AN
EXPOSITORY LEXICON
OF
MEDICINE AND THE ALLIED SCIENCES.

VOL. III.

Foramen menta'lē ante'rius. (L. *mentum*, the chin; *anterior*, that is before.) An aperture, occasionally present in the body of the lower jaw, which appears to be the retention of an embryonic feature.

F. Monroia'num. See *F. of Monro*.

F. Monro'ii. See *F. of Monro*.

F. Morga'gni. (*Morgagni*, an Italian anatomist.) The same as *F. cæcum lingue*.

F., ob'turator. (L. *obturo*, to stop up. *F. trou obturateur*; G. *Hüftbeinloch*, *Hüftloch*.) A large opening, closed in the natural state by fibrous membrane, in the os innominatum, the borders of the upper half being formed by the os pubis, and of the lower half by the ischium. In the male it is more or less oval, in the female somewhat triangular. It is narrower below than above, and presents a sharp margin, except above and to the outer side beneath the iliopectineal tubercle, where it is grooved, the groove running downwards, forwards, and inwards. It is filled by the obturator membrane, which is attached to its margin, which gives origin to the external and internal obturator muscles, and which is perforated by the obturator canal for the transmission of the obturator vessels and nerve.

F. obturato'rium. Same as *F., obturator*.

F. obtura'tum. The same as *F., obturator*.

F., occip'ital. The *F. magnum* of the occipital bone.

F. occipita'lē mag'nūm. The *F. magnum*.

F. oc'uli. (L. *oculus*, the eye.) The pupil of the eye.

F. œsophage'um. (Ὠισοφάγος, the gullet.) The opening in the diaphragm for the transmission of the œsophagus. It lies in front of the hiatus aorticus and more to the left, being separated from it by the decussating fibres of the crura; it is surrounded by muscular fibres, except occasionally when its anterior border is tendinous.

F. of Botal'li. (*Botalli*.) The *F. ovale of heart*.

F. of Ga'len. (*Galen*.) The *F. ovale of heart*.

F. of Majen'die. (*Majendie*, a French physiologist.) A small opening in the roof or posterior wall of the fourth ventricle, just above the level of the point where the central canal of the cord opens out into the ventricle.

F. of Morga'gni. (*Morgagni*.) The *F. cæcum of tongue*.

F. of Mun'ro. (*Monro*, a Scotch anatomist.) A communication between the lateral and third ventricles. It is double above and single below, like the letter Y. The upper parts of the Y lie between each pillar of the fornix in front and the optic thalamus behind.

F. of Paniz'za. An opening at the base of the two aortic arches in the heart of crocodiles.

F. of Rivi'ni. Same as *Rivini*, notch of.

F. of Süm'mering. The *Fovea centralis*.

F. of Wins'low. (*Winslow*, an English anatomist.) The communication between the peritoneal sac and the sac of the great omentum. This passage is bounded in front by the hepatic vessels; behind, by the vena cava; above, by the caudate lobe of the liver; and below, by the duodenum and a curve of the hepatic artery.

F. oö'des. (Ὠόδης, contraction of ὠοειδής, egg-like.) The *Obturator foramen*.

F., opt'ic. (Ὀπτικός, belonging to the sight. *F. trou optique*; G. *Sehloch*, *Schnervenloch*.) An aperture in the sphenoid bone above and to the inside of the sphenoidal fissure. It runs outwards and forwards from the side of the olivary eminence, pierces the small wing of the sphenoid, and transmits the optic nerve and the ophthalmic artery to the orbit. Its margins give origin to the rectus superior, and the conjoined tendon of the rectus inferior and the rectus internus muscles.

F. opt'icum. (*F. trou optique*; G. *Schnervenloch*.) The opening through which the optic nerve passes; the *F., optic*.

F. opt'icum choroï'deæ. The aperture in the choroid tunic of the eye for the transmission of the optic nerve.

F. opt'icum sclerot'icæ. The opening in the sclerotic coat of the eye for the transmission of the optic nerve.

F. orbita'rium inter'nūm. (L. *orbita*, an orbit; *internus*, that is within.) The *F. ethmoideum anterius*.

F. orbita'rium super'ius. (L. *orbita*, an orbit; *superior*, upper.) The *F., supra-orbital*.

F. ova'lē. (L. *ovalis*, egg-shaped. *F. trou ovale*; G. *ciförmiges Loch*.) See *F. ovale of heart*, *F. ovale of hip-bone*, and *F. ovale of sphenoid*.

Also, the same as *Fenestra ovalis*.

FORAMEN.

Also, a term for the *F. of Munro*.

F. ovalē cor'dis. (*L. ovalis*; *cor*, the heart.) The *F. ovale of heart*.

F. ovalē coxæ. (*L. ovalis*; *coxa*, the hip.) The *F. ovale of hip-bone*.

F. ovalē of heart. (*L. ovalis*. *F. trou de Botat*; *G. eiförmiges Loch*.) An oval aperture in the lower and middle part of the septum between the two auricles of the fetal heart, the result of the incomplete growth backwards of the septum. In the course of the tenth or eleventh week of fetal life a fold of tissue grows from the posterior wall of the common auricular cavity, projects towards the advancing auricular septum, passes in front and to the left of the foramen ovale, and by the fifth or sixth month forms a complete valve, which closes the passage of blood from left to right, but not from right to left. At birth this passage of blood from one auricle to the other ceases by the equalisation of pressure, in consequence of the filling of the left auricle with blood from the lungs; and in a few weeks afterwards the fold and the margin of the foramen ovale become united and the aperture becomes closed. Occasionally a small remnant of the opening is left unclosed, which in some cases is so large as to cause the condition called *Cyanosis*.

F. ovalē of hip-bone. (*L. ovalis*.) The *F., obturator*.

F. ovalē of sphenoid. (*L. ovalis*. *Sphenoid bone*. *G. eirundes Loch*.) An oval opening near the posterior margin of the great wing of the sphenoid bone. It lies a little outside and behind the foramen rotundum, and transmits the inferior maxillary nerve and a plexus of veins.

F. ovalē ossis pelvis. (*L. ovalis*; *os*, a bone; *pelvis*.) The *F., obturator*.

F. ovalē ossis sphenoidēi. (*L. ovalis*; *os*; *sphenoid bone*.) See *F. ovale of sphenoid*.

F. ovalē, pa'tency of. (*L. ovalis*; *pateo*, to lie open.) A congenital condition in which the natural fetal condition of an unclosed foramen ovale persists after birth. It is a frequent cause of cyanosis, but its presence during life is not, as a rule, indicated by a cardiac murmur.

F. palati'num antērius. (*L. palatum*, the palate; *anterior*, in front.) The incisive foramen.

F. palati'num posterius mag'num. (*L. palatum*; *posterior*, behind; *magnus*, great.) The opening of the posterior palatine canal.

F. pala'to-maxill'ary. (*L. palatum*; *maxilla*, the jaw.) The *F. palatinum posterius magnum*.

F. Paniz'zæ. See *F. of Panizza*.

F., pari'etal. (*L. paries*, a wall. *F. trou pariétal*; *G. Scheitelbeinloch*.) An opening for the transmission of a vein near the upper border of the parietal bone behind its middle, which establishes a communication between the longitudinal sinus and the veins outside the cranial cavity; the *Emissarium parietale*.

F., post-glenoid, cat. A foramen described by Mivart as occasionally present in the cat, which is situated just behind the post-glenoid process, transmits one of the two branches into which the median venous channel, which runs along the median junction of the parietals, divides.

F. pro si'nu petro'so inferio'ri. (*L. pro*, for; *sinus*, a gulf; *petrosus*, stony; *inferus*, that is below.) An aperture, present in about 25 per cent. of cases, situated in front of the

foramen jugulare, which permits the passage of the inferior petrosal sinus.

F., pter'yo-pal'atine. The opening of the pterygo-palatine canal.

F. quadra'tum. (*L. quadratus*, square. *F. ouverture de la veine cave inferieure*; *G. Hohlvenenloch*.) The somewhat quadrangular opening in the tendinous centre of the diaphragm, at the hinder part of the junction of its right and middle lobes; it transmits the inferior vena cava. The posterior border is lower than the anterior, and is frequently muscular.

F. quadrilat'erum. (*L. quatuor*, four; *latus*, a side.) The *F. quadratum*.

F. Rivini. The same as *Rivini*, notch of.

F. Rivinia'num. Same as *Rivini*, notch of.

F. rotun'dum. (*L. rotundus*, round. *F. trou grand rond*; *G. rundes Loch*.) A round canal perforating the base of the great wing of the sphenoid bone below the sphenoidal fissure; it opens beneath the orbit and transmits the superior maxillary nerve. It is absent in many animals.

F., sa'cro sciatic, great. (*Sacrum*; *sciatic*. *F. grande échanerure sciatique*; *G. grosses Sitzbeinloch*.) The space between the small sacro-sciatic ligament and the os innominatum; it transmits the pyriformis muscle, and the gluteal, sciatic, and pudic vessels and nerves.

F., sa'cro-sciatic, small. (*Sacrum*; *sciatic*. *F. petite échanerure sciatique*; *G. kleines Sitzbeinloch*.) The space bounded by the great and small sacro-sciatic ligaments and the border of the bone lying between the spine and the tuberosity of the ischium; it transmits the obturator internus muscle and the internal pudic vessels and nerve.

F. saph'e'næ. The *Saphenous opening*.

F. scapula'rē. (*L. scapula*, the shoulder-blade.) A foramen, occasionally present, formed by the ossification of the coracoid ligament of the scapula, which bridges over the scapular notch.

F. sclerot'icæ anti'cum. (*L. anticus*, in front.) The rim of sclerotic to which the cornea is attached.

F. sclerot'icæ posti'cum. (*L. posticus*, behind.) The *F. opticum scleroticæ*.

F. sphenoid'alē antērius. (*Sphenoid*; *anterior*, that is before.) A foramen, occasionally present, at the root of the external pterygoid process, which, as in the rabbit, permits the passage of the internal maxillary artery.

F., sphen'o-pal'atine. (*Sphenoid bone*; *palate bone*. *F. trou sphéno-palatin*; *G. Keilbeingaumenloch*.) The aperture or canal formed by the closure of the sphenopalatine notch of the palate bone by the body of the sphenoid bone, and leading from the sphenomaxillary fossa to the nasal cavity; it transmits the nasal or sphenopalatine branch of the internal maxillary artery, its accompanying vein, and the sphenopalatine nerves from Meckel's ganglion, which lie just on the outer side of the foramen, being the posterior superior nasal and the naso-palatine nerves.

F. sphen'o-spino'sum. (*Sphenoid bone*.) The *F. spinosum*.

F., spi'nal. (*G. Rückenmarksloch*.) Same as *F., vertebral*.

F. spina'lē. (*L. spina*, a thorn.) A synonym of *F. spinosum*.

Also, the same as *F., spinal*.

FORAMINA.

F. spino'sum. (L. *spina*, a spine. *F. trou petit rond, t. sphéno-épineux*; *G. Stachelloch.*) A small canal piercing the great wing of the sphenoid bone near its posterior angle, and transmitting the middle meningeal vessels and the meningeal plexus.

F. Steno'nis. See *Foramina of Stenson.*

F. Stenso'ni. See *Foramina of Stenson.*

F. sterna'lë. (L. *sternum*, the breast-bone.) An aperture occasionally found in the gladiolus of the sternum; it is caused by defective development of two contiguous centres of ossification so that they do not unite in the middle line.

F., sty'lo-mas'toid. (*Styloid* process; *mastoid* process. *F. trou stylo-mastoidien*; *G. Griffelwarzenloch.*) The outer opening of the *Aquæductus Fallopii*, which transmits the stylo-mastoid vessels and the facial nerve.

F. subarcua'tum. (L. *sub*, under; *arcuatus*, bowed.) A canal in the foetal petrous bone near the opening of the aquæductus vestibuli.

F. supe'rius et ma'jus. (L. *superior*, that is above; *et*, and; *major*, greater.) The *Helicotrema*.

F., supraor'bital. (L. *supra*, above; *orbita*, the orbit. *G. Oberaugenhöhlenloch.*) The name given to the supraorbital notch when, as sometimes happens, it is closed in so as to form a canal, and transmits the supraorbital artery and nerve.

F., supratroch'lear. (L. *supra*, above; *trochlea*.) A perforation which is sometimes present in the thin plate of bone lying between the coronoid fossa and the olecranon fossa at the lower end of the humerus.

F. Tari'ni. (*Tarini*.) The *Hiatus Fallopii*.

F. thyreoï'deum. (Θυρεός, a large oblong shield; εἶδος, likeness.) An aperture on one or on both alæ of the thyroid cartilage, transmitting a vein and covered by the periosteum.

F., thyroïd. (Θυρεός, a large oblong shield; εἶδος, likeness.) The *F., obturator*.

Also, the *F. thyreï'deum*.

F. transversa'rium. (L. *transversus*, placed across.) The canal at the base of the transverse process of each cervical vertebra, excepting the first, for the transmission of the vertebral artery.

F. ve'næ ca'væ. The *F. quadratum*, because it transmits the vena cava.

F. ve'næ saphenæ. The *Saphenous opening*.

F. veno'sum. The *F. quadratum*, from its office.

F., ver'tebral. (L. *vertebra*, a spine bone. *G. Wirbelloch.*) The central hole of a vertebra which contains the spinal cord.

Also, the same as *F. transversarium*.

F., vertebrarterial. (L. *vertebra*; *arteria*, an artery.) The foramen in the base of the transverse processes of the cervical vertebrae for the transmission of the vertebral artery.

F. Vesa'lii. (*Vesalius*.) An opening at the inner side of the foramen ovale of the sphenoid bone. It descends to the pterygoid fossa, and transmits a small vein, which is one of the emissary veins of Santorini.

F. Winslow'ii. See *F. of Winslow*.

F. zygomaticum ante'rius. (Ζύγωμα, the zygomatic arch; L. *anterior*, that

which is before.) The same as *F. zygomaticum faciale*.

F. zygomaticum exter'num. (Ζύγωμα; L. *externus*, that which is outside.) The same as *F. zygomaticum faciale*.

F. zygomaticum facia'lë. (Ζύγωμα; L. *facialis*, belonging to the face.) The opening on the facial or anterior surface of the malar bone, through which the superior maxillary nerve issues, being the external opening of the zygomatic canal.

F. zygomaticum inter'num. (Ζύγωμα; L. *internus*, that is within.) The same as *F. zygomaticum orbitale*.

F. zygomaticum orbita'lë. (Ζύγωμα; L. *orbis*, a circle.) The aperture on the orbital surface of the malar bone of the zygomatic canal. It transmits the superior maxillary nerve.

F. zygomaticum poste'rius. (Ζύγωμα; L. *posterior*, that is behind.) The same as *F. zygomaticum orbitale*.

F. zygomaticum supe'rius. (Ζύγωμα; L. *superior*, that is above.) The same as *F. zygomaticum orbitale*.

F. zygomaticum tempora'lë. (Ζύγωμα; *temporal* bone.) The termination on the temporal aspect of the malar bone of a branch of the canalis zygomaticus.

Foramina. Plural of *Foramen*.

F., carot'id. (*Carotid* artery.) The upper and lower apertures of the carotid canal in the temporal bone.

F. condyloï'dea accesso'ria. (*Condyle*; *accessio*, an addition.) Fine openings above and on the outer side of the anterior condyloid foramen, which transmit small veins.

F. conjugatio'nis. See *Conjugationis foramina*.

F. cribro'sa. (L. *cribrosus*, sieve-like.) The foramina of the cribriform plate of the ethmoid bone. They transmit branches of the olfactory nerve, and one gives passage to the anterior ethmoidal artery.

F. diplo'ica. (Διπλόη, a fold.) The openings of *Breschet's bone-canals*.

F. emissa'ria. (L. *emitto*, to send out.) The openings of the canals in the skull bones which transmit venous twigs.

E. ethmoida'lia. Same as *F. ethmoidea*.

E. ethmoï'dea. (*Ethmoid* bone.) The *Foramen ethmoideum anterius* and *Foramen ethmoideum posterius* of the orbital plate of the frontal bone.

F. inci'sor. (L. *incido*, to cut.) Same as *F. of Stenson*.

F. intervertebral. (L. *inter*, between; *vertebra*, a spine bone. *F. trous de conjugaison*; *G. Zwischenwirbellocher*.) The foramina formed by the apposition of the upper and lower notches on the pedicles of the arches of contiguous vertebrae; they transmit the spinal nerves and blood-vessels.

F., ma'lar. (L. *mala*, the cheek-bone.) The apertures on the external surface of the malar bone for the transmission of blood-vessels and nerves.

F. maxilla'ria superio'ra. (L. *maxilla*, a jaw; *superior*, that which is above.) Two or three small openings on the posterior surface of the tuber maxillare of the superior maxillary bone, giving passage to the superior alveolar vessels and to the dental branch of the anterior superior dental nerve.

F. nasa'lia. (L. *nasus*, the nose.) Small

FORAMINATED—FORCE.

openings for the transmission of vessels in the nasal bone.

F. nutritia osium. (L. *nutrio*, to nourish; *os*, a bone. G. *Ernährungslöcher der Knochen*.) The openings in the different bones by which the nutrient arteries gain the medullary cavity and break up in the endosteum.

F. of diaphragm. The *Foramen aorticum*, the *Foramen œsophageum*, and the *Foramen quadratum*.

F. of Morgagni. The openings of the glands of Littre in the urethra.

F. of Scarpa. See *F. Scarpæ*.

F. of Stenson. (*Stenson*.) The two lateral of the four branches of the anterior palatine canal. See, also, *Foramen, incisive*.

F., olfactory. (L. *olfactus*, the sense of smell.) The openings in the cribriform plate of the ethmoid bone for the transmission of the branches of the olfactory nerve.

F., orbital, external. (L. *orbita*, an orbit; *externus*, outer.) One or two small openings on the orbital surface of the great wing of the sphenoid bone, which transmit branches of the deep temporal arteries.

F. orbitaria interiora. (L. *interior*, inner.) The *F. ethmoidica*.

F. orbitaria interna. (L. *orbita*, an orbit; *internus*, within.) The *F. ethmoidica*.

F. palatina posteriora. (L. *palatum*, the palate; *posterior*, hinder.) Three openings situated on the free palatine surface of the palatine process of the palate bone. The anterior one, which is the widest, is often completed by the superior maxillary bone. They transmit the palatine nerves and branches of the pterygo-palatine artery.

F. palatina posteriora minora. (L. *palatum*, the palate; *posterior*, hinder; *minor*, less.) Small openings leading into canals which lie behind the pterygo-palatine canal.

F. papillaria. (L. *papilla*, a teat. G. *Harnporen*.) Small depressions, 0.7 mm. deep, on the apices of the pyramids of the kidney, into which the collecting tubules open.

F. repugnatoria. (L. *repugnatorius*, defensive.) The openings on the dorsum of some Myriapoda, by which the brown, corrosive, stinking secretion of the pear-shaped glands exudes.

F., sacral, anterior. (*Sacrum*; L. *anterior*, in front. F. *trous sacrés antérieurs*; G. *vordere Kreuzbeinlöcher*.) Four rounded apertures on the anterior surface of the os sacrum, at each extremity of the transverse ridges, which indicate the place of junction of the sacral vertebrae, and transmitting the anterior sacral nerves, the dorsal branches of the lateral and middle sacral arteries, and the spinal branches of the anterior longitudinal spinal veins.

F. sacral, posterior. (*Sacrum*; L. *posterior*, hinder.) F. *trous sacrés postérieurs*; G. *hintere Kreuzbeinlöcher*.) Four rounded apertures on the posterior surface of the os sacrum, opposite to the anterior sacral foramina, and transmitting the posterior sacral nerves.

F. Scarpæ. (*Scarpæ*.) Those two, of the four smaller canals into which the anterior palatine canal divides, which are nearest the middle line.

F. Thebesii. (*Thebesius*.) Small openings in the inner surface of the right auricle and, according to Langer, in all the cavities of the heart. Some are mere depressions between de-

cussating fasciculi of the muscoli pectinati, while others are the mouths of small veins proceeding from the muscular structure of the heart.

F. transversaria accessoria. (L. *transversus*, turned across; *accessio*, an addition.) Foramina, occasionally present, in the cervical vertebrae, through which runs an accessory vertebral artery given off by the deep cervical artery.

Foraminated. (L. *foramen*. G. *durchlöchert*.) Having small perforations.

Foraminifera. (L. *foramina*, plural of *foramen*, a hole; *fero*, to bear.) An Order of the Class *Rhizopoda*, being homogeneous, nearly structureless animals, with no central capsule or contractile vacuole, having a shell or test usually calcareous and perforated by one large opening or many small pores for the passage of the long filamentous pseudopodia.

Foraminiferous. (L. *foramen*; *fero*, to bear.) Having, or possessing, small holes or foramina.

Foraminous. (L. *foramen*. G. *löcherig*, *durchlöchert*.) Containing, or pierced with, holes.

Foraminula. Plural of *Foraminulum*.

F. carotico-tympanica. (*Carotid* artery; *tympanum* of ear.) Two openings or short canals, one of which is sometimes absent, which extend between the posterior wall of the carotid canal and the anterior part of the tympanum. The upper canal, when there are two, is traversed by the nervus petrosus profundus minor, the lower by the nervus carotico-tympanicus inferior, and the carotico-tympanic branch of the internal carotid artery passes through one of them.

Foraminulate. Same as *Foraminulous*.

Foraminule. (L. *foraminulum*.) The minute opening or ostium of the perithecium of some Fungi and Lichens, through which the spores escape.

Foraminulento os. (L. *foramen*, an opening; *os*, a bone.) Old name for the ethmoid bone.

Foraminulose. Same as *Foraminulous*.

Foraminulous. (L. *foraminulum*, dim. of *foramen*, an opening. G. *feinlöcherig*.) Pierced with fine holes or pores.

Foraminulum. (L. dim. of *foramen*, an opening. G. *Löcherchen*.) A minute opening, a small hole.

Foratio. (L. *foratus*, a boring.) The operation of trephining.

Forbach. Germany, in Lothringen. A mineral water, of temp. 17.5° C. (63.5° F.), containing sodium chloride and some hydrogen sulphide.

Forbid'den fruit. The smaller fruit of the shaddock, *Citrus decumana*, or, according to some, a variety of the *Citrus paradisi*.

Force. (Old F. *force*; from Low L. *fortia*, strength; from L. *fortis*, strong. I. *forza*; S. *fuerza*; G. *Kraft*.) The cause or influence which acts on a body in rest or in motion in such manner that its state of rest or of motion is changed, and which only exists in the presence of a second body possessing energy of motion or of position, which it loses by its action on the disturbed body.

Also, applied to the manifestations of this action, as motion, heat, and light.

F., absolute, of muscles. According

FORCE.

to Professor Haughton, it is for each square inch of cross section 102.55 lbs. for the coefficient of flexors of arms and of leg, whilst Henke and Koster find it to be 123.04 lbs. per square inch.

F., accelerating. (L. *accelero*, to hasten.) A force which continues to act upon a body so as to continue the impulse to movement after the first impact.

F., animal. The muscular energy of an animal.

F., assimilative. See *F. of assimilation*.

F., atomic. (*Atom.*) The force which is exerted between the atoms of different substances; as chemical attraction.

F., attractive. (L. *attraho*, to draw together.) The force or influence by which the tissues draw to themselves the nutritive juices of the body from which to select their own pabulum.

Also, a term which includes all the forces which tend to bring bodies or molecules together, such as the force of gravitation and the force of cohesion.

F., catabiotic. (*Katabiosis*, living.) Gubler's term for the influence exerted by living structures on neighbouring cells, by which their development is determined in harmony or into the likeness of the primary structure.

F., catalytic. See *Catalysis*.

F., cell. See *Cell force*.

F., centrifugal. See *Centrifugal force*.

F., centripetal. See *Centripetal force*.

F., coercive. See *Coercive force*.

F., cohesive. See *Cohesion*.

F., composition of. (L. *compono*, to put together.) The combination of two or more forces acting in different directions into one resultant, which will act in some other direction, as in the parallelogram or polygon of forces.

F., conservation of. (L. *conseruo*, to keep in existence. G. *Erhaltung der Kraft*.) The doctrine that the various forces or forms of energy can be reciprocally transformed into each other, so that kinetic energy may be changed into potential energy, and potential energy into kinetic energy; and this without loss of force or energy.

F., correlation of. (L. *cor*, for *con*, together; *relatus*, part. of *refero*, to bear back.) The doctrine that the different forces are intimately related to each other, and are different manifestations of motion.

F., depression of. (L. *deprimo*, to press down.) The muscular weakness which is induced by such general causes as enteric fever, or such local causes, as a lesion of nerve.

F., elastic, of gas'es. Same as *Gases*, *tension of*.

F., electric. The force of electricity.

Also, see *Electric force*.

F., electromotive. See *Electromotive force*.

F., endosmotic. See *Endosmosis*.

F., epipol'ic. The force of *Epipolasis*.

F., equilibrium of. See *Equilibrium of forces*.

F., expulsive. See *Vis expultrix*.

Also, in the plural, the same as *Expulsive pains*.

F., external. (L. *externus*, outward.) A force which acts on a body from without, as the force of gravitation.

F., field of. The district or space within which a force is influential.

F., formative. (L. *formo*, to shape. G. *Bildungstrieb*.) Same as *F., plastic*.

F., germ. See *Germ force*.

F., impulsive. (L. *impello*, to drive forward.) A force which acts on a body for a moment only, as the blow of a billiard ball.

F., internal. (L. *internus*, within.) A force which is exerted between the particles, or molecules, or atoms, of a body, as the force of cohesion.

F., kinetic. Same as *Energy, kinetic*.

F., line of. The direction in which a force is acting.

F., living. (*F. force vive*.) Same as *Energy, kinetic*.

F., magnetic. See *Magnetic force*.

F., measurement of. The absolute measurement of force is the velocity imparted to a body of unit mass, as a pound or a kilogramme, by a force acting on it for a unit of time, as a second.

Or, force is estimated by the measure of the force by which a unit mass, as a pound or a kilogramme, is attracted towards the earth, and is calculated on the basis of the distance which the unit mass will fall in a unit of time, as a second.

F., mechanical. (*Μεχανικός*, relating to machines.) The power which produces, or tends to produce, motion, or alteration of the direction of motion, or arrest of motion.

F., medicative. See *Vis medicatrix*.

F., metabolic. The influence which causes *Metabolism*.

F., molecular. (L. *moleculus*, a little mass.) A force exerted between molecules or particles of the same substance; as cohesion, affinity, and adhesion.

F., moment of. See *Moment of force*.

F., motive. Same as *Momentum*.

F., moving. Same as *Momentum*.

F., muscular. The force or energy exerted in the contraction of muscle.

F., nutritive. (L. *nutrio*, to feed.) The force otherwise called plastic.

F. of assimilation. (L. *ad*, to; *simulo*, to resemble.) A term for the collective action of the digestive and absorptive apparatus by which the materials of the outer world, whether organic or inorganic, are so modified as to become capable of forming part of a living body.

F. of cohesion. See *Cohesion*.

F. of gravity. Same as *Gravitation*.

F. of inertia. See *Inertia*.

F.s of medicines. See *Medicines, forces of*.

F. of restitution. (L. *restituo*, to replace in its former position.) The force, whatever it may be, which tends to bring back a disturbed body to its position of rest.

F., osmotic. See *Osmosis*.

F.s, parallelepipedon of. (*Παράλληλεπίδον*, a body with parallel surfaces.) This is analogous to the parallelepipedon of velocities, hence, if two component forces be at right angles to one another, the square of the resultant force will be equal to the sum of their squares.

F.s, parallelogram of. (*Παράλληλόγραμμος*, bounded by parallel lines.) The proposition that when two forces act at the same time on a body in different directions, the magnitude and direction of the resultant single force will be represented by the diagonal of the pa-

FORCE-PUMP—FORCEPS.

rallelogram completed from the lines drawn from the body to represent the magnitude and direction of each of the component forces.

F., permanent. (L. *permaneo*, to remain.) A constant force, as that of a body which is suspended.

F., plastic. (Πλαστικός, fit for moulding. *F. force plastique.*) The force which is supposed to act in the nutrition and repair of the tissues.

A term used by Lobstein to denote the force exerted by the elementary tissues on the organic material or protoplasm around, by which similar tissues are caused to be built up.

F., polar. (L. *polus*, the end of an axis.) A force which is potent at each end only of the axis of a body, or of each of its constituent molecules or atoms.

F.s, polygon of. (Πολύγωνος, many sided.) A figure of many sides, constructed to represent the various forces acting on a particle, and thus to obtain the resultant force, under the action of which it moves.

F., portative. (L. *porto*, to carry.) The power of a magnet to carry a weight, as represented by the greatest weight which it can cause to adhere to it.

F., potential. Same as *Energy, potential*.

F. pump. See *Force-pump*.

F.s, representation of. (L. *repræsentatio*, to exhibit.) The diagrammatic or graphic exhibition of a force by representing it as a straight line of different length in proportion to the value or power of the force, and having a barbed arrow to indicate its direction. A unit of length is selected to represent the unit of force, be it pound or kilogramme.

F., repulsive. (L. *repello*, to drive back.) A term which includes those forces which tend to separate bodies or molecules of bodies, such as the force of heat.

F.s, resolution of. (L. *resolvo*, to loosen, untie.) The process of resolving or decomposing a single force into two or more; as when a parallelogram is constructed on the line of the single force taken as its diagonal, and the two forces acting at the angle to produce it are developed.

F., resultant. (L. *resulto*, to spring back.) The single force which results from the composition of two or more forces acting together in different or in similar directions.

F., selective. (L. *selectus*, part of *seligo*, to choose.) The force or influence by which the several tissues take to themselves from the nutritive juices of the body the matters fitted for their own nourishment.

F., static. (Στατικός, causing to stand.) The totality of the conditions which maintain a body in equilibrium.

F., tensive. (L. *tendo*, to stretch.) The same as *Energy, potential*.

F.s, triangle of. (L. *tres*, three; *angulus*, an angle.) A figure constructed to show the relation between two component forces and their resultant.

F. tubes of. When through any portion of an equipotential surface lines of force pass, some of them graze the edge of the area and isolate it from an adjoining equipotential area. The space comprised between these equipotential areas and the marginal lines of force is termed a tube of force.

F., unit of. See *Unit of force*.

F., vegetative. (L. *vegeto*, to quicken.) Same as *F. plastic*.

F., vital. See *Vital force*.

Force-pump. In the construction of a force-pump fluid is raised in a tube by the elevation of a piston. As the piston falls it closes a valve, and the fluid is driven through a lateral aperture in the tube above the valve. Its return through this aperture when the piston rises is again prevented by another valve.

Forced. (*Force. F. forcé; I. forzato.*) Accomplished with strength or violence.

F. alimentation. (L. *alimentum*, nourishment.) Same as *Feeding, forced*.

F. enemata. See *Forcible enemata*.

F. movements. This term is applied to the apparently uncontrollable movements that occur in animals when suffering from lesions of certain parts of the central nervous system. One of the best known of them is the continuous rolling movement that occurs after section of one of the crura cerebri, or after unilateral section of the pons Varolii. Similar movements, known as circus movements, occur in injuries of the optic thalami and corpora striata. The animal moving sometimes towards, sometimes away from, the injured side; in other instances, when the corpora striata are injured, the animal tumbles head over heels.

Forceps. (L. *forceps*, a pair of tongs; from *formus*, hot; *capio*, to take; or from the same root as *furca*, a fork. *F. pince, forceps; I. foreipe; S. pinzas, forceps; G. Zange.*) A two-bladed instrument of many forms used for holding or seizing things. For different varieties see subheadings.

Also, a term for the pincer-like anal appendages of earwigs and other insects.

F., angular. (L. *angulus*, an angle.) Forceps, for introduction into a canal, which are bent at a greater or less angle, so that the hand is not in the line of sight when they are used.

F., anterior corporis callosi. See *F. corporis callosi anterior*.

F., antilgature, Nun'neley's. Strong, spring, cross-action forceps, like the bulldog forceps, with long narrow blades. Used for closing a bleeding artery after operation.

F., arterial. See *F., artery*.

F., artery. (L. *arteria*, an artery.) Forceps for seizing an artery in order to stop its bleeding, or to hold it whilst it is tied. The earliest form consisted of two blades of steel riveted together at one end, so that the other ends were kept open, these being pointed and serrated for a short distance on their inner surfaces; the blades were flat and slightly bowed towards their lower ends; each had a long slit, in which ran a pin, terminating on the outside of each blade in a head; by pushing the pin downwards the blades were closed and kept closed. For some of the varieties see the subheading with the name of the inventor.

F., artery, Assali'ni's. Forceps furnished with a hinge in the middle, and a spring above it to keep the ends of the blades closed. One blade has a short handle, the other blade is controlled by the thumb, and possesses a contrivance for holding the ligature which is about to be applied; the lower ends are toothed, the teeth are finely wedge-shaped, curving inwards at an angle of about 20°, the single tooth on one side fitting in between the two similar ones of the

FORCEPS.

other side. This is the earliest form of artery forceps fitted with teeth instead of serrations.

F., artery, Dieffenbach's. The same as *Bulldog forceps*.

F., artery, Liston's. Forceps riveted together at one end so that the lower ends diverge; these are furnished with teeth like Assalini's artery forceps. When closed by the pressure of the fingers a spring attached to the inner surface of one blade passes through a perforation in the other, and holds the two together by a catch, which can be released by the thumb.

F., artery, Lu'er's. Forceps with toothed points, which, when closed, are retained in this position by a spring with a catch attached to the inner side of one limb and passing through a hole in the other branch.

F., artery pressure, Spencer Wells's. Very strong forceps with scissor-like handles and light shanks and blades, the latter furnished with a row of U-shaped teeth, the teeth of one blade fitting into the interspaces of the other; they are closed by two catches, the pressure exerted by the first catch being from 5 lbs. to 7 lbs., and that exerted by the second catch being from 15 lbs. to 17 lbs.

F., artery, sliding. (*F. pince à verrou.*) These forceps resemble ordinary dissecting forceps, but when closed a bar passing through a slit in each limb can be made to slide down and keep the blades closed.

F., artery, Wakley's. A variety of Liston's artery forceps, in which the blades at their terminations are very wide and fenestrated for lightness, so that on tying the ligature the point of the forceps cannot be included. They are now almost universally used.

F., auricular. (*L. auricula*, the outer ear.) See *F., ear*.

F., bone. Strong forceps, shaped like ordinary pliers, for holding or extracting a sequestrum of bone in the operation for its removal, the teeth of which are directed backwards to prevent slipping. Some have an arrangement for securing the handles, and so keeping a tight hold on the bone.

F., bone-cutting, Liston's. Strong bone-nippers with bevelled blades, having a closely-meeting cutting edge; used to cut away pieces of bone, or the bones of the phalanges, metacarpus, and metatarsus. The blades are very short in proportion to the handles.

F., bone-cutting, maxillary. Bone nippers, the jaws of which are widely fenestrated between the joint and the cutting edge, which latter are narrow; the jaws are bent at various angles with the handles. Used in the excision of the superior maxillary bone.

F., bone, Ferguson's lion. Strong forceps, the blades of which are bowed out beyond the hinge and meet at their extremities, which are furnished with two widely separated rows of three teeth each. Used to grasp such bones as the patella and os calcis during resection.

F., bone, Mackenzie's nasal. Long slender forceps, bent in the middle at the joint, with hollow, semitubular blades opening vertically, and carrying a sharp chisel-ended, movable steel rod. They are used to remove portions of the turbinated bones and nasal exostoses; the chisel is withdrawn on the introduction of the forceps, the part to be removed is firmly grasped by them, and then the cutting bar is firmly pressed home.

F., bow. Forceps with handles terminating in rings, like those of a pair of scissors.

F., bulldog, Liston's. See *Bulldog forceps*.

F., bullet. See *Bullet forceps*.

F., cannula. (*L. cannula*, dim. of *canna*, a reed.) Long, slender forceps enclosed in a tube, which open by the protrusion of the ends of the blades through the extremity of the tube or cannula.

F., cataract. (*F. pince à cataract.*) Very fine forceps made like the dissecting forceps.

F., cil'ia. (*L. cilium*, an eyelash.) Same as *F., epilating*.

F., clamp. Forceps of much strength, having handles furnished with a screw, by which anything held between the blades can be subjected to great pressure.

F., clitoridec'tomy. (*Κλειτορίδης*, the clitoris; *ἐκτεμνω*, to cut out.) Dressing forceps with tenaculum points, for seizing the clitoris in the operation for its removal.

F., condensing plug. A pair of forceps with a rotating crutch on one blade, whereby it is fixed to a tooth, and having a fine, rounded point to the other blade, which is somewhat curved; used to consolidate the gold in the stopping of a tooth.

F. corporis callo'si anterior. (*L. anterior*, that which is in front; *corpus*, body; *callosus*, hard. *F. pince du corps calleux anterieure*; *G. vordere Zange*.) The fibres forming the anterior extremity of the corpus callosum, which proceed from the genu. They for the most part radiate into the frontal lobe in front of the thalamus.

F. corporis callo'si posterior. (*L. posterior*, that is behind; *corpus*, body; *callosus*, hard. *F. pince du corps calleux posterieure*; *G. hintere Zange*.) A curved fasciculus of medullated fibres, ending in a point, which extends backwards from the corpus callosum into the occipital lobes, and runs upon the superior median side of the posterior cornu of the lateral ventricle, uniting with the medullary substance of the lobulus cuneatus.

F., craniotomy. (*Κρανίον*, the skull; *τομή*, an incision.) See *Craniotomy forceps*.

F., craniotomy, Barnes'. The halves of these forceps are distinct and cross each other. The handles are united by a screw at their extremity. The blades are parallel when grasping, and duck-billed. The hinge is a pivot and a notch.

F., craniotomy, Matth'ew's. The halves of these forceps cross; the hinge is a pivot and a notch. The blades are duck-billed, solid, one of them has an extremity moving on a swivel. A ring on the handles can be pushed away from the hinge, and persistent pressure maintained by its means.

F., craniotomy, Murphy's. The handles are parallel, long; the halves cross like a pair of scissors. One blade is fenestrated, slightly curved; the other blade is solid, curved in the same direction, on the flat.

F. crena'ta. (*L. crena*, notch.) Dressing forceps, so called in reference to the roughened surface for holding.

F., cross-action. Forceps the halves of which cross each other at a joint, like a pair of scissors.

Also, spring forceps, the halves of which cross each other and are opened by pressure.

FORCEPS.

F. deceptoria. (L. *deceptorius*, deceitful. G. *verborgenes Messer*.) A *Bistouri caché*.

Also, an old term for a cutting instrument, the blade of which was hidden, so that the patient who refused to allow of an incision was deceived by the surgeon, who made the cut while pretending to introduce a blunt instrument.

F., dental. (L. *dens*, a tooth.) Forceps for holding and pulling out a tooth. They are constructed in such a manner that they are very strong, and the jaws can be accurately adjusted to the inequalities of the tooth, differently-shaped forceps being used for each kind of tooth.

F., dislocation. Cross-action forceps with U-shaped extremities, carrying a piece of webbing armed with cork or plush. Used to grasp the first phalanx of the fingers or toes, in order to effect extension for the reduction of a dislocation of one of the digits.

F., dissecting. (F. *pince à dissection*.) Forceps consisting of two flat narrow steel sides riveted together at one end in such manner that the other ends of the blades diverge, and can be approximated to catch hold of anything by pressure of the fingers on the middle of each blade, which is file-cut to prevent the fingers slipping.

F., dressing. (F. *pince à pansement*; G. *Kornzange*.) Forceps with handles as those of a pair of scissors and blades with ends round-pointed and furnished with coarse teeth. Used for removing strapping or lint in the dressing of wounds.

F., dynamometric. (Δύναμις, power; μέτρον, a measure.) A midwifery forceps to which a dynamometer is attached to measure the force of traction.

F., ear. Forceps with the long, thin blades terminating in a small ring and attached to the handles at an obtuse angle, so that the hand is not in the way of a view into the meatus. They are used for removing small polypi from the external auditory meatus, and for the extraction of foreign bodies.

F., ectropium. Right and left spring forceps with a screw and nut in the middle to keep the blades compressed. The under blade is thin, broad, and curved, so as to fit the inner surface of the eyelid; the upper blade is a slender wire adapted to the outer edge of the under blade. Used in the operation for ectropium.

F., endolaryngeal. (Ἐνδον, within; λάρυγξ, the larynx.) Curved, long-shanked forceps used in the crushing or tearing away of small tumours or growths from the interior of the larynx. Some have a double joint close by their end, which can be opened or shut, so as to open and shut the gripping part, by means of a sliding rod or spring. See also, *F., laryngeal*.

F., English. Midwifery forceps on the pattern of those of Smellie.

F., enterotomy. See under *Enterotome*.

F., entropium. See *Entropium forceps*.

F., epilation. (L. *e*, out; *pila*, hair.) Short spring forceps, the ends of each of the blades consisting of a circular disc or ring, which accurately meets its fellow, and is roughened internally by means of emery or an acid. Used for removing eyelashes or other hairs.

F., file-holding. Forceps used by dentists for holding a fragment of a dividing file.

F., folding. Forceps made up of a number of similar pieces of light steel, jointed by the middle in pairs and attached by their extremities in a row, one in front of each other; the free

extremities of the first pair bear rings, for the thumb and a finger, the free extremities of the last pair have forceps blades. The principle is the same as that of the instrument popularly called lazy tongs.

F., forcipres'sure. See *Forcippresure forceps*.

F., French. Midwifery forceps on the pattern of those of Levret.

F., gouge. Cutting forceps or pliers with gouge-shaped ends, which meet. Used in removing the projections or fragments of bone in operations for the removal of caries and necrosis of bone.

F., hæmorrhoid, clamp, Hen'ry Smith's. Strong, bow, cross-action forceps with broad, flat blades, the parallel edges of which are on one side concave, and on the other convex and serrated; attached to one of the shanks, near to the bow, is a curved screw, which passes through a perforation in the other shank, and is made to clamp the hæmorrhoid by a winged nut; the pile is then cut off and treated with nitric acid, which is prevented from damaging the instrument by the gilding of the blades.

F., hæmorrhoid, Hill'man's. Long, slender, cross-action, bow forceps with the joint about 3·5" from the extremity of the blade, which is an oval or a round ring, about ·75" in diameter, with a deep groove on its inner surface for firm holding.

F., hare-lip. Strong bow forceps with a linkage joint to give them a parallel opening and shutting; the blade which is passed behind the lip is flat, thin, and covered with tortoiseshell; it is about 2" long and ·5" wide; the other and outer blade is narrow, and closes on the middle of the inner one, so that an incision may be made along its edge.

F., hing'ed. Cross-action forceps with a hinged joint.

F., indicator. (L. *indico*, to point out.) The *F., midwifery*, *Audibert's*.

F., iridectomy. (Iris; Gr. ἱκτεμνω, to cut out.) Delicate forceps, the blades of which are bent upon their long axis for about a third of an inch from their extremity. They are usually toothed, and are used to seize the iris in the operation of iridectomy.

F., Kro'necker's. Small spring forceps which are fixed by a turn button in the middle of the blades, which at one end terminate in a small ring, and at the other are toothed after turning at a right angle. Used in physiological experiments.

F., laryngeal. (Λάρυγξ, the larynx.) Forceps used for the removal of foreign bodies or abnormal growths from the larynx. The blades may open either laterally or antero-posteriorly. See also, *F., endolaryngeal*.

F., laryngeal, Dur'ham's. Forceps consisting of a flexible wire tube carrying a stem with two short blades, hinged on its further end, and moved by a hinged rod connected with the handles, so that the blades may be opened and shut by protruding them or drawing them back.

F., laryngeal, Macken'zie's tube. Forceps consisting of a steel tube bent at an angle and carrying the blades of the forceps on a long shank; when the blades are protruded they spring open, when the tube is pushed over them they close; the blades are of different shapes, with sharp cutting teeth round their edges; they may

FORCEPS.

be made to revolve in the tube by the turning of a ring, so that they open laterally or antero-posteriorly.

F., laryngeal, Schrötter's. Bent forceps, with one fixed and one sliding blade.

F. le'ver, mid'wifery. An instrument by W. H. Taylor for applying traction to the end of the midwifery forceps. It consists of a block of wood, to the centre of which is hinged, by a ball-and-socket joint, a metallic rod, to which is attached a leathern strap, fastened to the end of the forceps; the wooden block rests on the bed, and is fastened by a strap to the bed-foot.

F., lig'ature. (*L. ligo*, to bind.) Forceps of the same form as *F. dissecting*.

F., lip, Morris's. Slender bowed forceps like Spencer Wells's artery pressure forceps, but with longer blades, U-shaped teeth. Used for compression of the coronary artery during operations on the lip.

F., lithot'omy. (*Λίθος*, a stone; *τομή*, an incision.) Forceps with long blades, adapted to seize the stone after the bladder has been opened in the operation of lithotomy. They may be straight or curved; the handles have a ring on the end of one and an open loop on the end of the other; the blades may be entirely solid, concave internally and roughened, or they may be fenestrated and lined with linen.

F., Lyons. Theuance's midwifery forceps, so called because he was a member of the College of Surgery of Lyons.

F. ma'jor corporis callo'si. (*L. magnus*, great; *corpus*, body; *callosus*, thick. *G. grosse Zange*.) The same as *F. corporis callosi posterior*.

F., mi'roscope. Spring forceps with very delicate extremities, with or without serrated surfaces of contact. To prevent the ends crossing when in use, a small pin fixed on the inner surface of one of the blades passes through a hole in the other.

F., mid'wifery. (*F. forceps obstetrical*; *G. Geburtszange*.) An instrument for the purpose of aiding delivery by seizing the head of the child, and thus allowing traction to be made on it.

The midwifery forceps, as the term is understood now, dates from the time of the Chamberlens, some little while before 1647; the midwifery forceps, that is, which is intended to effect the extraction of a living child. At a much earlier date than this instruments were used for the extraction of the child by gripping its head, but they were such that by no possibility could the child survive after their application; the instruments described by Hippocrates for wrenching the fœtus from its mother were for cutting and crushing previous to extraction; Soranus of Ephesus used two hooks simultaneously, as also after him Aetius and Paulus of Egina, as well as a forceps for breaking down the bones of the head; similar instruments for pulling at the crushed head after attachment to it by insertion into the orbit, or the mouth, or other part, were described by Albucasis and Rhodion; a little later Ambrose Paré used three hooked instruments to fasten into the head of a dead child to pull it out; and in 1554 Ruff of Zürich figured a pair of forceps for extraction of the fœtus, which contained apparently the suggestion of possible safety for a living child; but, as has been said, to the Chamberlens belongs the credit of the invention of an instru-

ment which could be used with safety to both mother and child, and which has been the parent of all subsequent forms of midwifery forceps. It is impossible to describe all the varieties of the instrument, but the most important have been attempted under the names of the different inventors. A midwifery forceps consists of two branches, consisting of a fenestrated blade with a cephalic, and in some a pelvic, curve, having a longer or a shorter stem, terminating in a handle, which is often covered on the outside with wood, and joined to each other by a lock as in Smellie's forceps, or by a pivot as in Levret's forceps, or by a hinge as in many German instruments. The cephalic curve is one on the face of each blade, to enable them to embrace the head of the child; and the pelvic curve is one in the opposite direction, to adapt the instrument to the sacral hollow of the pelvis.

In English instruments with a pelvic curve the blades are called right and left, according as they are adapted for the right or left side of the pelvis; in those with a pivot and mortise the blade carrying the pivot is the male or left branch; the one carrying the mortise is the female or right branch.

F., mid'wifery, Assall'ni's. Slender, steel, straight, fenestrated forceps with the extremities of the handles incurved, where a mortise and tenon forms the locking apparatus.

F., mid'wifery, Audibert's. (*F. forceps aide-memoire*.) Forceps, invented in 1833, having large, oval handles, on the inner faces of which are engraved various obstetrical details, such as the length of pelvic diameters, the form of the outlets, and other like facts.

F., mid'wifery, Bau'delocque's. The same as Levret's forceps, except that they are about two inches longer, and are destitute of the obtuse ridge or crest on the internal face of the blades.

F., mid'wifery, Beau'mer's. Forceps similar to those of Chamberlen, curved, however, not on the margins, but on the flat, in such a way that one of the blades is concave and the other convex. The convex blade has a pivot, the other a hole. The curvature of the convex blade begins at the articulation and is uniform to the end. This blade is intended to occupy the cavity of the sacrum. The branch with the hole is shorter than the other, and presents a double curvature on the flat, at first concave near the point of junction of the blades, so as to be adapted to the form of the pubes; it becomes convex near the extremity that it may glide over the head of the fœtus.

F., mid'wifery, Bernard's. (*F. f. assemblée*.) The blades are parallel, and are permanently united by a chain, which permits them to be introduced one over the other. Thus united they are simultaneously passed into one side only of the pelvis, and as they advance they are slipped round the head of the fœtus till they take up the usual position. Described in 1836.

F., mid'wifery, Brünig'hau'sen's. This form resembles that of Busch, and is about 15 inches long. The pelvic curvature commences suddenly. The fenestra are about 2½ inches long. It hinges with a lateral mortise and a flat-headed tenon. Described in 1802.

F., mid'wifery, Bur'ton's. Forceps, designed in 1751, consisting of a single channelled, broad, flattened handle, through which passes a stem, on the top of which are hinged two curved blades, which can be opened or closed by

FORCEPS.

the moving of the stem upwards or downwards, which is effected by a mechanism at the outer end.

F., midwifery, Busch's. This form has a similar hinge to Smellie's forceps, with a blunt hook at the end of the handle of each blade. It was invented in 1798.

F., midwifery, Campbell's. These forceps have the peculiarity that the handles can be lengthened or shortened at will, the difference being about 7 centimetres.

F., midwifery, Chamberlen's. See *Chamberlen's forceps*.

F., midwifery, Chassagny's persistent traction. These are intended to substitute mechanical for manual force. Their construction is similar to that of Thénance's. Two strong cords run along the internal face of the branches, and are fixed to a steel bar, which is applied to the knees of the patient when the instrument is applied. The cords are tightened by a rack and pinion. Described in 1861.

F., midwifery, curved. The form in which the blades have a curve forwards from about their middle, so as to adapt themselves to the anterior curve of the sacrum; it is called the pelvic curve.

F., midwifery, Denman's. The handles of these straight forceps are parallel, grooved near the base for a bandage, the joint on the same principle as Smellie's. There are two forms, the long and the short.

F., midwifery, Dubois. In this form the hinge is so constructed that the blades can be made to rotate with the hand without having recourse to a key. Described in 1792.

F., midwifery, DuSée's. Forceps, invented about 1733, which appear to contain the first suggestion of a movable joint, which could be fixed at will by means of a peg put through it. These forceps were not fenestrated, and had crenated extremities for firm holding.

F., midwifery, English. The same as *F., midwifery, Smellie's*.

F., midwifery, French. The *F., midwifery, Levret's*, especially the form modified by Pajot.

F., midwifery, Giordano's. Both halves are perforated at the base for the reception of the hinge, which is a separate and detached piece; when the blades are desired to be used together it is attached by means of a male screw, which works into a female screw.

F., midwifery, Hohls. These are fifteen inches long, and weigh a pound and a half. The blades are not fenestrated.

F., midwifery, Inglis's. Forceps without handles, only a short curved projection for traction.

F., midwifery, Levret's. These forceps, or Pajot's modification, are in common use in France since their invention in 1747. They are made of steel and have a central mortice and a pivot, which serves as a hinge. The blades are of an elongated oval form, with a concave internal face having a ridge and a pelvic curve to adjust them more accurately to it and to the head, which he was the first to devise. The handles terminate in blunt hooks. The total length is 418 mm., with a curve of 61 mm.

F., midwifery, long. The form of forceps in which the instrument is 16" or 17" long, so that they may be used before the head has entered the brim of the pelvis; they generally possess a pelvic curve.

F., midwifery, Lu'ca Giovan'ni Bo'er's. These are twelve inches in length, and resemble those of Smellie. The handles have a groove for the application of a bandage when they are in use.

F., midwifery, Mattei's. The articulation is made by means of a tube in which is a hole, the other blade can be inserted into this and fixed with a screw.

F., midwifery, Moreau's. Forceps resembling those of Levret, but with the blades more approximated to each other, so that when opened less tension is exerted upon the vulva.

F., midwifery, Nägeli's. These forceps resemble those of Levret, but differ from them in the handles being short, covered with wood, and terminating by two rounded processes, which have a groove; near the articulation the handles present a lateral hook-like projection. The articulation is a lateral notch and a tenon fixed by a screw. Described in 1853. They are the most usually employed instruments in Germany.

F., midwifery, Osian'der's. Powerful forceps, with the blades not fenestrated, with a special mortice and tenon. Described in 1799.

F., midwifery, Pajot's. Forceps like those of Levret made of steel, with a lock like Siebold's, and 45 centimetres long.

F., midwifery, Pajot's quadruple. Each half is composed of two parts, which can be divided on the principle of the bistouré cachée of Charrière, and so rendered more portable.

F., midwifery, Pal'fyn's. These, constructed about 1723, were long considered to be the first form invented. They differed from Chamberlen's in the circumstance that the two halves did not cross each other, but were parallel. The halves were united by a bandage, a chain or a hook, and the blades were not fenestrated but spoon-shaped, and were curved in an antero-posterior direction.

F., midwifery, Petit's. Forceps in which a mechanism exists between the branches by which the degree of pressure exerted can be to a certain extent measured.

F., midwifery, Rad'ford's. A long, straight forceps, with one blade longer than the other, the long blade being passed over the face, the short one over the occiput.

F., midwifery, Rath'law's. Forceps with fenestrated blades, like Chamberlen's, and iron handles jointed at the extremity; it was probably the invention of Roonhuysen of Amsterdam, suggested by an instrument which he had bought of Hugh Chamberlen, who had fled to Holland from England in consequence of political troubles.

F., midwifery, Richard's. Forceps with an articulation resembling those of Smellie, but so adapted that one blade can be advanced or retracted beyond the level of the opposite blade.

F., midwifery, Rizzo'li's. The male branch of these forceps presents a double hinge like that of Tarsitani's forceps. The female branch has a longitudinal fissure 22 mm. long, 7 mm. wide. The fissure present at the superior third of its borders is a conical excavation, with the base forwards. The first excavation receives the hinge when the male branch is behind, the second when it is in front.

F., midwifery, Rouch's. Forceps similar to those of Levret, but with a mechanism for preventing undue pressure on the head of the

FORCEPS.

fœtus, in the form of a projecting stem. Described in 1864.

F., midwifery, short. The form of the instrument which measures about 11" in total length, the distance from the lock to the tip of the blades being about 7.2"; the blades are fenestrated, curved on themselves so as to present the concavity towards each other, at the tips being distant 1" and the centre 3" from each other. They may be straight or curved.

F., midwifery, Siebold's. These are furnished with a lateral groove forming three parts of a circle. It is not necessary to raise the female branch to effect articulation. This can be accomplished by merely bringing the two branches into contact and making a screw-like movement. Their peculiarity is in the hinge. It differs from the mortise and pivot of Levret's forceps in that the mortise is not pierced in the centre of the female blade, but is formed as a hollow on one side, so that it is not necessary to raise the female blade to insert the pivot or tenon, but simply to bring them together so that the pivot enters the mortise, where it is fixed by a screw movement.

F., midwifery, Simpson's. Long forceps having fenestrated blades, with a pelvic curve and a shank; the blades are 6.25" long, with a fenestra 1.25" wide at its broadest part; they are 1.25" apart at their extremities and 3" in their middle when the handles are closed; the shank is 2.374" long, the joint is that of Smellie's forceps, the wooden handles are serrated at the edge, and just below the lock each carries a projecting spur. They can be widely separated within the pelvis without distending the vulva. Invented by James Simpson, of Edinburgh.

F., midwifery, Simpson's axis traction. A modification of Tarnier's midwifery forceps, by Alexander Simpson. The handles are straight, but the traction rods retain the perineal curve and are fixed.

F., midwifery, Smellie's. Forceps, which, before being curved by the instrument maker, are 12 inches in length from the end of the handle to the end of the blade. When curved, they are 11 inches or a little more, of which the handle measures 5 inches. The widest part of the blade measures 1 inch and 5-8ths, and this gradually diminishes towards the handle, the blade preserving its flatness to its insertion. The blades have the pelvic curve; the lock is of his device, and is the one which is used in English made instruments up to the present day, and is known as the English lock; it is formed by a deep, square notch in the middle of each blade at the top of the handle, the stem of the blade forming one side of the notch, and a steel projection from the handle forming the other. When the branches are crossed and in apposition the base of the stem of one blade fits into the notch of the other blade and locks the instrument. They were invented in 1752.

F., midwifery, straight. The form in which the axis is a straight line; it may be a long or a short forceps.

F., midwifery, Tarnier's. Forceps with a cephalic and a pelvic curve of the blades, a hinge-joint, a screw for fixing the blades after introduction, and a backward perineal curve of the handles; traction is made by hooking a supplementary curved handle, with a cross-bar for holding, on to the lower part of the posterior rim of the fenestra, so that the force may be

exerted in the proper axis of the pelvis. Described in 1877.

F., midwifery, Tarsita'ni's. These forceps resemble those of Levret. The branches cross, but the articulation is so constructed that the female branch can be fitted with equal ease above or below. Described in 1843.

F., midwifery, Thenance's. The branches of these forceps are parallel and articulate by means of a hinge at the extremity of the handles. They are perforated at the middle by an opening, into which a noose passes, intended to complete the articulation and fix the instrument. They were invented in 1801, and have been called the *Lyons forceps*.

F., midwifery, Trélat's. Forceps of very small size and possessed of great elasticity and flexibility.

F., midwifery, Valette's. Forceps constructed on the same principle as Thenance's but smaller, and the two halves of the instrument can be separated, and are connected again by a bayonet joint. Described in 1857.

F., midwifery, Ziegler's. Very like Denman's short forceps, with the exception that the fenestra of the lower blade is continued to the handle. The lower blade is introduced by slipping its long fenestra over the handle of the other one already in position. They possess a short shank before the springing of the curved blade.

F. minor corporis callosi. (L. *minus*, little; *corpus*, body; *callosus*, hard. G. *kleine Zange*.) A synonym of *F. corporis callosi anterior*.

F., Mu'seux's. The same as *F., polyypus*.

F., needle holding. (*F. porte-aiguille*.) Forceps constructed like a pair of scissors, but with the hinge very near the extremity, and with flattened, or serrated, or channelled blades, so that the needle may be firmly held.

F., Nelaton's. Cutting forceps used in the removal of fibroid tumours.

F., obstetrical. (L. *obstetrix*, a midwife.) Same as *F., midwifery*.

F. obstetricia. Same as *F., obstetrical*.

F., œsophage'al. (*Οισοφάγος*, the gullet.) Long, slightly curved forceps, opening laterally or antero-posteriorly, used for the removal of foreign bodies from the œsophagus. In some forms there is a joint near the end as well as one in the middle, so that slight movement of the handles causes a wide separation of the blades. Some are made with a flexible stem.

F., ovarian cyst, Nelaton's. Forceps, about 9" long, with slender limbs. The joint is 3" from the end of the blades; the handles have scissor-bows, and a ratchet catch to hold them when compressed; the blades terminate in circular discs of steel about one inch in diameter, and carry teeth cut at right angles to the axis of the forceps, as well as conical points, which project beyond the teeth, and are received into perforations in the opposite blade. Used for seizing the cyst in ovariectomy.

F., ovariotomy, clamp, Clay's. Strong heavy forceps with wood-covered handles and blades armed on their inner surface with thick plates of ivory. The joint is at one extremity, and near the other a curved screw and nut enables strong compression to be exerted on the enclosed pedicle; the actual cautery is then applied to it; slipping of the heated iron is pre-

FORCEPS.

vented by a vertical guard, which extends along one blade, and damage to the neighbouring tissues is avoided by the ivory plates.

F., ovum. (*L. ovum*, an egg.) Long slim forceps with pear-shaped, fenestrated blades, 1·5" long by ·75" broad, incurved on their edges, for extraction of a dead ovum from the uterus.

F., parrot-bill, Hoffmann's. Forceps with short, strong jaws and rather long handles, between which is a spring to keep them apart, and sometimes a projecting lug for firm handling. The lower jaw wedge-shaped in one plane, flat with a rounded extremity in the plane of the joint, and near the point a few coarse teeth; the upper jaw is perforated so as accurately to fit around and slightly beyond the lower blade, and its outer margin is thinned so as to constitute a cutting edge. Used for cutting away bone in the removal of sequestra and other operations.

F., pedicle, Spencer Wells's. Forceps made like Spencer Wells's artery pressure forceps, but much larger and stronger. Used for seizing the pedicle in ovariectomy.

F., polypus. (Πολύπους; from πολύς, many; πούς, a foot.) Forceps which have blades roughened inside for firm holding, and scissor handles. They are slightly curved. In some the inner surface of the blades is centrally and longitudinally grooved, and some are provided with locking handles.

F., polypus, axial. Forceps with long shanks and bent handles, arranged so that the blades open widely while the shanks scarcely expand at all.

F., polypus, Gant's. Forceps with the blades arranged like those of grape scissors, one edge cutting like a pair of scissors, the other broad and rough, so as to hold the polypus after it has been cut off.

F., polypus, Stocker's. Long, slender forceps with one long-shanked blade and one short one, which closes with a spring; the long shank passes through a circular screwed hole in the handle, which is bent at almost a right angle, and ends in a milled head, so that it can be revolved.

F., polypus, vine-scissors. The *F., polypus, Gant's*.

F., post-nasal, Löwenberg's. (*L. post.*, after; *nasalis*, belonging to the nose.) Forceps with long, slender, downward-curved handles and short, upward-curved, scooped-out blades, with gouge-shaped cutting extremities. Used for the removal of growths from the vault of the pharynx and the neighbouring parts.

F., post-nasal, Mackenzie's. Forceps constructed on the plan of a lithotomy instrument, with a male shank sliding in a female one, the blades being bent upwards, spoon-shaped, and sharp-edged; the male blade is moved by a lever. It is used for the removal of growths from the vault of the pharynx, especially at its sides.

F. posterior corporis callosi. The *F. corporis callosi posterior*.

F., punch. A name for *F., parrot-bill, Hoffmann's*; also see *F., punch, Mackenzie's*.

F., punch, Mackenzie's. Forceps having the handles bent at the hinge, and the blades slender and opening vertically; the lower blade has a small projecting bar or punch, which

fits into a fenestrated portion of the inner blade. It is used for the removal of nasal polypi.

F., saw. (*F. forceps-scie*; *G. Zangensäge*.) A pair of midwifery forceps furnished with a chain saw to cut up the head of the fœtus. It was invented by Van Huevel.

F.-scie. (*F. scie*, a saw.) Same as *F., saw*.

F., scissors. A double instrument used in the removal of the tonsils, consisting of a pair of toothed forceps lying upon and attached to a pair of long-handled scissors in such a manner that, when the handles of the scissors are pressed together, the forceps first close and hold the tonsil, and the blades of the scissors then close and cut it off.

F., septum, Adams's. (*L. septum*, a partition.) Strong, broad, flat-bladed forceps used for grasping the septum nasi so as to straighten it, or fracture it, when that is rendered necessary by congenital deformity or by a badly-united fracture.

F., slider. See *Slider-forceps*.

F., speculum. These forceps have a double hinge and are very long, so that they can be introduced to the extremity of a speculum vaginæ; or the joint is in the middle, and the extremity of the handles bent out of the sight line.

F., spring. (*F. pince à ressort*.) Forceps in which the blades, when closed, are held together by a spring.

Also, forceps which consist of two flattened halves riveted together at one end in such fashion that their blades are always open unless compressed by the fingers.

F., stage. See *Stage-forceps*.

F., tenaculum. (*L. tenaculum*, a holder.) Same as *F., vulsellum*.

F., toe-nail. Cross-action forceps with bow handles and wide, thin-ended, slightly curved blades, with a few pointed teeth, the convexity of one blade fitting into the concavity of the other. Used for the avulsion of an ingrowing toe nail.

F., tongue. Slender forceps with bowed handles and a ratchet catch to keep them closed. The blades terminate in a round or oval fenestrated disc, about ·75" in diameter, the ring of which in some is furrowed. Used for drawing the tongue out of the mouth in threatened asphyxia during anæsthesia and in other conditions.

F., tooth. Same as *F., dental*.

F., tor'si-pressure. Same as *F., torsion*.

F., torsion. (*L. torsio*, a wringing; from *torqueo*, to turn about.) Strong forceps with accurately fitting serrations on the blades and a spring catch or sliding bolt to retain them together. Used to seize an artery in the restraint of hæmorrhage by torsion.

F., tracheal. (*L. trachea*, the wind-pipe.) Long, curved forceps for extracting foreign bodies from the trachea.

F., tracheal, Gross's. Long, slender forceps made of German silver, each blade terminating with a ring, and capable of being bent in any direction.

F., trephining. Spring forceps used for removing the disc of bone cut by the trephine. The extremities of the blades have a circular outline for adaptation to the disc.

F., Trousseau's. Forceps made like

FORCERAL—FOREARM.

scissors, but curved on the flat. They are employed for dilating the opening in tracheotomy, and thus facilitating the introduction of the tube.

F., tympanum. An instrument about 3·5" long, with spring forceps at one end and a probe at the other. The middle is circular for the hold of the fingers, and the blades are slender and blunt-ended. Used for the introduction of the cotton wool into the tympanum, the probe end serving to adjust it.

F., urethral. (Οὐρηθρα, the urethra.) Slim, long-shanked, and long-bladed forceps used for the removal of small calculi, or fragments of crushed calculi, which have become fixed in the urethra. The hinge may be single, outside the urethra, or in the middle of the instrument, or double and near the further extremity of the blades, as in the form with the alligator-jaw action. According to Henry Thompson, urethral forceps should be 8·5" long, the stems should be slightly curved so as to cross each other, the ends of the blades should not be pointed, should not meet each other, and should be slightly scoop-shaped.

F., urethral, alligator-jaw. Urethral forceps which have a hinge immediately behind the toothed part of the blade and one near the end of the handles, so arranged that when the handles are pressed the blades close. They are so named because of the likeness of the short blades and hinge to an alligator's head.

F., uterus, Morris's. Bowed long forceps with the joint near the middle and each blade ending in a rather broad, incurved ring about 2" in diameter; near the handle is a ratchet and catch arrangement. Used in the removal of the uterus.

F., vesical. (L. *vesica*, the bladder.) Forceps for the removal of a stone, or a growth, from the bladder. See *F., lithotomy*, and *F., vesical, Thompson's*.

F., vesical, Thompson's. Forceps of two sizes, designed by Henry Thompson, for removing growths within the bladder after median division of the urethra in front of the prostate through the perinæum in men, and dilatation of the urethra in women. They are somewhat like lithotomy forceps, having the extremities of the blades where they meet roughened, so as to compress and disintegrate the tissues involved.

F., vulsellum. (L. *vulsella*, a kind of pincers.) Forceps the blades of which are each provided with four or more curved or tenaculum-like teeth.

Forceral. France, Département des Pyrénées-Orientales. A chalybeate mineral water.

Forcible. (*Force*.) Powerful; exercising force.

F. catheterism. See *Catheterism, forcible*.

F. en'ema. (Ένεμα, an injection.) The injection of a large quantity of fluid into the bowels for the purpose of reducing an intussusception of some part of the large intestine. It may be administered by means of an O'Beirne's tube and an enema syringe, or by means of the hydrostatic pressure of a body of fluid in a funnel connected with the intestinal tube by means of a length of india-rubber tubing, and held at such a height above the body as may be needful.

F. extension. The extension of a limb, as described under *Extension* and *E. apparatus*.

F. flexion of joints. See *Joint-adhesions, forcible rupture of*.

Forcing. (*Force*.) Pressing, thrusting, pushing with violence.

F. a stricture. Same as *Catheterism, forcible*.

F. pump. Same as *Force-pump*.

Forc'ipal. (L. *forceps*, a pair of tongs.) Of the nature of forceps.

Forc'ipate. (L. *forceps*, a pair of tongs. G. *zangenförmig*.) Forked like a pair of pincers, so as to be capable of opening and shutting.

Forc'ipated. Same as *Forc'ipate*.

Forc'ipres'sure. (L. *force*, strength; *presser*, to squeeze.) A mode of stopping bleeding from an artery, suggested by Desault in 1790. It consists in the squeezing of the bleeding artery between the ends of the blades of a pair of forceps provided with a spring to keep them close; within from twenty-four to forty-eight hours the forceps may be removed, obliteration of the canal of the artery being by that time effected. The process is adopted in cases of secondary hæmorrhage and in operations in deep cavities when the application of a ligature would be difficult.

F. for'ceps, Wells's. Forceps having strong, short blades, roughened within, and long scissor handles, with a catch or means of locking, devised by Spencer Wells.

Forc'ipula. (L. dim. of *forceps*, a pair of pincers. G. *Zünglechen*.) A small pair of forceps.

In Biology, the two pairs of cephalic appendages in the Arachnida.

For'del Square. Scotland, County Fife. A mineral water containing calcium and magnesium carbonate, magnesium sulphate, and a little iron.

For'digna'no. Italy, in Sardinia. A hot saline spring.

Fore. (Sax. *fore*, before.) That which is in front.

F. wing. The front wing, arising from the meso-thorax, of Insecta.

Forearm. (E. *fore*; arm. F. *avant bras*; G. *Vorderarm*.) That portion of the upper extremity which extends from the elbow to the wrist.

F., amputa'tion of. The extremity of the upper limb may be removed by amputation through any part of it, by the circular, or by either of the flap methods.

F., aponeuro'sis of. Same as *Fascia antebrachial*.

F., ar'teries of. The chief arteries of the forearm are the radial and the ulnar, though some small terminal branches from the superior and inferior profunda and the anastomotica supply the upper part, and some from the recurrent branches from the arteries of the palm the lower part. The branches of the radial are the recurrent muscular, superficialis volæ, anterior and posterior carpal; the branches of the ulnar are the anterior and posterior recurrent, the interosseous, and muscular.

F., bones of. The radius and ulna.

F., fas'cia of. The *Fascia, antebrachial*.

F., lymphat'ics of. See *Upper limb, lymphatics of*.

F., mot'ions of. The forearm is moved forwards by the biceps, brachialis anticus, pronator radii teres, aided by the flexor carpi radialis, flexor sublimis, flexor carpi ulnaris, and supinator

FOREBITTEN MORE—FORGE.

longus; backwards by the triceps and anconeus. It is rotated inward by the pronator teres, flexor carpi radialis, palmaris longus, flexor sublimis, and pronator quadratus. It is rotated outward by the biceps, supinator brevis, and extensor secundi internodii.

F., muscles of. The muscles of the forearm vary in different animals, but they usually consist of supinators and pronators of the hand or fore-foot, and flexors and extensors of the hand or fore-foot and of the digits.

F., nerves of. The inner part of the skin of the forearm is supplied by the internal cutaneous and the nerve of Wrisberg; the outer by the cutaneous of the musculo-cutaneous and cutaneous branches of the musculo-spiral; the lower part is supplied by recurrent branches of the median cutaneous branches of the ulna. The muscles are supplied by the median, ulnar, and musculo-spiral nerves; the median supplying the pronator radii teres and all the muscles of the forearm, except the flexor ulnaris and the flexor profundus digitorum, the anterior interosseous, and cutaneous palmar; the ulnar supplies the flexor carpi ulnaris and flexor profundus, and a cutaneous branch; the musculo-spiral supplies the supinator longus and the extensor carpi radialis longior, and gives off the posterior interosseous branch, which supplies the extensor carpi radialis brevior, supinator brevis, muscular and articular branches, and the radial branch, which gives off some cutaneous filaments.

F., veins of. See *Upper limb, veins of.*
Forebitten more. (E. *more*, an old word signifying root.) The bitten off root, *Scabiosa succisa*. (Prior.)

Forebrain. (E. *fore*; brain. G. *Vorderhorn*.) The anterior of the three primary encephalic vesicles into which the medullary tube or primary nervous system of the vertebrate embryo divides at an early stage of its growth. From it the primitive optic vesicle is given off on each side, and itself develops into two divisions, one in front for the cerebral hemispheres, corpora striata, and olfactory lobes, and one behind for the optic thalami and the third ventricle. At this stage the term forebrain or prosencephalon is given to the anterior division of the primary forebrain, and the term interbrain or thalamencephalon is given to the posterior division. The constriction separating the divisions, at first shallow, gradually grows deeper, but always leaves the two cavities connected by a central canal. The cavity of the prosencephalon becomes the lateral ventricles, the cavity of the thalamencephalon the third ventricle, and the communicating canal the foramen of Munro.

Forefinger. (E. *fore*; *finger*; Skeat suggests *forme finger*, meaning first finger, as the original expression. F. *index*; I. *indice*; S. *indice*; G. *Zeigefinger*.) The first or index finger; the digit continuous with the second metacarpal bone.

Forefoot. (Fore; foot.) The foot of an anterior or fore limb of a quadruped or multiped.

Forefront. (E. *fore*; F. *front*, the forehead.) The forehead.

Foregut. (E. *fore*; *gut*.) The anterior one of the three sections into which the primary digestive canal or mesenteron of the embryos of mammals and birds is divided; it occupies the cephalic fold of the embryo, and from it are developed the pharynx, œsophagus, stomach, and

duodenum, and also from it arise the rudiments of the lungs, liver, and pancreas. The other sections are named *Midgut* and *Hindgut*. See also, other divisions under *Mesenteron*.

Forehead. (E. *fore*; *head*; Mid. E. *forhead*. F. *front*; I. *fronte*; S. *fronte*; G. *Stirne*.) The part of the face which extends from the front line of the hair growth to the upper borders of the orbits, and is bounded on each side by the temples.

Forelimb. (Fore; limb.) The anterior limb of animals, fore-leg, wing, or arm.

Foremilk. (Fore; milk.) The first milk secreted after, or just before, the birth of the child.

Fore'skin. (E. *fore*; *skin*. F. *prépuce*; I. *prepuzio*; S. *prepuccio*; G. *Vorhaut*.) The *Prepuce*.

Foretooth. (Fore; tooth.) A tooth in the front part of the jaw.

Foreign. (Mid. E. *foreine*, *foreyne*; Old F. *forain*, strange; from Low L. *foraneus*; from L. *foras*, out of doors.) Belonging to another nation; extraneous; not belonging to.

F. body. (F. *corps étranger*.) Term applied to any substance lodged in a wound, which either produced it, or having been broken off from the weapon by the violence wherewith it was inflicted, is left in it and keeps up irritation, to the prevention of its cure; as a bullet, a piece of broken glass, a splinter or a nail.

Also, applied to any substance, not belonging to the natural structure of the body, which has found lodgement in it.

Forensic. (L. *forensis*, belonging to the forum, a place where law-courts were held.) Of, or belonging to, a court of law.

F. anatomy. See *Anatomy, forensic*.

F. chemistry. (F. *chimie légale*; G. *gerichtliche Chemie*.) Chemistry applied to legal investigations.

F. medicine. (F. *médecin légale*; G. *die gerichtliche Arzneiwissenschaft*.) Term for such parts of the science of medicine as are connected with judicial inquiries; it is otherwise, but incorrectly, termed medical jurisprudence, for this more properly expresses a knowledge of the laws and regulations applied to medical education and practice.

F. surgery. (F. *chirurgie légale*; G. *gerichtliche Chirurgie*.) The parts of the science of surgery connected with judicial inquiries.

Fores. (L. *foris*, a gate.) The vulva.

Forest. (Old F. *forest*; Low L. *foresta*, a wood; from L. *foris*, out of doors.) A large wood.

F. la'dy's herb. The iva, *Achillea moschata*.

Forfex. (L. *forfex*, scissors.) A pair of scissors; a forceps.

F. dentaria. (L. *dentarius*, pertaining to the teeth.) Forceps for the extraction of teeth.

Forficula. (L. *forficula*, a pair of small shears; dim. of *forfex*.) A Genus of the Sub-order *Euplexoptera*, Order *Orthoptera*.

F. auricularia, Linn. (L. *auricularius*, from *auricula*, the ear-lap. F. *perce-oreille*; I. *formica pinzajuola*; S. *tyereta*; G. *Ohrwurm*.) The earwig.

Forge. (Old F. *forge*; from L. *fabrica*, a workshop. G. *Schmiede*, *Schmiedewerkstatt*.) A smith's workshop.

F.-wa'ter. See *Fabrurum aqua*.

FORGES—FORMATIVE.

Forges. A name for the waters of *Chapelle-sur-Erdre*.

Forges-les-bains. France, Département de la Seine et Oise. Saline waters, containing carbonates and sulphates in small quantities.

Forges-les-eaux. France, Département de la Seine Inférieure. The waters come from four springs, named respectively Royale, Requette, Cardinale, and Nouvelle. Mean temp. 7° C. (44·6° F.) It is 80 metres above the level of the sea. The waters are weak chalybeate and slightly carbonated; the iron is in the form of crenate.

Forges-sur-Briis. Same as *Forges-les-bains*.

Forget-me-not. (*F. ne m'oubliez pas*; *G. Vergissmännicht*.) The *Myosotis palustris*; formerly applied to the *Ajuga chamaepitys*, on account of its nauseous and persistent taste.

Fork. (*Mid. E. forke*; *Sax. forc*; from *L. furca*, a fork.) An instrument having prongs.

Forked. (*Fork.*) Opening, or diverging, into two parts.

F. anther. An anther which is split into two parts, as in the *Vaccinium uliginosum*.

F. filament. The filament of a stamen which is split into two, as in Crambe.

F. venation. See *Venation, forked*.

Form. (*Mid. E. forme*; from Old *F. forme*; from *L. forma*, shape; from Aryan root *dhar*, to hold. *F. forme*; *G. Gestalt, Form*.) The external appearance, shape, or particular model of anything.

In Biology, the special characteristics of an individual as a type of others; also, the disposition or structure of the parts of an individual.

In Phrenology, a faculty, having its organ indicated by the width between the eyes, whose function is to take cognisance of form.

Also, the special characteristics of any substance, constituting it a liquid or a solid.

F. elements. A term applied in Biology to the cells and their derivatives of the structures.

F., external. (*L. externus*, on the outside.) The shape or aspect of a thing.

F., internal. (*L. internus*, within.) The structure of a living thing.

F.s, transitory. (*L. transeo*, to pass over.) A term applied to the different successive appearances in the growing embryo of a higher animal like to, or somewhat resembling, the permanent form of some other and lower form of living being.

Formæ. Plural of *Forma*.

F. transeuntes. (*L. transeo*, to pass over.) See *Forms, transitory*.

Formal. Same as *Formomethylal*.

Formaldehyde. Same as *Formic aldehyde*.

Formamide. $N(COH)H_2$. A colourless liquid obtained by heating ammonium formate with urea, and also by the dry distillation of ammonium formate and of ammonium oxalate. It is soluble in water and alcohol, but insoluble in ether. It boils at 192°—195° C. (377·6° F.—384° F.) with partial decomposition.

Formate. (*F. formiate*; *G. ameissensaure Salz*.) A salt of *Formic acid*. The formates are all susceptible of crystallisation; they are soluble in water. When distilled with strong

sulphuric acid they give off carbon monoxide and leave a residue of sulphate. Ferric chloride colours neutral solution of a formate a red brown, with production of ferric formate. Formates warmed with silver solution evolve carbon dioxide, and throw down a mirror-like precipitate of silver.

F., ammo'nium. See *Ammonium, formate*.

F., am'yl. $C_5H_{11}O_2 = CH(C_3H_7)O_2$. A colourless, mobile liquid, obtained by distilling a mixture of sodium formate, strong sulphuric acid, and amyl alcohol. It has a fruity smell, is slightly soluble in water, and boils at 116° C. (240·8° F.)

F., e'thyl. Same as *Ether, formic*.

F., meth'yl. $C_2H_5O_2 = (CHO \cdot CH_3)O$. A transparent, colourless liquid, obtained by distilling together methyl sulphate and sodium formate. It is volatile, has a fruity, ethereal smell, boils from 36°—38° C. (96·8°—100·4° F.), and has a vapour density of 2·084.

F., propyl'amin. A compound said to be the cause of the herring-like smell of ergot of rye.

F., so'dium. CHO_2Na . A salt crystallising in rhombic prisms with bevelled lateral faces, easily soluble in water. It has been suggested for use as an antipyretic. In experiments on animals it is said by Asloing to reduce temperature by causing great dilatation of the superficial capillaries, by diminishing the amplitude of the expiratory movements, and chiefly by lessening the chemical changes which go on in the lung.

Formatio. See *Formation*.

F. granulo'sa. Same as the *Membrana granulosa* of the Graafian follicles.

F. reticula'ris. (*L. reticulum, network*.) The term applied to a part of the anterior and lateral areas of the medulla oblongata, behind the pyramids and the olivary bodies, which, when seen in transverse section under a moderate magnifying power, presents a network of two sets of white fibres from the cord, one set running longitudinally, the other transversely. The longitudinal fibres of the anterior area come from the anterior column of the spinal cord, and those of the lateral area from the lateral columns of the cord; the transverse fibres are the internal arcuate fibres. The part of this formation lying in front and towards the centre contains no nerve cells; the part lying in the lateral area, where it takes the place of part of the anterior cornu of the cord, contains many nerve cells.

F. reticula'ris alba. (*L. reticulum; albus*, white.) The part of the *F. reticularis* which contains no nerve cells.

F. reticula'ris gris'ea. (*L. griseus*, grey.) The part of the *F. reticularis* which contains nerve cells.

Formation. (*L. formatio*, a shaping, a form; from *formo*, to shape. *F. formation*; *I. formazione*; *G. Bildung, Gestaltung*.) A growth.

Formative. (*L. formo*, to form. *G. gestaltend*.) That which can be moulded; plastic; that which gives form.

F. cells. Large spherical bodies found in the lower layer of the blastoderm of the impregnated fowl's egg; they probably arise by a process of segmentation from the white yolk, some containing a nucleus, and many small spherules

FORMED—FORMOSA.

or granules. Their real nature is doubtful, some of them being perhaps masses of yolk for nutrition.

Ziegler has also given this term to the large epithelioid cells which are found in granulations, and which are very influential in the building up of the new tissues; they are supposed by him to arise from the coalescence of leucocytes, and by others to be derived from the connective-tissue or other cells of the affected part.

F. force. See *Force, formative.*

F. lay'er. The parts where growth is proceeding in plants.

F. materials. In Botany, applied to the substances stored up in plants which furnish the materials for the growth of tissues, such as starch, sugar, and fat, for the growth of the cell wall, and albuminoids for the protoplasm and chlorophyll grains.

F. tissue. (G. *Bildungsgeewebe.*) The tissue from which new plant cells arise; also called *Meristem.*

F. yolk. See *Yolk, formative.*

Form'ed. (Form.) Shaped, made, constructed.

F. material. Term applied by Beale to that part of the matter of the body of a plant or an animal which has taken its ultimate form, and which is physiologically dead, in contradistinction to protoplasm or *Germinal matter.*

Form'ene. A synonym of *Methane.*

Formiate. (Formic acid. F. *formiate*; G. *ameisensaure Salze.*) A salt of formic acid. Same as *Formate.*

F. of ammo'nia. See *Ammonium formate.*

Form'ic. (L. *formica*, the ant. F. *formique.*) Of, or belonging to, the *Formica*, or ant.

F. acid. (F. *acide formique*; G. *Ameisensäure.*) CH_2O_2 . An acid first obtained by John Ray from the distillation of red ants. It occurs also in the caterpillar of *Bombyx processionea*, in common stinging nettles, in the fruit of the soap-nut tree, *Sapindus saponarius*, in tamarinds, and in the shoots of various pines. It is found in the sweat, blood, milk, muscle juice, and urine. It can be made by distilling a mixture of starch, binoxide of manganese, and strong sulphuric acid. It is a colourless acid liquid, producing stinging pain when applied to the skin, and causing a blister. It boils at 99.9°C . (211.82°F .); sp. gr. 1.2211. It is a powerful antiseptic. When heated with strong sulphuric acid pure carbon monoxide is evolved, recognisable by the colour of its flame. Diluted with an equal quantity of water, it is used externally as a stimulant to paralysed limbs; it produces an erythematous redness, and a stinging sensation as of nettles. Used internally in the *Spiritus formicarum*, G. Ph.

F. al'dehyde. COH_2 . This may be regarded as the aldehyde and ketone of formic acid, or as the oxide of the dyad radical methene. It can be obtained by passing the vapour of methyl alcohol, together with air, over ignited platinum. It has a powerfully irritating odour, and when warmed with an ammoniacal silver solution a mirror-like deposit of silver is formed. It has not been isolated from its solution.

F. ether. See *Ether, formic.*

F. oil. A synonym of *Furfural.*

Form'ica. (L. *formica*, an ant; from Gr. $\beta\acute{\upsilon}\rho\mu\eta\varsigma$, *Æol.* for $\mu\acute{\upsilon}\rho\mu\eta\varsigma$, an ant. F. *fourmi*;

G. *Ameise.*) A Genus of the Group *Heterogyna*, Order *Hymenoptera*, Class *Insecta*, the ant, emmet, or pismire.

Also, a term for a varicose tumour occurring on the anus and glans penis.

Also, the name of a black wart with a broad base and cleft surface, because pain is felt in it, especially on excision, like the bite of an ant.

Also, a synonym of *Herpes miliaris.*

F. ambulator'ia. (L. *ambulatorius*, from *ambulo*, to walk.) A synonym of *Herpes circinatus.*

F. corrosi'va. (L. *corrodo*, to gnaw.) A synonym of *Herpes exedens.*

F. ru'fa. (F. *fourmi rouge*; I. *formica*; G. *Waldameise.*) The systematic name of the ant, emmet, or pismire, which contains an acid juice and gross oil, which was supposed to possess aphrodisiac virtues. Ants have been used to make a stimulating cataplasm. The chrysalides of this animal are said to be diuretic and carminative, and by some were recommended in the cure of dropsy. The ant furnishes an acid called *Formic acid.*

A *Spiritus formicarum* is an official preparation of the present German Pharmacopœia.

Form'icant. (L. *formicans*, part. of *formico*, to creep like an ant.) Term applied to an extremely small and feeble pulse, feeling like the creeping of an ant.

Formica'tion. (L. *formico*, to creep like an ant, or to feel like the creeping of ants. F. *formication*; G. *Ameisenkriechen*, *Ameisenlaufen.*) A sense of pricking or tingling on the surface of the body, as if ants were creeping on it; it is an affection of the trunk of the nerve or of its central connections, not of its periphery. It occurs in organic diseases of the spinal cord, in hysteria, and as the effect of some poisons, as ergot. It is sometimes produced in the neighbourhood of wounds and fractures.

Form'icic. (L. *formica*, an ant.) Of, or belonging to, the *Formica*, or ant.

Also, the same as *Formic.*

F. acid. Same as *Formic acid.*

Formiciv'orous. (L. *formica*; *voro*, to devour.) Living on, or eating, ants.

Formifa'ction. (L. *forma*, shape; *facio*, to make.) Owen's term for the deposition of cells and elementary structures from the fluids so as to form a tissue.

Formioni'tril. A synonym of *Hydrocyanic acid*, being formamide with the elements of water removed.

Form'ix. Old term, used by Waltherus, *Sylv. Med.*, p. 651, for herpes esthiomenos, lupus, or noli me tangere.

Formobro'mide. Berzelius' term for *Bromoform.*

Formochlo'ride. Berzelius' term for *Chloroform.*

For'mo-guan'amine. Same as *Guanamine.*

Formoi'odide. Berzelius' term for *Iodoform.*

Formometh'ylal. Dumas' term for the ethereal liquid which passes over when a mixture of wood spirit, sulphuric acid, and peroxide of manganese is distilled. It is not a definite compound, but is a variable mixture of methylic formate and methylal. It is an anæsthetic when inhaled.

Formo'sa. An island off the east coast of China.

FORMULA—FORNIX.

F. cam'phor. See *Camphor, Formosa*.

Form'ula. (L. *formula*, dim. of *forma*, the form or manner of a thing. F. *formule*; I. *formula*; S. *formula*; G. *Formel*.) A fixed manner or method of doing a thing; a prescribed form.

In Pharmacy, a detailed description in due form of the name of each substance composing a medicine, of their several amounts, and of the mode of mixing or compounding them.

Also, a medical prescription.

Also, in Chemistry, an expression in symbols of the elementary constitution of a body.

Also, in Anatomy, an expression in symbols of some series of parts, as the teeth.

F., chemical. The mode of representing the proportionate composition of a chemical compound by symbols and figures; this is obtained by dividing the amount of each of its constituent elements in a hundred parts of the compound by the atomic weight of the element.

F., com'pound. A formula containing two or more official drugs or preparations.

F., constitu'tional. (L. *constitutio*, nature, arrangement.) A formula which, like a graphic formula, seeks to show the structure of a compound, of what parts it is built up, and its relations to other bodies.

F., dental. See *Dental formula*.

F., empir'ical. (Εμπειρικός, experienced.) A formula which simply expresses the composition of a body, without attempting to show the mode in which the atoms are linked together, in contradistinction to *F., rational*. Thus the empirical formula of urea is $\text{CH}_4\text{N}_2\text{O}$. This term was first employed by Berzelius.

F., empir'ical molec'ular. (Εμπειρικός; L. *moleculus*, dim. of *moles*, a mass.) A formula which not only expresses the composition of a body, but represents the molecular weight.

F., extempora'neous. (L. *ex tempore*, at the moment.) A formula made up on the spur of the moment, not necessarily in accordance with official instructions.

F., glyp'tic. (Γλυπτός, carved.) Representations of the constitutional formula of a chemical compound, effected not by writing, as in the graphic formula, but by representing the constituent atoms by solid balls, and their combinations by connecting rods.

F., graph'ic. (Γράφω, to write.) A formula in which the symbols of the elements of a compound are disposed in groups, so that the eye may readily recognise the relations of the substance to other compounds.

F., irr'ational. (L. *ir*, for *in*, neg.; *ratio*, a reason.) Same as *F., empir'ical*.

F., magis'tral. (L. *magistralis*, from *magister*, a master.) A formula composed on the instant; a prescription.

F. med'ica. (L. *medicus*, from *medeor*, to heal. G. *Arzneiformel*.) A synonym for a prescription.

F., molec'ular. (L. *moles*, a heap.) A short expression indicating the composition of each molecule of a substance. In cases where the body can be volatilised the molecular composition can be estimated from the vapour density.

F., offic'ial. (L. *officialis*, belonging to duty.) A formula decreed by official authority, such as appears in an authoritative pharmacopœia.

F. offic'inal. (L. *officina*, a workshop.)

A prescription made by authority. A term erroneously used for *F., official*.

F., rational. (L. *ratio*, a reason.) Term employed by Berzelius for a formula intended to indicate the chemical nature of the compound and its relations to other bodies. Thus, the rational formula for urea is $\text{CO}(\text{NH}_2)_2$, showing that it is a carbamide.

F., simple. A formula containing one official drug or compound only.

F., struc'tural. Same as *F., graphic*.

Form'ulary. (L. *formula*, a formula, an agreement.) One who is skilled in making up medicines.

Also (F. *formulaire*; I. *formolario*; S. *formulario*), a synonym of *Pharmacopœia*.

Form'ule. Same as *Formyl*.

Also, the same as *Formula*.

Form'yl. (Formic acid: Gr. ὄλη, the material of which a thing is made; F. *formyle*; I. *formilo*.) CHO. The hypothetical radical of formic acid and its derivatives.

F. al'dehyde. Same as *Formic aldehyde*.

F., perchlo'ride of. A synonym of *Chloroform*.

F., terchlo'ride. A synonym of *Chloroform*.

F., teri'odide of. A synonym of *Iodoform*.

Form'ylenes. C_2H_2 . The hypothetical triatomic radical of chloroform, bromoform, and iodoform.

Formyl'ia. Same as *Formyl*.

Formyl'ic. Relating to *Formyl*.

F. ac'id. A synonym of *Formic acid*.

Formylum. Same as *Formyl*.

F. chlora'tum. A synonym of *Chloroform*.

F. ioda'tum. A synonym of *Iodoform*.

F. perchlora'tum. A synonym of *Chloroform*.

F. trichlora'tum. A synonym of *Chloroform*.

For'nax. (L. *fornax*, akin to *furnus*.) A furnace.

For'nical. Relating to the *Fornix*.

For'nicate. (L. *fornix*, an arch. G. *gewölbt*.) Vaulted; applied to petals which are arched, as the upper petals of the *Salvia*.

F. convolu'tion. See *Gyrus fornicatus*.

For'nices. Plural of *Fornix*.

In Botany (G. *Deckklappe*), applied to the arched projections in the throat of the corolla of some boraginaceous plants.

Fornic'iform. (L. *fornix*, an arch.) Vaulted, having the form of an arch.

Fornix. (L. *fornix*, an arch. F. *voûte à trois piliers*, *trigone cerebral*; G. *Gewölbe*, *Bogen*, *Zwillingssbinde*.) A longitudinal commissure of the brain lying beneath the corpus callosum, and consisting of a thin arched layer of white, fibrous nerve tissue with free borders, the body of the fornix, and split at each extremity into two segments, the pillars or crura of the fornix. The fornix is originally the middle of the posterior part of the primitive cerebral hemisphere, and assumes its transversal position by reason of the growth backward of the hemisphere. The dimensions of the fornix of man are about 27 mm. long, 9—11 mm. wide, 4 mm. thick. See *F., body of*, and *F., pillars of*.

Also, the hollow on the under surface of the umbo of a shell.

FORNPECKLES—FOSSA.

Also, the upper convex shell of an oyster.

Also, in Botany, an arched projection in the throat of the corolla, as in the *Anchusa*.

F., body of. (*G. Körper des Gewölbes.*)

The middle triangular part of the fornix, broad behind, where it is connected with the under surface of the corpus callosum, and narrow in front, where it dips downwards, forming the anterior part of the third ventricle, and is separated from the corpus callosum by the septum lucidum. Its outer borders are free and lie upon the choroid plexuses; its under surface is separated from the optic thalami and the third ventricle by the velum interpositum. The greater number of its fibres are longitudinal, but towards the posterior part on its under surface the markings of transverse and oblique fibres may be seen, producing an appearance to which the term *lyra* or *psalterium* has been given. According to Sappey, these transverse fibres belong to the corpus callosum, but Gall and others look on them as commissural fibres connecting the two halves of the fornix.

F., bulbs of. The *Corpora albicantia*, so called because they are formed by the folding back of the anterior pillars of the fornix.

F. centralis. (*L. centralis*, in the middle.) A synonym of *F. cerebri*.

F. cerebri. (*L. cerebrum*, the brain. *G. Hirngewölbe.*) The structure described as *Fornix*.

F., columns of. (*G. Säulchen des Gewölbes.*) The *F., pillars of, anterior*.

F. conjunctivæ. (*L. conjungo*, to join together.) The line of reflection of the conjunctiva between the globe of the eye and the inner surface of the lid.

F. cranii. (*Κρανίον*, the skull.) The vault of the cranium, calvaria, or skull-cap.

F., crura of. (*L. crus*, a leg. *G. Gewölbeschenkel.*) The pillars of the fornix, but by many German anatomists applied only to the posterior pillars, the anterior ones being called the columns of the fornix.

F., crura of, anterior. (*L. crus*, a leg; *anterior*, in front.) The *F., pillars of, anterior*.

F., crura of, posterior. (*L. crus*; *posterior*, behind.) The *F., pillars of, posterior*.

F. nasi. (*L. nasus*, the nose. *G. Gewölbe der Nase.*) The roof of the nose.

F. of Gottschë. A pair of longitudinal ridges projecting from the roof of the midbrain of Teleostei into its cavity, which is known in higher forms as the iter a tertio ad quartum ventricululum.

F. periphericus. (*Περιφέρεια*, the line round a circular body.) A synonym of *Gyrus fornicatus*.

F. pharyngis. (*Φάρυγξ*, the gullet. *G. Schlundgewölbe.*) The upper end or roof of the pharynx.

F., pillars of, anterior. (*L. anterior*, in front. *F. piliers antérieurs de la voûte*; *G. vordere Säulen des Gewölbes.*) The two thin, roundish bands into which the fore part of the body of the fornix divides; each curves backwards and downwards, forming the margin of the foramen of Munro, along the wall of the third ventricle, then bends abruptly upwards and forwards, forming the white portion of one of the corpora albicantia, and, becoming the bundle of Vieq d'Azyr, enters the anterior tubercle of the optic

thalamus. The anterior pillars are connected near the foramen of Munro with the septum lucidum, the tænia semicircularis, and the peduncle of the pineal gland.

According to some recent observations, the fibres of the anterior pillars end in the corpora albicantia, the fibres running thence to the optic thalami being independent fibres.

F., pillars of, posterior. (*L. posterior*, hinder. *F. piliers postérieurs de la voûte*; *G. hintere Säulen des Gewölbes.*) The two broad, flattened, somewhat three sided bands into which the hind part of the body of the fornix divides; each curves outwards and downwards over the pulvinar of the optic thalamus to the descending cornu of the lateral ventricle, where, after giving off some fibres to the surface of the hippocampus major, it becomes the tænia hippocampi.

F., roots of. See *Radix ascendens fornicis* and *R. descendens fornicis*.

F. transversus. (*L. transversus*, turned across.) A lamina of medullary substance, triangular in form, horizontal in position, and free posteriorly, which is sometimes found uniting the diverging crura of the fornix.

F. vaginæ. (*L. vagina*, a sheath; *G. Scheidengewölben.*) That portion of the fundus of the vagina which arches over, and is attached to, the cervix uteri; it contains tubular glands.

Fornpeckles. A synonym of *Ephe-lides*.

Forpex. (*L. forpex*, fire-tongs.) Scissors.

Forskalea. Term used by Jussieu for *Forskohlea*.

Forskohlea. A Genus of the Nat. Order *Urticaceæ*.

F. angustifolia. Retz. (*L. angustus*, narrow; *folium*, a leaf.) Hab. Africa. Used as a diuretic and an adjuvant to sarsaparilla.

F. tenacissima. Linn. (*L. tenacissimus*, very tenacious.) Same properties as *F. angustifolia*.

Forstegg. Switzerland, Canton Saint Gallen. A cold sulphur water.

Förster. A German ophthalmic surgeon.

F.'s photometer. See *Photometer*, *Förster's*.

Forstero'nia. A Genus of the Nat. Order *Apocynaceæ*.

F. difformis. (*L. difformis*, mis-shapen.) A species indigenous in America. Said to be capable of removing freckles when used infused in milk. The juice removes warts.

Fortifying. (*F. fortifier*; from Low *L. fortifico*; from *L. fortis*, strong; *facio*, to make.) Making strong. A term sometimes applied to tonics.

Fortin's barometer. A cistern barometer having the bottom of the cistern made of leather, so that it can be raised or lowered by a screw, and so kept at a constant level.

Fortuna. Spain, Province of Murcia, near Archena. An earthy chalybeate water, of a temperature of 40° C. (104° F.), having a reputation for the cure of sterility in women.

Fortyknott. Popular name for the *Achyranthes repens*.

Fortygo. Hungary, in the District of Csik. An earthy sulphur spring.

Fos'sa. (*L. fossa*, a ditch; from *fodio*, to dig. *F. fosse*; *I. fossa*; *S. fosa*; *G. Grube.*) A large and more or less deep hollow, the opening of which is its widest part.

FOSSA.

F. acetabuli. (*L. acetabulum*, a drinking cup. *F. arrière-fond de la cavité cotyloïde*; *G. Pfannengrube*.) A rough depression at the bottom of the acetabulum. It extends from the crista downwards and forwards towards the incisura, and gives origin to the ligamentum teres.

F., amygdaloid. (*Ἀμυγδαλή*, an almond; *εἶδος*, likeness.) The space between the anterior and posterior pillars of the fauces, in which the tonsil, or amygdala, is situated on each side.

F. Amyntæ. (*Amyntas*, of Rhodes, an ancient surgeon.) A bandage applied by Amyntas in cases of fracture of the nose. The several turns of the bandage passed round the head and crossed at the root of the nose.

According to Quincy, a term for a double-headed bandage.

F., anconeal. (*Ἄγκων*, the elbow.) The *F. olecranon*.

F. anonyma. (*Ἀνώνυμος*, without name.) The depression between the crura of the antehelix of the auricle. The *F. triquetra*.

F. anterior major humeri. (*L. anterior*, that which is in front; *major*, comp. of *magnus*, great; *humerus*, the bone of the upper arm.) A depression situated on the anterior surface of the humerus above the trochlea and opposite to the fossa olecrani. It receives the coronoid process of the ulna during flexion of the forearm. The *F. coronoid*.

F. anterior minor humeri. (*L. anterior*; *minor*, comp. of *parvus*, little; *humerus*, the bone of the upper arm.) A slight depression situated on the anterior surface of the humerus, immediately above the capitulum. It receives the anterior margin of the head of the radius in extreme flexion of the forearm.

F. anthelialis. (*Ἀνθελίξ*, the interior of the two curved prominences of the ear.) The same as *F. navicularis auriculæ*.

F. arcuata. Same as *F. subarcuata*.

F. articularis. (*L. articula*, a joint.) The glenoid cavity of the temporal bone. The *F., glenoid*.

F. axilla'ris. (*L. axilla*, the armpit. *F. fosse d'aisselle*; *G. Achselhöhle*.) The armpit. A pyramidal depression situated below the shoulder and between the upper arm and the chest. The base is the inferior opening; the apex, above, communicates with the fossa supraclavicularis by means of a triangular opening between the subclavius muscle, the insertion of the scalenus muscle to the first rib, and the coraco-clavicular ligament. It is bounded in front by the pectoralis major and minor, the clavicular portion of the deltoid muscle, and the coraco-clavicular ligament; behind, by the latissimus dorsi, teres major, and subscapularis muscles. The lateral or external narrowest side is formed by the coraco-brachialis and biceps muscle, the humerus, and shoulder-joint; the inner wall by the serratus magnus.

F. bulbi urethræ. (*Βολβός*, a bulb; *ὀυρήθρα*, urethra.) An enlargement in the diameter of the urethra in the pars cavernosa, just below the lower end of the pars membranacea.

F., canine. (*L. caninus*; from *canis*, a dog. *F. fosse canine*; *G. Oberkiefergrube*.) A depression on the external surface of the superior maxillary bone, beneath the infra-orbital foramen, by the prominence of the canine tooth. It gives origin to the levator anguli oris.

F. capitis femoris. (*L. caput*, the head; *femur*.) The same as *Fovea capitis femoris*.

F. cereb'ralis anterior. (*L. cereb'ralis*, belonging to the brain; *anterior*, in front.) The *F. cranii anterior*.

F. cereb'ralis me'dia. (*L. cereb'ralis*; *medius*, in the middle.) The *F. cranii media*.

F. cereb'ralis posterior. (*L. cereb'ralis*; *posterior*, hinder.) The *F. cranii posterior*.

F. coch'leæ. (*Cochlea*.) A somewhat funnel-shaped depression the bottom of which constitutes the lamina cribrosa of the internal auditory meatus.

F. cochleariformis. (*L. cochlea*, a spoon; *forma*, shape.) The groove on the upper surface of the processus cochlearis in the tympanum for the tensor tympani muscle.

F., compound. A fossa which is made up of depressions in two or more contiguous bones.

F. con'chæ. (*Κόγχη*, a bivalve shell-fish. *G. muschelförmige Grube*, *Muschelhöhle*.) A synonym of *Concha auris*.

F. condylo'idea. (*Κόνδυλος*, a knob; *εἶδος*, likeness.) A depression situated behind each condyle of the occipital bone. It presents the opening of a short canal, the foramen condyloideum posterius.

F. corona'lis. (*L. corona*, a crown.) The depression on the inner surface of the orbital plate of the frontal or coronal bone for the anterior lobe of the cerebrum.

F. cor'onoid. (*Κορώνη*, a crown; *εἶδος*, resemblance. *F. fosse coronoïdienne*.) The depression on the fore part of the humerus, which receives the coronoid process of the ulna in flexion of the forearm.

F. costa'lis inf'erior. (*L. costa*, a rib; *inferior*, that is below.) The inferior facet on the body of a dorsal vertebra for articulation with the head of the rib.

F. costa'lis supe'rior. (*L. costa*; *superior*, that is above.) The facet near the upper border of a dorsal vertebra for articulation with the head of a rib.

F. cotylo'idea. (*Κοτύλη*, a cup; *εἶδος*, resemblance.) The acetabulum.

Also, the notch of the acetabulum.

F. cra'nii ante'rior. (*L. cranium*, the skull; *anterior*, in front.) This fossa is situated at the base of the skull, in front of the lesser wings of the sphenoid. It is formed by the horizontal plate of the frontal, the cribriform plate of the ethmoid, and by the ethmoidal process and lesser wing of the sphenoid. It presents the crista galli, the foramen cæcum, the olfactory groove and cribriform plate of the ethmoid bone, and the roof of the orbit. It is traversed by the ethmoidal and sphenoidal sutures.

F. cra'nii me'dia. (*L. cranium*; *medius*, in the middle.) A fossa situated on the inner surface of the base of the cranium, between the lesser wings of the sphenoid and the upper edge of the petrous portion of the temporal bone. It is formed by the sphenoid, temporal, and parietal bones. It presents the sella turcica, the square plate behind the sella turcica, the olivary tubercle, optic groove, cavernous groove, the foramen lacerum medium, the anterior clinoid process, the superior surface of the petrous portion of the temporal bone, the foramen spinosum, ovale, and rotundum. It is

FOSSA.

traversed by the squamous, speno-parietal, speno-temporal, and petroso-sphenoidal sutures.

F. cranii posterior. (L. *cranium*; *posterior*, hinder.) A fossa situated on the inner surface of the base of the cranium, behind the upper edges of the petrous processes. It is formed chiefly by the occipital and temporal bones. It presents the cerebellar fossæ of the occiput, the interior occipital crest, the sulci laterales, the foramen lacerum posterius, the mastoid and internal condyloid foramina, the foramen magnum and basilar process, and the meatus auditorius internus, aquæductus vestibuli, and superior petrosal groove, with the depression for the Gasserian ganglion. It is traversed by the mastoid and petro-occipital sutures.

F. cruris heliçis. (L. *crus*, the leg; *heliçis*, a prominence of the ear. G. *Grube des Leistenschenkels*.) The pit or fissure in the cartilage of the ear which is bounded by the commencement of the helix in front, and is situated between the two portions of the concha.

F. cubiti. (L. *cubitus*, the elbow. G. *Ellenbogengrube*.) The depression situated on the inner and anterior side of the elbow-joint. It is of triangular form, the apex directed downwards. It is indistinctly bounded above by the lower ends of the biceps flexor cubiti and the brachialis anticus, which, along with the common origin of the flexors of the fingers, form its floor; on the radial side it is bounded by the supinator longus, and on the ulnar side by the pronator teres.

F. cystidis fellææ. (Κύστις, the bladder; L. *fellæus*, from *fel*, bile.) The same as *F. vesicæ fellææ*.

F., digastric. (Δίς, twice; γαστήρ, the belly. F. *rainure digastrique*; G. *Warzenausschnitt*.) A deep groove on the inner side of the mastoid process of the temporal bone for the attachment of the posterior part of the digastric muscle.

F. digastrica mandibulæ. (L. *mandibula*, the lower jaw. F. *fossette digastrique*.) An oval depression on the inner surface of the inferior maxillary bone on each side of the symphysis, just below the mental spine, for the attachment of the anterior part of the digastric muscle.

F. digastrica os'sis temporalis. (L. *os*, a bone; *temporalis*, belonging to the temples.) The *F., digastric*.

F., digital. (L. *digitus*, a finger.) The same as *F., trochanteric*.

F. Douglasii. (Douglas, a Scotch anatomist. G. *Douglas'scher Raum*.) A term sometimes applied to the recto-uterine fossa alone, and sometimes to the recto-uterine fossa together with the excavatio recto-uterina. See *Douglas's pouch*.

F. ductus venosi. (L. *ductus*, a duct; *venosus*, belonging to a vein.) The depression on the under surface of the liver which is occupied by the remains of the ductus venosus. It constitutes the posterior part of the fossa longitudinalis sinistra hepatis. The *Fissure of liver for ductus venosus*.

F. elliptica. The *Fovea hemi-elliptica*.

F. ethmoidalis. (Ἠθμός, a sieve; ἴδος, resemblance.) The depression on the upper surface of the body of the ethmoid bone which lodges the olfactory tract and bulb.

F., floccular. (L. *flocculus*, a small lock of wool.) A depression on the posterior surface of the petrous portion of the temporal

bone, extending in the young child into the arch of the superior semicircular canal; in some mammals it is a deep pit.

F. genu. (L. *genu*, the knee.) The popliteal space.

F. glandis. (L. *glans*, an acorn.) The groove-like depression behind the glans penis.

F. glandulæ lacrimæ lis. (L. *glandula*, dim. of *glans*, an acorn; *lacrima*, a tear. F. *fossette lacrymale*; G. *Thränen-drüsen-grube*.) A concavity on the under surface of the orbital plate of the frontal bone, near the outer part and behind the zygomatic process. It lodges the lachrymal gland.

F. glandularis. A synonym of *F. glandulæ lacrimæ lis*.

F., glenoid. (Γλήνη, a shallow joint-socket; ἴδος, resemblance. F. *cavité glénoïde*; G. *Gelenkgrube*, *Oberkiefergrube*.) The depression in the temporal bone for articulation with the head of the inferior maxillary bone.

F., guttural. (L. *guttur*, a throat. G. *Schlundgrube*.) The depression on the basal surface of the cranium, between the foramen magnum and the posterior nares; it is the middle division of the lower surface of the base of the skull.

F. heliçis. (Ἠλίζ, a spiral, the helix of the ear.) The narrow curved groove in the auricle, lying between the helix and the anti-helix.

F. hemispherica. (L. *hemisphærium*, a half circle.) The *Fovea hemispherica*.

F. hyaloïdea. (Ὑαλος, glass; ἴδος, likeness.) A spheroidal depression in the vitreous humour which lodges the lens. The hyaloid membrane and the capsule of the lens here coalesce, forming the suspensory ligament of the lens.

F. hypophysæos. (ὑπόφυσις, a process.) A synonym of the *Sella turcica*, because it lodges the pituitary body, or *Hypophysis cerebri*.

F. ileocæcalis. (Ιλεum; cæcum.) A depression, 3 cm. deep and of variable length, situated between the mesentery, near the root of the vermiform process, the cæcum, and the end of the small intestine.

F. ileocæcalis ante'rior. (L. *ante'rior*, that is in front.) A variety, occasionally occurring, of the *F. ileocæcalis*.

F. ileocæcalis infe'rior. (L. *inferus*, that is below.) A synonym of the *F. ileocæcalis*.

F. ileocæcalis poste'rior. (L. *posterus*, that is behind.) A synonym of the *F. ileocæcalis*.

F. iliac. (Ιλία, the bone of that name. F. *fosse iliaque interne*; G. *Darmbeingrube*.) The smooth concavity which is presented by the upper and anterior part of the internal surface of the ilium.

F. ilio-pectine'a. (Ιλιον; pectineus.) A surface-marking presenting a hollow between the muscles of the upper fore and inner part of the thigh immediately below Poupart's ligament. It is triangular in form, broad and deep above, narrower and pointed below, and dips as deep as the iliopectineal tubercle. It is bounded above by Poupart's ligament, externally by the psoas major and iliacus muscles, internally by the pectineus, and below by the sartorius. It is connected with the abdominal cavity by the femoral canal, and it is filled with the femoral artery and vein and their common sheath, and with

lymphatic glands, nerves, and fat. Also called *Scarpa's triangle*.

F. incisiva. (L. *incido*, to cut into.) A synonym of the *F. myrtiform*.

F., inci'sor, of low'er jaw. (L. *incido*.) A shallow depression on the anterior surface of the inferior maxillary bone, just below the incisor teeth, on each side of the symphysis, from which the levator labii inferioris arises.

F., inci'sor, of up'per jaw. The *F. myrtiform*.

F., infraclavic'ular. (L. *infra*, below; *clavicle*.) A triangular space between the pectoralis major and deltoid muscles. It is broad just below the clavicle, but becomes narrower as it extends towards the arm. It presents in its deeper part the coraco-clavicular fascia, with the objects perforating that fascia.

F. infraorbitar. (L. *infra*, below; *orbita*, the orbit.) A synonym of *F. canine*.

F. infraspina'ta. (L. *infra*, below; *spine* of scapula. *F. fosse sous-épineuse*; G. *Untergrätengrube*.) The slightly concave surface of the scapula beneath the spine. It gives origin to the infraspinatus and teres minor muscles.

F. infraspinos. (L. *infra*, below; *spina*, a thorn.) The same as *F. infraspinata*.

F. infratemporal'is. (L. *infra*, beneath; *tempora*, the temples. G. *Unterschläfen-grube*.) A synonym of *F. zygomatic*.

F. inguinal'is externa peritone'i. (L. *inguen*, the groin; *externus*, that which is outside; *peritoneum*.) See *Fovea inguinalis externa peritonei*.

F. inguinal'is interna peritone'i. (L. *internus*, within.) See *Fovea inguinalis interna peritonei*.

F. inguina'lis latera'lis peritone'i. (L. *lateralis*, lateral.) A synonym of *F. inguinalis externa peritonei*.

F. inguina'lis me'dia peritone'i. (L. *medius*, middle.) A synonym of *F. inguinalis interna peritonei*.

F. inguina'lis media'lis peritone'i. (L. *medialis*, belonging to the middle.) A synonym of *F. inguinalis interna peritonei*.

F. innomina'ta. (L. *innominatus*, unnamed.) The depression in the auricle of the ear, the anterior part of which presents the opening of the external auditory meatus.

F., intercondylar. (L. *inter*, between; *condyle*.) The *F. intercondyloidea femoris posterior*.

F. intercondylo'i'dea. (L. *inter*, between; *condyle*.) The same as *F. intercondyloidea posterior*.

F. intercondylo'i'dea fem'oris ante'rior. (L. *femur*, the thigh-bone; *anterior*, that is in front.) The groove between the condyles of the femur in front, over which the patella plays.

F. intercondylo'i'dea fem'oris poste'rior. (L. *femur*, the thigh-bone; *posterior*, that is behind.) The deep, rough depression which is seen between the condyles on the posterior aspect of the femur, and which gives attachment to the mucous ligament of the knee-joint.

F. intercondylo'i'dea tib'ia ante'rior. (L. *tibia*, the bone of that name; *anterior*, that is in front.) The slight depression in front of the spinous process of the tibia.

F. intercondylo'i'dea tib'ia poste'

rior. (L. *tibia*; *posterior*, that is behind.) The slight depression situated behind the spinous process of the tibia.

F. ischio-rect'al. (*Ischium*, the bone of that name; *L. rectum*, the straight gut. *F. excavation ischio-rectale*; G. *Mastdarmsitzbein-grube*.) An irregular pyramidal hollow, about two inches deep, between the side of the rectum and the tuberosity of the ischium, having its base downwards. The inner side is oblique, and is bounded by the levator ani, covered by the anal fascia, and below by the external sphincter ani; the outer side is perpendicular and formed by the obturator muscle covered with its fascia. In front it extends to the triangular ligament, and behind are the great sacro-sciatic ligament and the gluteus maximus muscle. To expose it completely the skin, superficial and deep fascia, and the gluteus and sphincter ani muscles must be removed. The pudic vessels and nerve lie along the outer wall. The middle of the space is crossed by the inferior hamorrhoidal vessels and nerve. Anteriorly are two superficial perineal nerves, and posteriorly is a branch of the fourth sacral nerve, with cutaneous branches of the sciatic vessels and nerve. It is occupied by a mass of fat, and is crossed by the superficial transverse perineal muscle.

F., jugular. (*Jugular*. *F. fosse jugulaire*; G. *Drosseladergrube*.) A depression in the petrous portion of the temporal bone, situated behind the openings of the carotid canal and the aquæductus cochleæ. It is bounded externally by the vaginal and styloid processes, the stylo-mastoid foramen, and auricular fissure, and posterior to it is the jugular surface. It lodges the bulb of the jugular vein, and the auricular branch of the pneumo-gastric nerve.

F. jugula'ris col'li. (L. *collis*, the neck.) The same as *F. suprasternal*.

F., lach'rymal. (L. *lachryma*, a tear.) The *F. glandula lachrymalis*.

Also, a depression, formed by the sulcus lachrymalis of the lachrymal bone and a similar furrow on the superior maxillary bone, which contains the lachrymal sac.

F. lacrima'lis. (L. *lacrima*, a tear.) A synonym of *F. glandula lacrimalis*.

F. laryngo-pharynge'a. (Λάρυγξ; φάρυγξ.) A depression situated at the posterior extremity of the *Plicæ aryepiglotticæ*.

F. lenticula'ris. (L. *lenticula*, a lentil.) The *F. hyaloidea*.

F. ligamen'ti veno'si. (L. *ligamentum*, from *ligo*, to bind; *venosus*, belonging to a vein.) The same as *F. ductus venosi*.

F. longitudina'lis dex'tra hep'atis. (L. *dexter*, on the right hand; *hepar*, the liver. G. *linke Längsfurche der Leber*.) A depression on the under surface of the liver. The anterior part is the fossa for the gall-bladder. The posterior part is short but deep, and notches the posterior thick border of the liver; it is the fossa venæ cavæ.

F. longitudina'lis sinis'tra hep'atis. (L. *sinister*, on the left hand; *hepar*. G. *rechte Längsfurche der Leber*.) A depression on the under surface of the liver, extending from the anterior border to the incisura interlobularis; its anterior longer portion between the sharp anterior border of the liver and the left extremity of the fossa transversa is the fossa venæ umbilicalis, which is often partially covered by a bridge of hepatic substance. The posterior

FOSSA.

part, which is somewhat inclined to the right, is the fossa ductus venosi.

F. mag'na. (*L. magnus*, great.) The *F. navicularis auriculæ*.

Also, the *Vulva*.

F. mag'na mulie'bris. (*L. magnus*, great; *mulier*, a woman.) The *Vulva*.

F. mag'na Syl'vii. The *Fissure of Sylvius*.

F. mandibula'ris. (*L. mandibula*, a jaw. *G. Unterkiefergrube*.) A synonym of *F.*, *glenoid*.

F. maxilla'ris. (*L. maxilla*, a jaw. *G. Oberkiefergrube*.) A synonym of *F.*, *canine*.

F. max'ima. (*L. maximus*, greatest.) A synonym of the *F. olecrani*.

F. medullæ oblongatæ. (*L. medulla*, marrow; *oblongus*, oblong.) Term applied to the clivus, or inclined part, of the basilar portion of the occipital bone on which the medulla oblongata rests.

F., ment'al. (*L. mentum*, the chin.) A shallow depression on the fore part of the body of the inferior maxillary bone on each side of the symphysis. It gives attachment to the levator labii inferioris muscle.

F., mesopter'ygoid. (*Μέσος*, middle; *pterygoid* bone.) The single median depression between the two pterygoid plates in the cat.

F., Mohrenheim's. A synonym of the *F.*, *infraclavicular*.

F., Morgagni's. (*Morgagni*, an Italian anatomist.) A synonym of the *F. navicularis urethræ*.

F., myr'tiform. (*L. myrtus*, a myrtle; *forma*, shape.) The depression in the front of upper jaw, just above the incisor teeth and between the median line and the canine eminence.

F., navic'ular. (*L. navicula*, a small boat.) A depression at the base of the internal pterygoid plate of the sphenoid bone, which gives attachment to the tensor palati muscle.

F. navicular'is. (*L. navicularis*, relating to a small ship.) A synonym of the *F. laryngopharyngea*.

F. navicular'is auriculæ. (*L. navicularis*; *auricula*, the outer ear; *dim. of auris*, the ear. *G. kahnförmige Grube der Ohrmuschel*.) The depression between the crura of the antihelix. The *F. triquetra*.

F. navicular'is urethræ. (*L. navicularis*; *urethra*, the outer ear; *dim. of auris*, the ear. *G. kahnförmige Grube, schifförmige Grube der Harnröhre*.) A dilatation, 2 cm. long, 9 mm. wide, situated just within the external opening of the meatus urinarius; in it is situated the lacuna magna; it is lined with stratified pavement epithelium.

F. navicular'is vestibuli vaginæ. (*L. navicularis*; *vestibulum*, an antechamber; *vagina*. *G. kahnförmige Grube der Scham*.) A depression situated at the posterior commissure of the labia majora, between it and the frænulum pudendi.

F. navicular'is vulvæ. (*L. vulva*.) The same as *F. navicularis vestibuli vaginæ*.

F. of antihel'ix. (*Antihelix*.) The *F. navicularis auriculæ*.

F. of hel'ix. See *F. helicis*.

F. of the gall-bladder. The depression on the under surface of the right lobe of the liver for the gall-bladder. Same as *Fissure of liver for gall-bladder*.

F. of ve'na ca'va. Same as *Fissure of liver for vena cava*.

F., olec'ranon. (ὀλὲν, the elbow; κρανίον, the head. *F. fosse olécrânienne*; *G. Ellenbogengrube*.) A deep, triangular depression situated at the posterior surface of the humerus, immediately above the trochlea. It receives the olecranon process of the ulna when the forearm is extended.

F. orbicula'ris. (*L. orbiculus*, a small disc.) The *Fovea hemispherica*.

F. ova'lis aur'is. (*L. ovalis*, egg-shaped; *auris*, the ear.) The *F. triquetra*.

F. ova'lis cor'dis. (*L. cor*, the heart.) The *F. ovalis of heart*.

F. ovalis of ear. The *F. triquetra*.

F. ovalis of heart. (*L. ovalis*, oval, egg-shaped. *F. fosse ovale*; *G. eiförmige Grube des Herzens*.) A shallow depression situated on the right aspect of the septum auricularum, which is the remains of the foramen ovale. Its vertical diameter is about 20 mm., its horizontal about 14 mm. It is surrounded by the annulus ovalis, which is defective at the lower part; its floor is thin and translucent, and is sometimes obliquely perforated by a small hole, the remains of the foramen ovale; the fibres forming it spring chiefly from the right and lower border of the fossa.

F. ova'rii peritone'i. (*Ovarium*; *peritoneum*.) A depression in the peritoneum situated between the ovary and the sacro-iliac synchondrosis.

F. palati'na. (*L. palatus*, the palate.) The arch of the hard palate.

F., palatine, anterior. (*L. palatus*, the palate; *anterior*, in front.) The depression in the middle line of the palate, immediately behind the incisor teeth, into which the incisive canals open.

F. pararecta'lis. (Παρά, near to; *L. rectum*, the straight gut.) A narrow groove or depression in the peritoneum situated between the posterior surface of the broad ligament of the uterus and the internal surface of the posterior wall of the true pelvis.

F. paravesical'is. (Παρά, near to; *L. vesica*, the bladder.) A depression in the perineum situated in front of the broad ligament of the uterus and between it and the more or less distended urinary bladder. It is occupied by loops of intestine.

F., pari'etal. (*L. paries*, a wall.) The deepest part of the inner surface of the parietal bone opposite the parietal eminence.

F. paruteri'na. (Παρά, near to; *L. uterus*, the uterus.) The same as *F. pararectalis*.

F. patellæ. (*L. patella*, a small plate, the knee-cap.) The same as *F. intercondyloidea femoris anterior*.

F. patella'ris. (*L. patella*, the knee-cap.) The same as *F. intercondyloidea femoris anterior*.

Also (*L. patella*, a small dish), the same as *F. hyaloidea*.

F. peduncula'ris. (*L. pedunculus*, a little foot.) The great horizontal fissure of the cerebellum.

F. perinæ'i. (Περίναον, the perineum. *G. Mittelfleischgrube*.) The *F.*, *ischio-rectal*.

F. pituita'ria. A synonym of the *Sella turcica*, because it lodges the *Pituitary body*.

F., poplite'al. (*L. poples*, the knee. *G.*

FOSSA.

Knöchel, Knöchelgrube.) The hollow at the back of the knee. It is of rhombic form, the acute angles directed upwards and downwards. It is bounded anteriorly by the planum popliteum of the femur and the posterior wall of the capsule of the knee-joint, externally by the biceps femoris, internally by the semitendinosus and semimembranosus muscles, below by the two heads of the gastrocnemius. It contains the main arteries and nerves for the lower leg and foot, lymphatic glands, and much fat.

Also, a term for the popliteal surface of the femur.

Also, a synonym of *F. intercondyloidea femoris posterior*.

F., portal. (*L. porta*, a gate.) Same as *Fissure, portal*.

F. posterior humeri. (*L. posterior*, that is behind; *humerus*, the bone of the upper arm.) The same as *F., olecranon*.

F., pterygoid. (*Πτέρυξ*, a wing; *εἶδος*, likeness. *F. fosse pterygoïde*; *G. Flügelgrube*.) The space enclosed by the two plates of the pterygoid processes of the sphenoid bone; it gives origin to the internal pterygoid muscle.

Also, see *F. pterygoidea mandibule*.

F., pterygoid, of lower jaw. The *F. pterygoidea mandibule*.

F., pterygoid, of sphenoid bone. The *F. pterygoid*.

F. pterygoïdea mandibulæ. (*Πτερυγο-εἶδος*, like a wing.) A depression upon the fore part of the neck of the condyle of the lower jaw, to which the external pterygoid muscle is attached.

F. pterygo-maxilla'ris. (*Πτέρυξ*, a wing.) A synonym of the *F., spheno-maxillary*.

F. pterygo-palatina. (*Πτέρυξ*, a wing; *L. palatus*, the palate.) A synonym of *F., spheno-maxillary*.

F. pubo-vesica'lis. (*L. os pubis*, the pubic bone; *vesica*, the bladder.) The pouch or depression in the peritoneum situated between the posterior surface of the os pubis and the anterior surface of the bladder.

F. recto-uterina. (*L. rectum*, the straight gut; *uterus*, the uterus.) The space between the uterus and the rectum above the recto-uterine excavation, and therefore above the upper borders of the plicæ recto-uterinæ.

F., recto-vesi'cal. (*L. rectum*, the gut of that name; *vesica*, the bladder. *F. cul-de-sac recto-vesical*; *G. Mastdarmblasengrube*.) The pouch in the peritoneum lying between the rectum and the urinary bladder.

F. rhomboida'lis. Same as *F. rhomboidæ*.

F. rhomboïdea. (*Ῥόμβος*, a rhomb; *εἶδος*, likeness. *G. Rautengrube*.) The floor of the fourth ventricle; also the ventricle itself.

F. Rolan'di. Same as *Fissure of Rolando* or *Sulcus centralis*.

F. Rosenmülleri. (*Rosenmüller*, a German anatomist.) A synonym of the *Recessus pharyngis*.

F. sagitta'lis dex'tra. (*L. sagitta*, an arrow; *dexter*, on the right hand.) The same as *F. longitudinalis dextra hepatis*.

F. sagittal'is sinis'tra. (*L. sagitta*; *sinister*, on the left hand.) The same as *F. longitudinalis sinistra hepatis*.

F. scaphoïdea. (*Σκαφοειδής*, like a ship.) The long, curved depression in the au-

ricle of the ear between the helix and the anti-helix. Also called *F. helicis*.

F. sell'æ tur'cicae. The hollow of the *Sella turcica* for the reception of the pituitary body.

F. semiluna'ris ma'jor. (*L. semi*, half; *luna*, a moon; *maior*, greater.) The same as *Sigmoid cavity, greater*.

F. semiluna'ris mi'nor. (*L. minor*, less.) The same as *Sigmoid cavity, lesser*.

F. semiova'lis. (*L. semi*, half; *ovalis*, from *ovum*, an egg.) A synonym of the *Fovea hemielliptica*.

F. sigmoïdea os'sis tempora'lis. (*Σίγμα*, the letter S; *εἶδος*, resemblance; *L. os*, a bone; *temporalis*, temporal.) The broad, deep furrow situated on the inner surface of the mastoid process of the temporal bone. It is occupied by the transverse sinus, and contains the openings of the mastoid foramina.

Also, a synonym of the greater sigmoid cavity of the ulna.

F. sigmoïdea ul'næ ma'jor. See *Sigmoid cavity, greater*.

F. sigmoïdea ul'næ mi'nor. See *Sigmoid cavity, lesser*.

F., simple. A fossa whose whole extent is confined to one bone.

F., spheno maxillary. (*F. fosse sphéno-maxillaire*; *G. Flügelgaumengrube, Keilbein-gaumengrube*.) A small, triangular fossa situated at the apex of the orbit. The base or upper wall is formed by the body of the sphenoid, and it is bounded behind by the pterygoid process; in front by the superior maxillary bone; internally by the vertical plate of the palate bone; externally it is continuous with the pterygo-maxillary fissure. The apex is formed by the approximation of the pterygoid process to the tuberosity of the maxillary bone. The pterygo maxillary, the sphenoidal, and spheno-maxillary fissures communicate with this fossa. The posterior wall presents the orifices of the foramen rotundum, and of the Vidian and pterygo-palatine canals; the internal wall, of the spheno-palatine foramen, and the apex of the posterior palatine and accessory palatine canals. The spheno-maxillary fossa gives passage to the internal maxillary, pterygo-palatine, and spheno-palatine arteries; to the deep branch of the anterior facial vein, to the inferior ophthalmic, pterygo-palatine, and spheno-palatine veins; to the orbital and superior maxillary nerves; and to the spheno-palatine ganglion and its pharyngeal branches.

This fossa is described by the Germans under the name of *F. pterygo-palatina*, and the term spheno-maxillary fossa is applied to the zygomatic fossa.

F., spheno-pal'atine. (*Sphenoid bone*; *superior maxillary bone*.) The *F., spheno-maxillary*.

F. subarcua'ta. (*L. sub*, under; *arcuatus*, arched.) A deep pit existing in the embryonic cartilago petrosa, and situated beneath the eminence formed by the superior semicircular canal. According to v. Tröltsch, it extends through the whole of bony petrous bone, and opens behind the auricle, with a large jagged opening upon the external surface of the mass, which subsequently becomes the mastoid process. It is at first covered with a cartilaginous layer, but becomes patent in the new born child. It remains as a narrow slit or fissure. It contains an artery and a vein, and, according to Kölliker,

FOSSA.

the cavities which form in it explain the anomalous position of the tensor tympani and stapedius muscles in the tympanum.

F. subcæcalis. (L. *sub*, beneath; *cæcum*, the gut of that name.) A synonym of *F. ileocæcalis*.

F., subclavic'ular. (L. *sub*, under; *clavicula*.) The surface depression below the outer end of the clavicle on the inner side of the head of the humerus. It varies much in depth.

F. subinguinalis. (L. *sub*, beneath; *inguen*, the groin.) A synonym of the *F. iliopectinea*.

F., sublingual. (L. *sub*, beneath; *lingua*, the tongue.) A shallow, smooth, oval cavity situated on the inner surface of the inferior maxillary bone, just above the mylo-hyoid ridge. It lodges the sublingual gland.

F., submaxillary. (L. *sub*, under; *maxilla*, the jaw.) An oblong, shallow depression situated beneath the most prominent part of the mylo-hyoid ridge of the inferior maxillary bone. It lodges the submaxillary gland.

F., suborbital. (L. *sub*, under; *orbis*, a circle.) A synonym of the *F., canine*.

F., subpyramidal. (L. *sub*, under; *pyramis*, a pyramid.) A depression in the inner wall of the tympanum situated beneath the pyramid and behind the fenestra rotunda. The bottom of it is perforated by several foramina.

F. subrotunda. (L. *sub*, under; *rotundus*, round.) A synonym of *Fovea hemispherica*.

F., subscap'ular. (L. *sub*, under; *scapula*, the shoulder-blade. *F. fosse sous-scapulaire*; *G. Unterschulterblattgrube*.) A wide concavity formed by the anterior surface of the scapula. The two posterior thirds give origin to the subscapularis muscle, and present several lines, which pass obliquely upward and forward. The anterior third is smooth and has no muscular attachment. The fossa is separated from the posterior border by the surface for the attachment of the serratus magnus.

F. sulciformis. (L. *sulcus*, a furrow; *forma*, shape.) A furrow in the vestibule of the inner ear at the entrance to the aquæductus vestibuli, described by Morgagni.

F., supraclavic'ular. (L. *supra*, above; *clavicula*.) The posterior triangle of the neck.

The term is sometimes restricted to the lowest and deepest part of the triangle where the omohyoid muscle and the brachial plexus lie.

F. suprasphenoidal'is. (L. *supra*, above; *Gr. σφηνοςειδής*, wedge-shaped.) The fossa of the *Sella Turcica*.

F. supraspina'ta. (L. *supra*, above; *spina*, a spine. *F. fosse sus-épineuse*; *G. Obergrätengrube*.) A smooth, concave surface situated beneath the spine of the scapula, to the internal two thirds of which the supraspinatus muscle is attached.

F., supraster'nal. (L. *supra*, above; *sternum*, the breast-bone.) A surface-marking at the lower median part of the front of the neck. It is bounded laterally by the sternomastoid; below by the ligamentum interclaviculare; and posteriorly by the sternohyoids and sternothyroids.

F. supratrochlea'ris ant'erior. (L. *supra*, above; *trochlea*, a pulley; *anterior*, in front.) The *F., coronoid*.

F. supratrochlea'ris post'erior. (L. *posterior*, hinder.) The *F., olecranon*.

F. Syl'vii. A synonym of *Fissura Sylvii*.

F., temp'oral. (L. *tempora*, the temples. *F. fosse temporale*; *G. Schläfengrube*.) A deep hollow at the side of the head. It is bounded in front, above, and behind, by the temporal ridge. Below it is continuous with the zygomatic fossa, the limit between the two being the horizontal crest on the outer surface of the great wing of the sphenoid bone internally, and externally the zygomatic arch. Below and anteriorly is the upper part of the malar bone. The temporal fossa is formed by the temporal, parietal, frontal, sphenoid, and malar bones. It is occupied by the temporal muscle.

F. trag'ica. (Τράγος, a goat.) The depression in front of the external auditory meatus concealed by the tragus.

F. transvers'a hep'atis. (L. *transversus*, cross-wise; *hepar*, the liver.) The transverse depression on the under surface of the liver which contains the vena porta. The *Fissure of liver, transverse*.

F. triangula'ris auric'ulæ. (L. *triangularis*, three-angled; *auricula*, a little ear.) The depression between the crura of the antihelix of the auricle.

Also, called *F. triquetra*.

F. triangula'ris col'li. (L. *triangularis*; *collum*, the neck.) The anterior triangle of the neck.

F. triangula'ris medul'læ oblongat'æ. The central furrow of the *Calamus scriptorius*.

F. trique'tra. (L. *triquetrus*, three-cornered.) The depression between the crura of the antihelix of the auricle.

F., trochanter'ic. (Τροχαντήρ, the ball on which the hip-bone turns. *F. cavité digitale*; *G. Rollhügelgrube*.) A deep depression situated at the back part of the trochanter major. It gives origin, from above downwards, to the gemellus superior, obturator internus, gemellus inferior, pyramiformis, and obturator externus muscles; and to it is attached the ischio-femoral ligament.

F., troch'lear. (L. *trochlea*, a pulley; contr. from τροχαλία, the sheaf of a pulley. *G. Rollgrube*.) A small depression on the under surface of the orbital plate of the frontal bone, near the internal angular process for the pulley of the superior oblique muscle.

F. umbilica'lis. (L. *umbilicus*, the navel.) The *Fissure of liver for ductus venosus*.

F. ve'næ ca'væ. A deep notch in the under surface and posterior border of the liver, which lodges the inferior vena cava. It constitutes the posterior part of the fossa longitudinalis dextra. The *Fissure of liver for vena cava*.

F. ve'næ umbilica'lis. (L. *vena*, a vein; *umbilicus*, the navel.) The anterior longer part of the fossa longitudinalis sinistra. It extends between the anterior sharp border of the liver to the left extremity of the fossa transversa. It lodges the umbilical vein. The *Fissure of liver, umbilical*.

F. vesic'æ fel'leæ. (L. *vesica*, a bladder; *fel*, gall.) A depression constituting the anterior segment of the fossa longitudinalis dextra. It lodges the gall-bladder. The *Fissure of liver for gall-bladder*.

F., vesic'o-u'terine. (L. *vesica*, the bladder; *uterus*, the womb.) The pouch of

peritoneum in the female which lies between the bladder and the uterus.

F., zygomatic. (*Zýγωμα*, a bolt. G. *Kiefer-Keilbeingrube*.) An irregular, spacious fossa, wider above than below, and continuous at its upper end with the temporal fossa. Its anterior wall is formed by the zygoma and the tuber maxillare, its inner wall by the external pterygoid plate of the sphenoid bone, and its upper wall by the triangular plate of the great wing of the sphenoid bone and by a part of the squamous portion of the temporal bone, and its posterior part is open. The sphenomaxillary fissure opens into its upper part.

Fossæ. Plural of *Fossa*.

F., cerebellar. The *F., occipital, inferior*.

F. cerebelli. (L. dim. of *cerebrum*, the brain. *F. fosse cerebelleuse*.) A synonym of *F., occipital, inferior*.

F. cerebrales. (L. *cerebrum*, the brain.) A synonym of *F., occipital, superior*.

F. cerebri posteriores. (L. *cerebrum*, the brain; *posterior*, that which is behind.) A synonym of *F., occipital, superior*.

F. costales. (L. *costa*, a rib.) The facets on the bodies of the dorsal vertebrae for articulation with the heads of the ribs. The first nine dorsal vertebrae have two on each side, the tenth, eleventh, and twelfth only one.

F. costo transversariae. (L. *costa*, a rib; *transversus*, transverse.) Three depressions situated on the dorsal surface of the first three sacral vertebrae, between the processus transversarii. The uppermost is the deepest.

F. digitales. (L. *digitalis*, belonging to a finger.) Those fossae of the skull which are shallow and as if made with the finger.

F. naarium. (L. *nares*, the nostrils.) The *F., nasal*.

F., nasal. (L. *nasalis*, belonging to the nose. *F. fosses nasales*; G. *Nasenhöhlen*.) Two oblong cavities situated between the base of the cranium and the roof of the mouth, and separated from each other by a thin vertical septum. They are open in front and behind; laterally they open into the antrum. The upper wall is formed from before backwards by the nasal bone, cribriform plate of the ethmoid, the body of the sphenoid, and wing of the vomer. The floor is formed by the palatine plate of the superior maxillary and palate bones. The inner wall or septum is formed by the nasal spine and crest, the perpendicular plate of the ethmoid, vomer, and the crest of the upper maxillary and palate bones. The outer wall is formed by the nasal process of the superior maxillary and lachrymal bones, the vertical plate of the palate bone, the inner surface of the superior maxillary bone, and lateral mass of the ethmoid. The turbinal bones divide the nasal fossae into three meatuses.

F., occipital, inferior. The two lower of the four hollows on the inner surface of the tabular portion of the occipital bone; they are separated from the superior occipital fossae by the groove for the lateral sinus, and from each other by the lower half of the internal occipital crest; they lodge the lobes of the cerebellum.

F., occipital, superior. The two upper of the four hollows on the inner surface of the tabular portion of the occipital bone; they are separated from the inferior occipital fossae by the groove for the lateral sinus, and from each other

by the upper half of the internal occipital crest; they lodge the posterior lobes of the cerebrum.

F. occipitales inferiores. (L. *occiput*, the back of the head; *inferior*, that which is below.) The same as *Fossae cerebelli*.

F. occipitales superiores. (L. *occiput*; *superior*, that which is above.) The same as *Fossae cerebri*.

F. of skull. See *Skull, fossae of*.

F., Pacchionian. (*Pacchioni*.) The depressions on the inner surface of the skull for the reception of the Pacchionian bodies.

Fosse. Same as *Fossa*.

Fossette. (F. *fossette*, a dimple; dim. of *fossa*, a pit.) A small but deep ulcer of the cornea.

Fossil. (F. *fossile*, that which may be dug; from L. *fossilis*, dug up; from *fodio*, to dig. I. *fossile*; S. *fossil*; G. *Fossil*.) The petrified remains of living things dug out of the earth.

Also, dug out of the earth, petrified.

F. alkali. Sodium carbonate.

F. salt. Common salt dug up out of the earth.

F. wax. A synonym of *Paraffin*.

Fossores. (L. *fossor*, a digger.) A Group of the Order *Hymenoptera*, Class *Insecta*. Females armed with a sting on the posterior segment of the body, which is not retractile; basal joint of the posterior tarsi cylindrical; such as the wasps.

Also, a group of burrowing animals, including the moles.

Fossorial. (L. *fossor*, a digger.) Digging; applied to animals that burrow.

Fossorium. (L. *fossor*, a digger; from *fodio*, to dig.) A beam.

Fossula. (L. *fossula*, a small ditch; dim. of *fossa*, a ditch.) A small depression or fossa.

F. petrosa. (L. *petrosus*, rocky.) A depression on the inferior surface of the petrosal portions of the temporal bone, between the opening of aqueductus cochleae, the jugular fossa, and the inferior opening of the carotid canal. It presents a small opening named the canaliculus tympanicus. It contains the petrosal ganglion of the glosso-pharyngeal nerve, and the tympanic nerve.

F. trochlearis. (G. *Rollgrübchen*.) The *Fossa trochlearis*.

Fossulæ. Plural of *Fossula*.

F. olfactoria. (L. *olfacio*, to smell. G. *Riechgrübchen*.) The *Olfactory fossae of foetus*.

Fossulate. (L. *fossula*.) Having shallow, narrow pits.

Fothergill, Anthony. An English physician, born at Sedbergh in 1733, died in 1813.

Fothergill, John. An English physician, born near Richmond, in Yorkshire, in 1712, died in 1780.

F.'s disease. Same as *F.'s faccache*.

F.'s face'ache. A term for the several forms of facial neuralgia.

F.'s sore throat. The form of scarlet fever called *Scarlatina anginosa*.

Fotus. (L. *foetus*, a warming; from *foveo*, to keep warm.) A fomentation.

F. aromaticus. Fr. Codex. (F. *fomentation aromatique*.) Thirty grammes of species aromaticae are infused for an hour in sufficient hot water to produce a litre of infusion.

FOUCAULT—FOVEA.

F. commu'nis. (L. *communis*, common.) The *Decoctum pupaveris*.

F. emol'liens, Fr. Codex. (L. *emollio*, to soften. F. *fomentation emolliente*.) Fifty grammes of species emollientes are boiled for ten minutes in a sufficient quantity of water to make a litre of decoction.

Foucault, Jean Bernard Léon. A French physicist, born in Paris in 1819, died in 1868.

F.'s prin'ciple. A mode of ascertaining the velocity of light. It consists of an arrangement by which a beam of light starting from a given source and striking upon a mirror is reflected to a distant mirror, from which it is reflected to the first mirror, and from thence to the original source. If, however, the first mirror has been rotated perceptibly before the beam returns from the second mirror it is not reflected to the original source, but to some other point. The extent of the deviation can be measured, the amount of rotation of the first mirror, with the time taken for the beam to travel from the first to the second mirror and back, can be inferred from this, and the amount of rotation of the first mirror can be read off on a speed indicator; and the distance traversed by light in one second can be ascertained by calculation from these data.

F.'s prism. A prism on the same principle as Nicol's prism, with the omission of the Canada balsam, so that only a thin layer of air is left between the two parts of the prism.

Fouilloux. France, Département du Cantal. A thermal weak chalybeate water.

Foul. (Mid. E. *foul*; Sax. *fūl*; G. *faul*; from Aryan root, *pu*, to stink.) Unclean, filthy.

F. disease'. A term for syphilis.

Foulis's autolaryngoscope. (Ἀυτός, self; λαρυγξ, the larynx; σκοπέω, to observe.) A glass globe filled with water below a mirror and in front of a lamp, so that light rays are concentrated on the laryngeal mirror in the observer's pharynx, and being reflected in the mirror, can be seen by himself.

Fouquieræ. A Tribe of the Nat. Order *Tamariscineæ*, having a fleshy albumen and adherent petals.

Four. (Mid. E. *feowur*, *fower*; Sax. *feower*; G. *vier*; L. *quatuor*; Gr. *τέτταρες*; Sans. *chatvar*; from an original form *kwatwar*.) Twice two.

F.-leaved allseed. The *Polycarpon tetraphyllum*.

F.-leaved grass. The *Paris quadrifolia*.

F.-o'-clock plant. The *Mirabilis jalapa*, Linn., or *M. dichotoma*.

F.-rowed barley, Bere, *Hordeum vulgare*.

F.-tailed band'age. See *Bandage, four-tailed*.

F.-thieves vin'egar. The *Acetum propylacticum*.

Fourche. (F. *fourche*, a fork.) A small instrument with two small prongs. Used to fix the eye in cataract operations.

Fourchette. (F. *fourchette*, a small fork; dim. of *fourche*, a fork; from L. *furca*, a fork.) A small transverse fold of the mucous membrane just within the posterior commissure of the vulva; it is generally ruptured during labour.

Also, the frog or V-shaped prominence on the plantar surface of a horse's foot.

Also, in Ornithology (G. *Gabelbein*), the same as *Furcula*.

Also, the name of a forked instrument formerly used to divide the frænum of the tongue when short.

F. of ster'nium. (L. *sternum*, the breast-bone.) The hollow at the upper extremity of the manubrium of the sternum.

Four'croy. A French chemist, born in 1755, died in 1809.

F.'s bal'sam. Same as *Balsam of Laborde*.

Fourth. The ordinal of *Four*.

F. dig'it. (L. *digitus*, a finger.) The third or ring finger.

F. nerve. The pathetic or trochlear nerve.

F. ven'tricle. See *Ventricle of brain, fourth*.

Fou'sel oil. Same as *Fusel oil*.

Fovea. (L. *fovea*, a small pit; for *fodea*, from *fodio*, to dig. F. *fossette*; I. *fossetta*; G. *Grübchen*.) A small hollow or depression.

Also, the vulva.

Also, a term for a vapour bath for the lower extremities.

Also, in Botany, any hollow or pit; especially applied to the pit which separates the lamina from the sheath of the leaf of *Isoetes*, and which contains the sporangium.

F. antérior ma'jor hu'meri. (L. *anterior*, in front; *major*, greater; *humerus*, the arm bone.) The depression on the front surface of the humerus immediately above the trochlea; being the coronoid fossa.

F. antérior mi'nor hu'meri. (L. *minor*, less; *humerus*.) See *Fossa anterior minor humeri*.

F., antérior, of fourth ven'tricle. The *F. quarti ventriculi anterior*.

F. articula'ris latera'lis. (L. *articulus*, a joint; *lateralis*, lateral.) A synonym of the *Superficies articularis lateralis*.

F. axilla'ris. (L. *axilla*, the armpit.) The armpit.

F. calca'nei. (L. *calcaneus*.) A synonym of *Sulcus calcanei*.

F. capit'is fem'oris. (L. *caput*, head; *femur*, the thigh.) The depression on the upper and inner part of the head of the femur for the attachment of the ligamentum teres.

F. capituli ra'dii. (L. *capitulum*, a small head; *radius*.) The smooth saucer-shaped depression on the upper surface of the head of the radius.

F. cardi'aca. (Καρδιά, the heart. G. *vordere Darmportione*.) The pharyngo-umbilical orifice of the early embryo.

Also, a synonym of *Scrobiculus cordis*.

F. carotide'a. The anterior triangle of the neck, because it contains the carotid artery.

F. centra'lis laryn'gis. (L. *centralis*; Gr. *λαρυγξ*, the larynx.) The angle on the inner aspect of the thyroid cartilage in the median line.

F. centra'lis retinae. (L. *centralis*, central; *retina*.) The small hollow in the centre of the macula lutea of the retina, at one time erroneously supposed to be a hole. All the layers of the retina are very thin here, and of the layer of rods and cones the rods are absent, and the cones very much elongated and narrowed, their length at the centre being .076 mm.

F. coch'leæ. The depression at the bot-

FOVEA.

tom of the meatus auditorius internus; its floor is perforated by the branches of the internal auditory nerve, and constitutes the tractus spinalis foraminulentus.

F. coronoidæ. The *Fossa, coronoid.*

F. cruralis peritonei. (L. *crus*, the thigh; *peritoneum*.) A depression in the peritoneum lining the anterior wall of the abdomen immediately above Gimbernat's ligament and the femoral ring. It is the lower and outer part of the *F. inguinalis interna peritonei*.

F. digitata. (L. *digitus*, a finger.) The posterior cornu of the lateral ventricle of the brain.

F. elliptica. The *F. hemielliptica*.

F. elliptica vestibuli. The *F. hemielliptica*.

F. glenoidæ ossis temporalis. The *Fossa, glenoid, of temporal bone*.

F. glenoidæ scapulae. The *Glenoid cavity of the scapula*.

F. hemielliptica. ("Ἡμισ, half; ἔλλειψις, a leaving behind, an ellipse.) An oval depression in the roof of the vestibule of the inner ear.

F. hemisphaerica. ("Ἡμισ, σφαῖρα, a ball.) A small rounded depression in the front of the inner wall of the vestibule of the inner ear; it is perforated by many foramina for the passage from the internal auditory meatus of branches of the middle division of the vestibular nerve.

F. hyaloidea. The *Fossa, hyaloidea*.

F., inferior, of fourth ventricle. The same as *F. ventriculi quarti posterior*.

F. inguinalis externa peritonei. (L. *inguen*, the groin; *externus*, outward; *peritoneum*.) A shallow depression of the peritoneum lining the front wall of the abdomen immediately behind the posterior inguinal ring on the outer side of the plica epigastrica, and above that part of Poupart's ligament under which the femoral vessels run.

F. inguinalis interna peritonei. (L. *inguen*; *internus*, within; *peritoneum*.) A depression presented by the peritoneum lining the anterior wall of the abdomen situated to the inner side of the plica epigastrica, and between it and the plica pubo-umbilicalis. It lies behind the anterior inguinal ring, and separated from it by the fascia transversalis, and the aponeurosis of the transversalis and internal oblique muscles.

F. inguinalis lateralis peritonei. (L. *lateralis*, on the side.) A synonym of *F. inguinalis externa peritonei*.

F. inguinalis medialis peritonei. (L. *medius*, in the middle.) A synonym of *F. inguinalis interna peritonei*.

F. interclavicularis. (L. *inter*, between; *clavicle*.) The *Incisura semilunaris of sternum*.

F. lachrymalis. The *Fossa lachrymalis*.

F. lenticularis. Same as *Fossa lenticularis*.

F. malleoli lateralis. (L. *malleolus*, dim. of *malleus*, a hammer; *lateralis*, on the side.) The depression on the outer side of the inferior extremity of the tibia, for the attachment of the ligamentum talo-fibulare posterius.

F. navicularis. The *Fossa navicularis urethrae*.

F. oculi. (L. *oculus*, the eye.) The orbit.

F. olecrani. The *Fossa, olecranon*.

F. ovalis cordis. (L. *cor*, the heart.) The *Fossa ovalis of heart*.

F. ovalis fasciæ latae. The depression in the fascia lata which constitutes the saphenous opening in the thigh.

Also, the same as *Fossa ovalis*.

F. ovalis vestibuli. The *F. hemielliptica*.

F. parva maxillæ inferioris. (L. *parvus*, little; *maxilla*, the jaw; *inferior*, that is below.) A synonym of the *Fossa mentalis*.

F. patellaris oculi. (L. *oculus*, the eye.) The *Fossa patellaris*.

F., posterior, of fourth ventricle. See *F. ventriculi quarti posterior*.

F. processus condyloidei. (L. *processus*, a projection; *κόνδυλος*, a knob; *εἶδος*, likeness.) The depression behind the condyle of the occipital bone.

F., quarti ventriculi anterior. (L. *quartus*, fourth; *ventriculus*, a ventricle; *anterior*, in front. *F. fossette antérieure du quatrième ventricule*.) A depression situated above and to the outer side of the eminentia teres in the broadest part of the fourth ventricle, close to the upper end of the corpus testiforme.

F. quarti ventriculi posterior. (L. *quartus*, fourth; *ventriculus*; *posterior*, hinder.) A depression in the lamina cinerea on each side of the fourth ventricle just external to the lower part of the ala cinerea.

F. quarti ventriculi superior. The same as *F. quarti ventriculi anterior*.

F. rhomboidalis. (G. *Rautengrube*.) The floor of the fourth ventricle.

F. rotunda vestibuli. The *F. hemisphaerica*.

F. semi-elliptica. Same as *F. hemielliptica*.

F. sulciformis. (L. *sulcus*, a furrow; *forma*, shape.) The *Fossa sulciformis*.

F., superior, of fourth ventricle. The same as *F. quarti ventriculi anterior*.

F. supratrochlearis anterior. (L. *supra*, above; *trochlea*, a pulley.) The same as *F. anterior major humeri*.

F. tali. The same as *Sulcus tali*.

F. triangularis. (L. *tres*, three; *angulus*, an angle.) The *Calamus scriptorius*, from its shape.

F. triquetra auriculæ. (L. *auricula*, the external ear.) The *Fossa triquetra*.

F. trochlearis. (L. *trochlea*, a pulley.) A depression on the under surface of the orbital plate of the frontal bone, behind the incisura supraorbitalis, which gives attachment to the pulley for the superior oblique muscle.

F. ventriculi quarti. (L. *ventriculus*, a ventricle; *quartus*, fourth.) The floor of the fourth ventricle.

F. ventriculi quarti inferior. (L. *ventriculus*, a little point; *quartus*, fourth; *inferior*, lower.) A synonym of *F. ventriculi quarti posterior*.

F. vestibuli inferior. (L. *inferus*, that is below.) The depression at the bottom of the internal auditory meatus, which is perforated for the inferior division of the vestibular nerve.

F. vestibuli superior. (L. *superus*, that is above.) The depression at the bottom of the internal auditory meatus, which is perforated for the passage of the superior division of the vestibular nerve.

FOVEÆ—FRACTURE.

Foveæ. Plural of *Fovea*.

F. costales. (L. *costa*, a rib.) The depressions on the sides of the dorsal vertebræ for the articulation of the heads of the ribs.

F. glandulæres. (L. *glandula*, a gland.) The depression on the inner table of the skull for the reception of the Pacchionian bodies.

Foveate. (L. *fovea*, a small pit. F. *foveolæ*; G. *feingrabig*.) Minutely pitted.

Foveaux's constant battery. A modification of Smees's battery, consisting of fifty or more, or fewer, pairs of plates of platinum, silver, or zinc, attached to a board, with a dial regulating the number of pairs brought into action, and dipped into vulcanite or porcelain cells containing sulphuric acid diluted with twenty or thirty parts of water. The board carrying the plates is raised by a lever action when the lid is closed, so that the battery is kept out of action, and depressed when the lid is opened, so that the plates dip into the cells and bring the battery into action.

Foveola. (L. dim. of *fovea*, a small pit.) A small depression.

In Anatomy, the dark spot in the centre of the fovea centralis, caused by the showing through of the choroidal pigment, in consequence of the thinness of the structures of the retina at that part.

In Botany, a little pit or depression; especially a small depression above the fovea of the leaf of *Isoetes*.

Foveolæ. Plural of *Foveola*.

F. Howshipianæ. (*Howship*, an English anatomist.) The cavities in bone which are occupied by giant cells.

Foveolate. Same as *Foveolated*.

Foveolated. (L. *foveola*, a small pit.) Containing, or marked with, small depressions.

Foveole. Same as *Foveolæ*.

Fovilla. (According to Littre and Robin, it should be spelled *favilla*, being derived from L. *favilla*, ashes.) The finely granular fluid protoplasm contained in a pollen cell; the granules vary from 1-30,000" to 1-4000" in diameter; they vary in shape, some spherical, some oblong, some spindle-shaped; they become opaque on the addition of water; the fovilla contains also starch granules, and occasionally crystals, oil globules, or fatty matter.

Fovillæ. Plural of *Fovilla*.

Employed by some botanists to denote the granules only in the protoplasm of a pollen grain. See *Fovilla*.

Also, any granules in a liquid.

Fowl. (Mid. E. *foul*; Sax. *fugol*; Old High G. *fugal*; G. *Fogel*; from a Teutonic base *fugla*, of unknown origin.) A bird; a term especially applied to poultry.

F.'s cholera. See *Cholera, chicken*.

Fowler, Thomas. An English physician, born in York in 1736, died there in 1801.

F.'s solution of arsenic. The *Liquor arsenicalis*, B. Ph., which was introduced by Dr. Fowler as a substitute for the popular remedy known as tasteless ague drop.

Fowlwort. The *Tradescantia erecta*.

Fox. (Sax. *fox*; Old High G. *foha*; G. *Fuchs*.) The *Canis vulpes*. The fat was formerly esteemed as a resolvent, an antispasmodic, and an anodyne.

F. evil. Same as *Alopecia*.

F. grapes. The fruit of *Vitis vulpina*.

Foxberry. The *Arbutus uva ursi*.

Foxglove. The *Digitalis purpurea*.

F. leaves. See *Digitalis folia*.

F., purple. The *Digitalis purpurea*.

F., yellow. The *Digitalis lutea*.

Fracid. (L. *fracidus*, soft.) Over-ripe. Applied to fruits having a pasty consistence.

Fraction. (F. *fraction*; from L. *fractio*, a breaking; from *frango*, to break. G. *Bruch*.) The act of breaking.

Also, a portion broken off, a fragment; an aliquot part of a unit.

Fractional. (*Fraction*.) Relating to, or constituting, a fraction.

F. distillation. See *Distillation, fractional*.

F. percolation. Dichi's term for *Repercolation*.

Fractura. A *Fracture*.

F. assularis. (L. *assula*, a chip.) Same as *Fracture, comminuted*.

F. comminutiva. (L. *comminuo*, to separate into small parts.) See *Fracture, comminuted*.

F. complicata. (L. *complicatus*, part. of *complico*, to fold together.) Same as *Fracture, complicated*, and *F., compound*.

F. multiplex. See *Fracture, multiplex*.

F. simplex. (L. *simplex*, simple.) See *Fracture, simple*.

F. surcularia. (L. *surculus*, a twig.) Same as *Fracture, greenstick*.

Fracture. (F. *fracture*; from L. *fractura*, a breach; from *frango*, to break. I. *fratura*; S. *fractura*; G. *Bruch*.) A breakage; a solution of continuity in a body.

Also, to break a thing.

In Surgery, the breaking of a bone or a cartilage.

F., Barton's. See *Barton's fracture*.

F. bed. A double-inclined plane for fractures of the hip.

F., buttonhole. (F. *fracture à boutonnière*.) The same as *F., perforating*.

F. by avulsion. (L. *avulsio*, a tearing off.) Fracture in which a small fragment of bone is torn away by a strain exerted upon the ligamentous tissues attached to it.

F. by contrecoup. (F. *contre*, against; *coup*, a blow.) Fracture occurring in a different, and generally opposite, part of the bone to that which was the direct recipient of the blow, such as occasionally occurs in the skull.

F., cam'rated. (L. *camera*, an arch.) A fracture of the skull in which the fragments form an arch, their bases often resting on the dura mater.

F., capillary. (L. *capillus*, a hair.) A fracture of bone without displacement, consisting only of a fine crack or fissure.

F., causes of. These may either be predisposing or exciting. Amongst predisposing causes are some general diseases, as gout, rheumatism, and scurvy, which though they do not render the bones more fragile, yet by crippling the patient, render him more liable to accident. Scrophula, rickets, syphilis, and cancer are admitted by many. The subjects of locomotor ataxy and other central nervous diseases are very liable to fracture; and also aged persons.

The exciting causes are external injury from falls, blows, muscular action, gun-shot wounds and the like, and internal strain from indirect violence.

F., Celles. See *Colles' fracture*.

F., comminuted. (L. *comminuo*, to separate into small parts. F. *fracture commi-*

FRACTURE.

nutive; G. *Stückbruch*, *Splitterbruch*.) Fracture in which the bone is shattered into many small fragments.

F., complete. A fracture which involves the whole thickness of a bone.

F., complicated. (L. *complicatus*, to fold together.) Fracture in which there is some serious lesion of adjoining parts; as where, in fracture of the ribs, the lungs are wounded; or when, in fracture of the femur, there is dislocation at the hip-joint. Injuries of vessels and nerves are of common occurrence.

Also, the same as *F., compound*.

F., compound. (F. *fracture composée*; G. *offener Knochenbruch*.) Fracture with a coexisting skin wound, with which it communicates, and which may be produced by the original force which caused the fracture, or by the pushing of the end of one of the fragments through the soft parts; or by subsequent ulceration or sloughing.

F., compound comminuted. (L. *comminutus*, to separate into small parts.) A compound fracture with comminution of the bone.

F., conchoidal. (Κόγχη, a mussel-shell; εἶδος, likeness.) Said of a mineral which breaks with curved surfaces, as does flint.

F., cuneated. (L. *cuneus*, a wedge.) Larrey's term for *F., V-shaped*.

F., dentated. (L. *dens*, a tooth.) A fracture in which the ends of the fragments are toothed, so that they interlock, and prevent displacement.

F., depressed. (L. *deprimo*, to press down.) Fracture in which the surface of the injured part of the bone is below the level of the surrounding bone, as is seen in many fractures of the bones of the skull.

F., direct. A fracture of a bone caused by external violence applied directly to the limb.

F., double. A fracture of a bone in two places.

F., Dupuytren's. (*Dupuytren*.) Fracture of the fibula, with displacement of the foot outwards and retraction; but without, or with very little, eversion. The tibio-fibular ligament is torn from the tibia, and sometimes carries a splinter of that bone with it; and occasionally the extremity of the inner malleolus is broken off, and remains attached to the malleolus.

F., embolism. (Εμβόλισμα, that which is put in.) A blood embolism occasionally follows upon fracture of a bone; but the special form attaching to this injury is *Embolism, fat*.

F., epiphysal. (Ἐπίφυσις, an outgrowth.) Fracture separating the epiphysis of a bone from the diaphysis. The line of fracture is believed rarely to follow that of the epiphysal attachment through its whole extent.

F., fissured. (L. *fissura*, a crack.) An incomplete fracture in which the bone is cracked without displacement.

Also, a fracture with fissuring or cracking of one or both fragments.

F., Gosse's. See *Gosselin's fracture*.

F., greenstick. A form of fracture of a long bone in which whilst one side of the bone is broken the other is only bent. It occurs chiefly in the soft bones of children.

F., hackly. (E. *hackly*, rough, as if coarsely combed with a hackle.) Said of a mine-

ral which break and leaves fine, short, jagged, and sharp points on the surface.

F., hair. Same as *F., capillary*.

F., helioid. (Ἑλῆξ, a coil; εἶδος, likeness.) A fracture of a spiral form, the result of a *F., torsion*.

F., impacted. (L. *impactus*, part. of *impingo*, to drive into.) Fracture in which the fragments into which the bone is divided are forcibly pressed into each other, so that the continuity of the bone is not interrupted, but it is rendered shorter.

F., incomplete. (F. *fracture incomplète*.) Fracture in which the whole thickness of the bone is not broken through. Examples of it are met with in fissures and cracks of bone, and in sprain fracture and greenstick fracture.

F., indirect. A fracture produced by a cause which does not directly assail the point of injury, such as a fracture from muscular contraction.

F., intra-uterine. (L. *intra*, within; *uterus*, the womb.) Fracture taking place during fetal life. It usually results from direct violence to the mother, though it has also appeared to occur as a consequence of muscular contraction, or when twins are present, from entanglement and twisting of the limbs. Complete repair may take place before birth.

F., longitudinal. (G. *Längsbruch*.) The form in which the direction of the fracture is nearly in the direction of the long axis of the bone.

F., multiple. (L. *multiplex*, numerous. G. *mehrfacher Bruch*.) Fracture in which a bone is broken in two or more places, or in which more than one bone is broken.

F., oblique. (L. *obliquus*, slanting. G. *Schrägbruch*.) The form in which the line of fracture forms more or less of an acute angle with the long axis of the bone.

F., oblique spiroïd. (Σπειρα, a coil; εἶδος, likeness.) Gerdy's term for *F., V-shaped*.

F., partial. The same as *F., incomplete*.

F., perforating. (L. *perforo*, to bore through.) A form of fracture in which a missile or foreign body punches a portion of bone completely out from its surroundings.

F., Pott's. See *Pott's fracture*.

F., punctured. (L. *punctura*, a pricking.) A perforation of a bone by a sharp instrument or a small bullet.

F., radish. (F. *fracture en rave*.) A transverse fracture, so called because that is the way a radish would break across.

F., reduction of. (L. *reductio*, a bringing back.) The apposition and restoration to due position of the fragments of a broken bone. In most instances extension and counter-extension are requisite.

F., repair of. In cases of fracture when the parts are kept at rest, repair is effected by an intermediate callus, which is developed between the broken ends of the bone; this becomes converted into a kind of fibrous tissue, and the deposit of calcareous salts gradually takes place. If the parts are unavoidably kept in motion, as in many animals, and as in the case of the ribs and clavicle in man, in addition to the intermediate callus an ensheathing callus is also formed by the periosteum and adjoining tissues around the fragments, maintaining them in position, and after discharging their duty becoming in part or

FRÆNA—FRÆNULUM.

altogether absorbed. The earliest condition after a fracture of a bone is the surrounding of the broken ends with a blood clot derived from the vessels of the medulla, of the bone itself, of the periosteum, and of the adjacent soft structures. It has been generally believed that none of this effused blood takes any part in the reparative processes, that all of it is absorbed, but the most recent investigations throw doubt on this view. In three or four days the extravasated blood is infiltrated with, or replaced by, inflammatory exudation, which, losing its serous part, becomes firm and dense and forms the callus, which either ossifies directly or after its transformation into cartilage.

F., resec'ting. (*L. resecō*, to cut loose.) A term applied to a fracture produced by a rifle ball, which has hit one of the two bones of the forearm or leg, or one or two of the metacarpal or metatarsal bones, and has taken a piece of it away without injury to its neighbour.

F., Sal'iswitch. A longitudinal fracture of the bone of the arm. (*Dunglison*.)

F., second'ary. (*L. secundus*, second.) A fracture which follows upon some other lesion or disease, as a fracture in a cancerous bone.

F., sim'ple. (*G. einfacher Bruch*.) Fracture in which the broken fragments do not penetrate the free surface of the skin or mucous membrane, and which, therefore, do not permit the access of air or of any germs it may contain. A simple fracture may become compound by sloughing, ulceration, or suppuration.

F., spir'al. The result of a *F., torsion*.

F., splin'tered. Fracture in which a spiculum or long fragment of bone is separated, whilst the main body of the bone is intact; or there may be several spicula.

F., splin'tery. Said of a mineral which breaks with protruding points or splinters.

F., spont'aneous. (*L. spontaneus*, of one's free-will.) Fracture occurring in a person without sufficient apparent immediate cause, such as the fracture of different bones in persons suffering from locomotor ataxia, senile atrophy, malignant disease of bone, and other affections.

F., sprain. Callender's term for *F. by avulsion*.

F., stel'late. (*L. stella*, a star.) A fracture of a flat bone, in which several fissures radiate to the central and chief point of injury.

F., subcut'aneous. (*L. sub*, under; *cutis*, the skin.) The same as *F., simple*.

F., tor'sion. (*L. torsio*; from *torqueo*, to twist.) A fracture of a long bone produced by violent twisting or rotation, so that the fractured ends assume a distinctly screw-shaped position.

F., trans'verse. (*L. transversus*, turned across. *G. Querbruch*.) The form in which the direction of the fracture is nearly at right angles to the long axis of the bone.

F., un'e'ven. Said of a mineral which breaks with a rough surface, having many irregular elevations and depressions.

F., u'nion of. See *F. repair of*.

F., unun'ited. A fracture which, through some disease or disorder of the general system, or from some defect in the structure of the bone itself, or from some imperfection in the apposition of the fragments and in their retention in good position, has not become united except by loose connective tissue; the extremities of the

fragments having become atrophied and conical, or blunt and rounded, with the medullary canal closed by a thin plate of bony tissue. Among the constitutional causes tending to this result are reckoned fevers, scurvy, syphilis, and other weakening disorders, as well as the conditions accompanying old age and pregnancy. Among the local causes are defective supply of blood, sometimes from injury to the nutrient artery of the bone, sometimes from too light bandaging; bad adjustment of the fragments, or want of steady apposition, or the interposition of a piece of muscle between them.

F., V-sha'ped. A fracture which occurs usually at the extremity of a long bone, and consists of two diagonal fissures starting in the centre of the bone and running upwards and outwards on each side of the axis of the bone, so as to leave the lower end of the upper fragment wedge-shaped; there is often comminution of the lower fragment.

F., wedge-sha'ped. (*F. fracture en coin*.) Gosselin's term for *F., V-shaped*.

F., willow. The same as *F., greenstick*.

Fræ'na. Plural of *Frænum*.

F. Morga'gnii. (*Morgagni*.) The *F. of ileo-cæcal valve*.

F. of il'eo-cæ'cal valve. (*Ileum*; *cæcum*.) A ridge running some distance downwards on each side of the cæcum, commencing at the junction of each of the ends of the semilunar folds which form the ileo-cæcal valve.

F. of lips. (*F. freins des levres*; *G. Lippenbündchen*.) A fold of mucous membrane on the inner side of each lip in the middle line, extending to the gum; that of the upper lip is the larger.

F. of valve of Bau'hin. The *F. of ileo-cæcal valve*.

F. of valve of Tul'pius. The *F. of ileo-cæcal valve*.

F., syno'vial. (*F. freins des tendons*.) The folds of synovial membrane in the sheaths of tendons which stretch from the outer surface of the tendon to the inner surface of the sheath; they contain much elastic tissue.

Fræn'ula. Plural of *Frænulum*.

F. ary-epiglott'ica. The aryæno-epiglottic folds.

F. glos'so-epiglott'ica. The Glosso-epiglottic folds.

F. lab'ii. (*L. labium*, a lip.) See *Fræna of lips*.

F. labio'rurum o'ris. (*L. labium*, a lip; *os*, a mouth.) The *Fræna of lips*.

F. val'vulæ. The *Fræna of ileo-cæcal valve*.

F. val'vulæ co'li. (*L. colon*, the intestine of that name.) The *Fræna of ileo-cæcal valve*.

Fræn'ulum. (*L. dim. of frænum*, a band. *F. frein*; *I. frenulo*; *S. frenulo*; *G. Bündchen*.) A small bridle; a membranous fold restraining a part.

F. ary-epiglott'icum. *G. Kehildeckel-Giessbeckenband*.) The Aryæno-epiglottic fold.

F. bul'bi. (*L. bulbus*, a bulb.) Brücke's term for the connective tissue which retains the aortic bulb of reptiles in its position.

F. cer'e'bri. (*L. cerebrum*, the brain.) The *F. veli medullaris anterioris*.

F. clitor'idis. The *Frænum of clitoris*.

F. epiglott'idis. The *Frænum epiglottidis*.

FRÆNUM—FRAGUM.

F. glan'dis. (L. *glans*, a gland.) The *Frænum of prepuce*.

F. glan'dis clitor'idis. (L. *glans*, a gland.) The *Frænum clitoridis*.

F. la'bii inferior'is. (L. *labium*, a lip; inferior, lower.) See under *Fræna of lips*.

F. la'bii superior'is. (L. *labium*; superior, upper.) See under *Fræna of lips*.

F. labio'rum puden'di. (L. *labium*, a lip; *pudendum*, the external genital organs of the female.) The *Fourchette*.

F. ling'uae. The *Frænum linguae*.

F. ling'uae posterior'is. (L. *lingua*, the tongue; *posterior*, hinder.) The same as *Frænum epiglottidis*.

F. ling'ulae. (L. dim. of *lingua*, the tongue.) A thin, triangular, medullary lamina on each side of the median line connecting the lingula cerebelli with the posterior part of the crus cerebelli ad pontem.

F. no'vum. (L. *novus*, new.) The *Tenia semicircularis*.

F. prepu'tii. The *Frænum of prepuce*.

F. puden'di. (L. *pudendum*, the female external genital organs. *F. frein de la vulve*; *G. Schambündchen*.) The transverse fold of mucous membrane a little within the posterior commissure of the labia pudendi; also called the *Fourchette*.

F. veli. See *F. veli medullaris anterioris*.

F. veli medullaris anterior'is. (L. *velum*, a veil; *medulla*, marrow; *anterior*, in front. *F. frein de la valvule de Vieussens*.) A small band of longitudinal nerve-fibres connecting the anterior medullary velum with the median grooved surface of the lamina quadrigemina; it is occasionally bifid.

Frænum. (L. *frænum*, a band; akin to Sans. *dhrī*, to hold. *F. frein*; I. *frenulo*; S. *frenulo*; *G. Zaum. Bändchen*.) A bridle; a fold of membrane which acts as a restraint.

F. clitor'idis. See *F. of clitoris*.

F. epiglottidis. (*Epiglottis*.) The central and largest of the three glosso-epiglottic folds. It is a fold of mucous membrane extending, in the middle line, from the dorsum of the tongue to the anterior surface of the epiglottis.

F. glan'dis. (L. *glans*, a gland.) The *F. of prepuce*.

F. la'bii. (L. *labium*, a lip.) See *Fræna of lips*.

F. labio'rum. (L. *labium*.) The *Frænum pudendi*.

F. ling'uae. (L. *lingua*, a tongue.) See *F. of tongue*.

F. of clitor'is. (*Κλειτορίς*, the clitoris. *F. frein du clitoris*; *G. Kitzlerbändchen*.) The band of mucous membrane attached to the lower surface of the glans clitoridis, and formed from the junction of the lower fold of the nymphæ of each side.

F. of prepu'ce. (L. *præputium*, the foreskin. *F. frein du prépuce*; *G. Vorhautband, Eichelbändchen*.) A median fold of the extremity of the integument of the lower side of the penis, which is attached to the adjacent surface of the glans penis, as far forwards as the meatus urinarius.

F. of tongue. (*F. frein de la langue*; *G. Zungenbändchen*.) A fold of mucous membrane on the under surface of the tongue; it is situated in front of the anterior border of the genio-glossi muscles, and is attached to the middle line of the tongue, a little in front of its centre.

F. pe'nis. (*F. frein de la verge*.) Same as *F. of prepuce*.

F. præpu'tii. See *F. of prepuce*.

Fragaria. (L. *fraga*, strawberries; akin to Sans. *ghrā*, to smell sweetly. *G. Erdbeere*.) A Genus of the Nat. Order *Rosaceæ*.

F. anser'ina. Crantz. The *Potentilla anserina*.

F. pentaphyl'lum. Crantz. (*Πέντε*, five; *φύλλον*, a leaf.) A synonym of *Potentilla reptans*.

F. ster'ilis. Linn. (L. *sterilis*, barren.) The *Potentilla fragaria*.

F. tormentilla officina'lis. (L. *officina*, a workshop.) A synonym of *Potentilla tormentilla*.

F. ves'ca. Linn. (L. *vescus*, small. *F. fraiser*; *G. Walderdbeere*.) The Alpine or wood strawberry. Fruit pleasant, acidulous, said to be laxative and diuretic. Used in gout, gravel, and consumption. The roots are said to be aperient and diuretic. An infusion of the young leaves is used as a diuretic, and of the older ones as an astringent gargle. The flowers were formerly used as a sudorific, and in infusion as an application to erysipelatous parts. See also *Strawberry*.

F. virginia'na. Mill. (*Virginia*. *G. Scharlacherdbeere*.) A species of wild strawberry, indigenous in the United States, having astringent leaves. The progenitor of many cultivated varieties noted for their large size and their fine flavour.

Fragile. (*F. fragile*; from L. *fragilis*, easily broken; from *frango*, to break. I. *fragile*; S. *fragil*; *G. gebrechlich*.) Frail, brittle.

Fragile vitreum. (L. *fragilis*, fragile; *vitreus*, glassy.) The same as *Fragilitas ossium*.

Fragilitas. See *Fragility*.

F. crin'ium. (L. *crinis*, hair.) A disease which, according to Duhring, is not parasitic, but is an atrophy of the hairs.

F. os'sium. (L. *os*, a bone.) Unnatural brittleness of the bones; supposed to be caused by deficiency of animal matter, as in senile and fatty atrophy of bone.

Fragility. (L. *fragilitas*, brittleness; from *fragilis*. *F. fragilité*; I. *fragilita*; S. *fragilidad*; *G. Gebrechlichkeit*.) Brittleness, weakness.

Fragmen. (L. *fragmen*; from *frango*, to break.) A piece broken off; a fragment.

Formerly applied to a fracture.

Also, any particles broken off from a solid body, as the sand and granules from a urinary calculus, according to Scribonius Largus, n. 152, and Rhodius in *Lex*.

Fragment. (*F. fragment*; from L. *fragmentum*, a piece. I. *frammento*; S. *fragmento*; *G. Bruchstück*.) A piece broken off.

In Surgery, a term applied to each of the portions of a fractured bone, which are called upper and lower, or superior and inferior.

Fs, precious. Term formerly applied to the garnet, hyacinth, sapphire, topaz, and emerald. Cordial properties were attributed to them, and they were considered to protect from poison.

Fragum. (L. *fragum*, the strawberry plant; in the plural strawberries.) A strawberry, the fruit of *Fragaria vesca*, and its cultivated varieties.

FRAGUS—FRANKINCENSE.

Fragus. (*L. frugum.*) The strawberry plant, *Fragaria vesca*.

Frailes. Spain, Province of Jaen. A cold, earthy sulphur water.

Frambœsia. (*F. framboise*, a raspberry. *G. Erdbeerpocke*.) A term first applied by Sauvages to a specific disease characterised by the eruption on the surface of the skin and of the neighbouring mucous membranes of yellowish or reddish fleshy tubercles, having in some of their stages the appearance of a raspberry. The disease, or one very similar, is known in the whole of the tropics, but is called by different names: yaws in the West Indies and in the English speaking parts of the African coast, boubia in Spanish and Portuguese America and in Brazil, tonga in Australasia, and pian by the American Indians and French colonists; all of these names having their origin in some African dialect. It has occasionally been observed in the North of Scotland and in Ireland. The disease generally commences with some fever and pains in the joints, after which papules appear, which develop into the characteristic raspberry-like tubercles, chiefly on the face, neck, arms, genitals, and groins; in eight or ten days they become pustular, and when fully developed form foul, sloughy ulcers, which are long in healing and not infrequently lead to caries or necrosis of bone. The disease has been supposed to be syphilitic, but this is probably erroneous; it is propagable by direct contact, and the neighbourhood of the sexual organs being so common a seat of the disease sexual intercourse is a very frequent mode of its propagation. In the West Indies yaws is attributed to the bite of a fly.

F. americana. American yaws. A depascent variety, destroying progressively both muscles and bones, according to Mason Good. It is the form which occurs in tropical America.

F. guineensis. (*Guinea*.) African yaws, attacking infants and young persons chiefly, and subsiding as soon as the eruption appears, according to Mason Good.

F. illyrica. (*Illyria*, an ancient country at the head of the Adriatic.) A synonym of *Scherlievo*.

F. non-syphilitica. A synonym of *Syccosis capillitii*.

F. scotica. (*L. scoticus*, Scottish.) A synonym of *Sibbens*.

F. scrophulosa. (*Scrofula*.) A synonym of *Lupus exuberans*.

F. tropica. The disease described under the chief heading.

Franciscoa. A Genus of the Nat. Order *Scrophulariaceæ*.

F. uniflora. (*L. unus*, one; *flos*, a flower.) Hab. Brazil. Bark bitter. Plant used as a purgative, emetic, emmenagogue, and alexipharmic; it is employed in syphilis. Root called manaca.

Francoa. A Genus of the Nat. Order *Francoaceæ*.

F. appendiculata. Cav. (*L. appendicula*, a small appendage.) Hab. Chili. Astringent. Used in the treatment of inflammations and contusions. Juice of the leaves used in piles.

F. sonchifolia. Cav. (*L. sonchus*, the sow-thistle.) Hab. Chili. Used as *F. appendiculata*.

Francoa'ceæ. A Nat. Order of the Alliance *Ericales*, having polypetalous flowers;

free, half-sterile, scale-like stamens; and seeds with a firm skin.

Francoads. The plants of the Nat. Order *Francoaceæ*.

Fran'colin. Same as *Attagas*.

Frangula. U.S. Ph. (*L. frango*, to break. *F. bourdaine*, *bourgène*; *G. Faulbaumrinde*.) The bark of *Rhamnus frangula*, collected at least one year before being used. It contains frangulin, avornin, and emodin. It is a powerful cathartic, very irritating to the intestines when fresh, much less so when old. Used as *Extractum frangule fluidum*.

Also, the shrub *Rhamnus frangula*. It obtains its name from the brittleness of its branches.

F. alnus. Mill. (*L. alnus*, an alder.) The *Rhamnus frangula*.

F. bark. See *Frangula*.

F. californica. Gray. The *Rhamnus californica*, Eschscholtz.

F. Purshiana. Cooper. The *Rhamnus Purshiana*.

F. vulgaris. Reichert. (*L. vulgaris*, common.) The *Rhamnus frangula*.

Frangulic acid. $C_{11}H_{10}O_5$. An orange-yellow, crystalline substance obtained, along with glucose, when an alcoholic solution of frangulin is treated with dilute hydrochloric acid. It is said to be identical with emodin. It may also be obtained direct from *Rhamnus frangula*.

Frangulin. $C_{20}H_{20}O_{10}$. A colouring glycoside obtained from the cortex of the roots and stems of *Rhamnus frangula*, and from the bark and seeds of *Rhamnus cathartica*. It is of lemon-yellow colour, and forms silk-like crystals without taste or smell. It melts at $226^{\circ} C$. ($438.8^{\circ} F.$), and sublimes in part without decomposition. It is insoluble in water.

Also, called *Rhamnoxanthin* by its first discoverer, Binswanger; this was probably impure.

Frangulinic acid. Same as *Frangulic acid*.

Frankenhau'sen. Germany, in Schwarzburg-Rudolstadt, in a wooded hilly district, 500 feet above sea-level. Strong soil or salt waters, containing sodium chloride 215 grains, magnesium chloride 4, potassium chloride 3.7, magnesium bromide .003, and calcium sulphate 23 grains, in 16 ounces. Used chiefly as baths.

Frankenia. (*Frankenius*, a botanist.) A Genus of the Nat. Order *Frankeniaceæ*.

F. grandiflora. Cham. (*L. grandis*, great; *flos*, a flower.) An aromatic.

Frankenia'ceæ. A Nat Order of hypogynous Exogens of the Alliance *Violales*, having polypetalous flowers, a tubular furrowed calyx, and unguiculate petals.

Frankeniads. The plants of the Nat. Order *Frankeniaceæ*.

Frank fort. Germany; a city of Nassau.

Also, the name of a village in Beaver County, Pennsylvania, United States. Here are mineral waters, containing carbonic acid, iron and magnesium carbonates, hydrosulphuric acid, sodium chloride, and a small proportion of bitumen. They are recommended in dyspepsia, rheumatism, and in cutaneous affections. (Dunglison.)

F. green. A term for arsenite of copper.

Frankincense. (*F. frane*, pure; *encens*, incense.) The frankincense of the ancients is now called *Olibanum*, but several resinous substances still go by the name frankincense,

FRANKLIN, BENJAMIN—FRAXININ.

especially the resin of the spruce fir, *Abies excelsa*.

F., African. Same as *F., Arabian*.

Also, the same as *F., Sierra Leone*.

F., Arabian. The Arabian olibanum, the product of *Boswellia Carteri*.

F., common. The *Thus americanum*, B. Ph., the *Terebinthina*, U.S. Ph.

F., Indian. The *Olibanum*, Indian.

F., pine. The *Pinus tæda*.

F., Sierra Leônè. A resin obtained from *Daniellia thurifera*.

F. tree. The *Daniellia thurifera*.

F., true. A name given to the *Juniperus lycia* when it was supposed, but erroneously, to be the source of true frankincense or olibanum.

Franklin, Benjamin. An American physicist, born at Boston in 1706, died at Philadelphia in 1790.

F.'s plate. A form of electrical condenser consisting of a plate of glass in a wooden frame and covered with tinfoil on each side, with the exception of a border next to the frame, which is uncovered; one side of the tinfoil is connected with the frame by means of a slip extending to the frame, and so by a chain with the ground; it is charged by connecting the insulated side of tinfoil with an acting electrical machine.

F.'s spectacles. See *Spectacles*, Franklin's.

Franklinic. Relating to Franklin.

F. electricity. See *Electricity*, Franklinic.

Franklinisation. (*Franklin*.) The application of static electricity in the treatment of disease.

F. by sparks. The patient is insulated on a glass-legged stool and brought into connection with the prime conductor of an active electrical machine, and is discharged with a spark and a slight shock by means of a discharger or other object, or without a shock by means of a metallic brush passed slowly along at a very short distance from the skin.

F. by the electro-negative bath. The connection of a person, placed on an insulated stool, with the cushions of an active electrical machine by means of a brass chain.

F. by the electro-positive bath. The connection of a person, placed on an insulated stool, with the prime conductor of an active electrical machine by means of a brass chain.

F. by the Leyden jar. The discharge of a charged Leyden jar by applying the ends of the exciters to a part of the body. Used in neuralgia, tremors, and hysterical hyperæsthesia.

Franklinism. (*Franklin*.) A term for static electricity.

Frankbad. Same as *Franzensbad*.

Franzensbad. Germany, in Bohemia, near to Eger, by which name it is also known; situated in a marshy plain between the chains of Böhmerwald and Fichtelgebirge, 1350 feet above sea-level. The waters are cold. There are nine springs, and the proportion of the chief salts in a thousand parts are sodium sulphate 2·85, sodium chloride ·95, sodium carbonate ·8, calcium carbonate ·18, iron carbonate ·07, and much carbonic acid gas.

Mud baths are much employed. It is soft and soapy to the feel and contains ulmic acid and other vegetable matters, in addition to the salts contained in the waters. These, and the waters

for drinking, are used in anæmia, chlorosis, chronic gouty and rheumatic affections, uterine troubles, and some skin diseases.

Franzensbrunn. Same as *Franzensbad*.

Fraseria. (After John Fraser, an American collector of plants.) A Genus of the Nat. Order *Gentianaceæ*.

F. carolinensis. Walter. The *F. Walteri*.

F. officinalis. (*L. officina*, a manufactory.) The *F. Walteri*.

F. verticillata. (*L. verticillus*, the whirl of a spindle.) The *F. Walteri*.

F. Walteri. Michaux. (*Walter*, an American botanist.) American calumba, American gentian. Hab. Southern and Western United States. Root formerly official in U.S. Ph. It was thought to resemble calumba, but it contains no berberin; gentisic acid and gentiopierin have been obtained from it. It is a mild tonic in infusion or powder. The fresh root is said to be emetic and cathartic.

Frater uterinus. (*L. frater*, a brother; *uterinus*, uterine.) A child born of the same mother as another, but by a different father.

Fraternitas. (*L. fraternitas*, brotherhood.) The same as *Fratrio*.

Fratrio. (*L. frater*, a brother.) Conganguinity of healthy or morbid parts or tissues. Same as *Adelphixia*.

Fratia. Italy, Legation of Forlì. A mineral water, containing magnesium, sodium, and calcium sulphate. Used as a purgative.

Fraunhofer, Joseph von. A German optician and physicist, born at Straubing in 1787, died at Munich in 1826.

F.'s lines. Fine black lines occupying definite positions in the solar spectrum. They are coincident with the bright lines seen in the spectrum of many metals, and are supposed to be absorption bands caused by the white light which passes through the sun's atmosphere, being altered by the metallic vapours found there, which absorb from it the kind of light which themselves emit.

Fraxetin. $C_{15}H_{12}O_8$. A product, along with glucose, of the action of dilute acids on *Fraxin*.

Fraxin. $C_{16}H_{18}O_{10}$ according to Rochleder; $C_{21}H_{22}O_{13}$ according to Wurz. A glucoside found by Salm-Horstmar in the bark of *Fraxinus excelsior* and in those mannas which have a greenish colour. It crystallises in colourless, four-sided prisms, and has a bitter and slightly astringent taste; it is only soluble in hot water and in alcohol. It has also been found in other species of *Fraxinus*, and in the bark of the horse chestnut. It has been used as a febrifuge.

Fraxinææ. (*L. fraxinus*, the ash.) A Tribe of the Nat. Order *Oleaceæ*, having samaroid fruit.

Fraxinella. (Dim. of *L. fraxinus*, the ash tree. *F. fraxille*; *I. frassinella*; *S. fresnillo*.) The *Dictamnus albus*.

F. dictamnus. The *Dictamnus albus*.

F., white. The *Dictamnus albus*.

Fraxinellææ. Nees's term for *Rutaceæ*.

Fraxineous. (*L. fraxinus*; *G. eschenartig.*) Like the ash tree.

Fraxinin. Buchner's term for a supposed crystalline principle found by him in the bark of the common ash, *Fraxinus excelsior*. It has been shown to be mannite.

FRAXINITE—FREEZING.

A substance obtained from the same tree, and called by the same name, has been used as an antiperiodic; it consists of a bitter principle and tannin.

Fraxinite. (*L. fraxinus*.) Monchon's term for a dried extract of the leaves of the ash, *Fraxinus excelsior*. It is a compound substance.

Fraxinus. (*L. fraxinus*, the ash tree.) A Genus of the Nat. Order *Oleaceæ*.

F. americana, Linn. The white ash. A native of the United States. Bark bitter and astringent. Used in dysmenorrhœa and as an antiperiodic.

F. apetala, Lamb. ('A, neg.; *πίταλον*, a flower leaf.) The *F. excelsior*.

F. aurea. (*L. aureus*, golden.) The *F. excelsior*.

F. chinensis, Roxb. The species which supplies China wax.

F. crispa. (*L. crispus*, curled.) The *F. excelsior*.

F. discolor, Mühlenberg. (*L. discolor*, of various colours.) The *F. americana*, Linn.

F. europæa, Pers. The *F. ornus*, Linn.

F. excel'sa. The *F. excelsior*.

F. excelsior, Linn. (*L. excelsus*, very high. *F. frêne commun*; *I. frassino*; *G. Esche*.) The ash. Hab. Europe. The bark contains fraxin and malate of calcium; it is bitter and astringent, and has been used as a febrifuge and diuretic. The leaves contain tannin and fraxin, and have been used in gout and rheumatism, in scrofula, and as an antidote to snake-bites; they are said to be aperient and diuretic. In some parts of Sicily it yields a small quantity of manna.

F. florifera, Scop. (*L. flos*, a flower; *fero*, to bear.) The *F. ornus*.

F. halepensis, Herm. (*Halepensis*, from Aleppo.) The *F. parvifolia*.

F. lentiscifolia, Desf. (*L. lentiscus*, the mastich tree.) The *F. parvifolia*.

F. macedonica. (*Macedon*.) The *F. excelsior*.

F. ornus, Linn. (*L. ornus*, the wild mountain ash.) The manna ash. One of the species which supplies Manna.

F. ornus, Scop. The *F. excelsior*.

F. panicula'ta, Mill. (*L. panicula*, a tuft.) The *F. ornus*.

F. parvifolia, Lamb. (*L. parvus*, small; *folium*, a leaf.) Hab. Asia Minor. Exudes manna.

F. quadrangula'ta. (*L. quadrangulus*, four-angled.) The American tree named blue ash. Used as *F. americana*.

F. rotundifolia, De Cand. (*L. rotundus*, round; *folium*, a leaf.) One of the species supplying Manna, B. Ph.

F. sylvestris. (*L. sylvestris*, belonging to the woods.) The *Pyrus aucuparia*.

F. tamariscifolia, Vahl. (*L. tamariscus*, the tamarisk; *folium*, a leaf.) The *F. parvifolia*.

Frazeria Walteri. See *Frsæra Walteri*.

Freckle. (A Scand. word from a base *frek*, whence the diminutive *frekel*. *F. tache de rousseur*; *I. taccia rossa*; *G. Sommersprosse*.) A small spot or pigmentary discoloration of the skin, varying in shade from yellow to black. It is generally seen in numbers on the uncovered

parts of the body, and is supposed to be caused by the irritation of sun and wind. By some the term is applied to both *Ephelis* and *Lentigo*, by others it is restricted to the latter.

F., cold. A freckle on a covered part of the body; so called because it does not take its origin from the irritation of the sun's rays. A *Lentigo*.

F., sun. The pigmentary discoloration also called *Ephelis*.

Freckled. (*Freckle*. *G. sommersprossig*.) Term applied to any surface presenting scattered brownish spots, but particularly to the skin of those affected with *Ephelides*.

Free. (*Mid. E. fre*; *Sax. freô*; *G. frei*. *F. libre*; *I. libero*; *S. libre*.) At liberty, not confined.

In Biology, the term signifies not adherent.

F. calyx. (*Kάλυξ*, a flower-cup.) A calyx which is not adherent to the ovary; an inferior calyx.

F. cell formation. (*G. freie Zellbildung*.) The formation of a new cell free in the cavity of a parent plant cell, around a piece of the original nucleus which has separated from it and becomes surrounded by its own portion of protoplasm. In this way are formed the zoospores of many Algae, Fungi, and Liehens; and cells in the embryo sac of flowering plants, as well as in the anther and the pollen cells.

It was formerly thought that the secondary nuclei were not products of the division of the primary nucleus, but originated in the protoplasm; and some are now of opinion that the nucleus is not essential.

F. charge, electric. Same as *Electricity, free*.

F. ovary. (*L. ovarium*, an egg-keeper.) An ovary which has no attachment to the calyx; a superior ovary.

F. stamens. See *Stamens, free*.

F. tor'sion. See *Torsion, free*.

Freemartin. A name given to the female calf of twins of opposite sexes, which is said to have generally no sexual instincts, to be barren, and sometimes to possess testicles instead of, or in addition to, ovaries.

Freeze. (*Mid. E. freesen*; *Sax. freosan*; *G. friesen*; from Teut. base *frus*; from Aryan root *prus*, to burn. *F. geler, glacier*; *I. gelare*; *S. helarse*.) To stiffen with cold.

Freezing. (*Freeze*.) Stiffening with cold.

F. by ether. See *Ether-spray*.

F. machine. An apparatus for producing cold. Methyl chloride is in general employed, its rapid evaporation causing a fall of temperature in adjoining bodies, from which it abstracts heat.

F. microtome. See *Microtome, freezing*.

F. mixture. (*F. mélange frigorifique*.) A mixture of salts which, by their solution in water, produces a lowering of temperature by the conversion of sensible into latent heat, when the solid assumes the liquid form. Such are a mixture of pounded ice or snow and sodium chloride, which liquefies with a reduction of temperature to -20° C. (-4° F.); a mixture of snow and crystallised calcium chloride, which reduces the temperature to -45° C. (-49° F.); a mixture of equal parts of nitrate of ammonia and water, with a reduction of temperature to about -15° C. (5° F.); and a mixture of eight parts of sodium sulphate and five parts of hydrochloric acid, which reduces the temperature to -17° C. (1.4° F.)

F. point. (*G. Eispunkt, Gefrierpunkt*.)

FREIBERG—FRENCH.

The point at which water freezes, taken as one of the standard temperatures in the graduation of a thermometer; it is obtained by mixing ice and water and immersing the thermometer in it until the mercury or spirit sinks no further. In the Centigrade and Reaumur thermometers this point is marked 0°, in the Fahrenheit thermometer it is marked 32°.

F. process. The process of preserving animal structures from decomposition by keeping them in a perfectly dry atmosphere at or below the freezing point.

Freiberg. Germany, in Saxony. Chalybeate waters. Used as baths in paralysis, general weakness, and rheumatic and gouty affections.

Freienwaldé. Germany, a village in Brandenburg, near Berlin. Here are several springs, containing sodium chloride, calcium and magnesium sulphate, calcium and iron carbonate, all in small quantities. They are drunk alone or with whey, and used as baths, either alone or with the addition of iron, sulphur, or aromatic herbs, and as mud baths.

Freiersbach. Germany, in Baden, 1300 feet above sea-level. One spring contains bicarbonate of iron one part, calcium bicarbonate 5 parts, and sodium sulphate 2·8 parts, in 10,000, with much free carbonic acid and some hydrogen sulphide; three other springs contain smaller quantities of the salts and no hydrogen sulphide. They are used in chronic non-inflammatory affections of the several mucous membranes, in anæmic conditions, in nervous diseases consequent on poverty of blood and indolence of abdominal organs, and, especially the strong iron water, in uterine affections, such as leucorrhœa and sterility.

Fremitus. (L. *fremitus*, a murmuring; from *fremo*, to make a low roaring. F. *fremisement*; I. *fremito*; G. *Schüttern*.) A murmuring; the vibratile movement of a sounding body communicated to the air and to the neighbouring parts, and which may be felt; a shuddering.

F., aneurysmal. See *Thrill, aneurysmal*.

F., bronchial. (Brόγγια, the bronchial tubes.) Guttman's term for the thrill which may be felt in the chest when the bronchial mucous membrane is much and extensively swollen, or when there is much fluid secretion in the bronchial tubes.

F., cavernous. (L. *caverna*, a hollow.) The thrill which may be felt in the chest over the surface of a large cavity in the lung, if it be situated in the upper lobe, be near the surface, and in a very thin person.

F., endocardial. Same as *Thrill, endocardial*.

F. felinus. (L. *felinus*, belonging to a cat. F. *fremissement cataire* of Laennec, *bruisement* of Corvisart; G. *Katzenschwurren*.) The thrill felt over the heart in some cases of valvular disease. See *Thrill, valvular*.

F., friction. (L. *frictio*, a rubbing.) A fremitus sometimes felt on the chest, produced by the rubbing of the roughened surfaces of an inflamed pleura or pericardium.

F., hepatic. (Ἡπαρ, the liver.) Briançon's name for F., *hydatid*.

F., hydatid. (Ύδαρίς, a watery vesicle. F. *fremissement hydatique*; G. *Hydatidenschwurren*.) The vibration or thrill which may be felt by the finger, and sometimes heard by the

stethoscope, when an hydatid cyst is percussed; it is like to the recurring trembling of a mass of jelly when shaken. See *Thrill, percussion*.

F., pectoral. (L. *pectus*, the chest.) The same as F., *vocal*.

F., pericardial. Same as *Thrill, pericardial*.

F., pleural. Same as *Thrill, pleural*.

F., rhonchal. (Ρόγχος, a snoring.) A deep vibration, audible through the chest walls, caused by mucus in the bronchial tubes.

F., tussive. (L. *tussis*, a cough.) The thrill felt when the hand is placed on the chest during a cough.

F., vocal. (L. *voco*, to call.) The vibration felt when the hands are placed on the chest of one who is producing vocal sounds. See *Thrill, vocal*.

Fremontia. A Genus of the Nat. Order *Chenopodiaceæ*.

F. californica. Torr. The California slippery elm. Used as the slippery elm, *Ulmus fulva*.

Fræna. (L. *frenum*, that which holds things together.) An old term for the alveoli or sockets of the teeth. (Quincy.)

Also, see *Fræna*.

Frenator. (L. *frenator*, a curber.) A controller.

F. nerve. (F. *nerf frenateur*.) A term applied to a vaso-motor nerve, with reference to its office.

French. Relating, or belonging, to France.

F. barley. A term for pearl barley.

F. bean. The *Phaseolus vulgaris*.

F. berries. The fruit of *Rhamnus insectorius*.

F. bole. See *Bole, French*.

F. chalk. See *Chalk, French*.

F. cows'lip. The *Primula auricula*.

F. crust. A synonym of *Syphilis*.

F. distemper. A synonym of *Syphilis*.

F. grass. The *Onobrychis sativa*.

F. hart-wort. The *Seseli tortuosum*.

F. lavender. The *Lavandula spica*, and also the *L. stæchas*.

F. mar'gold. The *Tagetes patula*.

F. meas'ures. See *Measures, French*.

F. mer'cury. The *Mercurialis annua*.

F. nut. The walnut, *Juglans regia*.

F. oint'ment. (G. *Franzosensalbe*.) A name of *Unguentum hydrargyri*.

F. phys'ic nut. The *Jatropha multifida*.

F. phys'ic nut, bas'tard. The *Jatropha gossypifolia*.

F. plums. See *Pruna gallica*.

F. pox. A synonym of *Syphilis*.

F. rhu'barb. See *Rhubarb, French*.

F. rose. The *Rosa gallica*.

F. sa'lep. See *Salep, French*.

F. satyr'ion. The *Orchis militaris*.

F. scam'mony. The inspissated juice of *Cynanchum acutum*.

F. sor'rel. The *Rumex scutatus*; also the *Oxalis acetosella*.

F. spir'it. A term for brandy.

F. tam'arisk. The *Tamarix gallica*.

F. tur'nip. The variety of the cultivated turnip, *Brassica napus*, called the navew. The juice of the root is used in coughs, asthma, and consumption.

FRENCH LICK SPRINGS—FRICTION.

F. turpentine. The product of *Pinus maritima*. See *Turpentine*, French.

F. vinegar. The *Acetum gallicum*.

F. weights. See *Weights*, French.

F. wheat. The *Polygonum fagopyrum*.

F. willow. The *Epilobium angustifolium*.

F. wood. (G. *Franzosenholz*.) A name for guaiacum wood.

French lick springs. United States of America, Orange Co., Ind. Mineral waters, containing sodium chloride, sodium sulphate 4.5 grains, magnesium sulphate 3.6, and calcium sulphate 17.6 grains in a pint, as well as carbonic acid gas and hydrogen sulphide. There is a weaker water.

Frenela. A Genus of the Nat. Order *Coniferae*.

F. Fontanesii, Mirb. The *Callitris quadrivalvis*, Vent.

Frenetic. The same as *Phrenetic*.

Frenga. A local name for a disease observed in Austria, similar to *Fasciaria*.

F. serbiens. Same as *Frenga*.

Frenula. See *Frænula*.

Frænulum. Same as *Frænulum*.

Frænum. See *Frænum*.

Frenzy. (Mid. E. *frenesye*; Old F. *frenaisie*; L. *phrenesis*; Gr. *φρεναις*, for *φρενις*, inflammation of the brain. F. *frenesie*; I. *frenesia*; S. *frenesi*; G. *Wahnsinn*, *Raserei*.) Madness; delirium; great agitation of the mind.

Frequency. (*Frequent*. F. *frequence*; I. *frequenza*; S. *frecuencia*; G. *Häufigkeit*.) Rapidity; the occurrence of a thing at short intervals.

F. of pulse. The number of beats of the pulse in a given time, generally taken as one minute.

F. of respiration. (L. *respiro*, to breathe.) The number of complete acts of respiration, including inspiration and expiration, occurring in a given time, generally taken as one minute.

Frequent. (F. *fréquent*; from L. *frequens*, crowded. I. *frequente*; S. *frecuente*; G. *häufig*.) Occurring rapidly; happening at short intervals.

Frequentative. (F. *frequentatif*; from *frequent*.) A term denoting repetition of an action.

Frere Come's arsenical powder. Arsenious acid one part, cinnabar five parts, burnt sponge two parts. Used to destroy cancerous sores.

Fresh. (Mid. E. *fresch*; Sax. *fersc*; G. *frisch*; F. *frais*.) Strong; vigorous; undecayed; vivid; newly made; not salted.

F. water. Water not salt; river and well water.

F-water soldier. The *Stratiotes aloides*, from its sword-shaped leaves.

Fresnel, Augustin Jean. A French physicist, born at Broglie in 1788, died at Ville d'Avray, near Paris, in 1827.

F's rhomb. A rhomb of glass having an acute angle of 54°, and an obtuse angle of 126°, from which circularly polarised light may be obtained by allowing a ray of plane polarised light to fall perpendicularly upon it. This ray is decomposed in its passage through the rhomb into two rays of light of equal intensity polarised in planes at right angles to each other.

Fret. (Mid. E. *freten*; Sax. *fretan*; G. *fressen*.) To eat away; to fray; to wear away by friction; to irritate.

Also, in Medicine, the act or condition of chafing of a part from rubbing.

Also, a synonym of *Herpes*, and of *Intertrigo*.

Fretting. (*Fret*.) Chafing.

Also, a synonym of *Tormina*.

Fretum. (L. *fretum*, a strait.) A constricted part.

F. Halle'ri. (*Haller*, the physiologist.) The constricted region between the auricles and ventricles in the heart in the early stage of its development.

Also, the analogous constriction between the aortic bulb and the ventricle in reptiles.

Freycinetia. (*Freycinet*, a French naval officer.) A Genus of the Nat. Order *Pandanaceae*.

F. Banks'ii. (After Sir Joseph Banks.) The screw pine. Hab. New Zealand. Fleshy bracts eaten as food.

Freycinetia. Ad. Brogniart's term for *Pandanaceae*.

Freziera. (*Frezier*, a French traveller.) A Genus of the Nat. Order *Ternstroemiaceae*.

F. theoides. (*Thea*, tea; Gr. *είδος*, likeness.) Hab. Central America. Leaves used as tea.

Friability. (*Friable*. F. *friabilité*; I. *friabilita*; S. *friabilidad*; G. *Zerbrechlichkeit*, *Zerreiblichkeit*.) The capacity of being easily crumbled; reducible into small pieces by slight means.

Friable. (F. *friable*; L. *friabilis*, easily crumbled: from *frio*, to rub. I. *friabile*; S. *friable*; G. *zerreissbar*, *zerreiblich*.) Easily crumbled.

Friar. (Mid. E. *frere*; Old F. *frere*, *freire*; from L. *frater*, a brother. I. *frate*; S. *fraile*; G. *Frater*.) A member of a religious order.

F's balsam. The *Tinctura benzoini compositum*.

F's cap. The *Aconitum napellus*, from the resemblance of its upper sepals to a friar's cowl.

F's cowl. The *Arum tenuifolium*.

F's crown. The *Cirsium laniflorum*, and also the *C. eriophorum*.

F's elbow. A name in Mexico, *Ocodos de fraile*, of the fruit of the *Thevetia yccobi*.

Fricatio. (L. *fricatio*; from *frico*, to rub.) Rubbing; friction; shampooing.

Fricative. (L. *frico*, to rub.) A term applied to those letters the sound of which is produced by the friction of the breath passing through a narrow orifice; such are *f* and *s*.

Fricator. (L. *fricator*.) A rubber; one who shampoos.

Fricatorium. (L. *fricator*, a rubber.) A term for a *Liniment*.

Fricatrix. (L. *fricator*, a rubber.) A synonym of *Tribas*.

Fric'ta. A synonym of *Colophony*.

Fric'tio. (L. *frictio*, a rubbing; from *frico*, to rub.) See *Friction*.

F. hu'mida. (L. *humidus*, moist.) See *Friction*, moist.

F. sicca. (L. *siccus*, dry.) See *Friction*, dry.

Friction. (F. *friction*; from L. *frictio*, a rubbing; from *frico*, to rub. I. *fregamento*; S. *friccion*; G. *Reibung*, *Einreibung*.) The act

FRICTION-SOUND—FRIEDRICHSHALL

of rubbing; the rubbing into the skin of some medicament.

In Medicine, the term is applied to the methodical rubbing called *Shampooing*, as well as to less special forms, as the use of a flesh brush, and also to the rubbing in of liniments and embrocations.

In Mechanics, the term is more especially applied to the result of the rubbing of two bodies on each other when one or both of them is moving, being the resistance which the moving body has to overcome; it is directly proportional to the pressure of the two surfaces on each other.

F.s, apotherapeutic. See *Apothérapeia*.

F., coefficient of. (L. *co*, for *con*, with; *efficio*, to bring to pass.) The proportional amount of pressure which is required to be exerted to overcome friction. It varies with the roughness or the smoothness of the bodies concerned, as well as with their nature, and with the presence or absence of some intermediate lubricating substance.

F., dry. (F. *friction sèche*.) Friction applied with the hand, a brush, or flannel, with or without some kind of powder.

F., dynamical. (Δύναμις, power.) The friction which diminishes the velocity of a moving body.

F., frem'itus. See *Fremitus friction*.

F., moist. (F. *friction humide*.) The application of liniments and other fluid remedies by means of rubbing.

F. mur'mur. A term erroneously applied to a pericardial friction sound.

F., rolling. The friction which occurs when one body moves over another with a rolling action, as is the case with a wheel.

F., slid'ing. The friction which occurs when one body moves over another with a gliding and not a rolling motion.

F. sound. See *Friction-sound*.

F., stat'ical. (Στατικός, causing to stand.) The friction which tends to prevent the motion of a body at rest.

Friction-sound. (F. *frottement*; G. *Reibungsgeräusch*.) A sound, heard on auscultation, caused by the rubbing of rough surfaces against each other, such as the inflamed parietal and visceral surfaces of the pleura.

F., creak'ing. See under *F., pleural*.

F., pericard'ial. (Περικαρδῖος, around the heart.) A sound accompanying the heart-beat when the surfaces of the pericardium are roughened, as in the early and the later stages of pericarditis when there is little serous effusion, or where there are adhesions, or white patches; it varies in character, sometimes being directly rubbing and alternate, sometimes crackling or creaking; it is sometimes irregular in rhythm, and is generally heard only over a small and sometimes a variable area. Its most common seat is, perhaps, over the base of the right ventricle.

F., peritone'al. (Περιτόναιος, stretched over.) A sound sometimes heard during respiration over the lower part of the right chest-walls, and produced by the friction of the adjacent peritoneal surfaces of the liver and the diaphragm.

A similar sound has been heard to accompany the heart-beats when the upper peritoneal surface of the liver has been roughened.

Peritoneal friction-sounds may also be heard

in the abdomen during respiratory movements when there is thickening or roughness of the peritoneum; and they have also been heard in the epigastric region, produced by the impulse of the cardiac systole.

F., pleu'al. (Pleura.) A sound which accompanies the movements of respiration when the opposed surfaces of the pleura are roughened from inflammatory or other deposit, and in interlobular emphysema. The character varies from a soft to-and-fro sound as of rubbing of paper, to the harsh creaking of leather; or it may consist of irregular jerks, and it is most commonly heard at the base of the chest, towards the angle of the scapula. Sometimes it is pulsatile, and produced by the action of the heart.

F., pul'satile. (L. *pulso*, to beat.) A pleural friction sound having origin in the cardiac pulsations.

F., shoul'der-blade. A sound sometimes heard in the chest, due to the rubbing of the ribs against the scapula.

F., shoul'der-joint. A sound sometimes heard in the supraspinous fossa during respiration and produced in the shoulder-joint.

Friction'al. Relating to, or causing, or produced by, *Friction*.

F. electric'ity. See *Electricity, friction'al*.

Fric'trix. (L. *frictrix*, a female rubber; from *frico*, to rub.) A synonym of *Tribas*.

Fric'tum. (L. *frictus*, part. of *frico*, to rub.) Something to be rubbed in, such as a liniment.

Fried'reich, Nicola'us. A German physician, born in Wurzburg in 1825, died in Heidelberg in 1882.

F.'s disease'. A disease of the spinal cord, which has also been called hereditary ataxy. It frequently commences in childhood after the first dentition with some disturbance of the motor conditions of one or both of the lower limbs, ending in inability to stand. The defect of motor power spreads to the upper limbs, and causes tremblings, then the head waggles, the speech becomes hesitating from tremors of the tongue, and the vision is affected from oscillations of the eyeball; with all this difficulty in co-ordination there is actual loss of muscular power, which becomes more or less complete paralysis. Sometimes there are muscular contractions and sometimes pains, but seldom anything like the lightning pains of locomotor ataxia; neither is there, as in locomotor ataxia, loss of reflex power. There is found after death a sclerosis of the different columns of the cord, especially in the cervical and lumbar regions, affecting chiefly the posterior columns, but extending also to the other columns, and reaching the floor of the fourth ventricle through the posterior pyramids; in some cases the chief morbid changes are found around the central canal of the cord, and, according to Hammond, the cerebellum is also affected. There is generally atrophy and induration of the posterior roots of the spinal nerves, as well as of the hypoglossal nerve.

Friedrichshall. Germany. In Saxe Meiningen, situated in the pretty Valley of Greck. The water is cold, contains sodium and magnesium chloride and sulphate, and bromides. The sp. gr. is 1.022—1.0170. Temperature 10° C. (50° F.) It has been known as a saline water from the twelfth century; and from the last half of

FRIES, ELIAS MAGNUS—FRONDIFEROUS.

the last century a salt named *sal aperitif*, or aperient salt, has been prepared from it, which is nearly pure sodium sulphate. It is a purgative. The proportions of the chief salts in one thousand parts are sodium chloride 8.38, magnesium chloride 4, magnesium bromide 0.00279, sodium sulphate 5.43, magnesium sulphate 5.14, calcium sulphate 1.46, and a little free carbonic acid gas. The water is chiefly exported.

Fries, Elias Magnus. A Swedish botanist, born at Femsjö in 1794, died at Upsala in 1878.

F.'s classifica'tion. Class I. Dicotyledons: divided into Corollifloræ, Thalamifloræ, and Calycifloræ, having each an epigynous, an amphigenous, and a hypogynous series, and Incompletæ, divided according to the characters and presence of the perianth. Class II. Monocotyledons: having an epigynous, an amphigenous, and a hypogynous series. Class III. Cryptogams, or Nemeæ: consisting of Heteronemeæ, or those with germinating threads, and Homonemeæ, or those with gonidia.

Fries'land green. Same as *Brunswick green*.

Frige'facient. (*L. frigus*, cold; *facio*, to make.) Same as *Refrigerant*.

Frig'id. (*L. frigidus*, cold. *F. froid*; *G. kalt*.) Cold; chilly; wanting in sexual desire.

F. zone. (*L. zona*, a belt.) The zone of the earth lying between each pole and the corresponding polar circle, which is at a distance of about 23° 28'.

Frigida'rium. (*L. frigidarium*, the cooling room in a bath.) The cool room in an old Roman bath.

Also, the same as *Bath, cold*.

Frigid'ity. (*L. frigiditas*; from *frigeo*, to be cold. *F. frigidité*; *I. frigidita*; *S. frialdad*.) Coldness; absence of desire for sexual intercourse; impotence; sterility.

F. of stom'ach. A state of gastric debility, formerly considered to arise from sexual excesses.

Frigor'ic. (*L. frigus*, cold.) Relating to cold.

F. au'id. An old term applied to an imponderable fluid which was supposed to be the cause of cold.

Frigorifa'cient. (*L. frigus*, cold; *facio*, to make.) That which abstracts heat; a *Refrigerant*.

Frigorif'ic. (*L. frigorificus*; from *frigus*, cold; *facio*, to make. *F. frigorifique*; *I. frigorifico*; *G. kältend, abkühlend*.) Cooling, having power to make cold.

F. mixture. See *Freezing mixture*.

F. nerve. A term applied to a vaso-constrictor nerve.

Frigus. (*L. frigus*; *Gr. ψῖγος*, cold.) Cold.

F. ten'uë. (*L. tenuis*, thin.) Rigor or chill.

Fringe. (Old *F. frange, fringe*; from *L. fimbria*, threads. *F. frange*; *I. frangia*; *S. franja*; *G. Franse*.) A border of loose thread-like pieces.

F. myr'tles. The plants of the Nat. Order *Chamaelauceæ*.

F.s of diffrac'tion. See under *Diffraction*.

F. of interfe'rence. See under *Interference*.

F.s, syno'vial. See *Synovial fringes*.

F. tree. The *Chionanthus virginica*.

Fring'ed. (*F. frangé*; *I. frangiato*; *G. gefranset*.) Bordered as with a fringe.

In Botany, the same as *Fimbriated*.

F. body. (*F. corps frangé*.) The *Corpus fimbriatum*.

F. bog-bean. The *Villarsia nymphaeoides*.

F. pink. The *Dianthus superbus*.

Fringill'a. (*L. fringilla*, the redbreast or the chaffinch.) A Genus of the Order *Passeres*.

F. domes'tica. Naum. The common sparrow, *Passer domesticus*.

Fritillaria. (*L. fritillus*, a dice-box.) A Genus of the Nat. Order *Liliaceæ*, so called on account of its chequered petals.

F. imperia'lis. Linn. (*L. imperialis*, of the empire. *F. fritillaire imperiale*; *G. Kaiserkrone*.) The crown imperial lily. Formerly an official drug; bulb, acrid and said to be poisonous, used as a resolvent; it contains a considerable quantity, 23 per cent., of a very fine starch, which has been used as food.

F. melea'gris. Linn. (*F. fritillaire meleagre, f. damier*; *G. Schachtblume*.) Hab. Europe. Bulbs resolvent, infusion of flowers used as a calmative, and the juice in cancerous ulcers.

F. Thunberg'ii. Miq. The Bai-mo of Japan, where the bulbs are used as an anti-rheumatic.

Frog. (Mid. E. *frogge*; Sax. *froga*; *G. Frosche*. *F. grenouille*; *I. rana*; *S. rana*.) The animals of the Genus *Rana*. The liver of the common frog was formerly official in the London Pharmacopœia of 1618; when dried it was considered useful in quartan agues. Several of the species have been, and continue to be, used as a delicate food.

Also, a term applied to the triangular softer part on the sole of a horse's hoof.

Also, a term given to the thrush, or aphthous stomatitis, of infants.

F.-bit. The *Hydrocharis morsus ranae*, because it was supposed that frogs ate it.

F., eat'able. The *Rana esculenta*. It is used as a food.

F. foot. The plants of the Genus *Lemna*.

F., gib'bous. (*L. gibbus*, humped.) The *Rana esculenta*.

F. grass. The *Salicornia herbaceæ*.

F. leaf. The *Hydropeltis purpurea*.

F. rheosco'pic. See *Rheoscopic frog*.

F.'s spawn. The ova of the common frog, *Rana temporaria*. Once used in medicine.

F.-tongue. Same as *Ranula*.

Frond. (*L. frons*, foliage. *F. fronde*; *I. fronda*; *G. Wedel*.) The foliage or leaf of a fern; also, that of a palm.

Frond'es. Plural of *Frons*, foliage.

F. capill'i Veneris. The fronds of the *Adiantum capillus-Veneris*.

F. sabi'næ. The tops of the savin, *Juniperus sabina*.

F. tax'i. The tops of the yew, *Taxus baccata*.

Frondes'cence. (*L. frons*, foliage. *F. frondescence*; *G. Belaubung*.) The growing of foliage; the development of other organs into leaves.

Also, used in the same sense as *Vernation*.

Frondif'erous. (*L. frons*, foliage; *fero*, to bear. *G. belaubt*.) Leaf-bearing; applied to flowers which produce leaves.

FRONDIFORM—FRONTAL.

Also (*G. Wedeltragend*), applied to plants, like ferns, which bear fronds.

Frondiform. (*L. frons*; *forma*, shape. *G. wedelförmig*.) Having the shape of a frond.

Frondigerous. (*L. frons*; *gero*, to carry. *G. wedeltragend*.) Bearing fronds.

Frondiparous. (*L. frons*, foliage; *pario*, to bring forth.) Leaf producing; applied to flowers which produce leaves.

Frondium. An old name for a bandage for wounds of the forehead or of the nose.

Frondlet. A small *Frond*.

Frondose. (*L. frons*, foliage. *G. be-laubt, laubartig*.) Leafy; having leafy extensions.

Frondous. (*L. frons*.) Having branches bearing both leaves and flowers.

Also, a term applied to flowers parts of which develop into leafy structures.

Frondule. (*L. frons*, foliage.) A small frond.

Frons. (*L. frons*, the forehead.) The forehead.

Also (*L. frons*, foliage), a leaf, or a leaf-like stem.

F. quadra'ta. (*L. quadratus*, squared.) A term applied to the common form of forehead in rickety children, when it becomes, by excessive development of the frontal eminences, high, broad, and square.

Front. (*Mid. E. front*; *Old F. front*; from *L. frons*, the forehead.) The forehead.

Front-tap contraction. Gowers's term for the modification of the ankle reflex or ankle clonus which is obtained by tapping the front muscles of the leg whilst the ankle is passively flexed, by which the foot is moved rhythmically.

Frontal. (*L. frons*. *F. frontal*; *I. frontale*; *S. frontal*; *G. frontal*.) Belonging to, or connected with, the forehead.

Also, an application or a bandage for the forehead.

F. artery. (*F. artère frontale*; *G. Stirn-schlagader*.) One of the two terminal branches of the ophthalmic artery which turns over the inner border of the orbit and divides into branches for the supply of the muscles, integuments, and pericranium. It anastomoses with the supra-orbital artery and with its fellow in the middle line.

Also, a term sometimes applied to the anterior temporal branch of the superficial temporal artery.

F. artery, exter'nal. The supra-orbital artery.

F. artery, inter'nal. The *F. artery*.

F. bone. (*F. os frontal*; *G. Stirnbein*.) An unpaired symmetrical bone constituting the front part of the cranium and the upper part of the face; it consists of two portions, the upper and vertical and vaulted part forming the forehead, and two lower and horizontal parts, the orbital plates, forming the roof of the orbits. The frontal part of the bone is convex anteriorly, and at the outer parts of its lower border joins at an angle the orbital plates and forms the upper arch of the orbit, on the inner third of which is the supraorbital notch; above the orbital arches are the supraorbital ridges, and higher still the most prominent parts of the bone, the frontal eminences; between the inner ends of the orbital arches is the glabella, and below it the nasal notch with the nasal

spine; the roughened extremities of the orbital arches are the external and internal angular processes, from the former of which springs the temporal crest. The inner surface of the frontal part is concave, studded with the digital impressions for the convolutions of the brain, and intervening eminences; in the middle line in front is a ridge, the frontal crest, starting from the foramen cæcum at its anterior extremity and losing itself as it passes backwards, and divides to form the frontal sulcus, and sometimes retaining its fetal condition as a frontal suture. The orbital plates are marked on their upper or cerebral surface by furrows for the cerebral convolutions, and on their under or orbital surface by the lachrymal fossa just within the external angular process and by the trochlear fossa near to the internal angular process; they are separated from each other in the middle line by the ethmoidal notch. The frontal bone articulates with the two parietal, the sphenoid, the ethmoid, the two lachrymal, the two nasal, the two malar, and the two superior maxillary bones. This bone grows from two centres of ossification, at what, in the adult bone, is called the frontal eminence, commencing about the seventh week of fetal life; at birth the two sides are separate, and occasionally they remain more or less so in the adult, being united by the frontal suture, but this is generally obliterated by the end of the first year. This primitive separation into two parts is persistent in many animals. In the python the two halves are joined at each extremity only, forming a ring-shaped bone; and in some monkeys the extremities of the orbital plates are united behind the cribriform plate of the ethmoid bone. The point of junction of the two parts is in some apes developed into a strong external ridge, which joins the sagittal ridge. The superciliary ridges are very large in some apes.

F. convolutions. See under *Gyrus frontalis*.

F. crest. See *Crista frontalis*.

F. em'inance. See *Eminence, frontal*.

F. font'anelle. See *Fontanelle, anterior*.

F. fur'row. (*G. Stirnfurche*.) A depression on the inner surface of the frontal bone, which commences at the frontal spine and extends to the parietal bone. It lodges part of the superior longitudinal sinus and gives attachment to the falx cerebri.

F. lobe. See *Lobe of cerebrum, frontal*.

F. mir'ror. A circular mirror worn on the forehead, by means of an elastic band, for the purpose of throwing rays of light on the oral laryngoscopic mirror or on other parts.

F. mus'cle. (*G. Stirnmuskel*.) The anterior part of the occipito-frontalis muscle. It is flat, thin, narrower inferiorly, springs from the root of the nose, the glabella, and the acus superciliaris, expands over the frontal tuberosity, and ends in the galea aponeurotica.

F. nerve. (*F. nerv frontal*; *G. Stirn-nerv*.) The largest of the divisions of the ophthalmic nerve; it enters the orbit on the outer side of the fourth nerve, and lies between the levator palpebræ superioris and the periosteum; a little behind the middle of the orbit it divides into two branches, the supratrochlear and the supraorbital nerve. It is the palpebro-frontal nerve of Chaussier.

Henle applies the term to the inner or median branch of the supraorbital nerve.

FRONTALE—FROTH.

F. nerve, external. (G. *äusserer Stirn-nerv.*) The supraorbital nerve.

F. nerve, internal. (G. *innerer Stirn-nerv.*) The supratrochlear nerve.

F. notch. Henle's term for a shallow notch sometimes seen on the inner side of the supraorbital notch, and transmitting the smaller and innermost branch of the supraorbital nerve when it divides within the orbit; the branch which Henle calls the frontal nerve.

F. process of malar bone. A thick, well-serrated process forming the upper and outer part of the malar bone, which articulates with the external angular process of the frontal bone.

F. protuberance. (L. *protubero*, to bulge out.) The *Eminence, frontal*.

F. re'gion. The forehead; the part of the skull corresponding to the frontal bone.

F. si'nus. See *Sinus, frontal*.

F. spine. See *Crista frontalis*.

F. sul'cus. (L. *sulcus*, a furrow.) The *F. furrow*.

See also, under *Sulcus frontalis*.

F. su'ture. See *Suture, frontal*.

F. vein. (F. *veine frontale*; G. *Stirn-blutader*.) A vein which is formed by twigs from the vertex and the forehead, lying vertically on the outer side of the lower part of the median line, and terminating beneath the inner end of the eyebrow in the angular vein. It communicates with the anterior branches of the temporal vein and with its fellow of the opposite side.

F. vein of dip'loë. See *Diploe, vein of, frontal*.

Fronta'lë. (L. *frons*, the forehead.) An application to the forehead, be it drug or bandage.

Also, the *Frontal bone*.

Frontalis. See *Frontal*.

F. et occipitalis. The occipito-frontalis muscle.

F. mus'cle. See *Frontal muscle*.

F. ve'rus. (L. *verus*, true.) The corrugator supercilii muscle.

Frontate. (L. *frons*.) In Botany, applied to a leaf which gradually broadens from the petiole.

Frontated. Same as *Frontate*.

Front'let. A diminutive of *Front*.

The part of the base of the bill of birds where bristles generally grow.

Front'o-an'terior. (L. *frons*; *anterior*, in front.) Having the forehead in front.

F. presenta'tion. The presentation of the foetal head in labour with the forehead towards the abdominal surface of the mother.

Front'o-auricular. (L. *frons*, the forehead; *auricula*, the outer ear.) Relating to the forehead and the ear.

F. mus'cle. A muscle found in many mammals arising from the anterior and upper edge of the orbit and attached to the base of the auricle.

Front'o-cotyloid. (L. *frons*; Gr. *κοτύλη*, a small cup; *εἶδος*, likeness.) Relating to the forehead and the cotyloid cavity, or acetabulum.

F. presenta'tion. The presentation of the foetal head in labour with the forehead towards the acetabulum of the mother.

Frontody'mia. (L. *frons*.) Same as *Cephalody'mia*.

Fron'to-eth'moid. Relating to the frontal and to the ethmoid bones.

F. fora'men. (F. *trou fronto-ethmoïdal* of Chaussier.) The *Foramen cæcum of frontal bone*.

Fron'to-ma'lar. Relating to the frontal and malar bones.

F. su'ture. See *Suture, fronto-malar*.

Fron'to-na'sal. (L. *frons*, the forehead; *nasalis*, belonging to the nose.) Relating to the forehead and nose.

F. mus'cle. Chaussier's term for the *Pyramidalis nasi*.

F. nerve. The supratrochlear nerve.

F. plate. A broad median plate growing downwards and forwards from the front part of the base of the cranium of the human embryo during the fifth or sixth week. It passes between the ocular vesicles to the transverse buccal cleft. It is attached behind to the trabecular axis; its lower end is cleft for the nasal pits, so as to form a median part, from which the columella of the nose and the lunula of the upper lip are developed, and two lateral parts, from which the alæ nasi take origin.

Also, called *Naso-frontal process*.

F. process. An escutcheon-shaped fold of ligament which, in some fishes, as the skate, extends from the nostrils backwards towards the mouth on each side; it terminates in a rounded fimbriated lobe.

Also, the same as *F. plate*.

Fron'to-pa'rietal. (L. *frons*; *parietalis*, belonging to a wall.) Relating to the frontal and to the parietal bones.

F. bone. The bone of the head of the frog and other Amphibia, which consists of a conjoined frontal and parietal bone.

F. su'ture. See *Suture, fronto-parietal*.

Fron'to-pos'terior. (L. *frons*; *posterior*, hinder.) Having the forehead behind.

F. presenta'tion. The presentation of the foetal head in labour with the forehead towards the sacral region of the mother.

Fron'to-sphenoidal. Relating to the frontal and the sphenoidal bones.

F. su'ture. See *Suture, fronto-sphenoidal*.

Fron'to-tem'poral. Relating to the frontal and the temporal bones.

F. su'ture. See *Suture, fronto-temporal*.

Frost. (Mid. E. *frost*, *forst*; Sax. *forst*; G. *Frost*. F. *gelée*; I. *gelo*; S. *helada*.) The act of freezing; severe cold, so that water freezes.

F. bear'er. The *Cryophorus*.

F. bite. See *Frostbite*.

F. blite. The *Chenopodium album*.

Frostbite. The inflamed or gangrenous condition of the skin and adjacent parts produced by exposure to severe cold. The milder forms constitute chilblain; the severe form, or gangrene, may be either dry or moist, usually the latter.

Frostplant. The *Helianthemum canadense*.

Frostweed. The *Erigeron philadelphicum*.

F., Cana'dian. The *Helianthemum canadense*.

Frostwort. The *Helianthemum canadense*.

Froth. (Mid. E. *frothe*; a Scandinavian word; Icel. *froða*. F. *écume*; I. *echiuma*,

FROTHY—FRUCTUS.

spuma; *S. espuma*; *G. Schaum*.) The foam of a liquid caused by heating it, or by fermentation, or by agitation.

Also, to foam, to cause to foam.

F., bronchial. (*Βρόγχια*, the bronchial tubes. *F. écume bronchique*.) The tenacious, frothy secretion expectorated in some cases of asthma, asphyxia, and other affections of the respiratory organs, in which the bronchial mucus is agitated with air by means of the frequent efforts to cough.

Frothy. (*Froth*. *F. écumeux*; *I. spumoso*; *S. espumoso*; *G. schäumig*.) Full of, or resembling, froth.

F. expectoration. (*L. expectoro*, to spit out.) A term applied to expectoration which is tenacious and full of air bubbles, as in some cases of asthma, acute bronchitis, and oedema of the lung.

F. fæces. (*L. fæx*, sediment.) Fæces which, from decomposition, contain much gas intimately intermixed.

Fructescence. (*L. fructesco*, to produce fruit.) The condition of ripeness or maturity of fruit; the time or season when fruit ripens.

Fructiculose. (*L. fructus*, fruit.) Producing much fruit.

Fructiferous. (*L. fructus*, fruit; *fero*, to bear. *F. fructifere*; *G. fruchttragend*.) Carrying or bearing fruit, or the fruit.

Fructificatio. Same as *Fructification*, Also, the same as *Fecundation*.

Fructification. (*L. fructus*; *facio*, to make. *F. fructification*; *I. fruttificazione*; *S. fructificacion*; *G. Fruchtbildung, Befruchtung, Fruchtstand*.) The phenomena which accompany the formation and growth of the fruit of a plant.

Also, the disposition of the parts which form the fruit.

Also (*G. Befruchtungstheile*), the whole amount of the fruit structures of any plant; it is especially applied to the reproductive parts of ferns and mosses.

Fructiflorous. (*L. fructus*; *flos*, a flower. *F. fructiflore*.) Lamarck's term for a flower with an inferior ovary, in which the calyx assists in forming the pericarp.

Fructiform. (*L. fructus*; *forma*, shape. *F. fructiform*; *I. fruttiforme*; *G. fruchtähnlich*.) Having the form of a fruit.

Fructiparous. (*L. fructus*; *pario*, to bring forth.) Producing fruit in excess of the normal quantity.

Fructose. (*L. fructus*.) Fruit sugar, or *Lævulose*.

Also, applied to the sugar found in fruit, which consists of variable proportions of *lævulose* and *dextrose*.

Fructuation. (*L. fructus*, fruit.) The development or production of fruit.

Fructule. (*Dim.* of *L. fructus*. *F. fructule*; *G. Früchtchen*.) One of the parts or simple fruits of which a compound fruit is made up.

Fructus. (*L. fructus*, fruit; from *fruor*, to enjoy.) Fruit.

F. acaciæ. (*G. Schlehen*.) The fruit of *Prunus spinosa*, used as food.

F. acido-dulces. (*L. acidus*, sour; *dulcis*, sweet.) Subacid fruits; those which contain some amount of sugar as well as acid.

F. adansonie digitatæ. The fruit

of *Adansonia digitata*. Pleasant, sourish-tasting berries, which are eaten as a dessert fruit, and are said to be useful in dysentery.

F. adjowaen. Same as *Ajowan fruit* and *F. ajowan*.

F. agni casti. (*G. Keuschlammssamen, Mönchsamen*.) The fruit of *Vitex agnus castus*. Mericarp with a pepper-like taste. Used as an emmenagogue.

F. ajowan. True bishop's weed. The product of *Ammi copticum*, or of *Ptychotis adjowan*, D.C. Small spicy fruits long known in India. They resemble those of parsley, being greyish brown, plump, rough, and about one tenth of an inch long. Each mericarp has five prominent ridges. Each vallicula has a single vitta. The commissural surface presents two vittæ. The odour resembles that of thyme, and is due to an aromatic volatile oil, of which they contain 5 per cent. They also contain thymol. Used as a condiment, a carminative, and a vehicle for nauseous medicines.

F. algarobito. The fruit of *Balsamocarpion brevifolium*, Phil. Hab. Chili. The fruit contains much tannin.

F. algarovilla. The compressed fruit of *Juga Marthæ*, Spr., or *Pithecolobium parvifolium*, Benth. Hab. West Indies. Bitter, contains much tannic acid.

F. alkeken'gi. (*F. coquerets*; *G. Judenkirschen, Schlutten*.) The fruit of *Physalis alkekengi*. Red, shining, globular berries, the size of a cherry, and of a sweetish, bitter taste. They contain physalin. Not now used.

F. ammeos cretici. (*L. creticus*, belonging to Crete.) The fruit of *Ptychotis coptica*.

F. ammeos veri. (*L. verus*, true.) The fruit of *Ptychotis coptica*.

F. ammeos vulgaris. (*L. vulgaris*, common.) The fruit of *Ammi majus* or *Ptychotis fœniculifolia*. Used as a carminative.

F. amomi. (*Άμωμον*, a spice plant. pimenta. *G. Nelkenpfeffer*.) The fruit of *Eugenia pimenta*. See *Pimenta*, B. Ph.

F. anacardi occidentalis. (*F. noir d'acajou*.) The fruit of *Anacardium occidentale*. It is a reniform nut, seated on the end of a pyriform fleshy peduncle. Taste acrid, seeds oily, edible when roasted. The Cashew nut. See *Anacardium occidentale*.

F. anacardi orientalis. Malacca bean. See *Anacardium orientale*.

F. andæ. The fruit of *Anda Gomesii*, Juss., or *Johannesia princeps*, Velloz. Hab. Brazil. The shell is astringent. The seeds resemble sweet almonds. Purgative.

F. anethi. See *Anethi fructus*.

F. anisi. *G. Ph.* See *Anisi fructus*, U.S. Ph.

F. anisi stella'ti. (*L. stellatus*, star-shaped. *F. anise étoilé*; *G. Sternanis*.) The fruit of the *Illicium anisatum*, Loureiro. Each fruit is formed of eight one-seeded carpels, originally vertical but subsequently radiating. The carpels are irregularly wrinkled, beaked at the apex, brown, internally of a brighter colour, smooth. They have a cavity with a separate wall in their lower half for the seed. The seed is not aromatic, and amounts to one fifth of the entire weight of the fruit. It has an agreeable aromatic taste and smell. The fruit contains 4 or 5 per cent. of volatile oil, and is often sold for aniseed oil. It is rich in sugar. It is employed

FRUCTUS.

to flavour spirits, and is used as an addition to diaphoretic, diuretic, and expectorant remedies.

F. anisi vulgaris. (L. *vulgaris*, common.) See *Anisi fructus*.

F. apei'bæ hispidæ. (L. *hispidus*, rough.) The fruit of *Apeiba hispida*, Gärtn. Hab. Guiana. A berry; edible.

F. a'pii. (G. *Selleriesamen*.) The fruit of *Apium graveolens*. It is roundish, contracted at the side; ridges 5, narrow, equal, the lateral on the edge; vittæ one to each furrow. Used as a carminative.

F. ar'achis hypogæ'æ. (G. *Erdnuss*.) The fruit of *Arachis hypogæa*, L. A leguminous fruit. Seeds sweet, oily, poisonous. The oil and starch they contain used to make a kind of chocolate.

F. artocar'pi. (G. *Brodfrucht*.) The fruit of *Artocarpus incisa*, L.

F. attalææ funif'eræ. The fruit of *Attalea funifera*, Mart. A palm indigenous in the Brazils. See *Attalea*.

F. auran'tii. (F. *orange amèr*; G. *Pomeranzen*.) The fruit of *Citrus Bigaradia*, the bitter orange. Fruit roundish, smooth, or wrinkled; deep yellow, with concave oil cysts; pulp acid and bitter; rind very bitter, aromatic, tonic.

F. auran'tii immatur'i. G. Ph. (F. *orangettes*; G. *unreife Pomeranzen*.) The dried unripe fruit of *Citrus vulgaris*. They are globose, roundish or oval, .5 cm. to 1 cm. in diameter; greyish-brown to blackish, and marked with many oil glands. Taste aromatic and bitter. Employed to keep issues open; and used in decoction as an aromatic stomachic.

F. ave'næ. (G. *Hafer*.) Oats, the fruit of *Avena sativa*.

F. ave'næ excortica'tus. (L. *ex*, out; *cortex*, bark. F. *gruau d'avoine*; G. *Hafergrütze*.) Groats. The decorticated grains of the oat, *Avena sativa*. Used for food, especially in Scotland.

F. bab'lah. The fruit of *Acacia bambolah*, Roxb. Hab. East Indies. Contains much tannic acid. Used as a colouring agent.

F. badia'ni. Same as *F. anisi stellati*.

F. barringtoniæ acutangulæ. (L. *acutus*, sharp; *angulus*, a corner.) The fruit of *Barringtonia acutangula*, Gärt., or *Stravadium album*, De Cand. Hab. East Indies. Taste, warm and stimulating.

F. be'chicæ. (Bṛṅṅ, a cough.) Same as *F. pectorales*.

F. be'læ in'dicæ. (F. *coing du Bengale*; G. *Baelfrucht*, *Modjabere*.) The fruit of *Ægle marmelos*, Correa. Bael fruit, Bengal quince. A large berry like an orange, with a smooth hard shell. The interior divided into ten to fifteen cells, each containing several woolly seeds imbedded in a mucilaginous aromatic pulp. Much esteemed in India as a remedy for dysentery and diarrhœa, and in constipation as a laxative.

F. belladon'næ. (G. *Tollkirsche*.) The fruit of *Atropa belladonna*. They contain atropin, and are poisonous.

F. berber'idis. (G. *Berberitzenbeeren*, *Sauerdornbeeren*.) The fruit of *Berberis vulgaris*. Berries very acid, astringent, red, 1 cm. long, 4 mm. broad, one or two seeded. They contain malic acid. Used as an addition to other fruit juices.

F. bigno'niæ catal'pæ. The fruit of

Bignonia catalpa. Used as a stimulating expectorant.

F. bu'ro. The fruit of an unknown Indian plant. Used in infusion as a stomachic and antifebrile agent.

F. cajepu'ti. Trew's term for the seeds of *Anomum macospermum*, Smith, which he believed to be the true source of cajeput oil.

F. canarien'sis. (F. *semence de canarie*; G. *Kanariensamen*.) Canary seed, the fruit of *Phalaris canariensis*. Used for food when mixed with wheat or rye; also employed for poultices.

F. can'nabis. (F. *chenevis*; G. *Hanf-samen*.) Hempseed, the fruit of *Cannabis sativa*. Pericarp thin, hard, smooth, greenish, veined. Yields a large quantity of oil. Used as a demulcent in emulsion and decoction.

F. cap'sici. G. Ph. See *Capsici fructus*, B. Ph.

F. cardamo'mi. G. Ph. (F. *cardamomes*; G. *Malabarische Cardamomen*, *kleine Cardamomen*.) The fruit of *Elettaria cardamomum*, Maton, *Alpinia cardamomum*, Roxb. Cardamoms. The fruit of the Malabar cardamom is an ovoid, oblong, 3-sided, 3-valved capsule, containing numerous seeds. The pericarp is greyish yellow, papery, longitudinally striated, inodorous, tasteless, splitting lengthwise into three valves. Each of the three compartments contains from five to seven dark brown aromatic seeds, each about two lines long, irregularly angular, transversely rugose, enclosed in an aril. The seeds contain about 10 per cent. of a fatty oil, and between 4 and 5 per cent. of an essential oil. Used as an aromatic, and as a condiment.

F. cardamo'mi ceylan'ici. The product of *Elettaria major*, Smith; differing chiefly in its elongated form and its large size from the fruit of *Elettaria minor*, or small cardamoms. Long cardamoms.

F. cardamo'mi javan'ici. The fruit of *Anomum maximum*, Roxb. A native of Java. The fruits are from thirty to forty in number, arranged on a short thick scape forming a globose group four inches in diameter. Round cardamoms.

F. cardamo'mi mino'ris. (L. *minor*, less. G. *kleine Cardamomen*.) The *F. cardamomi*, G. Ph.

F. car'dui ma'riæ. (G. *Frauentistel-samen*, *Stichhörn*.) The fruit of *Carduus marianus*. Used as a febrifuge, diuretic, and emmenagogue.

F. ca'ricæ. (F. *figue*; I. *figo*; S. *higo*; G. *Feige*.) The fruit of *Ficus carica*, the fig. It consists of a thick, fleshy, hollow, pyriform receptacle, with numerous minute fruits growing on its inner surface. It contains from 60 to 70 per cent. of sugar. Figs, both fresh and dry, are consumed as dessert, and are regarded as laxative.

F. carminati'væ. Equal parts of the fruits of anise, fennel, coriander, and caraway.

F. caro'tæ. See *Carrot fruit*.

F. car'thami. (G. *Farbersafflorsamen*.) The fruit of *Carthamus tinctorius*. Used as a purgative in jaundice and dropsy.

F. car'ui. See *Carui fructus*.

F. car'vi. G. Ph. Same as *Carui fructus*.

F. car'vi Roma'ni. Same as *F. cumini*.

F. car'yæ. (G. *Pekan Nüsse*.) The fruit of *Carya oliviformis*, *C. alba*, and *C. sulcata*, Nutt. Hab. North America. Hickory nuts. A stone fruit with almond-like kernel. The oil is used in medicine and for domestic purposes.

FRUCTUS.

F. caryoca'ri. (G. *Souari*, *Swarrow-Nüsse*.) The fruit of *Caryocar glabrum*, Pers. A plant wild and cultivated in Guiana; the seeds resemble almonds.

F. cas'siæ fistulæ. The fruit of *Cassia fistula*. Cylindrical pods 12" to 20" long, 1" in diameter, with a blackish-brown woody shell, having two shining longitudinal bands, one of which is double, marking the junction of the valve; indehiscent, externally divided by transverse septa, each containing a glossy seed embedded in a blackish-brown sweet pulp, which is the *Cassia pulpa*, B. Ph.

F. cer'asi aci'dæ sicca'ti. (L. *cerasus*, a cherry; *acidus*, sour; *siccatus*, dried. G. *getrocknete saure Kirschen*.) The dried fruit of the sour variety of *Prunus cerasus*. Used in decoction as a drink.

F. cer'asi dul'cis. (L. *dulcis*, sweet. G. *Süsskirchen*.) The fruit of *Prunus avium*, L. A sweet fruit. Esculent.

F. cerato'niæ. (F. *carroube*, *carrouge*; G. *Johannisbrod*.) The fruit of *Ceratonia siliqua*. Fleshly, jointed pods, dark brown, shining, and finely wrinkled, containing a soft reddish-brown marbled pulp with a sweet taste. They contain grape sugar, pectin, gum, butyric acid, and tannin. Used in decoction as a pectoral drink.

F. chenopod'ii anthelmin'tici. See *Chenopodium*, U.S. Ph.

F. cicu'tæ terres'tris. (L. *cicuta*, hemlock; *terrestris*, belonging to the land.) The same as *Conii fructus*.

F. cit'ri. Lemons, the fruit of *Citrus limonum*.

F. coccognid'ii. (G. *Kellerhalskörner*.) Mezereon berries, the fruit of *Daphne mezereum*. A drastic purgative and emetic.

F. coc'culi. (F. *coques de Levant*; G. *Kockelskörner*, *Taumelkörner*.) The berries of *Anamirta cocculus*. See *Cocculus indicus*.

F. colocyn'thidis. G. Ph. The fruit of *Citrullus colocynthis*. See *Colocynth*.

F. con'i'i. (F. *Schierlingsamen*.) The fruit of *Conium maculatum*. See *Conii fructus*.

F. con'i'i macula'ti. See *Conii fructus*.

F. corian'dri. See *Coriandri fructus*.

F. cube'bæ. See *Cubeba*.

F. cu'mini. See *Cumin seed*.

F. cu'mini ni'gri. (L. *niger*, black.) The fruit of *Nigella sativa*. See *F. nigellæ sativæ*.

F. cupres'si. See *Cupressi fructus*.

F. cydo'niæ. See *Cydonia fructus*.

F. cynor'rhodi. (Κυνόρροον, the dog-rose.) The fruit of the dog-rose. See *Rosa canina fructus*.

F. cynos'bati. (Κυνόσατος, the wild rose.) The *Rosa canina fructus*.

F. dac'tyli. (L. *dactylus*, a date. G. *Datteln*.) Dates, the fruit of *Phoenix dactylifera*. An esculent fruit; slightly laxative.

F. dau'ci. The fruit of the carrot, *Daucus carota*. See *Carrot fruit*.

F. dau'ci cre'tici. (G. *Möhrenkümmel-samen*.) The seeds of the candy carrot, *Athamanta cretensis*.

F. diospy'ri virginia'ni. See *Diospyros*, U.S. Ph.

F. dividi'vi. Same as *F. libi-di-bi*.

F. eb'uli. (G. *Attichbeeren*.) The fruit of the dwarf elder, *Sambucus ebulus*. About half the size of elder berries, crowned at the

summit with five thickened, conical, adherent calyx teeth.

F. ecba'lii. See *Ecballii fructus*, B. Ph.

F. elate'rii. The fruit of *Ecballium officinarium*. See *Ecballii fructus*.

F. eleu'sinis. The fruit of *Eleusine coracana*, Gärt. A cereal cultivated in East India and Japan.

F. embe'liæ. The fruit of *Embelia robusta*. Used as a purgative in India.

F. euon'ymi. (G. *Pfaffenhütchen*.) The fruit of *Euonymus europæus*. Used in dropsy, and as an application for scabies.

F. eupho'riæ. The same as *F. nepetii*.

F. euter'pes. The fruit of *Euterpes oleracea*, Mart. Hab. Brazils. It yields an oil and a refreshing drink.

F. foenic'uli. G. Ph. (G. *Fenchelsamen*.) The fruit of *Foeniculum capillaceum*. Used as a carminative.

F. foenic'uli dul'cis. The fruit of *Foeniculum dulce*. See *Foeniculi fructus*.

F. foenic'uli roma'ni. (G. *Römischer Fenchelsamen*.) Same as *F. foeniculi dulcis*.

F. fraga'riæ. (F. *fraises*; G. *Erdbeeren*.) Strawberries. The fruit of *Fragaria vesca*.

F. guazu'mæ. The fruit of *Guazuma ulmifolia*. Hab. West Indies and South America. It possesses astringent properties, and is used in skin affections.

F. guevin'ia. Chilian hazelnut. The fruit of *Guevinia avellana*. Kernel edible, sweet and oily.

F. helic'teris. The same as *F. isoræ*.

F. hibis'ci. The fruit of *Hibiscus*, or *Abelmoschus esculentus*.

F. hippocast'ani. (F. *marrons d'Inde*; G. *Rosskastanien*.) Horse-chestnuts, the fruit of *Aesculus Hippocastanum*.

F. hippocast'ani tos'ti. (L. *tostus*, toasted. G. *geröstete Rosskastanien*.) Roasted chestnuts. Used as a drink in infusion, and in powder as a basis for snuff.

F. hol'ci. (G. *schwarze Hirse*.) The fruit of *Holcus spicatus*, L., *Penicillaria spicata*, W. Black millet. Hab. East Indies, Egypt, Spain. Used as food.

F. horæ'i. (Ωραϊος, produced at the right season.) An old term for summer fruits produced in due course; or, according to some, a term applied to apples, pears, plums, and such like, because they are composed of stone and flesh in due form.

F. hor'dei. (F. *orge*; G. *Gerste*.) Barley, the fruit of various species of *Hordeum*. See *Barley*.

F. hor'dei exortica'ti. (L. *ex*, out; *cortex*, bark. F. *orge perlee*; G. *Gerstengraupen*.) A term for pearl barley.

F. hyænan'ches. (G. *Hyänenwürger*.) The fruit of *Hyænanthes globosa*, Lamb. Hab. Cape of Good Hope. Very poisonous.

F. immatu'rus. (L. *immaturus*, unripe.) An aborted foetus.

F. ingæ Marth'æ. Algarovilla. The compressed fruit of *Inga Marthæ*, Spr., *Pithecolobium parviflorum*, Benth. Contains much tannic acid and is bitter.

F. iso'ræ. The fruit of *Isora corylifolia*, Wight, or *Helicteres isora*, L. An East Indian plant.

F. juglan'dis immatu'rus. (L. *immaturus*, unripe.) Unripe walnuts, the green

FRUCTUS.

fruit of *Juglans regia*. A laxative when preserved with sugar as a kind of jam.

F. juju'bæ. See *Jujubæ*.

F. junip'eri, G. Ph. (*F. baies de genievre*; G. *Wachholderbeeren*.) The fruit of *Juniperus communis*. See *Juniperus*, U.S. Ph.

F. lauri, G. Ph. (*F. baies de laurier*; G. *Lorbeeren*.) The fruit of *Laurus nobilis*. Olive brown or black, shining, succulent berries, wrinkled, with a large seed. They contain a fatty oil, a solid fat, an ethereal oil, laurin, resin, and starch. Used as an addition to baths and inunctions, and internally as a stomachic and carminative.

F. li'bi-di'bi. The fruit of *Cesalpinia coriaria*, W. Hab. South America. Highly astringent. Used as a colouring agent.

F. ligus'tri. The fruit of *Ligustrum vulgare*, L. Privet berries. Taste sweet-bitter. Acts as a purge and dyes purple and black.

F. lodoice'æ. (G. *Sechellennuss*, *Maldivischenuss*, *Meercocos*.) The fruit of *Lodoicea sechellarum*, Labill. A stone fruit deprived of its external fibrous layers. Albumen used to make a mucilaginous drink.

F. lucu'mæ. The fruit of *Lucuma mammosa*, Juss. Used for food in the West Indies.

F. luff'ææ. (G. *Netzgurke*.) The fruit of *Luffa ægyptiaca*, Mill. Edible. The fibrous investment used as a sponge.

F. mæ'sæ pic'tæ. (L. *pictus*, painted. G. *Sooria*.) The fruit of *Mesa picta*. It is of the size, form, and colour of the coriander. It contains boracic acid, and is used as a remedy for tapeworm.

F. ma'idis. (G. *Mais*, *Türkische Weizen*, *Welschkorne*.) The fruit of *Zea mays*. An important cereal cultivated in Southern Europe. Contains starch 62 per cent., gluten 11, fat oil 8 per cent.

F. ma'li. (L. *malus*, the apple. G. *Saueräpfel*.) The fruit of *Pyrus malus*, L. Crab apples and the cultivated varieties. Taste aromatic, sweet, and sour. Contains malic acid.

F. mam'mææ. (G. *Mammey Äpfel*.) The fruit of *Mammea americana*, L. Hab. West Indies; of *Mammea africana*, Sabin., Hab. West Africa; and of *Mammea emarginata*, Moç. Sess., Hab. Mexico. Edible.

F. melan'thi. Same as *F. nigella sativa*.

F. melon'genæ. (G. *Eienäpfel*.) The fruit of *Solanum ovigerum*, Dun. Eaten in Arabia and the East Indies.

F. meze'rii. Same as *F. coccognidii*.

F. mil'ii solis. (G. *Steinsame*.) The fruit of *Lithospermum officinale*, L. Used as a lithontriptic.

F. mo'ri. (L. *morum*, a mulberry. *F. mûres*; G. *Maulbeeren*.) Mulberries. Used as a colouring agent as well as a dessert fruit.

F. mucu'næ. The fruit of *Mucuna pruriens*, D.C., and of *Mucuna urens*, D.C. Hab. the tropics. A diuretic and anthelmintic.

F. muricula'tus. (L. *muriculatus*, finely prickled; dim. of *muricatus*, pointed.) Term applied to fruit which is rough on the surface.

F. myrobal'ani. See *Myrobalans*.

F. myrt'il'i. (*F. baies de myrtilles*; G. *Heidelbeeren*.) The fruit of *Vaccinium myrtillus*. Used as an esculent fruit. A popular remedy against diarrhoea.

F. myx'æ. Sebesten plums, the fruit of *Cordia myxa*. Mucilaginous and laxative.

F. nephe'lii. The fruit of *Nephelium longanum*, Hook, and other species. Hab. China. Edible.

F. nigell'æ arven'sis. (G. *Feld-schwarzkümmelsamen*.) The fruit of *Nigella arvensis*. A carminative.

F. nigell'æ sati'væ. (G. *Schwarzkümmelsamen*.) The fruit of *Nigella sativa*. Used as a carminative.

F. œnocar'pi. The fruit of *Enocarpus batava*, Mart. Hab. Brazil. It yields a sweet fat oil, and the pleasant beverage named yukissé.

F. o'leæ. (G. *Oliven*.) Olives, the unripe fruit of *Olea europæa*.

F. ophiocar'yi. The fruit of *Ophiocaryon paradoxon*, Endl. Hab. Brazil. An edible stone-fruit.

F. ory'zæ. (*F. ris*; G. *Reis*.) The fruit of *Oryza sativa*. See *Rice*.

F. pan'ici. (G. *Hirse*.) Millet. The fruit of *Panicum miliaceum*, Hirse. A cereal used in the East Indies; and also to make a drink like barley-water.

F. papav'eris. Same as *Papaveris capsula*, B. Ph.

F. papav'eris immatu'ri, G. Ph. The unripe capsules of *Papaver somniferum*. Same as *Papaveris capsula*, B. Ph.

F. pectora'les, Fr. Codex. (L. *pectoralis*, relating to the chest. *F. espèces pectorales*, *fruits pectoraux*.) Equal parts of figs, raisins, dates without their stones, and jujubes. Used as a ptisane in decoction of 50 parts to 1000 of water.

F. perfolia'tæ. The fruit of *Bupleurum rotundifolium*. A carminative.

F. petroseli'ni. (*F. fruits de persil*; G. *Petersiliensamen*.) Parsley seed, the fruits of *Petroselinum sativum*. They contain an ethereal and fatty oil. Used internally as a carminative; outwardly as an addition to an ointment used to kill lice.

F. phellan'drii, G. Ph. (*F. fruits de fenouil d'eau*; G. *Wasserfenchel*.) The fruit of *Enanthe phellandrium*. Reddish brown, elongated, 4 mm. in length. It contains 1·5 per cent. ethereal oil, 5 per cent. of fat oil, and 4 per cent. of resin.

F. phytolac'cæ. (G. *Kermesbeeren*.) The fruit of *Phytolacca decandra*. Used as a red colouring agent.

F. pimen'tæ. See *Pimenta*.

F. pru'ni sicca'ti. (L. *sicco*, to dry.) Dried prunes.

F. rham'ni cathar'ticæ, G. Ph. (G. *Kreuzdornbeeren*.) The fruit of *Rhamnus cathartica*. Used as a cathartic.

F. rho'is glab'ri, L. (L. *glaber*, smooth.) The fruit of *Rhus glabra*, indigenous in North America. Berries of sour and astringent taste. They are used in the preparation of vinegar, cooling drinks, and gargles.

F. ri'bis ni'gri. (*F. groseilles du cassis*; G. *Ahlbeeren*.) Black currants, the fruit of *Ribes nigrum*. Used as an esculent fruit and as a ptisane in coughs.

F. ri'bis ru'bri. (*F. groseilles*; G. *Johannisbeeren*.) Red currants, the fruit of *Ribes rubrum*. Esculent.

F. ro'sæ cani'næ. See *Rose canina fructus*.

F. ru'bi idæ'i. (*F. framboises*; G. *Himbeeren*.) Raspberries, the fruit of *Rubus idæa*. Used as an esculent fruit and as a flavouring agent.

FRUGIFEROUS—FRUIT.

F. sabadillæ. (S. *cebadilla*, a small corn.) The fruit of *Asagraea officinalis*. See *Sabadilla*, B. Ph.

F. sambuci. (F. *fruits du sureau*; G. *Hollunderbeeren*.) Elderberries, the fruit of *Sambucus nigra*.

F. scytalæ. The same as *F. nephelii*.
F. sebestenæ. Sebesten plums, the fruit of *Cordia myxa*. A demulcent and laxative.

F. secalis. (F. *seigle*; G. *Roggen*.) The fruit of *Secale cereale*. See *Rye*.

F. seseleos. (G. *Rosskümmelsamen*, *Bergkümmelsamen*.) The fruit of *Seseli tortuosum*. Used as a carminative.

F. sil'ybi. (G. *Stechkörner*.) The fruit of *Silybum marianum*, Gärt. Southern Europe. Oily and bitter.

F. sorbi sativæ. The fruit of *Sorbus domestica*, L. Hab. East Indies. Cultivated in Southern Europe. Edible.

F. sorghi. (G. *Kaffernhirse*.) Millet, the fruit of *Sorghum vulgare*, Pers. Indigenous in the East Indies. Cultivated in Arabia, Southern Africa and Italy. In Italy used to make polenta and macaroni.

F. strava'dii albi. Same as *F. baringtonia acutangula*.

F. tamarin'di. (F. *fruits de tamarinier*; G. *Tamarinden*.) The fruit of *Tamarindus indica*. It is a broad, compressed, reddish, ash-coloured, curved pod, 2" to 6" long, having many brown, flat, quadrangular seeds enclosed in membranous cells, outside which is an acid pulp, traversed by several longitudinal, branched, woody strings.

F. termina'liæ. Same as *F. myrobalani*.

F. trit'ici. See *Tritici farina* and *Wheat*.
F. umbilicatus. (L. *umbilicus*, the navel.) A fruit which retains on its apex remnants of the flower, as the fruit of the rose.

F. vanil'liæ. G. Ph. The fruit of *Vanilla planifolia*. See *Vanilla*, U.S. Ph.

F. ziz'yphi. The same as *Jujubæ*.

Frugiferous. (L. *frux*, fruit; *fero*, to bear.) Bearing or producing fruit.

Frugivora. (L. *frux*, fruit; *voro*, to devour. F. *frugivores*.) A Division of the Order *Cheiroptera*, Class *Mammalia*, consisting of the bats that live on fruit.

Frugivorous. (L. *frux*, fruit; *voro*, to devour. F. *frugivore*; I. *fruttivoro*; S. *frugivoro*; G. *fruchtfressend*.) Fruit-eating.

Fruit. (Mid. E. *fruit*, *frut*; F. *fruit*; from L. *fructus*, fruit; from L. base *frug*, to enjoy. I. *frutto*; S. *fruto*; G. *Frucht*, *Obst*.) The ovary of a plant when developed after fecundation, being the seed or seeds with the pericarp; especially applied to those with a more or less succulent flesh. In some fruits, in addition to the ovary, other parts of the flower, such as the calyx, persist and, developing, form part of the fruit; and other fruits consist of an aggregation of many ovaries proceeding from many flowers, and seated on a common receptacle, such as a fig or a fir-cone.

Also, the offspring of an animal.

F.s. accessory. (L. *accessio*, an addition.) Fruits which consist chiefly of the non-carpellary accidental part, such as the pine-apple.

F.s. ac'id. Fruits which contain a con-

siderable amount of acid and but little sugar, as the lemon.

F.s. ag'gregated. (L. *aggrego*, to heap together. F. *fruits agrégés*.) Fruits produced from a single flower consisting of many carpels.

F.s. anthocar'pous. (Ανθος, a flower; κάρπος, fruit.) Same as *F.s. accessory*.

F.s. apiculate. (L. *apiculum*, dim. of *apex*, a projecting point.) Fruits which have a small point or prickle at their apex, which is the remnant of the shrivelled style.

F.s. apocar'pous. (Από, from; κάρπος, fruit. F. *fruits apocarpés*.) Fruits which consist of one or more one-celled carpels, or ovaries, such as the *Follicle*, the *Achenium*, and the *Elatio*.

The fruits formed of one carpel only are by some excluded from this division, and called simple fruits.

F., ba'el. See *Belæ fructus*, B. Ph.

F.s. be'chic. See *Fructus bechicæ*.

F., bread. The fruit of *Artocarpus incisa*.

F., cap'sicum. See *Capsici fructus*, B. Ph.

F., car'away. See *Carui fructus*, B. Ph.

F.s. carminative. See *Fructus carminativæ*.

F. car'rier. (G. *Fruchttrager*.) The same as *Carpophore*.

F. cau'date. (L. *cauda*, a tail.) A fruit which, when ripe, retains at its apex a long appendage, consisting of the developed style, such as the achenium of the traveller's joy, *Clematis vitalba*.

F.s. collec'tive. Same as *F.s. multiple*.

F.s. comp'ound. (F. *fruits composés*.) Fruits resulting from the coalescence or aggregation of the products not of a simple flower, but of an inflorescence.

F., corian'der. See *Coriandi fructus*, B. Ph.

F.s. dehis'cent. (L. *dehisco*, to split open. F. *fruits déhiscents*; G. *Springfrüchte*.) Fruits which, when ripe, split up into two or three pieces for the purpose of discharging the seeds, such as the capsule of a poppy, and the schizocarp of a geranium.

F., dill. See *Anethi fructus*.

F., dog-rose. See *Rosæ canina fructus*, B. Ph.

F. dot. A term for *Sorus*.

F.s. dry. (F. *fruits secs*; G. *trockene Früchte*.) Fruits with a dry, hard pericarp.

F. es'sences. Alcoholic solutions of compound ethers which have a flavour like that of certain fruits. Thus, pine-apple essence contains chloroform, aldehyd, butyric ether, and amyl-butyric ether; and strawberry essence contains nitrous ether, acetic ether, formic ether, butyric ether, methyl-salicylic ether, amyl-acetic ether, and amyl-butyric ether.

F., fen'nel. See *Feniculi fructus*, B. Ph.

F.s. flesh'y. (F. *fruits charnus*; G. *fleischige Früchte*, *saftige Früchte*.) Fruits which have a succulent flesh, consisting of one or more of the layers of the pericarp.

F., hem'lock. See *Conii fructus*, B. Ph.

F.s. indehis'cent. (L. *in*, not; *dehisco*, to split open. F. *fruits indéhiscents*; G. *Schliessfrüchte*.) Fruits which do not split up when ripe, as the drupe of the peach, the berry of the vine, and the achena of the oak.

F., infe'rior. A fruit formed from an

FRUIT-PORT WELL—FRUTEX.

inferior ovary, and retaining the calyx as a part of its structure, such as the quince.

F. leaf. (G. *Fruchtblatt*.) A carpel.

F.s, lomenta'ceous. (F. *fruits lomentacés*.) Fruits which divide into transverse indehiscent sections, each containing a seed or seeds. See *Lomentum*.

F., meat. The fruit of *Artocarpus incisa*.

F.s, multiple. (L. *multiplex*, many-fold. F. *fruits multiples*; G. *Sammelfrüchte*.) Fruits which result from the combination of the carpels and other parts of several flowers.

Also, a term applied to apocarpous fruits developed from more than one carpel in a single flower.

F. node. (L. *nodus*, a knot. G. *Fruchtknoten*.) A term for the ovary of a plant.

F.s, oil'y. Fruits which contain much fixed oil, as the almond.

F.s, pec'toral. See *Fructus pectorales*.

F., perfect. A fruit which consists both of pericarp and seed.

F.s, pseudocarp'ous. (Ψευδής, false; κάρπος, fruit.) Same as *F.s, spurious*.

F.s, pseudosyncarp'ous. (Ψευδής; σύν, together; κάρπος.) Pseudocarps or spurious fruits resulting from the coalescence of bracts with the receptacle of a multiple fruit, such as the mulberry.

F.-scales. (G. *Fruchtschuppen*.) The scales which form part of a fruit, as those of a fir-cone.

F.s, sem'inoid. (L. *semen*, seed; Gr. εἶδος, likeness.) Dorrault's term for the fruits of the Umbelliferae, which, from their smallness and their shape, are often called seeds.

F.s, sim'ple. (F. *fruits uniques*.) Fruits which are formed from a single flower consisting of a single carpel.

Also, according to some, fruits proceeding from a single flower whether possessing one carpel or several.

F.s, spu'rious. (G. *Scheinfrüchte*.) Fruits which contain some other parts of the flower than the ovary, such as the strawberry, the juicy flesh of which is a development of the receptacle.

F., squirt'ing cu'cumber. See *Elaeagium fructus*, B. Ph.

F. stalk. Same as *Carpophore*.

F.s, starch'y. Fruits which are mealy, and contain much starch, as the chestnut.

F.s, suc'culent. (L. *succulentus*, juicy. G. *saftige Früchte*.) Fruits of which the pericarp, or some of its layers, retains its sap when it is ripe.

F. sug'ar. A synonym of *Lævulose*.

The term has also been applied to the glucose of fruits which consists of a variable mixture of dextrose and lævulose.

F., supe'rior. A fruit which is formed from a superior ovary, and of which the calyx does not form a part, as the capsule of a poppy.

F.s, sweet. Fruits which contain much sugar and but little acid, as the grape.

F.s, synanthocar'pous. (Σύν, together; άνθος, a flower; κάρπος, fruit. F. *fruits synanthocarpés*.) Fruits which result from the junction of several flowers.

F.s, syncarp'ous. (Σύν, together; κάρπος, fruit. F. *fruits syncarpés*.) Fruits which

consist of a single many-celled ovary; such are the *Caryopsis*, the *Samara*, the *Carcerule*, the *Capsule*, the *Siliqua*, the *Tryma*, and others.

F., tailed. Same as *F., caudate*.

F. tree, bread. The *Artocarpus incisa*.

Fruit-port well. United States of America, Ottawa Co., Mich. A salt spring, containing ferrous carbonate .68 in a pint.

Fru'men. (L. *frumen*, the gullet, or, according to some, the larynx.) An old term for the *Fauces*.

Fru'menta'ceous. (L. *frumentum*, wheat.) Resembling wheat or grain.

Fru'mentum. (L. *frumentum*, corn.) Grain from which bread is made; especially applied to wheat.

F. barb'atum. (L. *barbatus*, bearded.) The *Triticum monococcum*, Linn.

F. cornicu'latum. (L. *corniculatus*, horned.) Ergot of rye, from its shape.

F. cornu'tum. (L. *cornutus*, horned.) Ergot of rye, from its shape.

F. indicum. (L. *indicus*, Indian.) A term for maize.

F. luxu'rians. (L. *luxurio*, to grow rank.) Ergot of rye.

F. saracen'icum. (L. *saraceni*, the Saracens.) A term for buckwheat.

F. temulen'tum. (L. *temulentus*, intoxicated.) Ergot of rye.

F. tur'cicum. (L. *turcicus*, Turkish.) A term for maize.

F. tur'gidum. (L. *turgidus*, swollen.) Ergot of rye.

Frustra'neous. (L. *frustra*, in vain. G. *vergeblich*.) A term applied by Linnaeus to those composite plants in which the central florets are hermaphrodite and fertile, while those of the circumference are neutral, or female and sterile, and so appear to exist in vain.

Frustule. (L. *frustulum*, a small piece; dim. of *frustum*, a bit. G. *Stückchen*.) A small piece.

In Botany, applied to the segments of a Diatom.

Frustulose. (L. *frustum*, a piece; G. *zerstückt, zerbrockelt*.) Composed of, or consisting of, small fragments or frustules.

Frustulum. Same as *Frustule*.

Frustum. (L. *frustum*, a piece.) The part of a solid which is left when the top portion has been cut off at a plane parallel to the base, as the frustum of a cone; or the part of a solid comprised between any two planes, as the frustum of a sphere.

Frutes'cence. (L. *frutex*, a shrub.) The state of being like a shrub.

Frutes'cent. (L. *frutex*, a shrub. F. *frutescent*; G. *strauchartig*.) Having the characters of a shrub.

Fru'tex. (L. *frutex*, a shrub; akin to Gr. βρύω, to sprout forth. F. *arbrisseau*; G. *Strauch*.) A shrub.

F. bac'cifer brazilien'sis. (L. *bacca*, a berry; *fero*, to bear.) Same as *Cac-guaju-yo*.

F. in'dicus bac'cifer. (L. *indicus*, Indian; *bacca*, a berry; *fero*, to bear.) The *Mussaenda frondosa*.

F. in'dicus spino'sus. (L. *spinus*, thorny.) Same as *Cara schulli*.

F. odora'tus septentriona'lum. (L. *odoratus*, sweet-smelling; *septentrionalis*, belonging to the north.) The Dutch myrtle, *Myrica gale*.

FRUTICANT—FUCUS.

F. pavoninus. (L. *pavoninus*, belonging to a peacock.) The *Poinciana bijuga*.

F. tartareus. (*Tartary*.) The stem of the *Cibotium barometra*, the hairs of which were formerly used as a hæmostatic.

F. terribilis. (L. *terribilis*, frightful.) The *Globularia alypum*, so called because its leaves were supposed to be poisonous.

Fruticant. (L. *frutico*, to put forth shoots.) Having many shoots or twigs.

Fruticose. (L. *fruticosus*, shrubby, from *frutex*. F. *frutigneux*; S. *fruticoso*; G. *strauchartig*.) Shrubby; like a shrub.

F. lichens. See *Lichens*, *fruticose*.

Fruticous. Same as *Fruticose*.

Fruticulose. (L. dim. from *fruticosus*, shrubby. F. *fruticuleux*; G. *sträuchleinartig*.) Like a small shrub.

Fruticulus. (L. dim. of *frutex*, a shrub. G. *Sträuchlein*.) A little shrub; a low growing or dwarf shrub.

Fry. (Mid. E. *fri*; Icel. *fræ*, *frjó*; Sw. *frö*; F. *frei*. G. *Fischbrut*.) The spawn of fish.

Ft. A contraction of L. *fat*, or *fiant*, let it, or let them, be made.

Fuca'ceæ. (Φύκος, seaweed.) An Order of Lindley's Alliance *Algae*, having cellular or tubular unsymmetrical bodies, multiplied by simple spores formed externally.

Or a Suborder of the Order *Fucoideæ*, Class *Oosporeæ*, in which reproduction takes place by fertilisation, and there are no zoogonidia. It contains the seaweeds *Fucus* and *Sargassum*.

Fu'casin. (L. *fucus*.) A synonym of *Gelose*.

Fuch'sia. (After Leonard *Fuchs*, a German botanist.) A Genus of the Nat. Order *Onagraceæ*.

F. coccin'ea, Aitk. (L. *coccineus*, scarlet.) Hab. St. Domingo. A reputed febrifuge.

F. denticula'ta, Ruiz and Pavon. (L. *denticulatus*, having small teeth.) Hab. Peru. Berries esculent.

F. excortica'ta, Linn. (L. *ex*, from, out; *cortex*, bark.) Hab. New Zealand. Berries esculent.

F. macrostem'ma, Ruiz and Pavon. (Μακρός, long; στέμμα, a wreath.) Hab. Chili. Chileo, thilco. Leaves used in decoction as a mild stimulant.

F. racemo'sa, Lam. (L. *racemosus*, full of clusters.) Hab. St. Domingo. A febrifuge and an astringent in diseases of the lymphatic system.

Fuch'siamine. Same as *Fuchsin*.

Fuch'sin. (*Fuchsia*, from its resemblance to the colour of the flower.) A salt of aniline or rosanilin; generally applied to the hydrochlorate. It forms iridescent, green-coloured crystals with a golden lustre, giving an intense red colour to water; the commercial salt often contains arsenic. It is used as a staining agent in the preparation of microscopical specimens; dissolved in water and placed between glasses it has been employed to rectify some forms of colour blindness; and it has been given in albuminuria. Dose, '5 grain to 4 grains.

Fu'cin. The gelatinous substance obtained from the *Fucus vesiculosus*, and other species.

Fuciv'orous. (L. *fucus*, rock-lichen; *voro*, to devour.) Living on seaweeds.

Fuco'dium. A Genus of the Suborder *Fuaceæ*, Order *Fucoideæ*.

F. nodo'sum, Ag. (L. *nodosus*, knotty.) Hab. European and American Atlantic coasts. Used as *Fucus vesiculosus*.

Fu'cold. (Φύκος, seaweed; εἶδος, likeness. F. *fucoidæ*; G. *tangartig*.) Like to a seaweed, or to a *Fucus*.

Fucoid'al. Same as *Fucoid*.

Fucoid'eæ. (Φύκος, seaweed; εἶδος, likeness.) An Order of the Class *Oosporeæ*, Group *Thallophyta*. Multicellular *Algæ* growing in salt water, with an olive-brown or olive-green foliaceous or filamentous thallus.

Fucoxan'thin. (L. *fucus*, rock-lichen; Gr. *ξανθός*, yellow.) The colouring matter of the olive-coloured *Algæ*.

Fu'cus. (L. *fucus*, rock lichen; from Gr. φύκος, seaweed. F. *fucus*; G. *Seetang*.) A Genus of the Suborder *Fuaceæ*, Order *Fucoideæ*.

F. amyla'ceus, O'Sh. (L. *amylum*, starch.) The *Gracillaria lichenoides*.

F. baccif'erus, Turn. The laver, *Sargassum bacciferum*.

F. blad'der. The *F. vesiculosus*.

F. ceylan'icus. See *Ceylon moss*.

F. cris'pus, Linn. The *Chondrus crispus*.

F. digita'tus, Linn. The *Laminaria digitata*.

F. edul'is, Stackh. The *Schizymenia edulis*.

F. esculen'tus. (L. *esculentus*, fit for eating.) The *Chondrus membranifolius*.

F. fimbria'tus. (L. *fimbriatus*, fringed.) The *Chondrus membranifolius*.

F. helminthocorton, La Tour. The *Alsidium helminthochorton*.

F. hibern'icus. (L. *Hibernia*, Ireland.) The *Chondrus crispus*.

F. infla'tus. (L. *inflatus*, swollen up.) The *F. vesiculosus*.

F. irlan'dicus. (L. *irlandicus*, belonging to Ireland.) The *Chondrus crispus*.

F., knot'ted. The *Fucodium nodosum*.

F. lichenoi'des. The *Gracillaria lichenoides*.

F. na'tans, Turn. (L. *natans*, swimming.) The *Sargassum vulgare*.

F. nodo'sus, Linn. The *Fucodium nodosum*, Ag.

F. palma'tus. The *Rhodymenia palmata*.

F. pinnatif'idus, Huds. The *Laurencia pinnatifida*.

F. sacchari'nus, Linn. The *Laminaria saccharina*.

F. serra'tus, Linn. (L. *serratus*, saw-shaped.) Hab. Atlantic coasts of Europe. Used as *F. vesiculosus*.

F. siliquo'sus, Linn. The *Halidrys siliculosus*.

F. spino'sus, Linn. (L. *spinousus*, thorny.) The *Eucheuma spinosa*.

F., sweet. The *Laminaria saccharata*.

F. te'nax, Turn. The *Gracillaria tenax*, Grev.

F. te'res. (L. *teres*, round.) The *Chondrus membranifolius*.

F. vesiculo'sus, Linn. (L. *vesiculosus*, full of blisters. F. *varæ vesiculeux*, of Fr. Codex; G. *Blasentang*.) Bladder wrack. Hab. sea shores of Europe and America. It contains soda salts and potassium iodide. Used as food for horses and cattle. When in fruit, it was exposed

FUCUSAMIDE—FULIGOKALI.

to a red heat in a crucible with a perforated lid, and formed the *Æthiops vegetabilis*.

In decoction or liquid extract it is used for the reduction of corpulence. When bruised it is used as a local application to scrofulous swellings and sores, and to rheumatically stiffened joints.

Fucusamide. ($C_4H_3O \cdot CH$)₃N₂. A crystalline substance obtained by the action of ammonia on fucosol.

Fucusin. C₁₅H₁₂O₃N₂. An isomer of furfural obtained by boiling fucosamide with a solution of caustic potash or soda. It forms small, flat, star-shaped crystals.

Fucosol. C₅H₄O₂. A substance isomeric with furfural, from which it is more soluble in water and in liquid ammonia. It is obtained by distilling bladder wrack and other fuci, or sphagnum, or lichens, with dilute sulphuric acid. It is an oily substance, boiling at 171° C. —172° C. (339·8° F.—341·6° F.)

Fuencaliëntë. Spain, in the Province of Ciudad-Real. A town with 1500 inhabitants, on the western slope of the Sierra Morena, not far from the quicksilver mines of Almaden. Its situation is eminently picturesque. The single spring is thermal, the water containing lime sulphate, sodium chloride, iron, and some free carbonic acid gas. The quantity discharged in twenty-four hours is 1394 hectolitres. The temp. is 40° C. (104° F.) The season is from the 1st May to the 18th June, and from the 1st September to the 8th October. It is a tonic and alterative.

Fuga dæmonum. (L. *fuga*, a fleeing; *dæmon*, a spirit.) The *Hypericum perforatum*, because it was thought to drive away evil spirits.

Fugacious. (L. *fugax*, fleeing; from *fugio*, to flee. F. *fugace*; I. *fugace*; G. *flüchtig*.) Fleeting; lasting a short time.

In Medicine, applied to such things as a redness which comes rapidly and goes quickly.

In Biology, applied to organs and structures which are short lived, in comparison with the length of life of the organism which possesses them.

In Botany, applied to structures which fall off rapidly.

F. tu'mours. Same as *Tumours*, *phantom*.

Fugax. (L. *fugax*.) Same as *Fugacious*.

Fugilë. An old term which was very loosely applied; according to Castells, it signified the cerumen of the ear, or an abscess in the neighbourhood of the ear; Forestus used it in the sense of a glandular apostheme; and Paracelsus employed it to signify an appearance in the urine like wax.

Fugilla. Same as *Fugile*.

Fugosa. The name in the Antilles of the *Capraria biflora*.

Ful'cræ. (G. *Stützen*.) Plural of *Fulcrum*, as used in Botany.

The small osseous scales arranged in a row and situated on the anterior ray of the fins, especially of the caudal fin, of many ganoid fishes.

Fulcrate. (L. *fulcrum*, a support.) Propped up.

In Botany, applied to branches which descend to the ground and support the stem.

Fulcrum. (L. *fulcrum*, a support; from L. *fulcio*, to prop up. F. *appui*, point d'*appui*; I. *puntello*, punto d'*appoggio*; S. *apoyo*; G.

Stütze, *Stützpunkt*.) A prop; a point of support.

In Mechanics, the point on which a lever turns, or from or by which it is supported.

In Botany, applied to the stem and roots; also, to suckers and tendrils by which the plant is held fast; also, to the appendages of the conceptacles of the Erysiphei.

Also, see *Fulera*.

Fulgur. (L. *fulgur*, lightning; from *fulgeo*, to flash.) Lightning.

Fulgorant. (L. *fulguro*, to flash.) Shooting or darting like lightning.

F. pains. Same as *Lightning pains*.

Fulguration. (L. *fulguratio*, lightning; from *fulguro*, to flash. F. *fulguration*; I. *folgorazione*; S. *fulguracion*; G. *Wetterleuchten*.) Sheet or summer lightning.

Also, a term for the effects produced by lightning on the animal body.

Also, the production of *Lightning pains*.

Fulica. (L. *fulica*, a coot.) A Genus of the Order *Grallatores*, Class *Aves*.

F. atra, Linn. (L. *ater*, black. F. *foulque noir*; I. *smergo*; S. *negreta*; G. *Blasshuhn*.) The Coot.

F. chloropus, Linn. The *Gallinula chloropus*.

Fuligine. (L. *fuligo*.) An alcoholic extract of soot, prepared for internal use.

Fuliginosity. (L. *fuligo*, soot. F. *fuliginosità*; I. *fuliggine*; S. *fuliginosidad*; G. *russichter Zungenbeleg*.) The blackish or brownish matter which covers the teeth, gums, and lips, in typhoid and other adynamic conditions. It is composed of altered mucus, epithelial cells, granular matter, and fungoid growths, among which *Leptothrix* is common.

Fuliginous. (L. *fuliginosus*, full of soot; from *fuligo*, soot. F. *fuligineux*; I. *fuliginoso*; S. *fuliginoso*; G. *russig*, *beruszt*, *ruszfarbig*.) Of the colour of soot; smoke-coloured; containing soot.

A term applied to the teeth and lips when they are covered with a blackish or a brown coating.

Fuligo. (L. *fuligo*, soot; perhaps akin to *fumus*, smoke. F. *suie*; I. *fuliggine*; S. *holin*; G. *Russ*.) Soot. A tincture was used in hysteria, and an ointment in many skin diseases.

Also, the same as *Sordes*.

F. alba philosophorum. (L. *albus*, white.) An old term for sal ammoniac, ammonium chloride.

F. dentium. (L. *dens*, a tooth.) The sordes of the teeth.

F. ligni. (L. *lignum*, wood.) Soot from burning wood.

F. splendens. (L. *splendens*, brilliant. F. *crystal de suie*; G. *Glanzruss*.) Shining lamp-black from burning wood. It contains carbon, salts of ammonia, empyreumatic oils, and other products of combustion. Used internally and externally in chronic skin diseases and inveterate rheumatism.

Fuligokali. (L. *fuligo*; *kali*.) A black powdery or scaly substance, similar to *Anthrakokali*, prepared by boiling 100 parts of soot and 20 parts of potash in water, filtering, and evaporating to dryness. It is used in chronic skin diseases, both internally and externally. It was proposed by Deschamps. Dose, 10 to 20 centigrammes; externally 1 or 2 parts to 30 of lard.

FULL—FUME.

F., sulphurous. Fuligokali 60 parts are added to potash 14 parts and sulphur 4 to 10 parts, boiled in water, and evaporated to dryness. Used in chronic skin diseases. Dose, 10 to 20 centigrammes; externally 1 or 2 parts to 30 of lard.

Full. (Mid. E. *ful*; Sax. *ful*; G. *voll*; L. *plenus*; Gr. *πλήρης*; Sans. *pūrṇa*; from Aryan root *par*, to fill.) Containing as much as it is able; abundant; perfect.

Also, to scour and thicken cloth.

Fuller. (Sax. *fullere*; from *fullian*, to whiten; from Low L. *fullo*, to clean clothes; from L. *fullo*, a cloth cleaner. F. *foulon*; I. *fullone*; S. *batanero*; G. *Walker*.) One who fuls.

F.'s earth. (F. *terre à foulon*; S. *tierra de batan*; G. *Walkerserde*.) A soft, saponaceous clay of the oolitic and cretaceous systems, used in the fulling of woollen cloths. It varies much in composition, but contains generally some 53 per cent. of silica, 10 of alumina, 9 of oxide of iron, with a little magnesia and lime, and a trace of potash. It is used as an application to excoriations.

F.'s herb. The *Saponaria officinalis*.

F.'s tea'le. The *Dipsacus fullonum*.

F.'s thistle. The *Dipsacus fullonum*.

Fullness. (*Full*.) The state of being full; abundance.

F. of blood. Excess of blood, a plethoric condition of body.

F. of stomach. A feeling of weight or distension in the epigastric region.

Fulminant. Same as *Fulminating*.

Fulminate. A salt of *Fulminic acid*.

Fulminating. (*L. fulmino*, to lighten.) Exploding; detonating.

F. gold. $\text{Au}_2\text{O}_3(\text{NH}_3)_4$. Ammoniacal auric oxide. See *Aurum fulminans*.

F. pane. Same as *Franklin's plate*.

F. silver. See *Silver fulminating*.

Fulmination. (*L. fulminatio*, a darting of lightning. I. *fulminazione*; S. *fulminacion*; G. *Aufknallen*.) An explosion with noise, resulting from the sudden decomposition of a chemical substance.

Fulminic acid. $\text{C}_2\text{N}_2\text{H}_2\text{O}_3 = \text{CH}_2(\text{N O}_2)\text{CN}$. Nitro-acetonitril. An acid which has not yet been isolated; it is polymeric with cyanic and cyanuric acid. It forms explosive salts with some metals, especially silver.

Fulminuric acid. $\text{C}_3\text{H}_3\text{N}_3\text{O}_3$. A compound obtained by boiling a soluble metallic chloride with water and mercuric fulminate. It has an acid taste and crystallises in small colourless prisms.

Fulvous. (*L. fulvus*, deep yellow.) Tawny; orange yellow with grey.

Fulwa butter. The concrete oil of the seeds of *Bassia butyragcea*.

Fumagine. Laboulbène's name for the disease of leaves caused by *Fumago*.

Fuma'go. (*L. fumus*, smoke.) A Genus of the Family *Pleosporæ*, Suborder *Pyrenomyces*, Order *Ascomycetes*, Class *Carpasporæ*. The species grow chiefly in the honey-like substance accompanying the presence of Aphides, Coccis, and such-like insects.

F. salici'na. Tal. A soot-coloured fungoid growth on the leaves of many plants and trees. It forms the black mildew of the hop.

Fuma'na. A Genus of the Nat. Order *Cistaceæ*.

F. vulga'ris. Spach. (*L. vulgaris*, common.) The *Helianthemum fumaria*.

Fumaria. (*L. fumus*, smoke.) A Genus of the Nat. Order *Papaveraceæ*; so called because it was supposed to rise without seed from the vapours of the earth; or, according to Pliny, because when applied to the eyes it caused them to water, as does smoke.

F. bulbo'sa. Linn. The *Corydalis bulbosa*.

F. capreola'ta. Linn. (*L. capreoli*, tendrils. F. *fumiterre grünpante*.) Used as *F. officinalis*.

F. ca'va. Hoffm. The *Corydalis bulbosa*.

Also, the *Corydalis tuberosa*.

F. faba'cea. Linn. The *Corydalis fabacea*.

F. lu'tea. (*L. luteus*, yellow.) The *Corydalis capnoides*.

F. ma'jor. (*L. major*, greater.) The *Corydalis bulbosa*.

F. me'dia. Lois. (*L. medius*, in the middle.) Probably the same as the *F. officinalis*.

F. officina'lis. Linn. (*L. officina*, a manufactory. F. *fumeterre commune*, *fiel de terre*; I. *funosterno*; G. *gemeiner Erdrauch*.) The common fumitory. Hab. Europe. Herb bitter, diaphoretic, and aperient; formerly used in hepatic congestions, scorbutic affections, and in scaly diseases of the skin. Both an infusion of the dried leaves and the expressed juice of the fresh plant were used. Latterly it has been used to diminish plethora.

F. parvifo'ra. Lamk. (*L. parvus*, small; *flos*, a flower.) Used as *F. officinalis*.

F. parvifo'lia. De Cand. (*L. parvus*, small; *folium*, a leaf.) Hab. India. Used as a diuretic, diaphoretic, and aperient, to purify the blood in skin diseases, as an anthelmintic, and an antiperiodic.

F. spica'ta. Linn. (*L. spicatus*, pointed.) Used as *F. officinalis*.

F. Vaillant'ii. De Cand. Used as *F. officinalis*.

Fumaria'ceæ. A Nat. Order of thalamifloral Exogens of the Alliance *Berberales*, or a Family of the Order *Rheadinææ* or *Crucifloræ*, Subclass *Choripetalæ*, Class *Dicotyledonæ*, having irregular and unsymmetrical flowers, parietal placentæ, and stamens opposite the petals.

Fumar'ic. Relating to the *Fumaria*.

F. acid. $\text{C}_4\text{H}_4\text{O}_4$. (*F. acide fumarique*; G. *Fumarsäure*.) Obtained by Lassaigne, after the production of maleic acid, from the dry distillation of malic acid. It exists in the free state in *Fumitoria officinalis*, *Corydalis bulbosa*, *Glauclium luteum*, many species of *Agaricus*, and in *Lichen islandicus*. It occurs in small, white, flattened prisms, or plates, soluble in hot water and in alcohol. It unites with many bases, forming fumarates.

Fumarin. An alkaloid discovered by Peschier in the fumitory, *Fumaria officinalis*. It is white, bitter, soluble in ether and alcohol, but only slightly soluble in water. It has been used in medicine for the same purposes as the plant. Hannon considers it to be at first irritant, and then sedative.

Fumari'na. Same as *Frenaria*.

Fumaryl. $\text{C}_4\text{H}_2\text{O}_2$. A diatomic radical only known in combination with chlorine.

Fume. (Old F. *fum*, a smoke; from L. *fumus*, smoke; Sans. *dūmu*, smoke; from Aryan root *dhu*, to blow.) A smoke.

FUMEROLLES—FUNCTIONAL.

Also, to smoke, to emit a visible vapour.

Fumerolles. (L. *fumare*, to smoke.) Jets of steam and gas which escape from small holes in the earth in volcanic regions. They usually contain small quantities of boracic acid.

Fumeworts. The plants of the Nat. Order *Fumariaceæ*.

Fumigate. (L. *fumigatus*, part. of *fumigo*, to fumigate; from *fumus*, smoke.) To expose to fumes or to *Fumigation*.

Fumigatio. See *Fumigation*.

F. antiloinica Gaubil. ('Avri, against; λοιμός, the plague.) Same as *Fumigation*, *Guytonian*.

F. Guytonien'sis. See *Fumigation*, *Guytonian*.

F. Smythiana. Same as *Fumigation*, *nitrous*.

Fumigation. (L. *fumigo*. F. *fumigation*; I. *fumigazione*; S. *fumigación*; G. *Beräucherung*, *Räucherung*.) Exposure to fumes, especially the exposure of the body, or a part of it, such as the skin or the respiratory mucous membrane, to fumes, in order to produce a therapeutic effect. *Fumigation* may be dry or moist.

Also, the exposure of the body, or of clothing, or of a room, to the fumes of some disinfectant, for the purpose of destroying a contagium.

F., chlorinic. Same as *F., Guytonian*.

F.s., disinfectant. (L. *dis*, neg.; *inficio*, to infect.) *Fumigations* intended to destroy morbid contagia or offensive smells.

F., dry. The vapour of burning balsams or gum-resins, or of sulphur, or calomel. Used in the treatment of skin affections and of syphilis.

F.s., emollient. (L. *emollio*, to soften.) A term applied to the vapour of simple hot water, or to that of decoctions of malvaceous plants.

F.s., excitant. The vapour of decoctions of aromatic plants, or of water to which has been added alcoholic or ethereal tinctures. Applied to the skin surface so as to produce stimulation and diaphoretic action in gouty conditions.

F., Guytonian. *Fumigation* of free chlorine, as first proposed by Guyton de Morveau. It was obtained by mixing common salt three parts, manganese oxide one part, sulphuric acid one part, and water two parts.

F.s., hygienic. ('Υγιεινός, good for the health.) Same as *F.s., disinfectant*.

F., iod'uretted. A vapour bath containing the spray, produced at a high temperature, of a solution of iodide of potassium.

F., mercurial. The administration of mercury in vapour, so that it may be applied to the skin and be absorbed. The preparations used are generally calomel, black oxide, or cinabar. The patient is seated on a chair and covered with a blanket or waterproof clothing closely applied to the neck, so that the head is outside; the mercury is placed under the chair on a metal plate above a spirit lamp, which is kept burning for ten or fifteen minutes, when the patient is wrapped in a blanket and put to bed.

F.s., moist. The use of the steam of a solution of some medicament in water.

F., nitrous. A *fumigation* with nitrous acid gas, obtained by mixing potassium nitrate four parts and sulphuric acid two parts, and placing them in a vessel over a sand bath.

F., oxymuriatic. Same as *F., Guytonian*.

F., sulphurous. The use of vapour of sulphurous acid obtained by burning sulphur.

Also, the application of the vapour of a solution of hydrogen sulphide to the skin. It is said to be calming and sedative.

F., terebinthinated. (Τερίβινθος, the turpentine tree.) A vapour bath of steam charged with turpentine. Employed in chronic rheumatic affections.

Fumigatory. (L. *fumigo*. F. *fumigatoire*.) A room or an apparatus used for *fumigation*.

Fuminella. A Brazilian plant, the flowers of which are used to adulterate saffron.

Fuming. (Fume. F. *fumant*.) Smoking; emitting a thick vapour.

F. liquor of arsenic. An old term for *Arsenic trichloride*.

F. liquor of Be'guin. See *Be'guin's fuming liquor*.

F. liquor of Boyle. See *Boyle's fuming liquor*.

F. liquor of Ca'det. See *Cadet's fuming liquid*.

F. liquor of Liba'vius. See *Liba'vius's fuming liquor*.

Fumiter'ra. The *Fumitory*.

Fumitory. (Mid. E. *fumitere*; from Old F. *fumeterre*; from L. *fumus*, smoke; *terra*, the earth.) The plants of the Genus *Fumaria*, which see for explanation.

F., bulbous root'ed. The *Corydalis bulbosa*.

F., com'mon. The *Fumaria officinalis*.

F., yel'low. The *Corydalis capnoides*.

Fumus. (L. *fumus*, smoke; akin to Sans. *dhūma*, smoke; from Aryan root *dhu*, to blow.) Smoke; that portion of a substance which goes off in a more or less thick vapour during combustion.

F. al'bus. (L. *albus*, white.) An alchemical term for mercury.

F. cit'rinus. (L. *citrus*, a citron tree.) An alchemical name of sulphur.

F. du'plex. (L. *duplex*, twofold.) An alchemical name for the material of the philosopher's stone, that is, sulphur and mercury.

F. rubens. (L. *rubens*, reddish.) An alchemical term for orpiment.

F. ter'ræ. (L. *terra*, the earth.) The *fumitory*, *Fumaria officinalis*.

Function. (Old F. *function*; from L. *functio*, performance; from *fungor*, to perform; akin to Sans. *bhuj*, to enjoy; from Aryan root *bhuj*, to enjoy. F. *function*; I. *funzione*; S. *function*; G. *Verrichtung*.) The doing or performing of anything; the special action of a living organ or set of organs.

F.s., animal. The functions of organs special and peculiar to an animal, being those of the nervous system.

F.s., natural. The functions of the organs of assimilation.

F., re'flex. See *Reflex function*.

F.s., ve'getative. (L. *vegeto*, to quicken.) The functions of the organs which serve for growth and reproduction.

F.s., vi'tal. (L. *vita*, life.) The functions of the organs necessary to life, such as the organs of respiration and circulation.

Functional. Relating to a *Function*.

F. disease. See *Disease, functional*.

F. phenom'ena. (Φαινόμενα, an appearance.) Signs of disease or phenomena which

FUNDA—FUNGILLIFORM.

result from some disturbance or change in the functions of an organ, in contradistinction to physical phenomena which indicate by material signs some change in its structure.

Fun'da. (L. *funda*, a sling. Gr. σφενδόνη.) An old name for a four-headed bandage used in injuries of the face, especially fracture of the lower jaw, according to Galen, *de Fasciis*, Hippocrates, *de Art.*, i, 74, and Foësius, p. 604.

F. Gale'ni. (Galen.) Same as *Funda*.

F. maxil'læ. (L. *maxilla*, the jaw. G. *Schleuderbinde*.) A bandage for the chin, consisting of a broad band split longitudinally at each end nearly to the middle, which is placed over the chin, the two lower ends being tied over the vertex and the two upper ones behind the neck.

F. maxilla'ris. (L. *maxilla*, the jaw.) Same as *F. maxillæ*.

F. superficialis vesicæ. (L. *superficies*, the upper side; *vesica*, the bladder.) Those muscular fibres of the bladder which surround the attachment of the urachus in the fashion of a sling.

Fund'al. (L. *fundus*, the bottom.) Relating to the bottom or *Fundus*.

F. zone. See *Zone*, *uterine*, *fundal*.

Funda'lia. (L. *fundus*, the bottom.) An old term for the fecula or sediment of any turbulent fluid.

Fundament. (Mid. E. *foundement*, *fundement*; from Old F. *fondement*; from L. *fundamentum*, a foundation; from *fundo*, to lay the bottom of a thing.) A base; a foundation. A term for the anus.

Fundamental. (L. *fundamentum*.) Relating to a base or foundation.

F. colours. See *Colours*, *fundamental*.

F. or'gans. Term applied by von Baer to the primary structures which directly issue from the blastoderm in the form of tubes, and from which the permanent organs or structures are developed; thus the cutaneous layer of the blastoderm furnishes the tubes from which the skin and central nervous system arise; the fleshy layer gives origin to the double tube from which the osseous and muscular systems and the bony axis arise; the vascular and the mucous layers form together the tube from which the intestinal canal arises, while from the former alone springs the mesentery.

F. tissue. See *Tissue*, *fundamental*.

Fundi. The native name of the fruit of *Paspalum exile*. Used as food on the west coast of Africa.

Fundun'gi. Same as *Fundi*.

Fundus. (L. *fundus*, the bottom. G. *Grund*.) The base or bottom of an organ that has an external aperture.

Also, a term for the vulva.

F. oculi. (L. *oculus*, the eye.) The back part of the globe of the eye behind the crystalline lens. The parts seen by means of the ophthalmoscope are the optic disc, or entrance of the optic nerve, with the retinal vessels and their ramifications over the choroid, the macula lutea, and the fovea centralis on the red reflex of the choroid.

F. of blad'der. The *F. vesicæ*.

F. of eye. The *F. oculi*.

F. of womb. The *F. uteri*.

F. sac'ci lachryma'lis. The rounded upper end of the lachrymal sac.

F. uteri. (L. *uterus*, the womb. F. *fond de l'uterus*; G. *Gebärmuttergrund*.) The upper broad end of the womb.

F. vaginæ. (*Vagina*.) The arched upper end of the vagina which expands to receive the cervix uteri.

F. ventric'uli. (L. *ventriculus*, the stomach.) See *Stomach*, *fundus of*.

F. vesicæ fel'lææ. (L. *fel*, gall.) The large end of the gall-bladder. It projects beyond the anterior edge of the liver.

F. vesicæ urina'riæ. (L. *vesica*, a bladder; *urinarius*, belonging to urine. F. *fond de la vessie*; G. *Blasengrund*.) The lower part, or larger end, or base of the urinary bladder directed toward the rectum.

Funes. Plural of *Funis*.

F. cordis. (L. *cor*, the heart.) The *Columnæ carneæ*.

F. semicircula'res. Same as *Canals*, *semicircular*.

F. ventric'uli. (L. *ventriculus*, the stomach.) The oesophagus.

Fung'al. (L. *fungus*, a mushroom.) Relating to a *Fungus*.

F. alliance. Same as *Fungales*.

Funga'les. An Alliance of Thallogens, according to Lindley, being cellular, flowerless plants, nourished through their thallus, living in air, propagated by spores, colourless or brown, and sometimes enclosed in asci; destitute of green gonidia.

Fung'ating. (L. *fungus*, a mushroom.) Sprouting up rapidly, applied to granulations.

F. sore. A soft chancre with abundant granulations.

Fungi. (L. *fungus*.) A Nat. Order of the Subclass *Thallophyta*, Class *Acotyledones*. Plants consisting of cells arranged in rows, or hyphae, possessing no chlorophyll, nourished through the thallus or mycelium, which usually bears the organs of reproduction; some grow on dead organisms or decaying organic matter, saprophytes; others grow on living organisms, parasites.

F., aëro'bi'ous. (Ἀήρ, air; βίος, life.) Pasteur's term for the Fungi which require the presence of free oxygen as a condition of life.

F., anaëro'bi'ous. (Ἄν, neg.; ἀήρ; βίος.) Pasteur's term for the Fungi which do not require the presence of free oxygen as a condition of life, but usually die when subjected to its influence.

F., cleft. The *Schizomycetes*.

F., dust. The *Coniomycetes*.

F., filament'ous. The *Hyphomycetes*.

F., germ. The *Gymnomycetes*.

F., parasit'ic. (Παράσιτος, one who lives at another's expense.) The fungous growths which inhabit the animal body; especially those which live on its outer surface, such as the *Achorion Schenleinii*.

Fung'ic. (L. *fungus*. F. *fongique*.) Relating, or belonging, to a fungus.

F. ac'id. Braconnot's term for an acid contained in the juice of some fungi. According to Dessaignes, it is a mixture of citric, malic, and phosphoric acids.

Fungic'olous. (L. *fungus*; *colo*, to inhabit. F. *fongicole*.) Inhabiting or living on fungi.

Fung'iform. (L. *fungus*; *forma*, shape. F. *fongiform*.) Having the form of a fungus or mushroom.

F. papil'læ. See *Papillæ fungiformes*.

Fungill'iform. (L. dim. of *fungus*, a

FUNGIN—FUNGUS.

mushroom; *forma*, shape.) Like a small mushroom.

Fung'in. (L. *fungus*. F. *fungine*, *fungine*; I. *fungina*; G. *Schwammstoff*.) Braconnot's term for a substance contained in most fungi; it is isomeric with cellulose, but does not turn blue with tincture of iron after the action of sulphuric acid.

Fungoid. (L. *fungus*; Gr. *είδος*, likeness. F. *fongöide*; G. *schwammartig*.) Like to a fungus.

F. disease'. A term for encephaloid cancer, in reference to its mode of growth.

Fungosity. (L. *fungus*. F. *fongosité*; I. *fungosita*; L. *fungositas*; G. *Schwammigkeit*, *Schwammgewächs*.) The quality of being fungus; a fungous excrescence.

Fungous. (L. *fungus*. F. *fongueux*; I. *fungoso*; S. *fungoso*; G. *schwammig*, *pilzartig*.) Having the form or appearance of a fungus; spongy in texture.

F. cancer. See *Cancer*, *fungous*.

F. chancre. Same as *Chancre*, *fungating*.

F. excrescence. (L. *excreasco*, to grow out.) An exuberant granulation; a rounded mass of soft quick-growing structure, as in encephaloid cancer.

F. flesh. The exuberant granulations called, also, proud flesh.

F. foot of India. Same as *Mycetoma*.

F. tumour. See *Tumour*, *fungous*.

F. ulcer. See *Ulcer*, *fungous*.

Fungus. (L. *fungus*, a mushroom; a weakened form of Gr. *σπόγγος*, a sponge. F. *fungus*; I. *fungo*; S. *fungo*, *hongo*; G. *Fungus*, *Pilz*, *Schwamm*.) A plant of the Order *Fungi*.

Also, applied to most of the lower cryptogamous plants.

Also, an exuberant granulation in a wound.

Also, a morbid growth which is rounded and soft.

F. albus acris. (L. *albus*, white; *acris*, sharp.) The *Agaricus piperatus*.

F. albus pipera'tus. (L. *albus*.) The *Agaricus piperatus*.

F. albus saligneus. (L. *albus*, white; *saligneus*, belonging to the willow.) The *Dædalea suaveolens*, or *Trametes suaveolens*.

F. articuli. (L. *articulus*, a joint. G. *Gelenkschwamm*.) A term formerly used to denote those cases of knee-joint disease, which were called *White swelling*; and also the cases called *Spina ventosa*.

F. bleed'ing. Same as *F. hæmatodes*.

F. cancro'sus hæmato'des. (L. *cancrosus*, cancerous.) Same as *F. hæmatodes*.

F. cancro'sus medulla'ris. (L. *cancrosus*; *medullaris*, belonging to marrow.) A term for encephaloid cancer.

F. cel'lulose. Same as *Fungin*.

F. cerebra'lis. (L. *cerebrum*, the brain.) Encephaloid cancer, from its appearance.

F. cere'ebri. (L. *cerebrum*.) Hernia of the brain, which presents a fungating appearance.

F. cervi'nus. (L. *cervus*, a stag. G. *Hirschbrunst*.) The *Elaphomyces granulatus*.

F. chirurgo'rum. G. Ph. (L. *chirurgus*, a surgeon. F. *amadou*; G. *Wundschwamm*, *Feuerschwamm*.) The *Polyporus fomentarius* dried without the addition of saltpetre, as in ordinary amadou. It is used to stop bleeding. Also (G. *Bovist*), the *Lycoperdon bovista*.

F. coralloi'des. The *Clavaria coralloides*.

F. cynos'bati. (Κυνόσβατος, the wild rose.) Same as *Bedeguar*.

F. disease' of granula'tions. See *Granulations*, *fungous disease of*.

F. disease' of India. Same as *Mycetoma*.

F. fagino'sus. (L. *fagus*, the beech tree.) The *Morchella esculenta*, from its place of growth.

F. hæmato'des. (Αἱμάτωδης, looking like blood. G. *Blutschwamm*.) A term formerly employed, by the older Hey, to designate the hæmatoid varieties of encephaloid cancer. At one time it was supposed to be a parasitic animal living on the animal fluids. It was probably first described by Burns as an inflammatory fungosa.

F. ignia'rius. (G. *Feuerschwamm*.) The *Polyporus igniarius*.

F. ignia'rius præpara'tus. (L. *ignis*, fire; *præparatus*, prepared.) The *F. chirurgorum*, G. Ph.

F. lar'icis. (L. *larix*, a larch tree. G. *Lärchenschwamm*.) The *Polyporus officinalis*.

F. maximus rotun'dus pulveru'len'tus. (L. *maximus*, very great; *rotundus*, round; *pulverulentus*, powdery.) The *Lycoperdon bovista*.

F. medulla'ris. (L. *medulla*, marrow. G. *Markschwamm*.) A term for encephaloid cancer; probably first applied to medullary cancer of the eyeball.

F. melano'des. (Μέλας, black; *είδος*, likeness.) Same as *Cancer*, *melanotic*.

F. meliten'sis. (L. *melitensis*, belonging to the Island of Melita, or Malta.) The *Cynomorium coccineum*.

F. membrana'ceus. (L. *membranaceus*, skinny.) The *Hirneola auricula-judæ*.

F. morel. The *Morchella esculenta*.

F. musca'rius. The *Agaricus muscarius*.

F. of dura ma'ter. (G. *Gehirnschwamm*.) Cancer of the dura mater.

F. of Malta. The *Cynomorium coccineum*.

F. of pia ma'ter. (G. *Hirnschwamm*.) Cancer of the brain substance, on the supposition that it originates in the pia mater.

F. of tes'ticle. See *Fungus testis*.

F. orbicula'tus. (L. *orbiculatus*, rounded.) The *Lycoperdon bovista*.

F. petræus mari'nus. (L. *petræus*, that grows among rocks; *marinus*, belonging to the sea.) The *Umbilicus marinus*.

F. phalloi'des. (Φαλλός, the male organ; *είδος*, likeness.) The *Phallus impudicus*.

F. pipera'tus. The *Agaricus pipera'tus*.

F. porrig'inis. (L. *porrigo*, scurf.) The *Achorion Schönleini*.

F. querci'nus. (L. *quercinus*, belonging to the oak.) The *Polyporus igniarius*.

F. rosa'rum. (L. *rosa*, a rose.) The same as *Bedeguar*.

F. rotun'dus. (L. *rotundus*, round.) The puff ball. *Lycoperdon bovista*.

F. sal'icis. (L. *salix*, a willow.) The *Dædalea suaveolens*, or *Trametes suaveolens*.

F. sambu'ci. (L. *sambucus*, an elder tree. G. *Hollunderschwamm*.) The *Hirneola auricula-judæ*.

FUNIC—FUNICULUS.

F. sambuci'nus. (L. *sambucus*, the elder tree.) The *Hirneola auriculæ judæ*.

F. suave'olens. (G. *Weidenschwamm*.) The *Trametes suaveolens*.

F., sug'ar. The *Saccharomyces cerevisiæ*.
F. test for sug'ar. The yeast test for sugar in the urine.

F. tes'tis. See *Testis, fungus of*.

F. umbilica'lis. (L. *umbilicus*, the navel. G. *Nabelschwamm*.) A term applied to the remains of the umbilical cord, after its separation in the new born, when it ulcerates and forms extensive fungous granulations.

F. vasculo'sus. (L. *vasculum*, a small vessel. G. *Gefässschwamm*.) A fungoid growth with large development of capillary blood-vessels.

F., vin'egar. The *Mycoderma aceti*.

Funic. Same as *Funicular*.

Funicle. (L. *funiculus*, a small cord.) Same as *Funiculus*.

Funicular. (L. *funiculus*, a small cord. F. *funiculaire*.) Relating to the spermatic cord.

Also, relating to the umbilical cord.

F. artery. The cremasteric artery.

F. bellows sound. Same as *Murmur, funic*.

F. curve. The curve in which a perfectly flexible cord hangs when suspended by its ends.

F. hern'ia. See *Hernia, funicular*.

Funiculate. (L. *funiculus*, a small cord.) Like a small cord; possessing a *Funiculus*.

In Zoology, having a ridge like a fine cord.

Funicule. The same as *Funiculus*, as used in Botany.

Funiculi. Plural of *Funiculus*.

F. cinere'i antio'ries. (L. *cinereus*, ashy grey; *anterior*, in front.) The anterior cornua of the spinal cord.

F. medullæ spina'lis. (L. *medulla*, marrow; *spinalis*, belonging to the spine.) The columns of the spinal cord.

F. siliquæ. The fibres of the *Siliqua olivæ*.

Funiculit'is. (L. *funiculus*.) Inflammation of the spermatic cord.

Funiculose. (L. *funiculus*, a small cord. F. *cordelé*.) Like to a small cord; surrounded by a cord-like substance.

Funiculus. (L. *funiculus*, a slender cord; dim. of *funis*, a rope. F. *funicule*; G. *Strang*.) A small cord or cord-like substance.

In Anatomy, applied to the primitive cord or bundle of nerve fibres, bound together in a sheath of connective tissue, called the perineurium or neurilemma. Sometimes a nerve consists only of one such cord; sometimes it consists of several such cords bound together by connective tissue, which is called the epineurium or cellular sheath. The funiculi of a nerve composed of several of these cords join each other at intervals in a plexiform fashion, one or more of the nerve fibres of a fasciculus leaving it and joining its neighbour, but not uniting with any of its constituent nerve fibres.

Also, a term for the spermatic cord.

Also, a term for the umbilical cord.

Also, a term for the cylindrical cord which stretches from the testis to the fundus of the stomach of many Polyzoa, and from which the statoblasts arise as buds.

Also, a term for the part of the antenna which

lies between the scape and the club in certain insects.

In Botany (F. *funicule*; G. *Nabelstrang*), the stalk or thread by which an ovule or nucellus is attached to the placenta; it is penetrated by a central fibro-vascular bundle or collateral libero-ligneous fascicle, which does not enter the ovule; the place of junction is the hilum. Occasionally the funiculus is wanting, the ovule being sessile.

F., ante'rior. (L. *anterior*, in front.) The anterior column of the spinal cord.

F. cunea'tus. (L. *cuneatus*, wedge-shaped. G. *Keilstrang*.) The upper wedge-shaped prolongation of the posterior lateral column of the spinal cord in the medulla oblongata. It lies on the outer side of the funiculus gracilis, and after becoming enlarged at the level of the clava into the cuneate tubercle it assists in forming the lateral boundary of the fourth ventricle. It consists of white nerve fibres on the outside, enclosing portions of grey nerve tissue from the posterior cornu of the spinal cord. Also called restiform nucleus.

F. dorsa'lis. (L. *dorsalis*, belonging to the back. G. *Rückenstrang*.) The spinal cord.

F. exter'nus. (L. *externus*, outward.) The fibres of the *siliqua olivæ* which lie on the outer side of the olivary body.

F. grac'ilis. (L. *gracilis*, weak. G. *zarter Strang*.) The prolongation of the posterior median column of the spinal cord in the medulla oblongata. It is broad at its anterior end, the clava, and forms the hinder part of the lateral border of the fourth ventricle. It is composed of white fibrous tissue enclosing some grey matter from the posterior cornu of the spinal cord. It is also called the posterior pyramid of the medulla oblongata.

F. innomina'tus. (L. *innominatus*, unnamed.) The *F. teres*.

F. inter'nus. (L. *internus*, within.) The fibres of the *siliqua olivæ* which lie on the inner side of the olivary body.

F., lat'eral cuneate. (L. *lateralis*, belonging to the side. G. *Seitenkeilstrang*.) Henle's term for the *F. of Rolando*.

F. latera'lis. (L. *lateralis*.) The *F. of Rolando*.

F. longitudina'lis. The *F. teres*.

F. of Rolan'do. (Rolando. G. *Rolando'schen Strang*.) A small cord of white fibres running upwards in the medulla oblongata from the tubercle of Rolando, formed by enlargement and extension outwards of the caput cornu, covered by the white fibres of the ascending root of the fifth nerve, and by arched fibres going to the restiform body from the posterior column of the spinal cord.

F. oliva'ris. Same as *Fasciculus, olivary*.

F., poste'rior. (L. *posterior*, hinder.) The posterior column of the spinal cord.

F. pyram'idis. The *Tract, pyramidal, anterior*.

F. scleræ. (Σκληρός, hard.) Hannover's term for a strand of fibrous tissue which crosses from front to back of the sclerotic coat of the eye opposite the fovea centralis of the retina, and which joins together the several laminae of the sclerotic.

F. spermat'icus. (G. *Samenstrang*.) The *Spermatic cord*.

F. spina'lis. The *Spinal cord*.

F. teres. (L. *teres*, rounded off. G. *runder Strang*.) A flattish, rounded eminence

FUNIFEROUS—FURFURA.

on each side of the middle line of the hinder part of the fourth ventricle, formed by a projection of part of the base of the anterior cornu of the grey matter of the medulla oblongata.

F. tympani. The *Chorda tympani*.

F. umbilicalis. (G. *Nabelstrang*.) The Umbilical cord.

F. uteri. (L. *uterus*, the womb.) The round ligament of the uterus.

F. varicosus. (L. *varicosus*, full of dilated veins.) A *Cirsocèle*.

Funiferous. (L. *funis*, a cord; *fero*, to bear. L. *funifère*; G. *stricktragend*.) Bearing cord-like roots.

Funiform. (L. *funis*; *forma*, shape. F. *funiforme*; G. *strickförmig*.) Cord-like.

In Botany, applied to roots which have the appearance of many tough, flexible cords.

Funiliform. Same as *Funiform*.

Funis. (L. *funis*, a cord.) A cord, especially the umbilical cord.

Also, the same as *Laqueus*.

F. arborum. (L. *arbor*, a tree.) A term applied to some of the species of *Smilax* which climb.

F. argenteus. (L. *argenteus*, of silver.) The spinal cord, from its colour.

F. brachii. (L. *brachium*, the arm.) An old name for the median vein.

F. crispus. (L. *crispus*, curled.) The *Menispermum tuberculatum*.

F. felleus. (L. *felleus*, like gall.) A name given by Rumphius to a Menispermaceous plant of the East Indies, which is given instead of quinine in intermittent fever and jaundice.

F. Hippocratis. (*Hippocrates*.) The *Tendo achillis*.

F. umbilicalis. The Umbilical cord.

Funnel. (Mid. E. *fonel*, *funell*; perhaps from L. *infundibulum*, a funnel, through an Old F. *fonel*, or *fonil*.) A wide-mouthed tube for pouring liquids into vessels.

In Biology, the term is applied to the short wide cavity into which the stomach of some *Ctenophora* opens; and also, to the muscular tube formed by the union of the lateral margins of the foot, or the epipodial lamellæ, of cuttlefishes, and which is directed downwards and backwards, with its upper end towards the mantle cavity.

Also, see *Infundibulum*.

F. form'd. Same as *F. shaped*.

F. shaped. Of the shape of a funnel, being a tube with a widely dilated orifice and a narrow exit.

F. top. A common name for the Genus *Peziza*.

Fur. (Mid. E. *forre*; from Old F. *forre*, *fuerre*, a sheath; from an old Low G. source.) The close, soft, short hair of animals.

A term applied in Medicine to the coating of the tongue in certain diseased conditions of the alimentary canal, and of the body generally. It consists of desquamated epithelial cells and much granular matter, with frequently various bacteria and spores and hyphæ of some filamentous fungi.

Furca. (L. *furca*, a fork. F. *fourche*; G. *Gabel*.) A fork; a fork-like structure.

Furcalis os. (L. *furca*; *os*, a bone. G. *Schlüsselbein*.) The clavicle.

Furcate. (L. *furca*. F. *fourchu*; G. *gabelig*, *gabelästig*.) Forked; dividing into two diverging parts.

Furcella. (L. *furcella*; dim. of *furca*, a fork.) The notch on the upper border of the sternum.

Also, the clavicle.

Also, the same as *Fourchette*.

F. inferior. (L. *inferior*, lower.) The ensiform cartilage of the sternum when bifurcated.

Furcellaria. (L. *furcella*, dim. of *furca*, a fork.) A Genus of seaweeds of the Family *Cryptonemææ*, Order *Florideæ*, Class *Carposporeæ*.

F. fastigia'ta. Lamour. (L. *fastigo*, to make pointed.) A species said by Planchon to be found mixed with the Carrageen moss of commerce.

Furcellate. See *Furcillate*.

Furcifer. (L. *furca*, a fork; *fero*, to bear.) The penis.

Furcilla. (L. *furcella*, dim. of *furca*, a fork.) The fourchette.

Also, used by Lindenus, *Ex.*, xiii, § 58, to express hunger.

Furcillate. (L. *furcella*. G. *gabelförmig*.) Having small forks; forked in a diminutive manner.

Furcraea. A Genus of the Nat. Order *Bromeliaceæ*.

F. odorata. Poir. (L. *odoratus*, sweet-smelling.) Roots used as a false sarsaparilla.

Furcroya. Same as *Furcraea*.

Furcula. (L. *furcula*, a forked prop; dim. of *furca*.) An old name, used by Avicenna, iv, 5, tr. 1, c. 8, for the clavicle.

Also, the upper border of the sternum.

Also, the ensiform cartilage when bifurcated.

Also, the same as *Fourchette*.

Also, the bone called the merrythought in birds. It is composed of two clavicles and an interclavicle, which are separated in the young bird, but united into one bone in the adult; its extremities articulate with the coracoid bone, and the point of junction is attached to the carina of the sternum.

F. inferior. Same as *Furcella inferior*.

F. superior. (L. *superior*, upper.) The upper part of the sternum.

Also, a name for the clavicle.

Furcular. (L. *furcula*, shaped like a fork.) Relating to the *Furcula*.

F. bone. The *Furculum*.

Furculum. A misspelling of *Furcula*.

Füred. Hungary, County Zala, on the Plattensee. An earthy, alkaline, weak chalybeate water, containing sodium sulphide 6 grains, calcium carbonate 6 grains, iron and manganese carbonate .0845 grain, in 16 ounces, with much carbonic acid. Used in dyspepsia and some skin diseases.

Furfur. (L. *furfur*, bran. F. *son*; G. *Kleie*.) The outer cuticle of wheat, called *Bran*.

Also, a term applied, especially in France, to the layers of cuticle, like to bran, which are detached from the skin in such diseases as pityriasis.

Also, C₄H₂O, Bayer's term for *Furfuryl*.

F. amygdalarum. (L. *amygdala*, an almond. F. *tourteau d'amandes en poudre*; G. *Mandelkleie*.) The powdered remnant of the almond after the oil has been expressed. Used as an application to chapped hands and excoriations.

F. tritici. (L. *tritium*, wheat. F. *son de froment*; G. *Weizenkleie*.) The bran of wheat. See *Bran*.

Furfura. Same as *Furfur*.

FURFURACEOUS—FURROW.

Furfura'ceous. (L. *furfuraceus*, like bran. F. *furfuracé*; I. *furfuraceo*; S. *furfuraceo*; G. *kleinartig*.) Resembling bran; branny; scurfy.

F. desquama'tion. See *Desquamation*, *furfuraceous*.

F. ex'anthem. (Έξάνθημα, an eruption.) A skin eruption in which the epidermis is detached in small branny particles.

F. u'rine. A term applied to a urine in which there is a bran-like sediment.

Furfuracro'lein. $C_4H_3O \cdot C_2H_2 \cdot COH$. Prepared by heating a mixture of furfural and aldehyde with a weak solution of caustic soda. It crystallises from hot water in needles, which have a cinnamon-like smell.

Furfuracrylic acid. $C_4H_3O \cdot C_2H_2 \cdot CO_2H$. A cinnamon-smelling substance obtained by heating to the boiling point a mixture of furfural, acetic anhydride, and anhydrous sodium acetate. It crystallises from hot water in long, brittle needles.

Furfural. Same as *Furfural*.

Furfural'dehyde. Same as *Furfural*.

Furfuramide. $(C_4H_3O \cdot CH)_3N_2$. A white crystalline substance formed when furfural is treated with aqueous ammonia. It is insoluble in cold water, and crystallises in thin needles.

Furfuran. Same as *Tetrol*.

Furfura'tio. (L. *furfur*, bran.) A term applied to the diseases of the skin; also commonly called *Dandriff*, *Scurf*, or *Pityriasis*.

Furfura'tion. (L. *furfur*, bran.) The shedding of the skin in small branny particles.

Furfures. Plural of *Furfur*.

F. cap'itis. (L. *caput*, the head.) A term for *Dandriff*.

Furfurin. An isomer of furfuramide, obtained by heating it to $120^\circ C$. ($248^\circ F$.) It forms bitter crystalline salts.

Furfuris'ca. (L. *furfur*, bran. G. *Kleinflechte*.) A synonym of *Pityriasis*.

Furfural. (L. *furfur*; *oleum*, oil.) $C_4H_3O \cdot COH$. An oily liquid obtained by distilling bran with dilute sulphuric acid. It has an odour and taste of oil of cinnamon. It boils at $161^\circ C$. ($321.8^\circ F$.), is soluble in 12 parts of water and freely in alcohol.

Furfural was first obtained by Döbereiner, along with formic acid, by distilling sugar with dilute sulphuric acid and manganese dioxide, and was called by him artificial oil of ants. Subsequently Fownes having obtained it freely from bran, gave it its present name.

Furfuro'l'amide. Same as *Furfuramide*.

Furfurous. Same as *Furfuraceous*.

Furfuryl. C_4H_3O . The hypothetical radical of furfural and its derivatives.

F. al'cohol. $C_4H_3O \cdot CH_2 \cdot OH$. Formed by the action of sodium amalgam and water on furfural, but it has not yet been obtained in the pure state.

Fu'ria. (L. *furia*, a Fury.) Moeder's term for the *Dracunculus medinensis*.

F. interna'lis. (*Infernalis*, belonging to the lower regions. Swed. *skalt*.) An affection observed in Sweden, characterised by an eruption of very painful boils. It has been attributed to a worm of the character of the *Dracunculus medinensis*, but doubtfully.

Furibund'us. (L. *furibundus*, mad; from *furo*, to rage.) Maniacal; mad.

Furio'sus. (L. *furius*, raging; from *furo*.) Mad; maniacal.

Fur'nace. (Mid. E. *forneis*; Old F. *forneise*; from L. *fornax*, an oven; allied to *formis*, warm. F. *fournaise*; I. *fornace*; S. *horno*; G. *Ofen*.) An oven or place where a great heat may be made.

F., air. A furnace in which the combustion is kept up by the natural draught of air only.

F., blast. A furnace where combustion is quickened by the blowing of a current of air, either cold or hot, into the burning material.

F., evapor'ating. (L. *evaporo*, to disperse in vapour.) A furnace employed to reduce substances into vapour, so as to separate the volatilisable parts.

F., rever'beratory. (L. *reverbero*, to beat back.) A furnace in which the flames are thrown down by an arched roof on to the substances to be heated.

Furnas. A mineral spring in St. Michael's, one of the Azores. It is of high temperature, and contains iron carbonate and free carbonic acid.

Fur'nus. (L. *furnus*, an oven.) A *Furnace*.

F. anem'ius. (Ανέμιος, wind.) A blast furnace.

Fur'or. (L. *furor*, a raving; from *furo*, to rave.) Madness; mania.

F. bre'vis. (L. *brevis*, short.) Same as *Rage*.

F. ma'nia. Same as *Mania*.

F. uteri'us. (L. *uterus*, the womb. G. *Mutterwuth*.) A term for *Nymphomania*.

Fur'ed. (Fur.) Covered with *Fur*.

F. tongue. A tongue which is covered with a more or less thick substance consisting of epithelial scales, granular matter, food particles, and often fungoid growths.

Fur'row. (Mid. E. *forwe*, *forge*; from Sax. *furh*; G. *Furche*; from an uncertain root. F. *sillon*, *rainure*; L. *sulcus*; I. *solco*; S. *surco*.) A narrow trench, a groove, a wrinkle in the face. See also subheadings of *Sulcus*.

In Botany, the term is especially applied to the depression between the primary ridges of the fruit of an umbelliferous plant.

F., abdom'inal. (L. *abdomen*, the belly.) The superficial depression in the middle line of the abdomen between the two recti muscles, extending from the infrasternal fossa to a little below the umbilicus.

F., abdom'inal, super'ficial. The same as *F., abdominal*.

F., auric'ulo-ventric'ular. (*Auricle*; *ventricle*.) See *Heart*, *furrow of, auriculo-ventricular*.

F., bicip'ital, in'ner. (*Biceps*.) The superficial depression of the upper arm along the inner side of the biceps muscle; below it lie the brachial vessels and the median nerve, and in its lower half the basilic vein.

F., bicip'ital, out'er. The superficial depression of the upper arm on the outer side of the biceps muscle; below it lies the cephalic vein.

F., gen'ital. See *Genital furrow*.

F., il'iac. A superficial depression over the crest of the ilium, caused by the prominence of the external oblique muscle above, and the

FURROWED—FUSION.

gluteus medius below; deeper depressions at its anterior and posterior extremities mark the anterior superior and the posterior superior spines of the ilium.

F., inguinal. (L. *inguen*, the groin.) The curved depression at the fold of the groin over the situation of Poupart's ligament.

F., interventricular. See *Heart, furrow of, interventricular.*

F., longitudinal, of heart. See *Heart, furrow of, longitudinal.*

F., men'to-la'bial. (L. *mentum*, the chin; *labium*, a lip.) The transverse depression in the skin between the chin and the lower lip.

F. of Rolan'do. The fissure of Rolando, or *Sulcus centralis*.

F., spinal. The groove down the centre of the back over the spines of the vertebrae. It is obliterated at the junction of the cervical and dorsal regions by the prominence of the spinal processes of the seventh cervical and the first dorsal vertebrae, with the occasional addition of those of the sixth cervical and the second dorsal vertebrae.

F., sternal. (L. *sternum*, the breast-bone.) The groove in the chest over the sternum between the two pectoralis major muscles.

Furrowed. (*Furrow*.) Wrinkled; presenting one or more long and shallow depressions.

F. band of cerebel'lum. The connecting ridge of grey nerve substance in the cerebellum which stretches between the uvula and the amygdalæ of each side.

Furuncle. Same as *Furunculus*.

Furuncular. Relating to a boil, or *Furunculus*.

F. diath'esis. See *Diathesis, furuncular*.

Furuncul'i. Plural of *Furunculus*.

F. aton'ici. (Ἀτονός, relaxed.) A synonym of *Eethyma*.

F. nu'cleus. (L. *nucleus*, a kernel.) The core of a boil.

F. ventric'ulus. (L. *ventriculus*, the belly.) An old term used by Celsus, for the core of a boil.

Furunculoid. (L. *furunculus*, a boil; Gr. *eidos*, likeness.) Resembling a boil or *Furunculus*.

Furunculo'sis. (L. *furunculus*.) The condition in which boils appear in successive crops.

Furunculous. Same as *Furuncular*.

Furunculus. (L. *furunculus*, a petty thief, also a boil; dim. of *fur*, a thief. F. *furuncle*; I. *furuncolo*; S. *divieso*; G. *Furunkel*, *Blutschwär*, *Blutgeschwür*.) A Boil.

F. anthracoi'des. (Ἀνθραξ, a burning coal, a carbuncle; *eidos*, likeness.) A boil with a central slough resembling a small carbuncle.

F. delhi'nis. See *Delhi boil*.

F. gangræno'sus. (Γάγγραινα, a gangrene.) A term for carbuncle or anthrax.

F. malig'nus. (L. *malignus*, of an evil nature.) A term for anthrax or carbuncle.

Furze. (Mid. E. *firse*, *frise*; Sax. *fyr*.) The *Ulex europæus*.

Fusanus. A Genus of the Nat. Order *Santalaceæ*.

F. acumina'tus. (L. *acuminatus*, pointed.) Hab. New Holland. Furnishes an oily esculent nut.

Fusaria. (L. *fusus*, a spindle.) The

former name of a genus of intestinal worms, so called from their fusiform extremities.

F. lumbricoi'des, Zeder. The *Ascaris lumbricoides*.

F. vermicula'ris, Zeder. The *Oxyuris vermicularis*.

F. viscera'lis et rena'lis, Zeder. (L. *viscus*, the inward parts; *et*, and; *ren*, the kidney.) The *Strongylus gigas*.

Fusce'do. (L. *fuscus*, dark.) Swarthiness; duskiness.

F. cu'tis. (L. *cutis*, the skin.) Duskiness of skin from deposit of dark coloured pigment; a minor degree of *Melanoderma*.

Fusces'cent. (L. *fuscus*, swarthy.) Brownish; approaching to darkish brown in colour.

Fuscin. (L. *fuscus*, brown.) A brown substance obtained by Unverdorben from the animal oil of Dippel after exposure to the air; it is soluble in most acids, insoluble in water and alkalies.

Fuscosclerotin'ic acid. An amorphous constituent, according to Dragendorff, of ergot of rye.

Fuscous. (L. *fuscus*, swarthy.) Of a dark dull-brown colour.

Fuse. (L. *fusus*, part. of *fundo*, to melt. F. *fondre*; I. *fondare*; S. *fundir*; G. *schmelzen*.) To melt by the aid of heat.

Fusel oil. (*Fusel*, tippel. G. *Fuselöl*.) A term for a mixture of several homologous alcohols, chiefly amylic alcohol, and especially applied to this when in its crude form; the name is given in reference to its intoxicating powers.

Fusian prick'wood. The *Euonymus europæus*.

Fusibility. (*Fuse*. F. *fusibilité*; I. *fusibilità*; S. *fusibilität*; G. *Schmelzbarkeit*.) The capability of being fused or melted by heat.

Fu'sible. (L. *fusus*. F. *fusible*; G. *schmelzbar*.) Capable of being melted by heat.

F. cal'culus. See *Calculus, fusible*.

F. metal. A metallic alloy used in taking casts and in stereotyping, comprised of variable proportions of bismuth, lead, tin, and cadmium.

Fusiform. (L. *fusus*, a spindle: *forma*, shape. F. *fusiforme*; G. *spindelförmig*.) Spindle-shaped; evenly tapering to each end from a larger centre.

F. an'eury'sm. See *Aneurysm, fusiform*.

F. bou'gie. A bougie with a swelling in some part of its course, which tapers both ways. Used by Ducamp in stricture.

F. cell. A cell with a thickened centre and tapering ends, as is seen in both animal and vegetable structures.

F. convolu'tion. The *Gyrus occipito-temporalis lateralis*.

F. lob'ule. The *Gyrus occipito-temporalis lateralis*.

F. root. A root which gradually expands from its base for a short distance, and then tapers to a point, as that of the radish.

Fusion. (L. *fusio*, a smelting; from *fundo*, to pour out. F. *fusion*; I. *fusione*; S. *fusion*; G. *Schmelzung*.) The act of making a solid substance liquid by the aid of heat.

The process of liquefaction of a solid body by heat; it is generally accompanied by its expansion.

In Biology, the union or joining together of contiguous parts or tissues.

FUSO-CELLULAR—GADUS.

F., aqueous. (L. *aqua*, water.) The melting of salts in their water of crystallisation by means of heat.

F., dry. Same as *F., igneous*.

F., igneous. (L. *ignis*, fire.) The liquefaction of a salt by heat after the water of crystallisation has been driven from it.

F., latent heat of. See *Heat, latent, of fusion*.

F., laws of. The point of fusion is constant for each substance if the pressure be constant. The temperature of the fused body remains the same from the beginning to the end of fusion, whatever the heat employed. The point of fusion rises with the pressure.

F., vitreous. (L. *vitrum*, glass.) The slowly progressing change from solid to liquid, with gradual increase of temperature, exhibited by such substances as glass and iron.

F., watery. Same as *F., aqueous*.

Fuso-cellular. (L. *fusus*, a spindle; *cellula*, a cell.) Having spindle-shaped cells.

Fusses. An old term for mother cloves, the ripe fruit of the *Caryophyllus aromaticus*.

Fusti. (L. *fustis*, a knotted stick.) The same as *Festuca caryophylli*.

Fustic. A yellow dye wood of two kinds, old and young.

F., old. The produce of *Cladrastis tinctoria*.

F. tree. The *Cladrastis tinctoria*.

F., young. The produce of *Rhus cotinus*.

F., zante. The same as *F., young*.

Fustigation. (Low L. *fustigo*, to beat with a stick; from L. *fustis*, a knobbed stick. *F. fustigation*; I. *fustigazione*; G. *Prügeln*.) A beating; a cudgelling. Same as *Flagellation*.

F., electric. Duchenne's term for a mode of application of faradisation in hyperæsthetic neuroses, by tapping the affected part with the rheophore frequently.

F. with nettles. Same as *Flagellation with nettles*.

Fus'io. The yellow colouring principle of *Fustic*.

Fututio. (L. *fututio*, a cohabiting; from *futuo*, to have intercourse with a female.) Coition; sexual intercourse.

Fututrix. (L. *fututrix*, she that cohabits; from *futuo*.) Same as *Tribas*.

Fuzz'balls. The *Lycopodon bovista*.

Fya'da. An old Arabic name for mercury. (Ruland, and Johnson.)

G.

G., or the Greek Γ, denoted among the Greek physicians an ounce, *Uncia*.

Also, a contraction of L. *gummi*, gum; and of *gramma*, a gramme.

Gabal. Same as *Kabbala*.

Gaballa. Same as *Kabbala*.

Gaballia. Same as *Kabbala*.

Gabana'la. The ancient name of the kabalistic art. See *Kabbala*.

Gab'bara. (Heb. *cabbar*, a sepulchre; or *gabbar*, a man.) A mummy, or embalmed body.

Gab'erneg. Styria. An alkaline saline chalybeate water.

Gab'ian. France, Département de l'Hérault. Here are an acidulate chalybeate water and an earthy water, as well as the spring supplying the *Gabianum oleum*.

Gabia'num o'leum. (*Gabian*, a village in Languedoc. F. *huile de Gabian*; G. *Gabianöl*.) A reddish kind of petroleum found in the water of a spring in the neighbourhood of *Gabian*, near Beziers, in France; like other forms of petroleum, it has been used in many abdominal diseases.

Gabir'ea. (Γαβίρεα.) A fatty kind of myrrh, according to Dioscorides, i. 77.

Gaboon' poison. A poison used by the natives of the Gaboon country, and called also M'boundou and Icaja. It is said by some to contain two or more alkaloids, and to have a somewhat similar action to brucin; by others, to contain only strychnin.

Ga'bricus. An alchemical term for *Mercurium philosophicum*, or *Sulphur philosophorum*, the wife or female of which was called *Beya*.

Gad-fly. (E. *gad*, a goad; from Icel. *gaddr*, a goad, a sting.) The flies of the Genus *Tabanus*. The flies of the Genus *Estrus* are often thus called, but they are more fitly called Bot-flies.

Ga'di oleum. (*Gadus*.) Same as *Oleum morrhue*.

Gad'ic acid. (*Gadus*.) A deposit obtained by Luck from a light brown cod-liver oil, which fuses between 63° C. (145° F.) and 64° C. (147° F.) A doubtful substance.

Gadin'ic. Relating to the *Gadus*, or cod.

G. acid. C₂₅H₃₅O₄. A crystalline fatty acid found by Luck in cod-liver oil. Slightly soluble in cold alcohol, freely in hot alcohol and in ether.

Gadin'in. A synonym of *Gaduin*.

Gad'oid. (Γάδος, the hake; είδος, likeness.) Resembling the Gadidae, or cod-fishes.

Gadolinite. (*Gadolin*, a Russian chemist.) A greenish black mineral consisting of yttrium, silica, cerium protoxide, iron protoxide, and traces of lime, magnesia, and glucina.

Gaduin. (*Gadus*, the cod fish.) C₃₅H₄₆O₉. A fatty substance found in cod-liver oil. It is of dark-brown colour, inodorous and tasteless. It is insoluble in water, soluble in alcohol and ether.

Ga'dus. (Γάδος, a kind of fish, perhaps the hake.) A Genus of the Suborder *Anacanthini*, Order *Teleostei*, Class *Pisces*.

G. æglefinus, Linn. (G. *Schellfisch*.) The haddock, inhabiting the northern seas of Europe. Used as food when fresh or dried, and supplies some cod-liver oil.

G. brosmæ, Gm. The torsk, or tusk, which swarms in the seas about the Shetland Isles. Also called *Brosmin* or *brosmie*, Müller.

G. callarias, Linn. (Καλλαρίας, a kind of cod-fish. G. *Dorsch*.) The young of the *G. morrhua*, erroneously supposed to be a distinct species.

G. carbonarius. (L. *carbonarius*, relating to coal. G. *Köhler*.) The coal fish,

GÆEPHAGIA—GAG.

abounding on the rocky coast of the northern parts of Britain, about the Orkneys, and on the coast of Yorkshire, where they grow to two and three feet long. It is eaten as food; and supplies some cod-liver oil.

G. ciliaris. (*L. cilium*, an eyelash.) The Baltic torsk. Salted and dried by the Icelanders, it forms an article of commerce called *Tetteling*.

G. lo'ta, Linn. (*F. la lotte*; *G. Quappe*.) The burbot, of agreeable flavour, and easy of digestion; it supplies an oil like cod-liver oil. Also called *Lota vulgaris*, Cuv.

G. merlangus, Linn. (*F. merlan*; *G. Witling*, *Weissling*.) The whiting, in great abundance in the Irish seas and German Ocean. A delicate food. Also called *Merlangus vulgaris*.

G. merluccius, Linn. (*F. merluce*; *G. Rothauge*.) The hake, found in the North and Mediterranean Seas, and off the south-west coast of England. Eaten fresh or dried, and sometimes called Poor John, or stockfish; it supplies some cod-liver oil. Also called *Merluccius vulgaris*, Flem.

G. minutus, Linn. (*L. minutus*, small.) A very small species, never exceeding six or seven inches in length, found in abundance in the Mediterranean, where it is called *Capelan*, or *Officier*.

G. molva, Linn. (*G. Küppfisch*.) The ling, which grows to five or six feet in length. Dried and salted, it is esteemed as an article of food; it is also eaten fresh, and supplies some cod-liver oil. Also called *Molva vulgaris*.

G. morhua, Linn. (*F. morue*; *G. Kabeljau*.) The cod fish, well known, and abounding in the northern seas, from the liver of which cod-liver oil is obtained. When dried it is called stock fish.

G. pollachius, Linn. The whiting pout, or pollack, found on the rocky coast of Britain and other parts of Europe. Used as food, and as a source of cod-liver oil.

Gæphag'ia. See *Geophagism*.

Gæphagus. Same as *Geophagist*.

Gæphagist. (*Γαῖα*, earth; *φαγέιν*, to eat.) See *Geophagist*.

Gærtner. See *Gärtner*.

Gafetê. Portugal, Province of Estremadura. A cold spring, containing much hydrogen sulphide.

Gag. (Mid. E. *gaggen*, to suffocate; perhaps related to *W. cegio*, to choke; or to *Ir. gaggach*, stammering; or to Sax. *cæggian*, to lock.) To stop up the mouth so as to prevent speaking.

A term used in Surgery for an instrument which is placed in the mouth between the upper and lower teeth to prevent the closing, or to procure the opening, of the jaws. Various forms are employed, a simple wedge, a narrow prop of wood or ivory with a hollow at top and bottom for the reception of a tooth, a screw dilating apparatus, or a combination of these forms. The gag is used to keep the mouth open, or to increase the amount of its opening, during an operation, during the use of the stomach-pump or of an oesophageal tube, or during the administration of an anæsthetic.

G., conical screw. A form which consists of a cone of boxwood or ivory, about 3" long, with a diameter of 1·5" at its base, and approaching to a point at its apex. Upon the surface of this cone is cut a round-threaded screw of about eight threads to the inch; at the base of

the cone is a short, transverse, flattened handle. In using the instrument the point is introduced between the molar teeth at any part where a chink or vacant space is seen, and on turning the cone from left to right it gradually introduces itself by means of the screw on its surface, and separates the jaws. It is employed to open the mouth when it is forcibly closed, as in some insane persons, in tetanus, or in strychnine or other poisoning.

G., dental. (*L. dens*, a tooth.) A prop made in metal or vulcanite, about 1" to 1·5" long, consisting of a cylindrical stem, with a saddle-shaped piece at each end to fit the upper and lower rows of teeth, and sometimes jointed to accommodate different jaws. A long piece of silk is attached to these gags to prevent the possibility of their being swallowed.

G., Ferguson's. A name occasionally, but erroneously, given to the *G., Francis Mason's*.

G., Francis Ma'son's. This instrument consists of two bars of steel bent at an angle like the letter X, and opening or closing upon each other by means of a circular joint placed at the angles at about two thirds of their length. Their action is similar to that of a glove stretcher. The parts held in the hand are covered with wood, rather bulbous at their extremities to give a better grip, and between the handles and joint is a curved screw, which is attached to the middle of one stem or bar, and passes through a hole in the other; upon this screw is a loosely fitting nut with milled edges; the parts beyond the joint are round and slender, and at two inches from the joint turn again towards the handles, forming two hooks of about 1" long each; the extremities of these hooks are bent at right angles and flattened outward from the hook, but inwards when placed in the mouth, so that when the gag is closed they lie together and parallel; the flattened portions are roughened, and have their inner and outer edges slightly raised; these are frequently covered with canvas or a piece of india-rubber tubing, to avoid injuring the teeth. In using this gag the flattened and covered portions are introduced between the teeth, the handles passing beneath the ear are then compressed, and the screw nut is spun down as far as it will go; this fixes the gag, whilst the handles serve to keep it in its place between the teeth, and also to steady the head.

G., Henry Smith's. A steel instrument consisting of two levers fitted to each side of the jaw. These are united in pairs at the angles of the jaws by means of rack-and-pinion joints, which move the levers in a vertical direction. The lower ends of each pair of levers recurve suddenly at the angle of the mouth, and extend backwards inside the mouth and over the teeth of the lower jaw to a distance of about two inches; here they terminate in a roughened cross or saddle-shaped piece, which fits upon the teeth. At this point is attached to each lever a thin oval plate of steel, extending a little beyond the middle of the tongue; the pair of plates thus overlap each other, and being united by a rivet in one plate, which works in a slot in the other, a slight lateral adjustment is formed sufficiently ample to accommodate jaws of varying width, and to form an efficient depressor of the tongue. The upper pair of levers recurve and terminate in a similar manner to the lower ones, with the exception that there are no plates. When about

GAGE—GALACTOCELE.

to be used the two levers on each side are parallel, the instrument is introduced into the mouth, and the four saddles adjusted over the rows of teeth in the upper and lower jaws respectively; a key is then applied to the rack of the joints and turned; this action separates the ends of the levers inside the mouth as much as may be desired. A large ring is attached at each joint, into which a finger or strap is placed to keep the gag in the mouth. Used in operations for cleft palate and the like.

G., simple. A wedge of wood thickly covered with gutta percha, about 1" thick at the base, 4" long, and 1" wide. The apex of the wedge is thin, to enable it to be forced between the teeth, and the gutta-percha covering obviates injury to the teeth from the violence of the patient.

Gage. See *Gauge*.

Gagel. A name for the *Myrica gale*.

Gagliana. Italy, in the Valley of the Upper Arno. An earthy ohalybeate water.

Gaieiras. Portugal, in the Province of Estremadura. A sulphur spring, having a temp. of 34° C. (93.2° F.)

Gaiffe's element. A galvanic cell consisting of a plate of zinc and a plate of fused silver ohloride enclosed in an ebonite cup containing a solution of sodium chloride, and connected outside by means of binding screws; the plates are kept from touching by india-rubber pads, and the silver plate is enclosed in a muslin bag for the retention of the silver as it is reduced and deposited.

Gais. Switzerland, Canton Appenzell. A whey-cure place, about 3000 feet above sea-level, where there are cold, weak, chalybeate waters, containing a little calcium bicarbonate and some free carbonic acid.

Gait. (Icel. *gata*, a way.) The manner of walking.

The gait of a person suffering from certain diseases is often very distinctive. Thus, in simple paralysis the gait is shuffling, the toes are pointed to the ground, and the heels are raised; in ataxia the gait is reeling, the feet are thrown abruptly outwards and forwards and the heels come to the ground first.

Gala. (Γάλα.) Milk.

Gala'cia. Same as *Galaxa*.

Galacineæ. Don's term for the *Francoacea*.

Galactacra'sia. (Γάλα; ἀκρασία, bad mixture.) An unhealthy constitution of milk.

Galactacra'tia. (Γάλα; ἀκράτεια, debility.) Deficiency or absence of milk.

Galactæmia. See *Galacthæmia*.

Galactagen'tia. (Γάλα; L. *ago*, to drive.) Same as *Galactagoga*.

Galactago'ga. (Γάλα; ἄγω, to lead.) Things which promote the secretion of milk.

Galactagogue. (Γάλα; ἄγω. F. *galactagogue*; I. *galatogogo*; G. *milchleitend*, *milchmachend*.) Capable of increasing or promoting the flow of milk.

Galactagogues are of various kinds: those which act through the nervous system, as pleasant maternal emotions and the act of sucking; those which act through improving the general health, such as good diet and malt liquors; and those, if such there be, which directly stimulate the mammary secretion; such are said to be *jaborandi*, fennel seeds, nettle tea, a poultice of castor-oil leaves, suction, and electricity.

Galactal'cohol. Same as *Galactokohol*.

Galactaposte'ma. (Γάλα; ἀπόστημα, an abscess.) A milk abscess, an abscess of the female breast during suckling.

Galactediæ'ta. See *Galactodiæta*.

Galacthæ'mia. (Γάλα; αἷμα, blood.) Bloody milk, the secretion of milk containing blood.

Galact'ia. (Γάλα, milk.) A genus of diseases in Good's Nosology, embracing defective, excessive, vitiated, erratic, and other morbid secretions of milk; termed mislactation.

Also, the same as *Galactorrhæa*.

Galact'ic. (Γαλακτικός, milky. F. *galactique*; G. *milchicht*, *milchähnlich*.) The same as *Lactic*.

Galactidro'sis. (Γάλα; ἰδρωσις, a perspiring. G. *Milchschwitzen*.) The sweating of milk; formerly believed to occur in puerperal women from metastasis.

Galactif'erous. (Γάλα; L. *fero*, to bear.) Same as *Galactophorous*.

Galact'in. (Γαλακτίνος, milky. F. *galactine*; G. *Galaktin*, *Käsestoff*.) A term proposed by Hünefeld as a synonym of *Casein*.

Also, a nitrogenous substance obtained by Morin from milk, after the removal of the casein by acetic acid, the albumen by boiling, the fat by ether, and the earthy phosphates and sugar by concentrating, filtering and crystallisation. It contains a little gelatin, is soluble in water, insoluble in ether and alcohol, and gives a precipitate with tannin, which is not redissolved by heat. It emulsifies fats; it is found in blood, gastric juice, milk, eggs, many morbid fluids, and the juices of edible plants and of ootyledons.

Also, the same as *Lactin*.

Also, the substance contained in the milky juice of the *Galactodendron utile*.

Galact'ina. (Γάλα, milk.) Term formerly used for aliments prepared with milk.

Galactindro'sis. Same as *Galactidrosis*.

Galact'inous. (Γάλα, milk.) Of, or belonging to, milk; applied to food prepared with milk.

Galactirr'hœ'a. (Γάλα, milk; ῥοία, a flow. F. *galactirrhée*; G. *Ausschliessen der Milch*.) See *Galactorrhæa*.

Galact'is. (Γάλα.) Same as *Galactites*.

Galactis'chesis. (Γάλα; σχέσις, a checking.) An arrest or non-secretion of milk.

Galact'ites. (Γαλακτίτης.) A name of a stone which, when moistened, was said to exude a milky juice.

Galactocataract'a. (Γάλα, milk.) Same as *Cataract*, *fluid*, from its milky appearance.

Galact'occele. (Γάλα, milk; κύλη, a tumour. F. *galactocèle*; G. *Milchbruch*.) A tumour or swelling, consisting of a milky fluid, distending an obstructed milk duct, or effused into the surrounding connective-tissue after rupture of a milk duct. It generally commences suddenly during suckling, but its progress may be either rapid or very slow. It is usually painless, and at first fluctuating, but when it has lasted some time, and the watery parts of the milk have been absorbed, it may be hard and firm from thickening and calcification of its walls, and its contents may be thick and creamy, or even solid from absorption of the liquid parts of the milk.

GALACTOCHROUS—GALACTOPOIESIS.

Also, applied by Vidal de Cassis to a collection of fluid in the serotum, having a milky character, from admixture with fatty matter.

Galactochrous. (Γαλακτόχρως, milk-coloured.) Having the colour and appearance of milk.

Galactoden'dron. (Γάλα, milk; δένδρον, a tree.) A Genus of the Nat. Order *Urticaceæ*.

G. utilis, H. B. K. (*L. utilis*, useful. F. *arbre à la vache*; G. *Kuhbaum*.) The cow tree of South America, the *Brosimum galactodendron*.

Galactodensimeter. (Γάλα, milk; *L. densus*, thick.) A synonym of *Galactometer*.

Galactodes. (Γαλακτώδης, from γάλα; εἶδος, likeness. F. *galactode*; G. *milchähnlich*.) Like milk.

Galactodiæ'ta. (Γάλα; διαίτα, diet.) A milk diet.

Galactodiarrhœa. (Γάλα; διάρροια, looseness of bowels.) Diarrhœa in which the stools have the appearance of milk.

Galactœ'dema. (Γάλα; οἰδημα, a swelling.) An œdematous *Galactœcele*.

Galactof'erous. Same as *Galactiferous*.

Galactogan'glion. (Γάλα; γάγγλιον, a tumour under the skin.) A knotty swelling caused by distension of a milk duct in the breast.

Galactogen'ous. (Γάλα; γεννάω, to produce.) Milk producing.

Galactohæ'mia. (Γάλα; αἷμα, blood.) The secretion of bloody milk.

Galactoid. (Γαλακτοειδής; from γάλα; εἶδος, likeness.) Milk-like, resembling milk.

Galactokohol. (Γάλα; alcohol.) A synonym of *Koumiss*; because it has undergone fermentation with the production of spirit.

Galactoma. (Γάλα.) A tumour or cyst of the breast gland produced by the retention of milk in a duct.

Galactomastoposte'ma. Same as *Galactomastopostema*.

Galactomastoparec'tama. (Γάλα; μαστός, the breast; παρεκτείνω, to stretch.) A milk abscess.

Galactomastoposte'ma. (Γάλα; μαστός, the breast; ἀπόστημα, an abscess.) A milk abscess.

Galactometas'tasis. (Γάλα; μετástasis, a removal. G. *Milchversetzung*.) A metastasis of milk.

Galactom'eter. (Γάλα; μέτρον, a measure. F. *galactomètre*; G. *Milchmesser*, *Milchprüfer*.) A synonym of *Lactometer*.

Galactometry. (Γάλα; μέτρον.) The use of the *Galactometer*.

Galactomy'ces. (Γάλα; μύκης, a fungus.) A synonym of encephaloid cancer from its milky appearance.

Galacton'cus. (Γάλα; ὄγκος, a mass.) Same as *Galactœcele*.

Galactophag'ia. (Γάλα; φαγεῖν, to eat. G. *Milchnahrung*.) Milk diet.

Galactophag'ous. (Γάλα; φαγεῖν. G. *Milchfressend*.) Milk eating.

Galactoph'ora. (Γάλα; φορέω, to bear.) The substances having the property called *Galactagogue*.

Galactophore. Same as *Galactophorus*.

Galactophori'tis. (Γάλα; φορέω.) Bouchut's name for inflammation of the galac-

tophorous ducts. It may arise from a cracked nipple, the inflammation spreading down the duct, producing ulceration of its structure, and obliteration of its canal during the healing.

Also, applied to the ulceration of the apex of the nipple over the opening of the milk ducts, which constitutes a cracked nipple.

Galactoph'orous. (Γάλα, milk; φορέω, to bear. F. *galactophore*; G. *milchhaltig*.) Milk-bearing.

G. canals'. Same as *G. ducts*.

The term was also formerly applied to the lacteals in consequence of their milky colour.

G. ducts. (F. *canaux galactophores*; G. *Milchgänge*.) The excretory ducts of the mammary gland. They arise by fine branches in the lobules of the gland, which unite at the level of the areola into fifteen or twenty sacculated, wavy ducts, that converge to the base of the nipple, where each dilates into an ampulla .17"—.25" wide, and opens on its summit by an orifice smaller than the canal itself. The small ducts in the lobules consist of a membranous wall of branched connective-tissue cells lined by short columnar or polyhedral epithelium; the larger ones are surrounded by a thick fibrous investment, containing bundles of unstriated muscular fibre, and near the orifice the epithelium is of the tessellated form. The ducts possess no valves, and do not communicate with each other.

G. medicaments. The substances which possess the action called *Galactagogue*.

G. receptacle. The ampulla of a galactophorous duct.

G. sac. The ampulla of a galactophorous duct.

G. sin'uses. The ampullæ of the *G. ducts*.

Galactoph'orus. (Γάλα; φορέω. F. *galactophore*; I. *galattoforo*; *Galactophor*.) An artificial nipple applied to the breast over the natural nipple to facilitate sucking when the latter is too short for the child to take hold of, or when sucking is painful from a crack or other cause.

Galactoph'thisis. (Γάλα; φθίσις, consumption.) Emaciation in consequence of excessive secretion of milk or too long-continued nursing.

Galactoph'yga. (Γάλα; φεύγω, to flee.) Remedies which procure the dispersion or prevent the secretion of milk.

Galactoph'ygous. (Γάλα; φεύγω. G. *Milchvertreibend*.) Having power to disperse, or arrest the secretion of milk.

Galactopiom'eter. (Γάλα; πῖον, fat; μέτρον, a measure. G. *Milchfettmesser*.) An instrument for determining the amount of fatty matter in milk.

Galactopla'nia. (Γάλα; πλάνη, a wandering. F. *galactoplasie*; G. *Milchversetzung*.) Vicarious secretion of milk from an unnatural part; metastasis of the milk.

Galactoplero'sis. (Γάλα; πλήρωσις, a filling. G. *Milchüberfluss*.) An excessive secretion of milk.

Galactopoe'ia. (Γάλα; ποιέω, to make.) Agents able to increase the secretion of milk.

Galactopoe'sis. (Γάλα; ποιέω.) The secretion of milk.

Galactopoe'tica. Same as *Galactopoeia*.

Galactopoie'sis. (Γάλα; ποίησις, a

GALACTOPOIETIC—GALANGIN.

making. *F. galactopoïèse*; *G. Milchabsonderung, Milchbereitung.* The secretion of milk.

Galactopoietic. (Γάλα, milk; ποιέω, to make. *F. galactopoietique*; *G. milchmachend, milchbefördernd.*) Milk-making. Applied to certain aliments and plants which tend to increase the secretion of milk.

G. faculty. The fitness for suckling a child.

Galactopos'ia. (Γαλακτοποσία, a drinking of milk; from γάλα; πίνω, to drink. *F. galactoposie*; *G. Milchtrinken.*) The treatment of diseases by a milk diet.

Galactopotes. (Γαλακτοποτής, a milk drinker.) One who undergoes the milk cure.

Galactopycnometer. (Γάλα; πυκνός, compact; μέτρον, a measure.) A synonym of *Lactometer*.

Galactopy'ra. (Γάλα; πῦρ, fire, fever heat. *F. galactopyrie*; *G. Milchfieber.*) Milk fever.

Galactopyret'ic. (Γάλα; πυρετός, feverish heat.) Relating to milk fever.

Galactopyretos. (Γάλα; πυρετός.) Milk fever.

Galactorrhœ'a. (Γάλα; ροία, a flow. *F. galactorrhée*; *I. galattorraea*; *G. Milchfluss.*) An excessive secretion of milk and its flowing away in a nursing woman, or in one who has just ceased to suckle; this running away of milk may proceed from relaxation of the orifices of the milk ducts, from excessive suckling, or from ovarian excitement. It is said to be most common in those who are accustomed to menstruate profusely.

Also, a flowing of milk from the breast-gland of a woman who has not lately borne a child or been pregnant, or from the breast-gland of a man.

G. erro'nea. (*L. erroneus*, wandering about.) Same as *Galactoplasia*.

G. sacchara'ta. (Σάχαρον, sugar.) A copious secretion of too sweet milk.

Galactorrhœ'ic. (Γάλα; ροία.) Relating to *Galactorrhœa*.

Galactosac'charic. (Γάλα; σάκχαρον, sugar.) Relating to the sugar of milk.

Galactosac'charum. (Γάλα; σάκχαρον.) The sugar of milk.

Galactos'chesis. See *Galactischesis*.

Galactoscope. (Γάλα, milk; σκοπέω, to observe. *G. Milchbeschauer.*) A synonym of *Lactometer*.

Galactose. $C_6H_{12}O_6$. A glucose formed, along with dextrose, when milk sugar is boiled with a dilute acid. It is soluble in water, slightly soluble in cold alcohol, has a dextro-rotatory power of 83.8° , and is very easily fermentable. When acted on by nitric acid it yields mucic acid. It crystallises in large rhombic prisms.

Galacto'sis. (Γαλακτωσις.) The ecretion or production of milk.

Formerly, a changing into milk or into the likeness of milk.

Galactospon'gus. (Γάλα; σπόγγος, a sponge.) A term for encephaloid cancer, from its appearance.

Galactos'tasis. (Γάλα; στάσις, a standing.) A collection of milk, such as was supposed to exist in the condition *Galactoplasia*.

Galactosyr'inx. (Γάλα; σῦριγξ, a pipe.) A lacteal fistula.

Galacto'tes. (Γάλα, milk; from its milk-like appearance when triturated with water,

or from its use.) The milk stone; a calcareous mineral anciently used as astringent, but more frequently for promoting the flow of milk.

Galactother'apy. (Γάλα; θεραπεία, medical treatment.) The treatment of disease in children at the breast by the administration of medicines to the persons suckling them. In this manner mercury has been given for the cure of congenital syphilis.

Galactotrophy. (Γάλα; τροφή, nourishment. *G. Milchnahrung.*) Nourishment by means of milk alone.

Galactozemia. (Γάλα; ζημία, loss.) A copious secretion of milk, with a running away from the nipple.

Also, a loss of milk.

Galactozyme. (Γάλα; ζύμη, leaven.) A synonym of *Koumiss*, or fermenting milk.

Galactu'chia. (Γαλακτωχία; from γάλα; έχω, to have.) The sucking of milk.

Galactu'chos. (Γαλακτούχος.) The act of sucking; a giving of milk.

Galactu'ria. (Γάλα, milk; οὔρον, urine. *G. Milchnarren.*) A synonym of *Chyluria*, from its milky appearance.

Galæ'mia. Same as *Galacthæmia*.

Galæ'na. See *Galena*.

G. in'anis. (*L. inanis*, empty.) An old name of bismuth.

Gal'am butter. (*Galam*, a district on the west coast of Africa.) A fatty substance obtained from the fruit of *Bassia obovata* and other species. It melts at 29° C. (84.2° F.) Mungo Park's name for *Shea butter*.

G. gum. A gum from species of *Acacia* obtained from this district.

Galang'a. (*Malab. kalenga. F. galanga*; *G. Galgant.*) The commercial name of two kinds of roots obtained from species of *Alpinia*, the greater and the smaller galanga. They contain a volatile oil, an acrid resin, extractive, gum, bassorin, lignin, starch, fixed oil, and a crystalline substance called kâmpferid. A stimulant and aromatic. Dose, 15 grains.

G., Chi'nese. (*F. galanga de la Chine.*) The *G., smaller*.

G., great'er. The root of *Alpinia galanga*, Willd. It is $3''$ to $4''$ long, cylindrical, about the thickness of the thumb, often forked, reddish brown and marked with whitish rings on the outside, brighter on the inside, of agreeable aromatic odour, and pungent, aromatic taste.

G., In'dian. Same as *G., greater*.

G., Ja'va. The *G., greater*.

G., ma'jor. (*L. major*, greater.) The root of *Alpinia galanga*, Willd.

G., marsh. (*F. galanga des marais.*) The *Acorus calamus*.

G., mi'nor. (*L. minor*, less.) The root of *Alpinia officinarum*, Hance.

G., offic'nal. The *G., smaller*.

G., small'er. (*F. petite galanga.*) The root of *Alpinia officinarum*, Hance. It is less than the *G., greater*, darker in colour, and stronger in taste and smell.

G., true. The *G., smaller*.

Galang'al. Same as *Galanga*.

Gal'angale. Same as *Galingale*.

G., Eng'lish. (*F. souchet long*; *G. rundes Cyperngras.*) The *Cyperus longus*.

Galang'in. $C_{15}H_{10}O_5$. A substance, crystallising in yellowish-white needles, or in small six-sided tables, obtained from galanga root, *Alpinia galanga*.

GALANTHUS—GALEANTHROPY.

Galanthus. (Γάλα, milk; ἄνθος, a flower.) A Genus of the Nat. Order *Amaryllidaceæ*.

G. nivalis, Linn. (*L. nivalis*, belonging to snow. *F. perce-neige*, *galanthine-nivéole*, *violier d'hiver*; *I. galanto*, *foraneve*, *bucaneve*; *S. campanilla blanca*; *G. Milchblume*, *Schneeglöckchen*.) The snowdrop. Juice of the bulb, emetic. Used as a febrifuge. Externally employed in cataplasm as an emollient and resolvent.

Galarips. The *Allamanda cathartica*.

Galarrhœas. (Γάλα, milk; ροία, a flow.) A Genus of the Nat. Order *Euphorbiaceæ*.

G. lathyrus. The *Euphorbia lathyris*.

G. palustris. The *Euphorbia palustris*.

Galax. A Genus of the Nat. Order *Eriaceæ*.

G. aphylla. (Α, neg.; φύλλον, a leaf.) Hab. United States. Carpenter's leaf. Root astringent; bruised leaves used as an application to wounds.

Galaxia. (Γάλα, milk.) Old term for the porosities of the cranium; also for the passage and distribution of the chyle.

Galaxias. An old name for the *Morochthus lapis*, or *Agaricus mineralis*.

Galaxidion. Greece, in the Morea. A mineral spring containing sodium sulphate 2·8 grains, and sodium chloride 13·5 grains, in 16 ounces, along with free carbonic acid.

Galazyme. Same as *Galactozyme*.

Galba. A synonym of *Calaba*.

Galbanetum. Old name for a balsam made of galbanum diluted with turpentine.

Galbanum, B. Ph. (Χαλβάνη; Heb. *helbenab*. *F. galbanum*; *I. galbano*; *G. Mutterharz*.) A gum-resin imported from India and the Levant, the produce of *Ferula galbaniflua*, and perhaps of *F. rubricaulis* and *F. erubescens*. It consists of whitish, reddish, or yellowish tears attached to each other by a yellowish or greenish translucent matter mixed with fragments of vegetables. It has a peculiar disagreeable smell, and a bitterish, warm, somewhat acid taste; it forms a milky solution with water, wine, and vinegar, and is in great part dissolved by alcohol and ether. It consists of a volatile oil, gum, some resins, umbelliferon, and mucilage. It is stimulant, antispasmodic, and expectorant, and is used in chronic bronchitis, chronic rheumatism, and amenorrhœa, and externally to disperse indolent swellings. Dose, 10—20 grs. (.65—1·3 grm.).

Also, a Genus of the Nat. Order *Umbelliferae*.

G., long-leaved. The *Bubon galbanum*.

G., long-leaved. The *Bubon galbanum*.

G. officinale, Don. (*L. officina*, a workshop.) The systematic name of the plant which affords the substance *Galbanum*. It probably included the plants now known as *Ferula galbaniflua* and *F. rubricaulis*.

G., oil of. A yellowish oily liquid constituting 7 per cent. of galbanum, and consisting of several hydrocarbons. It is dextrogyrate.

When galbanum is distilled it yields a colourless, a greenish, and a blue oil, the latter probably identical with the blue oil of *Matricaria chamomilla*.

G., Persian. Said to be the produce of a plant called by Lindley *Opoidea galbanifera*.

G. plaster. See *Emplastrum galbani*.

G., resin of. A soft resin, constituting 60

per cent. of crude galbanum, soluble in ether and alkaline liquids. Heated with hydrochloric acid it yields *Umbelliferon*, and with potash *Resorcin*.

G., Scotch. The *Myrica gale*.

G., sweet. The *Myrica gale*.

Galbeum. Old term, used by Suetonius, in *Vit. Galbae*, c. iii, for a kind of ornamental bracelet formed of wool, in which medicines were wrapped up, worn by the weak or sick. Keuchenius, in *Not. ad Seren*, p. 272.

Galbula. (*L. galbula*, a small bird, perhaps the yellow thrush.) A bird formerly used in medicine, as described by Aldrovand., *Ornithol.*, xii, 39.

Galbulus. (*L. galbus*, yellow.) Old term for a yellowness of the skin.

In Botany (*L. galbulus*, the nut of the cypress tree. *F. galbule*; *I. galbulo*; *G. Zapfenbeere*), a globular or cone-shaped spurious berry, with three or more seeds formed by the coalescing of a few scales of a fertile catkin become succulent, as happens in the juniper, *Juniperus communis*.

Gal'da. Old name of a gum-resin, not now obtainable, brown externally, but white within, of a hard lamellated structure, smelling and tasting like elemi; formerly used as a stimulant medicine, and in plasters as strengthening.

Gale. (Sax. *gagel*, wild myrtle. *F. galé odorante*; *G. Myrtenheide*.) The *Myrica gale*.

G., sweet. The *Myrica gale*.

Galē. Same as *Gale*.

G. frutex. (*L. frutex*, a shrub.) The *Myrica gale*.

Galea. (Γαλή, an animal of the weasel kind, from the skin of which the helmet was made. *F. galea*; *G. Helm*.) A helmet.

In Botany (*F. gale*; *G. Helm*), applied to the superior arched lip or helmet of ringent and personate corollæ, as in *Lamium*, or a similarly shaped petal, as in *Aconitum*.

In Chemistry, an earthen vessel into which a retort is placed, so as to preserve it from direct contact with the flame.

In Medicine, applied to a headache extending all over the head, as if it were a helmet.

In Surgery, a term for a bandage for the head, somewhat like the form of a helmet; called also the helmet of Galen.

In Zoology (*F. galite*, *galette*; *G. Kinmladenhelm*), applied to a large vaulted membrane, movable, covering the jaws of the Orthoptera, and many of the Coleoptera and Neuroptera.

Also, a term for the *Annion*.

Also, a synonym of *Caul*.

G. aponeurotica capitis. (Απνεύρωσις, the tendinous end of a muscle; *L. caput*, the head. *G. Sehnenhaube*, *Schädelhaube*.) The tendinous middle of the occipito-frontalis muscle.

G. tendinea Santorini. (*L. tendo*, a tendon; *Santorini*.) The tendinous middle of the occipito-frontalis muscle.

Galeamaurosis. (Γαλή, a cat; *L. amaurosis*. *G. amaurotisches Katzenauge*.) The same as *Amaurosis*, cat's-eye.

Galeancon. (Γαλεγκών, weasel-armed; from γαλή, a weasel; ἄγκών, the bend of the arm. *G. Katzenarm*, *Wieselarm*.) A person with short arms like a weasel's.

Galeanthropy. (Γαλή, a cat; ἄνθρωπος, a man. *F. galeanthropie*; *G. Katzensucht*.) A species of insanity in which the patient imagines himself to be a cat.

Galeate. (*L. galea*, a helmet. *F. galéiforme*; *G. gehelmt*, *helmförmig*.) Resembling, or belonging to, a helmet; helmet-shaped, as the upper petal of the monkshood.

Galeated. Same as *Galeate*.

Galega. (Γάλα, milk; because it increases the milk of animals that eat it. *F. rue*; *G. Raute*.) A Genus of the Nat. Order *Leguminosæ*. Goat's rue.

G. apollinea. The *Tephrosia apollinea*.

G. officinalis. Linn. (*L. officina*, a shop. *F. rue capraire*; *I. capraria*; *G. Geissraute*.) The goat's rue. It has little smell or taste, but the leaves are eaten in salads in Italy. It is said to increase the secretion of milk, and has been used as a sudorific and alexipharmic in malignant fevers, in epilepsy, and in convulsions.

G. persica. (*L. persicus*, Persian.) The *G. officinalis*.

G. purpurea. Linn. The *Tephrosia purpurea*.

G. sericea. Thunb. (*L. sericeus*, of silk.) Used as *G. officinalis*.

G. spinosa. Linn. (*L. spinosus*, thorny.) Used as *G. officinalis*.

G. tinctoria. (*L. tinctor*, a dyer.) Said to supply some indigo.

G. toxicaria. The *Tephrosia toxicaria*.

G. virginiana. Linn. Turkey pea. Hab. United States. A decoction of the root is used as an anthelmintic, and as a diaphoretic. The *Tephrosia virginiana*, Pers.

G. vulgaris. (*L. vulgaris*, common.) The *G. officinalis*.

Galeiform. (*L. galea*, a helmet; *forma*, shape.) Having the shape of a helmet, as the upper petal of the monkshood.

Galen, Claudius. A celebrated physician born at Pergamos, in Mysia, in 131. The time and place of his death are uncertain; it took place in Rome, at Pergamos, or in Sicily, according to various authors, at some time between the years 201 and 210.

G.'s bandage. See *Bandage, Galen's*.

G.'s cerate. See *Ceratum Galeni*.

G.'s madwort. The *Marrubium alysum*.

G., veins of. See *Venæ Galeni*.

Galeña. (Γαλήνη, stillness of the sea.) A term applied to *Theriaca*, from its soothing effects.

Also (*F. galène*; *G. Bleiglanz*), the native sulphide of lead, from its smooth silvery appearance.

G. mineraliz'ta. (*Mineral*.) Lead-glance variously mixed with earthy matter; also applied to similarly mineralised bismuth, antimony, or iron.

Galenè. Same as *Galeña*.

Galenè'a. Same as *Galeña*.

Galení alyssum. The *Marrubium alyssum*.

G. can'cer. (*L. cancer*, a crab.) Old name for an eight-tailed bandage for the head, so called by Galen because it was like a crab's claws. (Hooper.) See also *Bandage, Galen's*.

G. oxyacantha. See *Oxyacantha*.

G. venæ. See *Venæ Galeni*.

Galenic. (*Galen*. *F. Galénique*; *I. galenico*; *G. Galenisch*.) After the manner of Galen, whose practice of medicine lay much in multiplying herbs and roots in the same composition.

G. rem'edies. Remedies obtained from

vegetables, in contradistinction to those obtained from inorganic substances.

Galenical. Same as *Galenic*.

G. medicine. The medical principles taught by Galen, which consisted in an almost entire reliance on simples. See *Galenism*.

Galenism. (*Galen*.) The doctrine of Galen. The theory of the four humours, which is the base of Galenism, their crasis or just temperament, and their coction, existed long before Galen, who lived in the second century of the Christian era (see *Cos, school of*). But, possessing a very considerable knowledge of anatomy, physiology, and pathology, endowed with a systematising spirit, he established a body of doctrine by which he subordinated the phenomena of health and disease to the action of the four humours. This was a great work, and satisfied the times for long; for the Arabian physicians accepted it, and when they assumed the sceptre of medicine in the West they handed down only Galenism, which is at bottom but an application of very rudimentary physics, having reference to the mixture and coction of certain humours. About the sixteenth century the chemical doctrines, the fruit of the long devotion to alchemy, began to displace those of Galenism. (Littre and Robin.)

Galenists. (*Galen*.) Term for the followers of Galen, or those who professed the medical principles promulgated by him.

Galenium. (Γαλήνη, tranquillity.) Old name for an anodyne cataplasm, described by Paulus Ægineta, vii, 18; Adams's Transl. vol. iii, p. 578.

Galeob'dolon. (Γαλή, a weasel; βόδλος, stench.) A Genus of the Nat. Order *Labiata*.

Also, a name for the *Lamium album*, or dead nettle.

G. luteum. Hudson. (*L. luteus*, yellow. *G. Nesselkraut*.) The yellow archangel. Indigenous, and formerly considered as vulnerary, astringent, and diuretic.

Galeo'coré. (Γαλή; κόρη, the pupil. *G. Katzenauge*.) A term for an eye in which the pupil appears like a long slit, as in the cat.

Galeo'des. (*L. galea*, a helmet; *Gr. εἶδος*, likeness.) A Genus of the Order *Solipugæ*, or *Solpugidea*, Class *Arachnida*.

G. araneoides. Pall. (*L. aranea*, a spider; *Gr. εἶδος*, likeness.) Hab. Central Asia and North Africa. A large arachnid, 2" long, whose bite is very severe and produces serious symptoms. No poison gland has been detected, and it is doubtful if the bite is really venomous.

Galeop'dalon. Same as *Galeobdolon*.

Galeop'sis. (Γαλή, a weasel; ὄψις, aspect; or *L. galea*, a helmet.) A Genus of the Nat. Order *Labiata*, from the likeness of its flowers to a weasel's head, or to a helmet.

G. angustifolia. Ehr. (*L. angustus*, narrow; *folium*, a leaf.) A subspecies of *G. ladanum*.

G. dubia. Leers. (*L. dubius*, doubtful. *F. chanvre bâtard*; *G. Hohkahn*.) Properties as *G. ladanum*.

G. galeob'dolon. Linn. The *Galeobdolon luteum*.

G. grandiflora. Roth. (*L. grandis*, great; *flor*, a flower.) The *G. ladanum*.

G. ladanum. Willd. (Λάδανον, gum

GALEORHÆZUS—GALIUM.

mastich. *F. galeopside*, *chanvre bâtarde*; *G. Hanfnessel*, *Hohlzahn*.) Hemp-nettle. Used in Germany in chest complaints.

G. ochroleu'ca, Lamk. (Ὠχρός, *sallow*; λευκός, *white*.) The *G. dubia*.

G. prostra'ta. (L. *prostratus*, spread out.) The *G. ladanum*.

G. seg'etum. (L. *seges*, a cornfield.) The *G. ladanum*.

G. tet'rahit, Linn. (Τέτρα, for *τίσσαιες*, four; ἔτος, the outer edge.) Oil of seeds used as vermifuge and antispasmodic.

G. versic'olor, Curt. (L. *versicolor*, of various colours.) Properties as *G. ladanum*.

G. villo'sa. (L. *villosus*, downy.) The *G. ladanum*.

Galeorhæ'zus. (Γαλήν, a cat; ῥόζος, a whirling. *G. Katzenschwurren*.) A term for the murmur called *Cat's purr*.

Galeric'ulate. (L. *galericulus*, a little hat. *G. hutformig*, *kappenformig*.) Covered as with a hat, a botanical term.

Galeric'ulum aponeurot'icum. (L. *galericulus*, a little hat or cap; *aponeurosis*.) A name for the tendinous expansion of the *Occipito-frontalis* over the pericranium, from its resemblance to a little cap.

Galerop'sia. (Γαλερός, cheerful; ὄψις, sight. *G. Heitersehen*.) Quickness and acuteness of sight, especially when abnormal.

Gale'worts. The plants of the Nat. Order *Myricaceæ*.

Galia. (L. *galla*, a gall-nut.) Old name applied to two medicines, the pure and the aromatic, both in the form of the lozenge; so called because they contain galls.

G. moscha'ta. (Μόσχος, musk.) A form which contained aloes, amber, musk, and sometimes nutmeg.

G. zebett'i'na. A form which contained civet.

Galia'ceæ. An Order, according to Lindley, of the Alliance *Cinchonales*, having the stamens epipetalous, bursting longitudinally; anthers straight; fruit didymous; leaves verticillate, without stipules. The Order is now included in the Nat. Order *Rubiaceæ*.

Galian'con. (Γαλιάνκων, from γαλή, a weasel; ἄγκων, the elbow.) Ancient term for a person who has preternaturally short arms or one shorter than the other.

Galian'conism. (Γαλιάνκων.) The condition of short-armedness; generally caused by defective development of some part of the humerus.

Galingale. (Old *F. galingal*, *garingal*; *S. galanga*; Arab. *Khalanjân*.) The root of a species of *Alpinia*. See *Galanga*.

G., Eng'lish. The *Cyperus longus*.

Galinso'ga. A Genus of the Nat. Order *Compositæ*.

G. parvifl'o'ra, Cav. (L. *parvus*, small; *flos*, a flower.) Hab. South America. Used as a vulnerary and antiscorbutic.

G. quinqu'radia'ta, Ruiz and Pavon. (L. *quinque*, five; *radiatus*, furnished with rays.) The *G. parviflora*.

Galiop'sis. Same as *Galeopsis*.

Galipe'a. (From the native name.) A Genus of the Nat. Order *Rutaceæ*.

G. cuspa'ria, St. Hil. Hab. South America, on the banks of the Orinoco river. Furnishes *Cuspariæ cortex*.

G. febrif'uga, H. Brogn. (L. *febris*,

fever; *fugio*, to put to flight.) The *G. cusparia*.

G. officina'lis, Hancock. (L. *officina*, a shop.) The *G. cusparia*.

Gali'pot. See *Gallipot*.

Also (*F. galipot*; *S. galipodio*), a name of the concrete resin obtained from the *Pinus maritima*, probably so called because of the gallpots in which it was placed.

Galitan'nic acid. (G. *Galitannsäure*.) $C_7H_5O_5$. A variety of tannic acid obtained by Schwartz from goose-grass, *Galium aparine*, and *G. verum*. Iron chloride colours it bright green, and copper acetate gives a dirty brown precipitate.

Galium. (Γάλα, milk; because certain species coagulate milk. *F. caille-lait*, *gaillet*; *I. gaglio*; *S. galio*; *G. Labkraut*, *Waldstroh*.) A Genus of the Nat. Order *Rubiaceæ*. Cheese rennet, or ladies' bedstraw.

Also, a name for madder, the *Rubia tinctorum*.

G. al'bum. (L. *albus*, white.) The *Galium mollugo*.

G. aparano'ides. (Ἀπαρίν, cleavers; εἶδος, likeness.) The *G. aparine*.

G. apariné, Linn. (Ἀπαρίν, cleavers. *F. caille-lait accrochant*, *grateron*, *rièble*; *G. Klebkraut*.) The goose-grass; also called cleavers, cleavers' bees, goose-sharc, hayriff. The expressed juice has been used as aperient and diuretic in dropsy, and is said, with the external application of the plant in cataplasm, to have cured cancer. It has also been used in psoriasis and epilepsy.

G. asprel'um. (L. dim. of *asper*, rough.) Hab. United States. Rough bedstraw. Properties as *G. aparine*.

G. brachycar'pos. (Βραχύς, short; καρπός, fruit.) The *G. aparine*.

G. cauca'sicum. The *G. verum*.

G. circe'zans. Hab. United States. Wild liquorice. Demulcent and diuretic.

G. crucia'ta, Scop. (L. *cruciatus*, crossed.) Crosswort. Root used as a dye.

G. crucia'tum, Smith. The *G. cruciata*.

G. infes'të. (L. *infestus*, troublesome.) The *G. aparine*.

G. lu'teum, Linn. (L. *luteus*, yellow. *F. caille-lait jaune*.) A variety of *G. verum*. Official in Fr. Codex.

G. mollu'go, Linn. (L. *mollugo*, something soft. *F. caille-lait blanc*.) Great hedge-bedstraw. Hab. Europe. Has been used in epilepsy. Official in Fr. Codex.

G. odora'tum. The *Asperula odorata*.

G. palus'trë, Linn. (L. *paluster*, belonging to a marsh. *F. caille-lait de marais*.) Used in epilepsy.

G. rig'idum, Will. (L. *rigidus*, stiff. *F. caille-lait raide*.) Used as *G. mollugo*.

G. scaber'rimum. (L. superl. of *scaber*, rough.) The *G. aparine*.

G. sca'brum, With. (L. *scaber*, rough.) A subspecies of *G. mollugo*.

G. sylvat'icum, Linn. (L. *sylva*, a wood.) Used as *G. mollugo*.

G. tincto'reum. (L. *tinctorius*, belonging to a dyer.) Hab. United States. Properties as *G. verum*. Used also in skin affections.

G. triflo'rum, Mich. (L. *ter*, thrice; *flos*, a flower.) Hab. United States of America. Contains coumarin. Used as *G. tinctorium*.

GALL—GALL-BLADDER.

G. tubercula'tum. (L. *tuberculum*, a small swelling.) The *G. verum*.

G. tyrolen'së. The *G. mollugo*.

G. Vaillantii, De Cand. A subspecies of *G. aparine*.

G. verum, Linn. (L. *verus*, true. F. *caille-lait*, or *gaillet jaune*; G. *Tabkraut*.) The ladies' bedstraw, or cheese-rennet, so called from the leaves and flowers possessing the property of curdling milk. The tops of the plant were long supposed to be efficacious in curing epilepsy. It has also been used as an astringent, sudorific, and antispasmodic.

Gall. (Mid. E. *galle*; Sax. *gealla*; G. *galle*; L. *fel*; Gr. *χολή*; from the same root as *χλωρός*, greenish.) A common name for the bile or secretion of the liver.

Also (Old F. *galle*, a fretting of the skin; from L. *callus*, hard skin), a chafe, a sore place on the skin from rubbing.

Also (Old F. *galle*; from L. *galla*, an oak apple), a tumour of a leaf or twig produced by the deposit of the egg of an insect of the Family *Cynipidæ*. See *Galla*, and *Galls*.

G. blad'der. See *Gall-bladder*.

G. duct. The Bile duct, common.

G., earth. The *Ophiorrhiza mungos*, from its bitterness.

G.-flies. The insects of the Family *Cynipidæ*.

G., glass. The scum which floats on the surface in the manufacture of glass. It has been used as a tooth powder.

G. in'sects. The insects of the Family *Cynipidæ*.

G.-nut. See *Galla*.

G. oak. The *Quercus infectoria*.

G. of skin. A term for chafing of the skin.

G. of the earth. A name for the plants of the Genus *Prenanthes*, specially the *P. alba*.

G., ox. See *Fel bovinum*.

G.-sick'ness. An old term for the remittent fever produced by marsh miasmata in the Netherlands. Same as *Fever, Waleheren*.

G.-stone. See *Gall-stone*.

Galla, B. Ph., U.S. Ph. (L. *galla*, the oak-gall. F. *noix de galle*, *galle de chêne*; G. *Gallnuss*, *Gallapfel*.) Galls, gall-nuts, nutgall. Excrecences on *Quercus infectoria*, Ollivier, caused by the punctures and deposited ova of *Diplolepis galle tinctoriæ*, Latr. Galls are hard, heavy, nearly globular bodies, 1" or less in diameter, with a smoothly tuberculated surface, blackish-olive green in colour on the outside, which pales to a light yellowish brown if the gall remains on the tree; yellowish white within, with a small central cavity containing either the more or less fully-developed insect, or, if the insect has escaped through a canal which it has bored, powdered fragments of the tissue of the gall. The central cavity is surrounded by a thin shell of thickened cells. The tissue of the gall is almost inodorous, and very astringent to the taste. It contains an average of 60 per cent. of tannin, 3 per cent. of gallic acid with some sugar, starch, albumin and resin. Used as an astringent, and as an antidote to tartarised antimony and the vegetable alkaloids.

G. maxima orbicula'ta. (L. *maximus*, greatest; *orbiculatus*, circle-shaped.) The gall of *Quercus infectoria*. See *Galla*.

Gallac'tucon. A substance contained in

the French lactucarium obtained from *Lactuca altissima*.

Gallæ. Plural of *Galla*.

G. halepen'ses. (L. *Halepensis*, from Aleppo.) Galls from Aleppo.

G. levan'ticæ. Galls from the Levant. A synonym of *Galla*, from the place whence they are sent.

G. quercin'æ. (L. *quercinus*, belonging to the oak.) A synonym of *Galla*, from their origin.

G. quer'cus. (L. *quercus*, the oak.) Oak galls.

G. tincto'riæ. (L. *tinctorius*, belonging to a dyer.) Ordinary galls, from their use in dying.

G. tur'cicæ. Galls from Turkey.

Galla'o. A term for *Yaws*.

Gall'ate. (F. *gallate*; G. *gallussäure Salz*.) A salt of *Gallic acid*. The gallates of the alkali-metals turn brown in solutions of the alkalies.

Gallatu'ra. (L. *gallus*, a cock.) An old term for the *Cicatricula*.

Gall-blad'der. (Sax. *gealla*, bile; *blædr*, a blister. F. *cholécyste*, *vesicule biliaire*; I. *vesicula del fiele*; G. *Gallenblase*.) A pear-shaped bag lying in the fossa vesicæ fellæ of the right lobe of the liver, and projecting beyond its anterior border. It is 3"—4" long, 1.5" broad, and has a capacity of 8—12 fluid drachms. Its upper surface is attached to the liver by areolar tissue, and its fundus and a large part of its under surface are covered by a reflection of the hepatic peritoneum. Its larger end, the fundus, is in front, lying behind the extremity of the ninth or tenth costal cartilage; its middle part, the body, touches the commencement of the colon; and its sigmoid smaller end, the neck, narrows and bends downwards to end in the cystic duct. It derives its blood supply from the cystic artery, and its nerves from the celiac plexus. Its walls consist of interlacing bands of dense, white, shining fibres of connective tissue, which support the blood-vessels and nerves, and enclose many unstripped muscular fibres, chiefly running longitudinally, having a peritoneal investment over a considerable surface, and a rugose mucous lining bearing columnar epithelium and many mucous crypts. It is developed as an offshoot or diverticulum from the wall of the original duct of the liver.

In some fishes, as the lamprey; in some birds, as parrots and pigeons; and in some mammals, as the whales, sloths, elephant, camel, and horse, the gall-bladder is absent. When this occurs the bile-duct may be dilated in some part of its course. In man, the gall-bladder is sometimes absent, sometimes irregular in form, and sometimes partially divided longitudinally. In some animals, and at times in man, small canals, hepato-cystic ducts, pass directly from the liver to the gall-bladder.

G., artery of. The *Cystic artery*.

G., dropsy of. Distension of the gall-bladder with a mucous fluid secreted by the glands of its lining membrane.

G., extirpation of. (L. *extirpo*, to pluck up by the root.) The gall-bladder has been removed by incision through the abdominal parietes for the relief and removal of gall-stones. In the first case reported there were only two small stones found. The patient recovered.

GALLEIN—GALLS.

G., fissure for. See *Fissure of liver for gall-bladder*.

G., fistula of. See *Fistula of gall-bladder*.

G., inflammation of. See *Cholecystitis*.

G., nerves of. See *Cystic plexus*.

G., rupture of. The gall-bladder may be ruptured from direct injury. Death occurs speedily after great pain and profound collapse.

G., valve of. A fold of the mucous lining of the gall-bladder at its neck.

Gallein. $C_{20}H_{14}O_8$. A brown-red powder, or small green crystals, obtained by heating two parts of pyrogallol with one of phthalic anhydride for some hours to a temperature of 190° – 200° C. (374° – 392° F.)

Gallerajë. Italy, in Tuscany. A mineral water, of a temp. of 45° C. (113° F.), containing sodium chloride 4 grains, magnesium sulphate 6 grains, calcium carbonate 9 grains, magnesium carbonate 2 grains, and iron carbonate one grain, in 25 ounces, with free carbonic acid and hydrogen sulphide. There are also two cold chalybeate springs, containing free carbonic acid, but no hydrogen sulphide.

Gallhumic acid. (G. *Gallhuminsäure*.) An amorphous, tasteless, inodorous, blackish substance, obtained by heating gallic or tannic acids. It is insoluble in water, alcohol, or ether, soluble in an alkaline water. A synonym of *Metagallie acid*.

Galli gallina'cei caput. Same as *Caput gallinaginis*.

Gallic. (L. *galla*, an oak gall. F. *gallique*; G. *gallicsch*.) Relating to the oak gall or *Galla*.

Also (L. *Gallia*, France. F. *français*; G. *Französisch*), relating to France.

G. acid. (F. *acid gallique*; G. *Galläpfelsäure*, *Gallnussäure*.) $C_7H_4O_5 = C_6H_2(OH)_3 \cdot CO_2H$. Molecular weight 188. A crystalline acid prepared from galls by prolonged maceration in water, boiling, straining, crystallising and recrystallising. It consists of white or pale fawn-coloured acicular prisms or silky needles; soluble in spirit, in 100 parts of cold and in 3 of boiling water; it is entirely dissipated by heat. It is used internally as an astringent in menorrhagia, epistaxis, hæmoptysis, hæmatemesis, hæmaturia, melæna, and purpura; and also, in pyrosis, polyuria, and excessive perspiration. Dose, 3 to 20 grains.

G. acid fermentation. See *Fermentation, gallic*.

G. acid, glycerine of. See *Glycerinum acidi gallici*.

G. disease. An old name for syphilis, in reference to its supposed place of origin or source in France.

Gallicolous. (L. *galla*; *colo*, to inhabit. F. *gallicole*.) Living in galls.

Galliformes. (L. *gallus*, a cock; *forma*, shape.) An Order of Garrod's Subclass *Homologonati* of the Class *Aves*. It includes ostriches, gallinaceous birds, rails, cuckoos, and parrots.

Gallin. $C_{20}H_{16}O_8$. Colourless crystals obtained by acting on gallein by nascent hydrogen.

Gallina'ceæ. (L. *gallinaceus*, belonging to poultry; from *gallina*, a hen; from *gallus*, a cock.) An Order of the Class *Aves*. They are terrestrial birds, with a thick-set body, strong, rather short, curved bill, legs feathered to the knees, anterior toes united by

a short membrane, posterior toe above the level of the others.

Gallina'ceous. (L. *gallinaceus*. F. *gallinacé*; G. *hühnerartig*.) Relating to, belonging to, or resembling, the *Gallinaceæ*.

Gallinæ. (L. *gallus*, the cock.) Plural of *Gallina*, a hen.

Also, the same as *Gallinaceæ*.

G. ventriculi tunicæ interiorēs. (L. *ventriculus*, the stomach; *tunica*, a coat; *interior*, inner.) The inner lining of a fowl's gizzard, which, when dried, was given as a stomachic and lithontriptic. See also *Ingluvium*.

Gallinaginis caput. See *Caput gallinaginis*.

Gallina'go. (Dim. of L. *gallus*, a cock. F. *bécasse ordinaire*; G. *Waldschneepfe*.) The woodcock.

Gallina'ria. (L. *gallus*, a cock.) A Genus of the Nat. Order *Leguminosæ*.

G. rotundifolia. Rumph. (L. *rotundus*, round; *folium*, a leaf.) Used as a purgative for fowls. The *Cassia cora*.

Gallinsecta. (L. *galla*, the gall-nut; *insecta*, insects. F. *gallinsecte*.) The gall insects, or *Cynipide*.

Gallipavo. (L. *gallus*, a cock; *pavo*, a peacock. F. *poule d'Inde*; G. *Truthahn*.) The common turkey. See *Meleagris gallopavo*.

Gallipot. (Du. *gleypot*; from *gley*, shining.) A glazed earthenware pot used to hold ointments, extracts, conserves, and other soft pharmaceutical substances.

Gallitrichis. Same as *Callitriche*.

Gallium. Syn. Ga; atomic weight 69.865; sp. gr. 5.9; specific heat .08. A metal discovered by De Boisbaudran in a zinc-blende from the Pyrenees by means of spectrum analysis. It is of bluish-white colour, so soft that it may be cut with a knife, tough, and melts at 30.1° C. (86.18° F.), remaining liquid for several weeks at the ordinary temperature. It is soluble in dilute hydrochloric acid and caustic potash, with evolution of hydrogen.

Also, the same as *Galium*.

Gallon. (Mid. E. *galon*, *galun*, *galoun*; Old F. *gallon*; Low L. *galona*, of unknown origin.) A measure of liquids.

The gallon of Imperial measure adopted in the B. Ph. contains 4 quarts, or 8 pints, or 160 fluid ounces, or 1280 fluid drachms, or 76,800 minims, and is equal to 1 gallon, 1 pint, 9 fluid ounces, 5 fluid drachms, and 8 minims of Apothecaries' measure. An Imperial gallon of distilled water weighs 70000 troy grains, contains 277.27384 cubic inches, and is equal to 4.543487 litres, or 4543.487 grammes.

The gallon of Apothecaries' or wine measure adopted in the U.S. Ph. contains 4 quarts, or 8 pints, or 128 fluid ounces, or 1024 fluid drachms, or 61,440 minims, and is equal to 6 pints, 13 fluid ounces, 2 fluid drachms, and 23 minims of Imperial measure. An Apothecaries' or wine gallon of distilled water weighs 58328.886 troy grains, contains 231 cubic inches, and is equal to 3.7859 litres, or 3785.95 grammes.

Gallotannic acid. (G. *Gallusgerbsäure*.) A synonym of *Tannic acid* when prepared from galls.

Gallow-grass. The hemp plant, *Cannabis sativa*, in reference to the rope of hemp for the gallows.

Galls. See *Galla* and *Gall*.

GALL-STONE.

G., Aleppo. Galls of *Quercus infectoria*, from Syria, so called from the port, Aleppo, whence they come; they are the most highly esteemed.

Aleppo galls are about the size of a filbert, of a blackish or yellowish-green colour, glaucous, compact, heavy, and very astringent if they have been gathered before the escape of the insect; those from which the Cynips has passed are whitish, and much less astringent.

G., Aleppo, crowned. A variety produced by the puncture by a Cynips of slightly developed leaf-buds. They are about the size of a pea, with a short pedicle at the base and a crown-like circle of blunt points at the summit. The interior is formed of four concentric, radiated layers, the innermost of which is amygdaceous. They contain only one cavity, and are often pierced by a hole for the escape of the insect.

G., Aleppo, green. The galls of this colour described under *Galla*.

G., American. The produce of *Quercus alba*; they are light and spongy, and contain little tannin.

G., black. The galls described under *Galla* which have not lost by age their dark colour; they are more astringent than when they become older and paler.

G., Bokh'ara. A small, very astringent gall found in the bazaars of India; they are probably the produce of a pistachio-nut tree.

G., Busso'rah. Same as *G., Mecca*.

G., Californian. The produce of *Quercus lobata*, large, orange-brown, and containing abundance of tannin.

G., Chinese. Reddish-brown galls found on the *Rhus semialata* and *R. japonica*, and caused by the *Aphis chinensis*. They are irregularly pyriform in shape, having lobes, but few tubercles; the outer shell is thin, fragile, and covered with a grey down; they contain 70 per cent. or more of tannin, and many insects.

G., corniculated. (*L. corniculatus*, a small horn.) Oak galls usually situated on a twig and having a number of horn-like excrescences with somewhat curved extremities; they are yellowish, woody, and containing many cells, each having an aperture for the escape of the Cynips.

G., French. The *G., ilex*.

G., eg'lantine. (*F. galle d'eglantier*.) Same as *Bedeguar*.

G., Hung'arian. Very irregularly shaped galls, attached to and caused by the ovipuncture of a Cynips in the capsule of the glans of the common oak, *Quercus robur*, after the fecundation of the ovary. They have one cavity only, often enclosing a perfect insect.

G., Is'trian. A small and little valued species of gall, reddish in colour, generally perforated by the escape of the Cynips.

G., ilex. (*F. galle ronde de l'yeuse*.) The galls known in commerce as French galls. They are perfectly spherical, 19 to 22 mm. in diameter, sometimes smooth, sometimes papillated, of a greenish grey or reddish colour. They are generally perforated; when broken are of a brownish colour and a spongy texture, with the exception of the innermost layer, which is whitish and dense. They are produced by the oviposition of a Cynips on the *Quercus ilex*, or holm oak.

G., Jap'inese. The produce of *Rhus*

japonica; very like Chinese galls, but more slender and lobulated, with a greater number of tubercles.

G., Levant'. The galls described under *Galla*; so called from the district whence they are obtained.

Also, a term sometimes applied to the capsules of the *Quercus agilops*, growing in Sicily and the isles of Greece.

G., Mec'ca. Very large galls from *Quercus infectoria*.

G., myrob'alan. A very astringent gall formed on the leaves of *Myrobalanus citrinus* by the oviposition of some insect. They are simple or double, ovoid, flattened, and wrinkled, of a greenish-yellow colour, and strongly astringent.

G., ointment of. See *Unguentum galle*.

G., Pied'mont. Same as *G., Hungarian*.

G., rose. Same as *Bedeguar*.

G., Smyrna. Galls of *Quercus infectoria* from Smyrna. They are a greyish-olive green in colour, and somewhat spongy.

G., So'rian. A variety of galls from the Eastern Mediterranean, about the size of a pea and blackish.

G., sweet-bri'ar. Same as *Bedeguar*.

G., tam'arix. Galls produced on the *Tamarix orientalis*. Used in India as a substitute for oak galls.

G., Texas. The produce of *Quercus virens*; somewhat like Aleppo galls but less tuberculated; they contain about 40 per cent. of tannin.

G., tincture of. See *Tinctura galle*.

G., Tur'key. The gall of the *Quercus infectoria*. See *Galla*.

G., way-this'tle. (*F. galle du chardon hémmoroidal.*) A gall found on the stem of the *Serratula arvensis*, which was formerly carried in the pocket for the cure of, and as a protective from, piles.

G., white. The galls described under *Galla*, from which the insect has escaped, and which, from their age, have become pale. They are not so astringent as at the earlier stage, when they are dark coloured.

Gall-stone. (*F. calcul biliaire*; *L. calculo biliario*; *G. Gallenstein*.) A concretion in some part of the biliary passages. Gall-stones vary in size from mere granules to large masses 4" or 5" long, filling and distending the gall-bladder; they vary in number from one to several hundreds, and they vary in shape from minute spherical bodies to flattened plates or polyhedral or irregular or branched masses; they may be smooth or tuberculated, white, yellow, brown or reddish or greenish black. When fresh they are heavier than water, when dry lighter; they are softish, often friable, generally greasy. They consist of one dark nucleus, sometimes more than one, with a radially striated middle coat, and a concentric-lined periphery. The nucleus consists of bile pigment, and lime, with some mucus; according to Thudichum, of casts of the hepatic ducts; the surroundings consist of more or less pure cholesterolin with more or less bile-pigment and lime salts of carbonic, phosphoric, and bile acids, the outer layer containing more salts; they generally contain also silicon, iron, manganese, copper, and zinc.

G.-col'ic. The pain produced by the passage of a gall-stone, or by its impaction in some part of the biliary passages. If the arrest take place in a bile duct of any considerable size

GALLULMIC ACID—GALVANISATION.

jaundice results, or the bile ducts behind it may become dilated, and inflammation or degeneration of the hepatic structures may follow. If a gall-stone be not arrested it may pass through the common duct into the intestine, or it may slip back into the gall-bladder; occasionally a gall-stone in the gall-bladder sets up inflammation of its walls and adhesion to the neighbouring intestine and ulceration. When perforation takes place the gall-stone may escape into the bowel; by a similar process it may escape through an opening in the abdominal walls.

Gallulmic acid. $C_6H_4O_2$. A black, shining, tasteless substance obtained by heating gallic acid to a temperature of 240° — 250° C. (464° — 482° F.) It is insoluble in water, soluble in alkalis.

Gallus. (For *garlus*, from the root of Gr. γάρω, to sing, to cry; also said to be from L. *galea*, a helmet, from its crest; or akin to the root γελ in ἀγγέλλω, to proclaim. F. *coq*; G. *Kahn*.) The domestic cock.

Also, a eunuch; so called from the *Galli*, or priests of Cybele, who in their frenzy were wont to castrate themselves.

G. banki'va, Temminck. The jungle fowl. Hab. India. From which the domestic fowl is supposed to be descended.

G. banki'va, var. **domes'tica**, Temminck. The domestic fowl.

G. domes'tica. The *G. bankiva*, var. *domestica*.

Galmier, Saint. See *Saint Galmier*.

Galreda. (Possibly from *G. Gallerte*.) A barbarous Latin word for a kind of gelatine or jelly, according to Schröderus, i, 3, lit. G.

Galthofer Bitterquellë. (G. *bitter*, bitter; *Quell*, a spring.) Austria, near Brünn. A mineral water, containing sodium sulphate 38.7 grains, magnesium sulphate 57.6 grains, in 16 ounces. Used as other purgative waters.

Galva'ni, Aloy'sio. An Italian physician, professor of practical anatomy at Bologna, born at Bologna in 1737, died there in 1798.

Galvania. (*Galvano*, a Portuguese naturalist.) A Genus of the Nat. Order *Cinchonaceæ*.

G. Vello'zii, Röm. and Schultz. The *Palicourea Marcgravii*.

Galvanic. (*Galvanism*. F. *galvanique*; G. *galvanisch*.) Of, or belonging to, *Galvanism*.

G. acupunc'ture. (L. *acus*, a point; *punctura*, a pricking.) Same as *Galvano-puncture*.

G. bat'tery. The same as *Voltaic battery*. A term applied in honour of Galvani, who was erroneously supposed to be the originator of the apparatus.

G. belt. A galvanic arrangement enclosed in a belt, to be worn round the waist. Zinc and copper plates, pulverised zinc and copper made into a paste with sawdust and calcium chloride, a series of small lead sulphate batteries, and other plans have been adopted, as well as the use of many substances having no electric properties beyond the name employed.

G. cau'tery. See *Galvano-cautery*.

G. cell. Same as *G. element*.

G. chain, Pul'vermacher's. A series of zinc and brass pairs forming a voltaic pile when moistened with vinegar. This arrangement furnishes a current of high tension.

G. circle. A combination of two plates

of different metals, such as platinum and zinc, immersed in water and touching each other, or connected with each other by a metallic wire.

G. cir'cuit. Same as *G. circle*.

G. coup'le. Same as *G. element*.

G. cur'rent. The electrical current resulting from the action of a galvanic battery.

G. ecraseur. See *Ecraseur, galvanic*.

G. electric'ity. Same as *Galvanism*.

G. el'ement. A simple galvanic element consists of a pair of different metals in metallic contact and immersed in some appropriate fluid.

G. excitability. (L. *excito*, to rouse.) The totality of the results produced in muscles under the influence of the galvanic current, either during its continuous passage or at the time of the opening or of the closing of the circuit.

G. gid'diness. See *Giddiness, galvanic*.

G. key. A *Commutator*.

G. knife. An instrument, invented by De Sére, consisting of a platinum blade having a central fissure, so that it is practically a flattened loop, each side of which is connected with a metallic handle, separated from its fellow by a plate of ivory and attached to one pole of a galvanic battery. By a sliding arrangement the amount of heat may be graduated; at 600° C. it acts as a hæmostatic; at 1500° C. it cuts like a knife.

G. moxa. (*Moxa*.) The use of a galvanic pair for the production of an eschar, suggested by Golding Bird. Two surfaces of skin near to each other are blistered and the cuticle removed; on to one is fastened by plaster a zinc plate, on to the other a silver plate, both connected by a copper wire; by electrolytic action chlorine is set free under the zinc plate, combines with the zinc to form zinc chloride, which slowly acting as a caustic produces a sufficient eschar in two days.

G. pair. Same as *G. element*.

G. pessary. See *Pessary, galvanic*.

G. pile. Same as *Voltaic pile*.

G. polarisa'tion. See *Polarisation, galvanic*.

G. poul'tice. A cotton bag, with its outer surface covered with waterproof material, is filled with cotton wool containing many small pieces of zinc and copper separated from each other by a piece of flannel, and after being moistened with vinegar is bound tightly to the skin. It produces reddening of the skin and pricking, and has been used in chronic rheumatism and many other diseases.

G. se'ton. A mode of producing inflammation in a canal or a tissue, being the carrying through, by means of a needle or probe, of a platinum wire, which, when connected with the two poles of a galvanic battery, becomes so hot as to produce the desired result.

G. transfu'sion. (*G. galvanische Durchleitung*.) The penetration of the skin by various drugs, as strychnia and quinine, when the electrodes of a galvanic battery are moistened with the solution and applied to the uninjured surface, the direction of the current being frequently reversed.

G. trough. A Voltaic battery in which the elements are arranged side by side in a trough.

Galvanisation. The act of applying or communicating *Galvanism*.

The term is specially used to denote the transmission of a galvanic current through some part of the body for the purpose of diagnosing or

GALVANISE—GALVANO-FARADISATION.

curing disease. The current used is one of low tension and considerable quantity.

G. by interrupted currents. The mode of using the constant current by frequently lifting off a rheophore from the surface of the skin and suddenly applying it again, so that muscular contraction may be induced at each moment of breaking and making contact.

G. by voltaic alternates. Remak's term for a mode of galvanisation by suddenly and frequently interrupting the current by removal of a rheophore and changing its direction by means of a commutator.

G., central. Beard's term for a mode of galvanisation in which the cathode rheophore is placed on the epigastrium and the anode is passed over the forehead and the vertex to stimulate the brain; along the inner border of the sterno-cleido-mastoid muscle to the clavicle to stimulate the sympathetic; and down the entire length of the spine to stimulate the spinal cord; so that the whole of the central nervous system is supposed to be brought under the influence of the current.

G., cutaneous. (L. *cutis*, the skin.) The application of a constant current to the skin, both the electrodes and the skin being dry so as to limit the action as far as possible. This proceeding has been recommended in cases of asphyxia and debility in the newly born. The electrodes should be applied to the neck. The stimulus of the current would probably affect, not only the sensory nerves of the skin, but the phrenic, vagus, and sympathetic nerves.

G., direction method of. The form in which one rheophore is placed over a nerve plexus, and the other over some part of the trunk of a nerve arising from it.

G., general. Galvanisation of the whole body, as in the electric bath, so that the whole muscular system is brought under the influence of the current.

G., labile. (L. *labilis*, gliding.) The form in which the anode rheophore is kept stationary and the cathode rheophore is moved along the skin in the direction of the muscles or the nerves which are to be influenced.

G., localised. A term for the application of the electricity of a galvanic battery to a limited section or tissue of the body.

G., neuro-muscular. The ordinary use of galvanism whereby both muscles and nerves are influenced.

G. of bladder. Practised in paralysis of the bladder by placing one rheophore above the pubic region and the other on the perinæum, or by introducing one rheophore into the bladder itself.

G. of brain. This may be accomplished by placing a rheophore on each mastoid process, on each temple, or on the frontal and occipital protuberances.

G. of ear. The cathode is placed on an indiffererent part, and the anode is dipped into salt water which is made to fill the external auditory meatus, or has an expanded end, which is placed on the lobe of auricle or the edge of the meatus, or it is attached to an electric sound, which is introduced into the Eustachian tube.

G. of spinal cord. A proceeding adopted to dilate the vessels of the cord and to improve the nutrition. Hammond particularly recommends the ascending constant current.

G. of sympathetic. The possibility of galvanising the great sympathetic nerve of the

neck has been much disputed, and is still unsettled. Althaus believes that by the use of the continuous current the sympathetic may be affected, but he also adds that the symptoms produced, such as drowsiness, and disturbance of the iris, and of the heart, are caused by the concurrent influence of the current on the pneumogastric, the depressor nerve, the spinal cord, and the base of the brain.

G., polar method of. The form in which one rheophore is placed on the nerve which is to be stimulated and the other on some part of the body unconnected with it.

G., stabile. (L. *stabilis*, firm.) The form of the process in which both the rheophores are kept at the same place during the whole of the application; or in which the part is immersed in salt water, with which the conducting wires of the battery are in contact.

Galvanise. (*Galvanism*.) To affect with *Galvanism*.

In Medicine, to apply the constant galvanic current.

Galvanism. (*Galvani*. F. *galvanisme*; I. *galvanismo*; G. *Galvanismus*.) A term applied, in honour of Galvani, who discovered the phenomena in 1780, to current or dynamical electricity; being the electricity developed by chemical action.

Galvano-caustics. The science of the *Galvano-cautery*.

Galvano-cauterisation. (*Galvanism*; Gr. *κατηρδιάζω*, to sear.) The destruction of the tissues by means of galvanism. The application of the *Galvano-cautery*.

G., chemical. (*Χημεία*, chemistry.) The destruction of tissue by means of electrolysis, as in galvanopuncture.

G., thermic. (*Θερμότης*, heat.) The destruction of the tissues by means of the galvanocautery.

Galvano-cautery. (*Galvanism*; Gr. *κατήριον*, a branding iron.) An apparatus designed for the destruction of a tissue or of a structure by the heat developed in an imperfect conductor of electricity, such as a platinum wire, in consequence of the resistance offered to the transmission of a powerful galvanic current through it. The battery used for this purpose should be composed of few cells exposing a large surface, so as to diminish its resistance, such as a Grove battery, or a bichromate of potash battery. The cauterising apparatus consists of platinum wire of different length and thickness, according to the purpose to be served, and arranged in the form of a loop, which, when heated, may be used as a knife or as an écoureur for the removal of a part, or wound round a porcelain core when a broad cauterising surface is required.

Galvano-emesis. (*Galvanism*; Gr. *ἔμεσις*, vomiting.) C. Fox's term for the production of vomiting by the application of a suitable conductor, attached to one pole of a battery, to the pharynx, and of another to the epigastrium by means of a wet sponge attached to the other pole.

Galvano-faradisation. (*Galvanism*; *faradisation*.) De Watteville's term for a form of electro-therapeutics, which consists in the uniting of the secondary induction coil and the galvanic battery in one circuit by connecting with a wire the negative pole of the one with the positive pole of the other, attaching the

GALVANO-HYPNOTISM—GAMBOIDIA.

electrodes to the two extreme or free poles, and sending both currents together through the body.

Galvano-hypnotism. (*Galvanism*; Gr. ὕπνος, sleep.) The hypnotic condition in which consciousness is quite extinct, produced by the passage of a galvanic current through the brain; this has been induced in an hysterical person.

Galvano-magnetism. Same as *Electro-magnetism*.

Galvano-therapeutics. (*Galvanism*; Gr. θεραπεύω, to take care of.) The use of galvanism for the cure or relief of disease.

Galvanolysis. Same as *Electrolysis*.

Galvanometer. (*Galvani*; Gr. μέτρον, a measure. F. *galvanomètre*; I. *galvanometro*.) An apparatus designed to determine the existence, the direction, and the intensity of a galvanic or voltaic current. It was invented by Schweigger, and is based on Ørsted's discovery of the deflection of a magnetic needle by a voltaic current passing at some distance from it; the needle tends to set itself at right angles to the current, the north pole turning in one direction when the current is above it, and in the other direction when the current is below it. The actual direction may be ascertained by the rule of Ampère, that when a man is supposed to be swimming in the current with his face to the needle, the north pole of the magnet will turn to his left hand. The instrument is rendered more sensitive by bending the wire back over the needle, for then, as the current in the upper part of the wire is in an opposite direction to that in the lower wire, the force exerted by both is in the same direction. In some instruments the wire travels round the needle many times. The construction of a galvanometer varies according to the strength of the current it is intended to measure. See also *Multiplier*.

G., astatic. (Ἀστατος, never standing still.) The form in which the influence of the earth's magnetism is neutralised by the presence of a compensating magnet, or by using an astatic pair of magnetic needles. By this means a much smaller electric current may be recognised.

G., differen'tial. An instrument in which the wire coil is composed of two separate wires running side by side. It is employed to measure the comparative value of two electric currents which are sent in opposite directions through the wires.

Galvanopuncture. (*Galvanism*; L. *punctura*, a pricking.) The introduction into the tissues of fine needles, connected with the poles of a voltaic battery, so that a current may pass through the structures from the end of the needle connected with one pole to the end of that connected with the other pole of the battery. It is chiefly employed in the treatment of thoracic aneurysm, to induce coagulation of the contained blood; it has also been employed for the relief of severe neuralgic pains.

Galvanoscope. (*Galvanism*; Gr. σκοπέω, to observe.) An instrument which serves to indicate the presence of current electricity.

Galvanoscopic. (*Galvanism*; Gr. σκοπέω, to observe.) Pertaining to, or of the nature of, a *Galvanoscope*, or of *Galvanoscopy*.

G. contraction. Muscular contraction produced by the action of galvanism.

G. frog. A recently killed frog is rapidly skinned and so dissected that the hind legs are left attached by the sciatic nerve trunks only to the part of the spinal cord, surrounded by its vertebrae, from which they spring.

Galvanoscopy. (*Galvanism*; Gr. σκοπέω.) The employment of galvanism in physiological experiment or for diagnostic purposes. Also, the use of the *Galvanoscope*.

Galvanotonic. Relating to *Galvanotonus*.

G. contraction. The muscular contraction which occurs in *Electrotonus*.

Galvanotonus. Same as *Electrotonus*.

Gaman'dra. Old name, used by Mich. Reudenius, for *Gamboge*. (Castellus.)

Gamarde. France, Département des Landes. A cold mineral spring, containing a little calcium sulphate, and some hydrogen sulphide. Used in skin complaints and in herpetic diathesis.

Gamasidæ. (G. *Käfermilben*.) A Family of the Order *Acarina*. Parasites of insects, birds, and mammals, with pincer-like chelicerae and free projecting maxillary palpi. They have no eyes.

Gamasus. A Genus of the Family *Gamasidæ*, Order *Acarina*, Class *Arachnoidea*.

G. auris. (L. *auris*, the ear.) A species which has been found in the external auditory meatus of the ox.

G. coleopteratorum, Latr. (*Coleoptera*.) The acarus found on dung-beetles. It is an asexual nymph, the male being *G. testudinarius*, and the female *G. crassipes*.

G. dermannyssoides, Megnin. (*Dermannyssus*; Gr. εἶδος, likeness.) Lives on the canary and other small birds, and on the small rodents.

G. marginatus, Herm. (L. *marginatus*, to furnish with a border.) Said to have been found in the human brain.

G. muscarum. (L. *musca*, a fly.) Found on the house fly.

G. pteroptoides, Megnin. (*Pteroptus*; Gr. εἶδος, likeness.) Found at the base of the hairs of field mice, rabbits, and bats, where it lives on the perspiration and on the blood of the animal.

Gamba. (L. *gamba*, a hoof; perhaps from Gr. κάμπη, a bending.) An old name for the patella.

Gambarus. Same as *Gammarus*.

Gamber. Same as *Gambir*.

Gambier. Same as *Gambir*.

Gambir. The Malay name of *Catechu pallidum*, B. Ph.

Also, the *Uncaria gambir*.

Gamboidic acid. Same as *Gambogic acid*.

Gamboge. The substance described as *Cambogia*, B. Ph.

G., cake. The form occurring in irregular masses mixed with sticks and other impurities. See *Cambogia*.

G., lump. Same as *G., cake*.

G., pipe. The ordinary form in cylindrical rolls. See *Cambogia*.

G. this'tle. The *Argemone mexicana*.

Gambogia. See *Cambogia*.

Gambogic acid. C₂₀H₂₄O₄. The same as *Cambogic acid*.

Gamboidia. A synonym of *Cambogia*.

GAMENOMANIA—GANGLIA.

Gamenoma'nia. Same as *Gamomania*.

Gam'ic. (Γάμος, union, marriage.) Pertaining to, or resulting from, sexual connection; produced by the conjunction of the male and female elements.

Gamma. (The Greek letter Γ, which it resembled.) Old name of an iron instrument for cauterising a hernia.

Gammacis'mus. (Γάμμα, the Greek letter γ.) Guttural stammering. Inability to pronounce the letters *g* and *k*, *d* or *t* being substituted.

Gam'marus. (L. *gammarus*, from *crab*; from Gr. κάμπαρος, a kind of crab or lobster.) The lobster, *Homarus gammarus*.

Gamma'tum ferramen'tum. (L. *gammatus*, shaped like a Γ, gamma; *ferramentum*, an iron implement.) A gamma-shaped instrument for cauterising hernia.

Gammelei'ra. The Brazilian name of *Ficus doliaria*, the milky juice of which is used in the treatment of patients suffering from the presence of *Anchylostomum duodenale*.

Gammis'mus. Probably a misspelling of *Psammismus*.

Gamocyst'itis. (Γάμος, union; κύστις, a bladder.) A Genus of the Class *Monocystidea*, Class *Gregarinina*. Ovoid bodies, living single, or united end to end.

G. tenax, Schn. (L. *tenax*, holding fast.) Found in the digestive tube of *Blatta lapponica*.

Gamogast'rous. (Γάμος; γαστήρ, the belly.) A term applied to a pistil in which the ovaries are more or less completely united and the respective styles and stigmata remain free.

Gamogen'esis. (Γάμος, marriage; γένεσις, generation.) Generation by the conjunction of structures from different individuals, being sexual reproduction.

Gamoma'nia. (Γάμος, marriage; μανία, madness.) A form of insanity characterised by strange and extravagant proposals for marriage. It is accompanied by little or no erotic excitement.

Gamomorph'ism. (Γάμος; μορφή, form.) The stage of growth in a living being in which the conditions necessary for the propagation of the species are developed and matured.

Gamopet'alæ. (Γάμος, union; πέταλον, a flower leaf. G. *Verwachsenblättrige*.) A Division of dicotyledonous plants, in which the perianth is composed of two whorls, calyx and corolla, the petals of the latter being united.

Gamopetal'ous. (Γάμος, union; πέταλον, a flower leaf. F. *gamopétale*; G. *verwachsenblumenblättrig*.) Having the petals of the corolla united. Same as *Monopetalous*.

De Candolle distinguished between gamopetalous and monopetalous, the former being applied to a tubular corolla which resulted from the union of several petals, the latter being applied to a corolla which resulted from the development of a single lateral petal.

Gamophyll'ous. (Γάμος; φύλλον, a leaf. F. *gamophylle*; G. *verwachsenblättrig*.) Having the leaves united. Applied to a perianth the parts of which are united to each other.

Gamosepal'ous. (Γάμος; sepal. F. *gamosepale*; G. *verwachsenkelchblättrig*.) Having the sepals united to each other. Same as *Monosepalous*.

Gamphæ. (Γαμφαί, the jaws.) Same as *Gamphelæ*.

Gam'phelæ. (Γαμφελαί, the jaws of

animals.) Old term for the cheeks or jaws. (Gorræus.)

Gang'amê. (Γαγγάμη.) Same as *Gan-gamon*.

Gan'gamon. (Γάγγαμον, a small round net for oyster catching.) Old name for the omentum, from its resemblance. (Gorræus.)

Gang'amum. Same as *Gan-gamon*.

Gang-flow'er. The *Polygala vulgaris*, because the time of its flowering was gang-week. when processions were made to mark the boundaries of parishes.

Gan'glia. The plural of *Ganglion*.

G., abdom'inal. (L. *abdomen*, the belly.) The sympathetic ganglia in the abdomen.

Also, the ganglia in the abdomen of the *Arthropoda*.

G. aberran'tia. (L. *aberro*, to wander from.) The same as *G. intercalaria*, and *G. accessoria*.

Also, Hyrtl's term for the small variable collections of ganglionic nerve tissue found on many of the nerve trunks.

G. accesso'ria. (L. *accessio*, an addition.) Two or three small ganglia which sometimes take the place of the middle cervical ganglion, or are found in addition to it on the cervical ganglionic cord of the sympathetic.

Also, applied to some small ganglia on the trunk of the spinal accessory nerve, either in the vertebral canal, or in the cranial cavity, or in the jugular foramen, or in connection with the communicating branch to the posterior root of the first cervical nerve.

G., Auerbach's. The ganglia of Auerbach's plexus.

G., axil'lary. (L. *axilla*, the armpit.) The axillary lymphatic glands.

G., branch'ial. See *Branchial ganglia*.

G., buc'cal. (L. *bucca*, the cheeks.) Small ganglia near the anterior part of the œsophagus of Mollusca, which supply it and the intestine. They are probably analogous to the sympathetic system of higher animals.

G. carot'ica accesso'ria inferio'ra. (L. *inferior*, that is below.) Ganglia found occasionally in the lower part of the plexus caroticus internus.

G. carot'ica accesso'ria superio'ra. (L. *carotid*; *accessio*, an addition; *superior*, that is above.) Ganglia found occasionally in the upper part of the plexus caroticus internus.

G., cephal'ic, of sympathet'ic. (Κεφαλή, the head.) The ophthalmic, the sphenopalatine, the otic, and the submaxillary ganglia, which constitute the whole of the intracranial ganglionic portion of the great sympathetic system, and are all connected with the fifth pair of nerves.

G., cer'ebral. (L. *cerebrum*, the brain. G. *Hirnganglienpaar*.) The largest, most anterior and most important of the suprœsophageal ganglia in the Opisthobranchiata and other Molluscs, as well as of the Arthropoda. They lie upon the œsophagus, and are connected by nerves with the infrœsophageal ganglia so as to form a ring around the anterior part of the digestive canal.

G. cer'ebr'i antio'ro. (L. *cerebrum*, the brain; *anterior*, in front. G. *die vordere Hirnganglien*.) A term for the *Corpora striata*.

G. cer'ebr'i post'ica. (L. *cerebrum*, the brain; *posticus*, hinder. G. *hintere Gehirnganglien*.) A term for the optic thalami.

GANGLIA.

G., cervi'cal. See *Ganglion, cervical, lower, G., cervical, middle, and G., cervical, upper.*

Also, the *G., sub-œsophageal*, of insects.

G. cervica'lia. (*L. cervix*, the neck.) Term applied by Martin St. Ange to the gangliform enlargements found in Cirripedes between the splanchnic or visceral nerves.

G., dor'sal. (*L. dorsum*, the back.) The *G., thoracic.*

G., epipharynge'al. (Ἐπί, upon; φάρυγξ, the gullet.) Same as *G., supra-œsophageal.*

G. form'ative. A term applied to the ganglia of nerves.

G., gas'tro-epiplo'ic. (Γάστρον, the belly; ἐπιπλόον, the omentum.) The lymphatic glands lying in the folds of the great omentum at the larger curvature of the stomach.

G., gland'iform. (*L. glans*, a gland; forma, shape.) A term applied to the class of organs including the spleen, thymus gland, thyroid body, and adrenals.

G., hemispher'ical. The *Cerebral hemispheres.*

G., hypopharynge'al. (ὑπό, beneath; φάρυγξ, the gullet.) The same as *G., infra-œsophageal.*

G., infraœsophage'al. (*L. infra*, beneath; *œsophagus*, the gullet. *G. unterer Schlundganglien.*) The two ganglia which lie beneath the œsophagus in Mollusca and Cirripedes. They are sometimes fused together.

G., in'guinal. (*L. inguen*, the groin.) The lymphatic glands of the groin.

G. intercala'ria. (*L. intercalo*, to introduce. *G. Schaltganglien.*) The small, round ganglionic enlargements sometimes found on the posterior roots of the spinal nerves, in addition to the ordinary ganglion of the root.

G. interme'dia. (*L. intermedius*, lying between.) Two or three ganglia sometimes occupying the position of, and representing, the ganglion cervicale superius.

G. interme'dia trun'ci cervica'lis. (*L. intermedius*, lying between; *truncus*, the stem; *cervix*, the neck.) The *G. accessoriæ.*

G. intervertebra'lia. (*L. inter*, between; *vertebra*, a spine bone.) The ganglia on the posterior roots of the spinal nerves.

G., la'bial. (*L. labium*, a lip.) The two anterior ganglia of the nervous system of the Mollusca.

G. lumba'lia. Same as *G., lumbar.*

G., lum'bar. (*L. lumbaris*, belonging to the loin. *G. Lendenknoten, Lumbalganglien.*) The ganglia of the lumbar part of the gangliated cord of the sympathetic. They are four, or sometimes five, in number, smaller than most of the dorsal ganglia, and somewhat oval in shape. They lie in the bodies of the vertebræ, along the inner border of the psoas magnus muscle, those of the left side behind the abdominal aorta, and those of the right side behind the inferior vena cava; the connecting cord is long and thin. The communicating branches with the spinal nerves are two or three in number. They accompany the lumbar arteries, and pierce the origin of the psoas magnus; branches go to the vertebræ and their ligaments, to the renal and spermatic plexuses, and to the abdominal, aortic, and superior hypo-gastric plexuses.

G., Mer'kel's. See *Merkel's ganglia.*

G. mesenter'ica. (Μέσος, in the middle; ἔσπερον, an intestine.) The mesenteric glands.

G. mesera'ica. (Μέσος, middle; ἀραιά,

the small intestines.) The ganglia of the superior mesenteric plexus.

G. nervo'rum. (*L. nervus*, a nerve.) The nervous ganglia.

G., œsophage'al. (*L. œsophagus.*) The ganglia situated above and below the œsophagus, as in Branchiopoda.

G. of cer'ebrum, infe'rior. (*L. cerebrum*, the brain; *inferior*, lower.) Gall's term for the optic thalami.

G. of cer'ebrum, supe'rior. (*L. cerebrum*, the brain.) The *Corpora striata.*

G. of glossopharynge'al. The *Ganglion, jugular*, and the *Ganglion, petrous.*

G. of in'crease. A term applied to the ganglia of nerves.

G. of pneumogas'tric. See *Ganglion of pneumo-gastric, lower*, and *Ganglion of pneumo-gastric, upper.*

G. of spi'nal nerves. The ganglia on the posterior roots of the spinal nerves.

G. of sympath'ic. See *Gangliated cord of sympathetic.*

G. of the crus. Meynert's term for the corpora striata and the cortex cerebri.

G. of the tegmen'tum. Meynert's term for the corpora quadrigemina and the optic thalami.

G., ophthal'mic. (Ὠφθαλμός, the eye.) The ganglia situated in Cirripedes and other animals at the base of each optic nerve.

G., opt'ic. (Ὀπτικός, relating to sight.) The *Corpora quadrigemina.*

G., pari'eto-splanch'nic. (*L. paries*, a wall; *Gr. σπλάνχνον*, an intestine.) The third pair of ganglia in the anal region of the Mollusca, at the posterior extremity of two long nerves which arise from the subœsophageal ganglia. They are fused together or connected by a short nerve trunk; sometimes they are fused with the supraœsophageal and the infraœsophageal ganglia.

G., pe'dal. (*L. pes*, a foot.) The name given to the *G., infraœsophageal*, of Mollusca, when they are situated in the foot.

G., peripher'ic. (*G. peripherische Ganglien.*) The ganglia of the sympathetic nerve which are distributed over the walls of the vessels and hollow viscera. In some instances they contain double-contoured or medullated nerve-fibres; in others they are chiefly or wholly composed of pale nerve-fibres with some nerve-cells.

G. postpyramida'lia. Masses of grey substance described by Clarke as existing in the posterior pyramids.

G. prostat'ica. (*Prostate gland.*) Some small ganglionic enlargements in the prostatic plexus of the sympathetic.

G. puden'da. (*L. pudendum*, the external organs of generation in the female.) A series of ganglia in the female representing the *G. prostatica* of the male.

G., re'nal. (*L. ren*, the kidney.) Small ganglia which are found in the course of the nerves of the renal plexus along the renal artery.

G. rena'li-aor'tica. (*L. ren*; *aorta.*) The *G. renalia.*

G., respi'rat'ory. See *Respiratory ganglia.*

G. retifor'mia. (*G. gangliösen Plexus.*) Intricate networks of fibres, either medullated or non-medullated, with cells, found in various parts of the body, as in the coats of the intes-

GANGLIAC—GANGLIATED.

tines, bladder, heart and arteries, bronchia, ciliary muscle, and uterus. In the latter case the cells are few in number, the centres lying outside the organ.

G., sacral. (*Sacrum*. *G. Kreuzbeinknoten*.) The ganglia of the gangliated cord of the sympathetic which are situated in front of the sacrum on the inner side of the anterior sacral foramina. They are usually four in number, each receives two branches from its neighbouring anterior spinal nerve, and gives off branches on the inner side, which join with those of the corresponding ganglion on the opposite side; the upper ganglia send some twigs to the pelvic plexus, and others to form a plexus on the middle sacral artery. The highest ganglion of each side is connected with the lower lumbar ganglia by one or two cords, and the lowest is connected with the ganglion impar, or when this is absent, with its fellow of the opposite side by means of a loop.

G. sacralia. See *G., sacral*.

G. sanguinea. (*L. sanguis*, blood.) The same as *G. glandiform*.

G. segregata. (*L. segregatus*, separated.) The sympathetic ganglia.

G., semilunar. (*L. semi*, half; *luna*, a moon. *F. ganglions semilunaires*; *G. die halbmondförmige Knoten*.) The two principal ganglionic masses of the solar plexus, of the size, and generally of the form, of a haricot bean. They are situated at the upper and outer part of the plexus, one on each side, close to the adrenals, near the celiac and the superior mesenteric arteries. Their expanded upper extremity receives the great splanchnic nerve and some filaments of the small splanchnic nerve; branches from the phrenic nerve join the ganglia, and the pneumogastric nerve joins the right ganglion. From their inner surface are given off numerous branches, which go to form the solar plexus.

G., sensory. See *Sensory ganglia*.

G., solar. The numerous small ganglionic masses scattered through the substance of the solar plexus.

G. spermatica. (*L. sperma*, seed.) The small ganglia scattered through the spermatic plexus.

G., spinal. (*L. spina*, the spine. *G. Spinalknoten*.) The ganglia situated on the posterior roots of the spinal nerves, just before these join with the anterior roots. They are elongated and grey, and are composed of bipolar or multipolar ganglion cells and fibres; their size stands in relation with the size of the root. The spinal ganglia of the cervical, dorsal, and lumbar nerves lie in the foramina intervertebralia; those of the sacral nerves and the coccygeal lie in the sacral canal, near the lower end of the sac of the dura mater.

Also, the ganglia which by their union become the spinal cord.

G., stomato-gastric. (*Στόμα*, the mouth; *γαστήρ*, the belly.) The same as *G., buccal*.

See also *Stomatogastric ganglia*.

G., subintestinal. (*L. sub*, under; *intestinum*, a gut.) The *G., parieto-splanchnic*.

G., sub-oesophageal. (*L. sub*, under; *oesophagus*, the gullet. *F. ganglions sous-oesophagiens*.) The second pair of ganglia of the nervous system of the Insecta. They are situated underneath the oesophagus, and supply the buccal apparatus.

G., supra-oesophageal. (*L. supra*, above; *oesophagus*. *F. ganglions sus-oesophagiens*.) The two anterior ganglia of the nervous system of Insecta. They are situated above and in front of the oesophagus, and are the analogue of the cerebral ganglia of Mollusca and other low forms.

G. sympathica accessoria. (*L. sympathia*, a feeling in common; *accessio*, an approach.) Certain variable ganglia which are found in the plexuses and other parts of the sympathetic system, in addition to the constant ganglia which have received names.

G. sympathica intercala. (*L. intercala*, to introduce.) The *G. sympathica accessoria*.

G. sympathica intermedia. (*L. inter*, between; *medius*, in the middle.) The *G. sympathica accessoria*.

G., thoracic. (*Θώραξ*, the chest. *G. Brustknoten*.) The ganglia of the thoracic part of the gangliated cord of the sympathetic. They are usually eleven in number, sometimes twelve, and lie underneath the pleura on or near the head of each rib; they are oval or three- or four-cornered, and smaller than the cervical ganglia, the first being the largest. They are connected with the adjoining spinal nerves by two branches, and with each other; many thin twigs pass into the posterior mediastinum to the vertebræ and ligaments; branches go to form the thoracic aortic plexus, the posterior pulmonary and the oesophageal plexuses; and large branches from the six or seven lower ganglia form the splanchnic nerves.

Also, the third, fourth, and fifth pairs of ganglia of the nervous system of the Insecta. They supply the nerves of the legs and wings.

G. thyreoidea inferiora anteriora. (*L. anterior*, in front.) Small ganglia in the front of the inferior thyroid plexus.

G. thyreoidea inferiora posteriora. (*L. posterior*, hinder.) Small ganglia in the back part of the inferior thyroid plexus.

G., vascular. (*L. vasculum*, a small vessel.) A term applied to such organs as the spleen.

G., visceral. (*L. viscus*, an intestine.) The *G., parieto-splanchnic*.

Gangliac. (*Γάγγλιον*, a tumour under the skin.) Relating to a *Ganglion*.

Ganglial. (*Γάγγλιον*.) Relating to a *Ganglion*.

Gangliar. (*Γάγγλιον*, a tumour under the skin.) Relating to, or resembling, a *Ganglion*.

Gangliated. (*Γάγγλιον*.) Possessing ganglia; intertwined with enlargements at the points of crossing.

G. cord of sympathetic. A term applied to each of the two cords of the sympathetic nerve with their interpolated ganglia, which extend on each side of the vertebral column from the base of the skull to the coccyx, where they are united to each other by a loop of nerve-fibres generally containing a ganglion. Above, they communicate with the plexuses on the cranial arteries, and by Ribes are said to unite with each other on the anterior communicating artery, a ganglion being interposed. Each ganglion is connected by short branches with the anterior primary division of each contiguous spinal nerve; the branches consist of both sympathetic and cerebro-spinal nerve-fibres. The ganglia were originally one for each vertebra, but those in the cervical and sacral regions be-

GANGLIFORM—GANGLION.

come agglomerated, so that there are three cervical ganglia, twelve thoracic ganglia, four lumbar ganglia, four sacral ganglia, and one median coccygeal ganglion; the upper ganglia are connected with many of the cranial nerves. The connecting cords consist of both sympathetic and cerebro-spinal nerves.

Gangliform. (*Ganglion*; *forma*, likeness. *F. gangliiforme*; *G. knotenformig*.) Of the nature, likeness, or appearance, of a ganglion.

G. plex'us. (*L. plexus*, a plaiting.) The *Ganglion of pneumogastric, lower*.

Gangliitis. (*Ganglion*.) Inflammation of a nerve ganglion.

Also, inflammation of a lymphatic gland.

Also, inflammation of the disease called *Ganglion*.

G. centra'lis. (*L. centralis*, belonging to a centre.) Same as *G. medullaris*.

G. medulla'ris. (*L. medulla*, marrow.) Nissen's term for the severer forms of sporadic cholera, on the hypothesis that it is caused by inflammation of the central or medullary part of the sympathetic nervous system, the solar plexus, and its derived plexuses.

G. neurilemmatis. (*Νεύρου*, a nerve; *λέμμα*, a coat.) Nissen's term for the slighter form of sporadic cholera, on the hypothesis that it is caused by inflammation of the sheaths of the sympathetic nerves.

G. peripher'ica. (*Περιφέρεια*, the line round a circular body.) A synonym of *G. neurilemmatis*.

Ganglioform. Same as *Gangliiform*.

Ganglioid. (*Γάγγλιον*, a tumour under the skin; *εἶδος*, likeness.) Resembling a ganglion.

Gangliolum. (*L. dim. of ganglion*, a sort of swelling; from *Gr. γάγγλιον*.) A small ganglion.

G. tympan'icum. The same as *Glandula tympanica*.

Ganglioma. (*Γάγγλιον*.) A tumour of a lymphatic gland, especially an epithelioma whether primary or secondary.

Ganglion. (*Γάγγλιον*, a tumour under the skin or near tendons. *F. ganglion*; *I. ganglio*; *G. Nervenknotten*.) In Anatomy, an enlargement in the course of a nerve. It is enclosed in a thin, adherent covering of connective tissue, continuous with the epineurium and the perineurium of its nerve, and sending branched processes into the interior; it consists of nerve-fibres, and nerve-cells connected by a dense substance, and by the processes from the investment of connective tissue. Ganglia vary in colour; some are a pearly white, some yellowish, and some rosy grey. During life they are somewhat translucent. See *G. cells*, and *G., nerve-fibres of*.

The nuclear collections of grey matter in the central nervous system have also received this name.

The term has also been applied to the class of organs to which the spleen, the thymus gland, the thyroid body, and the adrenals belong, and to the lymphatic glands.

In Surgery (*G. Überbein*), a ganglion is a more or less circumscribed distension of the synovial sheath of a tendon with synovia in a more or less altered condition. The neighbourhood of the wrist is a common seat, but ganglia are found also at the ankles, and at the hamstring tendons. A ganglion is painless unless inflamed, but generally produces a weakness of the affected

part. The contents may become thickened from inflammation, and concretions may form from deposits of plastic lymph or from coagulation of fibrin. See *G., compound*, and *G., simple*.

Also, applied to an enlarged bursa mucosa.

In Botany, the term ganglion has been applied to swellings on the mycelium of certain fungi.

G. abdomina'le. (*L. abdominalis*, belonging to the belly.) The semilunar ganglion of the abdomen.

G. abdomina'le centra'le. (*L. centralis*, belonging to the centre.) The *Solar plexus*.

G., ad'enoid. (*Ἀδὴν*, a gland; *εἶδος*, likeness.) A term applied to such bodies as the spleen, the thymus, and the adrenals.

G., An'dersch's. (*Andersch*.) The *G., petrous*.

G., an'nular. (*L. annulus*, a ring.) Same as *Annulus gangliiformis*.

G., Ar'nold's. (*Arnold*.) The otic ganglion.

G., auric'ular. (*L. auricula*, the outer ear. *G. Ohrknotten*.) The otic ganglion.

Also (*Auricle*), a synonym of *G., Ludwig's*.

G. auricula'rè Ar'noldi. (*L. auricularis*, belonging to the outer ear; *Arnold*.) The otic ganglion.

G., azy'gous. See *Azygous ganglion*.

G., Bid'der's. A ganglion of the heart, situated in its substance, opposite the left auriculo-ventricular valve.

Also, see *Bidder's ganglion*.

G., Boch'dalek's. The *G., supramaxillary*.

G., car'diac, great. (*Καρδία*, the heart. *G. grosser Herzknoten*.) The *G. of Wrisberg*.

G., car'diac, infe'rior. (*Καρδία*, the heart; *L. inferior*, lower. *G. der untere Herzknoten*.) The *G. of Wrisberg*.

G., car'diac, les'ser. (*Καρδία*. *G. der kleine Herzknoten*.) The *G., car'diac, superior*.

G., car'diac, mid'dle. (*Καρδία*. *G. mittleres Herzknoten*.) A small longish ganglion in the plexiform part of the middle cardiac nerve.

G., car'diac, supe'rior. (*Καρδία*. *L. superior*, upper. *G. der kleine Herzknoten*.) A small ganglion occasionally found on the superior cardiac nerve, underneath the inferior thyroid artery.

G. cardi'acum. (*Καρδία*. *G. Herzknoten*.) The *G. of Wrisberg*.

G. cardi'acum mag'num. (*Καρδία*. *L. magnus*, great. *G. der grosse Herzknoten*.) The *G., cardiac, inferior*.

G. cardi'acum mi'nus. (*Καρδία*; *L. minor*, less.) The *G., cardiac, superior*.

G. carot'icum. (*Carotic*. *G. carotisches Ganglion*.) A small ganglion at the commencement of the second bend of the internal carotid artery in the skull. It is sometimes absent, and sometimes is replaced by a plexus.

G. carot'icum infe'rius. (*L. inferior*, lower. *G. unterer Kopfschlagaderknotten*.) A small ganglion in the lower part of the carotid canal. Not generally admitted.

G. carot'icum inter'num. (*L. inter-nus*, within.) A term applied to the *G. carot'icum* when it lies higher up the artery than usual.

G. carot'icum supe'rius. (*L. superior*, upper. *G. oberer Kopfschlagaderknotten*.)

GANGLION.

A small ganglion in the upper part of the carotid canal. Not generally admitted.

G., carot'id. Same as *G. caroticum*.

G., Casser'ian. The *G., Gasserian*.

G., caverno'sum. (*L. caverna*, a cavern.) The *G. caroticum*.

G. cell pro'cesses. These present two forms. One of them is an unbranched pale process, which originates in the cell substance of the ganglion cells of the anterior horn of the grey substance of the spinal cord and other centres; it becomes sooner or later invested with a medullary sheath, and then constitutes a medullated nerve-fibre; occasionally two such processes are given off from a ganglion cell. The other form consists of processes which, after a short course, divide and ramify, becoming connected with or forming the neuroglia. They may be well seen in the ganglion cells of the posterior cornua of the spinal cord.

G. cell pro'cesses, branch'ed. Ganglion cell processes which, like those of the posterior horns of the grey matter of the spinal cord, ramify and fuse with the network forming the neuroglia.

G. cell pro'cesses, spir'al. In some bipolar ganglion cells, as is seen well in the cardiac ganglia of the heart, two fibres are given off in close proximity to each other. One pursues a straight course, the other winds round the straight fibres, and is of smaller diameter, refracts light more strongly, and blackens with gold chloride. It penetrates the cell deeply towards its centre. According to Bidder, after section of the vagus the spiral fibres degenerate, whilst the straight fibres do not.

G. cell pro'cesses, twist'ed. Same as *G. cell processes, spir'al*.

G. cells. (*F. globules ganglionaires*; *G. Ganglienzellen*.) The nerve-cells of the grey matter of the cerebro-spinal and the sympathetic systems.

The nerve-cells of a ganglion are usually round, oval, or pear-shaped, and are enclosed in a transparent capsule, having nucleated endothelial cell-plates on its inner surface, and continuous with the outer sheath or neurilemma of a nerve-fibre. When living the envelope is pale, distinctly limited, and apparently anhistous. The contents are very refracting, but no nucleus is visible; on pressure they escape from the capsule in yellowish drops, which do not mix with water, syrup, or serum, but take different shapes; sometimes they contain pigment granules. An hour or two after death the ganglion cell becomes granular; the capsule exhibits the flattened nuclei and appears fibrillated; the contents become solid and separate themselves from the envelope; and a reticulated nucleus containing one or two nucleoli becomes visible.

The ganglion cells vary in size and shape; some have a plain outline, others are spindle-shaped, many possess processes which are finely branched and form the nervous groundwork of the grey matter.

The ganglion cells of the grey matter of the spinal cord are multipolar or bipolar; those of the anterior cornu and of Clarke's column possess in addition an unbranched offshoot, called *Deiters' process*, which is continuous with the axis cylinder of a nerve; immediately below its origin it is much convoluted, and is covered with an extension of the capsule, which becomes the neurilemma of the nerve-fibre; the medullary

sheath of the nerve ceases at the convoluted part of the process. These cells are considered to be motor cells.

The ganglion cells of the medulla oblongata are of the same kind as those of the spinal cord, but vary much in size.

G. cells, apolar. (*L. a*, neg.; *polus*, a pole.) Ganglion cells which have a plain outline and possess no processes.

G. cells, Beale's. Bipolar ganglion cells, as found by Beale in the abdominal sympathetic of the frog, having one of the processes spirally twisted round the other, which is straight. The spiral fibre at its junction with the cell possesses many small nuclei.

G. cells, bipo'lar. (*L. bis*, twice; *polus*, the end of an axis.) Ganglion cells which possess two processes.

G. cells, cau'date. (*L. cauda*, a tail.) Large cells with one or more branched or unbranched processes.

G. cells, degenera'tion of. The ganglion cells undergo degeneration by the deposit of pigment or of lime salts, and by the formation of oil globules or of a hyaline substance.

G. cells, multipo'lar. (*L. multus*, many; *polus*, a pole.) Ganglion cells with more than two processes.

G. cells, stel'late. (*L. stella*, a star.) Ganglion cells with several processes projecting from different parts of their periphery.

G. cells, unipo'lar. (*L. unus*, one; *polus*, the end of an axis.) Ganglion cells with one process only.

G. cells, vacuola'tion of. (*L. vacuus*, empty.) The presence of one or more minute spots observed by Krauze, Schultze, and others, in many ganglion cells, varying in diameter from .0006 mm. to .001 mm. They are excentrically situated, and do not stain with carmine.

G. cerebel'li. (*Cerebellum*.) The *Corpus dentatum*.

G., cer'ebral. Same as *G., cerebroid*.

Also, see *Ganglia, cerebral*.

G. cer'eбри ant'erior. (*L. cerebrum*, the brain; *anterior*, in front.) The *Corpus striatum*.

G. cer'eбри poste'rius. (*L. posterior*, hinder.) The *Thalamus opticus*.

G., cer'eбroid. (*L. cerebrum*; *Gr. εἶδος*, likeness.) The uppermost of the two masses constituting the central nervous system of Arachnida. It is situated above the oesophagus, and sends nerve-filaments to the eyes and the chelicerae.

G., cervi'cal, infe'rior. The *G., cervical, lower*.

G., cervi'cal, low'er. (*L. cervix*, the neck. *F. ganglion cervical inférieure*; *G. unterer Halsknoten*.) The lowest or third ganglion of the cervical part of the gangliated cord of the sympathetic system. It is irregular in shape, but generally somewhat semilunar, the concavity looking upwards, and the two horns receiving the two filaments of connection with the middle cervical ganglion. It is situated in a depression between the transverse process of the last cervical vertebra and the neck of the first rib, behind the vertebral artery. It gives off external branches, some of which pass to the subclavian artery, and one to the first dorsal spinal nerve; from its upper surface, in conjunction with the first dorsal ganglion, it forms a plexus on the vertebral artery and its branches within the cranium; and from its inner surface, or from the first tho-

GANGLION.

racie ganglion, it gives off the lower cardiac nerve. It receives from the middle cervical ganglion the *Ansa Vieussentii*, and is sometimes connected with the phrenic nerve.

G., cervical, middle. (F. *ganglion cervical moyen*; G. *mittlerer Halsknoten*.) This, the smallest of the cervical ganglia, is very variable in position and form. It generally lies opposite the upper part of the sixth cervical vertebra, in close proximity to the inferior thyroid artery. It is sometimes absent, and is then represented by the *Ganglia accessoria*. It is connected with the upper cervical ganglion by one or two filaments, and is united to the lower cervical ganglion by two or more branches, some of which pass in front of the subclavian artery and form the *Ansa Vieussentii*, and the other behind is the main trunk. Its external branches join the fifth and sixth cervical nerves; and of its internal branches some run along the inferior thyroid artery to the thyroid body, where they join the recurrent laryngeal and external laryngeal nerves, and, while on the artery, the upper cardiac nerve; and others unite to form the middle cardiac nerve. It is sometimes connected with the phrenic nerve.

G., cervical, of pneumogastric. (L. *cervix*, the neck.) The *G. of pneumo-gastric, lower*.

G., cervical, superior. The *G., cervical, upper*.

G., cervical, upper. (F. *ganglion cervical supérieur*; G. *oberer Halsknoten*.) The largest of the cervical ganglia, 20 mm. long and 3–6 mm. broad, lies behind the internal carotid artery on the rectus capitis anticus major muscle, opposite the second and third cervical vertebrae. It is fusiform in shape, sometimes constricted in one or more places, and reddish grey in colour. It is connected with the first four spinal cervical nerves by slender branches from its outer side, with the lower ganglion of the pneumo-gastric nerve, and with that ganglion at its root, with the hypo-glossal nerve, and with the petrous ganglion of the glosso-pharyngeal nerve; its other branches are the carotid nerve, which accompanies the carotid artery into the skull and divides into two branches, the external of which forms the carotid plexus, and the internal the cavernous plexus; pharyngeal branches to form the pharyngeal plexus; the upper cardiac nerve; and the nervi molles for the trunk of the external carotid artery and its branches.

G. cervicalē inferius. (L. *cervix*, the neck; *inferior*, lower.) The *G., cervical, lower*.

G. cervicalē magnum. (L. *magnus*, great.) The *G., cervical, upper*.

G. cervicalē medium. (L. *cervix*; *medius*, in the middle.) The *G., cervical, middle*.

G. cervicalē primum. (L. *primus*, first.) The *G., cervical, upper*.

G. cervicalē superius. (L. *superius*, upper.) The *G., cervical, upper*.

G. cervicalē supremum. (L. *supremus*, highest.) The *G., cervical, upper*.

G. cervicalē tertius. (L. *tertius*, the third.) The *G., cervical, lower*.

G. cervicalē thyroideum. (Thyroid body.) The *G., cervical, middle*, from its position.

G. ciliarē. (L. *cilium*, an eyelash.) A term for the *Corpus dentatum*.

Also, same as *G., ciliary*.

G. ciliarē accessorium inferius. (L. *accessio*, an addition; *inferior*, lower.) A ganglion, very rarely present, situated below the ophthalmic ganglion, and at the junction of the naso-ciliary nerve with the ciliary nerves.

G. ciliarē accessorium superius. (L. *accessio*; *superior*, upper) A ganglion, very rarely present, situated above the ophthalmic ganglion, and at the junction of the naso-ciliary nerves with the ciliary nerves.

G., ciliary. (L. *cilium*, an eyelash. G. *Ciliarknoten*, *Blendungsknoten*.) The *G., ophthalmic*.

G., Cloquet's. (Cloquet, a French surgeon.) The *G., naso-palatine*.

G., coccygeal. (Coccyx. G. *Steissknoten*.) The *G., impar*.

G. cœliacum. (Κοιλία, the belly.) The semilunar ganglion.

G., com pound. The form of disease of this name which consists in a chronic effusion into the common sheath of a group of tendons, which often attains considerable size, and becomes irregular in shape from constriction by ligaments or other tissues. The sheath is often thickened, vascular, and lined with a friaged, velvety membrane, and the contained fluid thinner than in simple ganglion; it often encloses solid particles known as melon-seed bodies. Compound ganglion is not infrequently associated with disease of the carpal bones.

Some writers employ this term to describe the form in which, probably from strain or violence, the fibrous sheath of the tendon has given way, and the synovial membrane gradually protrudes through it, so that a greater or smaller tumour is formed.

G. cor'puscles. Same as *G. cells*.

G., Cor'ti's. The *G. spirale*.

G., cranio-cervical. (Κρανιον, the skull; L. *cervix*, the neck.) A term for the upper cervical ganglion, in reference to its connections.

G., diaphragmatic. (Διάφραγμα, a partition wall; the diaphragm.) Same as *G., phrenic*.

G., diffuse. (L. *diffusus*, spread out.) Same as *G., compound*.

G., Eh'renritter's. The jugular ganglion of the glosso-pharyngeal nerve.

G. fibres. See *G., nerve-fibres of*.

G., fron'tal. (L. *frons*, the forehead. G. *Stirnknöten*.) A single ganglion found at the anterior extremity of the nervous system of some Arthropoda, above the œsophagus and at the junction of two nervous twigs arising from the cerebroid ganglion.

G. fusiformē. (L. *fusus*, a spindle; *forma*, shape.) The superior cervical ganglion, from its shape.

G. Gasser'i. See *Gasser, ganglion of*.

G., Gasser'ian. See *Gasser, ganglion of*.

G., geniculate. (L. *geniculatus*, bended as a knee. F. *ganglion geniculé*; G. *Knieknöten*.) A small, reddish, triangular ganglion at the genu of the facial nerve. It lies with its apex against the hiatus Fallopii; it receives the nervus petrosus superficialis major and the upper branch of the nervus petrosus superficialis minor.

G. geniculi. Same as *G., geniculate*.

G. glob'ules. Same as *G. cells*.

G. habenu'lae. See *G. of habenula*.

G., hypogast'ric. (Υπό, under;

GANGLION.

γαστήρ, the belly.) A small ganglionic plexus, 13 to 19 mm. in diameter, on the outer surface of the lateral wall of the uterus, behind the lower end of the ureter.

G., hypogloss'al. (ὑπό, under; γλῶττις, the tongue.) A fusiform ganglion found on the hypoglossal nerve near its origin in the horse.

G. im'par. (L. *impar*, uneven in number. G. *Steissknoten*.) A single median ganglion frequently found on the loop which connects the lower ends of the two gangliated cords of the sympathetic trunk in the pelvis. It is situated on the front surface of the coccyx, and is connected by delicate twigs with the lowest sacral nerves and the coccygeal plexus. It supplies the coccygeal gland.

G., intercarotic. (L. *inter*, between; *carotic*.) A small yellowish-red ganglion lying in the angle at the springing of the external and internal carotids from the common carotid. It is 5 to 7 mm. long, 2 to 4 broad, and 1 to 2 thick; it contains a vascular plexus.

G., intercarot'id. The G., *intercarotic*.

G., interpeduncular. (L. *inter*, between; *pedunculus*, a small foot.) A collection of nerve-cells lying between the peduncles of the brain, which is connected with the ganglion of the habenula by a bundle of white fibres.

G. intervertebra'lē cap'itis ante'rius. (L. *inter*, between; *vertebra*, a spine bone; *caput*, the head; *anterior*, in front.) The *Gasserian ganglion*.

G. intervertebra'lē cap'itis poste'rius. (L. *posterior*, behind.) The ganglion resulting from the fusion of the two jugular ganglia of the glosso-pharyngeal and vagus nerves, before they are differentiated in the process of development.

G., jug'ular. The G., *jugular*, of glosso-pharyngeal.

Also, the G. of *pneumo-gastric*, upper.

G., jug'ular, of glos'so-pharynge'al. (Jugular. G. *Drosseladerknoten*.) A small ganglion, from .09"—.045" long, on the lower filaments of the glosso-pharyngeal nerve in the upper part of the jugular foramen. It is not always present, and is by some thought to be a detached part of the petrous ganglion.

G., jug'ular, of pneu'mo-gas'tric. The G. of *pneumo-gastric*, upper.

G., jug'ular, of va'gus nerve. The G. of *pneumo-gastric*, upper.

G., Laumon'ier's. The G. *caroticum superius*.

G., lenticular. (L. *lenticulus*, a little lentil. G. *Linsenknotten*.) The G., *ophthalmic*.

G., ling'ual. (L. *lingua*, the tongue. G. *Zungenknotten*.) The G., *submaxillary*.

G. lingua'lē mollē. (L. *lingualis*, belonging to the tongue; *mollis*, soft.) A small ganglion sometimes found on the lingual plexus of the upper cervical ganglion of the sympathetic.

G., Lud'wig's. One of the cardiac ganglia situated in the wall of the right auricle.

G., lymphatic. A term for a *Lymphatic gland*.

G. mag'nus Wrisberg'ii. (L. *mag-nus*, great.) See G. of *Wrisberg*.

G. maxilla'rē. (G. *Kieferknotten*.) The G., *submaxillary*.

G. maxil'lo-tympan'ic. (L. *maxilla*,

the jaw; *tympanum*.) The otic ganglion, so called from its position.

G., Meck'el's. (G. *der Meckel'sche Knotten*.) The G., *spheno-palatine*.

G. Meckel'ii mi'nus. (L. *minor*, less. G. *kleiner Meckel'sche Knotten*.) The G., *submaxillary*.

G., Meis'sner's. The ganglia of the plexus of Meissner.

G. mesenter'icum infe'rius. (Μέσος, in the middle; ἑντερον, an intestine; L. *inferior*, lower.) A very small ganglion contained in the *Plexus mesentericus inferior*.

G. mesenter'icum supe'rius. (L. *superior*, upper.) A large ganglion found among many very small ganglionic masses in the semilunar ganglion immediately underneath the origin of the superior mesenteric artery.

G., Müller's. (Müller.) The jugular ganglion of the glosso-pharyngeal nerve.

G., na'sal. (L. *nasalis*, belonging to the nose. G. *Näsenknotten*.) The G., *spheno-palatine*.

G., na'so-pal'atine. (L. *nasus*, the nose.) The same as *Plexus, naso-palatine*.

G., nerve fi'bres of. The continuation of the fibres of a nerve through a ganglion. The funiculi of a nerve on entering a ganglion become deprived of their perineurium, which joins the connective tissue surrounding the ganglion, and regain it on passing out on the other side. Some nerve-fibres pass through the ganglion unconnected with nerve-cells, but the most become continuous with a branch of a ganglion cell; sometimes, as in a bipolar cell, joining it at one side and leaving it at another, and sometimes, as in a unipolar cell, dividing in a T-shaped fashion, or bifurcating at a node of Ranvier, one branch passing to the ganglion cell and the other pursuing the course of the nerve.

G. ner'vi splanchn'ici. The G., *splanchnic*.

G. ner'vi splanchn'ici mino'ris. (L. *minor*, less.) The G. *splanchnico-renal*.

G. ner'vi va'gi infe'rius. (L. *vagus*, nerve; *inferior*, lower.) The G. of *pneumo-gastric*, lower.

G. ner'vi va'gi radi'cis. (L. *radix*, a root. G. *Wurzelknotten des Lungenmagennerven*.) The G. of *pneumo-gastric*, upper.

G. ner'vi va'gi supe'rius. (L. *superior*, upper.) The G. of *pneumo-gastric*, upper.

G. ner'vi va'gi trun'ci. (L. *truncus*, the stem. G. *Stammknotten des Lungenmagennerven*.) The G. of *pneumo-gastric*, lower.

G., ner'vous. A hard painful swelling in the course of a nerve; a *Neuroma*.

Also, a ganglion of a nerve; see under chief heading.

G., oesophag'o-gas'tric. A ganglion, situated on each side of the head beneath the oesophagus in Opisthobranchiata, which supplies branches to the salivary glands, oesophagus, and sympathetic ganglia of the stomach.

G. of An'dersch. The G., *petrous*.

G. of Ar'nold. The G., *otic*.

G. of circumflex nerve. A gangliform enlargement on the branch of the circumflex nerve of the arm, which supplies the teres minor muscle.

G. of crus'ta. (L. *crusta*, rind.) Meyner's term for the nucleus caudatus and the nucleus lenticularis of the corpus striatum, and the substantia nigra of Sömmerring as giving

GANGLION.

origin to the fibres of the crusta of the crus cerebri.

G. of fa'cial nerve. A reddish gangliform swelling on the facial nerve at the hiatus Fallopii, from which the motor root of Meckel's ganglion is given off. It also communicates with the otic ganglion and with the sympathetic branches around the middle meningeal artery.

G. of fifth nerve. The *G. of Gasser*.

G. of Gas'ser. See *Gasser, ganglion of*.

G. of habe'nula. A collection of nerve-cells in the *Trigonum habenulae*, which sends a bundle of nerve-fibres to the interpeduncular ganglion.

G. of pneu'mo-gas'tric, low'er. (Πνεύμων, the lung; γάστρην, the stomach. *G. unterer Knoten des Lungenmagennerven*.) A flattened, fusiform, reddish ganglion, about '8" long and '17" broad, on the trunk of the pneumo-gastric nerve just as it passes from the jugular foramen. It communicates with the hypo-glossal nerve, with branches of the two uppermost cervical nerves, and with the upper cervical ganglion.

G. of pneu'mo-gas'tric, up'per. (*G. oberer Knoten des Lungenmagennerven*.) An ovoid, greyish ganglion, about '2" in diameter, on the trunk of the pneumo-gastric nerve as it arrives in the jugular foramen. It communicates with the facial nerve, the petrous ganglion of the glossopharyngeal nerve, the spinal accessory nerve, and the cord of the sympathetic.

G. of portio dura. (*L. portio, portion; durus, hard.*) The *G. of facial nerve*.

G. of poste'rior interos'seous nerve. A gangliform swelling on the posterior interosseous nerve on the carpus, which sends twigs to the ligaments and the articulations of the carpus.

G. of Ribes. A small ganglion, said by Ribes to be found in the plexus formed at the point of junction of the cranial prolongations of the gangliated cords of the sympathetic of both sides on the anterior communicating artery of the brain. Its existence is doubted.

G. of si'nus of ve'na ca'va. The *G., Remak's*.

G. of tegmen'tum. (*L. tegmentum, a covering.*) Meynert's term for the optic thalamus and the corpora geniculata, the corpus mamillare, the ganglion interposed amongst the loops of the crus cerebri, and the pineal gland, which jointly give origin to the fibres of the tegmentum of the crus cerebri.

G. of va'gus root. The *G. of pneumo-gastric, upper*.

G. of va'gus trunk. The *G. of pneumo-gastric, lower*.

G. of Vieus'sens. The solar plexus.

G. of Wris'berg. A small ganglion in the superficial cardiac plexus at the point of junction of the superficial cardiac nerve of the sympathetic of the left side with the lower cervical cardiac branch of the left pneumo-gastric nerve.

G. oliva'rë. (*L. oliva, an olive.*) The upper cervical ganglion of the sympathetic, so called from its shape.

Also, the *G. of pneumo-gastric, lower*.

G., ophthal'mic. (Ὠφθαλμός, the eye. *F. ganglion ophthalmique; G. Augenknoten*.) A small, reddish, lenticular ganglion, about '1" long, lying on the outer side of the optic nerve

between it and the rectus externus muscle among the fat at the back of the orbit. It receives at the upper angle of its posterior border a sensitive root, long and thin, from the nasal branch of the ophthalmic nerve; at the lower angle of its posterior border a motor root, short and thick, and sometimes double, from the branch of the third nerve to the inferior oblique muscle; and just below the sensitive root a third root from the carotic plexus of the sympathetic. From the anterior border six or eight twigs are given off, the short ciliary nerves.

G., ophthal'mic, acces'sory. See *G. ciliare accessorium superius* and *G. ciliare accessorium inferius*.

G., opt'ic, ba'sal. (Ὀπτικός, belonging to the sight; βάσις, a base.) A small mass of grey matter on the outer side of the tuber cinereum, which sends fibres to the tractus opticus, near which it lies, and to the optic nerve.

G. opt'icum. A small ganglion observed by Darwin in Pollicipes, one of the Cirripedia, situated between and in front of the cerebral ganglion.

G., orb'itar. (*L. orbita, an orbit.*) The *G., ophthalmic*.

G., o'tic. (ὠς, the ear. *F. ganglion otique; G. Ohrknoten*.) A small, oval, flattened, reddish-grey ganglion, about '17" in its antero-posterior diameter, on the inferior maxillary nerve just below the foramen ovale, lying upon the outer surface of the Eustachian tube and in front of the middle meningeal artery. Its motor fibres are derived through its short root from the inferior maxillary nerve, and through its long root from the facial; its sensory fibres are derived through its long root from the glossopharyngeal nerve; and its sympathetic fibres arise from the plexus on the middle meningeal artery. It communicates with the auriculo-temporal nerve, and with the chorda tympani, and it sends a branch each to the tensor tympani and the tensor palati, many of the fibres of which spring from the inferior maxillary nerve in common with those of the internal pterygoid nerve.

G., pe'dal. (*L. pes, a foot.*) The ganglion which supplies the nerves of the foot of Mollusca. It forms, with the cerebroid ganglion and the connecting filaments, a collar round the oesophagus.

G., petro'sal. Same as *G., petrous*.

G. petro'sum. The same as *G. petrous*.

G., pe'trous. (*Petrous bone. G. Felsenknoten*.) A small, greyish, ganglionic enlargement, '17" to '25" long, of the glossopharyngeal nerve, which lies in a depression at the lower end of the groove in the lower border of the petrous bone, between the carotid foramen and the jugular fossa. It gives origin to Jacobson's nerve, and communicates with the upper cervical ganglion of the sympathetic, with the auricular branch of the pneumo-gastric nerve, and generally with its jugular ganglion also.

G., pharynge'al. (Φάρυγξ, the gullet.) A small ganglion in the pharyngeal plexus of the pneumogastric nerve. Sometimes there are more than one.

G. pharynge'um mol'le. (*L. mollis, soft. G. weiches Schlundknötchen*.) Same as *G., pharyngeal*.

G., phren'ic. (Φρήν, the diaphragm.) A small ganglion on the under surface of the right side of the diaphragm near the adrenal, formed at the junction of sympathetic branches from the

GANGLION.

solar plexus with one or two twigs from the right phrenic nerve. It gives off branches to the hepatic plexus, the right adrenal, and the inferior vena cava.

G., plex'iform. (L. *plexus*, a plaiting; *forma*, shape.) The *G.* of *pneumo-gastric*, *lower*.

Also, Lecat's term for the Gasserian ganglion.

G., Re'mak's. One of the cardiac ganglia situated near the opening of the inferior vena cava.

G. rhi'nicum. (Piv, the nose.) The *G.*, *spheno-palatine*, because it supplies the mucous membrane of the nose.

G. sacra'lë access'o'rium supre'mum. (L. *sacralis*, belonging to the sacrum; *accedo*, to be added to; *supremus*, highest.) A small additional ganglion sometimes found on the inner side of the uppermost of the sacral ganglia.

G., Schach'er's. The *G.*, *ophthalmic*.

G., Schmie'del's. The *G. caroticum inferius*.

G. semiluna'rë. (L. *semilunaris*, belonging to a half moon.) The *G.* of Gasser.

Also, see *Ganglia*, *semilunar*.

Also, a synonym of *G.*, *ophthalmic*.

G. semiluna'rë abdom'inis. See *Ganglia*, *semilunar*.

G. semiluna'rë Gasse'ri. See *Gasser*, *ganglion of*.

G. semiluna'rë ner'vi trigem'ini. (L. *semilunaris*; *nervus*, a nerve; *trigeminus*, threefold.) A synonym of *Gasser*, *ganglion of*.

G., sim'ple. The form of disease of this name which is a rounded, smooth, elastic swelling occurring in connection with the sheath of a tendon. It may be a dilatation of the sheath, or a hernial protrusion of the synovial membrane through an aperture in the fibrous part of the sheath, or, according to Paget, it is a cystic transformation of the cells enclosed in the fringe-like process of the synovial membrane lining the sheath. The ganglion which proceeds from a hernial protrusion is by some called a *G.*, *compound*.

G. sola'rë. The *Solar plexus*.

G. spermat'ico-rena'lë. (L. *sperma*, seed; *ren*, the kidney.) A ganglion found in the plexus spermaticus. It has a diameter of 2–3 mm. It receives two twigs from the second and third lumbar ganglia; and is sometimes divided into two, the *G. spermaticum inferius* and the *G. spermaticum superius*.

G. spermat'icum infe'rius. (L. *inferior*, lower.) The smaller of the two ganglia which sometimes represent the *G. spermaticorenale*.

G. spermat'icum supe'rius. (L. *superior*, upper.) The larger of the two ganglia which sometimes represent the *G. spermaticorenale*.

G., spheno'id'al. (*Sphenoid bone*.) The *G.*, *spheno-palatine*.

G., spheno-pa'latine. (*Sphenoid bone*; *palatine bone*. *G. Gaumenkeilbeinknoten*.) A small reddish ganglion situated in the sphenomaxillary fossa close to the sphenopalatine foramen. It is triangular, with a convex outer surface, and about 2" in diameter. It is closely connected with the posterior fibres of the sphenopalatine branch of the superior maxillary nerve, which constitute its sensitive root. Its motor

root is constituted by the great superficial petrosal nerve, which goes to the facial; and its sympathetic root is derived from the carotid plexus, through the large deep petrosal nerve. It gives off many branches; ascending branches to the orbit, to the mucous membrane of the posterior ethmoidal and sphenoidal sinuses, to the sixth nerve, and to the ophthalmic ganglion; descending branches, the anterior, posterior, and external palatine nerves; internal branches, the upper nasal, and the naso-palatine nerves; and posterior branches, the Vidian, and the pharyngeal nerves.

G. spina'lë in'fimum. (L. *spinalis*, belonging to the spine; *infimus*, lowest.) The *G. impar*.

G. spira'lë. (L. *spira*, a coil. *F. ganglion spiral*; *G. Spiralganglien*.) The continuous ganglionic cord in the spiral canal of the modiolus, through which the filaments of the cochlear nerve pass to their distribution on the lamina spiralis. The cells of the ganglion are bipolar, and one is always connected with each nerve fibre.

G., splanch'nic. (Σπλάνχνον, a viscous.) A small ganglion occasionally found on the great splanchnic nerve as it crosses the eleventh or the twelfth dorsal vertebra. It is more frequent on the right side; according to Cunningham it is constantly present.

Also, a term for each of the *Ganglia*, *semilunar*.

G. splanch'nico-suprarena'lë. (L. *splanchnicus*, relating to the viscera; *supra*, above; *ren*, the kidney.) A small ganglion in the suprarenal plexus at the point of junction of the branches from the smaller splanchnic nerve; the right side ganglion is the larger.

G. stella'tum. (L. *stella*, a star.) The inferior cervical ganglion of many mammals, such as the dog and rabbit, which itself is the analogue of the middle cervical ganglion of man.

Also, the large ganglion on the anterior wall of the mantle of Cephalopoda.

The term has also been applied to the middle cervical ganglion of man.

G., subling'ual. (L. *sub*, under; *lingua*, the tongue.) A small ganglion on the filaments of the lingual nerve which pass to the sublingual gland. It receives some branches from the plexus caroticus externus. The presence of ganglionic cells is denied by some.

G., submaxill'ary. (L. *sub*, under; *maxilla*, the jaw. *F. ganglion sous-maxillaire*; *G. Kieferknoten*.) A small, reddish, ovoid or triangular ganglion situated above the deep portion of the submaxillary gland and below the lingual nerve. Its motor root is derived through the lingual nerve, from the chorda tympani; the sensitive root is from the lingual nerve; and the sympathetic root from the plexus on the facial artery. It gives off several small nerves to the submaxillary gland, the pharyngeal glands, the mucous membrane of the mouth, and Wharton's duct; the anterior connection with the lingual nerves is probably a branch from the ganglion to it, and it also communicates with the hypoglossal nerve.

G. supramaxilla'rë poste'rius. (L. *posterior*, hinder.) The same as *G.*, *supramaxillary*.

G., supramaxill'ary. (L. *supra*, above; *maxilla*, the jaw. *G. Oberkieferknoten*.) A

GANGLIONARY—GANGRENODES.

small ganglion said to be found in the superior dental plexus above the root of each canine tooth.

G., supraesophage'al. (L. *supra*, above; *œsophagus*, the gullet. G. *oberes Schlundganglien*.) The G., *cerebroïd*.

G., supraren'al. The G. *splanchnico-suprarenale*.

G., temp'oral. (L. *temporalis*, belonging to the temples.) A small ganglion in the sympathetic plexus at the origin of the posterior auricular branch of the external carotid artery.

G. tempora'lè mollè. (L. *mollis*, soft.) The G., *temporal*.

G., tentac'ular. A ganglion situated on each side of the head in Opisthobranchiata, supplying branches to the tentacles.

G., thoracic. (Θώραξ, the chest.) The lower of the two masses which constitute the central nervous system of the Arachnida. It is situated beneath the œsophagus, is discoid in form, and is connected by two cords with the cerebroïd ganglion. It supplies the foot-jaws and the feet, and furnishes from its posterior extremity a cord, which is distributed to the abdomen.

G. thorac'icum pri'mum. (L. *thorax*, the chest; *primus*, first.) A name by some for the inferior cervical ganglion of the sympathetic.

G. thyreoïdeum infe'rius. (L. *inferior*, lower.) The middle cervical ganglion.

G. thyreoïdeum supe'rius. (L. *superior*, upper.) The upper cervical ganglion.

G., thyroïd. (Thyroid.) The middle cervical ganglion, from its position on the inferior thyroid artery.

G. transver'sum. (L. *transversus*, across.) The semilunar ganglia of the abdomen, from their position and combined shape.

G. trunci nerv'i vagi. The G. of *pneumo-gastric*, lower.

G., ventric'ular. (Ventricle.) The G., *Bidder's*.

G. vertebra'lè. (L. *vertebra*, a spine bone.) The lower cervical ganglion of the gangliated cord of the sympathetic.

G. vestibula'rè. (Vestibule.) The *Intumescentia ganglioformis*.

Ganglionary. Same as *Ganglionic*.

Ganglion'es. Plural of *Ganglion*.

G. nervo'rum. (L. *nervus*, a nerve.) The ganglions of the nerves.

Ganglioneura. (Γάγγλιον, a nerve-knot; *νεῦρον*, a nerve.) Rudolphi's term for the animals whose nervous system is characterised by the presence of ganglia connected by nervous cords, being the Mollusca and the Articulata; the former have been called *Heterogangliata*, the latter *Homogangliata*.

Ganglion'ic. (Ganglion.) Relating to a *Ganglion*.

G. centres. The masses of grey nervous tissue lying between the decussation of the anterior pyramids of the spinal cord and the floor of the lateral ventricles, chief of which are the corpora striata and the thalami optici.

G. column of anterior cornu. (L. *cornu*, a horn.) The series of large cells in the anterior cornu from which the anterior or motor roots spring.

G. columns of spinal cord. The separate longitudinal groups of ganglion cells traversing the spinal cord in the direction of

and parallel to its axis. The chief are the ganglionic column of the anterior cornu, Clarke's column, and the column of the intermediolateral tract. See under *Spinal cord*, *columns of*.

G. fo'ci. (L. *focus*, a hearth.) The same as G. *centres*.

G. lay'er of retina. See *Retina*, *ganglionic layer of*.

G. nerve. A nerve which possesses in some part of its course a ganglion.

Especially applied to the sympathetic nerve and its branches.

G. nerv'ous sys'tem. The sympathetic nervous system.

G. tis'sue. The tissue of a *Ganglion*.

G. typhus. A synonym of *Enteric fever*.

Ganglion'ica. (Γάγγλιον.) Medicines which are believed to act on the sympathetic or ganglionic nervous system.

Ganglioni'tis. Same as *Gangliitis*.

G., mesenter'ic. Inflammation of the mesenteric glands.

Gangliopathy. (Γάγγλιον, a nerve-knot; *πάθος*, suffering.) A condition in which debility is associated with paralysis, hyperæsthesia, or dysæsthesia of the solar plexus and the central ganglia of the sympathetic system; according to Tilt.

Ganglium. Same as *Ganglion*.

G. Gasser'i. Same as *Gasser*, *ganglion of*.

Gangræ'na. Same as *Gangrene*.

Also (G. *Krebsgeschwür*), formerly a synonym of *Lupus exedens*.

G. alopec'ia. Same as *Alopecia*.

G. ca'ries. Same as *Caries*.

G. col'is. (L. *colis*, the male organ.)

Gangrene of the penis.

G. nosocomia'lis. (L. *nosocomium*; from Gr. *νοσoκομείον*, a hospital.) See *Gangrene*, *hospital*.

G. nosocomio'rum. (L. *nosocomium*, a hospital.) Hospital gangrene.

G. o'ris. (L. *oris*, the mouth. F. *stomacæe*; G. *Mundfäule*.) Gangrenous stomatitis.

G. os'sis. (L. *os*, a bone.) A synonym of the diseases formerly included under the term *Spina ventosa*.

G. os'sium. (L. *os*, a bone.) Caries of bone.

G. Pot'tii. (Pott.) A term for senile gangrene.

G. pulmo'nis. (L. *pulmo*, a lung.) See *Lung*, *gangrene of*.

G. seni'lis. See *Gangrene*, *senile*.

G. sphac'elus. Same as *Sphacelus*.

G. tonsilla'rum. (L. *tonsillæ*, the tonsils.) Same as *Sore throat*, *putrid*.

G. ustilagin'ea. (Ustilago.) A term for the gangrene produced by the ergot of rye. See *Ergotism*.

G. vulvæ. (L. *vulva*, the external generative organs of the female.) Same as *Noma*.

Gangræn'an'chonè. (Γάγγραινα, gangrene; *ἀγχόνη*, a throttling. G. *Brandbräune*.) Hecker's term for an epidemic form of *Angina gangrænosa*.

Gangrænescen'tia. (Late L. *gangrænesco*, to become gangrenous.) The tendency to gangrene; the appearance of small spots of gangrene.

Gangræ'nic. (Γαγγραινικός.) Gangrenous.

Gangræno'des. (Γαγγραινώδης, from

GANGRÆNODYSPNŒA—GANGRENE.

γάγγραινα, gangrene; εἶδος, likeness.) Like to gangrene.

Gangrænodyspnœa. (Γάγγραινα; δύσπνοια, difficulty of breathing.) The difficulty of breathing accompanying gangrene of the lung.

Gangrænoid. (Γάγγραινα; εἶδος, likeness.) Like to gangrene.

Gangræno'ma. (Γάγγραινα.) A gangrene.

Gangrænop'sis. (Γάγγραινα; ὄψις, the countenance.) Gangrenous erosion of the cheeks; gangrenous stomatitis.

Also, the same as *Blepharitis gangrænosa*.

Gangræno'sis. (Γάγγραινωσις.) The state of becoming gangrenous.

Gangrene. (F. *gangrène*; from L. *gangrena*; from Gr. γάγγραινα, an eating sore which ends in mortification; from γρᾶνω, to gnaw. I. *cancerena*; S. *gangrena*; G. *Gangrän*, *heisser Brand*.) The death of a part of the body, extending over some considerable area, in a visible mass. It is caused by an interference with, or by an arrest of, the supply of blood to the part, as by thrombosis, or by the action of ergot, or by degeneration of the coats of the arteries; or it may be caused by destruction of the properties of the corpuscles of the blood, such as occurs from the action of prolonged cold. The gangrenous part at first is dull white, cold, and pulseless, then it may become moist and soft, or dry and mummified; if life lasts long enough a line of demarcation is formed between the living and the dead parts, indicating the seat of an ulcerative process, which in time effects the separation of the dead parts. See subheadings.

Some authors speak of gangrene as the first stage of mortification, of which the second is sphacelus.

G., acute. (L. *acutus*, sharp.) Gangrene which pursues its course rapidly, and is accompanied with much constitutional disturbance.

G., acute inflammatory. Harrison Cripps's term for the form of gangrene which results from acute violent inflammation following upon the inoculation of some septic material.

G., acute septic. See *G., septic, acute*.

G. by cadaverisation. (F. *gangrène par cadavérisation*.) Cruveilhier's term for a rare form of gangrene, in which the parts resemble those of a dead body as to appearance, coldness, and colour, and the epidermis is easily rubbed off. It usually, when it occurs, only precedes general death of the body, and results from a total stoppage of the blood supply of the part.

G. by coagulation. (L. *coagulo*, to cause to curdle.) Death of a part which contains a coagulable protoplasm by a special modification of the molecular condition of the tissues, in consequence of which they become more solid or hard. Such is the cause of the non-hæmorrhagic infarctions of the kidney, of the peculiar characters of the diphtheritic and croupous inflammations, and of the condition of the parts around colonies of bacteria, according to Cohnheim.

G. by colliquation. (L. *colliquesco*, to melt.) Same as *G., soft*.

G. by liquefaction. (L. *liquidus*, fluid; *facio*, to make.) Same as *G., soft*.

G. by softening. (F. *gangrène par ramollissement*.) Same as *G., soft*.

G., caseous. (L. *caseum*, cheese.) The

deep molecular gangrene of the tissues, consecutive to the infarctus of organs, which results in fibro-plastic or cheesy granulations, or infiltration. The same as *Caseation*.

G., chronic. (L. *chronicus*, long-lasting.) Gangrene which pursues a slow course.

G., cold. The form which is not preceded by fever.

G., constitutional. (L. *constitutio*, disposition.) Gangrene depending on constitutional defects, such as diabetes or degeneration of the circulatory system.

G., contagious. A term which includes hospital gangrene from its mode of origin.

G., cutaneous multiple. (L. *cutis*, the skin; *multiplax*, manifold.) A condition in which small gangrenous spots appear in different parts of the skin, which often extend deeply into the subcutaneous structures. It occurs most frequently in unhealthy children.

G., diabetic. (Διαβήτης, diabetes.) The form of gangrene which occurs sometimes during the course of diabetes. It is generally accompanied by much inflammation, and its progress is rapid. It may occur in the form of carbuncle or as a gangrene after an operation.

G., diphtheritic. (*Diphtheria*.) The molecular gangrene of the skin sometimes accompanying diphtheria, and consisting of greyish, sanguinolent, phagedænic ulcers covered with black dead patches.

G., dry. (F. *gangrène sèche*; G. *trockener Brand*.) The form in which, from the quantity of blood in the diseased structure being small, the gangrenous part becomes shrivelled, leathery, dark-coloured, and dry.

G., embolic. (Ἐμβολος, anything put in.) Gangrene produced by the blocking of an artery by means of an embolus. It may occur during the progress of febrile disorders, where there is some concurrent or antecedent heart disease. Its onset is sudden and marked by great pain in the part supplied by the blocked vessel, which is numb and cold. It is not generally accompanied by much constitutional disturbance.

G.-fe'ver. The fever which accompanies extensive and extending moist gangrene. It is of the character of septicæmia.

G. from ergot. See *Ergotism, gangrenous*.

G. from frost-bite. See *Frost-bite*.

G., gaseous. The form in which the tissues are infiltrated with gases evolved from the diseased parts.

G., glyco'hæ'mic. See *Glyco'hæmic gangrene*.

G., hos'pital. See *Hospital gangrene*.

G., hot. The form which is preceded by inflammation and fever.

G., hu'mid. (L. *humidus*, moist.) Same as *G., moist*.

G., idiopath'ic. (Ἰδιος, peculiar; πάθος, affection.) The form of gangrene which is produced by some condition special to the sufferer himself, such as thrombosis or diabetes; in contradistinction to a gangrene produced by some external cause, such as violence.

G., lo'cal. Gangrene caused by injuries of a part, or of a vessel leading to a part.

G., metastat'ic. (Μετάστασις, a being put into a different place.) The gangrene which sometimes attacks metastatic deposits.

G., mix'ed. A term which has been applied

GANGRENE.

to cases in which the area of moist gangrene is interspersed with patches of dry gangrene; and also to those cases in which the slough is not quite dry and yet not very moist.

G., moist. (F. *gangrène humide*; G. *feuchter Brand*.) The form in which, from the abundance of serum or of blood in the diseased structure, the gangrenous part rapidly decomposes, and becomes stained with the colouring matter of the blood. The putrefaction is accompanied, if not caused, by the growth of low organisms, vibrios, spirilla, and bacteria, especially the forms called *Termo* and *Catenula*. Sometimes the spores of Cryptogams, such as *Oidium* and *Aspergillus*, are found, as well as Infusoria, such as *Monas* and *Cercomonas*. The cells of the various structures become granular and rapidly disintegrate, the fibrous structures dissolve, and a dirty greyish, or blackish, or yellowish, stinking, semifluid mass results, which contains ammonium sulphide, hydrogen sulphide, butyric acid, margaric acid, tyrosin, and other fatty products, with salts and pigment.

G., molecular. (L. *moleculus*, dim. of *moles*, a mass.) A term for *Ulceration*, in allusion to the necrosis of minute parts or molecules of the tissue.

G., mummified. Same as *G., dry*, from the likeness of the diseased structures to a mummy.

G., o'dourless. Same as *G., soft*.

G. of lung. See *Lung, gangrene of*.

G. of mouth. (F. *gangrène de la bouche*.) See *Stomatitis, gangrenous*.

G. of umbilicus. See *Umbilicus, gangrene of*.

G., pota'to. A disease of the potato, in which the tubers become converted into a hard mass spotted with brown. It has been attributed by Martius to a fungus which he has called *Perisporium solani*.

G., primary. (L. *primus*, first.) The form in which the death of the part is the first occurrence, as in a severe burn, and is not preceded by inflammation of the part.

G., pulp'y. A synonym of *Hospital gangrene*.

G., Ray'naud's. Same as *G., symmetric*.

G., sec'ondary. (L. *secundus*, second.) The form in which the gangrene is preceded by acute inflammation.

G., se'nile. (L. *senilis*, belonging to old age. F. *gangrène senile*; G. *Altersbrand*.) The form of gangrene, generally attacking the toes and other parts of the feet but occasionally the hands also, which occurs in old people or those prematurely old from hard living. It generally arises from some slight local injury in a person whose blood-vessels have undergone degenerative changes, especially calcareous changes. It usually proceeds till death takes place, but not infrequently it is arrested for a time by a line of demarcation.

G., se'nile, of brain. A term applied to the white or yellow softening of the brain which occurs in old people.

G., sep'tic, acute. (Σηπτικός, putrefying.) The form in which, after a slight or a severe injury, there is a rigor, high fever, quick pulse, and rapid swelling of the part, which quickly spreads centrally, and soon ends in mortification, active decomposition, and typhoid symptoms.

G., soft. The form of death of a part in which the structures become diffuent and have no putrid smell, as in white softening of the brain from embolism of an artery, and in the softening of tubercles and cancerous growths.

G., specif'ic sep'tic. (Σηπτικός, putrefying.) Harrison Cripps's term for a class of gangrenes which includes acute inflammatory gangrene, hospital gangrene, phagedæna, and gangrenous stomatitis.

G., splen'ic. (Σπλήν, the spleen.) The form of suppurative splenitis, in which the whole or greater part of the parenchyma of the spleen is softened, of a greyish-white or reddish colour, diffuent, and retaining none of the natural structure except in the form of detritus.

G., sponta'neous. (L. *spontaneus*, of one's own free-will.) A synonym of *G., senile*.

Also, a synonym of *G., symmetric*.

Also, applied to those forms of gangrene which arise from other than local causes.

G., stat'ic. (Στατικός, bringing to a stand-still.) Gangrene resulting from mechanical obstruction to the return of blood from the part.

G., symmetric. (Συμμετρία, due proportion. F. *gangrène symétrique*.) Raynaud's term for a form of gangrene which occurs in persons of feeble constitution and circulation, but in whom no degeneration of arterial structures or obstruction of the calibre of the vessel is to be found, and owning as a direct cause the exposure to some amount of cold, or the depression from some tax on the constitution, such as child bearing. It generally commences at the ends of the fingers or toes, excites little constitutional disturbance and usually attacks the corresponding parts of both sets of limbs. It is said to be frequently associated with intermittent hæmatinuria.

G., thrombot'ic. (Θρόμβος, coagulated blood.) A similar form to embolic gangrene, differing only in that the obstructing cause is not brought from a distance, but is a clot of blood formed at the spot.

G., traumatic. (Τραυματικός, relating to wounds.) Gangrene resulting from external mechanical injury.

G., traumatic, local. The form in which, from injury to the chief blood-vessel of a limb, the parts below are suddenly deprived of their blood supply and die; or in which, from injury to one or other of the blood-vessels, there is extravasation of blood into the part, which, by its pressure, arrests the circulation and produces death of the structures.

G., traumatic, spreading. The form in which, from previous weakness in the circulatory system, or from concurrent injury to the thoracic organs, a somewhat slight injury results in gangrene, which is accompanied by venous thrombosis in its vicinity and so spreads upwards, often with great rapidity. A similar condition may arise in persons of poor habit of body, the result of alcoholic excess or of some chronic disease, whereby a comparatively slight injury results in rapidly spreading fatal gangrene.

G., troph'ic. (Τρίφω, to nourish.) Gangrene which results from disturbances of nutrition which accompany nerve lesions. Such are the severe bedsores of hemiplegia or paraplegia.

G., white. A rare form in which, after pains and symptoms of depression, a patch of

GANGRESCENT—GARCINIA.

skin on the leg or foot becomes of a dull-white colour, dry, parchment-like, and somewhat shrivelled. It separates from the healthy tissues by a distinct line of demarcation, and may be superficial or deep-seated.

The term has also been applied to ordinary sloughs when they are of a white colour.

Also (*F. gangrene blanche*), Quesnay's term for the form called by Cruveilhier *G. by cadaverisation*.

Gangrenes'cent. (Γάγγραινα.) Becoming gangrenous; relating, or tending, to gangrene.

Gangrenous. (Γάγγραινα. *F. gangrenous*; *G. brandicht, brandig.*) Affected with, or resembling, gangrene.

G. diathesis. See *Diathesis, gangrenous*.

G. emphyse'ma. (Εμφύσημα, an inflation.) A term for *Gangrene, gaseous*.

G. ero'sion of cheek. A term for gangrenous stomatitis.

G. inflammation. See *Inflammation, gangrenous*.

G. stomati'tis. See *Stomatitis, gangrenous*.

Gani'trus. A Genus of the Nat. Order *Diptera*.

G. oblon'gus. The *Eleocarpus oblongus*.

G. serra'tus. The *Eleocarpus serratus*.

Gan'ja. A name for Indian hemp.

Gan'jah. See *Gunjah*.

Gan'nal's solution. A solution of one part of aluminium acetate in twenty parts of water. Used as a preservative fluid for animal substances.

Ganna'na. Cinchona bark. (Quincy.)

Ganna'naperide. Same as *Gannana*.

Ganocephala. (Γάνος, brightness; κεφαλή, the head.) Owen's term for the *Labyrinthodonta*, which have an armoured head.

Gan'oid. (Γάνος, brightness; είδος, likeness.) Belonging to the Subclass *Ganoidei*.

G. scales. Those scales of fishes which are covered by an outer layer of bright, smooth enamel; they generally overlap each other slightly, and are rhomboidal, or occasionally cycloid, in shape.

Ganoidei. (Γάνος, brightness; είδος, likeness.) A Subclass of the Class *Pisces*, being osseous or cartilaginous, mostly freshwater, fishes provided with enamelled overlapping scales, or with osseous dermal plates; a muscular conus arteriosus provided with valves; free, operculated branchiæ; an optic commissure; and a spiral intestinal valve, as the sturgeon.

Gan'oin. (Γάνος.) The substance of the enamel layer of a ganoid scale; it is structureless.

Gantelet. (*F. dim. of gant, a glove.*) A spiral bandage closely applied to the hand and each finger.

Gan'tu-bharan'gë. The name in India of the root of a *Clerodendron*. Used in catarrhal affections.

Gaol. (Old *F. gaiole, gaole*; from Low *L. gabola*, dim. of *gabia*, a cage; from *L. cavea*, a hollow. *F. geôle*; *G. Kerker*.) A prison.

G. cachexia. See *Cachexia, gaol*.

G. fe'ver. See *Fever, gaol*.

Gap. (*E. gape*; or of Scand. origin.) An opening, a vacant space.

G. tooth'ed. Having natural interstices between the teeth.

Gape. (Mid. *E. gapen*; Sax. *gedpan*. *F. bâiller*; *I. sbadigliare*; *S. bostezar*; *G. gähnen*.) To open the mouth wide.

Gapes. (*Gape*.) A term for a disease of poultry and other birds, caused by the presence in the trachea of parasitic worms, the *Sclerostoma syngamus*. A few days after they are hatched the chicken begins to gape frequently, as if to get breath, to sneeze, and to swallow often; they gradually get thin and die with increased oppression in the breathing. The parasites are often present in large numbers.

Ga'ping. (*Gape*.) Yawning; wide open.

In Botany, applied to a labiate corolla which has a wide mouth from the arching of the upper lip, as in the white dead-nettle, *Lamium album*.

Ga'rab. Arabian name for the disease *Ægilops*. (Quincy.)

Ga'rapatte. The name given in Mexico, Brazil, and tropical America generally, to several parasitic Acarids, especially to the *Ixodes nigra*.

Ga'rance. (*S. garbanzo*.) The chick pea, *Cicer arietinum*.

Garcin'ia. (After Lawrance *Garcin*, an English traveller.) A Genus of the Nat. Order *Guttifera*.

G. acumina'ta, Planchon and Triana. (*L. acuminatus*, pointed.) The *G. morella*.

G. cambo'gia, Desrousseaux. The *G. Hanburii*; or, according to some, a distinct species supplying a pale yellow concrete juice, and differing from ordinary gamboge in being less active; its acidulous juice is employed as a condiment.

G. cambogioi'des, Royle. The *G. Hanburii*, or *G. morella*.

G. celeb'ica, Desrouss. The *G. indica*.

G. elliptica, Wallich. The *G. cambogia*.

G. gambo'gia, Desrouss. Same as *G. cambogia*.

G. Gaudichaud'ii, Planchon and Triana. The *G. morella*.

G. gut'ta, Wight. The *G. morella*.

G. Hanbur'ii, Hooker. The name given to *G. morella*, var. *pedicellata*, now that it is usually considered a distinct species.

G. in'dica, Choisy. Fruit pleasantly acid; seeds yield a concrete oil, kokum butter, containing much stearic acid, which is used for suppositories and ointments.

G. ky'dia, Roxb. Fruit similar, but inferior, to the *G. mangostana*.

G. lateriflo'ra, Bl. (*L. latus*, the side; *flos*, a flower.) The *G. morella*.

G. lobulo'sa, Wallich. The *G. morella*.

G. malabar'ica, Lam. Fruit like that of *G. mangostana*, but inferior to it.

G. mangosta'na, Linn. (*Malay Mangusta*. *F. mangoustan*.) The mangosteen. Hab. Malacca. Fruit possessing a very delicious pulp; pericarp bitterish, astringent, it contains tannin and mangosteen. The rind of the fruit, the bark, and the wood are used in diarrhoea, dysentery, leucorrhœa, and locally in sore throat and foul ulcers. The fruit has been substituted for bael, and has been used as an antiscorbutic.

G. morella, Desrousseaux. (*L. morella*, blackish.) The plant which by its several varieties furnishes gamboge.

G. morel'la, var. *pedicella'ta*, Thwaites. Hab. Siam. The plant which furnishes the official gamboge. The *G. Hanburii*.

GARDEN—GARGLING.

G. morel'la, var. **ses'silis**, Desrous. (L. *sessilis*, low, sessile.) Hab. Ceylon. The species which furnishes the gamboge of Ceylon.

G. papil'la, Wight. A variety of *G. cambogia*.

G. peduncula'ta, Roxb. (L. *pedunculus*, a foot stalk.) Tikul. Fruit larger than, but not so good as, that of the *G. mangostana*.

G. picto'ria, Roxb. (L. *pictor*, a painter.) Hab. India. Furnishes the gamboge of Mysore. The same as *G. morella*.

G. purpu'rea, Roxb. The *G. indica*.

G. travancor'ica, Beddome. Supplies the gamboge of Travancore.

G. zeylan'ica, Roxb. The *G. cambogia*.

Garden. (Old F. *gardin*; Old H. G. *gartin*, a yard. F. *jardin*; G. *Garten*.) A cultivated enclosure for flowers, vegetables, and fruits.

G. angel'ica. The *Angelica archangelica*.

G. ar'tichoke. The *Cynara scolymus*.

G. auric'ula. The *Primula auricula*.

G. beans. The seeds of *Faba vulgaris*, var. *major*.

G. bu'gloss. The *Anchusa officinalis*.

G. cab'bage. The *Brassica sativa*.

G. car'rot. The *Daucus carota*, var. *sativa*.

G. cher'vil. The *Anthriscus cerefolium*.

G. chrysanth'emum. The *Chrysanthemum coronarium*.

G. cress. The *Lepidium sativum*.

G. en'dive. The *Cichorium endivia*.

G. let'tuce. The *Lactuca sativa*.

G. nasturt'ium. The *Tropæolum majus*.

G. night'shade. The *Solanum nigrum*.

G. or'ache. The *Atriplex hortensis*.

G. or'pine. The *Sedum telephium*.

G. pa'tience. The *Rumex patientia*.

G. pea. The *Pisum sativum*.

G. pe'ony. The *Pæonia officinalis*.

G. purs'lane. The *Portulaca oleracea*.

G. rock'et. The *Brassica eruca*.

G. sage, large. The *Salvia hortensis major*.

G. sage, small. The *Salvia hortensis minor*.

G. snail. (G. *Garten-schnecken*.) The *Helix pomatia*.

G. spurge. The *Euphorbia lathyris*.

G. thyme. The *Thymus vulgaris*.

Gardenia. (After Dr. *Garden*, of Carolina.) A Genus of the Nat. Order of *Rubiaceæ*.

G. campanula'ta, Roxb. (L. *campanula*, a small bell.) Fruit cathartic and anthelmintic.

G. dumeto'rum, Lamb. The *Randia dumetorum*.

G. gen'ipa, Swartz. The *Genipa americana*.

G. grandifo'ra, Lour. Hab. Cochin China. An emollient and refrigerant decoction is made from it, and used in hectic fever, dyspnea, and other disorders.

G. gummif'era, Linn. L. *gummi*, gum; *fero*, to bear.) Produces the gum called *Cancaum* and *East Indian elemi*, which exudes from its leaves and bark.

G. longifo'ra, Ruiz and Pavon. The *Randia ruiziana*.

G. lu'cida, Roxb. (L. *lucidus*, shining.) Supplies a resin, called *Dikamali*, which has the

properties of myrrh, and is said to keep away flies.

G. resinif'era, Roth. (L. *resina*, resin; *fero*, to bear.) The *G. lucida*.

G. spino'sa, Thunb. (L. *spinus*, thorny.) The *Randia dumetorum*.

Gardenic acid. (G. *Gardeniasäure*.) $C_{11}H_{10}O_6$. A substance obtained from *Dikamali resin*, the produce of *Gardenia lucida* and other species.

Gardenin. $C_8H_8O_2$. A substance obtained in brilliant yellow crystals from *Dikamali resin*, the produce of *Gardenia lucida* and others. It is said to be identical with crocin.

Gare'tum. (Low L.) The ham or popliteal space.

Gargalë. Same as *Gargalos*.

Gargalis'mos. Same as *Gargalos*.

Gargalos. (*Γάργαλος*, a tickling.) Old term, used by Erotianus, in *Onomast. Hippocr.*, for irritation.

Also, a term for pruritus.

Also, a term for masturbation.

Gargarise. (F. *gargariser*; from Gr. *γάργαιζω*, to wash the throat.) To gargle, to use a gargle.

Gargarism. Same as *Gargarisma*.

Gargaris'ma. (*Γάργαιζω*, to wash the throat. F. *gargarisme*; G. *Gurgel*.) A wash for the throat; a gargle.

G. astrin'gens, Fr. Codex. (L. *astringo*, to bind together. F. *gargarisme astringent*.) Red rose petals, dried, 10 grammes, infused for half an hour in boiling water 250 grammes, then strained, and alum 5 grammes and mellitum rosarum 50 grammes added.

G. cum chlora'të potas'sico, Fr. Codex. (F. *gargarisme au chlorate de potasse*.) Chlorate of potash 5 grammes dissolved in water 250 grammes, and syrup of mulberries 50 grammes added.

G. emolli'ens, Fr. Codex. (L. *emollio*, to soften. F. *gargarisme émollient*.) Decorticated barley 5 grammes is boiled, till it bursts, with a sufficient quantity of water to make 250 grms., strained, and 50 grammes of white honey is added.

Gargaris'mum. Same as *Gargarisma*.

Gargaris'mus. Same as *Gargarisma*.

Gargathum. Old term, used by Joh. Laurentius, *Amalth.* *Onom.*, p. 377, for a bed on which persons distracted in mind and haunted by spirits were confined.

Garget. The *Phytolacca decandra*.

Also, a term for inflammation of the mammary gland in Ruminants usually affecting only one quarter of the gland. It may be of a serofulous character. The drinking of milk from an udder affected with garget has been thought to produce diphtheria.

Gargle. (Old F. *gargouiller*, to gargle; from *gargouille*, the gullet; from Low L. *gargula*, the throat.) A wash for the interior of the throat.

Also, to use this wash.

Gargling. (*Gargle*.) The act or process of using a gargle; it is accomplished by taking some into the mouth, throwing the head back so that it falls into the upper part of the pharynx, and then by a slow process of expiration bubbling air through it so as to splash it about the neighbouring parts.

G., bu'cal. (L. *bucca*, the cheeks.) The washing out of the mouth with a gargle or lo-

GARIEL'S PESSARY—GARTER.

tion, so as to apply it to the tongue, gums, cheeks, and upper and anterior part of the palate. The fauces and mouth are to be closed, and the liquid impelled in all directions by rapid movements of the buccal muscles and the tongue, or the head is thrown back and agitation of the liquid accomplished by the passage of air in expiration.

G., larynge'al. (Αάρονξ.) Guinier's method of gargling, whereby the fluid is made to bathe the part of the larynx above the vocal cords as well as the pharynx. After the fluid is taken into the mouth the head is to be slightly raised, the mouth moderately opened, the lower jaw protruded, and the sound of the double vowel *æ* emitted, or the parts put in the position of emitting it. The simultaneous performance of these movements opens largely the back of the mouth, lifts the soft palate, separates the base of the tongue from the posterior wall of the pharynx, and allows the fluid to gravitate into the upper cavity of the larynx. It is possible in expelling the fluid to drive it through the nostrils, so as to bathe the nasal fossæ.

G., postna'sal. (L. *post*, behind; *nasus*, the nose.) The energetic expulsion of the liquid used in ordinary gargling through the nostrils by means of a forcible expiration when the mouth is closed.

Gariel's pes'sary. See *Pessary*, *Gariel's air-ball*.

Garj'na bal'sam. Same as *Gurjun balsam*.

Gar'lic. (Sax. *gārlede*; from *gār*, a spear; *lede*, a leek plant. F. *ail*; I. *aglio*; S. *ajo*; G. *Knoblauch*.) The *Allium sativum*.

G., broad-leav'ed. The *Allium magicum*.

G., crow. The *Allium vineale*.

G., field, streak'ed. The *Allium oleraceum*.

G., hedge. The *Allium officinalis*.

G., mead'ow. The *Allium canadense*.

G., must'ard. The *Sisymbrium officinale*.

G., oil of, essen'tial. A dark-brown volatile oil, heavier than water, as obtained at first by distillation of garlic bulbs, but becoming of a pale yellow colour and lighter than water by repeated redistillation. It has a very pungent smell and an acrid taste; it is very irritating to the skin. It consists when pure of allyl sulphide.

G. pear. The fruit of the species of the Genus *Cratæva*, especially the *C. gynandra*.

G., round-head'ed, great. The *Allium ampeloprasum*.

G., sand. The *Allium arenarium*.

G., syr'up of. See *Syrupus allii*.

G., vip'ers'. The *Allium rotundum*.

G., wild. The *Allium oleraceum*.

G.-wort. The *Erysimum alliaria*, from its smell.

Garloch. The *Sinapis arvensis*.

Gar'miswyl. Switzerland, Canton Freiburg, 2000 feet above sea-level. A cold sulphur spring.

Garnet. (Old F. *grenat*; from Low L. *granatus*; from L. *granatum*, a pomegranate, from its likeness to pomegranate seeds.) A precious stone, being a specimen of quartzose crystal.

G. ber'ries. A term for red currants, the fruit of *Ribes rubrum*, from their colour.

Garos'mum. Old name for the *Chenopodium vulvaria*, or stinking orache.

Gar'ou bark. The bark obtained from the *Daphne gnidium*, or spurge flax.

Garre'tum. (Low L.) The popliteal region.

Gar'ris. France, Département des Basses-Pyrénées. A cold mineral water, containing a small quantity of calcium sulphide, with some nitrogen, carbonic acid, and hydrogen sulphide. Used in bronchial and vesical catarrhs, and some skin diseases.

Garroph'ilus. The *Eugenia caryophyllata*.

Gar'rot. (F. *garrotter*, to bind. I. *randello*; S. *garroto*; G. *Drehstock*.) An instrument invented by Morel in 1674 for compression of an artery. It consisted of a circular band tightened by means of two short sticks. The later form consists of a ball or pad placed over the course of the artery to be compressed and a plate of thick leather or other resisting substance at the opposite side of the limb, both kept in position by two or three turns of a bandage, which is tied over the pad; between this knot and the pad a short stick is introduced, which is twisted round to a variable distance according to the amount of compression required, which may be increased or diminished at will by the turning of the stick one way or the other.

Garrot'illo. A name given to the malignant sore throat by the Spanish writers, by whom it was first described.

Garrotte'. (S. *garrote*, a cudgel; strangling by means of an iron collar.) To strangle by means of the instrument of punishment so called in Spain.

To partially strangle a person by the pressure of the arm on the wind-pipe, so as to produce insensibility and to rob him.

G. in'juries. Death from strangulation may result if the pressure is hard enough and prolonged enough. Short of death, insensibility may be caused and may last some hours. The larynx is often seriously injured, its cartilages may be fractured, and inflammation of the parts may ensue.

Garrulitas. See *Garrulity*.

G. vulvæ. (L. *vulva*, the external organs of generation in the female.) The noisy expulsion of air from the vagina.

Garrulity. (L. *garrulitas*, from *garrio*, to chatter.) Talkativeness.

Garrya. (Dr. Nicholas Garry, of the Hudson's Bay Company.) A Genus of the Nat. Order *Garryaceæ*.

G. Fremont'il. Hab. California. Used as a substitute for quinine in ague.

Garrya'ceæ. A Nat. Order of monochlamydeous, corollifloral Exogens of the Alliance *Garryales*. They are evergreen shrubs, having opposite, exstipulate leaves, and unisexual amentaceous flowers.

Garryales. An Alliance of diclinous Exogens, according to Lindley, having monochlamydeous, sometimes amentaceous, flowers, inferior carpels, and a minute embryo in a large quantity of albumen.

Gar'ryhill. Ireland, County Carlow. A chalybeate water.

Gar'ryin. An alkaloid contained in the *Garrya Fremontii*.

Gar'ter. (Old F. *gartier*; closely connected with *garret*, the ham; F. *jarretière*; I.

GARTNER—GAS.

giarrettiera; *S. jarrettera*; *G. Strumpfband*.) A band round the leg for keeping up the stockings.

G.s., lithot'omy. (*Λίθος*, a stone; *τομή*, section.) Narrow worsted bands, about three yards long, used to tie together the hand and foot of each side in the operation of lithotomy.

Gärtner. A German anatomist of the nineteenth century.

G., canal' of. See *Duct, Gärtner's*.

G., duct of. See *Duct, Gärtner's*.

Garum. (*Γάρου*.) Old term for a kind of pickle made of fish preserved in salt; said to have been named after a certain species of fish chiefly used, and called *γάρος*, but the best was made from mackerels. It was said to be laxative.

Garus. A Dutch physician of the seventeenth century.

G., elixir of. See *Elixir of Garus*.

Garyophyllum. A name given by Pliny to a tree which is thought to be the *Dicypellium caryophyllatum*.

Garyophyllus. Same as *Caryophyllus*.

Gas. (Invented by Van Helmont, to denote the vaporous matter disengaged from a body by the aid of heat, and supposed to have been suggested by Dut. *geest*, spirit.) Any elastic aëriferm fluid.

G.s., absorption of. (*L. absorbeo*, to suck up.) Gases are absorbed by liquids in definite proportions. According to Bunsen's investigations, the amount of a gas that a liquid dissolves at the same temperature is proportionate to the pressure; and other things being equal, the amount dissolved is greater the lower the temperature. The presence of gases in solution does not interfere with the capacity of a liquid to dissolve others.

G.s., absorption of, coefficient of. The volume of the gas which is absorbed by a unit volume of the liquid at 0° C. (32° F.) and 760 mm. (29·9212") pressure.

G., acid marine'. A term for hydrochloric acid gas.

G., ammoniacal'. A term for gaseous ammonia.

G. analyzer. (*Ἀνάλυσις*, from *ἀναλύω*, to undo.) An instrument for determining the presence and quantity of the gases obtained by the destructive distillation of coal. These gases are ammonia, NH_3 ; sulphuretted hydrogen, SH_3 ; carbonic acid, CO_2 ; air or oxygen, O , and nitrogen, N ; carbonic oxide, CO ; bisulphide of carbon, CS_2 ; olefiant gas, C_2H_4 ; acetylene, C_2H_2 ; light carburetted hydrogen, CH_4 ; hydrogen, H . The first four gases are impurities, and ought not to be there. The following reagents are used:—Dilute sulphuric acid, solutions of nitrate of silver, arsenious acid, iodine, acetate of lead, subchloride of copper in hydrochloric acid, caustic potash, and pyrogallate of potash; bromine, lime water, red litmus water.

G. animal' sanguinis. (*L. animalis*, animal; *sanguis*, the blood.) A term for the vapour of the blood, *Halitus sanguinis*.

G. azo'ticum. A term for azote or nitrogen.

G. azo'ticum oxygena'tum. Nitrous oxide gas.

G. bath. The exposure of the body to the influence of a gas, such as carbonic dioxide.

G. battery. A galvanic battery devised

by Grove, and formed of a series of elements consisting of two glass tubes, into each of which is fused a platinum electrode provided with binding screws; one of the tubes is filled with hydrogen, the other with oxygen, and both are inverted in a vessel containing dilute sulphuric acid, so that half the platinum is immersed.

G. bottle. A strong iron vessel, into which 200 to 300 or more volumes of gas are condensed by pressure. An arrangement for the gradual escape of the gas into an elastic bag is made, and the whole is used for anæsthetic purposes. The gas employed for this purpose is usually nitrous oxide gas.

G. carbon. A very pure form of amorphous carbon occurring as a deposit in the upper portion of the retorts used in the distillation of coal in the production of coal-gas. It is used for the carbon poles of the electric light, and for the carbon cylinders of Bunsen's battery.

G. cautery. See *Cautery, gas*.

G., chalk. Carbonic acid gas; so called from its frequent source.

G. chamber. An apparatus used in microscopy for the purpose of studying the action of different gases on structures or organisms. It consists of a glass slide, on which is a ring of some material, perforated by a fine tube on each side for the purpose of conveying the gases, which is closed by a cover glass.

G., coal. See *Coal-gas*.

G.s., combining volumes of. Gases combine in simple proportions by volume, either one with one, or one with two, or similar simple ratio. This is a consequence of the fact that all molecules occupy an equal volume.

G.s., compressibility of. (*L. comprimo*, to press together.) The molecules of gases may be caused to approximate to each other by pressure, so that the volume is diminished and the density increased. See *Boyle's law*.

G., compressible. (*L. comprimo*, to press together.) A term which has been applied to a gas which can be brought to a liquid or a solid form by pressure.

G.s., conductivity of. (*L. conduco*, to draw together.) The power of conduction of a gas is very small when its particles remain stationary.

G.s., density of. (*L. densitas*, thickness.) Same as *G.s., specific gravity of*.

G., dephlogisticated. Same as *De-phlogisticated air*.

G.s., diamagnetism of. (*Διά*, through; *μαγνήτις*, a magnet.) When a stream of gas is made to traverse the field between the two poles of an electromagnet it is found to arrange itself in a plane at right angles to a line passing between the poles, or at a right angle to that in which an iron bar would set.

G.s., diffusion of. See *Diffusion of gases*.

G. douche. (*F. douche*, a shower bath; from *I. doccia*, a gutter.) The directing of a stream of gas to a part of the body; carbonic dioxide is used in this way as an anodyne to an open cancer.

G.s., effusion of. (*L. effundo*, to pour out.) The passage of a gas into a vacuum through a fine hole in a plate of metal or other substance. See *Effusion of gases*.

G.s., elastic force of. (*Ἐλαύνω*, to drive.) The property of a gas by which it tends to expand and fill the space which contains it,

GAS.

and which is due to a mutual repulsion exerted by the molecules of the gas on each other.

G.s, elasticity of. (Ελαύνω, to urge forward.) See *G., elastic force of.*

G.s, endosmosis of. See *Osmosis of gases.*

G.s, expansion of. Same as *G., elastic force of.*

G. hepaticum. (Ήπαρ, the liver. *F. gaz hepatique.*) Hydrogen sulphite, because it has the smell of liver of sulphur.

G., illuminating. (*L. illuminatus*, part. of *illuminare*, to give light to. *F. gaz de l'éclairage.*) Same as *Coal-gas.*

G., incoercible. (*L. in, not; coercere*, to confine.) A gas which cannot be reduced to a liquid or a solid condition.

G.s, index of refraction of. See *Refraction, index of, in gases.*

G., inflammable. An old term for butene.

Also, any gas which can be burnt.

G., inflammable sulphuretted. A term for hydrogen sulphide.

G.s, intestinal. These are nitrogen, hydrogen, carbon dioxide, and marsh gas.

G., intoxicating. Nitrous oxide gas.

G.-jet cautery. A form of gas cautery for destroying tissue. A very fine jet burning, on the principle of Bunsen's burner, a mixture of coal gas and atmospheric air, is directed on the part; it has been applied to the cancerous womb through a double speculum, between the walls of which a stream of cold water is kept running.

G.s, kinetic theory of. A theory in which it is maintained that the molecules of gases are moving with great and uniform velocity amongst themselves in a rectilinear direction. Frequent encounters occur between the molecules, but providing that the temperature is uniform no loss of energy occurs.

G., laughing. (*F. gaz hilarant.*) Nitrous oxide gas, because of its action when breathed in a diluted form.

G. lime. The lime that has been used in the purification of coal gas. It contains calcium carbonate, hyposulphite, and pentasulphide, and is used in the manufacture of sodium hyposulphite.

G., liquefaction of. (*L. liquefacio*, to make liquid.) The reduction of gases to the condition of a liquid by pressure, sometimes assisted by cold. A tube of fine bore above and dilated below, capable of supporting a pressure of 500 atmospheres, is partly filled with the gas to be liquefied and partly with mercury. The tube is inserted into a reservoir of steel, capable of resisting with safety a pressure of 800 atmospheres, and partially filled with mercury and water. The pressure is applied by means of a force pump. The whole is surrounded by a freezing mixture. In the case of most gases the manometer remains stationary as soon as liquefaction commences. On reducing the pressure slowly the liquid begins to boil, but if it be rapidly reduced a portion of the suddenly expanded gas absorbs so much latent heat as to liquefy the remainder, which forms a mist in the upper part of the tube.

G. liq'or. The ammoniacal liquid contained in the condensing apparatus of gas works. It contains ammonium carbonate, cyanide, sulphide, and sulphate, and is used largely in the production of ammonium chloride.

G., marsh. (*F. gaz des marais.*) A synonym of what is now called *Methane.*

G., mephitic. See *Mephitic gas.*

G., muriatic. Hydrochloric acid gas.

G., nitrous. See *Nitrous acid gas.*

G., nitrous dephlogisticated. Nitrous oxide gas, because it contains no phlogiston or hydrogen.

G., non-permanent. A gas which can be liquefied by cold and pressure.

G.s, occlusion of. (*L. occludo*, to shut up.) The property possessed by platinum, palladium, and some other metals, of absorbing many times their volume of gases, and of hydrogen in particular, forming, in all probability, a kind of alloy, which is decomposed at a red heat and in vacuo.

G. of acetates. A term for *Methane.*

G.s of blood. See *Blood, gases of.*

G.s of body. The gases contained in the natural tissues of the body are oxygen, ozone, hydrogen, nitrogen, carbon dioxide, marsh gas, ammonia, and hydrogen sulphide.

G.s of intestines. See *G.s, intestinal.*

G.s of putrefaction. The gases given off from decomposing animal and vegetable substances. They contain ammonium sulphide, sulphuretted and carburetted hydrogen, ammonia, nitrogen, and carbon dioxide.

G. of the lungs. The air as it passes from the lungs in expiration.

G., oil. See *Oil gas.*

G., olefant. See *Olefant gas.*

G.s, osmosis of. See *Osmosis of gases.*

G., oxygenated muriatic acid. An old term for chlorine.

G., oxymuriatic. An old term for chlorine.

G. palustré. (*L. paluster*, marshy.) The emanation or miasm of a marsh.

G., paradise. Nitrous oxide gas, because of its exhilarating effects when respired.

G., permanent. A gas which cannot be liquefied by cold.

G., phlogisticated. (*Phlogistin.*) An old name for nitrogen.

G., phos'gene. See *Phosgene.*

G. pingüé. (*L. pinguis*, fat.) Van Helmont's term for a gas which he obtained from dung and which was inflammable.

G., pulmonary. (*L. pulmo*, the lung.) Same as *G. of the lungs.*

G.s, radiation of. See *Radiation of gases.*

G., ru'tilant. (*L. rutilo*, to colour red.) A term for nitrogen peroxide, from the reddish-brown colour of its vapour.

G. sanguinis. (*L. sanguis*, the blood.) The halitus of the blood.

G.s, solidification of. (*L. solidus*, solid; *facio*, to make.) The reduction of gases to a solid state by the influence of pressure, sometimes combined with cold. When carbon dioxide, fluidified by pressure, is allowed suddenly to escape, a portion instantly assumes the gaseous state, but in doing so absorbs so much latent heat as to solidify the rest.

G.s, solubility of. (*L. solubilis*, soluble.) Gases are soluble in liquids in proportion to the amount of pressure exerted on them, other things, temperature and composition, being equal. The more easily soluble gases are more readily absorbed by liquids than the less easily

GAS-HOLDER—GASTERANGEMPHRAXIS.

soluble gases. Each constituent of a mixture of gases is dissolved by a liquid independently of the rest. The solubility of a gas in a liquid diminishes with increase of temperature, other things being equal. The volume of the same gas dissolved by the same quantity of the same liquid, at the same temperature, is constant, whatever the pressure, if the volume absorbed be measured at the same pressure. See also, *G.s.*, *absorption of*.

G.s., specific gravity of. See *Gravity*, *specific, of gases*.

G.s., specific heat of. The quantity of heat required to raise a given weight of a gas through one degree, 1° C., as compared with that necessary to raise a similar weight of water one degree; or the quantity of heat necessary to raise a given volume of a gas through one degree, as compared with that necessary to raise a similar volume of air one degree. Water being taken as unity or 1·000, Regnault found that the specific heat of an equal weight of its vapour is ·4805, of air ·2374, of oxygen ·2175, of nitrogen ·2438, of hydrogen 3·4090, of carbon monoxide ·2450, of carbon dioxide ·2163, and of ammonia ·5083; when compared with an equal volume of air referred to its own weight of water taken as unity, the specific heat of oxygen is ·2405, of nitrogen ·2370, of hydrogen ·2359, of carbon monoxide ·2370, of carbon dioxide ·3307, and of ammonia ·2966; the gases being under a constant pressure.

G. sulphuris. A term for sulphurous acid.

G. sylvestrē. (*L. sylvestris*, belonging to a wood.) Van Helmont's term for what is now known as carbon dioxide, or carbonic acid gas, when arising from fermented liquors.

G.s., transpiration of. (*L. trans*, through; *spiro*, to breathe.) Same as *Effusion of gases*.

G. ventilator. A chimney or flue conveying the products of combustion of a lamp or gas burner is surrounded by a loose jacket opening below into the room to be ventilated, and above into the open air. The heat of the internal tube warms the air and causes a current upwards, which effects ventilation.

G. vento-sum. (*L. ventus*, wind.) The atmospheric air.

G. wa'ter. Term for the water remaining after the coal gas used for illumination has passed through the purifier. It contains among other matters sulphuret of lime, and has been recommended in chronic diseases of the skin.

G., wa'ter. A term for hydrogen as obtained from the decomposition of water.

G., wood. Carburetted hydrogen obtained by the distillation of wood.

Gas-holder. A vessel of glass or metal filled with water and inverted on a shelf in a reservoir of water. The gas is introduced by means of a bent tube opening through a hole in the shelf into the vessel, which rising to the top of the vessel fills it by expelling the water.

Gas sphygmoscope. See *Sphygmoscope, gas*.

Gascarilla. Same as *Cascarilla*.

Ga'scol. The same as *Gazeol*.

Gaseous. (*Gas. F. gazeux; G. gasförmig.*) Of, or belonging to, or containing, gas; having, or full of, gas; æriform.

G. cyst. See *Cyst, gaseous*.

G. state. The condition of a body when

its molecules are separated from each other to such an extent that it is æriform and elastic; the state of being a *Gas*.

Gasification. (*Gas; L. facio*, to make.) The manufacture of gas; the process of making a gas.

Gasiform. (*Gas; L. forma*, likeness. *F. gazeiforme; G. gasförmig.*) Gas-like; air-like.

Gasometer. (*Gas; Gr. μέτρον*, a measure.) An apparatus for holding gas and measuring the amount as it escapes.

Gasometric. (*Gas; Gr. μέτρον.*) Relating to the measurement of gases, especially in chemical analysis.

Gasp. (*Ice. geispa*, to yawn; from *gapa*, to gape.) To catch the breath quickly, with difficulty, and with open mouth.

Gasser, Achilles Pirminius. A German physician, born at Liudau in 1505, died at Augsburg in 1577.

Gasser, Johann Laurentius. An anatomist of the eighteenth century, of whom nothing is known save that he was the instructor of Antonius Raymond Balthasar Hirsch, who, in 1765, named the ganglion on the sensory trunk of the fifth pair of nerves after him.

G., ganglion of. (*F. ganglion de Gasser; G. Gasser'sche Knoten.*) A ganglion on the sensory division of the trifacial nerve lying in a depression at the summit of the petrous bone. It is somewhat crescent-shaped, having the concavity backwards, and is flattened and striated on the surface, which is covered by dura mater; it rests also on fibres of the dura mater. Its anterior convex border gives off, from above to below, the ophthalmic nerve, the superior maxillary nerve, and the inferior maxillary nerve, which latter is joined by the motor division of the trifacial nerve. It receives on its inner surface sympathetic filaments from the carotid plexus, and from its upper or its outer surface it gives off meningeal filaments, which follow the middle meningeal artery and supply the dura mater of the middle lateral fossæ of the skull.

Gastein. Austria, in the Province of Salzburg, in the Tyrol, about 3000 feet above sea-level, surrounded by beautiful scenery. Indifferent thermal waters from twenty-one springs, having a temperature varying from 25° C. (77° F.) to 49° C. (120·2° F.), and containing very small quantities of sodium sulphate, sodium chloride, potassium sulphate, lithium chloride, calcium carbonate, iron carbonate, with traces of arsenic; but the amounts of all are very minute. Used in chronic skin affections, chronic atonic ulcers, chronic rheumatism and gout, contracted joints, amenorrhœa, dysmenorrhœa, neuralgia, migraine, paralysis agitans, and other chronic neuroses. Also called Wildbad-Gastein.

Gaster. (*Γαστήρ*, the belly.) A term which has been used to denote the abdomen, and also the stomach, and occasionally the uterus.

G. musculi. (*L. musculus*, a muscle.) The belly or fleshy part of a muscle.

Gastralgia. See *Gastralgia*.

Gasteranax. (*Γαστήρ; ἀναξ*, a king.) A term applied by Dolæus to a supposed principle having its seat in the lower part of the abdomen, and presiding over the function of digestion.

Gasterangemphrax'is. (*Γαστήρ*, the belly; *ἀγγος*, a vessel; *ἐμφράσσω*, to stop up.) Congestion or infarction of the blood-vessels of the stomach.

GASTERASE—GASTRALGIA.

Also, Vogel's term for obstruction of the pylorus.

Gasterase. (Γαστήρ.) Payen's synonym of *Pepsin*.

Gasterasthenia. (Γαστήρ; ἀσθένεια, weakness.) Debility of the stomach.

Gasterataxia. (Γαστήρ; ἀταξία, disorder.) Disorder of the stomach; weakness of the coats of the stomach.

G. aquosa. (L. *aquosus*, watery.) A term used to denote a chronic gastritis with pyrosis.

Gastereche'ma. (Γαστήρ; ἥχημα, a sound. G. *Magenlaut*, *Magengeräusch*.) A sound heard by means of the stethoscope in the stomach.

Gasteremphrax'is. (Γαστήρ; ἐμφράσσω, to stop up.) Over-distension of the stomach.

Also, the same as *Gasterangemphrax'is*.

Gasterhysterotomy. (Γαστήρ; ὑστέρα, the womb; τομή, section.) The opening of the womb through the abdominal parietes; *Cæsarian section*.

Gasteric. (Γαστήρ.) Same as *Gastric*.

Gastero-. (Γαστήρ, the belly.) A prefix signifying relationship to, or connection with, the stomach or the abdomen.

Gasteromycetes. See *Gastromycetes*.

Gasteromy'ci. (Γαστήρ, the belly; μύκης, a fungus.) A Family of Fungi which includes Lycoperdon and its allies.

Gasteropoda. See *Gastropoda*.

Gasterosteus. (Γαστήρ, the belly; οστίον, a bone.) A Genus of the Suborder *Acanthopterygii*, Order *Teleostei*, Class *Pisces*.

G. aculeatus, Linn. (L. *aculeatus*, furnished with prickles. F. *épineche*, *escharde*; G. *Stichling*.) The stickleback. Where they are very plentiful a nutritive oil has been made from them.

Gasterostomida. (Γαστήρ; στόμα, the mouth.) A Family of the Suborder *Distomæ*, Order *Nematoda*. Buccal sucker in the middle of the ventral face; a discoid sucker at the anterior extremity; digestive tube simple, contractile; anus and sexual orifices at the posterior extremity.

Gasterostomum, Von Siebold. (Γαστήρ; στόμα, the mouth.) A Genus of the Family *Gasterostomida*, living in fishes, the larva probably inhabiting a species of *Bucephalus*.

G. armatum, Molin. (L. *armatus*, armed.) Found in the intestine of *Conger vulgaris*.

G. clupeæ, v. Beneden. Found in the intestine of *Clupeus sprattus*.

G. crucibulum. Found in the intestine of the conger eel.

G. fimbriatum, von Siebold. (L. *fimbria*, fringes.) Found on the perch and the pike.

G. gadorum, Dies. Found encapsuled in the sheaths of nerves and in the membranes of the brain of *Gadus virens*.

G. graciles'cens, Wagener. (L. *gracilis*, slender.) The *Rhipidocotyle graciles'cens*.

G. minimum, Wagener. (L. *minimus*, least.) The *Rhipidocotyle minimum*.

G. triglæ, v. Beneden. Found in the intestines of *Trigla gurnardus*.

G. viperæ, v. Beneden. Found in the intestines of *Trachinus vipera*.

G. vi'væ, v. Beneden. Found in the intestines of *Trachinus draco*.

Gasterothalamææ. An Order of the Alliance *Lichenales*, according to Lindley, having the shields always closed or opened by the irregular separation of the thallodial covering. Nucleus enclosed, containing asci, deliquescent or shrivelling up.

Gasterotricha. See *Gastrotricha*.

Gasterozo'a. (Γαστήρ; ζῷον, an animal.) Fittinger's term for *Acalephæ*, *Infusoria*, and *Zoophyta*.

Gasterysterotomy. See *Gasterhysterotomy*.

Gastr-. Same as *Gastero-*.

Gastræ. (Γάστρα, the belly of a jar. G. *Gefässboden*.) The distended part or belly of a vessel or receptacle.

Gastradeni'tis. (Γαστήρ, the belly; ἀδέν, a gland.) Inflammation of a gastric gland.

Gastræ'a. (Γαστήρ.) Hæckel's term for the primitive type of the Metazoa, being a double-walled sac with an opening at one end communicating with the central cavity, which he supposes to have existed in ancient times.

G. the'ory. Hæckel's theory of the origin of all Metozoa from a hypothetical primitive type which he called *Gastræa*, by which he claims to substitute for the classification hitherto received a system based on phylogeny, having for its main principle the homology of the germinal layers and of the archenteron, and on the differentiation of the axes and of the celom.

Gastræ'ada. The name given by Hæckel to the group of animals of which the *Gastræa* was the earliest representative.

Gastræ'mia. (Γαστήρ, the belly, the stomach; αἷμα, blood.) Congestion of the blood-vessels of the stomach.

Gastræum. (Γαστήρ.) Illiger's term for the under surface of the body of a mammal, extending from the larynx to the anus.

Gastr'al. (Γαστήρ.) Relating to the stomach or to the abdominal cavity.

G. fil'ament. (L. *filum*, a thread.) Worm-like motile tentacles in the gastric cavity of the *Acalephs* homologous with the mesenteric filaments of *Anthozoa*.

G. gonads. (Γονή, offspring.) The sexual glands found in the oral wall of the stomach in *Anthomedusæ* and *Narcomedusæ* in opposition to the vascular gonads of *Septomedusæ* and *Trachomedusæ*.

G. lam'ina. (L. *lamina*, a plate.) A synonym of *Hypoblast*.

G. os'tia. (L. *ostium*, a door.) In sponges the openings of the radial canals in the stomach.

Gastr'al'gia. (Γαστήρ; ἄλγος, pain. F. *gastralgie*; G. *Magenschmerz*.) Pain at the epigastrium occurring in connection with some disorder or disease of the stomach. It sometimes extends along the course of the œsophagus, and also to the interscapular or left scapular region. It is usually very severe in ulceration of the stomach, and is greatly increased or entirely caused by the taking of food; it is very common but not invariable in cancer of the stomach, and is often constant; it occurs in many of the forms of gastritis, and in pyrosis, from the presence of the fluid; it is also occasionally a neuralgia; and, in some persons, is always produced whenever some special food is taken. For the milder forms of gastralgia some writers use the term *Gastrodynia*.

GASTRANABOLE—GASTRIC.

Also (*G. Bauchschmerz*), pain in the abdomen or belly.

Gastranabolé. (*Γαστήρ; ἀναβολή*, a lifting up. *G. Magenauwurf*.) Ejection of the contents of the stomach; rumination.

Gastranax. See *Gasteranax*.

Gastraneuria. (*Γαστήρ*, the belly; *ἄ, neg.*; *νεῦρον*, a nerve.) Defective innervation of the stomach.

Gastraneurysma. (*Γαστήρ; ἀνέ-ρυσμα*, a dilatation.) Dilatation of the stomach.

Gastrangemphraxis. See *Gasterangiemphrax*.

Gastrataxia. See *Gasterataxia*.

Gastratrophia. (*Γαστήρ*, the belly; *ἀτροφία*, a pining away.) Atrophy of the coats of the stomach.

Gastrecthema. See *Gasterechema*.

Gastrectasis. (*Γαστήρ*, the stomach; *ἔκτασις*, an extension.) Same as *Stomach, dilatation of*.

Gastrectasy. Same as *Gastrectasis*.

Gastrectomy. (*Γαστήρ*, the stomach; *ἐκτομή*, a cutting out.) The removal of a part of the stomach, as the pylorus, in cancer of the organ.

Gastrelcobrosis. (*Γαστήρ; ἔλκος*, an ulcer; *βρώσις*, an eating.) Ulceration of the stomach.

Gastrelcosis. (*Γαστήρ; ἔλκωσις*, ulceration. *G. Magenverschwärung*.) Ulceration of the coats of the stomach.

Gastreltrotomy. Same as *Gastro-elytrotomy*.

Gastremphraxis. See *Gasteremphrax*.

Gastrecephalo'ma. (*Γαστήρ*, the stomach; *ἐγκέφαλος*, the brain.) Encephaloid cancer of the stomach.

Gastren'chya. (*Γαστήρ; ἐγχείω*, to pour in.) A stomach-pump.

Gasterenter'gia. (*Γαστήρ; ἔντερον*, an intestine; *ἄλγος*, pain.) Pain in the stomach and intestines.

Gastrenter'ic. Same as *Gastro-enteric*.

Gastrenterit'ic. Same as *Gastro-enteritic*.

Gastrenteritis. Same as *Gastro-enteritis*.

Gastrenteromala'cia. (*Γαστήρ*, the belly, the stomach; *ἔντερον*, the intestine; *μαλακία*, softness.) Softening of the coats of the stomach and intestines.

Gastrepat'ic. Same as *Gastro-hepatic*.

Gastrepatitis. Same as *Gastro-hepatitis*.

Gastrepiplo'ic. Same as *Gastro-epiploic*.

Gastrethis'ia. (*Γαστήρ*, the stomach; *ἐπιτίζω*, to excite.) Irritation of the stomach.

Gastreupep'tic. (*Γαστήρ; εὐπεπτος*, easy of digestion.) Having power to promote digestion.

Gastric. (*Γαστήρ. F. gastrique; I. gastrico; G. gastrisch*.) Relating to, or belonging to, the stomach.

G. acid. A synonym of *G. juice*.

G. acids. The acids of the *G. juice*.

G. arteries. The arteries of the stomach, being branches of the coronary artery of the stomach, of the hepatic artery, and of the splenic artery.

G. arteries, short. The *Vasa brevia* of the stomach.

G. artery. The Coronary artery of the stomach.

G. artery, infe'rior, left. The left gastro-epiploic artery.

G. artery, infe'rior, right. The right gastro-epiploic artery.

G. artery, supe'rior, left. The coronary artery of the stomach.

G. artery, supe'rior, right. The pyloric artery.

G. catarrh'. A synonym of *Gastritis, catarrhal*.

G. catarrh', chron'ic. A synonym of *Gastritis, catarrhal, chronic*.

G. cham'ber. The cavity in some low animal forms which does duty for a stomach.

G. diges'tion. See *Digestion, gastric*.

G. ep'ilepsy. See *Epilepsy, gastric*.

G. fe'ver. This term has been very loosely used, for which see under *Fever, gastric*.

According to Mosler, there is a true gastric fever much like the milder cases of enteric fever, but really different specifically, and to be distinguished from these mainly by the thermometer. In enteric fever the temperature rises gradually, so that at the end of the first week it is higher than at the end of the first day, and this height is retained or increased during the second week. In gastric fever the temperature is often at its highest on the first day, or, at least, as high as on any succeeding day. In enteric fever the skin is constantly hot and dry; in gastric fever it is usually moist, especially in the palm of the hand. Herpes labialis is more frequently present in gastric than in enteric fever. The urine frequently deposits uric acid salts, but there is no great increase of urea, and no great diminution of chlorides.

G. fist'ula. (*L. fistula*, anything tubular. *G. Magenfistel*.) A communication other than the natural ones between the stomach and some viscous, or the peritoneal cavity, or the external surface of the body. A gastric fistula may be produced by an abdominal wound which penetrates the stomach, or which causes sloughing of its walls; or by an abscess of the abdominal walls opening both into the stomach and externally; or by ulceration from within, caused by a foreign body in the stomach; or by ulceration from without, produced, as in one case wilfully, by pressure; or by cancer or perforating ulcer, producing inflammation of the peritoneal coat, adhesion to some neighbouring surface, and destruction of the intervening tissue.

G. flux. (*L. fluxus*, a flow.) Same as *Gastrorrhœa*.

G. fol'icles. (*L. folliculus*, a small bag.) The *Glands, gastric*.

G. glands. See *Glands, gastric*.

G. hæm'orrhage. See *Hæmatemesis*.

G. hern'ia. A hernia containing some part of the stomach.

G. juice. (*F. suc gastrique; G. Magen-saft*.) The secretion of the tubular glands of the stomach, the *G. glands*. It is a thin, clear, colourless or yellowish, acid, and acid-smelling fluid, having a sp. gr. of 1001 to 1010, and containing a small but uncertain quantity of solids, estimated as low as .56 per cent. and as high as 2 per cent. Hydrochloric acid to the amount from .2 to .4 per cent., and a hydrolytic ferment,

GASTRICISM—GASTRITIS.

pepsin, are the two essential constituents of gastric juice; besides these there may be present lactic, acetic, butyric, and other acids; and constantly, sodium, potassium and calcium chlorides, with phosphates of lime, magnesia, and iron; it also contains mucin, some peptones, and a little fat.

The gastric juice converts albuminous bodies into peptones, probably after first reducing them into a substance called by Meissner parapeptone, and by Kuhne antialbuminate.

Gastric juice has been used as a local application to cancers and sloughing sores, with the effect of destroying the diseased or dead parts, the removing of the offensive smell, and the promotion of the growth of healthy granulation tissue.

G. juice, artificial. Artificial gastric juice may be made by adding hydrochloric acid to the amount of .2 per cent. of the product to the scrapings of the mucous surface of a pig's stomach and filtering. Or by digesting the mucous membrane of the stomach at 35° C. (95° F.) with water containing .2 per cent. of hydrochloric acid, or by extracting it with glycerine and adding hydrochloric acid. Its action is that of the natural gastric juice.

G. lymphatic glands. A series of small lymphatic glands lying on the greater and smaller curvatures of the stomach at the place of attachment of the omenta.

G. murmurs. See *Murmurs, gastric*.

G. nerves. (F. *nerfs gastriques*; G. *Magenerven*.) The terminal branches of the pneumogastric nerves on the stomach. The left nerve divides in front of the œsophagus on the stomach into many branches, which are distributed, some over the anterior surface of the stomach, others along the lesser curvature, where they join branches of the right nerve and of the sympathetic, and others run between the layers of the small omentum to the hepatic plexus. The right nerve divides at the back of the œsophagus on the stomach into branches, some of which supply the posterior wall of the stomach, and others join the cœliac, splenic, and left renal sympathetic plexuses.

G. neuralgia. (Νεύρον, a nerve; άλγος, pain.) Pain in the stomach, or gastralgia, depending on hyperæsthesia of the vagus nerve.

G. plexus, anterior. (L. *anterior*, in front. G. *vorderes Magengeflecht*.) The loose plexus formed by the intercommunication of the left gastric nerve with twigs from the sympathetic on the anterior face of the stomach.

G. plexus, posterior. (L. *posterior*, hinder. G. *hinteres Magengeflecht*.) The loose plexus formed by the intercommunication of the right gastric nerve with the branches of the sympathetic on the posterior surface of the stomach.

G. softening. See *Stomach, softening of*.

G. system. The digestive system; the organs of digestion.

G. teeth. See *Teeth, gastric*.

G. ulcer. See *Stomach, ulceration of*.

G. veins. The veins accompanying the G. arteries.

G. veins, short. See *Venæ gastricae breves*.

G. vomiting. A vomiting which depends upon, or is caused by, some direct disturbance of the stomach itself.

Gastricism. (Γαστήρ.) The doctrine of the dependence of the greater number of diseases on a bad condition of the stomach.

Also, stomach diseases generally.

Gastricity. (Γαστήρ. F. *gastricité*; I. *gastricità*; S. *gastricidad*; G. *Gastricität*.) A disturbance of the alimentary canal, with furred tongue.

Also, a term applied to the group of symptoms peculiar to what was called gastric fever.

Gastriculous. (L. *gaster*, the belly; *colo*, to inhabit.) Inhabiting the intestinal canal, as the larvæ of the *Estridæ*.

Gastriloquist. (L. *gaster*, the belly; *loquor*, to speak.) Same as *Ventriiloquist*.

Gastril'oquus. (Same etymon.) A *Ventriiloquist*.

Gastrimargia. (Γαστριμαργία, gluttony; from γαστήρ, the belly; μάργος, greedy.) Excess in eating and drinking.

Gastrimar'gus. (Γαστριμαργος, of greedy belly.) One who is gluttonous.

Gastrinum. A term for potash.

Gastrismus. (Γαστρισμός, gluttonous eating.) Over-filling of the stomach with food and the disorders consequent thereupon.

Gastritic. (Γαστήρ, the belly, the stomach.) Relating to, connected with, or resembling, *Gastritis*.

Gastritis. (Γαστήρ. F. *gastrite*; I. *gastrite*; G. *Magenentzündung*.) Inflammation of the coats of the stomach. It may be an acute or chronic inflammation of the mucous coat, causing an excessive secretion of mucus and a defective secretion of gastric juice, or ending in degeneration of its glandular structure or ulceration of its surface; or it may be an acute inflammation of all the coats, sometimes ending in gangrene, from the direct action of irritant or corrosive poisons; or it may be a chronic fibroid degeneration of the submucous connective tissue from such a cause as constant spirit-drinking to excess.

G., acute'. (L. *acutus*, severe.) Acute gastritis chiefly affects the mucous coat, except when caused by the taking of irritants or corrosives, when the whole stomach wall may be affected. As an idiopathic disease it is rare, but when it does occur in a violent form, or when it is caused by irritant poisons, the symptoms are very severe. There is acute burning pain, spreading from the epigastrium to the back, preventing a full breath being taken, violent retching and vomiting of bloody mucus, feeble pulse, cold perspirations, hiccup, rapid collapse, and death from prostration. If there be recovery, it is of slow and difficult attainment. In the milder forms, the symptoms are sometimes like those of enteric fever. The morbid conditions seen may be only moderate congestion, with softening and swelling of the mucous membrane, which is covered with mucus mixed with leucocytes; the epithelial cells of the gland ducts are in a state of mucoid degeneration, and there is a cloudy and granular condition of the epithelial cells of the peptic glands; or there may be small extravasations of blood, leading to ulceration or sloughing; or the congestion may be intense, and the gastric walls may be infiltrated with lymph or pus, or may be gangrenous; or ulceration may take place or atrophy. See also, G., *catarrhal*, *acute*, and G., *erythematous*, *acute*.

G. adhæsi'va. (L. *adhæro*, to stick to.)

GASTRITIS.

One of Good's two forms of gastritis in which the pain is very acute and the fever violent.

G., arthritica. (Ἀρθρίτις, gout.) Inflammation of the stomach occurring in a person of a gouty character, and supposed to be caused by the gouty diathesis.

G., catarrhal. (Κατάρρῳος, a running down. *F. gastrite catarrhale*; *G. Magenkatarrh.*) Inflammation of the mucous membrane of the stomach. See *G., catarrhal, acute*, and *G., catarrhal, chronic*.

G., catarrhal, acute. (*F. gastrite catarrhale aigue*; *G. acuter Magenkatarrh.*) A form of the disease which usually occurs at or after middle life, and is characterised by vomiting of a thick glairy mucus, with weight and fullness at the epigastrium, but seldom absolute pain; there is a loaded tongue, fetor of the breath, scanty and high coloured urine, and frontal headache. It is commonly caused by the eating of indigestible food, or by the abuse of alcoholic drinks, especially spirits; it not infrequently occurs in gouty or rheumatic persons, in those suffering from heart disease or cirrhosis of the liver, or from some lung mischief. In the milder cases there is little to be observed after death; redness, if it had been present, has gone, and only excess of mucus and free exfoliation of epithelial cells can be seen. In the more severe cases the stomach is contracted, the mucous lining is softened, and covered with an adherent tenacious mucus; it may be injected and not infrequently studded with small spots where blood has escaped from the vessels, in many of which ulceration has commenced; the cells of the gastric glands have become distended with granules and small oil globules, and the solitary glands are in like manner enlarged and degenerated.

G., catarrhal, chronic. (*L. chronicus*, long-lasting. *F. gastrite catarrhale chronique*, *catarrhe chronique de l'estomac*; *G. chronischer Magenkatarrh.*) A form of the disease which occurs at or after middle life, especially in those of a full habit of body, and in childhood. It is caused by errors in diet, such as too copious and too frequent meals, especially of animal food, the taking of alcoholic liquors to excess, and imperfect mastication; it is a frequent accompaniment of chronic wasting diseases. The symptoms vary; there is some tenderness on pressure, but little pain at the epigastrium, acidity and heartburn are not infrequent, usually there is nausea, seldom vomiting; when this occurs it is generally in the morning. The tongue is large, coated, and indented; sometimes the pharynx is congested, which causes cough; the bowels are usually confined and the urine high-coloured. The post-mortem appearances extend to the submucous tissue, and sometimes to the muscular coat; the mucous membrane is covered with a tough, white, transparent mucus, and itself is thickened, reddish, or brownish, or greyish in colour, and uneven or mammillated in surface; the mamillae are opaque and yellow, containing large glands distended with granular epithelium, and the furrows between them contain only small atrophied glands with thickened walls, enclosing oil globules or a few granular cells. On the unatrophied surface are seen bright transparent points, being cystic enlargements of the gastric glands distended with viscid mucus, containing spherical cells, and lined with calyciform epithelium. At a later stage the matrix of the mucous membrane hypertrophies

into bud-like prominences, which sometimes grow to villousities or small polypi.

G., chronic. (*L. chronicus*, long-lasting.) The chronic form of gastric inflammation presents a variety of symptoms, some directly due to the disease itself, others the consequence of the resulting malnutrition. The term is used loosely, and includes cases which are described as chronic catarrhal gastritis, chronic erythematous gastritis, and fibrosis of the stomach, as well as many which are simply called dyspepsia.

G., croupous. (*Croup.*) The form in which there is found a greyish yellow croupous membrane covering patches of the mucous surface of the stomach.

G., diphtheritic. (*Diphtheria.*) The form of inflammation of the stomach in which the mucous surface is more or less covered with patches of a thin, yellowish, adherent, lymphoid deposit or pellicle, or in which it is penetrated by it and becomes sloughy. It is a rare disease; it seldom, if ever, occurs alone, but nearly always in connection with diphtheria of the throat.

G., erythemat'ica. One of Good's two forms of gastritis in which there is an erythematous blush extending to and visible in the fauces, more moderate pain, less violent fever, and low and quick pulse.

See also *G., erythematous*.

G., erythematous. (Ἐρυθμία, a redness.) Fenwick's term for a form of gastritis differing from the catarrhal form in that it occurs more frequently in children and young persons, and constitutes a considerable number of the so-called gastric and remittent fevers of infants. It occurs in the progress of scarlet and other eruptive fevers, and is often seen in the last stage of phthisis and similar exhausting diseases. In all but the cases accompanying the eruptive fevers there is much shooting epigastric pain, and tenderness on pressure after food, which in the phthisical cases is more commonly described as a feeling of rawness. In children, the tenderness on pressure is more marked than the pain; there is nausea, and usually vomiting, but not of much mucus; generally there is thirst; the tongue is red, soon to become dry and glazed; the stools are liquid, frequent, and foetid, and the pulse quick. It seldom assumes a chronic form. The gastric glands are distended with granular and fatty matters, which obscure the epithelial cells; there is not much mucus, but in it casts of the glands are sometimes observed.

See also, *G. erythematica*.

G., favo'sa. (*L. favus*, a honeycomb.) Kundrat's term for a fatal inflammation of the mucous membrane of the stomach occurring in a person the subject of universal favus, and characterised by erosions of the gastric mucous membrane and intervening swellings which very much resembled the favus-cups of the skin, and which contained the *Achorion Schönleini*. The mucous membrane of the small intestine was also affected, but contained little of the fungus.

G., follicular. (*L. folliculus*, a small bag.) Same as *G., glandular*.

G., gan'grenous. (Γάγγραινα, an eating away.) The cases of acute gastritis in which gangrene of the mucous and other coats of the stomach results. It is most frequently, if not invariably, the result of the action of corrosive poisons.

GASTRO—GASTROCNEMIUS.

G., gland'ular. The form in which the gastric glands are swollen from increase of the epithelial cells, which themselves are cloudy, and are seen as small swellings on the uneven surface of the mucous membrane, which frequently ulcerates.

G., idioopath'ic. (Ἰδιος, peculiar; πάθος, suffering.) Inflammation of the stomach arising apparently spontaneously, not caused by irritant substances, as poisons, bad food, and alcohol.

G., pem'phigus. (Πέμφιξ, a bubble.) A form of gastritis which sometimes accompanies general pemphigus. It is characterised by superficial ulcerations of the mucous membrane, which are often blackish in colour from the action of the gastric juice on blood which has exuded from their surface; the ulcerations are supposed to be the bases of ruptured bullæ, or to be the results of the same influences which cause the bullæ of the skin.

G. phlegmono'dea. See *G., phlegmonous*.

G., phleg'monous. (Φλεγμονή, inflammation beneath the skin.) The form in which the submucous tissue is swollen, thickened, red, and infiltrated with pus or lymph which invades the muscular coat; the mucous coat is diffusely reddened or spotted with congested patches or small ulcerations; and the peritoneal coat is inflamed. It is usually a sequel of some other and general disease, such as typhus, septicæmia, or puerperal fever.

G., pri'mary. (*L. primus*, first.) Gastritis which is not caused by any other disorder of the body.

G., pu'rlent. (*L. purulentus*, full of matter.) A synonym of *G., phlegmonous*.

G., rheuma'tic. Gastritis which is supposed to be caused by *Rheumatism*.

G., sec'ondary. (*L. secundus*, second in order.) Gastritis which is caused by some disorder of the general system, as some cases of phlegmonous gastritis.

G. submucosa. (*L. sub*, under; *mucosa*, the mucous coat.) A synonym of *G., phlegmonous*.

G., toxic. (Τοξικόν, poison. *G. toxische Magenentzündung*.) Inflammation of the stomach produced by the taking of an irritant or corrosive poison.

Gastro-. (Γαστήρ, the belly, the stomach.) A prefix signifying relation to the stomach or to the abdomen. Same as *Gastro-*.

Gastroadeni'tis. (Γαστήρ; ἀδὴν, a gland.) Inflammation of the gastric glands, especially thickening of their apertures, such as occurs in some cases of chronic gastritis.

Gastro-ady'namic fever. See *Fever, gastro-ady'namic*.

Gastro-arachnoidi'tis. (Γαστήρ; arachnoid membrane.) Coincident inflammation of the stomach and the arachnoid membrane; formerly supposed to occur in some fevers.

Gastroarc'tia. (Γαστήρ; *L. arcto*, to narrow.) Same as *Gastrostenosis*.

Gastroarthri'tis. (Γαστήρ; ἀρθρίτις, belonging to the joints.) An inflammation of the stomach and the joints at the same time.

The term was used by Broussais to indicate gout which he believed to originate in a gastritis.

Gastroataxia. (Γαστήρ; ἀταξία, want of order.) A synonym of *Dyspepsia*.

Gastro-ataxic fe'ver. See *Fever, gastro-ataxic*.

Gastroaton'ia. (Γαστήρ; ἀτονία, languor.) A synonym of *Dyspepsia*.

Gastroblennozem'ia. (Γαστήρ, the belly; βλένω, mucus; ζημία, loss.) Excessive secretion of mucus from the stomach.

Gastrobranch'ia. (Γαστήρ; βράγχια, the gills.) De Blainville's term for fishes such as Myxine, which possess branchial sacs each opening into the œsophagus as well as into a common canal which has an external orifice.

Gastrobronchi'tis. (Γαστήρ; bronchitis.) A term for fever with much irritation of the bronchial and gastric mucous membranes; such as occurs sometimes in the later stages of pneumonia and phthisis.

Also, a term for the disease of dogs called the distemper.

Gastrobro'sis. (Γαστήρ; βρώσις, an eating.) Alibert's term for destruction and perforation of the coats of the stomach.

G. ulcero'sa. (*L. ulcer*, an ulcer.) Perforation of the stomach walls from ulceration.

Gastrocathar'sis. (Γαστήρ; κάθαρσις, a cleansing. *G. Magenaustrurf*.) Evacuation of the stomach, as by vomiting.

Gastrocele. (Γαστήρ; κήλη, hernia. *F. gastrocèle*; *I. gastrocele*; *G. Magenbruch*.) An abdominal hernia which contains some part of the stomach.

Also, a protrusion of some part of the stomach through the linea alba.

Gastrocephali'tis. (Γαστήρ; κεφαλή, the head.) Concurrent inflammation of the stomach and the brain, as occurs in some fevers.

Gastrocholecysti'tis. (Γαστήρ; χολή, bile; κύστις, a bladder.) Concurrent inflammation of the stomach and gall-bladder.

Gastrochol'ia. (Γαστήρ; χολή, bile.) A stomach affection with biliousness.

Gastrocholo'sis. (Γαστήρ; χολή.) Eisenmann's term for the form of fever which has been called bilious gastric fever.

Gastrocnē'mē. (Γαστροκνήμη, from γαστήρ; κνήμη, the leg.) The calf of the leg.

Gastrocnē'mia. (Γαστροκνημία.) The calf of the leg.

Gastrocnē'mium. (Γαστροκνήμιον.) The calf of the leg.

Gastrocnē'mius. (Γαστήρ, the belly; κνήμη, the leg. *F. gastrocnemien*; *I. gastrocnemio*; *G. zweiköpfiger Wadenmuskel*.) A muscle of the calf of the leg which arises by two heads; the outer from a depression on the outer side of the external condyle above the tuberosity, and from the hinder surface of the femur above the condyle; the inner from a depression on the internal condyle behind the adductor tubercle, from the lower end of the internal supracondylar ridge, and from the neighbouring part of the popliteal surface of the femur; the two parts converge and then lie side by side, separated by a thin band of tendon, and halfway down the leg end in a flat broad tendon, which becomes narrower and thicker as it approaches the soleus tendon, which it joins to form the tendo Achillis, which is inserted into the middle part of the posterior surface of the tuberosity of the os calcis. It is supplied by the internal popliteal nerve. The gastrocnemius acts as a flexor of the knee, and an extensor of the ankle-joint.

In some animals, as the *Echidna*, this muscle

GASTROCELIAC—GASTRO-ENTERALGIA.

is single, in others, as the chameleon, it is divided longitudinally into two parts, each of which is connected with other muscles; in some, as the Loris, it is very small, and in others it is absent; sometimes its tendon extends into the sole of the foot.

G., artery of. The sural artery.

G. exter'nus. (L. *externus*, outer.) The *Gastrocnemius*.

G. inter'nus. (L. *internus*, inner.) The *Soleus*; in Solipeds the *Flexor perforatus*.

Gastrocœliac. (Γαστήρ; κοιλία, the belly.) Relating to the abdominal cavity.

Gastrocœlic. Same as *Gastrocœliac*.

Gastrocolic. (Γαστήρ, the stomach; κόλον, the colon.) Relating to the stomach and to the colon.

G. epip'loon. (Ἐπίπλοον, the omentum.) The *Omentum, gastrocolic*.

G. fis'tula. See *Fistula, gastro-colic*.

G. oment'um. See *Omentum, gastrocolic*.

G. vein. A vein sometimes formed by the junction of the right gastro-epiploic vein with the right colic vein, before the former empties itself into the superior mesenteric vein.

Gastrocolica. (Γαστήρ; κωλικός, having the colic. G. *Magenkolik*.) Painful indigestion; stomach spasms.

Gastrocolitis. (Γαστήρ; κόλον, the colon.) Inflammation of the stomach and of the large intestine occurring simultaneously.

Also, Broussais' name for dysentery.

Gastrocolpotomy. (Γαστήρ; κόλπος, a sinus, and so the vagina; τομή, section.) A form of Cæsarean section in which an incision is to be made through the linea alba into the upper part of the vagina and the child extracted through the cervix uteri.

Gastroconjunctivitis. (Γαστήρ; conjunctivitis.) An epizootic prevalent among horses, which affects the mucous membrane of the alimentary canal and of the eyes. The attack is sudden; the animal ceases to feed, his coat becomes staring, the temperature is high, with daily exacerbations, the mouth is covered with stringy mucus, the tongue is covered with sordes, there is great thirst, the spine is stiff and rigid, the eyelids swollen, and the conjunctiva red. The mortality is about three per cent. The chief lesions are of the gastro-intestinal mucous membrane.

Gastrocystitis. (Γαστήρ; κύστις, a bladder.) Inflammation of the stomach and urinary bladder combined, as in some fevers.

Gastrodermitis. (Γαστήρ; δέρμα, the skin.) Inflammation of the stomach, accompanying inflammation of the skin, as in some exanthematous fevers.

Gastro'des. (Γαστρώδες, pot-bellied.) Same as *Gastroid*.

Gastro'dia. A Genus of the Nat. Order *Orchidaceæ*.

G. sesamoïdes. (Σηάμη, an Indian bean; εἶδος, likeness.) Hab. Tasmania. Root tuberous; esculent.

Gastrodiabrosis. (Γαστήρ, the belly; διάβρωσις, ulceration.) Ulceration of the coats of the stomach.

Gastrodialysis. (Γαστήρ; διάλυσις, a separating.) The condition brought about by a penetrating wound of the stomach.

Gastrodiatrema. (Γαστήρ; διατρίβω, to rub away.) A hole in the walls of the stomach.

Gastrodiatre'sis. (Γαστήρ; διάτρησις, a boring through.) The production of a perforation in the walls of the stomach.

Gastrodid'ymsus. (Γαστήρ; δίδυμος, twin.) A twin monstrosity united so that there is one abdominal cavity.

Gastrodisc. (Γαστήρ; δίσκος, a round plate.) Van Beneden's term for the endoderm, or hypoblast, of the vertebrate embryo about the ninth day, when it appears like a lenticular spot or disc applied to the inner face of the ectoderm, or epiblast of the blastoderm.

Gastrodis'cus. (Γαστήρ; δίσκος.) A Genus of the Order *Trematoda*.

G. Sonsino'nis. Cobbold. Found by Sonsino in the intestine of the horse in Egypt.

Gastrododecadactylopyra. (Γαστήρ; δωδεκαδάκτυλος, the duodenum; πύρ, fire.) Same as *Gastroduodenopyra*.

Gastrododecadactylo'typhus. (Γαστήρ; δωδεκαδάκτυλος.) Same as *Gastroduodenotyphus*.

Gastroduode'nal. (Γαστήρ; duodenum.) Relating to the stomach and the duodenum.

G. artery. (F. *artère gastroduodénale*; G. *Magenzwoelfingerschlagader*.) A branch of the hepatic artery at the upper surface of the pylorus, whence it runs behind the first part of the duodenum to its lower border, when it divides into the superior pancreatico-duodenal artery and the right gastro-epiploic artery.

G. plexus. See *Plexus, gastroduodenal*.

Gastroduodenitis. (L. *gaster*, the belly; *duodenum*, the gut of that name.) Inflammation of the stomach and of the duodenum occurring at the same time.

Gastroduodenocholecystitis. (Γαστήρ; duodenum; χολή, bile; κύστις, a bladder.) Concurrent inflammation of the stomach, duodenum, and gall-bladder; said to occur in yellow fever.

Gastroduodenopyra. (Γαστήρ; duodenum; πύρ, fire.) A fever with free secretion of gastro-intestinal mucus.

Gastroduodenotyphus. (Γαστήρ; duodenum; typhus.) Petechial typhus, according to Eisenmann.

Gastrodyné. Same as *Gastrodynia*.

Gastrodynia. (Γαστήρ; δόνη, pain. G. *Magenschmerz*.) A synonym of *Gastralgia*, especially used when the pain is not very severe. Also (G. *Bauchschmerz*), pain in the abdomen.

G. flatulen'ta. (L. *flatus*, breath.) Flatulent colic.

Gastrodysneu'ria. (Γαστήρ; δυν, a prefix meaning bad; νεύρον, a nerve.) Deficient innervation of the stomach and its consequences.

Gastro-ecta'sia. Same as *Gastrectasia*.

Gastro-elytrotomy. (Γαστήρ; ἔλυτρον, a sheath, and so the vagina; τομή, a cutting.) The younger Baudelocque's term for a modification of the Cæsarean section, in which, after an incision through the linea alba, the vagina was opened and the child extracted through the cervix uteri.

Gastro-encephalitis. (Γαστήρ; ἐγκέφαλον, the brain.) Concurrent inflammation of the stomach and the brain.

Gastro-encephalo'ma. (Γαστήρ; encephaloma.) Encephaloid carcinoma of the stomach.

Gastro-enteral'gia. (Γαστήρ; εν-

GASTRO-ENTERIC—GASTROMANTIA.

τερων, the intestine; ἄλγος, pain.) Pain in the stomach and bowels.

Gastro-enteric. (Γαστήρ; ἔντερον.) Relating to the stomach and bowels.

Gastro-enteritis. (Γαστήρ; ἔντερον.) Relating to *Gastro-enteritis*.

Gastro-enteritis. (Γαστήρ, the belly, the stomach; ἔντερον, an intestine. *G. Magendarmenzündung*.) Concurrent inflammation of the stomach and small intestines; a condition believed by Broussais to constitute the essence of the essential fevers of previous authors.

G., follicular. (L. *folliculus*, a small bag.) A fever with inflammation of the intestinal follicles, being *Enteric fever*.

Gastro-enterocolitis. (Γαστήρ; ἔντερον, an intestine; κόλον, the colon.) Concurrent inflammation of the stomach and the small and large intestines.

Gastro-enterostomy. (Γαστήρ; ἔντερον; στόμα, a mouth.) The formation of a permanent mouth, or fistulous opening, connecting the duodenum and the stomach when the pylorus is obstructed. The abdominal walls being opened, an incision is made into the stomach, and then into an adjacent portion of small intestine, and the edges of the several openings carefully stitched to each other. The operation was first performed by Wölfler of Vienna.

Gastro-enterotomy. (Γαστήρ; ἔντερον; τομή, section.) The opening of the intestine through the abdominal walls.

Gastro-epiploic. (Γαστήρ; ἐπίπλοον, the omentum.) Relating to the stomach and omentum.

G. artery, left. (F. *artère gastro-épiplœique gauche*; G. *linke Magennetzarterie*.) A branch of the splenic artery running from left to right along the greater curvature of the stomach and inosculating with the right gastro-epiploic artery. It supplies both surfaces of the stomach.

G. artery, right. (F. *artère gastro-épiplœique droite*; G. *rechte Magennetzarterie*.) The continuation of the gastro-duodenal branch of the hepatic artery. It runs from right to left along the greater curvature of the stomach, and inosculates with the left gastro-epiploic artery. It supplies both sides of the stomach, and sends long branches to the omentum.

G. ganglia. Same as *G. glands*.

G. glands. (F. *ganglions gastro-épiplœiques*.) The small lymphatic glands found along the greater and lesser curvatures of the stomach in the omentum.

G. nerves. The nerves of the stomach and omentum which are derived from the right and left gastro-epiploic plexuses which themselves are derived from the hepatic and splenic plexuses.

G. plexus, left. (L. *plexus*, a weaving.) A sympathetic plexus derived from the splenic plexus.

G. plexus, right. A sympathetic plexus derived from the hepatic plexus, and lying around the coronary artery of the stomach.

G. vein, left. The vein accompanying the left gastro-epiploic artery. It opens into the splenic vein.

G. vein, right. The vein accompanying the right gastro-epiploic artery. It opens into the superior mesenteric vein.

Gastro-epiploica. Same as *Gastro-epiploic*.

G. dex'tra. (L. *dexter*, right.) The *Gastro-epiploic artery, right*.

G. sinis'tra. (L. *sinister*, left.) The *Gastro-epiploic artery, left*.

Gastrogenital pouch. (G. *Gastro-genitaltasche*.) A segment of the sexual apparatus in *Lucernariae*.

Also, the dilatation of the radial canals for the reception of the generative organs in *Æginida*.

Gastrohæmorrhægia. (Γαστήρ, the stomach; αἱμορραγία, violent bleeding.) Bleeding from the stomach; hæmatemesis.

Gastro-hepatic. (Γαστήρ; ἥπαρ, the liver.) Relating to the stomach and the liver.

G. artery. (F. *artère gastro-hepatique*.) Walter's term for the coronary artery of the stomach.

G. current. See *Current, gastro-hepatic*.

G. fever. See *Fever, gastro-hepatic*.

G. omentum. See *Omentum, gastro-hepatic*.

Gastro-hepatitis. (Γαστήρ; ἥπαρ.) Inflammation of both stomach and liver.

Gastro-hyperneuria. Same as *Gastrhyperneuria*.

Gastrohysterotomy. (Γαστήρ, the belly; ὑστέρα, the womb; τομή, a cutting. G. *Bauchgeburmutter schnitt*.) A term for the *Cæsarean section*.

Gastroid. (Γαστροειδής, paunch-like. G. *magenförmig, bauchförmig, bauchähnlich*.) Having a dilatation like a belly.

Gastro-intestinal. (L. *gaster*, the belly, the stomach; *intestinum*, the intestine.) An equivalent of *Gastro-enteric*.

G. catarrh. Catarrhal inflammation of the alimentary mucous membrane.

Gastrolaryngitis. (Γαστήρ, the belly, the stomach; λάρυγξ, the larynx.) Inflammation of the larynx complicating gastritis.

Gastrolie'nal. (Γαστήρ; L. *lien*, the spleen.) Relating to the stomach and the spleen.

G. lig'ament. The *Gastrosplenic ligament*.

Gastrolith. (Γαστήρ; λίθος, a stone. G. *Magenstein*.) A concretion in the stomach.

Gastrolithi'asis. (Γαστήρ; λίθος.) The formation of, or condition of having, concretions in the stomach.

Gastrolobium. (Γαστήρ; λοβός, a pod.) A Genus of the Nat. Order *Leguminaceæ*; the species inhabit Australia, and are said to be poisonous to cattle.

Gastromalacia. (Γαστήρ; μαλακία, softness. G. *Magenerweichung*.) Softening of the coats of the stomach, as a pathological and not a post-mortem condition.

It was held by Rokitsky that this disease was prevalent among children, but it is now believed that the softening which is frequently seen in infants is like the softening in the adult stomach, an after-death change, and its greater frequency in children is accounted for by the production of lactic acid during fermentation of the contained milk. See *Stomach, softening of*.

Gastromalaco'sis. (Γαστήρ; μαλακός, soft.) Same as *Gastromalacia*.

Gastromalax'ia. (Γαστήρ; μαλαξίς, a softening.) Same as *Gastromalacia*.

Gastromant'ia. (Γαστήρ; μαντεία, prophesying.) Divination from the bottom or belly of a vessel by observation of the figures

GASTROMELES—GASTROPHTHISIS.

shown there when the vessel is filled with clear water.

Gastrom'eles. (Γαστήρ; μέλος, a limb.) A monstrosity with one or more supernumerary limbs attached to the abdomen, between the thoracic and pelvic limbs.

Gastrom'enia. (Γαστήρ; μηνιαία, the monthly courses of women.) Vicarious menstruation from the stomach.

Gastromeningi'tis. (Γαστήρ; μή-νιγξ, a membrane.) Inflammation of the stomach, and of the meninges of the brain, being the disorder formerly called bilious fever when cerebral symptoms were present.

Gastrometri'tis. (Γαστήρ; μήτρα, the womb.) Inflammation of the womb, accompanied by inflammation or irritation of the stomach.

Gastrometro'tomy. (Γαστήρ; μή-τρα, the womb; τομή, section.) A term for the *Cæsarean section*.

Gastro-mu'cous. (Γαστήρ; L. *mucus*, slime.) An epithet used to indicate gastric irritation with a copious secretion of mucus.

Gastrom'yces. (Γαστήρ; μύκης, a fungus. G. *Bauchpitz*, *Balgpitz*.) The fungous growths found in the stomach, such as *Torula* and *Sarcina*.

Gastromyces'tes. (Γαστήρ; μύκης, a fungus. G. *Bauchpitz*, *Balgpitz*.) An Order of basidiomycetous Fungi in which the hymenium is enclosed within the fructification lining the dividing walls or trammæ of its cavities. The name was given by Fries.

Gastromycod'era. (Γαστήρ; μύξα, mucus; δέρμα, skin.) The mucous membrane of the stomach.

Gastromycod'eris. (Γαστήρ; μύξα; δέρμα.) Same as *Gastromycodera*.

Gastromycoderi'tis. (Γαστήρ, the belly; μύξα, mucus; δέρμα, skin.) Inflammation of the mucous membrane of the stomach.

Gastromyelo'ma. (Γαστήρ; μυέλος, marrow.) Same as *Gastro-encephaloma*.

Gastronephrit'is. (Γαστήρ; νεφρός, the kidney.) Inflammation of the kidney with gastric complications.

Gastroneu'ria. (Γαστήρ; νεύρον, a nerve.) An affection of the nerves of the stomach.

Gastron'osus. (Γαστήρ; νόσος, disease. G. *Magenkrankheit*.) A stomach disease.

Gastronu'sos. (Γαστήρ; νοῦσος, disease.) A disease of the stomach.

Gastro-oesophagi'tis. (Γαστήρ; οἰσοφάγος, the gullet.) Inflammation of the œsophagus extending to the stomach, as may occur in gangrenous stomatitis.

Gastropancreatit'is. (Γαστήρ; pancreas.) Inflammation of the pancreas with disorder of the stomach.

Gastroparal'ysis. (Γαστήρ; παρά-λυσις, paralysis.) Paralysis of the stomach.

Gastroparietal. (L. *gaster*, the stomach; *paries*, a wall.) Relating to the abdominal cavity and to its walls.

G. band. Same as *G. septum*.

G. sep'tum. (L. *septum*, a partition.) The anterior of the two transverse fibrous septa attached to the parietes of the abdominal cavity of the Polyzoa and the brachiopodous Mollusca, which support the intestine; it is a relic of the intermetameric septum.

Gastrop'athy. (Γαστήρ, the stomach;

πάθος, suffering. G. *Magenleiden*.) Disease or disorder of the stomach.

Gastropericardi'tis. (Γαστήρ; περι-καρδῖος, about the heart.) Inflammation of both stomach and pericardium.

Gastroperiodyn'ia. (Γαστήρ; περι-όδος, a going round, a period; δόνη, pain.) A violent periodical pain in the pit of the stomach, known in India by the name *Sool*.

Gastroperitoni'tis. (Γαστήρ; περι-τόναιος, the peritonæum.) Inflammation of the peritoneal coat of the stomach.

Also, inflammation of the stomach and of the peritoneum as well.

Gastropharyngi'tis. (Γαστήρ; φάρυγξ, the gullet.) Inflammation of the pharynx extending to the stomach.

Gastroph'ilus. (Γαστήρ; φίλω, to love.) A Genus of the Family *Estridae*, Tribe *Muscaria*, Suborder *Brachycera*, Order *Diptera*.

G. e'qui, Fabr. (L. *equus*, a horse.) The bot-fly, the larva of which lives in the stomach of the horse, ass, and like animals. The female lays her eggs on the hair on the insides of the legs, or on the flanks of the animal. When they hatch the movements of the larva produce an itching, which causes the horse to lick the part, and so swallow some of them. Arrived at the stomach they attach themselves by the aid of mandibular hooklets to the mucous membrane, from which they draw their nourishment; they attain their full development, after many moultings, in ten or eleven months, when they are expelled from the body with the feces, where they change into a pupa by the hardening of the integument, and in about thirty days the perfect insect is produced.

G. fla'vipes, Oliv. (L. *flavus*, yellow; *pēs*, a foot.) Larva lives in the stomach of the ass. Found in South Europe.

G. hæmorrhoida'lis, Linn. (Αἰμορροῖς, liable to discharge blood.) Hab. Europe. Larva lives in the stomach of the horse.

G. lativen'tris, Löw. (L. *latus*, broad; *venter*, the belly.) Hab. Russia. Larva lives in the stomach of the ass.

G. nasa'lis, Clk. (L. *nasus*, the nose.) Hab. North of Europe and America. Larva lives in the stomach and œsophagus of the horse.

G. nigricor'nis, Löw. (L. *niger*, black; *cornu*, a horn.) Hab. Crimea. Larva lives in the stomach of the horse.

G. pec'orum, Fabr. (L. *pecus*, cattle.) Hab. Europe. Larva lives in the stomach of the Equidæ.

G. rhinoceron'tis, Owen. Larva inhabits the stomach of the rhinoceros.

Gastrophren'ic. (Γαστήρ; φρήν, the diaphragm.) Relating to the stomach and the diaphragm.

G. lig'ament. (L. *ligamentum*, a band. F. *ligament phrenico-gastrique*.) A short, triangular duplicature of the peritoneum as it passes from the diaphragm to the stomach. It extends from the left side of the œsophageal opening in the diaphragm to the left side of the cardiac end of the stomach.

Gastrophthal'mia. (Γαστήρ; ὀφθαλμία, a disease of the eyes.) Inflammation of the eyes supposed to depend on a disordered condition of the stomach.

Gastroph'thisis. (Γαστήρ; φθίσις,

GASTROPHTHOE—GASTROSTEGOUS.

consumption, decay. *G. Magenschwindsucht, Bauchschwindsucht*.) A disorder which has been described as a hectic fever, the cause of which lies in stomach or abdominal lesion.

Gastrophthoe. (Γαστήρ; φθόη, consumption.) Same as *Gastrophthisis*.

Gastroplegia. (Γαστήρ; πληγή, a stroke.) Paralysis of the stomach.

Gastroplethora. (Γαστήρ; πλεθώρα, fulness.) Over-fulness or congestion of the blood-vessels of the stomach.

Gastropleuritis. (Γαστήρ; πλευρίτις, pleurisy.) Inflammation of both stomach and pleura concurrently.

Gastropneumonia. (Γαστήρ; πνεύμων, the lung.) Concurrent inflammation of the stomach and the lung; also, called bilious pneumonia.

Gastropneumon'ic. (Γαστήρ; πνεύμων, the lung.) Relating to the stomach and to the lungs.

G. mucous mem'brane. One of the two great divisions of the mucous membranes of the body, being that which lines the alimentary canal and the respiratory passages, with their appendages, and which, commencing at the nose and mouth, terminates at the anus.

Gastropod. (Γαστήρ; πούς, a foot.) An animal of the Class *Gastropoda*.

Gastropoda. (Γαστήρ; πούς. *G. Bauchfüßler, Bauchflosser*.) A Class of the Subkingdom *Mollusca*. Land or water molluscs, having a more or less distinct head, provided with a radula and a dental apparatus; a distinct organ of hearing, and an undivided mantle which secretes a simple, shield-shaped, or spiral shell. Locomotion is effected by a ventral, muscular foot, whence the name.

Gastrophorphyrot'phus. A gastric typhous scarlet fever with angina. (Kraus.)

Gastropty'gma. (Γαστήρ; πτύγμα, anything folded. *G. Bauchfalte, Bauchplatte*.) A term applied to the *Plica abdominalis*.

Gastrop'tyx. (Γαστήρ; πτύξ, a fold.) Same as *Gastroptygma*.

Gastro-pul'monary. (L. *gaster*, the stomach; *pulmo*, the lung.) Relating to the stomach and the lungs.

G. fist'ula. See *Fistula, gastropulmonary*.

Gastropyloric. (Γαστήρ; πυλωρός, the pylorus.) Belonging to the stomach and the pylorus.

G. artery. The gastric artery.

Gastropy'ra. (Γαστήρ; πῦρ, fire.) Eichenmann's term for an inflammatory condition of the mucous membrane of the stomach and the fever connected therewith.

Gastropy'retos. (Γαστήρ; πυρετός, a fever.) A term used in the same sense as gastric fever.

Gastroraph'ia. See *Gastrorrhaphy*.

Gastrorrhag'ia. (Γαστήρ; ῥήγνυμι, to break forth. *F. gastrorrhagie; I. gastrorragia; G. Magenblutung, Blutbrechen*.) Bleeding from the stomach; see *Hæmatemesis* and *Melena*.

Gastror'haphy. (Γαστήρ; ῥαφή, a seam. *F. gastrorrhaphie; I. gastrorapha; G. Bauchnaht*.) Suture of an incision or of a wound of the abdominal walls.

Also, suture of an incision or of a wound of the walls of the stomach.

Also, a term applied by Billroth to the opera-

tion for the cure of gastric fistula. The stomach walls having been carefully separated from the abdominal walls, to which they have become adherent, the edges of the fistula are brought together by fine silk sutures, and the abdominal opening filled up by a flap taken from the healthy skin below the fistula.

Gastrorrhex'is. (Γαστήρ; ῥήξις, a breaking.) Rupture of the walls of the stomach.

Gastrorrhoe'a. (Γαστήρ; ροία, a flow. *F. gastrorrhée; I. gastrorrea; G. Magenfluss*.) The escape through the mouth, by regurgitation or by an easy vomiting, of a more or less abundant glairy fluid, which consists sometimes of the ordinary gastric mucus increased in quantity, and at other times is a thickish, whitish, tasteless, albuminous liquid; both forms may be stained with blood. It occurs most frequently in females.

This term (*G. Bauchfluss*) is also applied to the disorder called *Celiac flux*.

Gastros'chisis. (Γαστήρ; σχίσις, a cleaving.) Congenital fissure of the anterior abdominal wall.

Gastroscir'rhous. (Γαστήρ; σκίρως, a hardened tumour. *G. Magenkrebs*.) Scirrhus cancer of the stomach.

Gastro'scope. (Γαστήρ; σκοπῖον, to observe.) An instrument, devised by Mikulicz, for the inspection of the interior of the stomach. It consists of a long stiff tube, bent at an angle at the junction of its lower and middle thirds where a reflecting prism is placed, containing two water channels for washing out the stomach, and an air channel by which to distend it, and which serves to convey a double insulated electric wire for lighting up the interior.

Gastrosco'pia. (Γαστήρ; σκοπέω, to look at.) Inspection of the abdomen for purposes of diagnosis.

Also, see *Gastroscopy*.

Gastros'copy. (Γαστήρ; σκοπέω.) The inspection of the interior of the stomach by means of the *Gastro'scope*.

Gastrosc'isis. (Γαστήρ; εἶσις, a shaking. *G. Magenschütterung*.) Concussion of the stomach.

Gastro'ses. (Γαστήρ.) A term used by Baumes for diseases of the abdomen in general; and by Alibert for the diseases of the stomach only.

Gastro'spasm. (Γαστήρ; σπασμός, spasm.) Spasm of the stomach.

Gastrosphongio'mata. (Γαστήρ; σφόνγγος, a sponge. *G. Magenschwammknoten*.) A term applied to spongy outgrowths from the mucous membrane of the stomach.

Gastrosplen'ic. (Γαστήρ; σπλήν, the spleen.) Relating to the stomach and to the spleen.

G. ar'teries. The short gastric branches, or vasa brevia, of the splenic artery.

G. epip'loön. (Ἐπίπλοον, the omentum.) The *Omentum, gastrosplenic*.

G. lig'ament. Same as *G. omentum*.

G. omen'tum. Same as *G. omentum, gastrosplenic*.

G. vein. The *Splenic vein*.

Gastro'splen'itis. (Γαστήρ; σπλήν.) Inflammation of the stomach with painful swelling of the spleen.

Gastro'stegous. (Γαστήρ; στέγη, a roof.) A term applied to those reptiles in which the abdominal scales are the largest.

GASTROSTENOSIS—GAUGE.

Gastrostenosis. (Γαστήρ; στένωσις, a being straitened. *G. Magenverengerung.*) Narrowing or morbid contraction of the stomach.

G. cardi'aca. (Καρδία, the cardiac end of the stomach.) Stricture of the cardiac orifice of the stomach.

G. pylor'ica. (Πυλώρος, the pylorus.) Stricture of the pyloric orifice of the stomach.

Gastros'tomy. (Γαστήρ; στόμα, a mouth. *F. gastrotomie.*) The operation of making an opening through the abdominal walls into the stomach, so as to establish an artificial mouth or fistula.

The operation has been employed as a means of introducing nourishment into the stomach when death from starvation threatens in cases of close stricture of the œsophagus, or of other disease which prevents the swallowing of food.

According to Howse's method, a curved incision is made through the skin and superficial fascia of the abdomen for three inches, from a point just below and to the left of the ensiform cartilage, and extending along the lower margin of the chest, at about a finger's breadth below it; the deeper structures are then divided, and when the anterior wall of the stomach is brought into view it is drawn forwards into the wound by forceps, or by two loops of ligature silk; an outer row of silk sutures is made at a distance of three quarters of an inch from the edges of the wound, each passes through the whole thickness of the abdominal walls, and through the coats of the stomach; an inner row of silk or silver-wire sutures is then made to connect the stomach with the margins of the wound, and the surface is dressed with carbolised oil on lint, or with some other appropriate substance. An interval, which may amount to four or five days, or may need to be as short as a few hours, is then allowed to elapse, so that adhesion of the peritoneal surfaces of the stomach and abdominal walls may take place, and the stomach is then perforated by a small opening to allow of the introduction of the feeding-tube.

Gastrotome. (Γαστήρ; τομή, section.) An instrument used by veterinary surgeons for the puncture of the abdominal walls in tympanites.

Gastrot'omy. (Γαστήρ; τομή, a cutting. *F. gastrotomie*; *I. gastrotomia*; *G. Bauchschnitt.*) The opening of the walls of the abdomen for whatever purpose, be it for the liberating of a strangulated intestine, the removal of a tumour or fœtus, or other cause. In this signification it is now perhaps more common to use the term *Laparotomy*.

Also (*G. Magenschnitt*), the opening of the stomach through the abdominal walls. It has been adopted for the purpose of removing foreign bodies.

Gastrot'richa. (Γαστήρ; τρίξ, a hair.) Metschnikoff's term for a small group of animals allied to the Rotifera, which have a vesicular or vermiform body, ciliated on its ventral surface and terminated at the posterior extremity by two appendages of a fork-like character, between which opens the exit from the intestinal tube.

Gastrotuber'cula. (Γαστήρ; *L. tuberculum*, a small swelling.) Same as *Gastro-sphongiomata*.

Gastrotubot'omy. (*L. gaster*, the

belly; *tuba*, a tube. *F. gastrotubotomie.*) Gardien's term for the incision of the Fallopian tube through the abdominal walls, for the purpose of removing the fœtus in tubal extra-uterine pregnancy.

Gastrotympani'tes. (Γαστήρ; τυμπανίτες, distension of the belly like a drum. *G. Magentrommelsucht.*) Distension of the stomach with wind.

Gast'ro-urethrit'is. (Γαστήρ; οὐρήθρα, the urethra.) Inflammation of the stomach occurring in connection with inflammation of the urethra.

Gastrovas'cular. (*L. gaster*, the stomach; *vasculum*, a small vessel.) Relating to the abdominal cavity and a vessel.

G. canal's. The radial canals in the body cavity of the zooid of the Hydrozoa.

G. space. The body cavity of the Coelenterata, which serves both for digestion and circulation.

G. syst'em. Same as *G. space*.

Gastroxy'tes. (Γαστήρ; ὀξύτης, acidity. *G. Magensäure.*) Acidity of the stomach.

Gastr'ula. (Γαστήρ.) Hæckel's term for the larval or fundamental form of all animals above the Protozoa, being a hollow, double-walled, mouth-bearing vesicle, originating in the invagination of a simple, single-walled, mouthless vesicle, the *Blastula*, or *Blastophore*, which is the first product of the segmentation of the impregnated ovum. By the invagination of the blastula it results that the gastrula has two coats, an ectoderm and an endoderm; and an oral cavity, the blastopore, at the point where the two coats are continuous. The typical form is called *Archigastrula*, but three other forms are described by Hæckel, *Amphigastrula*, *Discogastrula*, and *Perigastrula*.

Gastrur'ia. (Γαστήρ; οὖρον, urine.) An old name for what was supposed to be a passage or flow of the urine into the stomach.

Gastr'us, Meigen. (Γαστήρ, the belly.) Same as *Gastrophilus*.

Gastryp'al'gia. (Γαστήρ; ὑπό, under; ἄλγος, pain.) A moderate pain in the stomach.

Gast'ryperneu'ria. (Γαστήρ; ὑπέρ, above; νῆυρον, a nerve.) Increased sensibility or activity of the nerves of the stomach.

Gast'ryperpath'ia. (Γαστήρ; ὑπέρ; πάθος, a suffering.) A severe disease of the stomach.

Gast'rypopath'ia. (Γαστήρ; ὑπό, under; πάθος, a suffering.) A mild disease of the stomach.

Gast'rysterot'omy. See *Gastrohysterotomy*.

Gate. (*Mid. E. gate, yate*; *Sax. geat.*) A door; an opening.

G. vein. The *Vena porta*.

Gate'a'do. The name of the astringent wood of the *Astronium fraxinifolium*, Schott.

Gath. Hungary, County Stuhlweissenburg. An earthy mineral water, containing carbonates of magnesia and lime.

Gat'tine. (*I. gattina*, a kitten.) A non-parasitic disease of silkworms, in which the body becomes covered with small sooty spots.

Gau'dia fœ'da. (*L. gaudium*, delight; *fœdus*, foul.) A term for masturbation.

Gauge. (*Old F. gauger*, to measure a piece of cask; from *Low L. gaugia*, the stand-

GAULT—GAZEOL.

ard measure of a wine-cask.) To measure the contents of a vessel.

Also, a standard of measure.

G., air-pump. A manometer attached to the pump or vessel, showing, by the difference in the level of the mercury in its two arms, the degree to which the pressure is diminished.

G., rain. See *Rain gauge*.

Gault. A term, of local provincial origin, for the stiff, dark-blue or grey marls, or calcareous clays, which lie between the upper and lower greensands of the chalk formation in the South of England. It contains many fossil shells, and forms, when decomposed, a fertile soil.

Gaultheria. (After Dr. *Gaulthier*, of Quebec.) A Genus of the Nat. Order *Ericaceæ*.

The name (U.S. Ph.) of the leaves of *Gaultheria procumbens*, or partridge berry.

G. antipoda. (*Ἀντιπόδες*, having feet opposite.) Hab. New Zealand. Bears esculent fruit.

G. hispida. (*L. hispidus*, bristly.) Hab. New Zealand. Bears an esculent fruit.

G. hispidula. (*L. dim. of hispidus*, hairy.) Contains an oil similar to *Oleum gaultheriæ*.

G. humilis. *Salis.* (*L. humilis*, lowly.) The *G. procumbens*.

G. leucocarpa. (*Λευκός*, white; *καρπός*, fruit.) Contains oil of gaultheria.

G., oil of. See *Oleum gaultheriæ*.

G. procumbens. *Linn.* (*L. procumbens*, part. of *procumbo*, to beat down. *F. gaultherie couchée*, *thé du Canada*; *G. Bergthæe*.) Teaberry, partridge-berry. Hab. North America. Leaves have an aromatic odour, and an astringent and aromatic taste. They contain a volatile oil, *Oleum gaultheriæ*, arbutin, urson, ericolin, and gallic acid, or an analogue. They are used as a substitute for tea, as an astringent in diarrhœa, as an emmenagogue, and as a galactagogue.

G. punctata. (*L. punctatus*, dotted.) Contains an oil similar to *Oleum gaultheriæ*.

G. serpyllifolia. *Pursh.* The *Phalerocarpus serpyllifolia*.

G., shallon. Hab. New Zealand. Bears an esculent fruit.

G., spirit of. See *Spiritus gaultheriæ*.

Gaultheric. Relating to *Gaultheria*.

G. acid. Synonymous with *Methylsalicylic acid*.

Gaultherilene. $C_{10}H_{16}$. A constituent, 10 per cent., of the *Oleum gaultheriæ*. A colourless, thin, volatile oil, of pepper-like smell, and boiling at 160° C. (320° F.); of sp. gr. 4.92, of vapour density 4.92.

Gaultherin. A neutral principle contained in the bark of *Betula lenta*, analogous to amygdalin, which by its action on an unknown principle and water produces a volatile oil analogous to the oil of gaultheria. It is syrupy, colourless, soluble in alcohol and water, and insoluble in ether.

Gauqua va. The *Smilax china*.

Gautiera. Same as *Gaultheria*.

G. repens. *Rafin.* (*L. repens*, creeping.) The *Gaultheria procumbens*.

Gauze. (Old *F. gaze*, canvas for wool-work; so called because it was first brought from Gaza in Palestine.) A thin, open fabric made of silk, linen, or cotton.

G., antiseptic. See *Antiseptic gauze*.

G., carbolic. Unbleached cotton gauze

impregnated to half its weight with a mixture of one part carbolic acid, four parts resin, and four parts paraffin.

G., eucalyptus. Unbleached cotton gauze impregnated with a mixture of one part eucalyptus oil, three parts dammar resin, and three parts paraffin wax.

G., iodoform. Unbleached cotton charged with resin and iodoform.

G., Lister's antiseptic. See *Antiseptic gauze*.

G., thymol. Unbleached cotton gauze impregnated with half its weight of a mixture of 16 parts thymol, 50 parts resin, and 500 parts spermaceti.

Ga'va. Spain, in Catalonia. An earthy chalybeate water, with a small amount of carbonic acid gas.

Gavora'no. Italy, in Tuscany. A mineral water of temp. of 35° C. (95° F.), containing magnesium sulphate 2 grains, iron carbonate 1.3 grain, in 16 ounces.

Gay. (*F. gay*; from High *G. gæhe*, quick.) Lively; merry.

G. feather. The *Liatris spicata*.

Gay-Lussac, Louis Joseph. A French chemist and physicist, born at St. Léonard in 1778, died in Paris in 1850.

G.'s alcoholometer. Same as *G.'s areometer*.

G.'s areometer. (*Ἀραιός*, light; *μέτρον*, a measure.) An instrument used to determine the amount of alcohol contained in a liquid. It is an hydrometer so constructed that the bottom of the stem, which is marked 0°, floats at the level of distilled water, and the top of the stem, which is marked 100°, floats at the level of absolute alcohol, when the instrument is placed in these liquids; and the intermediate degrees indicating a mixture of 20, 30, 60 per cent., and others, is obtained by immersing it in mixtures of three strengths of alcohol; these are subdivided into divisions indicating one per cent.

G., barometer of. The same as *Barometer, syphon*.

G.'s laws. That all gases have the same coefficient of expansion as air; that this coefficient is the same whatever be the pressure supported by the gas. Also, see *Dalton's laws*, who discovered them independently.

Gaylussacia. (*Gay-Lussac*, the French chemist.) A Genus of the Nat. Order *Ericaceæ*.

G. dumosa. (*L. dumosus*, bushy.) Dwarf huckleberry. Hab. United States. Used as *G. resinosa*.

G. frondosa. (*L. frondosus*, leafy.) Blue tangle. Hab. United States. Used as *G. resinosa*.

G. resino'sa. (*L. resinosus*, full of resin.) Black huckleberry. Hab. United States. Decoction used as an astringent in diarrhœa, and as a gargle in sore throat.

Gazel. The *Ribes nigrum*.

Gaz'col. (*F. gaz*, gas.) A liquid composed of one gramme of impure naphthaline dissolved in 10 grammes of benzine, mixed with a kilogramme of the ammoniacal liquor of gas-works and 10 grammes of acetone, and 100 grammes of coal tar added. It is used as an inhalant in whooping-cough and asthma, by being placed in a saucer and allowed to evaporate at the temperature of the room.

GAZEOUS—GELATIN,

Gazeous. Same as *Gaseous*.

Gaziform. See *Gasiform*.

Gazogene. An apparatus for impregnating water with gas, usually with carbon dioxide. It consists of two globes blown together. The lower globe contains the water to be charged with the gas, and communicates with the exterior by a long tube which reaches internally nearly to the base, and has a stopcock at the outer extremity. The upper globe contains a strong solution of sodium bicarbonate, the carbonic acid of which is set free by tilting a small tube containing tartaric acid.

Gazolyte. (F. *gaz*, gas; Gr. *λυτός*, soluble.) A body which is resolvable into a gas. Ampère's term for those elementary bodies which by combination form gases.

Gazometer. See *Gasometer*.

Gazost. France, Département des Hautes-Pyrénées, near Lourdes. A cold sulphur water, containing also small quantities of an alkaline iodide and bromide. Used in catarrhal conditions of the bronchial, gastric, and urinary mucous membranes, in some skin diseases, and in scrofulous disorders.

Ge'an. (F. *guigne*.) The wild cherry, *Prunus avium*.

Gecarcinus. (Γῆ, the earth; *καρκίνος*, a crab.) A Genus of the Suborder *Brachyura*, Order *Decapoda*.

G. ruricola. Latr. (*L. rus*, the country; *colo*, to inhabit. F. *tourlourou*.) The *Cancer ruricola*, or great land-crab of the Bahamas and West India Islands. Flesh eatable, but is at some times poisonous.

Gede'ola. The convex surface of the liver.

Gehring'swal'dé. Saxony, near Wolkstein. An earthy mineral water, in a pretty district. Used chiefly at its natural temperature, 29° C. (84·2° F.), for baths.

Gehuf. A name of a Sumatran tree, having a bitter nut, which furnishes an oil that is used in diseases of the liver and spleen.

Gehuph. Same as *Gehuf*.

Ge'ic. (Γῆ, the earth. F. *gêique*.) Resembling, or relating to, the earth.

G.ac'id. (Γῆ, the earth. F. *l'acide gèique*.) Same as *Umic acid*.

Geil'nau. Germany, in Nassau, in the Lahn Valley. An alkaline, slightly ferruginous water, containing sodium carbonate 8·14 grains, calcium carbonate 3·76, magnesium carbonate 2·78, and iron carbonate ·294 grain, in 16 oz., with much free carbonic acid. Used in anæmia and disorders of like nature, and as a table water to give appetite and to assist in digestion. The water is not drunk at the springs, but is entirely exported.

Ge'in. (Γῆ. F. *gèine*.) Berzelius's name for *Humus*. According to Braconnot it resembles *Umin*.

The name has also been given by Buchner to a bitter substance extracted from the root of *Geum urbanum*.

Ge'ision. (Γείσιον, dim. of γείσων, a cornice.) The eyebrows.

Geislingen. Germany, in Württemberg, between Stuttgart and Ulm. An indifferent mineral water, called Röthelbad, springs here.

Geis'mar. Germany, in Hesse. An earthy, saline, chalybeate water, containing much free carbonic acid.

Geiso'ma. (Γείσωμα, a penthouse.) The eyebrows; also the supraorbital ridge of the frontal bone.

Gei'son. (Γείσων, the eaves of a house.) The prominent portion of the eyebrows, which projects like the eaves of a house. (Gorræus.)

Geis'sin. Same as *Geissospermin*.

Geis'sler. A German glass-blower of the present time.

G's tube. A glass tube with an electrode melted into each end and partially exhausted, so that the contained air or gas is highly rarefied. When the electrodes are made to form part of a sufficiently powerful galvanic circuit the current passes through the gas, producing in its passage very beautiful optical effects, varying according to the nature of the gas.

G's vaporimeter. See *Vaporimeter*, *Geissler's*.

Geissospermin. $C_{19}H_{24}N_2O_2 \cdot H_2O$. An alkaloid derived from the bark of *Geissospermum læve*. It crystallises in small white prisms, soluble in alcohol and dilute acids, and nearly insoluble in ether and water. It is an active poison, paralysing the grey matter of the nerve centres.

Geissospermum. (Γείσων, a cornice; σπέρμα, seed.) A Genus of the Nat. Order *Apocynaceæ*.

G. lævë. Baillon. (*L. lævis*, light.) Paopereira. Hab. Brazil. Bark contains geissospermin and pereirin; it is very bitter, and has been used in intermittent fever, and as an astringent. Its leaves, called *Caroba* leaves, are bitter, and contain the same alkaloids.

G. vello'sii. Fr. Allemão. The *G. læve*.

Ge'sum. Same as *Geison*.

Geitonogamy. (Γείτων, a neighbour; γάμος, marriage.) The fertilisation of an ovary by pollen from another flower of the same plant.

Gelap'pium. A synonym of *Jalap*.

Gelas'ma. (Γέλασμα, laugh.) Laughter.

Gelas'mus. (Γέλασμα. G. *Krampf-lachen*.) Spasmodic or convulsive laughter.

Gelass'ini. (Γέλασινος, a laughter. G. *Lachzähne*.) The incisor teeth, because they are shown in laughing.

Also (G. *Lachegegrübchen*), the furrows or dimples in the cheeks formed by laughing.

Gela'tial. (*L. gelo*, to freeze.) Produced by, or resulting from, freezing.

Gelatification. (*L. gelatin*; *facio*, to make.) Forming gelatin, or a gelatinous substance.

Gelatig'enous. (*Gelatin*; *L. geno*, to beget.) Having the property of producing, or of yielding, gelatin.

G. tissues. Same as *Gelatinous tissues*.

Gelatin. (F. *gèlatine*; from Low L. *gelatina*; from L. *gelatus*, part. of *gelo*, to cause to freeze, to congeal. I. *gelatina*; G. *Gallerte*.)

$C_{76}H_{124}N_{24}O_{99}$. It generally contains some sulphur, but this is not an essential constituent. A substance which constitutes the greater part of tendons, connective tissue, and the animal matter of bones. When pure and dry it is an amorphous, transparent, brittle, tasteless substance, insoluble in alcohol, ether, and chloroform, soluble in warm water and glycerin, swelling up only in cold water. Its aqueous solution is strongly levo-rotatory, is precipitated by alcohol, mercuric chloride, and tannic acid; but not by acetic acid, as chondrin is, or by dilute mineral

GELATINA.

acids, or potassium ferrocyanide, as the proteids are, lead acetate, cupric sulphate, and alum. Boiled with sulphuric acid it yields leucin, glycine, ammonia, and perhaps aspartic acid; when subjected to the pancreatic ferments and putrefaction it yields gelatin-peptones, leucin, glycine, ammonia, carbonic acid, acetic acid, butyric acid, valeric acid, and other fatty acids.

Commercial gelatin is most commonly prepared from those parts of the skins of slaughtered animals which are cut off as not being fitted for making into leather, the best being made from the skin of calves' heads; it is also made from bones by boiling them in water under considerable pressure, especially bones which have had their lime removed by digestion in hydrochloric acid. To the solution a little salt is added to prevent decomposition, it is then strained, clarified with white of egg, run upon glass plates, cut into slices when solid, and dried at a temperature of about 27° C. (80-86° F.) The adulterations that have been detected are an excess of salt, to cause it to absorb moisture and increase its weight, and sugar.

The value of gelatin as a food has been much debated. It does not exist in any of the fluids of the body, and when taken into the stomach appears to be converted into a peculiar form of peptone, which is capable of being absorbed. It is probable that, as Liebig believed, it may to some extent supplement the proteids when these are deficient in the diet. If administered alone it soon produces insurmountable disgust, and death ensues from inanition. When directly injected into the blood it is eliminated from the body, according to Pavy, by the urine.

G. band'age, alcoholised. A stiff bandage for a limb made by soaking the roller after application in a solution of 200 grammes of gelatin in 150 of water, with the addition at the moment of solution of 100 grammes of alcohol.

G. bath. See *Bath, gelatinous*.

G. capsules. See *Capsule, gelatin*.

G., Chinese. A gelatinous substance prepared from the *Gracilaria lichenoides* and other Algae.

G., Deane's. A medium in which to mount microscopic objects, such as *Convolv.* It is prepared by soaking an ounce of gelatin in four ounces of water till it is quite soft, mixing with it five ounces of hot honey, boiling the whole together, and when it has somewhat cooled, adding a mixture of six drops of creasote in half an ounce of spirit of wine, and then filtering through fine flannel.

G. discs. Minute discs of gelatin impregnated with definite quantities of atropin, eserin, cocain, or other active principle. One is placed on the inner side of the lower eyelid, and its effect produced by absorption. Similar discs are also employed as a convenient mode of keeping precise doses of active agents, such as morphia, for hypodermic injection. Each disc is dissolved in a few drops of pure water for use.

G., Japanese. Same as *G., Chinese*.

G., medicated. (*L. medicatus*, medicinal.) Gelatin discs or squares formed by drying a concentrated solution of gelatin, in which some medicinal substance has been dissolved, on a polished level surface, and dividing to the required size.

Also, a solution of gelatin in water, which becomes solid at the temperature of the human body, charged with some medicinal substance.

Proposed by Rich as a convenient way of applying some drugs to the skin. The gelatin is heated and then painted on the affected skin; as it cools it forms a close protective. He has used chrysarobin, salicylic acid, pyrogallie acid, iodoform, and naphthol.

G., solution of, B. Ph. A test-solution obtained by mixing and digesting for half an hour on a water bath 50 grains of isinglass in shreds and 5 fluid ounces of warm distilled water, and then filtering through clean tow moistened with distilled water.

G., sugar of. A term for *Glycocoll*.

G. suppository. See *Suppository, gelatin*.

G. test for organisms. Angus Smith's test for the presence of living organisms in water. It consists in dissolving gelatin in water and leaving some pieces of gelatin in it. If organisms be present this rapidly becomes liquefied and globular.

G., test solution of, U.S. Ph. Isinglass is digested on a water bath for half an hour with 50 parts of distilled water, and filtered, if necessary, through cotton wool moistened in distilled water.

G., vegetable. A term for *Glutin*.

G., Wharton's. Same as *Wharton's jelly*.

Gelati'na, Fr. Codex. (*F. gélatine animale, colle de Flandre purifiée.*) See *Gelatin*.

G. aquat'ica. (*L. aquaticus*, living in water.) The *Hydropeltis purpurea*.

G. car'rageen, G. Ph. (*G. Irländisch-Moosgallerte, Carrageengallerte.*) One part of Carrageen moss is heated with 40 parts of water in a vapour bath for half an hour, strained, and lightly expressed, 2 parts of sugar added, and evaporated to 10 parts.

G. de cor'nu cer'vi, Fr. Codex. (*L. de, from; cornu, a horn; cervus, a stag. F. gelée de corne de cerf.*) Hartshorn shavings 250 grammes, after being washed, are boiled in 2000 grammes of distilled water to one half, then strained and expressed, and 125 grammes of sugar and the juice of a lemon added; afterwards clarified with white of egg, and evaporated to the consistence of jelly, the peel of a lemon added, in a short time strained again and allowed to cool.

G. de fu'co cris'po, Fr. Codex. (*L. de; fucus, seaweed; crispus, curled. F. gelée de carrageen.*) Carrageen moss 60 grammes is washed in cold water, then boiled for half an hour with sufficient distilled water to leave, after expression, about 250 grammes of liquid; it is then strained, 125 grains of white sugar added, evaporated to 250 grammes, and 10 grammes of orange-flower water added to it.

G. de helminthocorton, Fr. Codex. (*L. gelée de mousse de Corse.*) Corsican moss 30 grammes is boiled for half an hour with sufficient distilled water to produce on expression about 200 grammes of liquid; white sugar 60 grammes, white wine 60 grammes, and isinglass 5 grammes are added; then it is boiled to the consistence of a jelly and strained.

G. de lich'e'nö islan'dico, Fr. Codex. (*F. gelée de lichen d'islande.*) Saccharatum de lichen islandico 75 grammes and white sugar 75 grammes are boiled with 150 grammes of distilled water till a scum rises to the surface, this is removed, and 10 grammes of orange-flower water is added.

GELATINATE—GELOSE.

G. hymene'a. (ἡμίαιος, a wedding.) The gelatinous substance surrounding the asci and paraphyses of lichens and other cryptogamic forms.

G. liche'nis island'ici. G. Ph. (G. Isländisch-Moosgallerte.) Three parts of Iceland moss are treated with 100 parts of water in a vapour bath for half an hour, strained and expressed, 3 parts of sugar added, and evaporated to 10 parts.

G. pa'nis. (L. panis, bread.) See *Bread jelly*.

Gelatin'ate. (Gelatin.) To convert, or to be converted, into gelatin or its likeness.

Gelatinat'ion. Same as *Gelatinisation*.

Gelatine. See *Gelatin*.

Gelatin'iform. (Gelatin; L. forma, likeness. F. gélatiniforme; G. gallertförmig, gallertartig.) Having the consistence, or appearance, of gelatin.

G. can'cer. A term for colloid cancer.

G. degenerat'ion. See *Degeneration, gelatin'iform*.

G. mat'ter of the intes'tine. Prevost's term for what is now known as *Peptone*.

G. nerve-fi'bre. See *Nerve-fibre, gelatinous*.

G. transforma'tion. A term applied to syphilitic gummata.

G. tu'mour. See *Tumour, gelatin'iform*.

Gelatinisat'ion. (Gelatin.) The passage of a body into a semi-solid state, or one resembling gelatin.

Gelatin'ise. (Gelatin.) To change, or to be changed, into gelatin or its semblance.

Gelatinised. (Gelatin.) Charged with, or like to, gelatin.

G. chlo'roform. See *Chloroform, gelatinised*.

G. e'ther. See *Ether, gelatinised*.

Gelatin'iform. (Gelatin; L. forma, shape.) Having the appearance of gelatin. Same as *Gelatin'iform*.

G. at'rophy. (A, neg.; τροφή, nourishment.) Parrot's term for a degeneration of the cranial bones in syphilitic infants, beginning immediately below the pericranium, in which the osseous substance becomes soft, mucoid, and semitransparent.

Gelatin'oid. (Gelatin; Gr. εἶδος, likeness.) Resembling *Gelatin*.

G. sub'stances. The animal structures which contain gelatin, such as cartilage, bone, and tendon.

Gelatin'ous. (Gelatin. F. gélatineux; I. gelatinoso; G. gallertartig, gallertig.) Of, or belonging to, or like, the substance gelatin; having, or full of, gelatin; jelly-like; viscous; of the consistence of jelly.

G. arthrit'is. (ἄρθριτις, inflammation of a joint.) The form or stage of strumous synovitis in which, when examined, the cut edge of the synovial and perisynovial tissues presents a yellowish or pinkish jelly-like appearance, consisting of round and spindle-shaped cells and many nuclei in a soft granulated or delicately fibrillated matrix.

G. bath. See *Bath, gelatinous*.

G. cap'sules. See *Capsule, gelatin*.

G. extract. See *Extract, gelatinous*.

G. food. See under *Gelatin*.

G. li'chens. See *Lichens, gelatinous*.

G. nerve-fi'bres. A term for the non-medullated nerve-fibres.

G. nerve-sub'stance. See *Nerve-substance, gelatinous*.

G. pol'y'pus. See *Polypus, gelatinous*.

G. prin'ciples. Gelatin and those constituents of the animal body which resemble it, as chondrin, keratin, and elastin.

G. tis'sue. The undeveloped form of fibrous connective tissue in the embryo, of which *Wharton's jelly* in the umbilical cord is the type, and which occurs also in the cavity of the middle ear. It consists of spindle-shaped and branched connective-tissue cells in a matrix of homogeneous mucoid substance. It is found in the early stages of the tooth pulp.

G. tis'sues. Those which on boiling yield gelatin; such are the connective tissue, fibrous tissue, cartilaginous tissue, and osseous tissue.

Gela'tio. (L. gelatio, from gelo, to freeze. F. gélation.) A freezing; great cold. Term for the rigid state of the body in catalepsy, as if it were frozen.

Also, a term for *Frostbite*.

Gela'tion. Same as *Gelatio*.

Gel'atose. A fermentescible sugar obtained by Gerhardt from isinglass which has been boiled for some days with dilute sulphuric acid. Also called *Ichthyocollose*.

Gelatum petro'leum. Petroleum jelly, or vaseline.

Gel'bum. (Arab.) Alchemical term applied to argentiferous pyrites; also to the philosopher's stone.

Geldum. Same as *Gelbum*.

Gel'eine. Gannal's term for an organic substance obtained by the decomposition of gelatin, cartilage, and other constituents of the tissues of young animals, when submitted to the action of boiling water. In its turn, according to Gannal, geleine is transformed into gelatin by continued boiling.

Gelesnowod'sk. Same as *Schelesnowod'sk*.

Gel'um. Same as *Gelbum*.

Gel'idium. A Genus of the Order *Floridæ*, Class *Carposporeæ*.

G. cor'neum. Lamour. (L. corneus, horny.) A seaweed which is said to furnish a large part of Japan isinglass. It is often mixed with Corsican moss, and is the chief constituent of Japan moss.

Gel'in. A term given by Gannal to the fundamental principle of the connective tissues and tendons. It is obtained by washing the structures with cold water, macerating them for several days in lime or baryta water, then well washing in pure water, in a very dilute solution of acetic acid, and again in pure water. The fibrinous mass left is gelin. It is transparent, insoluble in water, which causes it to swell; it hardens and curls up in alcohol and ether; tannin hardens it; prolonged treatment with very dilute acids or alkalis causes it to swell up, and transforms it into soluble products. It is identical with *Collagen*.

Gelly. Same as *Jelly*.

Gellyonen. Wales, County Glamorgan, near Pont-ar-dawe. A mild chalybeate spring only used in the neighbourhood.

Gelos. (Γέλως; from γέλαω, to laugh.) Laughter.

Ge'lose. An amorphous gelatinous substance obtained by Payen from Japan moss, chiefly *Gelidium corneum*. It is insoluble in

GELSEMIA—GEMINATION.

cold water, soluble in hot water, stiffening to a jelly as it cools. Same as *Parabin*.

Gelsemia. Same as *Gelsemin*.

Gelsemic acid. $C_{20}H_{34}O_{19} + 2H_2O$. A crystalline substance obtained from the root of *Gelsemium sempervirens* by treating a fluid extract with dilute hydrochloric acid, and then with ether. It crystallises in tufts of fine needles, is colourless, inodorous, almost tasteless, soluble in ether and chloroform, slightly in water, fusible and volatilisable without change. When it, or one of its salts, is heated with a little nitric acid it forms a yellow or a reddish solution, which becomes blood-red on the addition of ammonia. It is said by Robbins to be identical with *Æsculin*, but Wormley believes it to be a different substance.

Gelsemii radix. (*L. radix*, a root.) The *Gelsemium*, U.S. Ph.

Gelsemin. $C_{22}H_{38}N_2O_4$, or half this amount. A colourless, or in commerce a yellowish brown, inodorous, bitter, alkaloidal substance obtained by treating the extract of the root of *Gelsemium sempervirens*, from which gelsemic acid has been separated, with soda, extracting it with chloroform, and purifying. It is sparingly soluble in water, freely in chloroform and ether. It is a powerful poison. Used as *Gelsemium*. It is a mydriatic when applied locally. Dose, 1-20th to 1-60th grain.

The term is also applied to a pale-brown amorphous substance, being the powdered alcoholic extract of the root of *Gelsemium sempervirens*. Dose, .5—2 grains.

G., fluid extract of. See *Extractum gelsemii fluidum*, U.S. Ph.

G. hydrochlorate. A light-brown or white powder, soluble in water. Dose, 1-60th to 1-20th of a grain. One part to water 200, used as a hypodermic injection. Used as *Gelsemium*, U.S. Ph.

G., poisoning by. Gelsemin reduces the frequency and depth of the respiratory actions; it paralyzes the motor nerves of the eye, dilates the pupil, produces difficulty of speech, weakens the muscles of the limbs, and causes the heart to beat more rapidly; reflex action is lost, respiration ceases, and convulsions or tetanus precede death. A sixth of a grain has produced death.

G., tests for. The solution of gelsemin in sulphuric acid is reddish or brownish, changing to pinkish, and becoming purplish when heated; a crystal of potassium bichromate or cerium oxide slowly passed through the solution leaves reddish-purple streaks; the solution in nitric acid is a brownish green, changing to deep green.

G., tincture of. See *Tinctura gelsemii*, U.S. Ph.

Gelseminia. Same as *Gelsemin*.

Gelseminium. Same as *Gelsemin*.

G. hydrochloricum. Same as *Gelsemium hydrochlorate*.

Gelsemium. (*I. gelsomino*, jessamine.) A Genus of the Nat. Order *Loganiaceae*.

Also, U.S. Ph., the rhizome and rootlets of *G. sempervirens*. It has a heavy aromatic odour and a bitterish taste. It contains gelsemin, as well as a fixed oil, a fatty and an acrid resin, a volatile oil, and other matters. It is a nerve depressant, and has been used in febrile disorders and neuralgia of the fifth nerve, as well as in dysentery, rheumatism, neuralgia, dysmenor-

rhœa, delirium tremens, trismus nascentium, spasmodic stricture, chorea, epilepsy, and hysteria; and as an adjuvant to quinine in fevers.

G. lucidum, Poir. (*L. lucidus*, shining.) The *G. sempervirens*.

G. nitidum, Mich. (*L. nitidus*, shining.) The *G. sempervirens*.

G. sempervirens, Aiton. (*L. semper*, always; *virens*, part. of *vireo*, to be green. *F. jasmin jaune*; *G. gelber Jasmin*.) Yellow jasmine. The root is the *Gelsemium*, U.S. Ph.

Gelterkinden. Switzerland, Canton Basel. A sulphur spring, 1200 feet above sea-level.

Gelu. (*L. gelu*, icy coldness.) Jelly.

Gély's suture. See *Suture*, *Gély's*.

Gem. See *Gemma*.

Gemellary. (*L. gemelli*, twins. *F. gemellaire*.) Relating to, or consisting of, twins.

G. pregnancy. Same as *Twin pregnancy*.

Gemelli. (*L. gemellus*, a twin.) Twins. A term used to designate the gastrocnemius muscle, in reference to its two heads of origin.

Also, the two muscles *Gemellus inferior* and *G. superior*.

Also, the testicles.

G. fem'oris. (*L. femur*, the thigh. *F. jumeaux pelviens*; *G. Zwillingmuskeln*.) The *Gemellus inferior* and *G. superior*.

G. su'ræ. (*L. sura*, the calf of the leg. *F. jumeaux de la jambe*; *G. Zwillingmuskeln der Wade*.) The gastrocnemius muscle.

Gemelliflorate. (*L. gemellus*, twin-born; *flos*, a flower. *F. gemelliflore*.) Having flowers disposed two and two.

Gemelliflorous. Same as *Gemelliflorate*.

Gemellip'arous. (*L. gemelli*, twins; *pario*, to produce.) Producing twins.

Gemellity. (*L. gemelli*. *F. gemellité*.) Dareste's term for the state of being twin.

Gemellus. (*L. gemellus*, dim. of *geminus*, twin-born. *F. gémîné*, jumeau; *G. gepaart*, gezeitigt.) Double; consisting of two.

Applied to the gastrocnemius muscle, because it has a double origin, arising by two distinct fleshy heads.

G. inferior. (*L. inferior*, lower. *F. jumeau inférieur*; *G. unterer Zwillingmuskel*.)

A muscle arising from the outer and lower part of the spine of the ischium, and inserted into the tendon of the obturator internus muscle. It is supplied by a branch of the sacral plexus of nerves. In the lowest mammals it is wanting; in some, as the camels, it is very large.

G. superior. (*L. superior*, upper. *F. jumeau supérieur*; *G. oberer Zwillingmuskel*.)

A muscle arising from the upper part of the tuberosity of the ischium, and inserted into the tendon of the obturator internus muscle. Its nerve supply is from the sacral plexus. In the lowest mammals it is wanting.

Geminate. (*L. geminus*, twin-born. *F. gémîné*; *I. geminato*; *S. geminado*; *G. doppelt*, gepaart, gezeitigt.) Twin; in pairs; two united into one.

In Botany, applied to parts which are disposed in pairs.

Geminated. Same as *Geminate*.

Gemination. (*L. geminus*, twin-born. *F. gemination*; *G. Verdoppelung*.) The production of twins.

In Botany, applied to juxtaposition of two

GEMINI—GEMMULE.

leaves belonging to different axes, as in the beladonna.

G. of teeth. See *Teeth*, gemination of.

Gem'ini. (L. *geminus*, twin born.) Twins. Applied to the conjoined *Gemellus inferior* and *Gemellus superior*.

Also, the testicles.

Geminiflo'rate. (L. *geminus*, twin, or double; *flos*, a flower. F. *geminiflore*.) Having flowers disposed in pairs, or two and two.

Geminiflo'rous. Same as *Geminiflo-rate*.

Gem'inous. Same as *Geminate*.

Gem'inum cent'rum semicircu-la'rè. (L. *geminus*, twin; *centrum*, a centre; *semicircularis*, half circular.) A term for the *Tenia semicircularis*.

Gem'inus. (L. *geminus*, twin-born. F. *jumeau*; G. *Zwilling*.) A twin; one of two born at the same birth.

Gemipo'ma. A name for the female breast.

Gemito'res. (L. *gemo*, to bemoan.) A synonym of the *Columbæ*, the pigeons, in reference to their cooing.

Gem'ma. (L. *gemma*, a bud; a jewel. F. *gemme*; G. *Auge*, *Knospe*.) In Botany, a young bud which contains the rudiments of a plant in a latent state till the season favours its evolution; a *Bud*.

Also, the same as *Bulbil*.

Also, a term for the non-sexual reproductive buds found in Hepaticæ.

Also, in Anatomy, a bud of an hydroid medusa.

Also, in Pathology, a granulation.

Also, a jewel, gem, or precious stone.

G. flora'lis. (L. *floralis*, belonging to a flower.) A flower bud.

G. florip'ara. (L. *flos*, a flower; *pario*, to produce.) A bud which produces a flowering branch.

G. foliip'ara. (L. *folium*, a leaf; *pario*, to produce.) A leaf bud.

G. latera'lis. (L. *lateralis*, belonging to the side.) A bud growing in the angle of a leaf.

G. oc'uli. (L. *oculus*, the eye.) The crystalline lens.

G. proventi'tia. (L. *provenio*, to come forth.) See *Bud*, latent.

G. termina'lis. (L. *terminalis*, belonging to a boundary.) Same as *Bud*, apical.

Gemma'ceous. (L. *gemma*, a bud. F. *gemmacé*; G. *Knospenartig*.) Belonging to, resembling, or having buds.

Gem'mæ. Plural of *Gemma*.

G. cap'aris condi'tæ. (L. *capparis*, the caper tree; *conditus*, pickled.) The floral buds of the caper plant, *Capparis spinosa*, preserved in vinegar with a little salt. Used as a condiment.

G. p'ini. Same as *Turiones pini*.

G. pop'uli. (F. *bourgeons du peuplier noir*; G. *Poppelknospen*.) The unopened leaf buds of the poplar, *Populus nigra*. They contain chrysic acid, salicin, populin, chrysin, and tecto-chrysin. They are used as a balsamic, vulnerary, and antihæmorrhoidal.

Gem'mate. (L. *gemma*.) Having, or producing, or arising from, a bud.

Gemma'tion. (L. *gemma*, a bud. F. *gemmation*; I. *gemmazione*; S. *gemmacion*; G. *Knospung*, *Knospentreiben*.) A budding out;

the state or process of budding. Same as *Generation* by gemmation.

G., contin'uous. (L. *continuus*, holding together.) The process of reproduction by gemmation, in which the buds remain attached to the parent and themselves give off other buds, which in like manner do not lose their connection with their parents, and so on for many generations; such as occurs in the sea-mat, *Flustra*, which is a compound animal composed of many single animals attached to each other.

G., discontin'uous. (L. *dis*, an inseparable particle meaning asunder; *continuus*.) The process of reproduction by gemmation, in which the buds become separated from the parent and develop into its likeness.

G., genera'tion by. See *Generation* by gemmation.

G., inter'nal. (L. *internus*, within.) The process of reproduction by gemmation in some of the Polyzoa, in which buds are developed from a specialised band which crosses the body cavity. They are called *Statoblasts*.

Gemmif'erous. (L. *gemma*; *fero*, to bear. F. *gemmifère*.) Bearing a bud or buds.

Gemmifica'tion. (L. *gemma*, a bud, or gem; *fio*, to become. F. *gemmification*; G. *Knospung*.) Term employed by Link for the manner in which the bud or gem is developed.

Also, used synonymously with *Ramification*, because ordinarily the bud is prolonged into a branch.

Gemmiflo'rate. (L. *gemma*, a bud; *flos*, a flower. F. *gemmiflore*.) Having flowers like buds. Applied to those which have the appearance of being shut up in buds.

Gemmiform. (L. *gemma*, a bud; *forma*, likeness. F. *gemmiforme*; G. *knospenförmig*.) Bud-like. Applied by Willdenow to flowers that are surrounded by leaves.

Gemmipar'ity. (L. *gemma*; *pario*, to produce.) The production of its kind by budding. Same as *Generation* by gemmation.

Gemmipar'ous. (L. *gemma*, a bud or shoot; *pario*, to bring forth. F. *gemmipare*; I. *gemmiparo*; G. *knospentragend*.) Producing buds. Applied to plants and certain animals which propagate by this means.

G. genera'tion. See *Generation* by gemmation.

G. reproduc'tion. Same as *Generation* by gemmation.

Gem'mula. Same as *Gemmule*.

G. anatropa. An anatropal ovule. See under *Anatropal*.

G. atropa. An atropal ovule. See under *Atropal*.

G. campylo'tropa. Same as *Campylo-tropous ovule*.

G. ortho'tropa. Same as *Orthotropous ovule*.

Gemmula'tion. (L. *gemmula*, a little bud. F. *gemmulation*.) Term for a kind of reproduction consisting in the separation of a minute portion of an organised being, endowed with distinct vitality, and producing a new individual without the agency of sexes, by simple growth and development. Same as *Generation* by gemmation.

Gem'mule. (L. *gemmula*, dim. of *gemma*, a bud. F. *gemmule*; I. *gemmetta*; S. *gemmula*; G. *Knöspchen*.) A little bud or shoot. A name given by Richard to the rudiment of

GEMMULIFEROUS—GENERATION.

the stem, growing upwards, and becoming stem and branches.

Also (*G. Keimkörper*), term applied to the small, white, seed-like bodies by which sponges are asexually propagated. They are invested by a membrane, or are enclosed in amphidises composed of siliceous substance, presenting one or several openings. In the sweet-water sponges of Europe they are latent during the winter months, but in spring the protoplasm creeps out of the openings of the shell, and forms the rudiment of a sponge.

Also, a synonym of *Ovule*.

Also, a synonym of *Plumule*.

Also, a term for the bud produced in *Generation* by *gemmation*.

Gemmuliferous. (*L. gemmula*; *fero*, to bear.) Bearing gemmules.

Gemo'nes. (*Γέμο*, to be full; because it seems as if pregnant.) Old term for the *Ætites*, or eagle stone. (*Goræus*.)

Gempelenbad. Switzerland, Canton St. Gallen. An earthy mineral spring, containing free carbonic acid, 1700 feet above sea-level.

Gemur'sa. (*L. gemo*, to wail.) Old term for a corn, or excrescence between the toes, or under the little toe, according to Pliny, xxvi, 1, quoted by Langius, ii, 13, so called from the discomfort it occasions.

Gen'a. (*L. gena*, the cheek; *Gr. γένυς*, the side of the face. *F. joue*; *G. Wange*.) A word employed to signify the cheek, and especially its outer surface.

In Biology, applied to the part of the head of some of the Insecta to which the mandible is articulated.

Also, applied to the triangular area which lies between the eyes of Trilobites and the free margin of the head.

Genæ. (*L. gena*.) The cheeks.

Gen'al. (*L. gena*. *F. génal*.) Relating to the cheek or cheeks.

G. glands. (*F. glandes genates*.) The molar glands.

G. tract. See *Tract, genal*.

Gendarus'sa. A Genus of the Nat. Order *Acanthaceæ*.

G. rosea, Rumph. (*L. roseus*, rose-coloured.) The *G. vulgaris*.

G. sericea, Kost. (*L. sericeus*, silken.) Hab. Peru. Used in inflammatory affections of the lungs.

G. tranquebariensis, Nees. The *Adiantum tranquebariensis*.

G. vulgaris, Nees. (*L. vulgaris*, common.) The Ganda-rusa of the Malays. Leaves emetic and diaphoretic. Used in chronic rheumatism; root astringent.

Geneagenesis. (*Γενέα*, offspring; *ἀ*, neg.; *γένεσις*, an origin.) A term for *Alternation of generation*.

Gean'thropy. Same as *Anthropogeny*.

Geni'as. (*Γενιάς*, a beard.) The first beard of a youth.

Also, Galen's term for a chin bandage.

Geni'on. (*Γένειον*, the part covered by the beard.) The chin.

Geneiorrhynchus. (*Γένειον*; *ῥύγχος*, a snout.) A Genus of rhynchophorous *Gregarina*.

G. monnieri, Sehn. A parasite of the digestive canal of the nymphæ of dragon flies.

Gen'epi. Same as *Genipi*.

Gen'eral. (*Old F. general*; from *L. generalis*, belonging to a race. *F. général, commun*; *L. general, comune*; *S. general, comun*; *G. allgemein, gewöhnlich*.) Relating to a whole kind, or the whole kind; common; ordinary.

G. anat'omy. See *Anatomy, general*.

G. paral'ysis. See *Paralysis, general, of insane*.

G. practit'ioner. A medical practitioner who does not restrict himself to one branch of the profession.

Gen'erant. (*L. genero*, to engender.) That which generates; begetting.

Gen'erate. (*L. genero*.) To beget; to produce; to cause to be.

Gen'erating. (*L. genero*, to engender.) Begetting; producing.

G. plate. The positive metal of a voltaic couple; being that which is most attacked by the liquid in which it is placed.

G. tis'sue. A term for the plant tissue called *Meristem*.

Genera'tio. See *Generation*.

G. æquivoca. See *Generation, equivocal*.

G. cal'culi. (*L. calculus*, a small stone.) The formation of stones or concretions in the animal body.

G. homogen'ea. (*ὁμός*, one and the same; *γένεσις*, generation.) The mode of production of an organised body by the union of parents of opposite sexes.

G. origina'ria. (*L. origo*, an origin, a beginning.) Same as *Generation, spontaneous*.

G. primig'ena. (*L. primigenus*, original; from *primus*, first; *geno*, to produce.) A synonym of *Generation, spontaneous*.

G. sponta'nea. See *Generation, spontaneous*.

Genera'tion. (*Old F. generation*; from *L. generatio*, a begetting; from *genero*, to engender. *I. generazione*; *S. generacion*; *G. Zeugung, Erzeugung*.) The production of progeny by a parent or parents.

Four modes of generation are met with in the animal kingdom, named respectively scissiparity, or fissiparous generation, or multiplication by fission; gemmiparity, or multiplication by budding; germiparity, or multiplication by germs; and lastly, oviparity, or multiplication by ova. The three first-named forms are agamic or asexual, the last is sexual. Scissiparity and gemmiparity occur in the Hydra and Vorticella. Germiparity is observed in some Protozoa. Sexual reproduction occurs in all the higher animals, and such animals may either be dioecious, the two sexes being each possessed by different individuals, or monœcious, when the two sexes are united in the same individual. If a monœcious animal is capable of self-impregnation it is termed hermaphrodite. If the fertilisation can only be effected by the mutual concourse of two individuals each is then termed androgynous.

G., accrementi'al. (*L. accresco*, to grow to.) Same as *Accrementition*.

G., act of. The union of the sexes; copulation.

G., alter'nate. See *Alternation of generations*.

G., asex'ual. (*L. a*, neg.; *sexus*, sex.) The production of a new being by budding, fission, or such-like, and not by the combination of sexual elements.

GENERATION.

G. by fecunda'tion. (L. *fecundo*, to make fruitful.) The production of its kind by the influence of a structure or sperm developed from a special organ on a germ or ovum produced by another special organ.

G. by fis'sion. (L. *fissus*, part. of *findo*, to cleave.) The production of its kind by a process of cleaving of the parent.

G. by gemma'tion. (L. *gemma*, a bud.) The production of its kind by the outgrowth and separation of a multicellular offshoot or bud from its parent.

G., change'able. Same as *G., alternate.*

G., endog'enous. Same as *Endogenesis.*

G., equivocal. (L. *æquivocus*, of doubtful meaning.) A term formerly applied to the production of offspring unlike their parents from defect or degeneration of the latter.

Also, the same as *G., spontaneous.*

G., fissip'arous. (L. *fissus*, cleft; *pario*, to bring forth.) Same as *G. by fission.*

G., gemmip'arous. (L. *gemma*, a bud; *pario*, to bring forth.) Same as *G. by gemmation.*

G., heteromorph'ous. (Ἑτερος, other; μορφή, form.) Krohn's term for Steenstrup's *Alternation of generations.*

Also, a term employed to designate the pathological development of heterologous growths.

G., homœomorph'ous. (ὁμοιος, similar; μορφή, form.) A term employed to designate the pathological development of homœomorphous growths.

G., marsup'ial. (Μαρσूपιον, a pouch.) The mode of production of the young which occurs in the *Marsupialia*, where the fœtus is expelled from the womb in a very immature condition and conveyed into an abdominal pouch of the mother, where it attaches itself to a nipple of the mammary gland, and there continues its growth.

G., organs of. (F. *parties genitales*; G. *Zeugungstheile*.) The parts concerned in the reproduction of the species.

In Coelenterata the Ctenophora are monœcious, and develop directly from ova without any agamous phase. The sexual products grow from each side of the costal rays in the special diverticula, the ovules on the one side and the spermatozoa on the other. The Hydromedusæ are agamous in their hydra or polypoid forms, whilst the medusal form propagates sexually. The Corallina present the three forms of generation, fissiparity, gemmiparity, and oviparity, the latter being most common. The generative organs are often found on different individuals, and are situated in the thickness of the mesentery-like folds, from which they escape by dehiscence.

In Echinodermata the sexes are usually separate. The generative glands are tubular, and usually symmetrically placed in accordance with the radial structure of these animals. The ova or spermatozoa are discharged into the sea, and fertilisation almost always occurs externally to the parents.

In Vermes reproduction may be asexual or sexual. In the former case it may either be by gemmation, by fission, or by formation of germinal cells, and then it most commonly occurs amongst the larvæ. The Platyhelmintha, including Turbellaria, Trematoda, Cestoda, and Nemeritina, and many Annelida, are hermaphrodite. The Nemathelmintha, Gephyrea, and Rotifera, and also the branchiate Annelida, are of sepa-

rate sexes. In the hermaphrodite Turbellaria the males have paired tubular testes, vesiculæ seminales, and a protrusible penis beset with hooks. The female organs usually consist of ovaries, yolk glands or vitellarium, a receptaculum seminis, a vagina, and uterus. The penis and vagina open, as a rule, upon the ventral surface by a common orifice. In Trematodes the male opening leads into a cirrus sac enclosing the protrusible terminal part or cirrus of the vas deferens. The vas deferens bifurcates, the branches terminating in two large simple or multilobed testes. In the female the uterus is convoluted, and there is a roundish ovary and two ramified tubular yolk glands, and sometimes a special shell gland. In Cestodes each proglottis possesses its own male and female generative organs. The male apparatus consists of numerous pear-shaped vesicles situated on the dorsal side, which are the testes, and their vasa efferentia open into a common vas deferens, and this again into a muscular point named the cirrus sheath, containing the copulatory organ or cirrus beset with spines. The female apparatus consists of ovary, yolk gland or vitellarium, shell gland, uterus, receptaculum seminis, and vagina. The genital cloaca opens on the ventral surface or on the alternate lateral margins of the successive segments, or the male and female organs may open separately. The Nemertina are usually diœcious; the two kinds of generative organs have a similar structure, and are sacs filled with ova or spermatozoa, situated laterally between the pouches of the intestine, and opening to the exterior by paired apertures in the body wall. The Nematoda are generally diœcious. Both kinds of sexual organs consist of single or paired, and often much-coiled, tubes. The vagina is short and opens on the ventral surface. The male presents an unpaired tube with hat-shaped spermatozoa, and opens on the ventral surface in common with the intestine. The cloaca usually contains two protrusible spicula. The Chaetognatha are hermaphrodite, possess paired ovaries, and receptacula seminis opening by two apertures at the base of the tail. The testes are also paired and open at the sides of the tail. In Acanthocephala the generative organs are highly developed; the sexes are separate. The male has two testes and two vasa deferentia; these unite behind to form a ductus ejaculatorius, which is often furnished with six or eight glandular sacs and a conical penis at the bottom of a bell-shaped protrusible bursa situated at the posterior pole of the body. The female organs consist of the ovary, of a complicated uterine bell, of the oviduct, and a short vagina opening at the posterior end of the body. In the young animal the ovary is a simple body enclosed in the ligament, but in the adult female the ovary grows, and becomes divided into numerous spherical masses of eggs, which at length burst the membrane of the ligament and fall into the body cavity, from whence they are discharged. Amongst the Annelida the Chaetopoda present both fissiparous and gemmiparous reproduction. In Oligochaeta, which are hermaphrodite, the ovaries and testes lie in definite segments, and empty their contents by dehiscence of their walls into the body cavity. In Polychaeta the sexes are also usually distinct.

In Rotifera the sexes are separate. In the males the generative organs are reduced to a testicular sac filled with spermatozoa, the muscular

GENERATION.

duct of which opens at the hinder end of the body. The large organs of the female consist of a roundish ovary and a short oviduct, which usually opens into the cloaca.

In Arthropods generation is usually sexual, but sometimes takes place by the development of unfertilised ova, or parthenogenesis. The ovaries and testes are commonly paired.

In Crustacea, with the exception of the Cirripedia and some Isopoda, the sexes are distinct. The generative organs in both males and females open at or near the boundary of the thorax and abdomen. In the Thoracostraca the female organs consist of two ovaries and two oviducts, which open on the basal joint of the antepenultimate pair of ambulatory legs, or on the intermediate sternal region. The testes are composed of numerous sacs and blind tubes, and, like the ovaries, are connected by a median portion. There are two vasa deferentia, which occasionally open on a special copulatory organ. The first or first and second pair of abdominal feet act as intromittent organs. The eggs either pass into a special brood pouch formed by lamellar appendages of the thoracic legs, or become attached to the abdominal feet of the female by a cement.

In Arachnida the male generative organs consist of paired testicular tubes terminating in vasa deferentia, which often receive the contents of accessory glands and open at the anterior extremity of the abdomen. In spiders the place of special copulatory organs is supplied by the pedipalps, which serve to transfer the sperm from the male to the female. The female organs are paired, usually racemose, glands with two oviducts, into which accessory glands open, and which often dilate into a receptaculum seminis.

In Insecta the male and female generative organs are always in different individuals; their ducts open on the ventral surface of the tail. The testes and ovaries are provided with paired ducts ending in an unpaired portion. In some cases, as in working bees and ants, and sexless termites, the sexual organs never attain complete maturity. The ovaries are elongated tubes, which unite to form an oviduct, the lower part of which is the vagina, and receives, in many cases, the ducts of special cement and sebaceous glands. There is often one or more receptacula seminis, in which the semen, often introduced in the form of spermatophores, may remain long and mature before exerting its fertilising powers. The male generative organs consist of paired tubular testes with vasa deferentia, a common ductus ejaculatorius, and an external copulatory organ.

In Mollusca the Lamellibranchiata are, for the most part, dioecious, but occasionally monœcious. The ovaries or testes are acinous glands situated on each side of the liver. The genital apertures are on each side of the base of the foot. They either open into the duct of the organ of Bojanus, or are in close relation with the orifice of that body.

In Gasteropoda the generative apparatus is asymmetrical, and the individuals are monœcious or dioecious. The Pulmonati, Operculati, Gasteropoda, the Prosobranchiata, and Heteropoda, are provided with a penis. In these the testis and ovary are usually concealed in the digestive gland. The sexual orifices are situated laterally near the anus. The males present a deferent canal, a vesicula seminalis and an ejaculatory duct; the females an oviduct, an albuminous

gland, a vagina, and a copulative pouch. The Patellida and Haliotida, though dioecious, have no penis. The Opisthobranchiata, and almost all the Pulmonata, are monœcious, the sexual glands being intimately fused together. The hermaphrodite gland has an efferent duct, which either opens into the oviduct or forms an incomplete canal, which opens at the base of the penis. Besides this efferent duct, which conveys semen, and the oviduct, there are certain male appendages, namely the flagellum, in which a spermatophore, called capreolus, is developed, a prostate-like gland, and a retractor muscle of the penis; and certain female appendages, namely the albuminous gland, the copulative pouch, which opens into the vagina, a pair of multifid glands, which also open into the vagina, and the sac of the dart, containing the dart or style.

The Cephalopoda are all dioecious. The male apparatus consists of an azygous testis contained in a membranous sac, into which the spermatozoa enter by rupture of the cœca of the gland. From thence they pass into a deferent canal, where they become agglutinated in complex bodies, named spermatophores. These then enter into a large sac, the pouch of Needham, and from thence pass into an ejaculatory tube, which opens into the branchial chamber at the base of the funnel. The female apparatus is azygous, and enclosed by a peritoneal sac, into which the ova fall as they escape by rupture. This sac communicates with a single or double oviduct, which opens at the base of the funnel. With the oviduct is connected an albuminous gland, and in some instances other glands, termed nidamentary glands, which secrete a viscous substance adapted to agglutinate the ova.

The Tunicata are hermaphrodite, and in Ascidia the testes and ovaries constitute a glandular mass situated on each side of the body. The ovary is central, and has an oviduct, and the testis surrounds and invests it, and is provided with many deferent canals. Both oviduct and vasa efferentia open into the cloacal cavity. In some Ascidia, as in Salpida, an alternation of generation or geneagenesis is observed.

In Pisces the sexes are usually distinct, though occasionally, in the smelt and carp, both spermatozooids and ova are produced in the same individual. In the lowest form, Amphioxus, about twenty small sacs are found on each side of the intestine, containing ova in the female and spermatozooids in the male. These sacs have no excretory duct, and their sexual products escape either by the mouth or the abdominal pore. In the Cyclostomata the testes and ovaries form an azygous sac, which bursts into the peritoneal cavity, and the sexual products escape by a genital pore situated behind the anus. In most of the osseous fishes the sexual glands have a short efferent duct, which opens behind the anus and in front of the canal of the urethra, or in some cases, as is also the case with Ganoidæ, it opens into the urinary passages. In the eel and salmon, however, the oviduct opens into the peritoneal cavity. In Plagiostomata the females present highly developed oviducts, which unite in front of the ovaries to form a pavilion; posteriorly they widen out to form a uterine cavity. In the males the deferent canals form convolutions resembling an epididymis anteriorly, and dilate posteriorly into a vesicula seminalis. Both oviducts and vasa deferentia open into the lower part of the abdominal canal. The

GENERATIVE—GENETALIA.

majority of fishes have no copulatory organs, but rudimentary organs are found in Plagiostomata.

In Batrachia the ovaries are paired and form two hollow glands, into which the ova fall, and then enter the long convoluted oviducts, which dilate into a kind of uterus, and open in the upper wall of the cloaca by two orifices. The testes are two in number, simple or lobed, and the efferent canals open into the urethra after having traversed the kidney, as in frogs, or into the cloaca, as in *Bufo obstetricans*. In the frog there are two accessory glands, known as the vesiculæ seminales. In most Batrachians there are no copulatory organs, but the ova are fecundated immediately after they have been extruded. The Cæciliidæ, however, possess copulatory organs.

In Reptilia there are in the female two ovaries and two oviducts, with a more or less developed pavilion. They open into the cloaca. In the male there are two testes with an epididymis and a deferent canal, which generally opens into the urethra or into the cloaca. In Saurophidia the males present two hollow organs situated symmetrically on each side of the transverse cloacal fissure. These can be everted, and have a fissure anteriorly, which in copulation guides the semen. In crocodiles and Chelonia the copulatory organ is azygous, median and tongue-shaped, and attached to the anterior wall of the longitudinal cloacal fissure. Its dorsal aspect presents a groove for the passage of the semen.

In Aves the male generative apparatus consists of two testes, of which the left is largest. The spermatic ducts form an epididymis terminating in a vas deferens, which opens on each side of the cloaca externally and below the orifice of the ureter. A slight enlargement near its termination is regarded as a vesicula seminalis. Near the external orifice is a glandular cul-de-sac, the bursa Fabricii, the use of which is unknown. In most birds there is no copulatory organ. A rudiment exists, however, in the ostrich, duck, and some others. In these the female presents a clitoris. The female generative apparatus of birds consists almost always of a single ovary and oviduct, which are situated on the left side, the right ovary is atrophied. The oviduct presents three abdominal parts, the ostium, the albuminiferous ducts, and the uterus.

In Mammalia the male apparatus includes the testes, epididymis, vas deferens, vesicula seminalis, the ejaculatory duct, the penis, with the canal of the urethra, and the accessory gland, named the gland of Cowper, and the prostate, with some mucous glands. The female apparatus includes the ovary, the oviduct or Fallopian tube, the uterus, the vagina, and the vulva.

G., ovip'arous. (L. *ovum*, an egg; *pario*, to bring forth.) The production of the species by means of a fecundated egg, which being expelled from the body is subsequently hatched when placed under favourable conditions; as in birds and some reptiles.

G., ovovivip'arous. (L. *ovum*; *vivus*, living; *pario*.) The mode of propagation of the kind effected by the development of an egg which passes into a receptacle in the body, where it is hatched, and the young immediately expelled.

G., regular. The production of offspring as the result of union of the sexes.

G., spont'aneous. (L. *spontaneus*, of one's free will.) The production of a new being

from inorganic matter without the intervention of a parent. See *Abiogenesis*.

G., univ'ocal. (L. *univocus*, that which has but one meaning.) Production of the species in the usual manner by the union of the sexes.

G., vir'ginal. Same as *Parthenogenesis*.

G., vivip'arous. (L. *vivus*, living; *pario*, to bring forth.) The production of young by their parents in perfect, though immature, form.

Generative. (L. *genero*, to beget. F. *généralif*.) Having relation to generation; able to beget.

G. cells. Same as *Epithelium, germinal*.

G. duct. Same as *Genital duct*.

G. organs. See *Generation, organs of*.

G. ridge. Same as *Genital ridge*.

Generic. (F. *générique*; from L. *genus*, a kind or race.) Of, or belonging to, the same genus; relating to a genus.

G. description. An account of the special characters of a genus.

G. difference. The special differences between two things in as far as these differences concern genera.

G. name. The central or race name which is specialised for individuals by another and subordinate name.

Gen'erous. (Old F. *genereux*; from L. *generosus*, of noble birth.) Of noble qualities.

A term used in regard to wines to express strength in alcohol.

Gene'siac. Same as *Genesial*.

Gen'esial. (Γένεσις, origin, or generation.) Of, or belonging to, generation.

G. cy'cle. (Κύκλος, a ring.) A period of ovarian, of uterine, and of mammary activity, into a series of which the reproductive life of the human female is divided; the ovarian commencing with puberty, continuing until conception takes place, and then giving place to the uterine; this lasting for the term of gestation, and then being succeeded by the mammary; and on the termination of lactation a fresh cycle commencing with the return of ovarian activity.

Gen'esic. (Γένεσις. F. *génésiq*ue.) Same as *Genetic*.

Gen'esio, San. See *San Genesio*.

Genesiology. (Γένεσις; λόγος, a word.) An account, or the science, of generation.

Gen'esis. (Γένεσις, an origin; from γένω, the radical form of γίγνομαι, to be born. F. *gènes*e; I. *genes*i; G. *Genesis*, *Zeugung*, *Erzeugung*.) The act of producing; generation; origination.

Also, a term applied to the first appearance of a formed anatomical element.

G., spont'aneous. (L. *spontaneus*, of one's free will.) The origin of a structure or of a thing without the intervention of a previous structure or thing of the same kind as a parent.

Genes'ta. Same as *Genista*.

Gen'estelle. France, Département de l'Ardèche. A chalybeate water, containing much free carbonic acid.

Genes'tra. Same as *Genista*.

Geneta'lë. (L. *genitalis*, belonging to generation.) The *Semen*.

Also, the penis.

G. ca'put. (L. *caput*, the head.) The glans penis.

Geneta'lia. (L. *genetalis*, belonging to generation.) The genital parts.

G. vir'i. (L. *vir*, a man.) The male organs of generation.

GENETHLIAC—GENIPI.

Geneth'liac. (Γενεθλιακός, belonging to a birthday.) An old name given to those astrologers which treated the future of an individual from the state of the heavens at his birth.

Genethliology. (Γενεθλιος, relating to birth; λόγος, an account.) The branch of astrology which treats of the influence of the stars on infants at birth, whereby those born under a certain sign or planet are endowed with the properties peculiar to that sign or planet; thus, those born under the sign Taurus, the bull, will be hardy and strong.

Genetic. (Γένεσις, generation.) Relating to generation.

Also, that which comes by inheritance.

Also, acting on the genital organs.

G. faculty. The power, or capacity, of procreation.

G. monoma'nia. Same as *Monomania*, *erotie*.

G. sense. Recamier's term for the sexual orgasm.

G. spir'al. An imaginary line drawn around the axis of a plant from the point of insertion of one of the oldest of the lateral members to that of each successive member; the part of the spiral which is included between one lateral member, such as a leaf, and the next in right line above it is called a cycle.

Genetica. (Γένεσις, generation.) Good's fifth class of diseases, being those of the sexual function.

Also, agents acting on the sexual organs or functions.

Genetical. Same as *Genetic*.

Gene'va. (Geneva, where it was first made.) A variety of gin, distilled from malt or rye, and afterwards subjected to the same process with juniper berries.

Also, called *Hollands*.

Gen'al. (Γένειον, the chin.) Relating to the chin.

G. tubercles. The *Mental spines*.

Geni'an. (Γένειον, the chin.) Relating to the chin.

G. apoph'ysis. (F. *apophyse génienne*.) The *Mental spines*.

G. pro'cess. Same as *G. apophysis*.

Geniantral'gia. Same as *Genyantral-gia*.

Genicula'ris. A name given by some authors to the valerian.

Genic'ulate. (L. *geniculum*, a little knee. F. *geniculé*, *généouillé*; G. *gekniët*, *gelenkig*, *knieförmig*.) Bent like a little joint, or like the knee; bent at an angle.

G. bod'y, in'ner. The *Corpus geniculatum internum*.

G. bod'y, out'er. The *Corpus geniculatum externum*.

G. gang'lion. See *Ganglion*, *geniculate*.

Genicula'tum cor'pus. See *Corpus geniculatum*.

Genic'ulum. (L. *geniculum*, dim. of *genu*, the knee. F. *genicule*; G. *Kniechen*.) A little knee.

In Botany, a small knot or joint.

Geni'o-. (Γένειον, the chin.) A prefix, signifying attachment to, or connection with, the chin.

Geni'o-glos'sus. (Γένειον; γλῶσσα, the tongue. F. *génio-glosse*; G. *Kinnzungen-muskel*.) The *Genio-hyo-glossus* muscle.

Geni'o-hy'o-glos'sus. (Γένειον; *hyoid* bone; γλῶσσα, the tongue. F. *génio-hyo-glosse*; G. *Kinn-Zungenbein-Zungenmuskel*.) A thin, flat, fan-shaped muscle lying vertically on each side of the middle line, arising from the upper mental spine of the inferior maxillary bone, and inserted successively into the whole length of the tongue in the middle line and into the upper part of the body of the hyoid bone; some fibres go to the pharynx. The posterior and inferior fibres elevate the hyoid bone and approximate it and the base of the tongue to the chin, so as to protrude the tongue out of the mouth, from which position the anterior fibres withdraw it. When both act together they render the tongue concave along the middle line. It is supplied by the hypoglossal nerve.

Geni'o-hy'oid. (Γένειον; *hyoid* bone. F. *génio-hyoïdien*; G. *Kinnzungenbein-muskel*.) A thin, narrow muscle arising from the inferior maxillary bone, and inserted into the upper part of the anterior surface of the hyoid bone. It elevates and advances the hyoid bone. It is supplied by the hypoglossal nerve. It is a constant muscle in Vertebrata, but is often inserted into the cornua of the hyoid bone.

G. nerve. A branch given off by the hypoglossal nerve as it lies beneath the mylohyoid muscle.

Geni'o-pharynge'us. (Γένειον; φάρυγξ, the gullet.) Winslow's and Sabatier's name for those fibres of the superior constrictor muscle of the pharynx which sometimes arise immediately behind the symphysis of the lower jaw, on each side of the median line, from the mental spines, and extend backwards to the pharynx.

Geni'on. See *Geneion*.

Genioplasty. (Γένειον; πλάσσω, to mould.) A plastic operation for restoring the chin.

Also, see *Genyplasty*.

Geniospo'rum. A Genus of the Nat. Order *Labiata*.

G. prostra'tum. Benth. (L. *prostratus*, strewn on the ground.) Nazei-nagai. Hab. India. Used as a febrifuge.

Genios'toma. A Genus of the Nat. Order *Apocynaceæ*.

G. febrif'ugum. Spreng. (L. *febris*, fever; *fugio*, to put to flight.) The *Strychnos pseudoquina*.

Gen'ip tree. The *Melicocca bijaya*.

Gen'ipa. (Genipapo, the Guiana name of the fruit.) A Genus of the Nat. Order *Rubiaceæ*.

G. america'na. Linn. The *lana* tree. Fruit, called *genipap*, is esculent; its rind furnishes a bluish-black dye.

G. edu'lis. Rich. (L. *edulis*, eatable.) Furnishes an eatable fruit.

G. esculen'ta. Lour. (L. *esculentus*, eatable.) Hab. Cochin China. Furnishes an eatable fruit.

G., gar'den. The *G. americana*.

G. oblongifo'lia. (L. *oblongus*, oblong; *folium*, a leaf.) Hab. Peru. Juice applied to the skin to protect it against insect stings.

Genipap. The fruit of *Genipa americana*.

Gen'ipi. (G. *Genipkraut*.) A name given to many aromatic composite plants growing on the high Alps, but especially to those of the Genus *Achillea*.

GENIS, ST.—GENITAL.

The *Achillea moschata*, and also the *Artemisia rupestris*.

G. album. (L. *albus*, white.) The *Artemisia mutellina*.

Also, the *Achillea moschata*.

G. atrum. (L. *ater*, black.) The *Artemisia spicata*.

G., bastard. (F. *genipi bâtard*.) The *Achillea nana*.

G., black. The *Artemisia spicata*.

G., musk. The *iva*, *Achillea moschata*.

G., true. The *G. verum*.

G. verum. (L. *verus*, true. F. *genipi vrai*.) The *Artemisia glacialis*.

G., white. The *G. album*.

Genis, St. See *St. Genis*.

Genista. (L. *genista*, the broom plant. F. *genêt*; G. *Ginster*.) A Genus of the Nat. Order *Papilionaceae*.

Also, the broom, *Sarothamnus scoparius*.

G. acanthoclada. (Ἀκανθα, a thorn; κλάδος, a shoot.) Hab. Greece. An antidysenteric. Said to be the *μύλαινα ῥίζα* of Hippocrates.

G. canariensis. Linn. Canary rose-wood; it yields the *Lignum rhodium*, and also the *Oil of rhodium*.

G. herba-cea. Lamk. The *G. sagittalis*.

G. hirsuta. (L. *hirsutus*, hairy.) The *Sarothamnus scoparius*.

G. inermis. Hal. Gött. (L. *inermis*, unarmed.) The *G. tinctoria*.

G. juncea. Lamb. (F. *genêt d'Espagne*.) The *Spartium junceum*.

G. purgans. Linn. (L. *purgo*, to purge. F. *genêt purgatif*.) Hab. France. Leaves and seeds purgative and emetic.

G. sagittalis. Linn. (L. *sagitta*, an arrow. F. *genêt herbacé*.) Used as *G. tinctoria*.

G. scoparia. Lamk. (L. *scoparius*, a sweeper. F. *genêt à balais*.) The *Sarothamnus scoparius*.

G. spinosa. (L. *spinus*, spiny.) The *Ulex europæus*.

G. spinosa indica. (L. *spinus*.) An Indian tree, the roots of which in decoction, or the leaves boiled and placed in vinegar, are said to be diuretic. Also, called *Bahel schulli*.

G. tinctoria. Linn. (L. *tinctorius*, belonging to a dyer. F. *genêt des teinturiers*.) Dyer's broom. The flowery tops are used as a diuretic in dropsy; and the seeds as a purgative; it is also employed in Russia against hydrophobia.

Genistoides. (L. *genista*; Gr. εἶδος, likeness.) A Genus of the Nat. Order *Leguminosae*.

G. hirsuta. (L. *hirsutus*, hairy.) The *Genista tinctoria*.

G. tinctoria. Mönch. The *Genista tinctoria*.

Genital. (Old F. *genital*, apt to beget; from L. *genitalis*, pertaining to generation; from *gigno*, to beget. F. *génital*; G. *zur Zeugung gehörend*.) Of, or belonging to, the organ of, or to, generation; serving to engender.

In the plural (G. *Zeugungsglieder*), used to denote the organs of generation.

G. canal. The canal of Müller.

G. cell. (G. *Genitalzelle*.) A cell found in many Invertebrata, characterised by its unusual size, granular character, or other peculiarity, from the segmentation of which the whole of the germ cells of the animal proceed. It

is often recognisable in one of the layers of the blastoderm when development has not proceeded beyond the gastrula stage.

G. cord. (F. *cordon génital*; G. *Genitalstrang*.) A term applied to the fetal structure in both sexes, which consists of the two Wolffian ducts and the two Müllerian ducts attached to each other, so as to form one cord, by intervening tissue; subsequently the Müllerian ducts coalesce and form one tube, from the lower part of which the vagina and inferior part of the uterus in the female, and the prostatic vesicle or uterus masculinus in the male, are formed. The Wolffian ducts become the vasa deferentia of the male, and subsequently become separated from each other; in the female they become atrophied.

G. corpuscles. The *Corpuscles* of Krause in the genital organs.

G. duct. Same as *Müller's duct*.

G. eminance. (G. *Genitalhöcker*.) A prominence, which first appears about the sixth week, in the human embryo, in front of and within the orifice of the common cloaca; from it the clitoris or the penis proceeds.

G. end-corpuscles. The *Corpuscles* of Krause in the genital organs.

G. fold. (G. *Genitalfalte*.) A fold of blastema occasionally seen on each side of the *G. ridge*.

G. frill. (G. *Genitalkrause*.) Term applied to the generative organs of *Acalophæ*, on account of their frill- or garland-like form and arrangement.

G. furrow. (F. *sillon génital*.) A groove seen about the end of the second month of fetal life on the inferior face of *G. ridge*, running towards the cloacal orifice.

G. glands. The primary growth on the inner and anterior side of the Wolffian body from which the testicle in the male and the ovary in the female is developed.

Also, a generic term for the testicle and the ovary.

G. lamella. (L. *lamella*, a thin plate. G. *Genitallamelle*.) In *Discophora*, a band-like stria on the inner wall of the genital sacculi. The generative products are here differentiated. In *Calycozoa*, a band with numerous glandular sacculi, each with an excretory duct opening into a genital sinus.

G. nerve. (F. *nerf génital*; G. *äusserer Samenerv*.) The internal branch of the genito-crunal nerve. It lies near the external iliac artery, down which it sends a twig, penetrates the inguinal canal, lying behind the spermatic cord or the round ligament, gives many fine filaments to the cremaster and outside the canal, and supplies the superior and outer part of the scrotum in the male and the labia majora of the female; some filaments are distributed on the upper part of the inner surface of the skin of the thigh.

G. nerve-corpuscles. The *Corpuscles* of Krause.

G. organs. See *Generation, organs of*.

G. plates. (F. *plaques génitales*.) Those of the apical plates surrounding the upper pole of the Echinodermata which are perforated for the orifice of the genital organs.

G. pore. A fossa in each proglottis of a cestoid worm, into which the male sexual orifice and generally also the female vaginal orifice open.

GENITALIA—GENTIAN.

G. re'flex. A term applied by Saunders to severe intermittent abdominal pain caused, as he supposed, by the irritation consequent upon an adherent prepuce.

G. ridge. An elevation of the blastema on the mesial side of each Wolffian body of Vertebrata, first seen about the sixth week of foetal life, from which the genital glands are formed.

G. sac'cule. (L. *sacculus*, a small bag. G. *Genitalsäckchen*.) The organ in Discophora from which the female generative products are developed. It projects like a hernia into the subgenital cavity.

G. sinus. (L. *sinus*, a gulf.) The canal in Calycozoa into which the ova are extruded.

G. tu'bercle. Same as *G. ridge*.

G. ve'sicle. (L. *vesicula*, a small blister. G. *Genitalbläschen*.) Same as *G. saccule*.

G. ves'tibule. (L. *vestibulum*, a forecourt.) The entrance to the female organs of generation; the vulva.

Genitalia. (L. *genitalis*.) The organs of generation, either in an animal or in a plant.

G. viri. (L. *vir*, a man.) The male organs of generation.

Genitality. (L. *genitalis*, belonging to generation.) The property of conceiving.

Genitalium. (L. *genitalis*, from *gigno*, to beget.) Old term for a disease of the genital organs.

Gen'itals. (L. *genitalis*, belonging to generation. F. *parties génitales*; G. *Zeugungstheile*, *Zeugungsglieder*.) The genital organs or parts contributing to generation in the male or female.

Gen'ito-. (L. *genitus*, part. of *gigno*, to beget.) A prefix in compound words denoting relation to, or connection with, the genital organs.

Gen'ito-cr'u'al. (L. *genitus*, part. of *gigno*, to beget; *cruralis*, belonging to the thigh. F. *génito-crural*.) Of, or belonging to, the genital organs and the thigh.

G. nerve. (F. *nerf génitocrural*, n. *suspubien* of Chaussier; *inguinal interne* of Cruveilhier; *femorogential* of Sappey; G. *ausserer Leistennerv*, *Schämschenkelnerve*.) A branch of the lumbar plexus, derived chiefly from the second lumbar nerve, and in part from the connecting cord between it and the third lumbar nerve. It passes through the psoas muscle and divides, at a variable height, into an internal or genital, and an external or crural, branch.

Gen'ito spi'nal. (L. *genitus*; *spina*, the spine.) Relating to the generative organs and to the spinal cord.

G.-spi'nal centre. See *Centre, genito-spinal*.

G.-spi'nal gan'gion. Same as *Centre, genito-spinal*.

Gen'ito-u'ri'nal. Same as *Genito-urinary*.

Gen'ito-u'ri'ary. (L. *genitus*; *urina*, the urine. F. *génito-urinaire*.) Of, or belonging to, the genital organs and the urine. Applied to the canals or passages which are connected with generation and the secretion and discharge of the urine.

G. ap'erture. The anterior division of the common cloaca of the embryo which becomes divided into two, this and the anal aperture, about the seventh or eighth week of foetal life.

G. mus'cles. The transversus perinæi,

the ischio-cavernosus or erector penis of the male, the erector clitoridis of the female, the bulbo-cavernosus or ejaculator urinae of the male, the sphincter vaginae of the female, and the constrictor urethrae with its subsidiary transversus perinei profundus.

Genit'u'ra. (L. *genitura*, a begetting; from *gigno*, to beget.) Old term (Gr. *γονή*, used by Galen, *de Sem.* i, 9, and Hippocrates, *Aph.* vi, 2), for the male semen injected into the uterus.

Also, generation or conception.

Also, the penis.

Also, the result of conception, the foetus.

Geni'um. Same as *Geneion*.

Gen'ius. (L. *genius*, the tutelary spirit of a person. F. *genie*; I. *genio*; G. *Genie*.) The ruling spirit or power of a person or thing; an inborn faculty for original mental work of the highest kind; the special or peculiar character, or tendency, of a person or thing.

G. epidem'icus. (Ἐπιδήμιος, prevalent among a people.) The prevalent epidemic tendency of disease.

G. mor'bi. (L. *morbus*, a disease. G. *Krankheitscharacter*.) The special character or tendency of a disease; the special tendency to local manifestations in an epidemic disease.

Genne'sis. (Γέννησις, an engendering.) Same as *Generation*.

Gennet'ic. (Γεννητικός, generative.) Of, or belonging to, the procreative function.

Gennet'ica. (Γεννητικός; from *γεννάνω*, to beget.) The genital organs.

Gennet'ici mor'bi. (Γεννητικός; L. *morbus*, a disease.) Diseases of the genital organs.

Genneticocnes'mus. (Γεννητικός; κνησμός, an itching.) Itching of the genital organs.

Genneticon'osi. (Γεννητικός; νόσος, disease.) Diseases of the genital organs.

Genometabol'e. (Γένος, sex; μεταβολή, change. G. *Geschlechtsumwandlung*.) The transformation of sex, as on the cessation of the menses.

Genonu'si. (Γένος; νόσος, disease.) Diseases of the genital organs.

Genoplasty. Same as *Genyplasty*.

Gen-seng. See *Gin-seng*.

Gen'sing. Chinese name for the root of the *Panax quinquefolium*.

Gen'tia. Same as *Gentianin*.

Gent'ian. The *Gentiana lutea*.

Also, the *Triosteum perfoliatum*.

G., autum'nal. The *Gentiana amarella*.

G., bas'tard. The *Gentiana amarella*.

G. bit'ter. The same as *Gentiopiricin*.

G., blue. The *Gentiana Catesbaei*.

G., Cates'bian. The *Gentiana Catesbaei*.

G., com'mon. The *Gentiana lutea*.

G., dwarf. The *Gentiana acaulis*.

G., ex'tract of. See *Extractum gentianae*, B. Ph.

G., field. The *Gentiana campestris*.

G., horse. The *Triosteum perfoliatum*.

G., infu'sion of, com'pound. See *Infusum gentianae-compositum*.

G., marsh. The *Gentiana pneumonanthe*.

G. mix'ture. See *Mistura gentianae*, B. Ph.

G. root. See *Gentiana radix*.

G., south'ern. The *Gentiana Catesbaei*.

G. spir'it. An alcoholic beverage made in

GENTIANA—GENTIANÆ RADIX.

Switzerland, and obtained from the fermentation of an infusion of gentian.

G., spring alpine. The *Gentiana verna*.

G., tincture of. See *Tinctura gentiane compositæ*, B. Ph.

G. violet. An anilin dye or colouring matter. Used to make a microscopic staining fluid.

G., white. The *Laserpitium latifolium*; and also the *Triosteum perfoliatum*.

G., yellow. The *Gentiana lutea*; also the *Fraseria Walteri*.

Gentiana. (L. *gentiana*; from *Gentius*, a king of Slavonia, who first discovered it. Gr. *γεντιανή*; F. *gentiane*; I. *gentiana*; S. *gentiana*; G. *Enzian*.) A Genus of the Nat. Order *Gentianaceæ*.

Also, the pharmacopœial name, U.S. Ph., of the root of the *G. lutea*. See *Gentiane radix*.

G. acaulis, Linn. (L. a, neg.; *caulis*, a stem. F. *gentiane grandiflore*.) Dwarf gentian. Hab. Europe. Root a bitter and stomachic.

G. alba. (L. *albus*, white.) A name in the old formularies for the *Laserpitium latifolium*, or white gentian.

G. amarel'la, Linn. (L. *amarellus*, bitterish. F. *gentianelle*, *gentiane amarelle*; G. *bitterer Enzian*.) Root a bitter tonic.

G. amarylloides. (*Amaryllis*; Gr. *αἶδος*, likeness.) The *G. quinqueflora*.

G. Andrews'ii, Griseb. Probably supplies some of the root known as *G. Catesbæi*, U.S. Ph.

G. Bürgi'ri, Miq. Hab. Japan. Used as a stomachic.

G. cachenlag'uen. The *Chironia chilensis*.

G. campanula'ta, Jacq. (Mod. L. *campanulatus*, bell-shaped.) The *G. punctata*.

G. campestris, Linn. (L. *campestris*, belonging to the level field. F. *gentiane champêtre*.) Field gentian. Hab. Europe. Used as a substitute for the official gentian.

G. Catesbæ'i, Elliott. Root formerly official in U.S. Ph.; and used in the same manner and for the same purposes as that of the *G. lutea*.

G. Catesbæ'i, Walt. The *G. saponaria*, Linn.

G. centaur'rium, Linn. (F. *centaurée petite*; G. *Tausendgüldenkraut*.) The *Erythræa centaurium*.

G. chira'ta, Wall. The *Ophelia chirata*.

G. chiray'ta, Roxb. The *Ophelia chirata*.

G. crini'ta. (L. *crinitus*, hairy.) Fringed gentian. Hab. North America. Used as *G. lutea*.

G. crucia'ta, Linn. (L. *cruciatus*, crossed. F. *gentiane croisée*, *croisette*, *crucianelle*.) A bitter tonic.

G. Elliotti, Chapm. The *G. Catesbæi*, Elliott.

G. fimbria'ta, Vahl. (L. *fimbriatus*, fringed.) The *G. Andrewsii*.

G. Gerard'i. The *Erythræa centaurium*.

G. german'ica, Willd. The *G. amarella*.

G. grandiflo'ra, Lamb. (L. *grandis*, great; *flos*, a flower.) The *G. acaulis*.

G. hyssopifo'lia, Linn. The *Cicendia hyssopifolia*.

G. kur'roo, Royle. Hab. India. Used as *G. lutea*.

G. linearifo'lia, Lamb. (L. *linearis*,

like a line; *folium*, a leaf.) The *G. pneumonanthe*.

G. lu'tea, Linn. (L. *luteus*, yellow. F. *gentiane jaune*, *grande gentiane*; G. *gelber Enzian*.) The plant which supplies *Gentiane radix*.

G. macrophyl'la, Pallas. (Μακρός, long; φύλλον, a leaf.) Used in Siberia as a stomachic and tonic.

G. major. (L. *major*, greater.) The *G. lutea*.

G. ni'gra. (L. *niger*, black.) The *Seseli libanotis*.

G. ochroleu'ca. (Ὠχρολέυκος, yellowish white.) Sampson's snakeroot. Hab. America. Used as *G. lutea*.

G. pannon'ica, Scop. (L. *pannonicus*, belonging to Pannonia, or Hungary.) Hab. Austria and Hungary. Used as *G. lutea*.

G. perfolia'ta, Linn. The *Chlora perfoliata*.

G. peruvia'na. The *Chironia chilensis*.

G. pneumonan'thë. (Πνεύμων, a lung; άνθη, a flower. F. *gentiane des marais*.) Marsh gentian. Hab. Europe. A bitter stomachic.

G. pratensis, Fral. (L. *pratensis*, belonging to a meadow.) The *G. amarella*.

G. puber'ula, Mich. (L. dim. of *puber*, covered with soft down.) The *G. Catesbæi*, Elliott.

G. puncta'ta, Linn. (L. *punctatus*, dotted. F. *gentiane ponctuée*.) Hab. Middle Europe. Used as *G. lutea*.

G. purpu'rea, Linn. (L. *purpureus*, purple. F. *gentiane pourprée*.) Hab. Europe, Asia. Used as *G. lutea*.

G. quinqueflo'ra. (L. *quinque*, five; *flos*, a flower.) Hab. North America. Used as *G. lutea*.

G. ru'bra, Linn. (L. *ruber*, red. G. *rother Enzian*.) The *G. lutea*.

G. sapona'ria, Fræl. (L. *sapo*, soap.) The *G. Andrewsii*.

G. sapona'ria, Linn. (L. *sapo*, soap.) Probably supplies some of the root known as *G. Catesbæi*, U.S. Ph.

G. sapona'ria, var. *puber'ula*, Gray. (L. *sapo*, soap; *puberulus*, rather downy.) The *G. Catesbæi*, Elliott.

G. ver'na, Linn. (L. *vernus*, belonging to spring.) Gentianella. Hab. European Alps. Root a bitter stomachic.

G. veterum. (L. *veteres*, the ancients.) The *G. lutea*.

Gentiana'ceæ. (*Gentiana*.) Epipetalous corollifloral Exogens of the Alliance *Gentianales*; or a Family of the Order *Contortæ*, Subclass *Sympetale*. Leaves generally simple, sessile, and always without stipules; flowers regular; stamens alternate to the lobes of the corolla and equal to them; stigmas two, simple, on a manifest style; ovary superior; placentæ parietal. It is divided into two Suborders, *Gentianeæ* and *Menyantheæ*.

Gentianæ radix, B. Ph. (L. *radix*, a root. F. *racine de gentiane*; G. *Enzianwurzel*, *Bitterwurzel*.) Gentian root. The dried root of *Gentiana lutea*, occurring in nearly cylindrical pieces, or longitudinal slices, of various lengths, about an inch thick, of a deep yellowish brown without, but lighter within, the upper portion closely annulate and the lower part longitudinally wrinkled. It is slightly sweetish and very bitter from the presence of gentiopierin;

GENTIANALES—GENYANTRALGIA.

it also contains gentisin. It is a stomachic and tonic, with, it is supposed, some action on the liver. It has been used in weakness of stomach, dyspepsia, atonic gout, amenorrhœa, chronic intestinal catarrh, and indolence of the liver. The powder has been applied to unhealthy ulcers, and the root has been used as a tent to enlarge narrowed canals or passages.

Gentianales. An Alliance of perigynous Exogens, according to Lindley's classification. Flowers dichlamydeous, monopetalous; placenta axile or parietal; embryo minute, or with the cotyledons much smaller than the radicle, lying in a large quantity of albumen.

Gentianeæ. (*Gentiana*.) A Suborder of the Nat. Order *Gentianaceæ*, with an imbricate-twisted corolla. Example, *Gentiana*.

Gentiane'in. Merat's name for *Gentio-pierin*.

Gentianel. The *Gentiana verna*.

Gentianella. A name for many of the species of *Gentiana* and of *Cicendia*.

Also, formerly the official name of *Gentiana germanica*.

G. autumnalis. (*L. autumnalis*, belonging to autumn.) The *Gentiana amarella*.

G. verna. The *Gentiana verna*.

Gentianic acid. Same as *Gentisin*.

Gentianin. A yellow, crystallisable substance obtained by Henry and Caventou from gentian root. It consists of a yellow, crystalline principle, called *Gentisin*, and a little *Gentio-pierin*. It has been used as an antiperiodic, but has not fulfilled its early promise. It has also been employed as a stomachic and tonic in lymphatic or scrophulous cases, and in worms.

Gentianine. Dulk's name for *Gentio-pierin*.

Gentianose. $C_{35}H_{56}O_{31}$. A crystallisable sugar obtained by Meyer from the juice of *Gentiana lutea*. It has a slightly sweet taste; it ferments under the influence of yeast, but does not reduce Fehling's copper solution.

Gentianworks. The plants of the Nat. Order *Gentianaceæ*.

Gentilitious. (*L. gentilitius*; from *gens*, a stock or family.) Of, or belonging to, a family. Old term applied to diseases inherited from parents; the same as hereditary.

Gentio'genin. $C_{14}H_{16}O_5$. A yellowish-brown, bitter substance obtained, along with glucose, by the action of dilute acids on gentio-pierin. It is isomeric with physalin.

Gentio'picrin. (*Gentiana*; Gr. *πικρός*, bitter. *G. Enzianbitter*.) $C_{20}H_{30}O_{12}$. The bitter principle of gentian; a colourless crystalline glycoside, soluble in water and alcohol, insoluble in ether. It is said not to be obtained from the dried gentian root. Obtained pure first by Ludwig and Kromayer.

Gentiotannic acid. A term for the tannic acid contained in gentian root.

Gentis'ic acid. Same as *Gentisin*.

Gentisin. $C_{11}H_{10}O_5$. Bright-yellow, tasteless crystals obtained from gentian root, soluble in 5000 parts of water and 500 parts of alcohol.

Gentisin'ic acid. $C_7H_6O_4$. A substance obtained, along with acetic acid and phloroglucin, by the action of caustic potash on gentisic acid. It is isomeric with protocatechuic or oxysalicylic acid.

Gen'u. (Akin to *γόνυ*, the knee. F. *genou*; G. *Knie*.) The knee.

G. cor'poris callo'si. (F. *genou du corps calleux*; G. *Balkenknie*.) The prominence where the anterior border of the corpus callosum bends downwards and backwards.

G. ever'sum. (*L. evert*, to turn out.) The condition of knee found in *Bow-leg*.

G. extor'sum curva'tum. (*L. extra*, on the outside; *versus*, turned; *curvatus*, curved. F. *genou en dehors*; G. *Säbelbein*, *O-bein*, *Sichelbein*.) A bending outward of the knee. Same as *Bow-leg*.

G. intror'sum flex'um. (*L. introrsus*, towards the inside; *flexus*, bent.) A term for *Knock-knee*.

G. inver'sum. (*L. inversus*, turned inwards.) Same as *Knock-knee*.

G. ner'vi facia'lis. (*L. nervus*, a nerve; *facialis*, belonging to the face. G. *Knie des Gesichtsnerven*.) The sharp backward bend of the facial nerve above the fenestra ovalis.

G. recurva'tum. (*L. recurvo*, to bend back. G. *Hohlknies*, *Hohlbein*.) A backward projection of the knee-joint, producing an angular hollow in front, and depending on relaxation of the posterior part of the capsular ligament, of the crucial ligaments, and of the popliteus muscle.

G. trac'tus opt'ici. (*L. tractus*, a tract; *opticus*, belonging to sight. G. *Knie des Sehstreifens*.) The bend near the origin of the optic tracts.

G. val'gum. (*L. valgus*, having the calves of the legs bent outwards.) An incorrect term for *Knock-knee*.

G. va'rum. (*L. varus*, having the legs bent outwards.) A term for *Bow-leg*.

Gen'ua. Plural of *Genu*.

G. arcua'ta. (*L. arcuo*, to bend like a bow.) The bending of the knee outwards.

G. val'ga. See *Genu valgum*.

G. va'ra. See *Genu varum*.

Gen'uclast. (*L. genu*, the knee; Gr. *κλάω*, to break.) An instrument for breaking down adhesions, whether osseous or fibrous, in the knee-joint.

Genuflex'ed. (*L. genu*; *flexus*, bent. G. *kníebeugig*.) Bent at the knee; bent like a knee; bent at a joint.

Genuflexion. (*F. genuflexion*; from *L. genu*, the knee; *flexus*, part of *flecto*, to bend.) The act of bending the knee; kneeling.

G., forcible. The forcible bending of the knee-joint, and the retaining of the leg in a state of flexion, employed in the treatment of some forms of popliteal aneurysm.

Gen'ugra. (*L. genu*, the knee; Gr. *ἄγρᾱ*, a seizure.) The Paracelsian term for *Gonagra*, or gout in the knee.

Genuine. (*L. genuinus*, innate, natural; from *geno*, to beget.) Of the true race, legitimate.

Genuus. (*L. genus*, race; cognate with Gr. *γένος*, race, family. F. *genre*; G. *Gattung*, *Geschlecht*.) An assemblage of species, or a single species, having certain characters in common, by virtue of which they are members of a special genus, and by means of which they are distinguishable from the species of another genus.

G. curatio'nis. (*L. curatio*, a curing, healing.) The kind or manner of cure.

G.-hybrid. A hybrid resulting from the union of two living things of different genera.

Geny'antra'lgia. (*Γένυς*, the cheek;

GENYANTRIC—GEOPHILUS.

ἄντρον, a cave; ἄλγος, pain. G. *Oberkinnbackenhöhleiden*.) Pain in the antrum of the superior maxillary bone.

Genyantric. (Γένυς; ἄντρον.) Relating to the antrum of the superior maxillary bone.

Genyantrit'ic. (Γένυς; ἄντρον.) Relating to *Genyantritis*.

Genyantritis. (Γένυς; ἄντρον.) Inflammation of the antrum of the superior maxillary bone.

Genyan'tron. (Γένυς; ἄντρον. G. *Oberkinnbackenhöhle*.) The antrum of the superior maxillary bone, or antrum of Highmore.

Genyocynan'chē. (Γένυς; κυνάγχη, sore throat.) A term for *Mumps*.

Genyplast'y. (Γένυς, the cheek; πλάσσω, to form.) An operation for restoring the cheek when it has been destroyed by injury, or is imperfect from congenital deformity.

Gen'ys. (Γένυς.) The jaw; the cheekbone; the chin.

Ge'oblast. (Γῆ, the earth; βλαστός, a sprout.) A plumule which rises from the earth, leaving the cotyledons below the ground.

Geoblas'tous. (Γῆ, the earth; βλαστός, a sprout. F. *géoblaste*.) A term applied to those plants which in germinating produce their cotyledons underground and lose them there without their appearing on the surface.

Geochos'ia. (Γῆ; χῶσις, a heaping up.) An earth bath.

Geoc'ores. (Γῆ; κόρις, a bug.) A Tribe of the Suborder *Hemiptera*; being land bugs, with the antennæ directed forwards and of medium length; rostrum generally long.

Geoffræ'a. Same as *Geoffroya*.

Geof'roy, Etienne François. A French apothecary and botanist, born in Paris in 1672, and died there in 1731.

Geoffroy'a. (E. F. *Geoffroy*, a French botanist.) A Genus of the Nat. Order *Leguminosæ*.

G. iner'mis. Swartz. The *Andira iner-mis*.

G. jamaicēn'sis. Murray. The *Andira inermis*.

G. piso'nia. Rausch. The *Andira inermis*.

G. racemo'sa. Poir. (L. *racemosus*, full of clusters.) The *Andira inermis*.

G. retu'sa. Lam. The *Andira retusa*.

G. spin'o'sa. Linn. (L. *spinus*, thorny.) The Umari of Brazil. Seeds vermifuge and astringent. Used in stomach disorders and as a vulnerary.

G. spinulo'sa. Mart. Seeds vermifuge.

G. surinamen'sis. De Cand. The *Andira surinamensis*.

G. vermifu'ga. St. Hil. (L. *vermis*, a worm; *fugio*, to put to flight.) The *Andira anthelmintica*.

Geoffroy'n. Same as *Surinamin*.

Geogas'teres. (Γῆ, the earth; γαστήρ, the belly.) Same as *Geogastromycetes*.

Geogastromyc'etes. (Γῆ; γαστήρ, μύκης, a fungus. G. *Erdbalgpilze*.) The *Gastromycetes* which grow underground.

Geog'enous. (Γῆ; γεννῶω, to produce. G. *erdentsprossend*.) Growing or springing from the ground.

Geographical. Relating to *Geography*.

G. pathol'ogy. See *Pathology*, *geographical*.

Geog'raphy. (Old F. *geographie*; from L. *geographia*; from Gr. *γεωγραφία*; from γῆ, the earth; γράφω, to write or to describe. G. *Geographie*, *Erdbeschreibung*.) A description of the whole earth, or terrestrial world, its mountains, seas, rivers, parts, limits, situation, and other things belonging to it.

G., medical. The description of the surface of the earth in its relation to health and disease.

Geol'ogy. (Γῆ, the earth; λόγος, a discourse. F. *géologie*; G. *Geologie*, *Erdkunde*.) The science of the structure of the earth and of the substances which compose it; their relations to each other; their mode and time of origination; the changes which they have undergone and are undergoing, both in development and in disintegration, under the influence of the various telluric forces and powers.

Ge'omancy. (Γῆ; μαντεία, prophesying. F. *géomancie*.) Divination by means of observations of the relationships between the superficial conditions of the earth and certain figures and points.

Geom'etræ. (Γῆ, the earth; μετρέω, to measure. G. *Spanner*.) A Suborder of the Order *Lepidoptera*, so called from the mode of progression of their larvæ, as if they were measuring the ground; which, when they move, fix the anterior legs, arch the body, and bring the posterior legs up to the anterior ones, then stretching out the body they fix the anterior legs as far in advance as they can reach, and repeat the arching of the body.

Geometrical. Relating to *Geometry*.

G. shadow. See *Shadow*, *geometrical*.

Geom'etry. (Mid E. *geometry*; Old F. *geometrie*; L. *geometria*; Gr. *γεωμετρία*, the measurement of land.) The science of measurement; the branch of mathematics which treats of the properties and relations of magnitudes.

Geonom'ia. (Γῆ, the earth; νόμος, a law. F. *géonomie*.) Term for that branch of general physics which treats of the laws which effect those changes observed on the surface of the earth and in the atmosphere.

Geophag'ia. Same as *Geophagism*.

Geophag'ism. (Γῆ, the earth; φαγῆν, to eat. F. *géophagie*; G. *Erdessen*.) The practice of *Earth-eating*.

Geophag'ist. (Γῆ; φαγῆν. F. *géophage*.) One who practises *Geophagism*.

Geophagy. (Γῆ; φαγῆν.) Same as *Geophagism*.

Geoph'ila. (Γῆ; φιλέω, to love.) A Genus of the Nat. Order *Rubiaceæ*.

G. macrop'oda. The *Psychotria macropoda*.

G. renifor'mis. Cham. and Schlecht. (L. *ren*, the kidney; *forma*, shape.) Hab. tropical America. Root emetic.

Geophil'ous. (Γῆ, the earth; φιλέω, to love. F. *géophile*.) Earth-loving. Applied to plants that grow on, or animals that live upon, the earth.

Geophil'us. (Γῆ; φιλέω, to love.) A Genus of the Order *Chilopoda*, Class *Myriopoda*.

G. carpoph'agus. Leach. (Καρπός, fruit; φαγῆν, to eat.) Has been expelled from the nasal fossa of a man after having caused agonising pain.

GEOPHYLLOUS—GERANIUM.

G. longicornis. (*L. longus*, long; *cornu*, a horn.) A species which is poisonous.

The poison glands are two longish, hard, cellular structures surrounded by striped-muscle bundles.

Geophyllous. (Γῆ, the earth; φύλλον, a leaf. *F. geophylle*.) Having leaves, or leaflets, of an earthy colour.

Georg'en, St. See *St. Georgen*.

Georg'enbad. Saxony. A chalybeate water and a sulphur spring are found here.

Georges des monts, Saint. See *Saint Georges des monts*.

Georgia, mineral waters of. The water of Indian springs in Butts County is sulphurous. The warm springs, in Merryweather County, have a temperature of 90° Fahrenheit. Madison's springs, in Madison County, are chalybeate; and so are Rowland's springs, in Cass County. (Dunglison.)

Geotactism. (Γῆ, the earth; τακτικός, regulating.) Van Tieghem's term for the influence which the force of gravity exercises on the movement of mobile parts of a plant, such as the protoplasmic naked body of *Fuligo septica* which, under the negative influence of gravity, climbs vertical walls, and when grown on a horizontal rotating plate grows towards the centre of rotation.

Geotropism. (Γῆ; τρέπω, to turn.) The tendency of a plant, or a part of it, to grow towards or away from the centre of the earth.

G., negative. The form in which the growing part tends upwards, as in the case of the stem.

G., positive. The form in which the growing part tends downward to the earth, as in the case of the root.

G., transverse. The form in which the growing part tends in a direction across the line of action of gravity.

Gephyrea. (Γέφυρα, a mound.) A Class of the Subkingdom *Vermes*. Marine worms with a cylindrical body, coriaceous and occasionally imperfectly ringed integument, a retractile proboscis, mouth situated at the anterior extremity of the body or ventrally; no respiratory organs; nervous system consisting of a ventral ganglionic chain, an œsophageal collar, and frequently a cerebral ganglion; sexes distinct.

Gerace man'na. See *Manna geracina*.

Geræology. Same as *Geratology*.

Gerafou'ris. The *Dianthus caryophyllus*.

Gerania'ceæ. (*Geranium*.) A Nat. Order of thalamitoid Exogens of the Alliance *Geraniales*; or a Family of the Order *Gruinales*; having the flowers usually asymmetrical; sepals five, imbricate; fruit consisting of five carpels attached by their styles to a carpophore. Examples, *Erodium*, *Geranium*.

Geraniales. An Alliance of hypogynous Exogens, according to Lindley, with monodichlamydeous symmetrical flowers, axile placentæ, an imbricated calyx, a twisted corolla, definite stamens, and an embryo with little or no albumen.

Gera'nin. $C_{10}H_{16}$. A terpene obtained from the oil of *Andropogon schœnanthus*.

Gera'nin. A bitter substance found in the *Erodium* or *Geranium cicutarium*.

Gera'niol. $C_{10}H_{18}O$. An isomer of borneol found in the oil of *Andropogon schœnanthus*.

Ger'anis. (Γέρανος, a crane; from a fancied resemblance.) Old name of a bandage for a dislocated humerus, or fractured clavicle, invented by Hippocrates, or, as some say, Perigenes; Gr. γέρανις, mentioned by Galen, *de Fasc.*, n. 74, and Paulus Ægineta, vi, 99, Adams's *Trans.*, vol. ii, p. 457.

Geranium. (Γεράνιον, the stork's bill; from γέρανος, a crane. *F. géranion*, *bec-de grue*; *G. Storchschnabel*.) A Genus of the Nat. Order *Geraniaceæ*; so called because its pistil resembles a crane's bill.

Also, U.S. Ph., the rhizome (*F. racine de pied-de-corneille*, *r. de bec-de-grue tacheté*; *G. Fleckstorchschnabelwurzel*) of *G. maculatum*. It contains tannic and gallic acids, red colouring matter, resin, and a crystallisable principle. An astringent in diarrhœa, dysentery, and internal hæmorrhage, and locally in relaxed throat and leucorrhœa; it is also used as an injection in gleet and leucorrhœa. Dose, 20—30 grains (1·3—1·95 gramme).

G. batrachyo'ides. (Βάτραχος, a frog; εἶδος, likeness.) The *G. sylvaticum*.

G. carolinia'num. Hab. North America. Same properties as *G. Robertianum*.

G. cicutarium. Linn. The *Erodium cicutarium*.

G. columbi'num. Linn. (*L. columba*, a dove.) The dove's foot. Astringent and detersive.

G., fluid extract of. See *Extractum geranii fluidum*, U.S. Ph.

G. foetidum. (*L. foetidus*, stinking.) The *G. Robertianum*.

G. macula'tum. Linn. (*L. maculatus*, spotted.) Hab. North America. Supplies *Geranium*, U.S. Ph.

G. moscha'tum. Linn. The musk geranium. It has astringent properties, and has been used as an antispasmodic.

G. noveboracensë. The *G. maculatum*.

G. oil. The essential oil obtained from the leaves and flowers of *Pelargonium roseum*, *P. odoratissimum*, *P. radula*, and other species.

G. oil of India. The oil obtained from *Andropogon schœnanthus*.

G. praten'së. Linn. (*L. pratensis*, belonging to a meadow. *F. géranion des près*.) The crow-foot crane's-bill. It possesses slight astringent properties.

G. purpureum. (*L. purpureus*, purple.) The *G. Robertianum*.

G. Robertia'num. Linn. (*F. herbe à Robert*, *herbe à l'esquinancie*.) Herb Robert, or stinking crane's-bill, formerly used as an external application in erysipelatous inflammation, cancer, mastodynia, and old ulcers, internally in kidney disorders, and as a gargle in sore throat.

G. rotundifo'lium. Linn. (*L. rotundus*, round; *folium*, a leaf.) The round-leaved crane's-bill. It is slightly astringent.

G. sanguineum. Linn. (*L. sanguineus*, bloody.) The bloody crane's-bill. It is slightly astringent.

G. sylvaticum. Linn. (*L. sylvaticus*, belonging to a wood.) The wood crane's-bill. Used as an astringent and detersive.

G. tuberosum. Linn. (*L. tuberosus*,

GERANOMORPHÆ—GERMANIS OLEUM.

full of swellings.) Hab. South Europe. A wine of the root was used locally in vulvar inflammations.

Geranomorphæ. (Γέρανος, a crane; μορφή, form.) The cranes.

Gerās. (Γήρας.) Old age.

Geratici morbi. (Γήρας, old age; L. *morbus*, a disease.) The diseases of old age.

Geratology. (Γήρας; λόγος, a discourse.) The account or description of what concerns old age.

Geraud, Saint. See *Saint Geraud*.

Gericterus. (Γήρας, old age; ἰκτερος, the jaundice.) The jaundice of old persons.

Gerlach, Joseph. A German physiologist of the present century.

G's nerve-network. The minute filamentous network produced by the branching of the processes of the ganglion cells of the central nervous system.

Germ. (F. *germe*; from L. *germen*, a sprout. I. *germe*; S. *germen*; G. *Keim*.) The rudiment of a new organism, animal or vegetable; the part of a living thing which after fecundation is capable of development into the likeness of the organism from whence it sprang. That from which anything springs.

In Pathology, the term is applied to the rudiments or spore forms of those organised structures which are supposed to cause putrefaction and fermentation, and many infectious and septic diseases.

G. area. The *Gastrodisc*.

G. cell. A cell contained in the cavity of the embryo-sac of *Filices*, *Musci*, and *Hepaticæ*. Also, the same as *Oosphere*.

Also, a term applied to *Cell*, *germinal*.

G. disc. The *Discus proligerus*.

G., enam'el. See *Enamel germ*.

G., epithelium. Same as *Epithelium*, *germinal*.

G., flesh. A synonym of *Sarcophyte*.

G. force. Same as *Plastic force*.

G. hill. The *Discus proligerus*.

G. lamellæ. (L. *lamella*, a thin plate.)

The two layers of the *Blastodermic vesicle*.

G. mass. The protoplasm from which the embryo is developed.

G.s of disease'. A term which is loosely used in several senses. It is most frequently employed to denote the actual thing, be it organised or unorganised, which is the special cause of a communicable disease, such as the Achörion Schönleini of favus, the uric acid of gout, or the contagium of scarlet fever; but it is used also to denote the presence in the body of some latent, quiescent morbid matter, the result of some previous disease or of hereditary influence which, under certain circumstances, may be lighted up into action and produce a new disease or reproduce a similar disease.

G. reticulum. (L. *reticulum*, a little net.) Von Ebner's term for the nucleated fibrillar supporting network sometimes seen between the seminal cells in the seminal tubules of the adult testicle.

G. sac. (G. *Keimblase*.) The vesicular blastoderm of mammals.

G.s, specif'ic. The germs or spores of those fungoid growths which are supposed to cause specific diseases.

G. spot. The *Germinal spot*.

G. stock. The term applied to the part of the body from which budding takes place in

those animals in which a distinct special area is set apart for the purpose of generation by gemination.

G. the'ory. A term applied to the theory of the origin of many diseases in the morbid influence of certain fungi, which are introduced into the organism by means of their germs or spores.

G. ves'icle. The *Germinal vesicle*.

Also, formerly applied to the vesicular blastoderm of mammals.

G. yolk. The white yolk of the ovum of birds.

Ger'man. Relating to, or belonging to, or derived from, Germany.

G. benzo'ic acid. Benzoic acid prepared from the urine of cattle and horses by producing hippurate of calcium and boiling it with hydrochloric acid, thus forming benzoic acid and glycocholl.

G. cham'omile. The *Matricaria chamomilla*.

G. contrayer'va. The root of *Vincetoxicum officinale*.

G. gera'nium oil. The oil obtained from the leaves and flowers of *Pelargonium radula*.

G. gol'den locks. The *Helichrysum arenarium*; also the *Linosyris vulgaris*.

G. i'ronwort. The *Sideritis scordiodices*.

G. knot-grass. The *Scleranthus annuus*.

G. lactuca'rium. See *Lactucarium*, *German*.

G. leop'ard's bane. The *Arnica montana*.

G. mad'wort. The *Asperugo procumbens*.

G. mea'sles. See *Measles*, *German*.

G. mil'let. The *Sorghum germanica*.

G. sarsaparil'la. A name for the *Carex hirta*, which see.

G. sil'ver. Same as *Nickel silver*.

G. tam'arisk. The *Myricaria germanica*.

G. tin'der. The soft amadou made of the *Polyporus fomentarius*.

G. yeast. See *Yeast*, *German*.

German'der. (F. *germandrée*; from L. *calamandrea*; a corrupt form of L. *chamædrys*; from Gr. χαμαιδρύς; from χαμαί, on the ground; δρύς, a tree. I. *camædio*; S. *escordio*; G. *Germander*.) The *Teucrium chamædrys*.

G. chick'weed. The *Veronica agrestis*.

G., com'mon. The *Teucrium chamædrys*.

G., creep'ing. The *Teucrium chamædrys*.

G., jag'ged. The *Teucrium botrys*.

G. ma'rum. The *Teucrium marum*, or Syrian herb mastich.

G. scor'dium. The *Teucrium scordium*.

G., small. The *Teucrium chamædrys*.

G. speed'well. The *Veronica chamædrys*.

G., tree. The *Teucrium flavum*.

G., wall. The *Teucrium chamædrys*.

G., wa'ter. The *Teucrium scordium*.

G., wild. The *Veronica chamædrys*; and also the *Teucrium scorodonia*.

G., wood. The *Teucrium scorodonia*.

Germanis oleum. Name for the *Balsamum carpathicum*, obtained both by wounding the young branches of the *Pinus cembra* and by boiling them; also by distilling the fresh

GERMANO, ST.—GERMINATION.

cones. It comes to us diluted with turpentine, in a very liquid state.

Germano, St. See *St. Germano*.

Germarium. (L. *germen*, a sprout.) The sac in which the ova are developed in some of the lower animal forms, as the Turbellaria.

Germen. (L. *germen*, a sprout; from Aryan root *kar*, to make; or from Ind. Eur. root *garbh*, to conceive. F. *germe*; G. *Keim*.) The rudiment of the young fruit at the base of the pistil; the ovary of a plant.

Also, a term for the semen.

Also see *Germ*.

G. dentalé. (L. *dens*, a tooth.) The Tooth pulp.

G. falsum. (L. *falsus*, false.) A uterine mole.

G. spurium. (L. *spurius*, false.) A uterine mole.

Germicide. (Germ; L. *cado*, to kill.) Having power to kill germs.

Germiduct. (Germ; L. *duco*, to lead.) The efferent canal of the *Germigene*.

Germigene. (L. *germen*; *geno*, to produce.) The gland of the female generative apparatus of cestoid and Trematode worms in which the germinal vesicles are formed.

Germinal. (L. *germen*.) Relating to a germ.

G. area. The *Area generativa*.

G. bands. The two symmetrical halves into which the ventral plate of the embryo of insects divides.

G. cell. See *Cell, germinal*.

G. cells, primitive. (L. *primitivus*, first of its kind.) The larger cells of the germinal epithelium which subsequently become ova or male elements, as the case may be; they differ from the other cells, not only in their larger size, but in their possession of a large oval highly refracting nucleus.

G. corpuscles. (L. *corpusculum*, a little body.) Hensley's term for the *G. vesicles* before impregnation, because they are then, according to him, merely corpuscles of protoplasm.

G. disc. The *Discus proligerus*.

G. epithelium. See *Epithelium, germinal*.

Also, the single layer of polyhedral or short columnar cells covering the free surface of the tunica albuginea of the ovary.

G. layers. The three layers of the blastoderm, being the epiblast, hypoblast, and mesoblast.

G. mac'ula. (L. *macula*, a spot.) The *G. spot*.

G. matter. Lionel Beale's term for vitally active matter or protoplasm.

G. membrane. Same as *Blastoderm*.

G. nucleus. (L. *nucleus*, a kernel.) The *G. spot*.

G. pole. The part or pole of the egg where lies the germinal spot.

G. spot. (F. *tache generative*; G. *Keimfleck*.) The spherical or lenticular nucleolus of the permanent ovum situated in the nucleus or germinal vesicle; sometimes there are several, one of which is usually longer than the rest, and contains small, opaque granules.

G. streak. The same as *Primitive streak*.

G. vesicle. (L. *vesicula*, a small bladder. F. *vesicule generative*; G. *Keimbläschen*, *Keimblase*.) The nucleus of the permanent ovum of animals. It consists of a matrix of

nucleoplasm surrounded by a fine vesicular membrane, situated in the germinal disc on one surface, the germinal pole, of the ovum. That of the human ovum is about 1-500th of an inch in diameter. Its contents are clear when it is fresh, but become granular on the addition of reagents.

In Botany, the term germinal vesicles is applied to the cells, usually three in number, which are situated near the summit of the embryo sac of the ovule of angiospermous plants, one or more of which, on the contact of the pollen-tube, develops into the embryo.

G. wall. A thickened rim of material under the edge of the epiblast, at the inner margin of the opaque area of a fecundated bird's egg, and consisting of cells of the thickened edge of the blastoderm, yolk granules, and many nuclei.

Germinating. (L. *germino*, to bud.) Sprouting.

G. endothelial cells. See *Endothelium, germinating cells of*.

Germination. (L. *germinatio*, a sprouting forth; from *germino*, to bud, sprout, or branch out. F. *germination*; G. *Keimen*.) The act or process of sprouting of a seed; growth.

Also, the development of a *Germ*.

G., embryomorphous. (Εμβρυον, the fruit of the womb before birth; μορφή, form.) Richard's term for the form of generation in Cryptogams in which the archegonia contain a central cell analogous to the embryonal vesicle of Phanerogams, which after fecundation becomes segmented, and develops into a bud-like structure, from which the new plant arises.

G., mycelioid. (Mycelium; Gr. εἶδος, likeness.) Richard's term for the form of generation in Cryptogams which occurs in many filamentous Algæ, Fungi, Lichens, and Mosses, where the spore buds at each extremity, and sends out a long filament.

G. of pollen. The development which the pollen grain undergoes after falling upon the micropyle, as in Gymnosperms, or upon the stigma, as in Angiosperms, until it reaches the oosphere or embryo-sac, and effects *Fecundation*.

In Gymnosperms the multicellular pollen grain falling into the open orifice of the ovary is deposited directly upon the micropyle of the ovule, where it is retained by a small drop of liquid; the largest cell of the pollen grain protrudes the intine through the extine and forms a pollen tube, which grows, and becomes applied to the embryo-sac, where fertilisation occurs.

The pollen grain of Angiosperms is unicellular, but often contains two or more nuclei of different sizes, around which the protoplasm is aggregated so as to resemble cells; when the pollen grain has reached the stigma of a flower, the pollen tube, consisting of the intine, is pushed out through the extine from the larger nucleus or cell, passes down the style by penetrating its loose conducting tissue or its canal, when this is present, and, nourished by the protoplasm of the structures, reaches the micropyle; here its walls become thickened and its protoplasm contains starch grains; growing, it reaches the apex of the nucellus, and, perforating it, comes into contact with the embryo-sac, where fertilisation is effected.

The time that intervenes between pollination and fertilisation varies much; it may be two or three days, as in the Crocus, ten days, as in

GERMINATIVE—GERMS.

Orchids, several weeks, as in the Hazel, or a year, as in the Firs.

G. of seeds. The series of phenomena or processes exhibited in a seed when under the influence of moisture, air, a certain degree of warmth, and, it may be, of electricity, the embryo develops into a young plant. These phenomena are the rupture of the testa, the protrusion of the radicle and its growth downwards, the expansion of the cotyledons, and the growth upwards of the plumule.

In Cycadæe the primary root, after growing downwards for awhile, sometimes becomes tuberous and sometimes forms a mass of thick fibrous roots; the two cotyledons remain in the seed, absorb their nourishment from the endosperm, and by their growth push out their basal parts along with the plumule.

In Coniferae the primary root passes through the ruptured testa at the radicular end of the seed and grows persistently, the cotyledons increase in size, push their bases and the plumule out of the same aperture, but themselves remain in the endosperm till it is absorbed, when they are drawn upwards by the growth of the axis, and unfold to act as the first foliage leaves of the plant.

In Monocotyledons the lower part of the cotyledon generally lengthens and pushes the primary root and the plumule out of the seed, itself remaining within the endosperm until its nutrient part is absorbed; or, as in grasses, the cotyledon assumes the form of a shield, the scutellum, which remains within the endosperm for nutritive purposes, the roots rupturing the root-sheath, which remains attached to the axis, as the coleorrhiza.

In Dicotyledons the seed or fertilised ovule consists of an outer coat or testa, with an inner coat or tegmen, and a body composed of the embryo alone, or of the embryo surrounded by a perisperm. In germination the testa, or, in dry indurated fruits, the pericarp, bursts from the swelling of the endosperm, or of the cotyledons, in consequence of the absorption of water. The radicular portion of the axis then begins to elongate and appears on the surface of the seed, quickly attains a considerable length, and forms secondary roots in acropetal succession, while the cotyledons and plumule remain in the seed. Soon these also begin to protrude and increase in size rapidly. The plumule becomes the primary stem of the plant and produces lateral shoots, and the cotyledons form the first pair of leaves.

In the process of germination certain chemical changes, which result in loss of weight, occur in the seed; oxygen is absorbed, carbonic anhydride is given off; the starch is converted into sugar and gum, and the fatty matters into fatty acids and glycerin; these latter changes being effected by diastase, or by a diastatic ferment, probably derived from the nitrogenous substances of the seed, which themselves undergo complicated changes; but all these chemical phenomena are still imperfectly known.

G. of spores. Spores are asexual reproductive bodies found in the vascular Cryptogams and in Muscinæ; the structures often called spores in Thallogens are not all of the same nature, and will be found described under the other names which have been given them, such as *Zygospore*.

In Filicinae when a spore is placed in a position favourable for germination the first change is the formation of a new coat of cellulose im-

mediately on the outside of the protoplasm; shortly this external membrane is ruptured, and through the aperture the new coat develops into a short tube soon provided with chlorophyll and possessing transverse partitions; after a while it develops at its extremity, becomes more cellular, forms a triangular green layer, which has a notch on one edge so as to make it kidney-shaped, and is the prothallium. It becomes closely applied to the earth, and from its under surface arise a large number of absorbent hairs; behind the notch the cells increase in number, so as to form a sort of cushion, which sometimes, as in *Osmunda*, grows and forms a kind of median nerve. From the posterior and lateral region of the lower surface are developed the male organs, or antheridia, and at a later period are formed upon the cushion behind the notch the female organs, or archegonia.

In Equisetineæ, as described by Hofmeister, the spores possess a central globular nucleus and a yellow oleaginous fluid surrounded by four membranes, the outermost of which forms the elaters. When thrown on moist ground the cell-contents and the innermost membrane expand and rupture the other membranes, protruding in the form of a transparent process containing numerous chlorophyll granules. The nucleus quickly vanishes, and two new ones make their appearance, separated by a septum into two unequal cells, the larger and anterior containing all the chlorophyll granules, the smaller and posterior containing a finely granular hyaline substance; this cell forms the first radicular hairs of the growing prothallium.

Generally these rudimentary plants are dioecious. The male prothallia are the smaller, and bear the archegonia; the female are much the larger, are freely branching, and a little later than the males develop the antheridia on their last-formed offshoots.

In Muscinæ the endospore protrudes through a rupture of the exospore, in the form of a tube, which grows from its extremity and becomes divided by transverse septa; at each articulation is given off a septally divided tube like the first, which itself also branches several times, and therefrom results a confervoid mass of filaments called the protonema; those filaments which grow into the earth become brown in colour and serve for nutritive purposes, while those above the soil are green from abundance of chlorophyll. When the protonema becomes well developed there is observed on the lower cell of many of the branches the growth of a short tube, separated by a partition from the parent, from the terminal cell of which arises the new plant by a small tubercle, which at its base produces hairs that penetrate the soil and act as roots, and at its summit develops into a stem with leaves, becoming a sexual adult.

G., thalloid. (Θαλλός, a green leaf.) Richard's term for the form of generation in Cryptogams which occurs in the greater part of the Algae and in Ferns, where the spore gives origin to a prominence which becomes a pediculated, broad, flattened membranous organ called a *Thallus*.

Germinative. (*L. germino. F. germinatif; G. keimfähig.*) Having power to bud or sprout, or to develop.

G. faculty. The faculty, or power, or influence, which enables seeds to germinate.

Germ. France, Département des Hautes-

GERMULE—GEUM.

Pyrenées, between Lourdes and Bagnères de Bigorre. A cold sulphur spring, used in chronic disorders of the respiratory and urinary mucous membranes.

Germule. (Dim. of *L. germen*, a sprout.) A small germ.

Geroboscia. (Γεροβόσκια; from γήρας, old age; βόσκη, food. *G. Greisenahrung.*) The special and appropriate nourishment of the old.

Gerocomum. Same as *Gerocomium*.

Gerocomia. (Γήρας; κομέω, to care for. *F. gerocomie*; *G. Alterspflege.*) Term for that department of hygiene which treats of the regimen and medical attention proper for old age.

Gerocomicē. Same as *Gerocomia*.

Gerocomiūm. (Γήρας; κομέω.) A hospital for the old.

Geroldgrün. Germany, near Lobenstein. An earthy alkaline chalybeate.

Geromarasmus. (Γήρας, old age; μαρasmus, decay.) The extreme weakness and thinning of old persons.

Geronstere. Belgium. A chalybeate water near to *Spa*, which see.

Gerontatropy. (Γέρων, an old man; ἀτροφή, a pining away.) The extreme thinning which sometimes takes place in old age.

Gerontic. (Γερωντικός, relating to an old man.) Relating to old age.

Gerontoboscia. (Γέρων, an old man; βόσκη, food.) Same as *Geroboscia*.

Gerontocomicē. Same as *Gerocomia*.

Gerontocomiūm. (Γερωντοκομειον; from γέρων, an old man; κομέω, to care for.) A hospital for the aged.

Gerontogæous. (Γέρων, old; γαία, the earth.) Belonging to the old world.

Gerontophthalmia. (Γέρων, an old man; ὀφθαλμία, a disease of the eye.) The chronic conjunctivitis which occurs in the old.

Gerontopia. (Γέρων; ὦψ, the eye.) Linden's term for the weakness of sight of old people.

Gerontopityriasis. (Γέρων; πιτυρίασις, dandriff.) The pityriasis, or scurfy skin, of old persons.

Gerontopogon. (Γέρων, an aged man; πώγων, a beard.) Old man's beard. A name for a kind of *Tragopogon*, from the likeness presented by the downy seed enclosed in the calyx to a grey beard.

Gerontopogum. Same as *Gerontopogon*.

Gerontotoxon. See *Gerontoxon*.

Gerontoxon. (Γίρπον, an old man; τόξον, a bow. *G. Altersbogen, Greisenbogen.*) A synonym of *Arcus senilis*.

G. lentis. (*Lens*.) Ammon's term for the radiating streaks, or a turbidity, in the equatorial axis of the lens of middle-aged and elderly people; sometimes they remain stationary for a long time, but generally eventually increase into a cataract.

Geropityriasis. Same as *Gerontopityriasis*.

Geropogon. See *Gerontopogon*.

Gerotoxon. Same as *Gerontoxon*.

Gerotropheum. (Γέρων, an old man; τροφή, nourishment.) A hospital for the aged.

Gerotrophia. (Γέρων; τροφή.) Same as *Gerocomia*.

Ger'sa. (Arab.) Old term for *Cerussa*; also for *Fæcula*. (Ruland.)

G. serpentina. A term for the starch prepared from the *Arum maculatum*.

Ger'vais, St. See *Saint Gervais*.

Ger'yon. Old name, used by Libavius, *Synt. A. Ch.*, vii, 15, for hydrargyrum, or quicksilver.

Gesneraceæ. A Nat. Order of epipetalous, corollifloral Exogens of the Alliance *Bigonioides*; or a Family of the Order *Labiatifloræ*, Subclass *Sympetalæ*. Herbs with opposite leaves, unilocular ovary, parietal placenta, embryo with minute cotyledons, and a long radicle.

Gesner'eæ. A Suborder of the Nat. Order *Gesneraceæ*, having the fruit partially adherent to the calyx, and the seeds with a little albumen.

Ges'nerworts. The plants of the Nat. Order *Gesneraceæ*.

Ges'or. (Arab.) Old name for *Galbanum*.

Ges'ta. (L. plural of *gestum*, a deed; from *gero*, to bear.) A term of old, used in hygienic treatises to denote the different muscular actions and positions of the body resulting therefrom, which are capable of influencing, more or less directly, the health. *Gesta* were divided by Hallé into four orders: those of waking, sleeping, movement, and repose.

Gesta'tion. (L. *gestatio*; from *gero*, to bear, or carry.) Term for such species of exercise as may be enjoyed without any bodily exertion; as swinging in a hammock or chair, riding in a carriage, or sailing in a boat.

Also (L. *graviditas*; Gr. *κύσις*; F. *gestation*; I. *gestazione*; G. *Schwangerschaft, Trächtigkeit*), the condition of a woman when she is pregnant; gravidity. Same as *Pregnancy*.

G., ectopic. (Ἐκτοπος, away from a place.) Barnes's term for *Pregnancy, extrauterine*.

G., interstitial. See *Pregnancy, interstitial*.

G., intramu'ral. See *Pregnancy, intramural*.

G., pari'etal. See *Pregnancy, parietal*.

G., pe'riod of. The length of gestation in the human subject has not been accurately determined; it may be taken to be from 275 to 280 days. In the mare it is 350 days, in the cow, 280, in the sheep 150, in the dog 60; these periods being subject to variation.

G., protracted. See *Pregnancy, protracted*.

Gesticula'tion. (L. *gesticulatio*; from *gesticulator*, to make mimic gestures.) The act of making gestures to express a sentiment; or, as in some diseases, without, or contrary to, volition.

Ge'tah-laho'e. The vegetable wax of Ceylon, the product of *Ficus cerifera*.

Gethyllis. (Γηθυλλίς, dim. of γήθιον, a kind of leek.) A Genus of the Nat. Order *Amaryllidaceæ*.

G. spira'lis. (L. *spira*, a coil.) Hab. South Africa. Used in flatulence and colic.

Get'tana. A synonym of *Gutta percha*.

Get'tysburg. United States of America, State of Pennsylvania, Adams County. A mineral water near this place contains sodium, potassium, magnesium, lithium, calcium and iron bicarbonates, a small quantity of magnesium borate, and some sulphates, chlorides, and phosphates.

Ge'um. (F. *benoite*; I. *erba benedetta*; S. *cariofilate*; G. *Benedictenkrant, Nelkenwurz, Nelkenkraut*.) A Genus of the Nat. Order *Rosaceæ*.

Also, formerly, the name (U.S. Ph.) of the

GEUMA—GIBBUS.

rhizome, with the rootlets, of *Geum rivale*, or water avens. It contains a volatile oil, tannin, and a bitter principle. It is an astringent tonic, and is used in relaxation of, and increased secretion from, any of the mucous tracts; and also in rheumatism, scrofula, ague, and atonic menstrual troubles. Dose, 30 grains. It is not now official.

G. aleppicum, Jacq. The *G. canadense*.

G. canadense, Murray. Blood root. Hab. North America. A bitter astringent. Used in infantile diarrhœa.

G. caryophyllatum. (Καρυόφυλλον, the clove tree.) The *G. urbanum*.

G. chamaedrifo-lium, Crantz. (L. *chamædrys*, the wall germander; *folium*, a leaf.) The *Dryas octopetala*.

G. intermedium, Ehrh. (L. *inter*, between; *medius*, the middle.) An astringent.

G. montanum, Linn. (L. *montanus*, mountainous.) Pink root. Hab. European Alps. Used as *G. urbanum*.

G. nutans, Rafin. (L. *nutans*, nodding.) The *G. rivale*.

G. palustris. (L. *paluster*, marshy.) The *G. rivale*.

G. rivalis, Linn. (L. *rivalis*, belonging to a brook. F. *benoite aquatique*; G. *Sumpfnelkenkraut*.) Supplies *Geum*, formerly in U.S. Ph.

G. strictum, Ait. (L. *strictus*, close.) The *G. canadense*.

G. urbanum, Linn. (L. *urbanus*, cultivated, ornamental. F. *benoite officinale*; G. *Benedictenwurzel*, *Nelkenwurzel*.) The avens; also called bennet. Formerly official in the Dublin Ph., and used as a tonic and astringent in hæmorrhages, chronic dysentery, diarrhœa, and leucorrhœa. Dose, 5—1 drachm.

G. vernum. (L. *vernum*, relating to spring.) Used as *G. canadense*.

G. virginianum. Same as *G. canadense*.

Geuma. (Γεῦμα; from γέωω, to taste.) Food.

Geusiodysphoria. (Γεῦσις, the sense of taste; δυσφωρία, excessive pain.) The pain and suffering caused by sapid substances, when the mucous membrane of the mouth is inflamed.

Geusiosis. (Γεῦσις; νόσος, disease. G. *Geschmackskrankheiten*.) Diseases of the organs of taste.

Geusis. (Γεῦσις.) The sense of taste; the faculty of tasting.

Also, a term for the root of the tongue.

Geusterion. (Γευστήριον, a thing to taste with.) The part of the mouth where the sense of taste is located.

Geustica. (Γευστικός, for taste.) The things relating to the sense of taste.

Geustodysporia. Same as *Geusiodysphoria*.

Geustonusi. Same as *Geusiosis*.

Geuthmos. (Γεῦμός, the sense of taste.) Same as *Geusis*.

Gezir. A term for *Oporonax*.

Ghee. Same as *Ghi*.

Gherkin. (Shortened form from Du. *agurkje*, a small cucumber; the *a* is from Ar. *al*, the; the *je* is the Dut. dimin. suffix for which *ken* was formerly used; and the body of the word is from Pers. *khiyâr*, a cucumber.) A small cucumber; the young fruit of *Cucumis sativus*. Used in pickle as a condiment and an antiscorbutic.

Ghi. (Hind. *ghi*.) Butter made from buffalo's milk and clarified by boiling.

Ghit. Old term for gamboge.

G. gemo'co. An old term for gamboge.

G. jeco'mo. An old term for gamboge.

G. je'mou. An old term for gamboge.

Gialappa. Old spelling of *Jalapa*.

Giant. (F. *giant*; from L. acc. *gigantem*, from nom. *gigas*; from Gr. γίγας. I. *gigante*; S. *gigante*; G. *Riese*.) A person of unusual height. An adult living being which, without any defect of the essential characters of its kind, exceeds greatly the ordinary height of others of the same species.

G-celled sarco'ma. See *Sarcoma*, *giant-celled*.

G. cells. See *Cells*, *giant*.

G. fen'nel. The plants of the Genus *Ferula*.

G. puff-ball. The *Lycoperdon bovista*.

Giantism. (F. *giantisme*.) A condition of excess of development in which a young living thing precociously attains the size and appearance of adult life, but does not go on to surpass the average.

Gianuz'zi, crescents of. (*Gianuzzi*, a contemporary Italian physiologist.) Same as *Heidenhain, demilunes of*.

Gibar. (Arab.) Old term for a metallic medicine, or one containing any metallic substance. (Ruland and Johnson.)

Gibba. (L. *gibba*, from the root *gib*; softened from Gr. κυρ, or κυφ, root of κύπτω, to bend forward.) A hump, a hunch.

Gibber. (L. *gibber*, of same derivation as *gibba*.) A hump, a hunch.

In Botany, a pouch at the base of a corolla or other floral envelope.

Gibberos'ity. (L. *gibber*.) Same as *Gibbosity*.

Gibbes's tubercle stain. See *Tubercle stain*, *Gibbes's*.

Gibbiferous. (L. *gibbus*, a hump; *fero*, to bear. F. *gibbifere*.) Bearing a hump.

In Botany, applied to the throat of a corolla in which there are prominences like humps.

Gibbiform. (L. *gibbus*, a hump on the back; *forma*, likeness. F. *gibbiforme*.) Resembling a hump or swelling on the back. See *Gibba*.

Gibbose. Same as *Gibbous*.

Gibbositas. Same as *Gibbosity*.

G. cario'sa. (L. *cariosus*, decayed.) Hump-backedness from caries of the vertebrae.

Gibbosity. (L. *gibbosus*, hunchbacked. F. *gibbosité*; I. *gibbosita*; S. *gibosidad*; G. *Buckeligkeit*.) The state or condition of being gibbous or humped.

The word has been variously used; by some it is restricted to the projection caused by *Pott's disease*; by others it includes all deviations from the right line of the vertebral column, however caused.

G., an'gular. Angular curvature of the spine.

G. re'nis. (L. *ren*, the kidney.) The outer margin of the kidney.

Gibbous. (L. *gibbosus*; from *gibbus*. F. *gibbeux*; I. *gibboso*; S. *giboso*; G. *hockerig*.) Bunched out; bulged; crooked; hump-backed.

Gibbousness. Same as *Gibbosity*.

Gibbus. (L. *gibbus*, of same derivation as *gibba*. F. *bosse*; G. *Buckel*, *Hocker*.) A hump on the back, or a similar swelling on any other part of the body. See *Gibba*.

G. Pot'tii. (*Pott*, the English surgeon.) Angular curvature of the spine from caries of the vertebrae.

GIBLETS—GILL.

Giblets. (Old F. *gibilet*. F. *abatis d'oie*; G. *Gekröse*.) The internal parts or entrails of birds, especially those of the goose.

Gibum. (Arab.) Old name for cheese. (Ruland and Johnson.)

Gich. (Arab.) Alchemical name for gypsum. (Ruland and Johnson.)

Gid. (Contraction of *giddy*.) A term applied to the brain disease of sheep caused by the hydatid, *Cœnurus cerebralis*.

Giddiness. (*Giddy*.) Same as *Vertigo*.

G., galvanic. The giddiness produced by sending a continuous galvanic current of sufficient strength through the head, as from ear to ear; the inclination of the body is generally towards the side where the anode is applied. Some persons are more easily affected than others, those having locomotor ataxia being the most sensitive.

Giddy. (Sax. *gyddian*, to be merry.) Having the sensation of unsteadiness or of turning round.

Gien'gen. Germany, in Württemberg. An earthy mineral spring, 1450 feet above sea-level.

Giese'kia. A misspelling of *Gisekia*.

Giess'hübl. Germany, in Bohemia, not far from Carlsbad. An alkaline water, containing much free carbonic acid.

Giess'hübl-Fuch'stein. Same as *Giess'hübl*.

Giffæ. Old term, used by Bayrus, in *Enchirid. Practic.*, iv, 10, p. 118, for tumours behind the ears.

Gifo'la. A Genus of the Nat. Order *Compositæ*.

G. vulgaris, Cass. (*L. vulgaris*, common.) The *Filago germanica*.

Gigante'a. (*L. gigas*, a giant.) The *Helianthus tuberosus*.

Gigante'us. (Γίγαντιος, *gigantic*. G. *riesenhüft*.) Of large size.

Gigantic. (*L. gigas*, a giant.) Giant-like; of large size.

Gigantism. (*L. gigas*, a giant. F. *gigantisme*.) Same as *Giantism*.

Giganto'des. (Γίγας, a giant; εἶδος, likeness.) Like a giant; of large size.

Gigantos'traca. (Γίγας, a giant; στρακον, the hard shell of a tortoise.) A Group of the Class *Crustacea*, having a single pair of limbs in front of the mouth, deriving their nerve supply from the cerebral ganglion, and four or five other pairs situated around the mouth, having their basal joints transformed into a powerful jaw.

Gigarti'na, Ag. (Γίγαρτον, a grape stone.) A Genus of the Family *Gigartineæ*, Order *Florideæ*, Class *Carposporeæ*.

G. acicularis, Lamour. (*L. acicula*, a small pin.) A species sometimes found mixed with *Alsidium helminthochorton* in Corsican moss, collected on the Mediterranean coasts of France and Spain.

G. helminthochorton, Lamour. The *Alsidium helminthochorton*, Kütz.

G. lichenoides. The *Gracilaria lichenoides*.

G. mamillo'sa, Ag. (*L. mamilla*, a teat.) A species which is often found mixed with *Chondrus crispus* in Carrageen moss.

G. spino'sa. The *Eucheuma spinosa*.

Gigarum. (*L. gigas*, a giant; *arum*, the wake robin.) A Genus of the Nat. Order *Araceæ*.

G. serpenta'ria. (*L. serpens*, a snake.) The *Arum dracunculæ*.

Gigas. (*L. gigas*; from Gr. γίγας, a giant.) A giant.

Gigerium. (*L. gigeria*, the cooked entrails of poultry.) The *Gizzard*.

Gig'ger. A familiar name used in the West Indies for the larva of the *Sarcophylla penetrans*, or chigoe, of which it is probably a corruption.

Giglia. Italy, in Tuscany. A chalybeate spring.

Gigon'das. France, Département Vaucluse. A sulphur spring; also known as Montmirail.

Gigon'za. Spain, Province of Cadiz. A cold, earthy, sulphur spring.

Gilarum. A name for the *Thymus serpyllum*.

Gilcom'ston. Scotland, near Aberdeen. A mild chalybeate spring.

Gil'ead. A mountainous district of Syria eastward of the Jordan.

G., balm of. See *Balsam of Gilead*.

G., balm of, fir. The *Abies balsamea*.

G., balsam of. See *Balsam of Gilead*.

Gill. (A Scandinavian word; Dan. *gielle*; Sw. *gål*. Gr. βραγχία; *L. branchiæ*; F. *branchie*, *ouïe*; I. *branchie*; S. *branquias*; G. *Kieme*.) A term, with a hard pronunciation of the first letter, for the organ of respiration in water-breathing animals; consisting essentially of a loop of blood-vessels enclosed in a membranous expansion of the integument arranged for the purpose of exposing the blood to the aerating influence of water.

In Vermes many of the *Chætopoda* have external tufted gills attached to the dorsal parapoda, and others possess transformed tentacles serving this purpose.

In Arthropoda the *Crustacea* possess gills of a great variety of forms; in *Branchiopoda* they are attached as flat plates to the feet; in *Isopoda* the extremities of the abdominal limbs are transformed into two plates, the inner of which serves for respiration, the outer one for the protection of the inner; in *Amphipoda* they are pouches at the base of the thoracic limbs; in *Stomatopoda* they are plume-like, and attached to the abdominal or the thoracic limbs; in *Decapoda* they are attached to the ambulatory feet, and are enclosed in rows in a cavity formed at each side of the thorax by a fold of the tegument, through which a current of water is propelled; in the land crabs they are enclosed in an air-containing cavity, and approach to the characters of a lung.

In Arthropoda the *Lamellibranchiate Mollusca* possess lamellar gills placed on each side between the mantle and the foot, each lamella consisting of two layers of fringe-like ciliated filaments, either free or connected to each other by many horizontal bands; the respiration of the *Cephalophora* is sometimes solely cutaneous, but generally there are some small membranous gills either on the dorsal or lateral regions of the body, or under the mantle in a respiratory chamber; the *Cephalopoda* possess either two or four pyramidal, non-ciliated gills, situated in the mantle-cavity.

In Pisces the gills consist of fine filaments or delicate lamellæ, enclosed in a respiratory chamber, attached to the branchial arches, in a double parallel series, receiving their blood sup-

GILL.

ply from the aortic arches, returning it to the dorsal aorta, and covered with an extension of the oral mucous membrane. In *Leptocardii* the gills consist of leaf-shaped membranous folds in the atrial cavity, attached to the stiff rods which support the outer wall of the pharynx; between them are the slits for the admission of water from the pharynx, which escapes from the atrial cavity by the abdominal or atrial pore. In *Cyclostomi* the gills are a series of six or seven pouches without branchial arches, but with an outer cartilaginous framework or gill-basket, which is perforated by passages of exit for the water, and opens into the oesophagus by separate passages or by a common canal. In *Selachii* the gills consist of five branchial sacs on each side, supported on the lateral cartilaginous rings of the branchial arches; each has a separate opening on the sides of the cervical region in Sharks, on the ventral surface in Rays, and into a common gill-slit with a cutaneous operculum in *Chimaera*. In *Plagiostomus* *Selachii* the embryos bear external gills projecting from the slits of the branchial pouches. In *Ganoidei* the pectinated gills lie free in the branchial cavity, covered by an operculum or gill-cover, which in many genera bears on its inner surface an accessory respiratory gill. In *Teleostei* the gills are pectinated, usually four in number, lie free in a branchial cavity, and are covered by a gill-bearing operculum, with branchiostegal rays supporting a branchiostegal membrane; the opercular gill is not a respiratory organ, and is called the pseudobranch. In the *Dipnoi* the gills are four in number, or fewer, in a branchial cavity opening by a gill-slit in front of the anterior fin; some have for a great part of their life external gills, and, in all, the sacs representing the swim-bladder act as lungs.

In *Amphibia* gills as well as lungs are present. In many the gills atrophy after the larval period; in some they persist during the whole of life. Generally there are three or four pairs, which may be contained in a cavity covered by a fold of the skin and opening externally, or they may consist of branched or tufted cutaneous appendages carried on the outside of the body.

In Botany, the term is applied to each of the radiating vertical plates on the under surface of the pileus of fungi.

Also (Mid. E. *gille*, *gylle*; Old F. *gelle*, a measure for wine), with a soft pronunciation of the first letter, a measure of liquids containing one fourth part of a pint; in many districts a gill is half a pint.

Also, a name for the *Glechoma hederacea*.

G. arches. (F. *ares branchiaux*; G. *Kiemenbogen*.) The cartilaginous or bony rods forming a kind of framework in fishes, to which the gills are attached. In *Teleostei* there are usually four such arches.

G. artery. (G. *Kiemengefäss*.) The artery which, given off from the aorta, travels along the base of each gill in fishes and breaks up into capillaries, by means of which the blood is exposed to the water and undergoes oxidation. There are in the embryo usually five such vascular hoops, which become reduced to four in the adult by the atrophy or modification of the fifth arch.

G. basket. The cartilaginous framework forming the outer protection of the gills of the Lamprey and its allies.

G.s, biserial. (L. *bis*, twice; *series*, a

row.) The arrangement generally found in fishes, in which each branchial arch supports two series of gill plates.

G. cavity. (F. *sac* or *poehe branchial*; G. *Kiemenraum*, *Kiemenhöhle*.) The chamber in which the gill is contained. In the *Myxini* each gill has its own cavity, but in the *Teleostei* and many other groups of fishes the gills are contained in a cavity common to all.

G. cover. (G. *Kiemendeckel*.) The series of bones which, in most *Teleostei* and many *Ganoidei*, cover and protect the cavity containing the gills. They usually consist of the preoperculum, the operculum, the suboperculum, and the interoperculum. They are sometimes covered with so thin a membrane that the bones may be easily distinguished; at others they are hidden by a thick integument. In *Siluridae* the interoperculum is rudimentary or absent.

G.s, dermic. (Δέρμα, the skin.) A term applied to certain caecal appendages of the body of some *Echinodermata* which communicate with the body-cavity, and are supposed to be respiratory organs.

G.s, external. (L. *externus*, external.) Gills which depend from the outer surface of the body. In *Selachian* embryos the filaments of the internal gills which protrude through the branchial cleft.

In the young of *Polypterus* tegumentary processes serving as respiratory organs.

In *Amphibia* they are also tegumentary processes, and appear in the form of two or three pairs of branched processes, which spring from as many branchial arches. In the *Perennibranchiata* these are permanent; in the *Caducibranchiata* they disappear.

G.s, fixed. (F. *branchies fixes*.) Cuvier's term for the condition of the gills of *Cyclostomi* and *Selachii*, in which each supporting septum of the two branchial mucous surfaces, anterior and posterior, is attached to the pharyngeal and dermal integuments by its entire peripheral margin, and the streams of water flow out by as many fissures in the skin as those by which they enter from the pharynx.

G. flap. Same as *G. cover*.

G.s, free. The condition of the gills found in *Teleostei*, *Plectognathi*, *Lophobranchii*, *Ganoidei*, and *Holocephali*. The outer border of the supporting branchial arch is unattached to the skin and plays freely backward and forward, with its gill surfaces in a common gill cavity, which has a single outlet, usually vertical in direction.

G. go-by-ground. The *Glechoma hederacea*.

G.s, half. (G. *halbe Kiemen*.) The same as *G.s, uniserial*.

G.s, internal. (L. *internus*, internal.) Gills which are enclosed in a branchial cavity. Short membranous processes which in the anurous *Amphibia* replace the external gills.

Also, a term improperly applied to the vesicular expansions in the ambulacral tubes of *Echinodermata*.

G. lamellæ. (L. *lamella*, a thin plate. F. *lamelles branchiaux*, *feuilles branchiaux*.) Same as *G. plates*.

G. leaflets. (G. *Kiemenblättchen*.) The delicate layer of connective tissue supported, in some fishes, by a plate or rod of cartilage, on which the gill arteries ramify. The *G. plates*.

GILLA—GIMEAUX.

G. lid. Same as *G. cover*.

G. opening, external. (*L. externus*, external.) The aperture by which the water escapes from the gill cavity of fishes. In the Myxini the outlets of the six lateral branchial sacs open by short tubes into a longitudinal canal, which, directed backwards, opens by an orifice near the middle line of the ventral surface. In *Bdellostoma* and Lampreys there are some stigmata on each side. In all higher fishes, with the exception of Plagiostomi, the external gill opening is single on each side.

G. opening, internal. (*L. internus*, internal.) The aperture by which the water enters from the pharynx into the gill cavity in fishes. In the Myxini between the two outlets of the lateral longitudinal canals which carry away the water which has traversed the gill cavities there is a third larger opening, which communicates by a short duct with the end of the oesophagus and admits the water which passes from that tube by the orifices leading into the branchial sacs. In the higher groups of fishes the inlets to the branchial interspaces are situated on each side of the fauces, and are equal in number to the interspaces.

G., opercular. (*L. operculum*, a little lid. *F. branchie operculaire*.) A gill met with in many fishes which is not attached to a proper branchial arch but to the inner surface of the operculum.

G. plates. (*G. Kiemenplatte*.) Delicate vascular lamellæ by means of which the aeration of the blood is effected in fishes. They are supported on a framework. Water is driven over their surface, which presents capillaries intermediate to an artery and a vein. The number of plates on one process is estimated at 55 in the gudgeon, 135 in the carp, 700 in the eel, 1000 in the cod, 1400 in the salmon, 1600 in the sturgeon. It may be reduced to 3, as in *Lophius*, *Diodon*, and *Tetrodon*, or even to one, as in *Amphipnous*.

G. sac. (*G. Kiemensäck*.) The flattened cavities, each having a separate internal and external orifice containing the gill, in the Myxine.

G.s, tracheal. (*L. trachea*, the wind-pipe.) A term applied to the modifications of the tracheal vessels of the larva of aquatic insects which adapts them for water-breathing purposes. The stigmata are replaced by foliaceous, filiform, or branched appendages traversed by fine tracheal tubes. They vary much in form and position, being foliaceous in form and ventral in position in the Ephemeridæ, filiform and confined to the four first abdominal segments in the Phryganidæ, and confined to the posterior segments in the Sialidæ.

G.s, uniserial. (*L. unus*, one; *series*, a row.) Term applied to the gills of some osseous fishes in which certain of the branchial arches support only one series of gill plates.

G. vein. (*G. Kiemenvene*.) The vessel situated at the base of each gill which returns the blood after it has been aerated to the dorsal aorta in fishes.

G.s, whole. The same as *G.s, biserial*.

Gilla. An Arabic word for salt, but applied to vitriol spontaneously resolved into water. (Ruland and Johnson.) It is the magnetic salt of vitriol, white vitriol, or sulphate of zinc, according to Frid. Hofmannus, in *Clav. ad Schr.*, i, 3, p. 4.

G. theophrasti. Old term for white

vitriol, dissolved in water, filtered, again evaporated and dried, according to Junken, *Lex*.

G. vitrioli. An old term for sulphate of zinc.

Gillenïa. A Genus of the Nat. Order *Rosaceæ*.

G. stipulacea, Nutt. (*L. stipula*, a stalk.) Small-flowered Indian physic. Rhizome and rootlets formerly official in the U.S. Ph., and used as a mild emetic.

G. trifoliata, Mönch. (*L. tres*, three; *folium*, a leaf.) Indian physic. Rhizome and rootlets formerly official in the U.S. Ph., and used as a mild emetic.

Gillenin. The bitter principle of the species of *Gillenïa*; it produces nausea and vomiting.

Gilliesiaceæ. A Nat. Order of hypogynous, petaloid Monocotyledons of the Alliance *Liliales*. Small bulbous plants with grass-like leaves and small perianth, surrounded by a whorl of six or eight petaloid leaves.

Gilliesiads. The plants of the Nat. Order *Gilliesiaceæ*.

Gilliflower. See *Gillyflower*.

Gillur-ka-putta. A local remedy in India for goitre; probably furnished by *Laminaria saccharina*.

Gillyflower. (*F. giroflée*; from Low *L. caryophyllum*; from Gr. *καρόφυλλον*, a clove tree.) A name given to certain plants, especially the *Dianthus caryophyllus*.

G., clove. The *Dianthus caryophyllus*.

G., marsh. The *Lychnis flos cuculi*.

G., queen's. The *Hesperis matronalis*.

G., rogue's. The *Hesperis matronalis*.

G., stock. The *Mathiola incana*.

G., wall. The *Cheiranthus cheiri*.

Gillyvor. Same as *Gillyflower*.

Gilsland. England, County Cumberland, near Carlisle. Here are a sulphur spring and an iron spring. Used in dyspepsia, chronic rheumatism, and skin diseases.

Gilvor. (*L. gilvus*, pale yellow.) The yellow earthy colour of skin which is seen in many cachexias and dyscrasias.

Gilvous. (*L. gilvus*, pale yellow.) A dullish reddish yellow.

Gilvus. (Arab.) Old name for a pale, dull red colour. (Ruland and Johnson.)

Gimbal. (A corruption of *E. gimmal*; from Old *F. gemeau*, a twin; from *L. gemellus*, a twin.) A contrivance for suspending a thing in such a manner that it shall keep its equilibrium; as the two rings, one moving within the other about two axes which are at right angles to each other, which are used for the suspension of the compass on board ship.

Gimbernât, Don Antõnio de. A Spanish surgeon of the end of the eighteenth century. He was a professor at Barcelona from 1762 to 1774, and afterwards lived in Madrid.

G's collyrium. See *Collyrium, Gimbernât's*.

G's ligament. The thin, triangular layer of ligamentous structure forming the deeper fibres of the median attachment of Poupart's ligament attached for .75" along the inner part of the ileo-pectineal line. Its external margin is concave, and forms the inner boundary of the femoral ring. Some of its fibres assist in forming the triangular fascia.

Gimeaux. France, Département du Puy-de-Dôme. Mineral waters, containing a

GIN—GINGLYMUS.

little calcium and other carbonates and much free carbonic acid with traces of sodium iodide, and arseniate. There are five springs, some of which are cold, and one has a temperature of 25° C. (77° F.)

GIN. (A contraction of *geneva*; a corruption of Old F. *genevre*, juniper; from L. *juniperus*, juniper, with the berries of which gin is flavoured.) A spirit distilled from a mixture of malt and barley; molasses and maize are also sometimes employed. In Holland a mixture of rye and malt is used; it is distilled with juniper berries, and often flavoured with some aromatic substance, such as coriander seeds, caraway seeds, cardamoms, grains of paradise, angelica root, calamus aromaticus, almond cake, liquorice, cinnamon, orange peel, and other matters. In addition, gin is adulterated with water, sulphuric acid, capsicum, sulphate of zinc, acetate of lead, and alum.

G. drinker's liver. A term applied to atrophic cirrhosis of the liver from its frequent cause.

G. liver. Same as *G. drinker's liver*.

Gingeli oil. Same as *Gingelli oil*.

Gingelli oil. The oil of *Sesamum indicum*.

Gingelly oil. Same as *Gingelli oil*.

Ginger. (Old F. *gingibre*; L. *zingiber*; Gr. ζγγίβερις; Sansk. *crīṅgavera*, from *crīṅga*, horn; *vera*, shape; so called from its likeness to the antler of a deer. F. *gingembre*; I. *zenzero*; S. *gingibre*; G. *Inqwer*.) The rhizome of *Zingiber officinale*. See *Zingiber*, B. Ph.

G., adulterations of. Powdered ginger has been adulterated with sago meal, tapioca, potato starch, wheat flour, ground rice, cayenne powder, mustard husks, and turmeric.

G., Barba'does. Same as *G., black*.

G., Ben'gal. Same as *G., grey*.

G., black. The scalded unscraped rhizome of *Zingiber officinale*.

G., broad-leaved. The rhizome of *Curcuma zerumbet*.

G., Chi'nese. Generally occurs only preserved in sugar.

G., es'sence of. The *Tinctura zingiberis fortior*.

G., fluid extract of. See *Extractum zingiberis fluidum*, U.S. Ph.

G., garden. The *Capsicum annum*.

G., grass. The *Andropogon Martini*.

G., grey. The scalded unscraped root of *Zingiber officinale* from India. The bark is yellowish.

G., Indian. The *Asarum canadense*.

G., Jama'ca. The *Zingiber officinale*.

G., mango. The rhizome of *Curcuma amada*.

G., oleoresin of. See *Oleoresina zingiberis*, U.S. Ph.

G., syr'up of. See *Syrupus zingiberis*, B. Ph.

G., tincture of. See *Tinctura zingiberis*, B. Ph.

G., tincture of, strong. The *Tinctura zingiberis fortior*.

G., tro'ches of. See *Trochisci zingiberis*, U.S. Ph.

G., white. (F. *gingembre blanc*.) The scalded, scraped, and dried rhizome of *Zingiber officinale*. It is often artificially bleached with sulphurous acid or the hypochlorites.

G., wild. The root of *Asarum canadense*.

Gingerbread tree. The *Hyphane thebaica*, from the flavour of the pericarp of its fruit.

Gingerin. A liquid oleo-resin obtained from the root of *Zingiber officinale*. Used as an addition to purgative pills to prevent griping.

Gingerol. A straw-yellow, pungent, bitter, syrupy substance obtained by Thresh from Jamaica ginger. It is soluble in alcohol.

Gingerworts. The plants of the Nat. Order *Zingiberaceae*.

Gingibra'chium. (L. *gingivæ*, the gums; *brachium*, the arm.) Old name, used by a certain Regnerus Snoyf, a physician of great erudition and extensive practice, according to Forestus, in *Schol.*, l. xx, 11, for scorbutus, or the scurvy, when it affects both the gums and arms.

Gingid'ium. (Γγγιδιον.) Old name, used by Dioscorides, for an edible species of the carrot, probably the *Daucus gingidium*.

Gingihil. Old term for *Zingiber*. (Quincy.)

Gingil'i oil. The oil of *Sesamum indicum*. Same as *Gingelli oil*.

Gingiped'ium. (L. *gingivæ*, the gums; *pes*, a foot.) A term, by Regnerus Snoyf, for scorbutus, when it affects both the gums and lower extremities. See also *Gingibrachium*.

Gingi'va. (L. *gingiva*, a gum. F. *gencive*; I. *gingiva*; S. *encia*; G. *Zahnfleisch*.) The highly vascular, fleshy substance covering the alveoli of the upper and lower jaws, and the necks of the teeth; the gum.

G. cærulea. (L. *cæruleus*, dark blue.) The blue line which is frequently to be seen at the free margins of the gum in cases of chronic lead poisoning, first described by Burton.

Gingi'væ. (L. *gingiva*.) The gums.

Gingi'val. (L. *gingiva*.) Relating to the gums.

G. line. The red line at the free edge of the gums seen in phthisical persons.

Gingiv'itis. (L. *gingiva*. F. *gingivite*; I. *gingivite*; S. *gingibitis*; G. *Zahnfleischentzündung*.) Inflammation of the gums, which become swollen and spongy; they bleed easily and frequently ulcerate, especially at the free border.

G., expul'sive. (L. *expello*, to drive out.) A form in which the inflammation spreads from the gum to the sockets of one or more teeth, and produces there such changes as to destroy and gradually to push out the tooth.

G. parenchymato'sa. (Παρίγχυμα, anything poured in beside.) The form of inflammation of the gums in which there is much infiltration of the submucous tissue.

Gingiv'ula. (L. dim. of *gingiva*.) The gums.

Ging'ko. A Genus of the Nat. Order *Coniferae*.

G. biloba. Linn. (L. *bis*, twice; *lobus*, a lobe.) The *Salisburia adiantifolia*.

Gingko'sic acid. C₂₄H₄₈O₂. A yellow fatty acid obtained by Schwarzenbach from the fruit of the gingko, *Salisburia adiantifolia*.

Ginglymoid. (Γγγλυμός, a hinge; εἶδος, likeness. F. *ginglymoïde*; G. *ginglymusformig*, *thürangelartig*.) Resembling a hinge, or ginglymus; hinge-like.

G. joint. A hinge-like joint. See *Ginglymus*.

Ginglymus. (Γγγλυμός, a hinge. F.

GINKLOSE—GIRDLE.

ginglyme; I. *ginglimo*; S. *ginglimo*; G. *Gewerbgelenk*, *Winkelgelenk*, *Scharniergelenk*.) A diarthrodial joint having some likeness to a hinge, in that its motion is only in two directions, as the elbow-joint.

G., angular. (L. *angulus*, an angle.) The articulation described under the chief heading.

G., lateral. (L. *lateralis*, belonging to the side.) A pivot-joint or trochoid articulation, as in the upper radio-ulnar articulation.

A synonym of *Diarthrosis rotatorius*.

G., trochoid. See *Trochoid articulation*.

Ginklose. A tetanic disease common among the new-born in Iceland.

Ginols. France, Département de l'Aude. Weak indifferent waters, of a temperature of 30° C. (86° F.), one spring containing calcium bicarbonate .15 and magnesium sulphate .3 parts in 1000; another spring contains calcium bicarbonate .26 and magnesium sulphate .18 in 1000 parts. The waters are mildly laxative, diuretic, and tonic.

Ginoria. A Genus of the Nat. Order *Lythraceæ*.

G. americana, Jacq. Hab. West Indies. Juice diaphoretic and diuretic. Used in syphilis.

G. syphilitica, Moc. The *Nesaea syphilitica*, H. B. K.

Ginseng. (According to Abel de Rémusat the true name is *Jiin-chen*, from *jîn*, a man; *chen*, triple; and signified that this wonderful plant made three with man and heaven.) The small fusiform root of the *Panax quinquefolium*. It possesses an aromatic odour, and is used in China and Japan as a febrifuge and as a cure for many diseases.

G., Asiatic. The *Panax schinseng*.

G., blue. The *Caulophyllum thalictroides*.

G., Chinese. The *Panax schinseng*.

G., horse. The *Triosteum perfoliatum*.

G. of Canada. The root of *Panax quinquefolium*.

G., white. The *Triosteum perfoliatum*.

G., yellow. The *Caulophyllum thalictroides*.

Gipsophila. See *Gypsophila*.

Gipsywort. The *Lycopus europæus*.

Gir. (Arab.) Old name for quicklime; also called *Git* and *Gith*. (Ruland.)

Giral'des, Cardozo Caza'do Joachim Albin. A French surgeon of Portuguese extraction, born at Gênes in 1808, died in Paris in 1875.

G., innominate body of. (L. *innominatus*, unnamed.) Same as **G., organ of**.

G., organ of. The three or more small, irregular masses situated in front of the spermatic cord, just above the head of the epididymis. They consist of convoluted tubules lined with columnar ciliated epithelium, and are persistent Wolffian tubules. Similar tubular remnants are also seen occasionally in the broad ligament of the female on the uterine side of the parovarium.

Also, called *Parepididymis*.

Giraumont. The seeds of the pumpkin, *Cucurbita pepo*.

Girdle. (Sax. *gyrdel*. F. *ceinture*; I. *cintura*, *cintola*; S. *cingulo*; G. *Leibband*.) A band for the waist. See also *Cingulum*.

G. bone. (F. *os en ceinture*; G. *Gürtelbein*.) A bone of the head of some Amphibia which was so called by Cuvier in consequence of its annular form; it is called by Parker the *Sphenethmoid bone*.

G., mercurial. See *Cingulum mercuriale*.

G., pelvic. (L. *pelvis*, a basin, the pelvis.) The support for the lower limbs in Vertebrata. Primarily, in Pisces, it is a single piece of cartilage, which in Selachii is expanded dorsally. In Ganoidei and Teleostei the cartilage undergoes ossification, and is divided into two lateral halves united in the middle line. Their position varies considerably being sometimes so far forwards as to be united with the shoulder girdle.

In Amphibia the pelvis is composed of two bones, which are connected proximally with the vertebral column. Distally they are divided into two pieces, a dorsal, which is the representative of the ilium, and a ventral, the ischiopubic bone of Urodela, which joins with its fellow below in the middle line, and probably represents only the ischium. In the Anura the ilia are long and slender, and coalesce with the ischiopubic bones, which are converted into a vertical disc and fused with each other.

In the Reptilia the ilium is greatly developed, and is connected with the sacrum behind the acetabulum. There is an os pubis and an ischium, which are more or less connected in the middle line.

In Aves the ilium also extends far backwards and forwards, and is connected with many vertebrae. The ischium runs backwards from the incomplete acetabulum. The ossa pubis are slender, directed backwards, and in Struthio form a symphysis.

In Mammals there are three bones, the ilium, the ischium, and the os pubis. The primitive connection of the pelvis with the sacrum is always in front of the acetabulum. The ilium is directed obliquely backwards. The ventral portion of the pelvis encloses an obturator foramen, and forms a symphysis. In the Monotremata and Marsupialia there are two bones in front of the pubes, which are named marsupial bones, since they support the pouch.

G. sensation. The feeling of having a string or a broad band tied round the body or one of the limbs. It is a not uncommon sensation in many diseases of the spinal cord, especially those which are confined to a short tract, and irritate without compressing or destroying the posterior nerves or their grey matter. It is a not infrequent accompaniment of caries of the vertebrae.

G., shoulder. (F. *ceinture de l'épaule*; G. *Schultergürtel*.) The support for the upper limbs in Vertebrata. Of Pisces the lowest or suctorial fishes have none. In the Placoid fishes the shoulder girdle consists of large supra-scapulae completely segmented off from the scapulae. In the Ganoïd fishes the true shoulder girdle is entirely unossified, but in such an example as the Sturgeon there is a supra-scapula and a coraco-scapular mass. Siluroïd Teleostei, like Callichthys, possess a supraclavicle, a clavicle, an interclavicle, and a postclavicle, a scapula, a præcoracoid, and a coracoid, more or less coalesced. In Acanthoptera, as the Morrhuæ, there are a supraclavicle, postclavicle, clavicle, scapula, coracoid, præcoracoid, and mesocoracoid.

Amongst anourous Amphibia the toad possesses a suprascapula, scapula, præcoracoid, and coracoid, all of which are ossified; the sternum is cartilaginous. The frog has, in addition, an ossified omosternum and a sternum. In lizards, as in *Trachydosaurus*, there is a suprascapula, scapula, mesoscapula or acromion, coracoid, epicoracoid, præcoracoid, interclavicle, clavicle, and sternum.

In *Chelonia* each moiety of the shoulder girdle is a bifurcated rod, the hinder fork only having a separate ossification from the main bone. The endoskeletal part of the thorax is open below. Clavicles and interclavicle forming the three anterior plates of a thoracic-abdominal (dermal) shield, which is composed altogether of nine bones.

In Aves the sternum is highly developed and divisible into a præsternal, a mesosternal, and a xiphisternal region, and laterally there may be patches of bone known as the lophosteon, coracosteon, urosteon, and pleurosteon. The clavicles are united to form a furculum.

In the lower Mammalia, as the Monotremata, there is no perfect segmentation of the shoulder girdle. In the higher Mammalia, as the Carnivora, there is a sternum, clavicle, and scapula.

Gir'kin. Same as *Gherkin*.

Gir'mer. (Arab.) Old term for tartar. (Ruland and Johnson.)

Gisekë, Paul Dietrich. A German physician, born at Hamburg in 1745, and died there in 1796.

Gisekia. (*Giseke, Paul Dietrich.*) A Genus of the Nat. Order *Phytolaccaceæ*.

G. pharnaceoides, Linn. (*Φαρμακείον*, a plant, probably a panax; *είδος*, likeness.) Hab. India. A taniacide.

G'isi. Switzerland, Canton Unterwalden. An alkaline spring.

Gis'isim. (Arab.) Old term for gummi, or gum. (Ruland and Johnson.)

G'it. Same as *Gith*. Also, see *Gir*.

Gith. (Arab.) Old term for quicksilver. (Ruland.)

Old name for a species of *Nigella*, or of *Melanthium*, or of *Piper*, according to Rhodius, *ad Scribon.*, n. 60.

Also (Eng. provincial), the corn-cockle, *Githago segetum*.

Githagin. A substance obtained by Scharling from the *Githago segetum*. It is analogous to saponin.

Githago. (E. *gith*, the corn-cockle.) A Genus of the Nat. Order *Caryophyllaceæ*.

G. segetum, Desf. (L. *seges*, a corn-field. F. *mielle des blés*, *coquelourd des blés*; G. *Kornrade*.) The corn-cockle. Roots vulnerary and astringent; seeds purgative. When they occur in large quantity in wheat and are ground up with it they are said to render bread made from the flour poisonous.

Gitta'go. Same as *Githago*.

Giuliano, San. See *San Giuliano*.

Giunco marino. Italy, in Tuscany. An alkaline chalybeate water, containing sodium carbonate 8 grains, sodium chloride 5, and iron oxide one grain, in 25 ounces.

Giuseppe, St. See *St. Giuseppe*.

Giz'ard. (Old F. *gezier*; from L. *gigeria*, the cooked entrails of poultry. F. *gésier*; G. *Fleischmagen*.) The proper stomach of birds.

Also, applied to the thickened, and sometimes tooth-bearing, stomach of some *Ctenostomata*.

Glabella. (L. *glabellus*, dim. of *glaber*, smooth, without hair. F. *glabelle*; G. *Stirnglatze*.) A term for the small space between the eyebrows and immediately above a line from one to the other.

Also, the smooth median portion of the cephalic shield of a Trilobite.

G. coccyge'a. (L. *coccyx*, the bone of that name.) A smooth, hairless spot of skin over the end of the coccyx, in which the foveola coccygea lies, which is perhaps the point of closure of the sacral canal.

Glabellad. A term applied by Dr. Barclay, the same as *Glabellar*, used adverbially.

Glabellar. Of, or belonging to, the *Glabella*.

Glabello-occipital. (L. *glabellus*, without hair; *occiput*, the back part of the head.) Relating to the glabella and the occiput.

G. line. A line drawn through the cranium from the glabella to the external occipital protuberance.

G. plane. The horizontal plane of the cranium through the *G. line*.

Glabbellum. Same as *Glabella*.

Glab'rate. (L. *glaber*, smooth.) Somewhat, or becoming, *Glabbrous*.

Glabre'ity. (F. *glabréité*; from L. *glabritas*, baldness. G. *Glattheit*.) The condition of a surface which has no hairs.

Glab'risim. (L. *glaber*, smooth.) In Teratology, the state of a part which is born smooth when naturally it should have been hairy.

Glabrit'ies. (L. *glaber*. G. *Kahlsein*.) Baldness.

Glabrius'culous. (L. dim. of *glaber*, smooth.) Less hairy than natural but not quite bald; possessing few, short, and fine hairs.

Glab'rous. (L. *glaber*, smooth; akin to Gr. *γλαφυρός*, hollowed, smoothed. F. *glabre*; I. *glabro*; G. *glatt*.) Smooth.

In Botany (G. *unbehaart*), having no hairs or down, and so, with a smooth surface.

G. hone wort. The *Trinia vulgaris*.

G.rup'ture wort. The *Herniaria glabra*.

Glab'ula. Same as *Galbula*.

Glab'cial. (F. *glacial*; from L. *glacialis*, icy; from *glacies*, ice. G. *eisig*, *eiskalt*.) Icy; frozen; having the appearance of ice.

G. ac'e'tic acid. $C_2H_4O_2$. Pure acetic acid free from water, in large, transparent, glistening, tabular crystals, which melt at $16.7^{\circ}C$. ($62.06^{\circ}F$.) The *Acidum aceticum glaciale*, B. Ph.

G. hu'mour. (L. *humor*, a liquid.) The crystalline lens of the eye.

G. phosphor'ic ac'id. HPO_3 . A term applied to commercial metaphosphoric acid. It usually contains some soda.

G. sulphur'ic ac'id. H_2SO_4 . Pure anhydrous sulphuric acid in the crystalline form.

Glacia'tion. (L. *glacies*.) The act or process of freezing, or of assuming a state or condition resembling ice.

Gla'cier. (F. *glacier*; from *glace*, ice; from L. *glacies*, ice. I. *ghiacciajo*; S. *ventisqueros*; G. *Gletscher*.) An accumulation of ice in a valley or hollow of the land, formed from the snow of higher regions.

Gla'cies. (L. *glacies*. F. *glace*; I. *ghiaccio*; S. *hielo*; G. *Eis*.) Ice, or an ice-like substance.

GLACIFICATION—GLAND.

G. mar'iae. An old name of *Selenite*.
Glacifica'tion. (L. *glacies*; *facio*, to make.) The production of, or conversion into, ice.

Gla'cious. (L. *glacies*.) Like to ice; of the coldness of ice.

Glad'don. Same as *Gladwyn*.

Gla'den. Same as *Gladwyn*.

Gla'der. Same as *Gladwyn*.

Glad'iate. (L. *gladius*, a sword. F. *gladié*; I. *gladiate*; S. *gladiato*; G. *schwertformig*.) Of, or belonging to, a sword; sword-like.

Glad'iole, wa'ter. (L. *gladiolus*, a small sword.) The *Butomus umbellatus*.

Glad'iolus. (L. *gladiolus*, a small sword; dim. of *gladius*, a sword, from the shape of its leaves. F. *glai'eul*; G. *Schwertel*, *Siegwurz*.) A Genus of the Nat. Order *Iridaceae*.

Also, in Anatomy, a term for the second piece or body of the sternum.

G. cæru'leus. (L. *cæruleus*, sky blue.) The *Iris germanica*.

G. commu'nis. Linn. (L. *communis*. common. F. *glai'eul commun*; G. *Siegwurz*.) The corn flag. Hab. South Europe. Root said to be aphrodisiac, purgative, and emetic. Bruised bulbs applied to scrofulous tumours.

G. fœ'tidus. The *Iris fœtidissima*.

G. luteus. (L. *luteus*, yellow. F. *iris flambe*; G. *Wasserschwertlilie*.) The *Iris pseudacorus*, or yellow water-flag.

G. palus'ter. Gand. Formerly official as *Radix Victorialis rotunde*.

G. plica'tus. Linn. (L. *plicatus*, folded.) Hab. Cape of Good Hope. Bulbs eaten as food.

G. seg'etum. Linn. (L. *seges*, a corn-field. F. *glai'eul des moissons*.) Used as *G. communis*.

G. ster'ni. (L. *sternum*, the breast-bone.) The central part or body of the sternum.

G. vulga'ris. (L. *vulgaris*, common.) The *G. communis*.

Glad'ius. (L. *gladius*, the sword.) A sword. A term for the penis.

Also, the horny endoskeleton or pen of cuttle-fishes.

G. pistorien'sis. (L. *pistoriensis*, belonging to Pistorium, now Pistoia, a city of Etruria when Catiline fell.) A Pistorian sword, or bistoury.

Glad'wine. Same as *Gladwyn*.

Glad'wyn. The *Iris fœtidissima*.

G., stink'ing. The *Iris fœtidissima*.

Glaeopel'tis. See *Gloiopeltis*.

Glag'os. (Γάγος, milk.) Old name for milk.

Gla'iadin. Same as *Gliadin*.

Glaine-Mont'aigut. France, Département du Puy-de-Dôme. Two mineral springs rise here, containing a small quantity of iron and much free carbonic acid. Used especially in gastric troubles associated with anæmia and chlorosis.

Glair. (F. *glaire*, slime; from Low L. *clara ovi*, white of egg.) Old term for albumen or white of egg, or any substance of like nature.

Glair'idin. Same as *Glairine*.

Glairig'enous. (F. *glaire*, slime; Gr. γέννω, to produce.) Producing slime or mucus, or *Glairine*.

G. mat'ter. A synonym of *Glairine*.

Glair'ine. (F. *glaire*; I. *glairina*; S. *glarina*; G. *Glarein*.) A synonym of *Baregine*.

Glair'y. (*Glair*.) Slimy, like white of egg.

Glaish'er, James. An English physicist of the present century.

G.'s fac'tors. (L. *factor*, a maker.) A series of numbers by which the dew point at definite temperatures may be empirically deduced. The difference between the registered temperatures of the dry- and wet-bulb thermometers is multiplied by the factor which stands opposite the dry-bulb temperature in the following table, the product is deducted from the dry-bulb temperature, and the difference is the dew point.

Dry bulb temp. F. degree.	Factor.	Dry bulb temp. F. degree.	Factor.
10	8.78	56	1.94
11	8.78	57	1.92
12	8.78	58	1.90
13	8.77	59	1.89
14	8.76	60	1.88
15	8.75	61	1.87
16	8.70	62	1.86

55	1.96		

Gla'ma. Old term, used by Foësius, *Econ.*, p. 136, for *Lippitudo*; also for the sordes of the eyes; also called *Gramia*.

Glance. (Probably of Scand. origin; Old Sw. *glans*, splendour.) A swift gleam of light; a hasty look.

A name applied to minerals which have a metal-like lustre, as antimony glance.

Gland. (Old F. *gland*; from L. *glans*; from Gr. βάλανος, an acorn; from βάλλω, to cast. I. *glandula*, *ghiandole*; S. *glandula*; G.

GLAND.

Drüse.) In Biology, an organ whose function it is to separate from the blood some substance which may serve a useful purpose in the animal economy, or which may be of no further use, and be ejected from the body.

A secreting gland consists essentially of nucleated cells, generally resting upon a basement membrane, on the other side of which lie the capillary blood-vessels; this folded into a sac-like form is a simple gland. By projecting folds of the essential structure, or by invaginations of its surface in a simple or in a complicated fashion, compound glands are formed, and by a restriction of the cells to the finer branches the stem or trunk becomes an excretory duct; as a gland becomes more complicated its different parts are bound together by connective tissue, and the whole is often enclosed in a fibrous capsule. Many glands are provided with lymphatics often proceeding from lymphatic spaces in their midst; and probably all possess nerves either medullated, or non-medullated, or both. Pflüger has affirmed the penetration of the nucleated cells themselves with nerve-fibres.

The term was formerly applied to other organs which had a lymphatic gland-like appearance, or which were then supposed to fulfil the purposes of a gland, such as the pineal gland and the pituitary gland.

Also, the bulbous end of the penis. The *Glans penis*.

Also, the bulbous end of the clitoris. The *Glans clitoridis*.

In Botany, a cell, or collection of cells, or a cavity containing some special secretion; it is an epidermal structure. The term is also applied to other epidermic or subepidermic appendages, such as glandular hairs.

Also, the same as *Glans*.

G.s, absorbent. (*L. absorbeo*, to suck up.) The lymphatic glands, from the function of the lymphatic vessels.

G.s, accessory. (*L. accessus*, an approach.) A term for *Cowper's glands*.

G.s, accessory, of pancreas. (*L. accessus*.) A term for *Brunner's glands*.

G., accessory, of parotid. See *Parotid, accessory gland of*.

G.s, acini of. (*L. acinus*, a berry.) The sacular recesses in the lobules of a gland.

Formerly the term was applied to the smallest lobules themselves.

G.s, acino-tubular. (*L. acinus*, a berry; *tubulus*, a small pipe.) Glands in which the terminal acini or sacules have a more or less tubular character.

G., acinous. See *Acinous glands*.

G., admaxillary, inferior. (*L. ad*, to; *maxilla*, the jaw; *inferior*, lower.) A mucous gland closely attached to the submaxillary gland of the rabbit and guinea pig.

G., admaxillary, superior. (*L. ad*; *maxilla*; *superior*, upper.) A mucous gland closely attached to the parotid gland of some animals, as the rabbit.

G.s, aggregate. Same as *G.s, aggregated*.

G.s, aggregated. (*L. aggrego*, to collect into a flock.) A synonym of *Peyer's glands*, which are aggregations of simple lymphoid follicles.

G.s, aggregated, of Bruch. Same as *Bruch, clusters of*.

G.s, agminated. (*L. agmen*, a multi-

tude.) A term for *Peyer's glands*, which are groups of lymphoid nodules.

G., albumen. (*L. albumen*, the white of egg.) A large, whitish gland on the efferent duct of the female part of the hermaphrodite sexual gland of some of the Mollusca.

G.s, albuminous. Same as *G.s, serous*.

G.s, alveoli of. (*L. alveolus*, a small hollow.) Same as *G.s, acini of*.

G., amygdalous. (*L. amygdala*, an almond. *F. glande amygdale*.) The *Tonsil*.

G.s, anal. See *Glandula anales*.

G., angular. See *Glandula angularis*.

G.s, anomalous. (*Ἀνώμαλος*, uneven, irregular.) Lieutaud's term for glands which have no excretory duct, such as the thyroid body and the thymus gland.

G., anteprostatic. (*L. ante*, before; *prostate* gland.) A small gland sometimes found in front of and between Cowper's glands.

Also, a synonym of *Cowper's glands*.

G.s, aporic. (*Ἄ, neg.*; *πόρος*, an opening.) A term applied to the class of glands of which the spleen, the thymus, the thyroid, and the adrenals are representatives, because they possess no excretory duct. They are connected with the ordinary secreting glands by the ovary, the cavities of which, ordinarily closed, burst to discharge their contents.

G.s, arterial. (*L. arteria*, an artery.) A generic term for the bodies represented by the carotid and the coecygeal glands, in consequence of their being chiefly made up of a plexus of small arteries.

G.s, articular. (*L. articulum*, a joint.) The synovial glands.

G.s, arytaenoid. See *Arytaenoid glands*.

G., assimilating. (*L. assimilo*, to make like to.) A gland whose function is that of the preparation of a substance for conversion into the tissues of the body.

G.s, auricular, anterior. (*L. auricula*, the outer ear; *anterior*, in front.) The *G.s, facial, superficial*.

G.s, auricular, posterior. (*L. posterior*, hinder.) The *G.s, subauricular*.

G.s, axillary. See *Axillary glands*.

G.s, Bartholin's. See *Bartholin's glands*.

G.s, Bauhin's. (*Bauhin*.) The oblong aggregated mass of glands on each side of the apex of the tongue. Some are racemose, others acino-tubular; they open by a line of ducts.

G.s, Blandin's. A group of small glands opening by four or five apertures on each side of the median line at the apex of the tongue.

G.s, blind. Same as *G.s, aporic*.

G.s, blood. See *Blood glands*.

G.s, Bowman's. See *Bowman's glands*.

G.s, brachial. (*Βραχίων*, the arm.) Some lymphatic glands lying around the brachial artery in the upper arm.

G., branchio-tympanic. (*Βράγχια*, the gills of a fish; *τύμπανον*, a drum.) Krause's name for the *Glandula tympanica*, in reference to its position on the superior tympanic nerve, and to its development in connection with the first branchial arch of the embryo.

G., bronchial. (*Βράγχια*, the bronchial tubes.) The *Thyroid gland*.

G.s, bronchial. See *Bronchial glands*.

G.s, Bruch's. See *Bruch, clusters of*.

G.s, Brunn's. Same as *Brunner's glands*.

G.s, Brunner's. See *Brunner's glands*.

GLAND.

G.s, buc'cal. See *Buccal glands.*

G., buc'cal, infe'rior. See *Glandula buccalis inferior.*

G., buc'cal, supe'rior. See *Glandula buccalis superior.*

G.s, bul'bo-cav'ernous. (L. *bulbus*, a bulb; *cavernosus*, cavernous.) A synonym of *Cowper's glands*, in reference to their situation near the bulb of the urethra and the cavernous bodies.

G.s, bul'bo-ure'thral. (L. *bulbus*; *urethra*.) Same as *G.s, bulbo-cavernous.*

G.s, cæ'cal. (L. *cæcus*, blind.) The lymphatic glands of the cæcum. In the horse and ox they form a moniliform chain in the line of each cæcal artery.

G.s, car'diac. (Καρδια, the left extremity of the stomach. *G. Kardialdrüsen.*) The same as *G.'s, peptic.*

Also, the *G.s, mediastinal, superior.*

G., carot'ic. The *Carotid gland.*

G., carot'id. See *Carotid gland.*

G.s, cells of. The cells of secreting glands are spheroidal, polyhedral, or columnar in shape, containing granular protoplasm and a nucleus. They receive into their interior by osmosis from the blood the special substances to which they are attracted, and give them out into the excretory passage of the gland, either in the same form in which they were received from the blood, or in another form after elaboration or reconstruction in their interior. The cells may yield their secretion by osmosis, or by bursting and the escape of their contents, or by themselves becoming shed.

G.s, ceru'minous. See *Ceruminous glands.*

G., cervi'cal. (L. *cervix*, the neck. *G. Halsdrüse.*) The *Tonsil.*

G.s, cervi'cal. (L. *cervix*. *F. glandes cervicales*; *G. Halsdrüsen.*) The lymphatic glands of the neck. See the subsequent sub-headings.

G.s, cervi'cal, deep, infe'rior. See *G.s, cervical, deep, lower.*

G.s, cervi'cal, deep, low'er. (*G. tiefere Halsdrüsen.*) The lymphatic glands of the neck which lie in the supraclavicular fossa and in the angle between the internal jugular and the subclavian veins. They are covered by the superficial layer of the cervical fascia, and in part by the origin of the sterno-cleido-mastoid muscle. They receive the lymphatic vessels of the head and neck, the efferent ducts of the upper deep cervical ganglia, the lymphatics of the lower part of the thyroid gland, of the larynx and pharynx, and of the cervical part of the trachea and œsophagus, those of the skin and superficial muscles of the lower part of the neck, and also those accompanying the vertebral blood-vessels. They are closely connected with the axillary and the superior mediastinal glands. The efferent canals unite to form a short, generally single vessel, the jugular lymphatic trunk.

G.s, cervi'cal, deep, supe'rior. See *G.s, cervical, deep, upper.*

G.s, cervi'cal, deep, up'per. (*G. tiefe obere Halsdrüsen.*) A collection of ten to sixteen lymphatic glands lying around the internal jugular vein and on the pharyngeal wall, and extending from the bifurcation of the common carotid artery to the base of the skull; smaller ones lie between the thyroid gland and the trachea, and between the pharynx and the

vertebral column. They receive the efferent vessels of the deep facial, submaxillary, and superficial cervical glands; the lymphatics of the brain and its membranes, of the Eustachian tube, tympanum, and labyrinth, of the tongue, the larynx, the lateral lobes of the thyroid gland, and of the middle and lower parts of the pharynx, as well as those between the deep muscles of the upper part of the throat and neck. They empty into the *G.s, cervical, deep, lower.*

G.s, cervi'cal, me'dian. (L. *medius*, in the middle.) An inconstant set of lymphatic glands in the middle of the neck, through which, when they are present, the efferent vessels of the lingual lymphatic glands run in their course to the lower deep cervical glands.

G.s, cervi'cal, supe'ri'cial. (*G. oberflächliche Halsdrüsen.*) Four to six lymphatic glands lying along the external jugular vein between the platysma myoides and the deep cervical fascia. They receive the efferent vessels of the subauricular and the occipital glands, some of the lymphatics of the superficial facial and the submaxillary glands, those of the outer ear, and of the skin of the throat and neck. They empty themselves into the lower deep cervical glands.

In addition to these, one or two small superficial cervical glands are sometimes found in the front of the neck on the sterno-hyoid muscle, and less frequently at the back of the neck over the trapezius muscle.

G., cho'roid. (*Choroid tunic.*) A rete mirabile surrounding the entry of the optic nerve in many Teleostean fishes. It is situated between the membrana argentea and vasculosa. It receives its arterial blood from the artery issuing from the pseudobranch. Where the pseudobranch is absent the choroid gland is also deficient.

G.s, Clop'ton Ha'vers's. See *Havers, glands of.*

G.s, clo'sed. Organs which are composed of adenoid tissue, but which have no excretory duct. Such are the closed follicles of the intestine, the lymphatic glands, the adrenals, the pineal gland, the pituitary body, the tonsils, the thymus gland, the thyroid body, and the spleen, to which some add the coecygeal gland.

G., coccyge'al. See *Coecygeal gland.*

G.s, cœ'liac. (Κοιλία, the belly. *G. obere Eingeweidedrüsen.*) Sixteen to twenty large glands lying behind the pancreas, duodenum, and pylorus, upon the descending aorta, between and behind the folds of the transverse mesocolon and the smaller omentum, and surrounding the cœliac axis, the vena portæ, and the origin of the superior mesenteric artery. They receive the lymphatics from a large part of the liver, both superficial and deep, those of the stomach and the upper half of the duodenum, those of the superior and inferior gastro-epiploic glands of the mesentery, and those of the spleen and the pancreas. Their efferent vessels in part join the intestinal lymphatic trunk, in part the lumbar lymphatic trunk, to empty themselves into the thoracic duct.

G.s, com'pound. (L. *com*, for *eum*, together; *pono*, to lay.) A secreting gland, consisting of a branched secreting surface more or less complex.

In Botany, glands consisting of several secreting cells attached to each other.

GLAND.

G.s, concat'enate. (L. *con*, together; *catena*, a chain.) A term applied to the lymphatic vessels and glands of the neck when they can be felt as a cord with knots on it.

G.s, congl'o'bate. See *Conglobate glands*.

G.s, conglom'erate. (G. *Knäueldrüsen*.) See *Conglomerate glands*.

G.s, Cow'per's. See *Cowper's glands*.

G., Cow'per's, fe'male. The vulvo-vaginal or *Bartholin's gland*.

G., Cow'per's, male. See *Cowper's glands*.

G.s, cu'bital, deep. (L. *cubitum*, the elbow. G. *tiefe Ellenbogendrüsen*.) Small lymphatic glands lying deeply in the bend of the elbow by the hrachial vessels.

G.s, cu'bital, superficial. (G. *oberflächliche Ellenbogendrüsen*.) One or two lymphatic glands over the inner condyle of the humerus near the basilic vein.

G.s, cuta'neous. (L. *cutis*, the skin. F. *glandes cutanées*.) The glands of the hair-follicles, the sudoriparous glands, and the sebaceous glands.

G.s, decid'ual. (L. *deciduus*, that falls off.) The glands of the decidua vera, which develop during pregnancy, as described under *Decidua*. According to Ercolani, there are no true glands in the decidua, only tortuous channels produced by the escape of the secretion of the utricular glands of the uterus, which forms a passage through the substance of the new structure, which he believes to form the decidua vera, and not, as is generally supposed, the developed mucous lining of the uterus, which, in the true sense of that term, he affirms to have no existence.

G.s, den'tal, of Serres. (L. *dens*, a tooth. G. *Zahndrüsen*.) Small white bodies studding the mucous membrane of the gum before the eruption of the milk teeth. They are patches of the epithelium of the enamel germ, which has not been obliterated.

G.s, diapnog'enous. (Διαπνοή, perspiration; γέννω, to produce.) The *Sudoriparous glands*.

G.s, diges'tive. (L. *digero*, to carry asunder.) The glands of the leaves of certain plants, such as *Nepenthes* and *Drosera*, which secrete a viscous liquid which dissolves albuminoid matters in virtue of an acid, and, according to some, of a ferment, which it contains.

G.s, dor'sal. (L. *dorsum*, the back.) The lymphatic glands in the neighbourhood of the subscapular vessels on the back.

G., duct of. (L. *ductus*, a leading.) The canal by which a gland opens on to a surface or into a cavity or canal, and by which its secretion is conveyed away.

G.s, duct'less. Same as *G.s, aporic*.

G.s, duode'nal. (*Duodenum*.) The same as *Brunner's glands*.

G., Duver'ney's. See *Duverney's gland*.

G.s, epiglot'tic. The *Epiglottidean gland*.

G.s, epiglot'tic. See *Epiglottic glands*.

G.s, exter'nal. (L. *externus*, outward.) The glands which are situated on the outer surface of the epidermis of a plant, such as glandular hairs.

G.s, fa'cial, deep. (G. *tiefe Antlitzdrüsen*.) Three to six lymphatic glands lying on the pharyngeal wall behind the buccinator muscle on the internal maxillary artery. They receive the deep lymphatics from the temporal

and pterygo-palatine fossæ, from the orbit, the nasal cavities, the fauces and pharynx, as well as those which follow the course of the middle meningeal vessels; their efferent vessels join the upper deep cervical glands.

G.s, fa'cial, superficial. (G. *oberflächliche Antlitzdrüsen*.) Three or four small glands lying in front of the ear over the parotid gland. They receive the superficial lymphatics of the frontal and temporal regions, and their efferent vessels join the submaxillary and superficial cervical glands.

G.s, fem'oral. (L. *femur*, the thigh.) The *G.s, inguinal*.

G. fe'ver. See *Gland-fever*.

G.s, follic'ular. (L. *folliculus*, a small bag. F. *glandes folliculeuses*; G. *Balgdrüsen*.) The same as *Lymphoid follicles*.

G.s, follic'ular, of the tongue. (G. *Balgdrüsen der Zungenwurzel*.) Peculiar glands found at the root of the tongue. One form presents invaginations of the mucous membrane, of hemispherical form, with a double wall and narrow lumen which opens on the surface of the membrane; the inner wall, composed of mucous membrane, presents conical simple papillæ; the outer layer of the wall is made up of dense connective tissue, and the tissue between the two layers corresponding to the submucous tissue contains from 50 to 100 closed follicles, resembling those of the lymphatic system. A second form is described by Krause, in which the central cavity presents a large oval papilla at the fundus.

G.s, Galea'ti's. The same as *Lieberkühn's crypts*.

G.s, gas'tric. (Γαστήρ, the stomach. F. *glandes de l'estomac*; G. *Magendrüsen*.) The glands of the stomach. They consist of tubules opening by a separate or by a joint orifice on the surface of the gastric mucous membrane. They are divided into cardiac or peptic glands and pyloric glands at each end of the stomach, and an intermediate zone of glands partaking of the character of each of these.

Also, the lymphatic glands called *G.s, gastro-epiploic, inferior*, and *G.s, gastro-epiploic, superior*.

G.s, gastro-epiplo'ic, infe'rior. (Γαστήρ, the stomach; ἐπιπλοον, the omentum; L. *inferior*, lower. G. *untere Magennetzdrüsen*.) Six or eight small lymphatic glands lying along the greater curvature of the stomach between the folds of the gastro-colic omentum. They receive the lymphatics from the lower and anterior surface of the stomach, and from the upper half of the duodenum, and they empty themselves into the celiac glands.

G.s, gastro-epiplo'ic, super'ior. (L. *superior*, upper. G. *obere Magennetzdrüsen*.) Four to six small lymphatic glands lying along the small curvature of the stomach between the folds of the gastro-phrenic ligament and the lesser omentum. They receive the lymphatics from the upper and hinder surface of the stomach, and empty themselves into the celiac glands.

G.s, ge'nal. (L. *gena*, the cheek.) The same as *G.s, molar*.

G.s, gen'ital. (L. *genitalis*, belonging to generation.) The glandular part of the *Wolffian body*.

G., germig'enous. (L. *germen*, a sprout; *geno*, to produce.) The germ-producing struc-

GLAND.

ture or ovary of cestoid worms; the structure which produces the germinative vesicles.

G.s, glo'bate. Same as *Conglobate glands*.

G.s, glob'ular. (L. *globulus*, a little ball.) Ball-shaped bags attached to the leaf surface by a point, as in some labiate plants.

G.s, gut'tural. (L. *guttur*, the throat.) Same as *G.s, pharyngeal*.

G., Har'der's. See *Harder, gland of*.

G.s, Haver'sian. See *Havers, glands of*.

G.s, hepatic. ("ἥπαρ, the liver. G. *Leberdrüsen*.) Small lymphatic glands lying in or near the hepato-duodenal ligament, through which some of the lymphatics of the liver pass on their way to the cœliac glands.

Also, see *Glandula hepatica*.

G.s, hon'eycomb. The same as *Peyer, glands of*, from the appearance of the patches.

G.s, hydroph'orous. ("ὕδωρ, water; φέρω, to carry.) The sudoriparous glands.

G.s, hypogas'tric. ("ὑπό, under; γαστήρ, the belly.) The *G.s, iliac, internal*.

G.s, il'iac. (L. *ilium*, the groin.) The *G.s, iliac, external*.

G.s, il'iac, antérior. (L. *anterior*, in front.) The *G.s, iliac, external*.

G.s, il'iac, external. (G. *äussere Hüftdrüsen*.) Six or eight large glands lying on both sides of the common and external iliac vessels from the crural ring to the fifth lumbar vertebra. They receive the efferent vessels of the inguinal glands, the lymphatics of the psoas and iliacus muscles, and of the muscles and the peritoneum of the abdominal walls below the umbilicus; they are intimately connected with the hypogastric and sacral glands; and their efferent vessels pass in great part to the inferior lumbar glands, and some to the internal iliac glands.

G.s, il'iac, inter'nal. (G. *innere Hüftdrüsen, Beckendrüsen*.) Nine to twelve lymphatic glands lying along the internal iliac vessels. They receive lymphatics from the inguinal and external iliac glands, some deep lymphatics from the thigh which accompany the obturator vessels, some deep lymphatics from the buttocks which accompany the ischiatic vessels, lymphatics from the hinder part of the scrotum or labia majora, from the urinary bladder, from the fornix of the vagina and the cervix, and lower part of the body of the uterus. Their efferent vessels go to the inferior lumbar glands.

G.s, il'iac, supérior. (L. *superior*, upper.) Two or three lymphatic glands occasionally found on the crest of the ilium.

G.s, infraclavic'ular. (L. *infra*, below; *clavicle*.) One or two lymphatic glands lying on the coraco-clavicular fascia between the pectoralis major and deltoid muscles.

G., infraor'ital. See *Glandula infra-orbitalis*.

G.s, in'guinal. (L. *inguen*, the groin. G. *Leistendrüsen*.) The glands of the groin, divided into superficial and deep.

G.s, in'guinal, deep. (G. *tiefer Leistendrüsen*.) Three to seven lymphatic glands lying behind the superficial layer of the fascia lata, close to the femoral vessels; the uppermost of them lies in a compartment of the crural canal on the inner side of the femoral vein. They are intimately connected with the superficial inguinal vessels, and receive the deep lymphatics of the lower limb, and they terminate in the external iliac glands.

G.s, inguinal, super'ficial. (G. *ober-*

flächliche Leistendrüsen.) Seven to thirteen lymphatic glands lying in two sets in the groin. One set, oblique, over the line of Poupart's ligament, the other set, vertical, around the upper end of the long saphenous vein. The former receive the lymphatics of the lower part of the abdomen, the outer part of the gluteal region, the perinæum, and the external genital organs. Their efferent vessels partly join the deep inguinal glands, but mostly go to the external iliac glands.

G., intercarot'id. (L. *inter*, between; *carotid* artery.) The *Carotid gland*, so called from its situation at the bifurcation of the carotid artery.

G.s, intercel'lular. (L. *inter*, between; *cellula*, a small cell. F. *glandes des cloisons*, De Bary; G. *Zwischenwanddrüsen*.) A term applied to those glands of the leaves of some plants, such as the *Ledum palustre*, which dispose of their secretion, not outwardly, but into the substance of the intercellular tissue.

G.s, intercost'al. (L. *inter*, between; *costa*, a rib. G. *Zwischenrippendrüsen*.) Sixteen or twenty lymphatic glands in the hinder part of the intercostal spaces, near the heads of the ribs and the anterior surface of the vertebral column. They receive lymphatics from the intercostal spaces, the deep muscles of the back, and the vertebral canal, from the borders of the diaphragm and from the pleura, and communicate with the internal mammary lymphatic plexus and the posterior mediastinal glands. Their efferent vessels open chiefly into the thoracic duct, but some of the upper vessels of the right side open into the right lymphatic duct.

G.s, internal. (L. *internus*, within.) The plant-glands which are situated beneath the epidermis.

G., interun'gulate. (L. *inter*, between; *ungula*, a hoof.) The *Canalis biflexus*.

G.s, intest'inal. (L. *intestina*, the intestines.) The mesenteric glands.

G.s, intest'inal, solit'ary. The *Solitary glands*.

G.s, jug'ular, inférior. The *G.s, cervical, deep, lower*, from their position in relation to the jugular vein.

G.s, jug'ular, inter'nal. The *G.s, cervical, deep, upper*.

G.s, jug'ular, super'ficial. The *G.s, cervical, superficial*.

G.s, jug'ular, supe'rior. The *G.s, cervical, deep, upper*.

G.s, Kraus's. (Krause, a German anatomist of the present time.) The small mucous glands embedded in the *Conjunctiva forniceis*.

G.s, la'bial. (L. *labium*, a lip. G. *Lippendrüsen*.) The small racemose glands which lie between the mucous membrane of the lip and the orbicularis oris muscle and open near the edge of the mouth.

G., lach'rymal. The *Lacrimal gland*.

G., lac'rim'al. The *Lacrimal gland*.

G., lac'rim'al, acces'sory. (L. *accessus*, an approach.) The *G., lacrim'al, inferior*.

G., lac'rim'al, inférior. (L. *lacrima*, a tear; *inferior*, lower.) Rosenmüller's term for the anterior part of the lacrimal gland, which is separated from the remainder by a thin fascia; it is closely attached to the hinder part of the upper eyelid, and opens by several separate minute ducts, as well as by some which join the ducts of the main portion of the gland.

GLAND.

G., lac'rim'al, pal'pebral. (L. *palpebra*, an eyelid.) The *G., lac'rim'al, inferior*, from its relationship to the eyelid.

G., lac'rim'al, supe'rior. (L. *superior*, upper. *G. obere Thränen-drüse.*) The chief part of the *Lac'rim'al gland*.

G., lactif'erous. (L. *lac*, milk; *fero*, to bear.) The mammary gland.

G.s, larynge'al, ante'rior. (L. *larynx*; *anterior*, in front.) Rather large mucous glands situated in the space between the hyo-epiglottic, the thyreo-epiglottic, and the middle thyreo-hyoid ligaments.

G.s, larynge'al, poste'rior. (L. *posterior*, hinder.) The *Glandulæ arytenoideæ mediæ*.

G.s, lentic'ular. (L. *lens*, a lentil.) Flattened, rounded, cuticular appendages of the leaves and stems of *Salix*.

Also, applied to such of the lingual glands, at the base of the tongue, as have this shape.

Also, see *Glandulæ lenticulares*.

G.s, Lie'berkuhn's. See *Lieberkuhn's crypts*.

G.s, lin'gual. (L. *lingua*, the tongue. *G. Zungendrüs'en.*) Racemose and acino-tubular glands in the mucous membrane of the tongue, chiefly in the posterior part of its upper surface. Some open into the foramen cæcum and into the moats around the papillæ circumvallatæ; the secretion of these is watery.

Also, see *Glandulæ lingualis*.

Also (*G. Zungenlymphdrüs'en*), one or two lymphatic glands lying on the hyoglossus muscle.

G.s, lin'gual, poste'rior. (L. *lingua*, the tongue; *posterior*, hinder.) Glands situated in the root of the tongue, near the periphery of the follicular glands of the tongue. Their excretory ducts perforate the wall of the last-named glands obliquely, and open into their cavity by a funnel-shaped duct.

G.s, Littré's. See *Littre's glands of*.

G.s, lob'ulated. (L. *lobulus*, a small lobe.) The same as *G.s, racemose*.

G.s, lum'bar. (L. *lumbus*, the loin. *G. Lendendrüs'en.*) Twenty to twenty-five large lymphatic glands on the posterior abdominal wall, lying outside the peritoneum, upon and on the outer side of the *psaos maximus*, the *quadratus lumborum*, and the lumbar part of the diaphragm, around the abdominal aorta and the vena cava. They are divisible into a superior and an inferior group, or into a mesial and two lateral groups intimately connected with each other by a lymphatic plexus. They receive the efferent vessels of the external iliac, internal iliac, and sacral glands, the lymphatics of the sigmoid flexure of the colon through the mesocolic glands, those of the testicle, epididymis, and tunica vaginalis, and, in the female, those of the fundus and upper part of the body of the uterus, of the Fallopian tubes, and of the ovaries, those of the kidneys, of the adrenals, and the lymphatics of the deep muscles of the back, of the lumbar origin and lower surface of the diaphragm, of the lumbar part of the vertebral canal and of the posterior part of the peritoneum. The greater number of the efferent vessels join to form the lumbar lymphatic trunk, one on each side, which opens, along with the remainder of the small efferent vessels, into the lymphatic duct.

G., Lusch'ka's. The *Coccygeal gland*.

G.s, lymphatic. See *Lymphatic glands*.

G., mam'mary. See *Mammary gland*.

G., mandib'ular, superf'icial. See *Glandula mandibularis superficialis*.

G.s, mas'toid. (*Mastoid process.*) Two or three small lymphatic glands under and behind the ear, lying over the insertion of the sterno-mastoid muscle. They receive lymphatics from the posterior part of the scalp, and their efferent vessels enter the superficial cervical glands.

G., maxil'lary. (L. *maxilla*, the jaw.) The *Submaxillary gland*.

G.s, maxil'lary, inter'nal. (L. *maxilla*, the jaw.) The *G.s, facial, deep*.

G.s, mediast'i'nal, ante'rior. (L. *mediastinus*, belonging to one standing in the middle; *anterior*, in front. *G. vordere Mittelfeldrüs'en.*) Three or four lymphatic glands in the anterior mediastinum, in front of the lower part of the pericardium. They receive some of the efferent vessels of the lower sternal glands, lymphatics from the superficial surface of the right lobe and from the middle part of the liver, and from the upper surface of the diaphragm. The efferent vessels pass to the right and left lymphatic trunks.

G.s, mediast'i'nal, poste'rior. (L. *posterior*, hinder. *G. hintere Mittelfeldrüs'en.*) Eight to twelve small lymphatic glands lying along the descending thoracic aorta and the œsophagus. They receive lymphatics from the diaphragm, the œsophagus, and the pericardium. Their efferent vessels chiefly join the lymphatic duct, but some join the bronchial glands.

G.s, mediast'i'nal, supe'rior. (*G. obere Mittelfeldrüs'en.*) Eight or ten lymphatic glands in the upper part of the interpleural space, lying upon or near the arch of the aorta and the innominate veins. They receive the lymphatics of the heart, of the greater part of the pericardium, and of the thymus gland. Their efferent vessels join the thoracic and the right lymphatic ducts.

G.s, Meibom'ian. See *Meibomian glands*.

G.s, Me'ry's. A synonym of *Cowper's glands*.

G.s, mesenter'ic. See *Mesenteric glands*.

G.s, mesera'ic. (*Mésos*, in the middle; *ἀραιά*, the small intestines.) The mesenteric glands.

G.s, mesocol'ic. (*Mésos*, in the middle; *κόλον*, the colon. *G. Gekrösdrüs'en des Dickdarms.*) Twenty to fifty lymphatic glands lying in a single or double row between the folds of the mesocolon, near to the posterior part of the intestinal wall.

G.s, mili'ary. (L. *milium*, a millet seed.) Small, superficial, roundish granules studded over the surface of a plant.

Also, a synonym of *Stomata*.

Also, a name of the *Sebaceous glands*.

G.s, Mohl's. Glands resembling the sudoriferous glands which open on the margin of the eyelids near the eyelashes. They consist of a wavy or spiral tube embedded in the tissue of the eyelid, lined with columnar epithelium, and enclosed in a longitudinal layer of non-shaped muscular fibre-cells.

G.s, mo'lar. (L. *mola*, a grinding tooth. *G. Backzahn-drüs'en.*) Two or three largish racemose glands lying between the masseter and the buccinator muscles, and opening by separate ducts nearly opposite the last molar tooth.

GLAND.

G.s, Morgagni's. See *Morgagni, glands of*.

G.s, moriform. (L. *morum*, a mulberry; *forma*, likeness. F. *glandes acineuses*; G. *Maulbeerförmige Drüsen, traubenförmige Drüsen*.) The same as *Acinous glands*.

G.s, mucilaginous. (*Mucilage*.) A term applied by Havers to the fringed vascular folds of a synovial membrane, which are called *Haversian fringes*.

G.s, muciparous. (L. *mucus*, slime; *pario*, to produce.) The *Mucous glands*.

G.s, mu'cous. (L. *mucus*, slime.) Glands the cells of which secrete mucus. Examples of these glands are met with in the sublingual and admaxillary of the guinea pig, the glands of Nuhn at the tip of the tongue in man, the submaxillary and orbital glands of the dog and cat, and the sublingual of the rabbit. In all these the alveoli are lined by a single layer of goblet-shaped mucous cells. Outside the mucous cells, but within the *membrana propria*, there are to be found, from place to place, crescentic masses named the *demilunes* of Heidenhain, or the *crenscents* of Giannuzzi, each of which is composed of several polyhedral granular-looking cells containing a spherical nucleus. During prolonged stimulation the columnar mucous cells are replaced by small polyhedral cells similar to those constituting the *crenscents*. These are either the collapsed mucous cells, or are the products of the proliferation of the granular cells.

G.s, Na'both's. The *Ovule Nabothi*.

G.s, na'so-trache'al. (L. *nasus*, the nose; *trachea*, the windpipe.) The mucous glands of the olfactory region and of the trachea. They consist of clustered sacculi opening into an axial excretory duct. Their walls are soft and friable, and adhere closely to the connective tissue of the mucous membrane in which they are situated; they are filled with polyhedral epithelium, with spherical, non-nucleolated nuclei, of 6 mm. to 8 mm. in diameter; the excretory duct has a slit-like opening, and is lined with vibratile epithelium.

G.s, nectariferous. (L. *nectar*, the drink of the gods; *fero*, to bear.) The pores or depressions at the base of the petals of the flowers of some plants, as the *Ranunculus*, which contain a honey-like fluid secreted by the cells of its walls.

G.s, Need'ham's. Two large glands on the efferent duct of the spherical testicle of *Cephalopoda*, which secrete the membranous envelope of the spermatophores.

G., nerv'ous, of pel'vis. The *Coccygeal gland*, so called from its structure and its position.

G., Nuck's. See *Nuck, gland of*.

G.s, Nuhn's. Same as *G.s, Blandin's*.

See also, *Nuhn, glands of*.

G.s, occip'ital. (L. *occiput*, the back of the head. G. *Hinterhauptsdrüsen*.) One or two variable lymphatic glands lying upon the cranial insertion of the trapezius muscle. They receive the superficial lymphatics of the back of the head, and empty themselves into the superficial cervical glands.

G.s, odorif'eros. The *Glandulæ odoriferae glandis*.

G.s, oesophage'al. (Οισοφάγος, the gullet. G. *Speiseröhrendrüsen*.) Small compound mucous glands situated in the submucous

tissue of the oesophagus, and opening upon its inner surface by means of a long excretory duct. They are most numerous at the lower end, and form a ring round the cardiac orifice of the stomach.

G.s of biliary ducts. Mucous glands disposed in two longitudinal rows in the smaller ducts, but scattered irregularly in the larger ones. They are of two kinds, branched tubular glands and racemose glands.

G.s of cheeks. The *Buccal glands*, or *G.s, molar*.

G.s of colon. (Κόλον, the large intestine.) Lymphatic glands which, in the horse and ox, form a double chain in the track of the colic arteries and of some of their collateral branches.

G. of Harder. See *Harder's Gland*.

G.s of Ha'vers. See *Havers, glands of*.

G.s of Manz. See *Manz, glands of*.

G.s of supply. Pemberton's term for such glands, as the liver and salivary glands, which furnish a secretion for use in the body.

G.s of waste. Pemberton's term for such glands, as the kidney and mammary gland, which furnish a secretion which is not used in the body.

G.s, oil. Same as *Sebaceous glands*.

G., or'bit'al. Same as *Glandula infra-orbitalis*.

G.s, oxyn'tic. (Ὀξύνω, to make sour.) Term applied by Langley to the glands, by others termed fundus, peptic, or rennet glands, occurring in *Rana temporaria* and *Triton cristatus* and other Amphibia. The epithelium lining the mouths of these glands consists of long columnar cells, which in their outer part contain mucigen. Each cell is prolonged into a fine process. In the neck of the gland are found, in the upper portion, nearly cubical cells; in the lower portion two or three very marked mucous cells; in the body of the glands the cells are irregular or ellipsoidal. These cells are the proper secreting cells which produce an acid fluid.

G.s, Pacchio'nian. See *Pacchioni, glands of*.

G.s, pal'atine. (L. *palatus*, the roof of the mouth. G. *Gaumendrüsen*.) The small glands which are found in a continuous layer between the mucous membrane and the periosteum of the hard palate, as well as on both surfaces of the soft palate.

G.s, pal'pebral. (L. *palpebra*, an eyelid.) The *Meibomian glands*.

G., pancreat'ic. The *Pancreas*.

G.s, pancreat'ico-splen'ic. (*Pancreas*; *spleen*. G. *Milz-Pankreas-Drüsen*.) Eight or ten lymphatic glands lying in the hilum of the spleen, between the folds of the gastro-splenic ligament. They receive the lymphatics of the spleen and of the fundus of the stomach, as well as the superficial and deep lymphatics of the body and tail of the pancreas, and they empty themselves into the celiac glands.

G.s, pap'illary. (L. *papilla*, a small pimple.) Prominent nipple-shaped glands, as in some of the *Labiata*.

G., parot'id. See *Parotid gland*.

See also, *Glandulæ parotidæ*.

G.s, parot'id. (Παρά, near; οὖς, the ear.) Three or four small lymphatic glands lying beneath the parotid fascia, and sometimes embedded in the parotid gland; one lies in front of the tragus of the ear. They receive the

GLAND.

lymphatics of the temporal region, and empty into the submaxillary and superficial cervical glands.

G., parot'id, acces'sory. See *Parotid gland, accessory*.

G.s., Peck'lin's. Same as *Peyer, glands of*.

G.s., pec'toral. (L. *pectus*, the breast.) Lymphatic glands lying on the serratus magnus muscle, which receive the lymphatics of the epigastrium and the front of the chest, and empty into the axillary glands; called also *Glandula thoracica profunda*.

Also, one or two lymphatic glands lying on the lower border of the pectoralis major muscle; also called *Glandula thoracica superficiales*.

G.s., pep'sin. Same as *G.s., peptic*.

G.s., pep'sin-form'ing. The same as *G.s., oxyntic*.

G.s., pep'tic. (Πεπτικός, assisting digestion.) The tubular gastric glands which are situated, almost side by side, over the whole mucous surface of the stomach except in the neighbourhood of the pylorus. They perforate the mucous layer, extending to the muscular layer of the mucous membrane. They are wavy tubes, .6—2 mm. in length, according to the thickness of the mucous membrane in which they are situated, and 70—80 μ in diameter. The deep part or fundus of each gland presents a slightly curved and sometimes bilobed distension; the more superficial part or neck is narrower and cylindrical, and opens, along with that of one or two neighbouring glands, into a short common duct, which has a fine aperture on the surface of the mucous membrane. The duct is lined with one layer of columnar epithelium. The neck and fundus of the gland contain two forms of cells: one form, the chief or principal cells, the adenomorphous cells of Rollet, the Hauptzellen of Heidenhain, form a continuous single layer on the basement membrane; the other form, border or parietal cells, the delomorphous cells of Rollet, the Belegzellen of Heidenhain, are interspersed between the layer of chief cells and the basement membrane, at some distance from each other in the fundus, nearer to each other in the neck of the gland. The chief cells are polyhedral in the neck, gradually becoming cylindrical, until in the bottom of the fundus they are long columnar; they are translucent and granular, with a reticulated protoplasm and a somewhat oval or a spherical nucleus. The border cells are large, oval, spherical, or angular, somewhat opaque, and closely reticulated. These glands secrete the gastric juice, or some of the chief matters from which the gastric juice is formed.

G., perman'ent. (L. *permaneo*, to remain.) A gland with an open duct, whose function is continually to withdraw the secretion.

G.s., perspi'ratory. (L. *perspiro*, to breathe through.) The glands which secrete the sweat or perspiration; the *Sudoriferous glands*.

G.s., Peyer's. See *Peyer, glands of*.

G.s., pharynge'al. See *Pharyngeal glands*.

G.s., pi'lous. (L. *pila*, the hair.) The glands of the hair follicles.

G., pine'al. See *Pineal gland*.

G., pitu'itary. (G. *Schleimdrüse*.) The *Pituitary body*.

G.s., plex'iform. (L. *plexus*, a twining; *forma*, shape.) A term for Peyer's glands.

G.s., poi'son. See *Poison glands*.

G.s., poplite'al. (L. *poples*, the ham. G. *Kniekehldrüsen*.) Three or four small, variable glands, embedded in part, near the popliteal artery. They receive the deep lymphatics of the leg, and a few superficial ones which accompany the short saphenous vein. They empty into the deep inguinal glands.

G.s., præcru'al. (L. *præ*, before; *crus*, the leg.) A small, elongated mass of twelve or more lymphatic glands in Solipeds lying within the anterior border of the fascia lata, on the circumflex iliac artery. They empty themselves into the iliac glands.

G., præhy'oid. (L. *præ*, before; *hyoid*.) The part of the suprahyoid accessory thyroid gland which lies over the middle of the body of the hyoid bone.

G.s., præpec'toral. (L. *præ*; *pectus*, the chest.) A mass of lymphatic glands in Solipeds lying on the lower end of the jugular vein, within the inferior border of the scalenus muscle. They receive the lymphatics from the præscapular and axillary glands, and from the pharyngeal glands and those which accompany the internal thoracic blood-vessels. Their efferent vessels of the right side form the right lymphatic duct, and those of the left side join the thoracic duct, or open by its side into the vena cava. They probably represent the axillary glands of man.

G.s., præpu'tial. (L. *præputium*, the foreskin.) The *Glandula odorifera glandis*.

G.s., præscap'ular. (L. *præ*; *scapula*, the bladebone.) A chain of lymphatic glands in Solipeds and other animals lying on the ascending branch of the inferior cervical artery, beneath the mastoido-humeral muscle. They receive the lymphatics of the neck, breast, and shoulder, and empty into the præpectoral glands.

G., pros'tate. See *Prostate gland*.

G., prostat'ic. See *Prostate gland*.

G.s., pul'monary. (L. *pulmo*, the lung.) A term applied to those small, lentil-shaped bronchial glands which lie in the substance of the lung on the larger bronchial tubes.

G.s., pylor'ic. (Πυλωρός, a gate-keeper, the lower orifice of the stomach.) The gastric glands which lie in the neighbourhood of the pylorus. They consist of a convoluted and slightly branched tubular gland lined with transparent columnar epithelial cells opening by a neck, lined with polyhedral epithelium, with one or two others, into a somewhat long common duct, having its aperture on the surface of the gastric mucous membrane, and lined with columnar epithelium. Their product is unknown, it is believed not to be mucus, and some are of opinion that it is pepsin.

G.s., rac'emose. (L. *racemus*, a cluster of grapes. F. *glandes en grappes*; G. *traubenförmige Drüsen*.) Compound glands consisting of a number of sacculi opening in clusters into the branched extremities of the excretory duct; the sacculi are more or less rounded and lined, often very thickly, with glandular epithelium; they are united by connective tissue into groups, and those in the larger glands into lobules.

G.s., rac'emose, comp'ound. A collection of simple racemose glands opening into one common excretory duct, and connected together, so as to form one, often lobulated, gland.

GLAND.

Such are Cowper's glands, the lachrymal and salivary glands, the pancreas, and the mammary glands.

G.s., racemose, simple. Racemose glands which consist of one excretory tube or follicle, which divides at its extremity into several dilated saccules. Such are the sebaceous glands, the glands of the nasal mucous membrane, the oesophageal glands, Brunner's glands, the glands of the biliary ducts and of Littré, and the Meibomian glands.

G.s., renal. (L. *ren*, the kidney.) The *Adrenals*.

G., reticular. (L. *reticulum*, a web.) A name given to such glandular organs as the liver and kidney, because their secreting structure is placed in the interstices of a network of connective tissue.

G., Rivini's. (*Rivini*.) The sublingual gland.

G., Rosenmüller's. The *G., lacrimal, inferior*.

Also, that one of the deep inguinal lymphatic glands which lies in the crural ring.

G.s., sac'cular. (L. *sacculus*, a little sac.) Same as the compound glands described as *G.s., racemose*.

Also, simple glands which are wider at their base than at their orifice, being flask-like.

G.s., sa'cral. (*Sacrum*. G. *Kreuzbeindrüsen*.) Four or five large lymphatic glands lying in the hollow of the sacrum, behind the rectum and between the layers of the meso-rectum. They receive the lymphatics of the rectum, of the posterior pelvic wall, and the lower part of the vertebral canal, and empty themselves into the inferior lumbar glands. They are in connection with the sacral lymphatic plexus and with the hypogastric and mesocolic glands.

G., salival. Same as *G.s., salivary*.

G.s., salivary. (L. *saliva*, spittle. G. *Speicheldrüsen*.) The generic term of the parotid, submaxillary, and sublingual glands, which secrete the saliva.

G., salivary, abdom'inal. (L. *abdomen*, the belly.) The pancreas, because of its position and of its secretion being similar to saliva.

G., salivary, exter'nal. The parotid gland.

G.s., scap'ular. Same as *G.s., subscapular*.

G.s., scent. See *Scent glands*.

G.s., sebaceous. See *Sebaceous glands*.

G.s., secre'ting. (L. *secretus*, part. of *seco*, to separate.) Glands whose purpose is to furnish a secretion. They consist essentially of epithelial cells resting on a basement membrane.

G.s., secre'tory. Same as *G.s., secreting*.

G.s., sep'tal. (L. *septum*, a partition.) Plant-glands which exist in the interocular septa of the ovary.

G.s., se'rous. (L. *serum*, the watery part of blood.) Glands in which the cells are separated from each other by a fluid albuminous cement-substance. Examples of this form of gland are found in the parotid and pancreas of man and mammals, and in the submaxillary of the rabbit and guinea-pig. The cells lining the club-shaped, or flask-shaped, or tubular alveoli are columnar, or cubical, or pyramidal, and are composed of a densely reticulated protoplasm and a spherical nucleus. When at rest, the cells lining the alveoli of the serous salivary glands become enlarged and filled

with coarse granules; during secretion, these granules become used up, so that the cell substance becomes more transparent, a few granules ultimately only remaining in the cells of that part of the gland near the lumen of the tube.

G.s., ses'sile. (L. *sessilis*, low.) External plant-glands which lie close to the epidermis, as the lupulin of the Hop.

G.s., simple. Glands which consist of a depression in a surface without any side branches or recesses.

In Botany, a gland consisting of one cell or cavity.

G.s., solitary. See *Solitary glands*.

G.s., stalk'ed. The external plant-glands which consist of one long cell distended at its apex with the secretion; they are also called glandular hairs.

G.s., staph'ylene. (*Σταφυλή*, the uvula.) The palatine glands.

G.s., ster'nal. (L. *sternum*, the breast-bone. G. *Brustbeindrüsen*.) Six to ten lymphatic glands lying in a row on each side of the inner surface of the cartilages of the seven upper ribs, along the course of the internal mammary vessels; their issuing and entering lymphatics form the internal mammary lymphatic plexus. They receive the lymphatics of the upper surface of the diaphragm, of the anterior part of the intercostal spaces, of the thoracic muscles, of the rectus abdominis, and of the mammary gland; they empty themselves into the anterior mediastinal glands and into the lymphatic trunks at the root of the neck.

G.s., subauric'ular. (L. *sub*, under; *auricula*, the ear.) The *G.s., mastoid*.

G.s., subconjunct'ival. (L. *sub*, under; *conjunctiva*. F. *glandes sous conjunctivales*.) The same as *G.s., tarso-conjunctival, acinous*.

G.s., subglos'sal. (L. *sub*, under; *glossa*, the tongue.) The *G.s., submaxillary*, in Solipeds.

G., sublin'gual. See *Sublingual gland*.

G.s., sublum'bar. (L. *sub*, under; *lumbus*, the loin.) A large group of lymphatic glands, in Solipeds and other animals, occupying the sublumbar region, lying in the angle formed by the two internal inguinal arteries, around the upper part of the femoral artery, and around the origins of the inferior mesenteric and spermatic arteries. They receive the lymphatics of the pelvis, and some from the rectum, the large colon, and the spermatic cord, as well as the efferent vessels of the deep inguinal ganglia; they empty themselves into Pecquet's reservoir, the receptaculum chyli.

G., submaxillary. See *Glands, submaxillary*.

G.s., submax'illary. (L. *sub*, under; *maxilla*, the jaw. G. *Unterkieferdrüsen*.) Eight or ten lymphatic glands lying between the base of the lower jaw and the digastric muscle, and underneath the superficial cervical fascia. They receive the superficial lymphatics of that part of the face from which the facial vein obtains its blood supply, those of the inner surface of the mouth, and those of part of the tongue; they are in communication with the superficial facial glands, and they empty themselves into the superficial and upper deep cervical glands.

G.s., suboccip'ital. (L. *sub*, under; *occiput*, the back of the head.) One or two glands lying on the upper end of the complexus mus-

GLAND-CYST—GLAND-FEVER.

cle. They receive the lymphatics of the hinder part of the scalp, and empty into the superficial cervical glands.

G.s, subscap'ular. (L. *sub*, under; *scapula*, the blade bone.) Lymphatic glands, of variable number, lying upon the anterior and outer surface of the scapula along the subscapular vessels, and receiving the deep lymphatics of the shoulder and the back.

G.s, substernal. (L. *sub*, under; *sternum*, the breast-bone.) The *G.s, sternal*.

G.s, sudoriferous. See *Sudoriferous glands*.

G.s, sudorip'arous. (L. *sudor*, sweat; *pario*, to produce.) The *Sudoriferous glands*.

G.s, supraclavicular. (L. *supra*, above; *clavicle*.) The lower deep cervical glands.

G.s, supracoccygeal. (L. *supra*, above.) The *Coccygeal gland*.

G.s, suprahyoid. (L. *supra*, above; *hyoid*.) An accessory thyroid gland sometimes found in man above and in the middle or outer side of the chief gland.

G.s, suprahyoid. (L. *supra*, above; *hyoid*.) One or two lymphatic glands in the centre of the neck between the anterior bellies of the digastric muscles. They receive the lymphatics of the lower lip.

G.s, suprarenal. (L. *supra*, above; *ren*, the kidney. F. *glandes surrenales*.) The *Adrenals*.

G.s, suprarenal, accessory. (L. *supra*; *ren*; *accessus*, an approach.) Small, flattened bodies, 2—5 mm. in diameter, sometimes found on the surface of the suprarenal bodies or adrenals. They consist of a yellowish cortex and a brownish central substance.

G.s, synovial. (*Synovia*.) The same as *Havers, glands of*.

G.s, sweat. (G. *Schweissdrüsen*.) The *Sudoriferous glands*.

G.s, tarsal. (Tapσός, the edge of the eyelid.) The *Meibomian glands*, so called from their position.

G.s, tarso-conjunctival, acinous. (Tapσός; *conjunctiva*; *acinus*.) Acino-tubular glands found in the conjunctival fold of both lids. In the upper lid they are divided into two groups by the tendon of the levator palpebræ superiores; those situated above the tendon and near the temporal region are most numerous and largest. Some of the ducts perforate the tendon to open on the conjunctiva. They have been variously regarded as isolated portions of the lachrymal gland, and as representatives of the glands of Harder. They are highly vascular.

G.s, tartar. Certain glands which were formerly, erroneously, supposed to exist in the gums, and which secreted the *Tartar, dental*.

Also, the same as *G.s, dental*.

G., temporary. A gland which having prepared or elaborated its proper secretion, gives it up, and is of no more use.

G., thymus. See *Thymus gland*.

G., thyroïd. See *Thyroid gland*.

G., thyroïd, accessory. See *Thyroid gland, accessory*.

G., tibial, anterior. (L. *tibia*, the bone of that name; *anterior*, in front. G. *vordere Schienbeindrüse*.) A lymphatic gland, sometimes absent, lying on the anterior surface of the interosseous ligament of the leg.

G. tis'sue. See *Glandular tissue*.

G.s, trache'al. (L. *trachea*, the wind-pipe. G. *Lufttröhrendrüsen*.) A term applied to those bronchial glands which lie on the lower end of the trachea.

G.s, trachoma. See *Trachoma glands*.

G.s, tubular. (L. *tubulus*, a small pipe. G. *röhrenförmige Drüsen*.) Simple glands in which the cavity is of nearly the same diameter throughout, as in the gastric glands, Lieberkühnian follicles, and sweat glands.

Also, compound glands in which the several parts of the branched cavities are each of similar dimensions throughout, as in the kidney and testis.

G., tympanic. See *Glandula tympanica*.

G.s, Tyson's. See *Tyson, glands of*.

G.s, urethral. (Ουρήτρα, the passage for the urine.) The racemose mucous glands of the urethra. Those of the male urethra are called *Littre's glands*.

G., uropygial. (Ουρρά, the tail; πυγή, the rump.) The *Coccygeal gland*.

Also, in birds, a cutaneous gland over the lower extremity of the vertebral axis which secretes a greasy substance for the lubrication of the feathers.

G.s, uterine. See *Uterus, glands of*.

G.s, utricular. (L. *utriculus*, a small leathern bottle.) The pearl-like glands of the ice-plant.

Also, the mucous follicles of the large intestine and the uterus which have a saccular dilatation at their extremity.

G.s, vaginal. See *Vaginal glands*.

G.s, vascular. (L. *vasculum*, a small vessel.) Same as *Blood glands*.

G., venenif'ic. (L. *venena*, poison; *facio*, to make.) A *Poison gland*.

G., venenip'arous. (L. *venena*; *pario*, to produce.) A *Poison gland*.

G.s, Vesalius's. See *Vesalius, gland of*.

G.s, vesicular. (L. *vesicula*, a little blister.) Glands in the form of small vesicles filled with oil as in the leaf of the myrtle.

G.s, vitelligenous. (L. *vitellus*, the yolk of an egg; *geno*, to produce.) The small glands in the female part of the sexual apparatus of the *Tæniada* which secrete the vitellus of the ovum. Their excretory ducts unite to form a vitelloduct, which joins with that of the opposite side before combining with the germiduct to form the oviduct.

G.s, vulvo-vaginal. (*Vulva*; *vagina*.) The same as *Bartholin, glands of*.

G.s, Weber's. See *Weber, glands of*.

G.s, Willis's. See *Willis, glands of*.

G.s, zygomat'ic. (*Zygoma*.) The *G.s, facial, superficial*.

Gland-cyst. A cyst developed in a gland from obstruction of a duct, or distension of a follicle.

Gland-fever. A fever having connection with a disordered condition of the glands.

G., catarrhal. (Κατάρρεος, a running down.) Hugo Engel's term for a febrile affection commencing, after exposure to cold and damp, with chilliness, general aching, increased temperature, quick pulse, sluggish bowels, and high-coloured and very acid urine. The superficial inguinal and some superficial abdominal lymphatic glands swell and become painful; the

GLANDACEOUS—GLANDERS.

skin over them is reddened, and in from three to five weeks several of them suppurate; with this the fever declines and the patient gets well, but is for a long time very weak, and especially in the lower limbs, which are very slow to recover strength. No other glands of the body are affected.

Glanda'ceous. (*L. glans*, an acorn. *G. eichelbraun*.) Of an oaken-brown colour.

Glande'balæ. The hairs of the armpit.

Glan'dered. Having the *Glanders*.

Glan'derous. Relating to *Glanders*.

G. leucocythæ'mia. See *Leucocythæ'mia, glanderous*.

Glan'ders. (*Gland*, in reference to the affection of these structures. *F. morve*, from *L. morbus*, the disease; *I. moccio, ciamorro, morva*; *S. muermo*; *G. Rotz, Rotzkrankheit*.) A virulent, contagious disease of Solipeds, especially of the horse, capable of being communicated to other animals, such as the goat, sheep, rabbit, cat, lion, bear, and man. Cattle, swine, and dogs seem to be insusceptible of the malady in its complete form, although the latter sometimes develop local troubles after inoculation with the discharges of glanders. The disease assumes two chief forms: one the form here described, and another described under the head *Farcy*; but the contagium of both is believed to be the same. Glanders may be acute or chronic, for which see subheadings. The disease described by Vegetius Renatus, in the fourth century, as malleus was probably glanders.

See also, *G., human*.

G., acute'. (*L. acutus*, sharp. *F. morve aiguë*; *G. acuter Rotz*.) The general symptoms which precede acute glanders in the horse are usually severe. There is great prostration, much muscular weakness and trembling, staring of the coat, increased temperature, 42·8° C. (109·04° F.), and quick breathing, 25 to 30 in a minute; the conjunctival and nasal mucous membranes are yellowish red and deeply congested, and the faeces are covered with mucus. After twenty-four or forty-eight hours red spots, rapidly becoming violet, appear on the pituitary membrane, on them pustules arise, which speedily burst and discharge a sero-purulent fluid, and in their place red-bordered deep ulcers appear, which frequently coalesce, and from which a glutinous, often bloody, offensive discharge issues, which in many cases contains detached crusts and gangrenous shreds. The glands under the jaw and tongue rapidly become swollen and infiltrated, and sometimes contain a fluid which, if evacuated, is seen to be of an oily nature and of an orange-red colour. As the disease proceeds the frontal sinuses are implicated, and the integument over them becomes thickened and painful; the breathing is generally difficult and noisy from extension to the larynx; on one or both sides of the face and neck the lymphatic vessels become hardened and thickened, constituting the farcy cords, which enlarge in knots, ulcerate, and discharge the characteristic oily fluid; the lymphatics of the legs participate in the same destructive process, producing much painful swelling of the limbs; the eyes become sunken and the conjunctival secretion very copious, the belly is tucked up, the strength becomes exhausted, and the animal dies. The morbid changes, in addition to those above noted, consist of nodules or tubercles and local

inflammations, which end in caseous deposit or in ulcerations. The tubercles or epithelial nodules of glanders are found in the submucous tissue of the respiratory passages, in the lungs, and in the skin; they vary in size from that of a hemp seed to that of a pigeon's egg; on section they are seen to have a bright yellow centre with a festooned edge, surrounded by a dry, greyish zone, which at its borders is in many places yellow, and is situated in a black hemorrhagic spot; these nodules may be single, or two or three may be confluent, they may be situated around a bronchiole, or may develop in the alveoli of the lung. They consist of embryonal or lymphoid cells, those in the centre undergoing degeneration, those on the periphery undergoing rapid development, and around them is a zone of hyperæmic lung tissue, often containing minute clots of extravasated blood. They are the direct result of infection from the inflammation of the pituitary membrane through the diseased lymphatics. In like manner to these pulmonary nodules the alimentary mucous membrane is sometimes affected. The blood contains fewer red corpuscles and many more white corpuscles; and there would appear to be a great excess of uræa in the urine.

See also, *G., human, acute*.

G., chronic. (*L. chronicus*, long-lasting. *F. morve chronique*; *G. chronischer Rotz*.) The three chief characters of the chronic form of glanders are the ulcerations of the pituitary membrane, the sublingual glandular swellings, and the discharge from the nasal cavities; one or other of them may vary in intensity and alter the aspect of the disease. It differs in no degree, except in intensity, from the acute form.

G., conta'gium of. (*L. contagium*, an infection.) A rod-shaped bacillus generally containing spores, and somewhat like a tubercle-bacillus, has recently been described by Bouchard and others, which is said to be the cause of glanders. It has been cultivated in the blood-serum of the horse, and in two experiments an attack of glanders and in others farcy has followed its injection into the body of horses, rabbits, and guinea-pigs. Vasilieff has found a similar bacillus in a case of human glanders. A bacillus found in farcy deposits in the lungs has also been cultivated, and when inoculated produced farcy in a puppy. The flesh of glandered horses does not appear to be injurious when cooked; it was eaten largely during the siege of Paris in 1870, and did not appear to do harm.

G., hu'man. (*Mālis*; *L. malleus*; *F. morve*; *I. morva*; *S. muermo*; *G. Rotz*.) The glanders of the horse reproduced in the human subject by inoculation. It never arises spontaneously in man. The ancient references to this disease are, at the least, doubtful; and it was not until the observations of Schilling, Elliptson, and Rayer, at the beginning of the present century, that the identity of the disease was established. Human glanders may assume an acute or chronic character, for which see subheadings. The other form of the disease, called *Farcy*, is described under that heading.

G., hu'man, acute'. Acute glanders in man may be the primary manifestation of the disease, or it may follow upon acute farcy. There is usually a period of incubation, lasting from two to fourteen days, then, after feelings of great depression, there are rigors, headache, transient rheumatoid pains in the limbs and

GLANDES—GLANDULA.

joints, fever with high temperature, quick full pulse, nausea, foul tongue, high coloured and scanty urine, and perhaps diarrhœa and profuse perspirations; at this time the neck, the armpits, and the groin become tender, and the lymphatic glands there may be swollen. Then follows, somewhere about the sixth day, the characteristic eruption; this is frequently preceded or accompanied by erysipelas of the face, seldom of the limbs, which speedily vesiculates, and often ends in producing gangrenous spots. The eruption is most common on the face and the limbs, and consists of a greater or less number of pustules, which begin as red, flea-bite-looking discrete papules, which speedily appear yellow and shot-like; they soon become pustules or, more rarely, bullæ, containing a sanguineous fluid; they have a hardened base, are seldom umbilicated, and either dry up and fall off, or are converted into deep ulcerations; the vesicles and bullæ of the erysipelatous rash meanwhile are progressing and becoming gangrenous. The pustules assail the pituitary membrane and spread to the respiratory mucous membrane; a thin, clear fluid is discharged from the nose and fauces, which speedily becomes glutinous, then puriform and bloody; the buccal and pharyngeal mucous membrane is also attacked; the tonsils, the parotid glands, and the neighbouring lymphatic glands become swollen and painful. Cough with fetid expectoration indicates extension to the bronchial tubes, or, it may be, lobular or hypostatic pneumonia; dyspnœa may distress much and vomiting, and serous, stinking motions may pass involuntarily. The fever throughout is intense; the pulse soon becomes small, quick, and weak, sometimes irregular and intermittent; there is generally a little albumen in the urine, and at the end leucin and tyrosin. Recovery is rare. Death often takes place within a week, but sometimes does not occur for a month or more. The post-mortem appearances consist of skin eruption, subcutaneous abscesses, softening of and suppuration in the muscles; sometimes, but not frequently, inflammation of lymphatics and infiltration and suppuration of their glands, ulcerations and gangrenous patches of the nasal and respiratory mucous membranes, hepatisation and purulent infiltration of the lungs, with false membranes of the contiguous pleura; sometimes local congestions of the alimentary canal, enlarged liver with granular and hepatic degeneration of the hepatic cells, softened, diffuent, and engorged spleen, occasionally a suppurating parotid, and perhaps congested kidneys with granular and fatty degeneration of the epithelium; some of the joints are not infrequently inflamed with serous or purulent effusion; but nothing morbid is recorded of the nervous system. See *G., contagium of.*

G., hu'man, chronic. The slowly progressing form of glanders in man is characterised by the specific ulceration of the pituitary mucous membrane, and is usually preceded by the conditions which constitute chronic farcy; recovery is rare. After a period of malaise and muscular pains, cough, sore throat, and chronic coryza appear, with some uncomfortableness in the nostrils, especially the left, and the voice becomes nasal; slowly the secretion becomes increased, and perhaps streaked with blood, and then dry scabs are expelled; seldom is the discharge as profuse or as offensive as in acute glanders. At this period ulcerations of the nasal

mucous membrane, sometimes proceeding to perforation of the septum, occur; there may be buccal and pharyngeal ulcerations; there is cough and dyspnœa, showing extension of mischief to the respiratory mucous membrane, with expectoration of heavy, purulent, and blood-streaked sputa; the voice is hoarse, and swallowing difficult; sometimes the patient is carried off by acute lobular pneumonia or capillary bronchitis. There is seldom submaxillary swelling or affection of the skin. The rheumatoid pains are very distressing. The patient gets weaker and anæmic, and may be carried off by diarrhœa and exhaustion.

Glandes. Plural of *Glands*.

G. quercus. (*L. quercus*, the oak.) Acorns.

G. quercus tostæ. (*L. tostus*, toasted. *G. Eichetkaffee*.) Roasted acorns. Used as a substitute for coffee. Said to agree better with a weak stomach.

Glandiferous. (*L. glands*, an acorn; *fero*, to bear. *G. eichelttragend*.) Bearing acorns. Also (*L. glands*, a gland), bearing glands.

Glandiform. (*L. glands*, a gland; *forma*, shape. *F. glandiforme*; *G. drüsenförmig*.) Formed or shaped like a gland.

G. corpuscle. A synonym of *Acinus*.

Glandilemma. (*Gland*; *Gr. λήμμα*, a coat. *G. Drüsenhäutchen*.) The membrana propria of a gland.

Glandinose. Same as *Glandulose*.

Glandium. (*L. glands*, a gland.) Old name for the thymus.

Glandula. (*L. dim. of glands*, a gland. *F. glande*; *G. Drüse*.) A gland; a little gland; a glandule.

G. ad au'rem. (*L. ad*, near to; *auris*, the ear.) The parotid gland, from its situation.

G. analis. (*L. anus*, the fundament.) A flattened acinous gland of the rabbit and other animals lying on the outer wall of the rectum about the level of the seventh caudal vertebra; it secretes an oily substance which facilitates the passage of the dung through the anus.

G. angularis. (*L. angulus*, an angle.) The submaxillary gland, from its position near the angle of the jaw.

G. arytænoïdea im'par. (*Arytænoïd* cartilage; *L. impar*, unequal.) The same as *Glandula arytænoïdea medice*.

G. atrabilia'ris. (*L. ater*, black; *bilis*, bile.) A term applied to the *Adrenals*.

G. Avicen'næ. (*Avicenna*.) An old term for the disease called *Ganglion*.

G. Bartholia'na. (*Bartholin*.) A name of the sublingual gland.

G. basila'ris. (*L. basis*, a base.) The pituitary body, from its situation at the base of the brain.

G. buccalis inferior. (*L. bucca*, the cheek; *inferior*, lower.) A small salivary gland of the rabbit and other animals lying on the upper border of the outer surface of the body of the inferior maxillary bone, at the anterior edge of the masseter muscle; it has four or five ducts, which open opposite the first and second lower molar teeth.

G. buccalis superior. (*L. bucca*, the cheek; *superior*, upper.) A small salivary gland of the rabbit and other animals lying between the buccinator muscle and the buccal mucous membrane, and opening into the mouth near to the duct of the infraorbital gland.

GLANDULACEOUS—GLANDULÆ.

G. carot'ica. See *Carotid gland*.
G. col'li. (L. *collum*, the neck.) A term for the tonsil.

G. epigas'trica. (Ἐπιγαστρικόν, the region of the stomach.) A lymphatic gland occasionally found in the abdominal walls in the middle of the epigastric region.

G. foraminis obturato'rii. (L. *foramen*, a hole; *obturator*.) A moderately large constant lymphatic gland lying at the inner end of the obturator foramen.

G. Guido'nis. An old name for a gland-like tumour, soft, movable, without roots, and not attached to the neighbouring parts.

G. Harder'ia'na. See *Harder's gland*.

G. infraorbita'lis. (L. *infra*, beneath; *orbita*, the orbit.) A salivary gland of the rabbit and other animals lying in the lower and anterior angle of the orbit behind the root of the orbital process of the zygomatic bone and the anterior end of the lower lid. It opens by a fine duct on the mucous surface of the cheek near the third upper molar tooth.

G. innomina'ta. (L. *innominatus*, unnamed.) The *Caruncula lachrymalis*.

G. innomina'ta Gale'ni. (L. *innominatus*, unnamed; *Galen*.) The upper and chief part of the lachrymal gland.

G. intercarot'ica. See *Gland, intercarotid*.

G. lachryma'lis accesso'ria. The *Gland, lacrimal, accessory*.

G. lachryma'lis infe'rior. The *Gland, lacrimal, inferior*.

G. lachryma'lis palpebra'lis. The *Gland, lacrimal, palpebral*.

G. lachryma'lis supe'rior. The *Gland, lacrimal, superior*.

G. lacrima'lis. See *Lacrimal gland*.

G. lacrima'lis hydatoid'ea. (L. *lacrimalis*; *hydatid*. F. *hydatide de la glande lacrymale*; G. *die Wasserblase der Thränen-drüse*.) Term employed by Ad. Schmidt for hydatid in the lacrimal gland.

G. lactif'era. (L. *lac*, milk; *fero*, to bear. G. *Milchdrüse*.) The mammary gland.

G. lingua'lis. (L. *lingua*, the tongue.) The *Sublingual gland*.

G. lingua'lis Bartholinia'na. (L. *lingua*, the tongue.) The *sublingual gland*.

G. mam'mæ. The *Mammary gland*.

G. mamma'ria. The *Mammary gland*.

G. mandibula'ris superficia'lis. (L. *mandibula*, the jaw; *superficialis*, belonging to a surface.) A small, longish, salivary gland of the rabbit and other animals lying along the outer surface of the alveolus of the incisor teeth of the upper jaw.

G. maxilla'ris. (L. *maxilla*, the jaw.) The *submaxillary gland*.

G. orbita'ria. (L. *orbita*, an orbit.) The *Lacrimal gland*.

G. paro'tis. The *Parotid gland*.

G. pinea'lis. The *Pineal gland*.

G. pituita'ria. The *Pituitary body*.

G. pros'tata. The *Prostate gland*.

G. pros'tata mulie'bris. A name for the corpus glandulosum, or spongy eminence at the orifice of the female urethra.

G. Riviui'na. (Rivini.) The *sublingual gland*.

G. saliva'lis exter'na. See *Gland, salivary, external*.

G. so'cia parot'idis. The *Socia parotidis*.

G. sublingua'lis. See *Sublingual gland*.

G. submaxilla'ris. See *Submaxillary gland*.

G. thy'mus. See *Thymus gland*.

G. thyreo'idea. See *Thyroid gland*.

G. thyreo'idea accesso'ria supra-hyo'idea. (L. *accessus*, an approach; *supra*, above; *hyoid* bone. G. *Nebenschildrüse*.) A gland-like body situated, in about 14—18 per cent. of subjects, either in the median plane in front of the body of the hyoid bone, or above this bone, covered by the suprahyoid portion of the superficial lamina of the cervical fascia; or it may be situated laterally between the geniohyoid muscles. It is of yellowish or rosy hue, and is from 2—9 mm. in diameter. It may be converted into a cystiform body, which occurs in about 9 per cent. of cases. There are sometimes two such cysts.

G. tympanica. (Τύμπανον, a drum. G. *Paukendrüse*, *Paukenkneimendrüse*.) A small fusiform, vascular body situated on the tympanic branch of the glossopharyngeal nerve, or nerve of Jacobson, just after its entrance into the tympanic canal. It lies between the perineurium of the tympanic nerve and the periosteum of the tympanic canal. It is about 4 mm. long, and is about 1 mm. thick. The artery supplying it is a tympanic twig of the ascending pharyngeal artery. It contains some elastic tissue, a number of arteries and veins, a network of capillaries, a few nerves composed of pale nerve fibres, and occasionally ganglion cells and other variously formed cells, which sometimes contain yellow pigment. It seems to be the remains of the ramifications of a large embryonal branch of the stylo-mastoid artery which traverses the opening of the stapes; this branch is normal in some Cheiroptera, Insectivora, and Rodentia, and is an occasional variety in man. It also represents an involution or fold of the mucous membrane of the tympanic cavity or first branchial cleft.

Glandula'ceous. (L. *glandula*. G. *drüsenartig*.) Like to a gland.

Glandulæ. Plural of *Glandula*.

G. aggregatæ latera'les. (L. *aggero*, to heap together; *lateralis*, lateral.) A group of glands placed horizontally beneath the false vocal cord, at the lower border of the quadrangular arytaeno-epiglottic fold.

G. aggregatæ postero'ries. (L. *ag-gero*; *posterior*, behind.) A group of glands situated in the posterior wall of the larynx; the mucous membrane over them is arranged in vertical folds.

G. agmina'tæ. See *Agminated glands*.

G. ana'les. The mucous glands of the anus. Also, see *Glandula analis*.

G. antibra'chii. (Ἀντί, against; βραχίον, the arm.) Two or three small lymphatic glands occasionally found on the radial or the ulnar artery.

G. ap'icis lingua'e. (L. *apex*, the tip of a thing; *lingua*, the tongue.) The same as *Glands, Blandin's*.

G. arytaeno'ideæ. (*Arytaenoid* cartilage.) Acinous mucous glands on the hinder part of the arytaeno-epiglottic folds.

G. arytaeno'ideæ latera'les. (*Arytaenoid*; *lateralis*, belonging to the side.) Same as *G. arytaenoideæ*.

G. arytaeno'ideæ me'diæ. (*Arytaenoid*; L. *medius*, in the middle.) Acinous

GLANDULÆ.

mucous glands situated behind the cartilages of Santorini, just above the point of crossing of the arytenoides obliqui muscles.

G. assistentes. See *Assistentes glandule*.

G. aureola' res. (L. *aureolus*, golden.) The glands in the areola of the mammary gland.

G. axilla' res. The *Axillary glands*.

G. bronchia' les. The *Bronchial glands*.

G. Brunneria' nœ. See *Brunner's glands*.

G. Brunnia' nœ. Same as *Brunner's glands*.

G. bucca' les. See *Buccal glands*; and also *Glandula buccalis inferior*, and *G. buccalis superior*.

G. cardi' acœ. See *Glands, cardiac*.

G. ceru' minis. The *Ceruminous glands*.

G. cerumino' sæ. The *Ceruminous glands*.

G. cervica' les me' diœ. The *Glands, cervical, median*.

G. cervica' les profun' dœ inferio' res. (L. *profundus*, deep; *inferior*, lower.) The *Glands, cervical, deep, lower*.

G. cervica' les profun' dœ superio' res. (L. *superior*, upper.) The *Glands, cervical, deep, upper*.

G. cervicis u' teri. (L. *cervix*, the neck; *uterus*, the womb.) The *Ovula Nabothi*.

G. concatena' tœ. See *Glands, concatenate*.

G. congloba' tœ. See *Conglobate glands*.

G. congrega' tœ Monro' ii. (L. *congregatus*, gathered together.) The palpebral portion of the lachrymal gland. The *Glandula lachrymalis inferior*.

G. corona' penis. (L. *corona*, a crown; *penis*, the male organ.) The sebaceous glands of the corona penis; the glands of Tyson.

G. Cowpe' ri. See *Cowper's glands*.

G. Cowpe' ri femin' œ. (L. *femineus*, pertaining to a woman.) The vulvo-vaginal glands.

G. cubita' les profun' dœ. (L. *cubitus*, the elbow; *profundus*, deep.) The *Glands, cubital, deep*.

G. cubita' les superficia' les. The *Glands, cubital, superficial*.

G. cutis spira' les. (L. *cutis*, skin; *spira*, a coil.) The *Sudoriparous glands*, in reference to their position and form.

G. digesti' vœ. (L. *digestio*, a dissolving of food.) The *Gastric glands*.

G. duræ ma' tris. (L. *durus*, hard; *mater*, mother.) The glands of the dura mater; the *Pacchionian bodies*.

G. duræ meningis. (L. *durus*; *meninx*, a membrane.) The *Pacchionian bodies*.

G. epiglot' ticœ. See *Glands, epiglottic*.

G. facia' les profun' dœ. (L. *profundus*, deep.) The *Glands, facial, deep*.

G. facia' les superficia' les. The *Glands, facial, superficial*.

G. follicula' res lingua'. (L. *folliculus*, a small bag.) Same as *Glands, lingual*.

G. folliculi cilia' res. (L. *folliculus*; *cilium*, an eyelash.) The *Meibomian glands*.

G. fun' di. (L. *fundus*, the bottom.) Heidenhain's term for the *Glands, peptic*.

G. gena' les. (L. *gena*, the cheek.) The *Buccal glands*.

G. glomifor' mes. (L. *glomus*, a ball of thread; *forma*, shape. G. *Knäueldrüsen*.) The *Sudoriparous glands*, so called from their shape.

G. hepaticæ. ("Ἡπαρ, the liver. G. *Gallengangdrüsen*.) The racemose glands of the mucous lining of the bile ducts.

G. humera' riœ. (L. *humerus*, the bone of that name.) The *Glands, brachial*.

G. hypogastri' ci. See *Glands, hypogastric*.

G. inguina' les. The *Glands, inguinal*.

G. interarytænoideæ. (L. *inter*, between.) The *G. arytenoides mediae*.

G. intercartilagin' œœ. (L. *inter*, between; *cartilago*, cartilage.) The *Glands, tracheal*.

G. intestina' les. (L. *intestina*, the intestines.) Peyer's glands.

G. labia' les. See *Glands, labial*.

G. lactifera' aberran' tes. (L. *lac*, milk; *fero*, to bear; *aberro*, to wander.) The glands of the areola of the breast.

G. lactifera' accessor' iœ. (L. *lac*; *fero*; *accessus*, an approach.) The *G. lactifera aberrantes*.

G. lenticula' res. (L. *lens*, a lentil.) The mucous glands or lymph follicles of the intestinal canal.

G. lingua' les Ebne' ri. (Ebner, a German anatomist of the present time.) Acinous glands in the region of the papillæ circumvallatæ of the tongue which secrete saliva.

G. lingua' les posterio' res. See *G. linguales Ebneri*, and *Glands, lingual*.

G. Littr' i. See *Littre's glands of*.

G., lumbar' les. See *Glands, lumbar*.

G. lu' puli, G. Ph. (L. *lupulus*, the hop. G. *Hopfennehl*.) The same as *Lupulinum*, U.S. Ph.

G. lymphaticæ. The *Lymphatic glands*.

G. lymphaticæ cervica' les. See *Glands, cervical*, and its subheadings.

G. lymphaticæ lumba' les. See *Glands, lumbar*.

G. mediasti' nicæ posterio' res. The *Glands, mediastinal, posterior*.

G. min' imæ. (L. *minus*, least.) A synonym of *Lieberkühn's crypts*.

G. morifor' mes. (L. *morum*, a mulberry; *forma*, shape.) The same as *Acinous glands*.

G. mucip' aræ. (L. *mucus*, slime; *pario*, to produce. G. *Magenschleimdrüsen*.) The mucous glands of the stomach.

G. mucip' aræ racema' tim conges' tæ intestino' rum. (L. *mucus*, slime; *pario*, to produce; *racemus*, a cluster; *congestus*, pressed together; *intestina*, the intestines.) A term for Peyer's glands.

G. mucosæ. (L. *mucus*, slime.) See *Mucous glands*.

Also, the same as *Lieberkühn's crypts*.

G. mucosæ coagmina' tæ intestino' rum. (L. *mucosus*, mucous; *coagminatus*, collected in a heap; *intestina*, the intestines.) A term for Peyer's glands.

G. mucosæ lingua' les. The *Glands, lingual*.

G. mucosæ palpebra' rum. (L. *mucus*; *palpebra*, the eyelid.) The mucous glands of the conjunctiva.

G. myrtifor' mes. The *Carunculae myrtiformes*.

G. odorif' eræ. (L. *odor*, a smell; *fero*, to bear.) Same as *Tyson's glands of*.

Also, the *Scent glands*.

G. odorif' eræ glandis. (L. *odor*, a

GLANDULAR—GLANDULOSE.

smell; *fero*, to bear; *glands*, a gland.) The sebaceous glands of the corona glandis of the penis. Same as *Tyson glands* of.

G. odorif'erae Tysoni. (L. odor; *fero*.) Same as *Tyson glands* of.

G. œsophageæ. See *Glands, œsophageal*.

G. Pacchio'ni. The *Pacchionian bodies*.

G. palati'næ. See *Glands, palatine*.

G. palpebra'les seba'cei. (L. *palpebra*, an eyelid; *seba*, suet.) The *Meibomian glands*.

G. pancreat'ico-liena'les. (*Pancreas*; L. *lien*, the spleen.) The *Glands, pancreatico-splenic*.

G. parotideæ. (Παρά, near; οὖς, the ear.) The lymphatic glands; called also *Glands, superficial*.

G. pelvi'næ. (Pelvis.) The *Glands, iliac, internal*.

G. pharyngeæ. See *Glands, pharyngeal*.

G. præputia'les. (L. *præputium*, the foreskin.) The same as *Tyson glands* of.

G. pulmona'les. Same as *Glands, pulmonary*.

G. pulmonicæ. Same as *Glands, pulmonary*.

G. rena'les. (L. *ren*, the kidney.) The *Adrenals*.

G. rena'les inter'næ. (L. *ren*, the kidney; *internus*, within.) The *Malpighian corpuscles*.

G. rottil'erae. Same as *Kamala*, B. Ph., the powder which consists of the glands which cover the capsules of *Rottlera tinctoria*.

G. seba'ceæ. The *Sebaceous glands*.

G. seba'ceæ cilia'res. (L. *seba*, suet; *cilium*, an eyelid.) The *Meibomian glands*.

G. seba'ceæ glan'dis. (L. *seba*; *glands*, a gland.) The sebaceous glands of the corona of the glands penis.

G. seba'ceæ palpebra'rum. (L. *seba*; *palpebra*, the eyelid.) The *Meibomian glands*.

G. sociæ. (L. *socius*, associated.) A term for *Peyer's glands*.

G. solita'riæ. The *Solitary glands*.

G. splen'ico-pancreat'icæ. The *Glands, pancreatico-splenic*.

G. spu'riæ. (L. *spurius*, false.) A term applied to the ductless glands.

Also, applied to *Peyer's glands*.

G. sterna'les. See *Glands, sternal*.

G. sudorif'erae. See *Sudoriferous glands*.

G. suprarena'les. (L. *supra*, above; *ren*, the kidney.) The *Adrenals*.

G. tartaricæ. See *Glands, tartar*.

G. thorac'icæ profun'dæ. (L. *thorax*, the chest; *profundus*, deep.) See under *Glands, pectoral*.

G. thorac'icæ superficia'les. (L. *superficies*, the upper side.) See under *Glands, pectoral*.

G. thyreoïdæ access'o'riæ infe'rio'res. (L. *accessus*, an approach; *inferior*, lower.) Small accessory lobules occasionally found on the lower border of the thyroid gland.

G. thyreoïdæ access'o'riæ poste'rio'res. (L. *accessus*; *posterior*, hinder.) Small accessory lobules occasionally found on the posterior surface of the thyroid gland.

G. thyreoïdæ access'o'riæ supe'rio'res. (L. *accessus*; *superior*, upper.) Small

accessory lobules occasionally found on the upper border of the thyroid gland.

G. trachea'les. See *Glands, tracheal*.

G. tubulo'sæ. Same as *Glands, tubular*.

G. Tysonia'næ. See *Tyson's glands*.

G. urethra'les. See *Glands, urethral*.

G. uteri'næ. See *Uterus, glands of*.

G. vascula'res. See *Glands, vascular*.

G. vasculo'sæ. Same as *Glands, vascular*.

G. ventriculo'rum. (L. *ventriculus*, the stomach.) The mucous glands of the ventricles or sinuses of the larynx.

G. Vesalia'næ. See *Vesalius, glands of*.

G. vestibula'res. (L. *vestibulum*, a fore-court.) The vulvo-vaginal or *Bartholin's glands*.

Glan'dular. (L. *glandula*, a little gland. F. *glandulaire*; G. *drüsig*.) Of, or belonging to, a glandule, or gland. Resembling a gland in appearance, function, or structure.

G. ab'scess. See *Lymphatic glands, abscess of*.

G. ang'i'na. (L. *angina*, the quinsy.) A synonym of *Pharyngitis, follicular*.

G. ascites. (Ἀσκίτης, a kind of dropsy.) Dropsy of the belly caused by disease of the liver, kidneys, spleen, or lymphatic glands.

G.-cell'd carcino'ma. A term applied to the class of carcinomatous growths which are derived from the glandular epithelium of some organ; it includes the scirrhus and encephaloid cancers.

G. cur'rent. See *Current, glandular*.

G. disease' of Barba'does. Same as *Elephantiasis arabum*.

G. flux. (L. *fluxus*, a flowing.) An excessive flow of the normal secretion of a gland, such as the bile, milk, or sweat.

G. gran'ules. (L. *granula*, a small grain.) The *Malpighian corpuscles* of the spleen.

G. growths. The tumours described as *Adenoma*.

G. hairs. See *Hairs, glandular*.

G. hyper'trophy. See *Hypertrophy, glandular*.

G. ophthal'mia. See *Ophthalmia, glandular*.

G. paren'chyma. (Παρίγχυμα, anything poured in.) The tissue of a *Gland*.

G. tis'sue. The tissue or structure of a *Gland*.

In Botany, a term applied to the tissue which consists of vessels with concave depressions on their walls.

G. tumour. An *Adenoma*.

Glandula'tion. (L. *glandula*.) The mode of occurrence or presence of glands in plants.

Glan'dule. (L. *glandula*.) A small gland.

G., Malpi'ghian. (Malpighi.) The plexus of blood-vessels of a *Malpighian corpuscle*.

Glandulif'eros. (L. *glandula*; *fero*, to bear. G. *drüsentragend*.) Bearing glandules.

In Botany, applied to an organ which possesses glands or gland-bearing hairs.

Glanduliform. (L. *glandula*; *forma*, shape.) Having the appearance of a gland or glandule.

Glan'dulose. (L. *glandula*, a glandule, or gland. F. *glanduleux*; G. *drüsig*.) Having

GLANDULOSITY—GLASS.

numerous little elevations like glands; full of gland-like formations.

Glandulosity. (L. *glandula*.) A collection or assemblage of glands.

Glanduloso-carneous. (L. *glandula*; *carneus*, fleshy.) A term applied to certain excrescences of the mucous lining of the bladder by Ruysch.

Glanduloso-serate. (L. *glandula*; *serratus*, notched on the edge. G. *drüsig-gesägt*.) A term applied to a serrated leaf with glands on the serrations.

Glandulosum corpus. (L. *glandula*; *corpus*, a body.) The Prostate gland.

Glandulous. Same as *Glandular*. Also, same as *Glandulose*.

Glands. (L. *glands*, an acorn; akin to Gr. *βάλανος*, in which *β* replaces an original *γ*.) Same as *Gland*.

Also, a term for *Goitre*.

Also, a synonym of *Pessary*.

Also, a synonym of *Suppository*.

Also, in Botany (F. *gland*; I. *ghianda*; S. *belotta*; G. *Eichel*), a dry, hard, inferior, indehiscent, one-celled, or one- or two-seeded fruit often enclosed in a capsule; it is produced from a two- or more-celled ovary, having one or more ovules in each cell, all of which, except one or two, become abortive. Such is the acorn of the oak and the nut of the hazel.

Also, called *Balanus* and *Nut*.

G. clitoridis. (*Clitoris*. F. *gland du clitoris*; G. *Eichel des Kitzlers*.) The small imperforate outer end of the clitoris; it is of like structure to the *G. penis*.

G., earth. (F. *glands de terre*.) The tuberous roots of *Bunium bulbocastanum*, and of *Lathyrus tuberosus*.

G., Egyptian. (F. *noix de Ben*.) Ben nut, the fruit of *Guilandina moringa*.

G. jo'vis theophrasti. A name for the *Fagus castanea*, or Jupiter's acorn.

G. penis. (L. *penis*, the male member. F. *gland de la verge*; G. *Eichel der Ruthe*.) The outer bulbous or nut-like end of the penis. Its base projects circularly, forming the corona glandis, and its extremity is perforated by a vertical fissure, the orifice of the urethra. Its structure is the same as that of the corpus spongiosum; it is covered with a delicate, minutely papillated, fibrous-tissue membrane, bearing stratified pavement epithelium. The papillæ contain loops of capillary blood-vessels; the nerves form a plexus of non-medullated fibres near the surface bearing end-bulbs. It is developed about the third month of intra-uterine life.

G. pituitam excipiens. (L. *pituita*, phlegm; *excipio*, to take out.) The *Pituitary body*, so called because it was supposed to discharge phlegm from the nostrils.

G., sweet. The fruit of *Quercus ballota*, Dorf.

G. ulnæ. (L. *ulna*, the bone of that name.) The olecranon.

G. unguentaria. (L. *unguentum*, ointment.) The Ben nut, the fruit of *Guilandina moringa*.

The term has also been applied to the *Myrobalan*.

Glaphyr'ia. (Γλαφυρός, hollow; smoothed.) A Genus of the Nat. Order *Myrtaceæ*.

G. nitida. (L. *nitidus*, shining.) Leaves used as tea; called Bencoolen tea.

Gla'rea. (L. *glarea*, gravel. G. *Kies*.) Urinary sand.

Gla'reose. (L. *glarea*.) Growing in gravel.

Gla'ser, Jo'hann Hein'rich. A Swiss anatomist, born at Basel in 1629, died in 1675.

G., fis'sure of. See *Fissure*, *Glaserian*.

Glaser's polychrest salt. See *Sal polychrestus Glaseri*.

Glase'rian. Relating to *Glaser*.

G. fis'sure. See *Fissure*, *Glaserian*.

Glass. (Sax. *glæs*; a derivative of the old European base *gal*, from Aryan root *ghar*, to shine. G. *Glæs*; L. *vitrum*; F. *vitre*, *verre*; I. *vetro*; S. *vidrio*.) A hard, brittle, transparent, non-crystalline substance obtained by fusing together silica in some form, as white sand or quartz; an alkali, as purified potashes, refined soda-ash, or sodium sulphate; and calcium silicate in some form, as marble or limestone; with, in some varieties, lead or iron and metallic colouring matters. It is a mixture of silicates with excess of silica. Glass is insoluble in water and acids, and is capable of liquefaction by heat, assuming in the process of fusion all degrees of consistence.

G.-blowers, disea'ses of. Glass-blowers use a long tube, the end of which is dipped into a mass of molten metal. They then blow through the tube and expand the metal into a globe. When large globes or cylinders have to be blown the tube to which the mass of molten metal is attached is often passed from one workman to another to complete the expansion. The end is often rough, and hence their lips get cracked and fissured, whilst syphilis is sometimes communicated. The violent effort of blowing is said to produce pulmonary emphysema, and cardiac and renal disease is common.

G., Bohe'mian. A silicate of potash and lime, made from pure powdered quartz and purified potashes. It is very free from colour, is very little affected by chemical reagents, and bears a high temperature without softening. It is used for making combustion tubes and other chemical apparatus.

G., bottle. A silicate of soda and lime, with alumina and iron oxide, made from impure materials, such as coloured sand, the residual alkaline and earthy salts from gas works, common salt, and clay. It is harder and more infusible than crown glass, and more easily attacked by acids.

G., co-efficient of expansion of. The co-efficient of the cubical expansion of glass is obtained by deducting the co-efficient of the absolute expansion of mercury from that of its apparent expansion in glass, the result being the co-efficient of the expansion of glass, or '002584; it varies somewhat with different kinds of glass.

G., crown. A silicate of soda and lime made with sodium sulphate. It has a faint blue colour; it is harder than *G. Bohemian*, but is more fusible and more readily acted on by acids. Its sp. gr. is 2.535, and its refractive index for the D. line is 1.53.

G., devitrified. (L. *de*, from; *vitrum*, glass.) Glass which has assumed the character of porcelain in consequence of being heated strongly for a long time while surrounded by sand or gypsum, by which, as Reaumur originally thought, it took up some of its surround-

GLASSY—GLAUCOMA.

ings; or, as Lewis later suggested, some of its alkali was volatilised; or, as Pelouze taught, and is now believed, some of the silicates become crystallised.

G., flint. A silicate of potash and lead, of great lustre, and refracting powers. It is very fusible and easily attacked by acids. The purest is called *Crystal*, and is used for optical instruments. A variety with still higher refracting power is called *Strass*. The sp. gr. varies from 3·135 to 3·417, and the refractive index for the D line from 1·707 to 1·778.

G. gall. See *Gall, glass*.

G., green, common. Same as *G., bottle*.

G., Muscovy. A name of *Selenite*, or *Mica*.

G. of antimony. See *Antimony, glass of*.

G. of borax. The transparent solid mass into which borax cools after being liquefied above a red heat. It is used as a flux.

G., optical, heavy. The variety of *G.*, flint, called *Crystal*.

G., plate. Same as *G., crown*.

G. pox. A term for *Varicella coniformis*.

G.-rod cautery. (Καυτήριον, a branding iron.) A glass rod heated in a Bunsen's burner or other flame, and used for cauterising purposes.

G. snake. The *Ophisaurus ventralis*.

G., soluble. A solution obtained by melting silica with twice its weight of potassium or sodium carbonate, and dissolving in water; acids precipitate the silica in a gelatinous condition. See, for medical properties, *Sodium silicate*.

G., toughened. Glass heated till it softens, then plunged into melted wax, fat, bituminous substances, or paraffin, and allowed to cool slowly.

G., window. A term for *G., crown*, from its frequent use.

G. wool. Glass spun to a very fine fibre. Used in the filtration of acids.

G.-wort. The *Salsola soda*.

G.-wort, Allicant. The *Salsola sativa*.

G.-wort, jointed. The *Salicornia herbacea*.

G.-wort, snail-seed'ed. The *Salsola kali*.

Glas'sy. Relating or like to *Glass*.

G. membrane. A hyaline membrane immediately outside the outer root-sheath of the hair-follicle; it is continuous with the basement membrane of the skin.

G. swelling. Weber's term for amyloid infiltration.

Glas'tea bilis. (L. *glasteum*, the blue dye called woad; *bilis*, bile.) An old name for bile having a bluish colour.

Glas'tum. An old name for the *Isatis tinctoria*, or woad. (Quincy.)

Glauber, Johann Rudolf. A German chemist, born at Carlstadt in 1604, died at Amsterdam in 1688.

G.s salt. The sulphate of soda, which was first artificially made by Glauber in 1656.

G.s spirits of nitre. A synonym of *Nitric acid*.

Glaube'ri al'cahest. See *Aleachest glauberi*.

Glauberite. (Glauber.) Brogniart's term for oblique four-sided prisms of sulphate of soda and lime found in association with rock salt.

Glauce'do. (Γλαυκός, bluish, or sea-green.) The same as *Glaucoma*.

Glauc'es'cence. (Γλαυκός.) The state or condition of having a glaucous appearance.

Glauc'es'cent. (Γλαυκός. F. *glaucescet*; G. *graugrünlich*.) Of a greyish-green colour.

Glau'ic acid. (Γλαυκός, sea-green.) An acid obtained from *Glaucium luteum*, identical with *Fumaric acid*.

Also, a synonym of *Verdic acid*.

Glau'cin. An alkaloid of unknown composition discovered by Probst in the first year's leaves of *Glaucium luteum*. It assumes the shape of crystalline crusts formed of small nacreous tears; it is acrid and bitter to the taste, dissolves in alcohol and ether, with difficulty in cold water, and melts at 100° C. (212° F.) When heated with concentrated sulphuric acid it changes to a violet-blue colour.

Glau'cine. (Γλαυκός, sea-green.) A term for spontaneous cow-pox, in consequence of the greyish-blue colour of the vesicles.

Glau'cium. (Γλαυκός, a sea-green colour. F. *glacier*; G. *Hornmohn*.) A Genus of the Nat. Order *Papaveraceae*. The horned poppy.

G. cornicula'tum, Curt. (F. *glacier rouge*.) Seeds furnish by expression an odourless, tasteless, yellow oil, which is used for cooking purposes.

G. fla'vum, Crantz. (L. *flavus*, yellow. F. *pavot cornu, glacier jaune*.) The yellow horned poppy. Seeds and juice anodyne, afterwards purgative.

G. ful'vum, Loisel. (L. *fulvus*, tawny-yellow.) The *G. flavum*.

G. lu'teum, Scop. (L. *luteus*, yellow.) The *G. flavum*.

Glauco'ma. (Γλαύκωμα, from γλαυκός, gleaming. F. *glaucome*; I. *glaucoma*; S. *glaucoma*; G. *Glaucom, grüner Staar*.) A term for a disease of the eye in use from the very earliest times. The exact signification of the term as used by the ancients has been a subject of much discussion, based upon the true interpretation of its base-word γλαυκός, when used in reference to colour. By some, this is supposed to denote a greenish-yellow colour, and by others, a bluish-grey. Were the latter the real meaning glaucoma would seem to signify cataract, and were the former the true rendering it would probably signify some other diseased condition or conditions of the eye, such as those included under the term amaurosis in later times. According to Sichel, who has examined this question with great learning, the glaucoma of the ancients and their successors was cataract; and it was not until Brisseau, in 1705, established by his dissections the distinction between true glaucoma, or incurable cataract, as he called it, and ordinary cataract, showing that the former was a disease of the vitreous body, and the latter of the crystalline lens, that any one thought of connecting the word glaucoma with a deep-seated greenish opacity restricted to the vitreous body. Heister, in 1720, speaks of glaucoma as an incurable disease consisting of a glaucous opacity of the vitreous body, manifestly situated deeply behind the pupil at the back of the crystalline lens. Woolhouse, about the same time, described glaucoma in the same sense, noting especially the dilatation and irregularity of the pupil, the retraction of the iris, and the tortuosity and the

GLAUCOMA.

varicose condition of the conjunctival blood-vessels. Yet at this period other surgeons, such as Mèry, Taylor, and Palfyn, write of alterations of the structure of the crystalline lens as among the characteristics of glaucoma. Under this term Morgagni also, in 1740, included opacity of the lens, as well as opacity of the vitreous body. In 1776 Desmouneux mentions an alteration in the colour of the choroid as an accompaniment of the disease. In 1807 Autenrieth speaks of it as an affection of the choroid, probably of psoric origin; in 1825 von Beer looks to gout as a causative influence; in 1831 Fabini draws attention to the stony hardness of the eye, which Plattner had previously described, as characteristic of one form of the disease; in 1832 Fischer describes it as a chronic choroiditis, in which the ocular veins were the principal seat of the inflammation, in connection with a similar affection of the whole venous system, but especially of that of the abdomen; in 1841 Schröder van der Kolk considered that an inflammatory exudation from the choroid, between it and the retina, of a yellowish or whitish fibro-albuminous fluid constituted the essence of the disease; and in 1846 Tavinot found the origin of glaucoma in a functional disturbance of the ciliary nervous system. In 1851 Helmholtz made public his discovery of the ophthalmoscope, and within a few years it bore good fruit in the observations of Jäger as to the profound alteration of the optic nerve at its entrance and of the retina, observations which were confirmed by von Gräfe in 1854 as to the projecting appearance of the rim of the optic disc, to which he added pulsation of the central artery of the retina; and thus the proof of the individuality of the disease glaucoma as at present understood was completed.

Glaucoma may be described as a disease of the eye, characterised by increased tension of the globe and gradual impairment or loss of vision. It presents various forms.

In regard to the etiology of glaucoma, evidence has accumulated to show that the increased tension, which is the central feature of the disease, may be induced by various causes. Under ordinary conditions it is believed that the aqueous humour is secreted by the ciliary processes into the posterior chamber of the eye. From this chamber a current sets through the pupil into the anterior chamber; the fluid secreted escapes for the most part through the lacunar spaces forming the canal of Fontana, though there may be some other channels of discharge, and the quantity secreted and that draining away are equal. It is clear that if the quantity secreted be increased, or if some obstacle be presented to the escape of the fluid, an increase in the quantity of fluid in the chambers of the eye will result, and the tension of the globe be correspondingly augmented. Glaucoma is accordingly threatened or induced by increased blood pressure, whether local or general; by mitral disease and emphysema, causing venous stasis; by gout and rheumatism, which occasion vascular changes; by atheromatous arteries, which thus become converted into rigid tubes, which fail to equalise and extinguish the shock of the pulse wave.

Amongst the circumstances which may prevent the escape of the fluid, the chief are the approximation of the iris to the cornea, with narrowing or total obliteration of the canal of Fontana, adhesion of the iris to the lens, and enlargement

of the lens itself, pressing the iris forwards. A ready explanation is afforded of the bad effects of atropin solutions in eyes previously threatened with glaucoma, for in such cases the dilator of the iris contracting renders the iris thicker and still further interferes with the drainage of the anterior chamber, already more or less obstructed, and an explosion of glaucoma follows. The shallow anterior chamber naturally existing in hypermetropic eyes renders such persons especially liable to glaucoma. Physical changes, such as increased rigidity of the sclerotic, and enlargement of the lens with advancing age, have been assigned as causes of glaucoma. It is almost equally common in the two sexes, but occurs most frequently about fifty years of age, in those who have had much trouble, who have wept much, slept badly, suffered from confined or disordered bowels, who are hypermetropic, and who are of a gouty or rheumatic habit of body.

The pathological conditions which result from the excessive pressure are the pressing outwards and yielding of the retinal vessels and cribriform fascia, flattening of the vessels against the sclerotic ring, and atrophy of the peripapillary choroidal tissue.

The predisposing causes are unquestionably gout and rheumatism, leading to changes in the structure of the choroidal vessels, and perhaps to abnormal rigidity of the sclerotic.

In some instances, however, the attack is induced by hæmorrhage from the choroidal vessels.

G., ab'solute. (*L. absolutus*; from *absolvere*, to loose from.) The same as *G. consummatum*.

G., acute. (*L. acutus*, pointed. *F. glaucomæ aigu.*) The premonitory symptoms of an acute attack of glaucoma are chiefly subjective, the patient complaining of more or less frequent attacks of misty vision, of fogs and obscurations before the eyes, of gradually increasing presbyopia, vision for distant objects remaining good, whilst the near point gradually recedes, so that stronger and stronger glasses are required for reading, sewing, or other near work, of contraction of the field of vision, of coloured sparks, bright flashes of light and other luminous appearances, or photopsiæ before the eyes, of haloes and coloured rings round candles and lamps. There is constant or intermittent increase of tension. More or less headache and shooting pains in the temple, brow, and nose are experienced. The media are often hazy. The disc may or may not be cupped.

The symptoms during an attack may also be divided into the subjective and the objective. The subjective are pain, which is often very intense, insensitiveness of the cornea, and impaired vision, or complete loss of sight. The objective are increased tension, the eye feeling as hard in some cases as a marble, more or less conjunctivitis and chemosis, injection of the sclerotic, especially in the ciliary region, dulness and steaminess of the cornea, its polished surface appearing as if it had been breathed upon, a shallow anterior chamber, dulness of the iris, the markings on which become obscured, dilatation and immobility of the pupil, and cloudiness of the media. The fundus can be seen with difficulty or not at all. If visible the margins of the disc are often ill-defined, and it is possible that pulsation of the veins or of the arteries may be recognised. The symptoms, if no treatment be adopted, usually remit after some days, leaving the patient with impaired vision. A second

GLAUCOMA.

and a third attack may then supervene, and blindness with white atrophy of the optic nerve is the usual result.

G., angioneurotic. (*Ἀγγεῖον*, a vessel; *νεῦρον*, a nerve. *F. glaucome par angionévrose.*) Glaucoma arising from excess of secretion.

G., auricular. (*F. glaucome auriculaire.* Morisset's term for a disturbance of the organ of hearing, caused by excess of fluid in the labyrinth, which produces an auditory tension analogous to the ocular tension of glaucoma, and with similar results. Such are buzzings, giddiness, and variable deafness. The excess of tension may arise from external pressure, as by a mass of wax on the membrana tympani, or from circulatory disturbances.

G., chronic. See *G., inflammatory, chronic.*

G., chronic non-inflammatory. (*L. chronicus*, long-lasting; *non*, not; *inflammo*, to kindle. *F. glaucome chronique simple*; *I. glaucoma simpliciter cronico.*) The same as *G. simplex*.

G., collateral. (*L. collatero*, to admit on both sides. *F. glaucome collaterale.*) The same as *G., congestive*.

G. complicatum. (*L. complico*, to fold together.) Glaucoma occurring in cases of detached retina or intraocular hæmorrhage, or after the extraction of the lens.

G., confirmed. (*L. confirmo*, to strengthen.) Glaucoma when fully developed or expressed.

G., congenital. (*L. con*, together with; *genitus*, born. *G. angeborenes Glaucom.*) Term applied by Michel to the state of increased intra-ocular tension to which congenital hydrophthalmus is attributable.

G., congestive. (*L. congestus*, part. of *congero*, to accumulate. *F. glaucome congestif.*) Glaucoma due to general increase of arterial pressure.

G., consecutive. (*L. consequor*, to follow after. *F. glaucome consécutif.*) The same as *G., secondary*.

G. consummatum. (*L. consummo*, to perfect.) Glaucoma when the attack has subsided, but left the eye with increased tension and a cupped disc.

G. diabeticum. (*Diabetes.*) Term applied by Roster to a form of glaucoma occurring in association with diabetes.

G. evolutum. (*L. evolvo*, to roll out.) A pronounced or fully developed attack of glaucoma.

G. fulminans. (*L. fulmino*, to hurl lightning. *F. glaucome foudroyante.*) That form of glaucoma in which the symptoms supervene with suddenness and great violence, the pain being intense, the failure of vision rapid, and loss of sight almost certain, unless appropriate remedial measures are speedily adopted.

G. hæmorrhagicum. (*Ἀἱμορραγία*, hæmorrhage. *F. glaucome hæmorrhagique.*) Glaucoma associated with retinal hæmorrhage. The retina becomes thickened, chiefly owing to serous infiltration and to hæmorrhages. The hæmorrhages chiefly run in the direction of the vessels, and in the internal molecular layer and the internal fibrous layer. The arteries appear as whitish lines, their coats being affected with sclerosis, and sometimes present millary aneurysmal dilatations. The veins are full. The choroid is irregularly pigmented, the small arteries and capillaries dilated and gorged with

blood. The conjunctival elements are in a state of proliferation. The sclerotic is thickened. The media of the eye are often hazy. Cupping of the disc is sometimes slight or absent, at others well marked. The symptoms are amblyopia, with scotomata corresponding to the hæmorrhages, which may be seen with the ophthalmoscope. After a certain period of quiescence, which may be prolonged for some months or years, an acute attack of glaucoma supervenes. The prognosis is always bad, and enucleation is often necessary to relieve pain.

G. imminens. (*L. imminens*, threatening.) The premonitory stage of glaucoma, in which the patient has photopsia, obscurations, haloes round light, increased tension of the globes, periodical or occasional impairment of vision, and sometimes cupping of the disc, with intermissions when vision is more or less perfectly restored.

G. inflammatorium. (*L. inflammo*, to inflame.) The same as *G., acute*.

G., inflammatory, acute. (*L. acutus*, sharp-pointed; *inflammo*, to inflame.) The same as *G., acute*.

G., inflammatory, chronic. (*L. chronicus*, long lasting; *inflammo*, to kindle. *F. glaucome inflammatoire chronique.*) Glaucoma in which the general symptoms caused by increased pressure are accompanied with redness of the sclerotic and general congestion of the globe of the eye. The cornea is slightly steamy, its sensibility diminished; the aqueous humour often turbid; the pupil dilated; the anterior chamber shallow, owing to the iris being pressed forwards; the visual power diminished. It may either, owing to some exciting cause, suddenly develop into an attack of acute glaucoma, or it may lead to white atrophy of the optic discs, attended with more or less cupping of the disc.

G. malignum. (*L. malignus*, evil.) Glaucoma persisting or becoming more intense after iridectomy.

G., mechanical. (*Μεχανικός*, mechanical. *G. mechanisches Glaucom.*) Glaucoma the cause of which is to be sought in mechanical conditions interfering with the current of blood or lymph through the eye.

G. myopicum. (*Myopia.*) Glaucoma occurring in myopic eyes.

G., nervous. (*L. nervus*, a nerve. *G. nervosæ Glaucom.*) Glaucoma in which the cause of the disease is referable to vaso-motor influence affecting the flow of fluids through the eye.

G., ophthalmic. (*Ὀφθαλμός*, the eye. *F. glaucome ophthalmique.*) Glaucoma arising from some cause resident in the eye itself.

G. periodicum. (*Περιοδικός*, returning at stated times.) Typical glaucoma, or glaucoma recurring at regular intervals.

G., primary. (*L. primus*, first.) Glaucoma proceeding from vascular changes in the choroid, ciliary processes, and iris, or to the enlargement of the lens, which, according to Priestley, occurs with advancing years. In either case the intra-ocular tension is increased, owing to obstruction or obliteration of the filtration channels at the periphery of the anterior chamber.

G., primitive. (*L. primus*, first.) The same as *G. simplex*.

G., prodromic. (*Πρόδρομος*, going before. *F. glaucome prodromique.*) Term em-

GLAUCOMATIC—GLEDITSCHIN.

ployed by De Wecker to include the symptoms which are premonitory of an attack of glaucoma. The principal symptoms are the appearance of smoke or fogs before the eye, haloes or rainbows round lights, increased tension of the globe, great reduction of the amplitude of accommodation, hazy cornea, sometimes pulsation in the vessels, and some subacute inflammatory symptoms.

G., secondary. (*L. secundarius*, belonging to the second class. *F. glaucoma secondaire*.) Term applied to glaucoma when it is the result of some antecedent inflammation or other lesion of the eye. The most noticeable of these are panniform keratitis, staphyloma of the cornea, congenital hydrophthalmia, anterior sclero-choroiditis, inclusion of the iris in cicatrices of the cornea, serous iritis, posterior synechia, injury or dislocation of the lens, posterior sclero-choroiditis, hæmorrhagic choroiditis, syphilitic retinitis, tumours, injury by cuts, and especially by puncture in the ciliary region.

G. simplex. (*L. simplex*, simple.) Glaucoma occurring without inflammatory symptoms, though the presence of increased tension is manifested by cupping or excavation of the optic disc, which is generally of porcellaneous whiteness. The vision is greatly reduced or altogether lost.

G. simplex cum inflammationē intermittenē. (*L. simplex*; *cum*, with; *inflammatio*, inflammation; *intermittit*, to leave off for a time.) In this form whilst there is, as a rule, constantly excessive tension of the globe, inflammatory attacks supervene.

G., v. Græfe's forms of. v. Græfe recognised three forms of glaucoma. In the first the whole sequence of glaucomatous symptoms at once arises, and consecutively degeneration of the optic nerve is visible by the ophthalmoscope. In the second the lesion of the optic nerve is the first striking symptom, the other glaucomatous signs being only feebly marked, though they may subsequently attain their typical development. In the third form there is throughout only the degeneration of the optic nerve.

Glaucomat'ic. (*F. glaucomatique*.) Of, or belonging to, *Glaucoma*.

Glaucomatose. (*Γλαύκωμα*.) Same as *Glaucomatous*.

Glaucomatous. (*Γλαύκωμα*.) Having, or affected with, *Glaucoma*.

A term applied to an eye which presents an increase of tension and more or less amblyopia.

G. excavation. (*L. excavatio*, to hollow out.) The cupping or hollowing of the optic disc seen in glaucoma.

Glaucophyllous. (*Γλαυκός*, sea-green; *φύλλον*, a leaf.) Having leaves of a sea-green or azure colour.

Glaucopierin. (*Γλαυκός*, sea-green; *πικρός*, bitter.) A white, bitter, crystalline substance obtained by Probst from the root of *Chelidonium glaucum*. It is soluble in hot water and in alcohol, slightly so in ether. It is also found in the root of *Glaucium luteum*.

Glaucosis. (*Γλαύκωσις*, blindness from glaucoma.) The origination of *Glaucoma*. Also, blindness from *Glaucoma*.

Glaucotin. Probst's term for a product of the decomposition of chelerythrin when treated with hydrochloric acid.

Glaucous. (*Γλαυκός*, sea-green, or blue colour. *F. glauque*; *G. blaugrün*, *bläulich-grün*,

grünlich-blau, *meergrün*, *graugrün*.) Of a grey or bluish green colour, sea-green, approaching to green; hoary.

In Botany, covered with a bloom.

Glaur'a. A term by Paracelsus for amber.

Glaux. (*Γλαύξ*.) The name of a marine plant, mentioned by Dioscorides, which was used to excite the secretion of milk. It has been supposed to be the milk vetch, *Astragalus glycyphyllos*; and also, perhaps with less reason, the *Glaux maritima*.

Also, a Genus of the Nat. Order *Primulaceæ*.

G. maritima. Linn. (*L. maritimus*, belonging to the sea. *G. Milchkraut*.) Used as a pot herb and a salad, to increase the secretion of milk.

G. vulgaris. (*L. vulgaris*, common.) The *Astragalus glycyphyllos*.

Glaze. (*Glass*.) To furnish with glass; to assume a glassy appearance.

Glazed. (*Glaze*.) Furnished with glass.

Also, applied to a bright shining surface.

Glazing. (*Glaze*.) The being furnished with a glazed surface.

G. of wounds. See *Wounds*, *glazing of*.

G., poisonous. Ironware is occasionally glazed with a glaze containing lead and arsenic in a form soluble in weak acids. The presence of these metals may be recognised by boiling it in dilute nitric acid and applying the usual tests to the acid liquid.

Gle'ba. (*L. gleba*, a clod.) The nucleus or tissue lying within the peridium of the sporiferous apparatus of some *Gastromycetes*, in which the spores are produced.

Gle'bulæ. (*L. glebula*, a small clod.) A term used in Botany for small crumb-like masses.

Glecho'ma. (*Γλήχων*, pennyroyal. *G. Gundermann*.) A Genus of the Nat. Order *Labiata*.

G. hedera'cea. Linn. (*L. hedera*, ivy.) The *Nepeta glechoma*.

G. hirsuta. (*L. hirsutus*, hairy.) The *Nepeta glechoma*.

Glechon. (*Γλήχων*.) Old name, used by Hippocrates and Dioscorides, for the *Mentha pulegium*, or pennyroyal.

Also, a Genus of the Nat. Order *Labiata*.

G. spathula'tus. A diuretic and diaphoretic.

Glechoni'tes. (*Γλήχων*.) Old name for wine impregnated with the Glechon, or *Mentha pulegium*.

Gle'ditsch, Johann Gottlieb. A German physician and botanist, born at Leipzig in 1714, died at Berlin in 1786.

Gleditschia. (*Gleditsch*.) A Genus of the Nat. Order *Leguminosæ*.

G. brachycarpa. Pursh. (*Βραχύς*, short; *καρπός*, fruit.) Used as *G. triacanthos*.

G. ferox. (*L. ferox*, fierce.) The unripe fruit furnishes *Gleditschin*.

G. monosper'ma. Walt. (*Μόνος*, single; *σπέρμα*, seed.) Used as *G. triacanthos*.

G. triacanthos. Linn. (*Τρεῖς*, three; *ἄκανθα*, a thorn.) Hab. North America. The unripe fruit furnishes *Gleditschin*; the pulp of the fruit is used in bronchial catarrhs, and from it an intoxicating fermented liquor is made; the seeds are used to feed animals; the sap yields a sugar.

Gleditschin. An alkaloid contained in the unripe fruit of *Gleditschia ferox* and *G.*

triacanthos. It forms rhomboidal crystals, which are almost insoluble in water, soluble in alcohol and ether. Said to have a poisonous action.

Gleet. (Sax. *glidan*, to glide, to slip down gently, from the slow oozing of the discharge. *F. goutte militaire*; *I. scolo cronico*; *G. Nach-tripper*.) The last stage of gonorrhœa when it becomes chronic. It consists of a scanty discharge from the urethra, which may be of a gummy or a muco-purulent character; it produces no pain in passing urine, and depends on some chronic urethritis, or on vegetations of the mucous membrane, or on implication of the urethral glands, or on stricture, and is often the consequence of a strumous or gouty, or rheumatic disposition, especially when occurring in a delicate person.

Gleichenberg. Austria, Styria, in the circle of Gratz. Six warmish mineral springs, containing small quantities of sodium carbonate and chloride, with much free carbonic acid, and one of them, the Klausnerstahlquelle, a very little iron carbonate. Used in anæmia, serofula, lymphatic enlargements, acid dyspepsias, chronic catarrhal conditions of the respiratory and urinary mucous membranes, gout, and diabetes. They are often combined with milk or whey.

Gleichenia. (After Frau von Gleichen.) A Genus of the Nat. Order *Polypodiaceæ*.

G. Hermannii. Rhizome used as food.

Gleislibergbad. Austria, in the Tyrol, Circle Botzen. A cold sulphur spring.

Gleissen. Prussia, in Brandenburg, near Landsberg. Cold, weak iron waters with free carbonic acid. Used in anæmic conditions and as a calumative in neurotic and hysterical diseases. Mud baths are used, and the whey cure is also employed.

Gleisweiler. Bavaria, near Landau. A cold water, containing a small quantity of sodium chloride and some free carbonic acid. The whey and grape cure are also employed.

Glemé. (Γλήμη.) The gummy mucus of chronic inflammation of the tarsal edge of the eyelid, or *Lippitudo*.

Also, a synonym of *Lippitudo*.

Glenac. France, Département du Cantal. A chalybeate spring, containing much carbonic acid.

Glen'dye. Scotland, in Kincardineshire. A chalybeate water.

Glené. (Γλήνη, the pupil of the eye.) The pupil of the eye.

Also, the front part of the eye.

Also, the eyeball itself.

Also, the socket of the eye.

Also, the crystalline lens.

Also (γλήνη, a shallow joint-socket), a shallow cavity for the articulation of a bone.

Glenitis. (Γλήνη.) Inflammation of the crystalline lens.

Glenocercaia. (Γλήνη, a socket; κέρκας, a tail.) A larval form of a trematode worm.

G. fla'va. De la Valette. (*L. flavus*, yellow.) The same as *Monostomum flavum*, Mehlis.

G. lophocer'ca. de Filippi. Found in *Bythinia tentaculata*.

Glenoid. (Γλήνη, a shallow joint-cavity; είδος, likeness.) Resembling a pit, or cavity.

G. cavity. (*F. cavité glénoïde*; *G. Gelenkgrube*.) A shallow cavity on a bone for the reception of a projection or prominence of another bone to form a joint.

G. cavity of scap'ula. (*F. cavité glénoïde d'omoplate*; *G. Gelenkhöhle des Schulterblatt*.) A shallow, pyriform, articular surface on the head of the scapula, looking outwards, forwards, and slightly upwards, for articulation with the head of the humerus; the narrower end is uppermost, and is marked for the attachment of the long head of the biceps; and to its border is attached the glenoid ligament.

G. cavity of temporal bone. Same as *G. fossa of temporal bone*.

G. fac'ets. (*F. facette*, dim. of *face*.) Three convex articular surfaces on the external surface of the shoulder-girdle of some fishes for the articulation of the three chief divisions of the fin.

G. fissure. The *Glaserian fissure*.

G. fos'sa. (*L. fossa*, a trench.) Same as *G. cavity*.

G. fos'sa of temporal bone. (*F. cavité glénoïde du temporal*; *G. Gelenkgrube des Schläfenbeins*.) A fossa situated between the anterior and middle roots of the zygoma of the temporal bone; it is bounded in front by the eminentia articularis and the anterior root of the zygoma, behind by the vaginal process, and externally by the auditory process and the middle root of the zygoma. It is divided into two parts by the Glaserian fissure; the anterior part, covered by cartilage, articulates with the condyle of the lower jaw; the posterior part lodges a portion of the parotid gland.

G. lig'ament of phalan'ges. Cruveilhier's term for the anterior ligaments of the metacarpophalangeal articulations.

G. lig'ament of scap'ula. (*L. ligamentum*, a band. *F. bourrelèt glénoïdien*; *G. Pfannenlippe*.) A triangular, fibrous rim, 16" thick, attached to the edge of the glenoid cavity of the scapula, and deepening it.

G. surface. Same as *G. cavity*.

Gleu'cinum. (Γλεύκος, must.) Old term (*Gr. γλεύκινον*), for an ointment mentioned by Galen, *de C. M. per Gen.* vii, 14, in which must was used as an ingredient; a simpler form was also proposed by Dioscorides, 1, 6.

G. o'leum. (*L. oleum*, oil.) An infusion of several aromatics in wine and olive oil.

Gleucom'eter. (Γλεύκος, must; μέτρον, a measure.) An instrument for measuring the amount of sugar in the must of wine.

Gleu'cos. (Γλεύκος.) Must; a sweet wine.

Gleu'cose. (Γλεύκος.) Same as *Glucose*.

Gleu'is. (Γλεύκος, sweet wine.) Old name for a certain sweet wine, or wine that has much must mixed with it.

Gliacoc'cus. (Γλία, glue; κόκκος, a kernel.) The gelatinous envelope which Billroth's *Coccobacterium septicum* develops when in process of multiplication.

Gliadin. (Γλία, glue. *G. Pflanzenleim*.) A name for one of the constituents of vegetable gluten. It is obtained by evaporating the alcoholic solution of gluten from which mucin has been separated. It is a yellowish glazy substance which absolute alcohol and ether change to a friable earthy mass. It is soluble in diluted alcohol of 40° to 80°, which solution becomes milky on the addition of absolute alcohol or water, and flocculent on the addition of ether. It is soluble in weak alkalis and diluted acetic and tartaric acids. With sulphate of copper and potassium the saturated solution of gliadin in

GLIDE—GLOBE.

acetic acid gives no appreciable violet coloration except after boiling.

Also, Gmelin's term for *Hæmatin*.

Ritthausen gave the name to a vegetable gluten containing sulphur.

Glide. (Mid. E. *gliden*; Sax. *glidan*; G. *gleiten*. F. *glisser*; I. *scorrere*.) To slide; to move smoothly.

Gliding. (*Glide*.) Moving smoothly.

G. joint. A form of diarthrosis in which the articular surfaces of the bones are nearly flat, and have only a sliding motion between each other.

G. motion. (F. *glissement*; G. *Verschlebung*.) The movement of the bones of a joint which consists in the slipping of flat surfaces upon each other without any angular or rotatory motion, as in the movements of the carpal and tarsal bones on each other.

Glioma. (Γλία, glue.) Virchow's name for a tumour originating from, and largely consisting of, the neuroglia cells of the central nervous system, especially of the brain, and sometimes of the spinal cord. A glioma has an ill-defined outline and a softish feel; it may be grey and translucent, or whitish or reddish and more opaque; it is generally solitary, and may be a small granule on the surface of the ventricles, or a large mass in the nervous substance. It consists of a finely reticulated or felted mass of glistening filaments, branching processes of cells, the oval nuclei of which are numerous and very visible, but which themselves, with their small amount of protoplasmic contents, can only be seen in the fresh state or after staining; some cells contain several nuclei; it is fairly vascular, sometimes freely supplied with vessels, which are sacculated or dilated, and which frequently have given way, so that a clot is formed. Degeneration, both fatty, mucoid, and caseous, may occur. It has been supposed by Klebs that glioma grows from the ganglion cells, but this view is not generally accepted. It is a variety of rounded-cell sarcoma.

G. myxomatodes. Same as *Gliomyxoma*.

G., retinal. A soft tumour, having many of the characters of glioma, growing from the retina, filling up the eyeball or breaking through the cornea. The cells are some of them simple and some of them branched. By some this tumour is looked on as a sarcoma.

G. sarcomatodes. Same as *Gliosarcoma*.

G., teleangiectatic. (Τηλη, far; ἀγγειον, vessel; ἐκτασις, dilatation.) A form of glioma characterised by the presence of numerous vessels.

Gliomata. (Γλία.) The tumours of connective tissue described by Virchow under the term *Glioma*.

Gliomyxoma. A term applied to those tumours which present the characters both of a *Glioma* and a *Myxoma*, that is to say, proceed from, and, when mature, contain numerous neuroglia cells, whilst at the same time the ground substance is translucent and traversed at intervals by fibres. Such tumours have been seen in the central organs of the nervous system. See also *Sarcoma mucosum*.

Gliosarcoma. A term applied to those tumours which resemble both a *Glioma* and a *Sarcoma*, that is to say, develop from and contain numerous neuroglia cells, whilst they also con-

tain rounded or fusiform sarcoma cells and fine fibres situated between the cells; such tumours are found in the central organs of the nervous system. See also *Sarcoma gliosum*.

G. retinæ. A retinal glioma which has the appearance of a sarcoma. See *Glioma, retinal*.

Glîres. (L. *glis*, a dormouse.) Same as *Rodentia*.

Glirina. (L. *glis*.) Same as *Rhizophaga*.

Glischrasma. (Γλίσχρασμα, gluten.) Viscidity, stickiness.

Glischrocholous. (Γλίσχρος, viscid; χολή, bile. F. *glischrochole*.) That which is glutinous and bilious.

G. stools. Applied to the alvine evacuations which have these characters.

Glis'chroid. (Γλίσχρος; εἶδος, likeness. F. *glischroïde*; G. *kleberähnlich*.) Resembling, or of the nature of, that which is viscous, or glutinous.

Glis'chron. (Γλίσχρος, glutinous.) A name for gluten.

Glis'chrose. (Γλίσχρος, viscous, or glutinous. F. *glischreux*; G. *klebrig, schleimig*.) Having, or full of, gluten, or viscosity; viscous; glutinous.

Glis'chrotes. (Γλίσχρότης, tenacity.) Term for tenacity, or viscosity.

Glis'chrotic. (Γλίσχρότης, tenacity.) Of, or belonging to, gluten.

Glis'chrous. (Γλίσχρος, glutinous, or viscous. F. *glischreux*.) Of, or belonging to, gluten; glutinous; viscous.

Glis'chrum. Same as *Glis'chron*.

Gliscomargo. Old name for white chalk. (Ruland and Johnson.)

Glis'son, Francis G. An English physician, born at Rampisham in Dorset in 1596, died at Colchester in 1677. He was Regius Professor of Medicine in the University of Cambridge, and at one time Professor of Anatomy in the Royal College of Physicians of London.

G., capsule of. (L. *capsula*, a small bag. G. *Glisson'sche Kapsel*.) A strong sheath of areolar tissue which surrounds the portal vein, the hepatic artery, and the hepatic duct, at the transverse fissure of the liver, and in diminished thickness accompanies their branches some distance into the substance of the organ; it serves also to form incomplete septa between the lobules.

Glis'ten. (Sax. *glisian*.) To shine, to glitter.

Glis'tening. (Sax. *glisian*.) Shining, glittering.

Glis'ter. Same as *Clyster*.

Glob ber'ries. The fruit of the yew, *Taxus baccata*.

Glob'ate. (L. *globus*, a ball. F. *globé*; G. *kugelförmig*.) Ball-shaped.

Glob'ba. A Genus of the Nat. Order *Zingiberaceæ*.

G. nu'tans. Linn. (L. *nutans*, nodding. F. *globbée pendante*.) Hab. Moluccas, West Indies. A decoction of the root is used in menorrhagia and leucorrhœa.

G. sylvest'ris. Rumph. (L. *syvestris*, belonging to a wood.) The *G. nutans*.

G. unifor'mis. Rumph. (L. *unus*, one; *forma*, form.) Hab. West Indies. A decoction of the root is used in diarrhœa, and the fruit is employed in colic.

Globe. (F. *globe*; from L. *globus*, a ball.

GLOBI—GLOBULE.

I. globo ; **S. globo** ; **G. Kugel**.) A round body ; a sphere.

G. crowfoot. The *Trollius europæus*.

G. daisy. The *Globularia vulgaris*.

G.s. epidermic. Same as *Cell-nests*.

G. flower. The *Trollius europæus*, from the shape of its heads.

G. flower, mountain. The *Trollius europæus*.

G., hyster'ic. See *Globus hystericus*.

G. light'ning. See *Lightning, globe*.

G., ocular. (*L. oculus*, the eye.) The eyeball after the separation of its muscles and outer connections.

G. of segmenta'tion. Same as *G., vitelline*.

G., organ'ic. Same as *G., vitelline*.

G. ranunculus. The *Trollius europæus*.

G. this'tle. The *Echinops sphærocephalus*, from the shape of its heads.

G. this'tle, little. The *Echinops ritro*.

G., uterine. (*L. uterus*, the womb.) The rounded mass of the womb felt in the hypogastric region immediately on delivery and for ten or twelve days afterwards, until it has resumed its normal size.

Also, the pregnant womb.

G., vitelline. The granular cells resulting from the earlier processes of segmentation of the ovum.

Globi. Plural of *Globus*.

G. martia'les. (*L. Mars*, iron.) The *Ferrum tartaratum*, obtained by mixing one part of iron filings and two parts of cream of tartar, and formed into small balls for convenience of swallowing.

Globif'erous. (*L. globus* ; *fero*, to bear.) Bearing a globe or ball. Applied to insects which have bulbous-ended antennæ.

Glob'in. Preyer's term for the proteid which is formed, along with hæmatin, when a solution of hæmoglobin is boiled or treated with strong acids, or with absolute alcohol. It contains no inorganic matter, is insoluble in water, and swells up without dissolving in solutions of common salt or sodium hydrate. It is probably a mixture.

Globoceph'alus. (*L. globus*, a globe ; *Gr. κεφαλή*, the head.) A sexually mature form of nematode worm.

G. longemucrona'tus, Molin. (*L. longus*, long ; *mucronatus*, pointed.) Found in the intestines of *Sus scrofa*.

Globoids. (*L. globus*, a ball ; *Gr. εἶδος*, likeness.) Small, round bodies composed of a double phosphate of calcium and magnesium, the latter base in excess, frequently found embedded in *Aleurone grains*.

Globose. (*L. globus*. *F. globuleux* ; *G. geballt, kugelig, kugelrund*.) Round like a ball.

Globular. (*L. globulus*, a small ball. *F. globulaire*.) Like to a globule ; composed of globules.

In Botany, not quite *Globose*.

G. den'tine. (*G. Körnerschicht des Zahnbeins*.) A layer of dentine, presenting rounded masses, lying immediately beneath the enamel.

G. light'ning. Same as *Lightning, globe*.

G. spu'ta. See *Sputa, globular*.

Globular'e'tin. C_9H_9O . The purgative principle of the *Globularia alypum* and *G. vulgaris*. It is a resinous substance, tasteless when pure. It acts on the kidneys as well as on the

bowels, increasing the quantity of the solid constituents of the urine, and for this reason has been recommended where a fit of gout is impending.

Globula'ria. (*L. globus*, a globe ; from the appearance of its flower. *F. globulaire* ; *G. Kugelblume*.) The French daisy. A Genus of the Nat. Order *Selaginaceæ*.

G. alypum, Linn. (*ἄλυστος*, without pain. *F. globulaire turbith* ; *G. dreizühnige Kugelblume*.) The Montpellier turbeth, wild senna ; the leaves are used in Spain for syphilis ; used also in intermittents. It is said to be a powerful but safe cathartic. It was formerly called *Frutex terribilis*.

G. frutico'sa, Tournef. (*L. fruticosus*, shrubby.) The *G. alypum*.

G. monspeliensum. The *G. alypum*.

G. nudicaulis, Linn. (*L. nudus*, naked ; *caulis*, a stem.) Hab. Germany. Purgative.

G. vulga'ris, Linn. (*L. vulgaris*, common. *F. globulaire commune*.) Purgative, resolvent, and vulnerary.

Globula'riæ. A Tribe of the Nat. Order *Selaginaceæ* ; or a Family of irregular flowered, anisostemonous, hypogynous, gamopetalous Exogens, including only the Genus *Globularia*.

Globularin. $C_{15}H_{20}O_8$. A bitter glucoside obtained from the *Globularia alypum* and *G. vulgaris*. It is an uncrystallisable resinous substance, slightly soluble in water, freely in alcohol, ether, and chloroform, and having an acid reaction.

Globularires'in. $C_{20}H_{35}O_8$, a doubtful estimation. The pleasant smelling resin of the leaves of *Globularia alypum*. It is an olive-green substance, soluble in alcohol and ether.

Also, a synonym of *Globularetin*.

Globularitan'nic acid. The tannic acid obtained from *Globularia alypum*.

Globule. (*L. globulus*, a small ball. *F. globule* ; *I. globetto, globettino* ; *S. globulo* ; *G. Kugelchen*.) A small globe ; a small rounded body.

In Biology the word is applied to many minute spherical or rounded structures, such as the corpuscles of pus, lymph, or blood, the spores of ferns or minute fungi, and such like.

In Botany, a term applied to the male reproductive organs or antheridia of Characeæ, which grow at the base of the branches below or alongside of the nucule. Each globule consists of eight flat cells, called *Shields*, the four at the distal pole are triangular, the basal four being quadrangular ; from the middle of the inner face of each shield a cylindrical shell, the *Manubrium*, projects inwards, bearing on its extremity a roundish hyaline cell, the *Capitulum*.

Also, applied to the antheridia of carposporous Thallophytes.

In Pharmacy, a small pill or pilule is called a globule.

G.s. blood. The red and white blood-corpuscles. See under *Blood*.

G.s. chyle. See *Chyle-corpuscles*.

G.s. colostrum. Same as *Colostrum corpuscles*.

G.s. cy'toid. See *Cytoid globules*.

G.s. den'tine. See *Dentinal globules*.

G.s. direc'tive. (*L. dirigo*, to set in a straight line. *F. globules de direction* ; *G. Richtungsbläschen* of Van Beneden.) The polar globules ; so called because they influence segmentation.

GLOBULI—GLOBUS.

G.s, ganglion. The cells of grey nerve-tissue, from their occurrence in ganglia.

G.s, hæmatic. (*Αἷμα*, blood. F. *globules hématiques*.) The blood-corpuscles.

G.s in pulp. Spherical detached masses of dentine occasionally found in the tooth-pulp of adults.

G.s, lymph. See *Lymph corpuscles*.

G.s, milk. See *Milk globules*.

G.s, mu'cous. See *Mucus corpuscles*.

G.s, mu'cus. (L. *mucus*, slime.) The corpuscles of mucus. See *Mucus corpuscles*.

G.s of crystalline lens. (F. *globules du cristallin*; G. *Linsenkugeln*.) The layer of cells covering the anterior surface of the lens, and situated beneath the anterior capsule of the lens.

G.s of direc'tion. See *G.s, directive*.

G.s of Morga'gni. The same as *G.s of crystalline lens*.

G.s, organoplas'tic. (*Organ*; Gr. *πλάσσω*, to form.) The embryonal cells.

G.s, pale. The white corpuscles of the blood.

G.s, polar. (L. *polus*, an axle. F. *globules polaires*; G. *Polarzellen*.) Robin's term for certain spheroidal bodies, one or two or more in number, which appear in the transparent zone of an ovum undergoing segmentation, and which are detached particles of the germinal vesicle, lying upon the spheres of segmentation, which have become extruded from it at one pole, whence their name.

G.s, pus. See *Pus globules*.

G.s, py'oid. See *Corpuscles, pyoid*.

G.s, red. The red corpuscles of the blood.

G.s, transpa'rent. Same as *Blood corpuscles, transparent*.

G.s, white. The white corpuscles of the blood.

Glob'uli. Plural of *Globulus*.

G. arteria'rum ter'mini. (L. *arteria*, an artery; *terminus*, a boundary.) Nichol's term for the acini of a gland.

G. lent'is. The *Globules of crystalline lens*.

G. lymphatic'i. The *Lymph corpuscles*.

G. mamilla'res. (L. *mamilla*, a small teat.) The *Corpora albicantia*, from their appearance.

G. martia'les. Same as *Globi martiales*.

G. medulla'res. (L. *medulla*, marrow.) The *Corpora albicantia*.

G. mercuria'les. Globules composed of an amalgam of mercury and tin. Used formerly to purify water by boiling them in it.

G. sangui'nis. (L. *sanguis*, the blood.) The blood corpuscles.

G. tar'tari ferrugino'si. (L. *ferrum*, iron.) Same as *Globi martiales*.

G. tar'tari martia'les. (*Tartar*.) Same as *Globi martiales*.

G. tar'ta'tis fer'ri et lixiv'ia'e. (L. *ferrum*, iron; *lixivia*, lye.) Same as *Globi martiales*.

G. vagina'les. (*Vagina*.) Large oval or spherical capsules of gelatin containing some drug for introduction into the vagina.

Globulim'eter. (L. *globulus*, a small ball; Gr. *μέτρον*, a measure.) An instrument for measuring the number of the red corpuscles or globules in the blood, based on the differences of tint of a mixture of blood and solution of

carbonate of soda according to the greater or less number of red corpuscles present.

Globulin. A proteid contained in blood, the crystalline lens, the cornea, connective tissue and other structures. It may be obtained as a granular deposit by passing carbonic acid gas through blood-serum, or a filtered aqueous solution of the crystalline lens. It is insoluble in water, soluble in oxygenated water, and in dilute neutral saline solutions. A solution of globulin becomes opalescent at 73° C. (163.5° F.), and deposits at 93° C. (199.4° F.) It is precipitated from its solution by alcohol and carbonic acid gas. The term was used by Mùlder and Berzelius.

Also, called *Crystallin*.

Also, Donnè's term for the white granulated corpuscles of chyle.

Also, Lecanu's term for hæmatosin, in that it is contained in the red blood-globules.

Also, Turpin's term for chlorophyll grains.

Globulins. The bodies of which *Globulin* is the type. They are insoluble in water, but are dissolved by a one per cent. solution of sodium chloride, from which, with the exception of vitellin, they are precipitated, both by stronger solutions of salt and by the addition of a large quantity of water. They consist of globulin or crystallin, vitellin, myosin, fibrinogen, and fibrinoplastin.

Globulism. (*Globule*.) A term for homœopathy, because of the use of small globules in the administration of remedies.

Globulose. (L. dim. of *globus*, a ball.) Like a small ball or sphere.

Glob'ulous. Same as *Globulose*.

Globulus. (L. dim. of *globus*, a ball.) A little ball, a globule. Same as *Globule*.

Also, an old name for a round, movable, slightly painful tumour in the lip.

G. Aran'tii. Same as *Arantii corpora*.

G. hystericus. See *Globus hystericus*.

G. na'si. (L. *nasus*, the nose.) The tip of the nose.

G. pall'idus. (L. *pallidus*, pale.) The internal and middle paler zones of the lenticular nucleus of the corpus striatum.

G. sanguin'eus. (L. *sanguineus*, bloody.) The first moving red point of the early embryo.

Also, called *Punctum saliens*.

G. stap'edis os'sis. (L. *stapes*, the bone of that name; *os*, a bone.) The *Os orbiculare* of the inner ear.

Glob'us. (L. *globus*, a round ball. F. *globe*; G. *Kugel*, *Ball*.) A ball, or globe.

G. hystericus. (*Hysteria*. F. *globe hystérique*; G. *hysterische Kugel*.) The choking sensation, as of a lump in the throat, felt by hysterical persons. It is not unusual for the sensation to commence apparently in the epigastrium, or even in the lower part of the abdomen, and gradually to rise into the throat so as to produce the choking sensation. It is probably caused by irregular spasmodic contractions of the œsophagus or the pharyngeal muscles.

Ewald regards it as the result of an abnormal irritation of the nerves of the mucous membrane of the œsophagus, or a visceral paræsthesia. Others, as Jolly, consider it to be a disturbance of the motor nerves with antiperistalsis. Globus has occasionally been observed as a kind of aura in epilepsy.

G. ma'jor. (L. *major*, greater. G. *Kopf des Nebenhodens*.) The upper and larger end or

GLOCHIDEOUS—GLOMERULUS.

head of the epididymis consisting of the collected conical vasculosa.

G. minor. (L. *minor*, less. G. *Schwanz des Nebenhodens*.) The lower and more pointed end or tail of the epididymis.

G. pallidus. (L. *pallidus*, pale.) The inner and middle paler zones of the *Nucleus lenticularis*.

G. uterinus. (L. *uterus*, the womb.) The hard round lump in the hypogastrium after delivery, formed by the firmly contracted uterus.

Glochideous. Same as *Glochidiate*.

Glochid'iate. (Γλωχίς, the point of a dart. F. *glochidié*; G. *widerkakig*, *angelbors-tig*.) Barbed like a fish-hook; applied to hairs of plants.

Glochid'ium. (Dim. of γλωχίς, any projecting point.) A projection from the gills of the mussel, which is now known to be the young.

Glochinate. (Γλωχίς, the point of a dart.) Same as *Glochidiate*.

Glochis. (Γλωχίς, the point of a dart. F. *glochide*; G. *Angel*, *Widerhake*.) A sharp or barbed point.

In Botany (G. *Angelborste*), applied to a bristle-like hair turned backwards at its point into two or more straight teeth.

Gloiocarp. (Γλοιός, any sticky stuff; καρπός, fruit.) The quadruple spore of some Algæ.

Gloiopel'tis. (Γλοιός, any sticky stuff; πέλις, a shield.) A Genus of the Order *Flo-ridææ*.

G. tenax. Kutz. (L. *tenax*, holding fast.) A species from which Japanese isinglass is obtained.

Glome. (L. *glomus*, a ball of thread.) A rounded mass.

In Botany, a round head of flowers.

See also *Glomus*.

G. of frog. Bracey Clark's name for the two rounded, elastic eminences, separated by a cleft, which form the posterior extremity or base of the frog of the horse's foot. They cover the angles of inflexion of the wall of the foot, and are continuous with the perioplic band.

Glo'mer. (L. *glomus*, a clue of thread.) Old term for a conglomerate gland.

Glomer'ate. (L. *glomero*, to wind round. F. *gloméré*; G. *genauelt*, *zusammengeballt*.) Applied to glands that are formed of a clue, as it were, of sanguineous vessels having an excretory duct but no cavity. Same as *Con-glomerate*.

Also, in Botany, crowded together; congregated; gathered into a round head or *Glomerule*.

Glomerated. Same as *Glomerate*.

Glomera'tion. (L. *glomus*.) Heaping into a roundish mass.

An old term for a tumour.

Glom'rose. (G. *knäuelig*.) Same as *Glomerate*.

Glomer'ulate. (L. *glomerulus*. F. *glomerulé*.) Possessing, or arranged in, the form of a *Glomerulus*.

Glom'erule. (L. dim. of *glomus*. F. *glomerule*; G. *Knäuel*.) A small round mass.

In Anatomy, applied to a rounded congeries of blood-vessels, as the glomeruli of the kidney.

In Botany (G. *Blüthenknäuel*), a head or dense cluster of flowers, being a cyme with a few sessile or short pedicelled flowers, as in the box, *Buxus sempervirens*.

See also *Glomerulus*.

G.s of Ruysch. See *Ruysch*, *glomerules* of.

Glomer'ull. Plural of *Glomerulus*.

In Botany, powdery masses on the surface of some lichens.

G. Malpighii. See *Glomerulus* of *Malpighi*.

G. of kid'ney. See *Glomerulus* of *Malpighi*.

G. renales. (L. *ren*, the kidney.) The Malpighian corpuscles.

Glomeruli'tis. (*Glomerulus*.) Inflammation of the glomeruli of Malpighi and their capsule. It may occur in the acute or the chronic affections of the kidney, and may result in thickening of the capsule, with development of its epithelium, and a new formation of cells in the loops of the capillaries.

Glomerulo-nephri'tis. (L. dim. of *glomus*, a ball; Gr. *νεφρίτις*, inflammation of the kidney.) Klebs' term for a form of inflammation of the kidneys, in connection with scarlet fever, in which the interior of the Malpighian corpuscles is full of small angular nuclei resulting from the free proliferation of the connective-tissue corpuscles, and embedded in a finely granular ground substance. According to Waller, the cells are also derived from the diapedesis of leucocytes; nucleated cells are found also outside the capsule of the Malpighian corpuscles and around some of the arteries and small veins of the cortex, but the usual intratubular changes found in ordinary scarlatinal nephritis are not present, except in the immediate neighbourhood of the Malpighian corpuscles. In addition, many of the cortical capillaries are so stuffed with leucocytes that the circulation is much impeded, or it may be arrested. The tube-casts crowded with leucocytes described by George Johnson have their origin probably in glomerulo-nephritis.

Glomer'ulose. (L. *glomerulus*, dim. of *glomus*, a ball of thread.) Closely clustered like a *Glomerulus*.

Glomer'ulus. (L. dim. of *glomus*. F. *glomerule*; G. *Knäuelchen*.) A small round ball, especially consisting of a collection of vessels.

Also, applied to the convolutions of the fibres of the olfactory nerve which constitute the *Stratum glomerulosum*.

Also, a synonym of *Granule-cell*, or *Gluge's corpuscles*.

G. arterio-coccyge'us. The *Coccygeal gland*, from its shape, position, and structure.

G. arterio'sus coccyge'us. The *G. arterio-coccygeus*.

G. cauda'lis. (L. *cauda*, a tail.) The *Coccygeal gland*.

G. chorioideus. Same as *Glomus chorioideus*.

G., exter'nal. Same as *G. of Wolffian body*.

G. of kid'ney. Same as *G. of Malpighi*.

G. of Malpighi. (*Malpighi*. F. *glomerule vasculaire*; G. *Gefässknäuel*.) The spheroidal tuft of vessels in the Malpighian corpuscles of the kidney, being capillary blood-vessels derived from an afferent branch of an interlobular artery, which, after an intricately convoluted course, are collected into an efferent vein which emerges near the entrance of the artery.

GLOMULIFEROUS—GLOSSITIS.

G. of proneph'ros. (Πρό, before; νεφρος, the kidney.) A term originally applied by Balfour to the glomerulus of the Wolffian body before its true nature was made known by A. Sedgwick.

G. of Wolffian body. A vascular growth projecting into the series of peritoneal funnels which leads from the body-cavity into the lumen of the Wolffian tubules of the embryo of the chick.

G., peritone'al. (Περιτόνειον, the lining membrane of the abdomen.) The *G. of Wolffian body*.

Glomuliferous. (L. *glomus*; *fero*, to bear.) Bearing clusters of minutely branched, coral-like excrescences. (M. C. Cooke.)

Glomulus. Same as *Glomerulus*.

Glo'mus. (L. *glomus*, a ball of thread. F. *globe*; G. *Knäuel*.) A clue of thread. Also, swelling of the frog of the horse's foot. Also, the same as *Globus*.

G. chorioideus. (Choroid.) The convoluted mass of vessels of the choroid plexus at the entrance into the middle cornu of the lateral ventricle.

Glon'oin. A synonym of *Nitroglycerin*.

Glon'oine. Same as *Glonoin*.

Glonoi'num. Same as *Glonoin*.

Gloriade. A drink composed of a litre of water, ten grammes of ground roasted coffee, and fifty grammes of rum.

Glorianes. France, Département des Pyrénées Orientales. A cold, weak chalybeate water, containing some free carbonic acid.

Glorio'sa. A Genus of the Nat. Order *Liliaceæ*.

G. super'ba. Linn. (L. *superbus*, splendid.) Hab. India. Contains an acrid narcotic poison. The white farinaceous powder obtained from the root by bruising and repeated washing is used in Travancore as a remedy for gonorrhœa.

Gloss. (A Scand. word; Icel. *gossi*, a blaze.) Brightness, lustre.

Gloss'a. (Γλώσσα, the tongue.) The tongue.

Also, the faculty of speech.

Glossagra. (Γλώσσα, the tongue; ἄγρα, a seizure.) Violent pain occurring in the tongue.

Gloss'sal. (Γλώσσα.) Relating to the tongue.

Glossal'gia. (Γλώσσα, the tongue; ἄλγος, pain. F. *glossalgie*; G. *Zungenschmerz*.) Pain in the tongue.

Glossalgic. (Γλώσσα; ἄλγος. F. *glossalgique*.) Of, or belonging to, *Glossalgia*.

Glossalgy. Same as *Glossalgia*.

Glossanis'chon. (Γλώσσα, the tongue; ἀνέχω, to raise on high. F. *glossanischon*; G. *Zungenhochhalter*, *Zungenheber*.) An instrument for raising, or taking hold of, or holding up, the tongue.

Glossanis'chum. (Γλώσσα; ἀνέχω.) Same as *Glossanischon*.

Glossanoch'eus. (Γλώσσα; ἀνέχω.) Same as *Glossanischon*.

Glossan'ocho'n. (Γλώσσα; ἀνέχω.) Same as *Glossanischon*.

Glossan'thrax. (Γλώσσα, the tongue; ἄνθραξ, a burning coal. F. *glossanthrax*; G. *Zungencarbunkel*, *Zungenbrand*.) Carbuncle of the tongue, which is of rare occurrence in human beings, but is not unfrequent in some kinds of

domestic animals. It is said to be exceedingly malignant.

Glossarium. (Γλώσσα, the tongue.) The middle part of the proboscis of Diptera.

Glossa'ta. (Γλώσσα.) A synonym of *Lepidoptera*, in reference to the long proboscis.

Glossepiglot'tic. See *Glosso-epiglot'tic*.

Glossia'nus. (Γλώσσα, the tongue.) The lingualis muscle.

Glossi'na. A Genus of the Family *Muscidae*, Suborder *Brachycera*, Order *Diptera*.

G. mor'sitans. Westwood. (L. *morsito*, to bite.) The tsetse. Hab. Central Africa. It is a little bigger than the common fly, having large, yellowish eyes, a filiform, horizontal, sharp proboscis, a longitudinal striped thorax, and a yellow abdomen with black spots. Its bite is not dangerous to man or to wild animals, so it is said, but is most fatal to domestic cattle, sheep, horses, and dogs. The parts about the bite swell, the fat becomes soft, viscous, and yellow; and in a few days the animal dies with inflammatory congestions or gangrenes of the liver, heart, and lungs, and incipient putrefaction of the whole body. It has been supposed that the bite is serious by reason of septic infection, the fly having fed on putrid flesh, and having inoculated the putrefying juices.

Glossit'ic. (F. *glossitique*.) Of, or belonging to, *Glossitis*. Of, or belonging to, the tongue.

Glossitis. (Γλώσσα, the tongue. F. *glossite*; I. *glossite*, *glossitide*; S. *glositis*; G. *Zungenentzündung*.) Inflammation of the tongue.

G. circumscrip'ta partia'lis. (L. *circumscribo*, to enclose in a circle; *partialis*, from *pars*, a part.) A dense, firm exudation affecting a limited region of the tongue. It sometimes passes slowly into an abscess.

G. diffu'sa universa'lis. (L. *diffusus*, part. of *diffundo*, to spread; *universalis*, belonging to all.) A dense, firm exudation affecting the whole mass of the tongue. It is an acute febrile process.

G., dissec'ting. (L. *disseco*, to cut asunder.) A term applied to those cases of inflammation of the tongue in which the surface becomes fissured.

G., erec'tile. (L. *erigo*, to raise.) Salter's name for a form of inflammation of the tongue, in which there is enormous and rapid distension of the organ by blood, rendering it very large, hard, and stiff, so that respiration is performed with difficulty even through the nostrils. If free incisions are made, the blood escapes and recovery ensues.

G., gen'eral. A synonym of *G. diffusa universalis*.

G., gum'matous. (*Gumma*.) The development of syphilitic gummata in the substance or on the surface of the tongue. They arise from the connective tissue of the corium of the mucous membrane, or from that of the muscles.

G., mercu'rial. Severe inflammation of the tongue with swelling of an œdematous character. It has been occasionally observed as a result of the use of mercury, and has been known to terminate fatally.

G. metastat'ica. (Μετάστασις, a removing.) A form of glossitis said to occur in sep-

GLOSSO—GLOSSOLOGY.

ticæmia, and especially in typhus, smallpox, and puerperal fever.

G. mucosa. (L. *mucosus*, slimy.) Inflammation of the mucous surface of the tongue.

G. papillaris. (L. *papilla*, a nipple.) A swelling of one or more of the papillæ circumvallatæ occasionally observed in hysterical women.

G., papillary. (L. *papilla*, a nipple.) Inflammation of the papillæ of the tongue only; a rare form.

G. parenchymatosa. See *G. parenchymatous*.

G., parenchymatous. (Παρέγχυμα, anything poured in beside.) Inflammation of the substance of the tongue due to the severe administration of mercury, or of iodide of potassium, to exposure to cold and damp, or to the local influence of acrid or septic substances. The organ becomes red, swollen, and oedematous, livid in colour, dry and brown if it protrudes from the mouth, not very painful, but often producing great distress from the interference with breathing and swallowing. It may gradually subside, or may result in sloughing or in a circumscribed abscess, or in an increase of connective tissue with permanent hardening. The muscular fibres become swollen, pale and brittle.

G. profunda. (L. *profundus*, deep.) Same as *G., parenchymatous*.

G., seletrous. (Σκληρός, hard.) A manifestation of tertiary syphilis in the tongue, consisting of a circular or oval, indurated thickening of the mucous corium, which is infiltrated with small leucocytes, or of a lobulated thickening arising from the muscular tissue. Neither form gives rise to severe ulcerations.

G., superficial, chronic. The disease called *Leukoplakia*.

G., superficial, non-ulcerative. Simple inflammation of the mucous surface of the tongue.

G., ulcerative. Inflammation of the mucous surface of the tongue which proceeds to ulceration.

Glossa. (Γλῶσσα, the tongue.) A prefix signifying connection with the tongue.

Glossoblennotheca. (Γλῶσσα, βλήνη, mucus; θήκη, a sheath.) A mucous bursa under the tongue.

Glossocacé. (Γλῶσσα; κακός, bad.) A foul ulceration of the tongue with an enfeebled condition of body.

Glossocarcinoma. (Γλῶσσα; καρκίνωμα, cancer. F. *glosso-carcinome*; G. *Zungenkrebs*.) Cancer of the tongue.

Glossocardia. (Γλῶσσα; καρδία, the heart.) A Genus of the Nat. Order *Compositæ*.

G. Boswallæ. De Cand. Hab. India. A potherb tasting like fennel.

G. linearifolia. Cass. (L. *linea*, a line; *folium*, a leaf.) The *G. Boswallæ*.

Glossocatochus. (Γλῶσσα, the tongue; κατέχω, to hold. F. *glossocatoche*; G. *Zungenhalter*.) A term (Gr. γλωσσόκατοςχος) applied by Paulus Ægineta, vi, 30, as a name for an instrument for depressing the tongue, or a *Spatula lingue*. It was a kind of forceps, one end pressing on the tongue, the other placed under the chin.

Glossocèle. (Γλῶσσα; κήλη, a tumour. F. *glossocèle*; I. *glossocèle*; S. *glossocèle*; G. *Zungenbruch*.) Protrusion of the tongue from

the mouth in consequence of inflammatory swelling, hypertrophy, salivation, or other cause.

Glossocoma. (Γλῶσσα; κόμα, drowsiness.) A word said, probably erroneously, to be the same as *Glossospasmus*.

Glossocomeion. (Γλωσσοκομείον, a case to keep mouth-pieces; from γλῶσσα, the tongue; κομῶ, to take care of.) A box or case, mentioned by Galen and Foesius, in which to place a fractured limb.

Also, the female pudendum.

Glossodesmus. (Γλῶσσα; δεσμός, a band. G. *Zungenbandchen*.) The frænum of the tongue.

Gloss-epiglottic. (Γλῶσσα, the tongue; ἐπιγλωττίς, the epiglottis.) Relating to, or connected with, the tongue and the epiglottis.

G. folds. The folds of mucous membrane which runs backwards from the base of the tongue to the epiglottis; two are lateral, and one central, the latter is the largest, and is called the *Frænum epiglottidis*.

G. frænula. (L. *frænulum*, dim. of *frænum*, a bridle.) The *G. folds*.

G. ligament. (L. *ligamentum*, a band.) Same as *G. folds*.

G. muscles. The *G. folds*, on the assumption that they include some transverse muscular fibres.

G. plicæ. (L. *plica*, a fold.) The *G. folds*.

Gloss-epiglottidean. Same as *Gloss-epiglottic*.

Gloss-facial. (Γλῶσσα, the tongue; L. *facies*, the face.) Relating to the tongue and the face.

G. artery. The external maxillary artery with its branches.

Glossography. (Γλῶσσα; γράφω, to write.) A description of the tongue.

Glossohyal. (Γλῶσσα; hyoid bone.) Relating to, or connected with, the tongue and the hyoid bone.

A name for a median projecting process extending forwards from the basihyal, as seen in the horse and other animals, or a separate bone supporting the tongue in fishes; in man it is represented by the vertical ridge on the anterior convex surface of the body of the os hyoides.

Also, an old term for the posterior cornu of the hyoid bone.

Glossoid. (Γλῶσσα; εἶδος, likeness. G. *zungenförmig*.) Like to a tongue.

Gloss-labio-pharyngeal. (Γλῶσσα; L. *labium*, the lip; Gr. φάρυγξ, the gullet.) Relating to the tongue, the lips, and the pharynx.

G. paralysis. (Παράλυσις, a loosening by the side. F. *paralyse glosso-labio-pharyngée*.) See *Paralysis, glosso-labio-pharyngeal*.

Gloss-laryngeal. (Γλῶσσα; λάρυγξ, the opening of the windpipe.) Relating to the tongue and the larynx.

G. paralysis. See *Paralysis, glossolaryngeal*.

Glossology. (Γλῶσσα; λόγος, a discourse.) An account of the tongue.

Also, an account of the faculty of speech.

Also, De Caudolle's term for the section of Botany concerning the names of plants and their parts.

GLOSSOLYSIS—GLOSSOTOMY.

Also, an account of the terms used in any science.

Glossol'ysis. (Γλῶσσα; λύσις, a loos-ing.) Paralysis of the tongue from relaxation; also from apoplexy or hemiplegia.

Glossomantei'a. (Γλῶσσα; μαντεία, prophesying.) Prognosis of disease from a consideration of the condition of the tongue.

Glossomegis'tus. (Γλῶσσα; μεγισ-τός, greatest.) Great swelling, or enlargement, of the tongue.

Glosson'cus. (Γλῶσσα; ὄγκος, a mass. *G. Zungengeschwulst.*) A swelling of the tongue.

G. inflammato'rius. Inflammation with swelling of the tongue.

Glossopalatine. (Γλῶσσα; *L. palatum*, the palate.) Belonging to the glossopala-tine muscle or arch.

G. arch. The anterior arch of the fauces, situated between the palatoglossi muscles.

G. mus'cle. The *Palatoglossus*.

Glossopalati'nus. (*G. Zungengau-menmuskel.*) The *Palatoglossus*.

Glossopetalum. (Γλῶσσα; πέταλον, a flower-leaf.) A Genus of the Nat. Order *Celastraceæ*.

G. glabrum, Schreb. (*L. glaber*, smooth.) Hab. Guiana. Leaves used in ophthalmias and other inflammations; juice astringent.

Glossopharynge'al. (Γλῶσσα, the tongue; φάρυγξ, the throat.) Relating to, or connected with, the tongue and the pharynx.

G. mus'cle. See *Glossopharyngeus*.

G. nerve. (*F. nervf glossopharyngien*; *G. Zungenschlundkopfnerv.*) The ninth cranial nerve. It arises from its nucleus, a few fibres joining it from the solitary bundle, and, after traversing the medulla oblongata, issues by five or six filaments from the upper part of the groove between the olivary and the restiform bodies below the facial and auditory nerves, passes outwards in front of the flocculus to the middle part of the jugular foramen, where it lies in a groove or canal of the petrous bone, within a separate sheath of dura mater, in front of the pneumogastric and spinal nerves, and emerging thence between the internal carotid artery and the jugular vein, it is directed downwards between the artery and the styloid muscles to the posterior border of the stylo-pharyngeus, around which it curves and passes beneath the hyoglossus muscle to be distributed to the posterior part of the tongue. In the jugular foramen it presents the jugular and the petrous ganglia, and by means of its branches it supplies the mucous membrane of the tongue, pharynx, and middle ear and the stylopharyngeus muscle; and is connected with the inferior maxillary, the facial, the pneumogastric, and the sympathetic nerves. It is chiefly a nerve of taste where it is distributed to the base of the tongue and the soft palate; some part is a nerve of common sensation, and a few fibres are motor, chiefly, if not altogether, derived from the facial nerve; it is also said to be a vaso-dilator nerve.

G. nerve, nu'cleus of. (*L. nucleus*, a kernel.) The upper part of the column of gan-glion-cells lying at the outer and back part of the central canal, at the base of the posterior cornu in the lower part of the medulla oblongata which forms the nucleus of the pneumo-gastric and spinal accessory nerves also.

G. paral'ysis. See *Paralysis*, *glosso-pharyngeal*.

Glossopharynge'us. (Γλῶσσα, the tongue; φάρυγξ, the throat.) A term applied to those fibres of the superior constrictor muscle of the pharynx, which arise from the side of the tongue and the mucous membrane of the mouth.

Also, a term for the *Glossopharyngeal nerve*.

Glos'sophyte. (Γλῶσσα; φυτόν, a plant.) A vegetable parasite growing on the tongue.

Glossophy'tia. (Γλῶσσα; φυτόν. *F. langue noire.*) Dessoir's term for a dark dis-coloration of the tongue caused by fungoid growths, dead epithelium, and debris of food.

Glossople'gia. (Γλῶσσα; πληγή, a stroke. *G. Zungenlähmung.*) Paralysis of the tongue, being paralysis of the muscles supplied by the glossopharyngeal nerve. It occurs generally in hemiplegia from hæmorrhage or other mischief in the hemispheres and basal ganglia of the brain. It is frequently present in bulbar paralysis and in progressive muscular atrophy, occasionally in the later stages of locomotor ataxy and in those cases of sclerosis in which the ganglion cells of the hypoglossal nerve are affected. It may also result from injury to the nerve in fractures of the upper vertebrae and in wounds, and from the pressure of tumours. It may be unilateral or bilateral, partial or complete.

Glossopto'sis. (Γλῶσσα; πτώσις, a falling down. *G. Zungenvorfall.*) Protrusion of the tongue.

Glossor'raphy. (Γλῶσσα; ραφή, a stitching. *G. Zungenanath.*) The suturing of the tongue.

Glossorra'gia. (Γλῶσσα; ῥήγνυμι, to burst forth.) Severe bleeding from the tongue.

Glossoscir'rhus. (Γλῶσσα; σκίρρος, a hard tumour. *G. Zungenkrebs.*) Scirrhus cancer of the tongue.

Glossos'copy. (Γλῶσσα; σκοπῶ, to observe.) The inspection or observation of the tongue for the purposes of the diagnosis and the treatment of disease.

Glossosemeiot'ics. (Γλῶσσα; ση-μειῶ, to mark.) The signs of disease as ob-served in the tongue.

Glossospas'mus. (Γλῶσσα; σπασ-μός, a spasm. *F. glosso-spasme*; *G. Zungenkrampf.*) Spasm of the tongue.

Glossopath'a. (Γλῶσσα; σπάθη, a broad blade. *G. Zungenspatel.*) A flat, broadish instrument for depressing the tongue to facilitate the ocular examination of the throat or the ap-plication of remedies.

Glossostaphyli'nus. (Γλῶσσα; σταφυλή, the uvula.) A synonym of the *Palato-glossus muscle*.

Glossostere'sis. (Γλῶσσα; στερίω, to deprive. *F. glossostere'se*; *G. Ausschneidung der Zunge.*) Excision or extirpation of the tongue.

Glossostrophia. (Γλῶσσα; στρέφω, to turn.) The forcible turning of the tip of the tongue upwards and backwards, so as to produce suffocation.

Glossot'omy. (Γλῶσσα, the tongue; τέμνω, to cut. *G. Zungenschnitt.*) The dissec-tion of the tongue.

Also, the cutting out of the tongue. See *Tongue*, *removal of*.

GLOSSY—GLOUCESTER.

Glos'sy. (A Scandinavian word; Icel. *glossi*, a blaze.) Bright, shining, and smooth.

G. fingers. (G. *Glanzfinger*.) See *G. skin*.

G. skin. (G. *Glanzhaut*.) A peculiar thin, smooth, shining, reddened condition of skin, generally painful with a burning pain, and sometimes fissured or excoriated, usually seen in the hand, and caused by injury to the nerve which supplies it. It was first described by Paget as an accompaniment of certain intractable neuralgias, but had been previously noted by Denmark as following on an injury to the radial nerve by a bullet, and has been particularly observed by Weir Mitchell as a sequel of nerve-injury along with disturbances of nutrition of the nails, hairs, and subcutaneous connective tissue. According to Charcot, it is due to an inflammatory condition of the skin, akin to that which causes scleroderma.

G. toes. (G. *Glanzzehen*.) See *G. skin*.

Glossyepitrophia. (Γλωσση, the tongue; ὑπερ, above; τροφή, nutrition. F. *glossyepitrophie*; G. *Übernährung der Zunge*.) Hypertrophy or excessive enlargement of the tongue.

Glotta. (Γλωττα, the tongue.) The tongue.

Glottag'ra. (Γλωττα; ἄγρα, a seizure.) The same as *Glossagra*.

Glottalgia. (Γλωττα; ἄλγος, pain.) The same as *Glossalgia*.

Glottic. (Γλωττα, the tongue. F. *glottique*.) Of, or belonging to, the *Tongue*.

Also, belonging to the *Glottis*.

G. soufflé. (F. *soufflé*, breath.) The sound heard through the stethoscope over the neck produced by the passage of the air through the glottis in respiration.

Glottidospasmus. (Γλωττίς, the glottis; σπασμός, a spasm. F. *glottidospasme*; G. *Stimmritzenkrampf*.) Term for spasm of the glottis.

Glottis. (Γλωττίς, the mouth of the wind-pipe. F. *glotte*; I. *glotta*, *glottide*; S. *glotis*; G. *Stimmritze*.) The triangular opening in the middle of the larynx, the apex being in front where the vocal cords meet at the thyroid cartilage, the base being behind between the lower ends of the arytenoid cartilages, and the sides being formed by the true vocal cords. It may be closed by approximation of the vocal cords, partly closed, as in the production of the voice, when it is widest in the middle, or quite expanded when it is lozenge-shaped. In the adult male it is about 23 mm. long, and when fully expanded 12 mm. broad.

G., cartilag'inous. The posterior third of the aperture of the glottis formed by the bases of the arytenoid cartilages.

G., false. (F. *fausse glotte*.) The space between the superior or false vocal cords.

G., functions of. The chief use of the glottis is the production of the voice, which is accomplished by the air being driven with sufficient force over the free edges of the chink formed by the vocal cords to cause them to vibrate. It is also a protection against the entrance of foreign bodies into the trachea, for the exquisite sensibility conferred upon its mucous membrane by the superior laryngeal nerve enables the muscles closing it to respond to the slightest mechanical irritation. See *Voice* and *Vocal cords*.

G., infe'rior. (L. *inferior*, lower.) The *G., true*.

G., ligament'ous. The anterior two thirds of the opening of the glottis formed by the vocal cords.

G., ligaments of, infe'rior. The true or inferior vocal cords.

G., lips of. The true or inferior vocal cords.

G., œde'ma of. See *Larynx, œdema of*.

G., respi'ratory. (L. *respiro*, to breathe out.) The *G., cartilag'inous*.

G., ri'ma of. (L. *rima*, a cleft.) The interval between the true vocal cords as described under *Glottis*.

G., spasm of. A sudden paroxysm of apparent suffocation occurring in children under a year old, caused by the complete or almost complete closure of the glottis from spasm of the muscles, which may last from one to twenty seconds, when the child breathes again with short sonorous inspirations until a longer one terminates the paroxysm. During the attack the face is turgid and livid, the eyes are fixed, the mouth is open, and the head is drawn back. During, and often for some time before, the attack there may be spasmodic flexion of the feet and extension of the hands, and when severe it may be terminated by a genuine epileptic convulsion. The paroxysms may be single, or there may be several at short intervals, to be renewed after some days or weeks. The mortality is high, males are more frequently attacked than girls, and rickets is the chief predisposing cause. The attacks come on most frequently in cold weather. Some writers, as Ross, distinguish between spasm of the glottis and laryngismus stridulus, directing attention to the circumstances that laryngismus stridulus occurs in children over two years old, that in it the dyspnoea is more or less continuous, with a raucous cough, and that it is less fatal. Other writers use the two terms in the same sense. Spasm of the glottis is also known as internal convulsions.

G. spu'ria. (L. *spurius*, false.) The *G., false*.

G. supe'rior. (L. *superior*, upper.) The *G., false*.

G., true. The *Glottis*.

G., tu'bage of. (L. *tuba*, a trumpet. F. *tubage de la glotte*.) The introduction of a tube into the lumen of the larynx, suggested by Des-sault, for the purpose of keeping a free passage for the air in cases of croup, and so avoiding the need of tracheotomy. It has been recommended also in œdema of the glottis and laryngitis, but is not now practised.

G. ve'ra. (L. *verus*, true.) The *Glottis*.

G., vo'cal. (L. *vocalis*, speaking.) The *G., ligament'ous*.

Glottiscope. (Γλωττίς; σκοπέω, to observe.) Babington's term for the instrument which he invented in 1829, and which consisted of a small mirror attached to a wire shank, which was introduced into the back of the mouth and illuminated by the sun's rays or a mirror held in the left hand, so that a reflection of the glottis and the adjacent parts of the larynx could be seen in it. It was essentially the same instrument as the modern laryngoscope.

Glottitis. (Γλωττα, the tongue.) Same as *Glossitis*.

Gloucester. England, in the county of that name. There is here a saline water, con-

GLOUTIOUS—GLUE.

taining 50 grains of sodium chloride and 10 grains of sodium sulphate in the pint.

Gloutius. (Γλουτός, the buttock.) Same as *Gluteus*.

G. maximus et extimus. (L. *maximus*, greatest; *et*, and; *extimus*, outermost.) The *Gluteus maximus*.

G. secundus et medius. (L. *secundus*, second; *et*, and; *medius*, in the middle.) The *Gluteus medius*.

G. tertius et intimus. (L. *tertius*, third; *et*, and; *intimus*, innermost.) The *Gluteus minimus*.

Glove. (Mid. E. *gloue*; Sax. *glóf*; F. *gant*; I. *guanto*; S. *guante*; G. *Handschuh*.) A close-fitting cover for the hand.

G-shaped. Having the appearance of the finger of a glove, as the corolla of the fox-glove, *Digitalis purpurea*.

Glover. (*Glove*.) One who makes gloves.

G.s suture. See *Suture*, *glover's*.

Glow. (Mid. E. *glowen*; Sax. *glówan*; G. *glühen*; from a Teutonic base *glo*, through an older base from the Aryan root *ghar*, to shine.) To shine brightly, to burn with a bright light without flame.

G. discharge. The luminous discharge of electricity from the pointed conductor of an electric machine in vigorous action where the electrified particles of air stream away.

G., electrical. Same as *G. discharge*.

G. worm. See *Glow-worm*.

Glow-worm. (F. *ver-luisant*; G. *Jo-hanniswurm*.) The *Lampyrus noctiluca*. It was formerly thought to be lithontriptic.

Glucæmia. See *Glycæmia*.

Glucic. (Γλυκός, sweet.) Relating to sugar.

G. acid. $C_{12}H_{18}O_9$; or, according to Reichardt, $C_{12}H_{22}O_{12} = C_{12}H_{16}O_6 \cdot 3H_2O$. An acid resulting from the dehydration of glucose by alkalies, or by boiling it with dilute sulphuric acid. It is colourless, uncrystallisable, hygroscopic, and very soluble in water and in alcohol.

Glucina. (Γλυκός, sweet.) Same as *Berylla*.

Glucinic acid. Same as *Glucic acid*.

Glucinum. (Γλυκός.) Same as *Beryllium*.

Glucogen'esis. See *Glycogenesis*.

Glucogeny. See *Glycogenesis*.

Glucohæmia. See *Glycohæmia*.

Glucolig'nose. See *Glycolignose*.

Gluconic acid. $C_6H_{12}O_7$. An acid obtained by Hlasiwiz from the action of chlorine water on glucose or on cane sugar.

Glucosamides. Same as *Glycosides*.

Glucosan. $C_6H_{10}O_5$, or $C_{12}H_{20}O_{10}$. A slightly bitter substance obtained by heating anhydrous glucose to a temperature of 160° – 170° C. (320° – 338° F.), by which it loses two equivalents of water. It is dextrogyrous. When boiled with dilute acids it is again converted into dextrose.

Glucose. (Γλυκός, sweet.) $C_6H_{12}O_6$. Grape-sugar, dextrose. A variety of sugar found in grapes and other fruits, in honey, and in diabetic urine. It may be obtained from starch by the action of diastase, or by boiling with dilute sulphuric acid. It differs from cane-sugar in being less sweet, and less soluble in water and in alcohol; from water it crystallises in thin hexagons, which agglomerate into globular masses; from alcohol it is deposited in anhydrous micro-

scopic needle-like crystals, which melt at 140° C. (284° F.) Its solution turns the plane of polarisation of a light ray to the right, its molecular rotatory power being $+56^\circ$. Glucose is found in chyle, urine, liver, eggs, the allantoic fluid in greater or less quantity in the normal condition, and in the urine in diabetes. It is more properly called *Dextrose*. When injected into the veins or into the rectum it acts as a diuretic.

G. ferment. The ferment in the animal body which is instrumental in the conversion of glycogen into glucose. It is contained in the liver, and possibly results from the destruction of red blood corpuscles there, but it has not yet been isolated.

G. hydrate. $C_6H_{12}O_2 \cdot H_2O$. A granular, warty substance obtained from the watery solution of glucose.

G., ordinary. The substance described as *Glucose*.

G., tests for. Solution of glucose becomes brown, or blackish brown, when boiled with solution of potash, *Moore's test*. When heated with a cupric salt it reduces it, and throws down oxide of copper, *Trommer's test*, *Fehling's test*. It reduces salts of tin, *Mau-nièr's test*. It reduces bismuth nitrate, throwing down a black deposit, *Böttger's test*. It undergoes fermentation when yeast is added, *Yeast test*. Also, see *Indigo-carmin test* and *Picric acid test*.

Glucoses. (Γλυκός.) The sugars having the composition $C_6H_{12}O_6$. They are ordinary glucose, levulose, mannitose, galactose, inositol, sorbin, eucalyn, and dambosé.

Glucosides. (Γλυκός.) Vegetable substances which by boiling with dilute acids or alkalies, or by the action of ferments, are resolved into glucose and some other substance; they are very numerous, and include amygdalin, arbutin, chitin, convolvulin, myronic acid, salicin, and many others.

G., artificial. (L. *ars*, art; *facio*, to make.) Compound ethers formed by heating glucose to 100° – 120° C. (212° – 248° F.) with some organic acid, as acetic or benzoic. The natural glucosides have none of them, as yet, been made in this fashion.

Glucosis. (Γλυκός, sweet.) The condition of *Glycosuria*.

Glucosu'ria. See *Glycosuria*.

Glue. (Old F. *glu*, glue; from Low L. *glutina*, acc. of *glus*, glue. F. *colle*, *glu*; I. *glutina*, *colla*; S. *cola*; G. *Leim*.) An impure gelatin obtained by boiling the hides and hoofs of animals, straining the solution and evaporating sufficiently to produce a solid when cooled.

G. band'age. See *Bandage*, *glue*.

G. bone. The *Osteocolla*.

G.-bone stone. The *Osteocolla*, or bone-binder.

G., fish. A term for *Isinglass*.

G.-makers, disea'ses of. Dr. Goldie found in a colony of glue makers, numbering 1935 persons, the mean annual mortality was 35.6 per 1000, and that from the five zymotic diseases, smallpox, measles, scarlatina, fever, and diarrhoea, amounted to 9.12 per 1000. This high proportion has not been observed by others. But the boiling of the animal tissues from which glue is prepared produces very offensive gases.

G., marine. A mixture of shell-lac, eaoutchouc, and naphtha. Used for microscopic purposes in making shallow cells, or in fixing

GLUGE, GOTTLIEB G.—GLUTEAL.

glass rings for deeper cells, or for building up cells with glass plates for the mounting of objects.

G. plant. The *Plocaria tenax*.

G., vegetable. Same as *Gliadin*.

Glugé, Gottlieb G. A Professor in the University of Brussels, born at Brakel in Westphalia in 1812.

G.'s corpuscles. A term applied to the cells in inflammatory exudations described by Gluge as compound inflammatory globules. They are pus cells which have undergone fatty degeneration and become filled with fine granules of oily matter; they soon break up.

Gluma. Same as *Glume*.

Gluma'ceæ. (L. *gluma*, a husk of corn.) A Subclass of the Class *Monocotyledones*, including *Cyperaceæ* and *Graminaceæ*.

Gluma'ceous. (L. *gluma*. F. *glumacé*.) Of, or belonging to, or of the nature of, chaff, or a glume.

Glum'al. (L. *gluma*, a husk.) Relating to, or characterised by, a *Glume*.

G. alliance. Same as *Glumales*.

Gluma'les. An Alliance of Endogens, according to Lindley; or a Cohort of the Series *Glumifloræ*, having a unilocular ovary and an erect ovule.

Glum'ate. (L. *gluma*, a husk. F. *glumé*.) Having a *Glume*.

Glume. (L. *gluma*, a husk of corn; from *glubo*, to deprive of the bark. F. *glume*; I. *gluma*; S. *gluma*; G. *Balg*, *Deckspelze*.) The husk of corn or grass seeds; especially applied to the bract or bracts at the base of the spikelet of *Graminaceæ*, or at the base of the flowers of the *Cyperaceæ*.

Glum'ella. Same as *Glumelle*.

Glumelle. (L. dim. of *gluma*. F. *glumelle*; G. *Balglein*.) An inner, smaller, or secondary glume.

Glumellula. Same as *Glumellule*.

Glum'ule. (L. dim. of *gluma*. G. *Honigspelze*.) The scale or scales, having the nature of a bract, frequently found at the base of the ovary of grasses.

Glumif'eræ. (L. *gluma*; *fero*, to bear.) Same as *Glumaceæ*.

Glumifloræ. (L. *gluma*; *flos*, a flower.) An Order of the Series *Micranthæ*, having a spiked or panicle inflorescence without a spathe, inconspicuous flowers concealed by glumes, superior, small, one-seeded, dry, indehiscent fruit.

Glumose. (L. *gluma*. F. *glumoux*.) Having husky calyces; chaffy, or full of chaff.

Glut'a. A Genus of the Nat. Order *Terebinthaceæ*.

G. ben'ghas. Linn. The Kayo rangas of the Malays. The fresh juice is used as an irritant.

Glutæ'al. Same as *Gluteal*.

Glutæ'us. (Γλουτός, the buttock.) Of, or belonging to, the buttock. See *Gluteus*.

Glutaminic acid. Same as *Glutaminic acid*.

Glutamin. $C_5H_9NO_3 \cdot NH_3$. An amide of asparagin existing in beet root, in the shoots of the vetch, and the pumpkin, but not yet obtained pure.

Glutamin'ic acid. $C_5H_9NO_4 = C_5H_5(NH_3)(CO_2H_2)$. A substance obtained by Ritt-hausen from gluten and substances containing it, along with leucin and tyrosin. It occurs in brilliant, white, anhydrous, rhombic crystals, melting at 135° – 140° C. (275° – 284° F.), and at

a higher temperature decomposing with the production of yellow oily drops smelling of burnt horn. It is a dextro-rotatory substance.

Glutanic acid. $C_5H_9O_5 = C_5H_7(OH)(CO_2H)_2$. A substance obtained by acting on a watery solution of glutaminic acid with a current of nitrous acid gas. It crystallises with difficulty, and is levogyrous. Also called oxy-glutaric acid; it is the homologue of malic acid.

Glutar'ic acid. $CO_2H \cdot CH_2 \cdot CH_2 \cdot CH_2 \cdot CO_2H$. A crystalline substance obtained by heating glutanic acid with hydriodic acid. It crystallises in large monoelonic prisms, soluble in water, alcohol, and ether.

Glute'al. (Γλουτός, the buttock.) Relating to, or connected with, or belonging to, the buttock.

G. aponeuro'sis. (Ἀπονευρώσις, the end of a muscle.) The hinder and upper part of the fascia lata, which invests the gluteus medius and, after splitting, encloses the gluteus maximus.

G. arch. The aperture in the gluteal aponeurosis for the passage of the gluteal vessels and nerve.

G. artery. (F. *artère fessière*; G. *oberer Gesässschlagader*.) The continuation of the posterior division of the internal iliac artery; it passes backwards between the lumbo-sacral cord and the first sacral nerve, turns round the upper margin of the great sacro-sciatic foramen above the pyriformis muscle, and divides into a superficial part, which supplies the gluteus maximus and the integument over the sacrum, anastomosing with the posterior branches of the lateral sacral arteries; and a deep branch which subdivides into two, the upper of which supplies the gluteus maximus, and anastomoses with the external circumflex and deep circumflex iliac arteries, and the lower of which supplies the smaller gluteal muscles and the hip-joint, and anastomoses with the external circumflex and the sciatic arteries. In the pelvis the gluteal artery gives off branches to the pyriformis and obturator internus muscles, and the innominate bone.

G. artery, inf'erior. (G. *unterer Gesässschlagader*.) The *Sciatic artery*.

G. artery, sup'erior. The *G. artery*.

G. bur'sa. See *Bursa, gluteal*.

G. lymphat'ic glands. Several lymphatic glands which lie just above the pyriformis muscle upon the gluteal vessels as they pass through the great sacro-sciatic foramen.

G. nerve, inf'erior. (F. *nerf fessier inférieure, petit sciatique*; G. *unterer Gesässnerv*.) A branch from the lumbo-sacral cord and the first and second sacral nerves at the back of the sacral plexus; it supplies the gluteus maximus and sends a branch to the commencement of the small sciatic nerve.

G. nerve, sup'erior. (F. *nerf fessier supérieur*; G. *oberer Gesässnerv*.) A branch from the lumbo-sacral cord and the first sacral nerve, which leaves the pelvis, with the gluteal vessels, through the sacro-sciatic foramen above the pyriformis muscle, and divides into an upper branch, which supplies the gluteus medius, and a lower branch, which supplies the gluteus medius, the gluteus minimus, and the tensor vaginae femoris.

G. re'flex. See *Reflex, gluteal*.

G. ridge. The rough ridge of bone, formed by the prolongation of the external lip of the linea aspera to the great trochanter of the femur,

GLUTEN—GLUTEUS.

to which the *gluteus maximus* is attached. It is the representative of the third trochanter of the horse, rhinoceros, and other animals.

G. veins. Branches accompanying the gluteal arteries and joining the internal iliac vein.

Gluten. (L. *gluten*, glue. F. *gluten*; I. *glutine*; S. *gluten*; G. *Kleber*, *Pflanzenleim*.) The tenacious substance which remains after washing dough in a stream of water. According to Einhof, only part of this mass consists of gluten, which is soluble in alcohol; the remaining insoluble portion is identical with vegetable albumen. It consists of a soft, elastic mass which, when dried, becomes yellowish and brittle; when placed in water it swells up, and in water slightly acidulated with hydrochloric acid it ultimately dissolves; it is levogyrous. It putrefies easily, and then becomes liquid, giving off carbonic acid, hydrogen, and hydrogen sulphide, and forming, among other things, leucine and ammonium acetate and phosphate. It contains probably four albuminoid principles, gliadin, mucedin or mucin, gluten-fibrin, and gluten-casein.

G. amyloceum. (L. *amylum*, starch.) The gluten of flour.

G., animal. Frank's name for plastic lymph.

Also, a term for fibrin.

G. articulo'rum. (L. *articulum*, a joint.) A term for the synovia.

G. Beccaria's. (Beccaria, an Italian chemist.) The substance described as *Gluten*, so called from its discoverer.

G. bread. Bread made from wheat flour from which all the starch has been washed out. The gluten is made vesicular by the aid of compressed air or carbonic acid gas, and was first recommended by Bouchardat for use by diabetic persons.

G., com'mon. The substance described as *Gluten*.

G., determina'tion of. A weighed quantity of flour is made into a paste with water and kneaded on a muslin sieve under a stream of water till it ceases to give off a milky fluid; the crude gluten is left. The amount may also be determined by the *Aleurometer*.

G. fabril'e. (L. *fabrilis*, belonging to an artificer.) Glue.

G., gran'ulated. A mixture of wheat flour with gluten.

G. gran'ule. Same as *G., granulated*.

G. of tears. Same as *Daeryolin*.

G., pure. The part of common gluten which is soluble in boiling alcohol.

G., veg'etable. Ordinary gluten.

Gluten-casein. The *Pflanzenfibrin* of Liebig, the *unlösliches Pflanzenalbumin* of Berzelius. One of the constituents of gluten. It is obtained by digesting freshly made gluten, with alcohol of 60°, with alcohol of 80°, with absolute alcohol, and then with ether; the residue is dissolved in an aqueous solution of potash, filtered, precipitated by acetic acid, washed in water and in alcohol, and dried in a vacuum. It is a greyish, earthy substance, insoluble in boiling water, slightly soluble in alcohol acidulated with acetic or tartaric acid, soluble in alkalies. The alkaline solutions are precipitated by the metallic salts; sulphate of copper causes a blue precipitate, soluble in excess of potash, and producing a violet-blue solution. It contains in

100 parts, carbon 50.2, hydrogen 6.8, nitrogen 17.4, oxygen 24.1, and sulphur 1.5 parts.

Gluten-fibrin. One of the constituents of gluten, obtained by distilling a cold alcoholic extract of gluten to one half, so that the gliadin and mucedin are left; on cooling, the gluten-fibrin is deposited as a brown mass, which is purified by frequent washing in alcohol and in ether. It is a brownish-yellow, elastic substance, becoming horny when dried over sulphuric acid. It is insoluble in water, soluble in hot alcohol; in ammonia water it swells and forms a gelatinous, transparent mass. In 100 parts it contains carbon 51.7, hydrogen 7.5, nitrogen 15.6, oxygen 21.5, and sulphur .7 parts.

Gluten-pepton. The peptone of gluten.

Glutenoid. (*Gluten*; Gr. *εἶδος*, likeness.) Like to *Gluten*.

Glute'us. (Γλουτός, the buttock.) Relating to the buttocks.

The name of the muscles of the buttock.

G., deep. The muscle of Solipeds and other animals analogous to the *G. minimus* of man.

G. exter'nus. (L. *externus*, outward.) Percival's name for the *G., superficial*.

G. magn'us. (L. *magnus*, great.) The *G. maximus*.

G. maj'or. (L. *major*, greater.) The *G. maximus*.

G. maxim'us. (L. *maximus*, greatest. F. *grand fessier*; G. *grosser Gesässmuskel*.) A large, quadrilateral muscle which arises from the posterior fourth of the crest of the ilium, and from the rough surface between it and the superior curved line of that bone; from the posterior surface of the last two pieces of the sacrum and the first three pieces of the coccyx; from the posterior surface of the great sacro-sciatic ligament; and from the aponeurosis of the erector spinæ muscle; it is inserted into the fascia lata of the outer side of the thigh, and by a flattened tendon into the gluteal ridge.

Also, Bourgelat and Percival's name for the middle gluteus of Solipeds, the analogue of the *gluteus medius* of man.

G. me'dius. (L. *medius*, in the middle. F. *moyen fessier*; G. *mittlerer Gesässmuskel*.) A muscle which arises from the surface of the ilium between its superior and middle curved lines, from the outer lip of that portion of the crest which is between them, and from the part of the gluteal aponeurosis which covers it, and is inserted into the oblique impression on the outer surface of the great trochanter. It is an abductor of the thigh.

The name has been given by Pigot to the *G., superficial*; and by Bourgelat to the *G., middle*.

G., mid'dle. The muscle of Solipeds and other animals analogous to the *G. medius* of man.

G. min'imus. (L. *minimus*, least. F. *petit fessier*; G. *kleiner Gesässmuskel*.) A muscle which arises from the surface of the ilium between the middle and inferior curved lines, and is inserted into an impression on the anterior border of the great trochanter. It is an abductor of the thigh.

G. min'or. (L. *minor*, less.) The *G. minimus*.

The name has been given by Bourgelat to the superficial gluteus of Solipeds, which is the analogue of the *gluteus maximus* of man.

GLUTI—GLYCERIDES

G. quartus. (L. *quartus*, fourth.) A small, delicate muscle of the cat and other animals which arises in front of the acetabulum just outside the origin of the rectus femoris, and is inserted in the fore part of the femur on the inner side of the great trochanter.

G. secundus. (L. *secundus*, second.) The *G. medius*.

G., superficial. A term applied to the muscle of Solipeds and other animals which is analogous to the gluteus maximus of man.

G. tertius. (L. *tertius*, third.) The *G. minimus*.

Glu'ti. (Γλουτός, the buttock.) The buttocks, the nates.

Glu'tia. (Γλουτός, the buttock.) The two anterior or upper *Corpora quadrigemina* of the brain; also called *Nates*.

Also, a term for the buttocks.

Glu'tin. (L. *gluten*, glue. F. *glutine*.) The gelatin obtained from skin, serous membrane, hoof, bone, tendon, fibrous and spongy cartilage, and cartilage of bone.

Also, a synonym of *Gelatin*.

Also, applied by Soubeiran to vegetable albumen, as distinguished from gluten.

Also, a term for *Gluten-casein*.

Glu'tinant. (L. *glutino*, to glue.) Capable of uniting severed parts.

Glutina'ria. The *Salvia officinalis*.

Glutination. (L. *glutino*.) Same as *Agglutination*.

Glu'tinative. Same as *Agglutinative*.

Glutinosum sponta'neum. (L. *glutinosus*, gluey; *spontaneus*, of one's free will.)

An old term for phlegm generated in the primæ or secundæ viæ from viscid aliments and a morbid coction of the blood by reason of debility of the viscera, and the cause of many chronic diseases.

Glutinous. (L. *gluten*, glue. F. *glutineux*; I. *glutinoso*; S. *glutinoso*; G. *klebrig*, *leimartig*.) Having the properties of gluten; gluey; adhesive; viscid.

Glu'tinum. Same as *Glue*; also, the same as *Gluten*.

Glu'titis. (Γλουτός, the buttock. F. *glutite*; G. *Gesäss-Muskel-Entzündung*.) Inflammation of the buttocks, or of the glutei muscles.

Glu'toi. (Γλουτός, the buttock.) The nates.

Glu'tophthis'is. (Γλουτός, the buttock; *phthisis*, consumption. F. *glutophthisie*; G. *Gesäss-vereiterungsschwindsucht*.) Atrophy or tabes from suppuration of the buttocks or glutei muscles.

Glu'topyo'sis. (Γλουτός; *πύωσις*, suppuration. F. *glutopyosie*; G. *Gesäss-Muskel-Vereiterung*.) Suppuration of the buttock, or of the glutei muscles.

Glu'tos. (Γλουτός.) The buttock.

Also, the great trochanter, because the muscles of the buttocks are inserted into it.

Glu'tony. (F. *glouton*, a glutton; from L. *gluto*, a glutton.) Inordinate eating.

Glu'ttu'patens. (L. *gluttus*, the throat; *patco*, to extend, or be stretched out.) An epithet, used by Q. Serenus, according to Keuchenius, in *not.*, p. 149, for the stomach, which is an extension or continuous portion of the œsophagus or canal communicating with the throat.

Glu'ttus. (L. *gluttus*, for *glutus*, the gullet.) The gullet.

Glu'tus. (Γλουτός, the buttock.) The nates, or buttock.

Also, a term for the trochanter major.

Glycæ'mia. See *Glycœhamia*.

G., nor'mal. A term applied to the condition of the blood when sugar is normally present.

Glyc'amyi. A synonym of *Glycerinum amyli*, and compounded of the two words.

Glycan'sis. (Γλύκανσις, a sweetening.) A synonym of *Edulcoration*.

Glycar'aton. The *Glycyrrhiza glabra*.

Glycas'ma. (Γλύκασμα, that which is sweetened.) Old term for a sweet medicated wine prepared from must, as Lindenus considers, *Exerc. x.*, § 15.

Glycelæ'um. (Γλυκός, sweet; *ἐλαιον*, olive oil.) Groves's name for a compound of finely powdered almond meal one part, glycerin two parts, and olive oil six parts. Used as a basis for ointments.

Glycer'als. The substances resulting from the combination of a molecule of aldehyd with a molecule of glycerin, and the elimination of a molecule of water.

Glycer'ate. (*Glycerin*.) A solution of some substance in glycerin.

Cap restricts the term to those medicaments having glycerin for an excipient which retain a solid or semisolid consistence.

Also, a salt of *Glyceric acid*.

G. of alo'es. Half an ounce of Socotrine aloes, in fine powder, is mixed with four fluid ounces of glycerin, agitated occasionally for several days, heated in a water bath for fifteen minutes, and strained through linen. It is a bright mahogany-coloured liquid. Used as a local application in lichen agrius and the exco'rations of eczema; it is applied by means of a camel's-hair brush.

G. of i'odide of i'ron. Iodine 70 parts, powdered iron 35 parts, glycerin 400 parts. It is an emerald-green fluid, five grains containing one grain of iodide of iron.

G. of tar. Glycerin an ounce, oil of cade half a drachm, and starch powder half an ounce, are mixed with the aid of heat. Used as a local application in chronic skin diseases.

Glycera'ton. A synonym of *Glycyrrhiza*.

Glycer'ia. (Γλυκερός, sweet.) A Genus of the Nat. Order *Graminacæ*.

G. flu'itans. Brown. (L. *fluito*, to float. G. *Süssgras*.) Flote grass, manna grass. Seeds used as food, in soup or as gruel, especially fitted for weakly persons or invalids.

Glycer'ic. Relating to *Glycerin*.

G. ac'id. $C_3H_5O_4 = CH_2OH \cdot CHOH \cdot COOH$. A syrupy, colourless substance obtained by the action of fuming nitric acid on glycerin. It is monobasic, and forms crystallisable salts.

G. e'ther. $C_3H_5O_4(C_2H_5)$. Ethyl glycerate. A thick, bitter-tasting liquid formed when glyceric acid is heated for some hours with four times its bulk of absolute alcohol at a temperature of 170°—190° C. (338°—374° F.)

G. oxide. Same as *Glycerin ether*.

Glycerides. The neutral fats or glycerin ethers. They are the compound ethers of the triatomic alcohol, glycerin. They are insoluble in water, sparingly soluble in alcohol, and soluble in ether and bisulphide of carbon.

GLYCERIN—GLYCERINUM.

Glycerin. (Γλυκερός, sweet. *F. glycérine*; *I. glicérina*; *G. Glycerin, Olzucker*.) $C_3H_5O_3 = C_3H_5(OH)_3$. A propenyl alcohol obtained by the action of alkalis or salts on natural fats, by which salts of the fatty acids are formed, and the glycerin, with which they are combined to form the fat, is set free. It used to be prepared by boiling fat with litharge and water, but is now obtained by decomposing and distilling the neutral fats by means of superheated steam. It is a colourless, sweet-tasted, syrupy liquid, of sp. gr. 1.27, boiling at $290^{\circ} C.$ ($554^{\circ} F.$), and becoming solid at $-40^{\circ} C.$ ($-40^{\circ} F.$). It forms monoclinic, colourless crystals at a very low temperature. It is soluble in water.

Glycerin was discovered by Scheele, and was called by him the sweet principle of fats.

See *Glycerinum*, B. Ph.

G. barometer. (Βάρος, weight; μέτρον, measure.) A barometer, constructed by Jordan, in which the fluid used is glycerin. The advantages consist in its greater range of oscillation than a mercurial barometer, in consequence of the tenfold greater length of the column and in its smaller liability to be affected by back pressures than a water barometer, in consequence of the very low tension of its vapour at ordinary temperatures; and its disadvantage is that it easily absorbs water from the air, but this is largely prevented by a layer of liquid paraffin in the cistern over the glycerin.

G., butyrate of. Same as *Butyrin*.

G. cream. Glycerin, soft soap, and cherry-laurel water mixed together in equal proportions. An application for chilblains.

G. cream, camphorated. Glycerin two parts mixed with camphor one part, dissolved in rectified spirit one part.

G., creosoted. A solution of creasote in glycerin. One formula is creasote 2 parts, alcohol 25 parts, glycerin 50 parts. Used as an application to ulcers.

G. ether. A term for *Propenyl oxide*.

G. ethers. Same as *Glycerides*.

G. fermentation. (*G. Glyceringährung*.) See *Ferment, glycerin-forming*.

G., iodised. See *Glycerinum iodi*.

G. jelly. A gelatinous substance formed by dissolving gelatin or gum arabic in glycerin with the aid of heat. Used for the mounting of microscopic objects.

Martindale gives the following formula for a jelly to be used for the hands when chapped:—Gelatin 140 grains is soaked for a few minutes in rose water 6 oz., heated in a water bath to solution, mixed when cool but fluid with white of egg .75 oz., then heated till the albumen is coagulated, glycerin 6 oz. and salicylic acid 12 grains added, and filtered.

G. lymph. A mixture of vaccine lymph with glycerin.

G. of borax. See *Glycerinum boracis*.

G. of carbolic acid. See *Glycerinum acidi carbolic*.

G. of gallic acid. See *Glycerinum acidi gallici*.

G. of starch. See *Glycerinum amyli*.

G. of tannic acid. See *Glycerinum acidi tannici*.

G. of tanin. Same as *Glycerinum acidi tannici*.

G. ointment. The following formula has been given:—Melt together at a moderate heat half an ounce of spermaceti, a drachm of

white wax, and two fluid ounces of oil of almonds; pour them into a mortar and rub in an ounce of glycerin, stirring till the ingredients are cold. Used in chaps and excoriations.

G. pessary. Glycerin 2 parts heated with starch 3 parts, and then made in a mould into pessaries weighing two drachms and a half.

G. plug. A ball of cotton wool of the size of a small Tangerine orange well soaked in glycerin and a string attached to it. It is introduced into the vagina by means of a speculum, lodged close to the cervix uteri, and kept in position by a plug of dry cotton wool. It is used for the purpose of relieving uterine congestion, which it does by producing, usually, a free watery discharge. It should be allowed to remain six or eight hours, then removed by means of the string, and a hot vaginal douche used.

G., solvent power of. According to Klever, 100 parts by weight of glycerin dissolve at ordinary temperatures of the following substances the number of parts here denoted:—Acid, arsenious, 20; acid, arsenic, 20; acid, benzoic, 10; acid, boracic, 10; acid, oxalic, 15; acid tannic, 50; alum, 40; ammonium carbonate, 20; ammonium chloride, 20; antimony, potassium tartrate, 5.5; atropin, 3; atropin sulphate, 33; barium chloride, 10; borax, 60; brucin, 2.2; calcium sulphide, 5; cinchonine, 5; cinchonine sulphate, 6.7; copper acetate, 10; copper sulphate, 30; iodine, 1.9; iron potassium tartrate, 8; iron lactate, 16; iron sulphate, 25; lead acetate, 20; mercuric chloride, 7.5; mercuric cyanide, 27; morphia, 45; morphia acetate, 20; morphia hydrochlorate, 20; phosphorus, 2; potassium arseniate, 50; potassium chlorate, 3.5; potassium bromide, 25; potassium cyanide, 32; potassium iodide, 40; quinine, 5; quinine tartrate, 25; sodium arsenate, 50; sodium bicarbonate, 8; sodium borate, 60; sodium carbonate, 98; sodium chlorate, 20; sulphur, 1; strychnia, 25; strychnia nitrate, 4; urea, 50; veratrin, 1; zinc chloride, 50; zinc iodide, 40; zinc sulphate, 35.

G. tampon. (*F. tampon*, a plug.) See *G. plug*.

Glycerin-phosphoric acid. Same as *Glycerophosphoric acid*.

Glycerina. Same as *Glycerin*.

Glycerine. See *Glycerin* and *Glycerinum*.

Glycerinum, B. Ph., U.S. Ph. (Γλυκερός, sweet. *F. glycérine*; *G. Glycerin, Olzüss*.) $C_3H_5O_3$. Glycerin. A sweet principle obtained from fats and fixed oils, and containing a small percentage of water. It is used as a vehicle for medicaments, as an addition to poultices to keep them moist, to collodion to make it flexible, and to extracts and other masses to keep them soft and to preserve them from mouldiness. It is applied locally to chaps, excoriations, and dry skin complaints; and has been given internally as a laxative, and, according to some, as a nutritive substitute for cod-liver oil. At one time it was thought to be useful in phthisis and in diabetes. See *Glycerin*.

Also, the name used in the B. Ph. to denote a solution of some medicinal substance in glycerin, for which it is eminently fitted by reason of its bland, sweet, and pleasant taste, its wide solvent power, its unchangeability and its capacity for keeping other substances unchanged, and its non-drying faculty.

GLYCERISED—GLYCEROPHOSPHORIC ACID.

G. ac'idi carbol'ici, B. Ph. (F. *glycérolé d'acide phenique*; G. *Phenolglycerit*.) Carbolic acid one ounce dissolved in four fluid ounces of glycerin.

G. ac'idi gal'lici, B. Ph. (F. *glycérolé d'acide gallique*; G. *Gallussäure-glycerit*.) Gallic acid one ounce dissolved by the aid of heat in four fluid ounces of glycerin.

G. ac'idi tan'nici, B. Ph. (F. *glycérolé de tannin*; G. *Tannin-glycerol*.) Tannic acid an ounce dissolved by means of a gentle heat in four fluid ounces of glycerin.

G. am'yli, B. Ph. (F. *glycéré d'amidon*; G. *Stärke-glycerit*.) Starch an ounce mixed with glycerin eight fluid ounces, and heated to 240° F. until a transparent jelly is formed.

G. belladon'næ. Extract of belladonna an ounce rubbed with a drachm or so of boiling distilled water to make a smooth paste, and then mixed with an ounce of glycerin. Used as an application to the breasts to arrest the secretion of milk, and as an anodyne application to carbuncles and boils.

G. bismu'thi. See *Glycerole of nitrate of bismuth*.

G. bora'cis, B. Ph. (F. *glycérolé de borax*; G. *Borax-glycerol*.) Borax an ounce dissolved in four fluid ounces of glycerin.

G. i'odi. Twenty grains of iodine combined by means of heat with an ounce of glycerin. Used for the local application of iodine.

G. nitro'sum. Same as *Nitro-glycerin*.

G. olei ric'ini. (L. *oleum*, oil; *ricinus*, the castor-oil plant.) Equal parts of glycerin and castor oil rubbed together in a mortar till they form a semisolid substance, and flavoured with some essential oil. A purgative. Dose, a teaspoonful or more.

G. plum'bi subaceta'tis. Acetate of lead 5 oz., oxide of lead 3·5 oz., glycerin 20 oz., and distilled water 12 oz. are boiled together for fifteen minutes, filtered, and evaporated to one pint. Used, diluted with water or milk, as an application in eczema.

G. rosa'tum. (L. *rosa*, the rose.) Glycerin mixed with an equal part or more of rose water. Used as an emollient application to the skin.

G. tragacan'thæ. Powdered tragacanth 60 grains, glycerin half an ounce, water a drachm and a half, are heated together for ten minutes in a water bath. Used as a pill excipient.

Glycerised. Containing, or compounded with, *Glycerin*.

G. collo'dion. The *Collodium flexibile*.

Glycerite. Same as *Glyceritum*.

G., mercu'rial. A solution of perchloride of mercury 1·5 drachm in glycerin 3 drachms. Recommended by Vigier as an innocuous parasiticide, the glycerin preventing absorption of the mercury.

G. of starch. See *Glyceritum amyli*.

G. of tan'nic ac'id. Same as *Glycerinum acidis tannici*.

G. of tan'nin. Same as *Glycerinum acidis tannici*.

G. of tar. See *Glyceritum picis liquidæ*.

G. of yolk of egg. See *Glyceritum vitelli*.

Glyceri'tum. (F. *glycéré*, *glycerat*, *glycérolé*; G. *Glycerit*, *Glycerolat*.) The official term, U.S. Ph., for a solution of a substance in glycerin.

G. am'yli, U.S. Ph. *Glycerite of starch*.

Ten parts of starch mixed with ninety parts of glycerin and heated to 140° C. (284° F.), and not exceeding 144° C. (291° F.), until a transparent jelly is formed.

In Fr. Codex (F. *glycéré d'amidon*), starch 10 parts is heated with 140 parts of glycerin.

G. cum extracto belladonnæ, Fr. Codex. (L. *cum*, with. F. *glycéré d'extraît de belladonne*.) Extract of belladonna 10 parts mixed with 90 parts of glyceritum amyli.

G. cum iodure'to potas'sico, Fr. Codex. (F. *glycéré d'iode de potassium*.) Potassium iodide 4 parts dissolved in distilled water 4 parts, and mixed with glyceritum amyli 22 parts.

G. cum ox'ydo zin'cico, Fr. Codex. (F. *glycéré d'oxyde de zinc*.) Ten grammes of oxide of zinc mixed with 20 grammes of glyceritum amyli.

G. cum tan'nico, Fr. Codex. Ten parts of powdered tannin mixed with 50 parts of glyceritum amyli.

G. pi'cis liq'uidæ. Tar a troy ounce, carbonate of magnesium two troy ounces, glycerin four fluid ounces, alcohol two fluid ounces, water ten fluid ounces; mixed and strained, and the amount brought up to a pint by percolating the residue with water. Formerly in U.S. Ph.

G. so'dii bora'tis. Same as *Glycerinum boracis*.

G. vitelli, U.S. Ph. (L. *vitellus*, the yolk of an egg.) Fresh yolk of egg forty-five parts rubbed with fifty-five parts of glycerin till they are thoroughly mixed. It has the disadvantage of acidifying rapidly, and soon giving off hydrogen sulphide, according to Litré; but others report that it may be kept indefinitely. It is used as a protective local application in burns, erysipelas, cracks of the nipples, and some skin diseases, and is employed as a vehicle for the administration of drugs such as cod-liver oil.

Glycerol. The term given by some modern chemists to *Glycerin*.

Glycerole. A combination of glycerin with some substance. Cap has proposed that this term should be restricted to those combinations which are liquid.

G. of al'oes. Chausit's term for a solution of alcoholic extract of aloes in glycerin.

G. of hypophos'phites. Squire gives the following formula:—One part each of hypophosphites of lime, potash, and soda, dissolved in 40 parts of water, filtered, and 40 parts of sugar, 2 of orange-flower water, 2 of cherry-laurel water, and 12 of glycerin, added. Dose, 1—2 drachms.

G. of lead. Squire gives the following formula as a substitute for Goulard's ointment:—Triturate camphor one drachm with a few drops of rectified spirit, dissolve it by heat in glycerin 13·5 oz., and when cool add solution of subacetate of lead 2·5 oz.

G. of ni'trate of bis'muth. Two troy ounces of crystalline bismuthous nitrate dissolved in sufficient glycerin to make 8 ounces. Used as a local application in eczema.

Glycerophos'phate. A salt of *Glycerophosphoric acid*.

G. of lime. A salt occurring in micaceous crystals, soluble in cold water, and having a pleasant, sweetish taste. Proposed as an efficient substitute for phosphate of lime. Dose, 7—15 grains.

Glycerophosphor'ic ac'id. C_3H_7

GLYCERYL—GLYCOGEN.

PO_6 , or $\text{C}_3\text{H}_5(\text{OH})_2 \cdot \text{O} \cdot \text{PO}(\text{OH})_2$. A syrupy liquid formed when lecithin is decomposed by caustic baryta. It has both a sour and a sweet taste. It is found in the brain, nerves, muscle, yolk of egg, bile, and pus.

Glyceryl. (Γλυκός, sweet; ἔλν, stuff, matter.) $(\text{C}_3\text{H}_5)'''$. The triatomic radical of glycerin and the glycerides. When it behaves as a monatomic radical it is *Allyl*. The fixed or fatty oils are supposed to be compounds of the different fatty acids with glyceryl.

G. alcohol. A term for *Glycerin*.

G. ether. $\text{C}_6\text{H}_{10}\text{O}_3 = (\text{C}_3\text{H}_5)_2\text{O}_3$. A colourless, oily, inodorous liquid obtained when glycerin is treated with calcium chloride. It boils at 171° – 173° C. (339° – 343° F.), and mixes in all proportions with water, alcohol, and ether.

G., hydrate of. A term for *Glycerin*, and its three allies diglycerin, diglycide, and triglycerin.

G. oxide. Same as *G. ether*.

Glyceryl-phosphoric acid. Same as *Glycerophosphoric acid*.

Glycidoll. See *Glycocol*.

Glycide. $\text{C}_3\text{H}_5\text{O}_2$. The alcohol corresponding to the glycidic ethers. It is obtained by treating an ethereal solution of glycidic acetate with sodium hydroxide. It is a mobile liquid, boiling at 161° – 163° C. (321° – 325° F.)

Glycidic ethers. The diatomic ethers derived from the glycerides by the action of an alkali.

Glycidyl. C_3H_4 . The hypothetical diatomic radicle of the glycidic ethers.

Glycin. Same as *Glycocol*.

Glycina. See *Glucina*.

Glycinē. A Genus of the Nat. Order *Leguminosae*.

G. abrus. The *Abrus precatorius*, Linn.

G. apios, Linn. The *Apios tuberosa*, Mönch.

G. hispida, Sieb. The *Soja hispida*.

G. soja, Linn. The *Soja hispida*.

G. subterranea, Linn. The *Voandzeia subterranea*.

G. tomentosa, Linn. Radical tubercles esculent.

Glycinium. (Γλυκός, sweet.) Same as *Beryllium*.

Glycion. Same as *Glycyrrhizin*.

Glyciphagus. (Γλυκός, sweet; φαγεῖν, to eat.) A Genus of the Family *Sarcoptidae*, Order *Acaridea*; so called by Héring because some of the species feed on sugary substances.

G. cursor, Gerv. (L. *cursor*, a runner.) Lives on dead and dried insects, old anatomical specimens, dried fruits and conserves, and other like substances, and in the dust of stables.

G. hippopodōs, Gerv. (ἵππος, a horse; πούς, a foot.) The *G. cursor*.

G. palmifer, Fumouse. (L. *palm*a, a palm; *fero*, to bear.) Found in the dust of stables and caves.

G. plumiger, Fumouse. (L. *pluma*, down; *gero*, to bear.) Found in the dust of stables and caves.

G. prunorum, Héring. (L. *prunus*, a plum.) The *G. cursor*.

G. spinipes, Koch. (L. *spina*, a thorn; *pes*, a foot.) Habits the same as *G. cursor*.

Glyciphylla. (Γλυκός, sweet; φύλλον, a leaf.) A Genus of the Nat. Order *Vacciniaceae*.

G. hispidula, Raf. (L. *hispidulus*, rather rough.) The *Phalerocarpus serpyllifolia*, Don.

Glycipros. (Γλυκός, sweet; πικρός, bitter.) A name for the *Solanum dulcamara*, from its taste.

Glyc'o-benzo'ic acid. A synonym of *Hippuric acid*.

Glyc'ocene. Same as *Glycogen*.

Glycocolate. A salt of glycocholic acid. The glycocholates are generally soluble in water and in alcohol. They have a bitter and, at the same time, a sweetish taste. When sugar and a few drops of sulphuric acid are added they assume a purple colour, which disappears on the addition of water.

Glycocholic acid. (Γλυκός, sweet; χολή, bile.) $\text{C}_{26}\text{H}_{43}\text{NO}_6$. A constituent, in the form of a soda salt, of the bile discovered by Gmelin. It crystallises in long, white, delicate needles, or it forms an amorphous resinous mass; it is soluble in alcohol, slightly soluble in water, and hardly at all soluble in ether; hydrochloric, sulphuric, and acetic acids, alkaline solutions, and glycerin dissolve it; it has a bitter-sweet taste. Its solutions are dextrogyrous. It is found in the bile of man and the ox, but not in that of carnivorous animals. Glycocholic acid is resolved by boiling with alkalis into glycecin and cholic acid.

Glycocholon'ic acid. Same as *Cholonic acid*.

Glycocin. Same as *Glycocol*.

Glycocol. (Γλυκός, sweet; κόλλα, glue. G. *Leimzucker*, *Leimsüss*.) $\text{C}_2\text{H}_5\text{NO}_2 = \text{C}_2\text{H}_5\text{NH}_2\text{COOH}$. A crystalline substance obtained by boiling hippuric acid for an hour with four times its weight of strong hydrochloric acid; it is then evaporated nearly to dryness, extracted with water treated with plumbic oxide, and then with hydrogen sulphide, and afterwards evaporated and crystallised. It is easily formed in the liver, but is probably not one of its natural constituents.

Glycoc'yamin. $\text{C}_5\text{H}_7\text{N}_3\text{O}_2$. A colourless crystalline substance produced by the action of cyanamide on glycocol. It is soluble in water, insoluble in alcohol. One of its atoms of hydrogen is replaceable by a metal.

Glycodys'lysin. $\text{C}_{20}\text{H}_{39}\text{NO}_4$. A white, amorphous powder formed by heating glycecin and cholic acid to 190° – 200° C. (374° – 392° F.) It is easily soluble in alcohol, ether, and chloroform.

Glycogel'atin. Gelatin an ounce is soaked in orange-flower water 2·5 oz. for two hours, then heated in a water bath to solution, glycerin 2·5 oz. is added; when cool the fluid is coloured with an ammoniacal solution of carmine, and then allowed to become solid. Used for the making of lozenges and pastilles.

Glyc'ogen. (Γλυκός, sweet; γεννάω, to produce.) $\text{C}_6\text{H}_{10}\text{O}_5$; $5(\text{C}_6\text{H}_{10}\text{O}_5)$, Hoffman; $11(\text{C}_6\text{H}_{10}\text{O}_5) + 4\text{H}_2\text{O}$, Abeles; $6(\text{C}_6\text{H}_{10}\text{O}_5) + \text{H}_2\text{O}$, Kütz and Bornträger. A white, amorphous, tasteless, inodorous, starch-like substance obtained by Bernard from the liver of the calf, the pig, and other animals. It is soluble with opalescence in cold water, insoluble in alcohol and ether; its watery solution is dextro-rotatory. To obtain it the liver of a newly-killed animal is quickly removed, cut into fine pieces, and thrown into boiling water to destroy the liver ferment and prevent the change of the glycogen into grape sugar, boiled for some time, and filtered. The filtrate is

GLYCOGENESIS—GLYCOLAMIDE.

treated alternately with dilute hydrochloric acid and potassio-mercuric iodide as long as a precipitate is formed, and again filtered; the result is an opalescent solution of glycogen, from which it may be obtained by precipitation with strong alcohol and drying. It collects in amorphous granules around the nuclei of the liver cells, and is most abundant in young animals, in the developing bird's ovum, and in most embryonic tissues; it is found also in the muscles, in the blood, especially in the leucocytes, and in small quantities in the organs generally. It is very abundant in the liver after a diet containing much starch, or milk, or fruit, or cane sugar, but it is not increased when mannite, or inosite, or gum is taken; it is in somewhat small quantity after a purely albuminous or fatty diet; and it is almost absent during prolonged starvation and in fevers. Its direct source is not known, and it is not supposed by all that the carbohydrates go directly to form glycogen, but that in some indirect method, as by economising other uses of albumen, they allow some of it to become converted into glycogen as an intermediate product. Its destination is still unsettled. Bernard's original view was that it is being continually converted into sugar in the liver through the agency of a ferment, that this sugar is carried by the blood to the muscles, where it is chiefly used up, as well as in smaller quantities into the lungs and other tissues. Pavy contends that it is not converted into sugar in the normal condition, but that it is stored up in the liver cells to form a preliminary step in the metamorphosis of sugar into fat. Pavy believes that glycogen is a natural constituent of the blood, in which it can exist without being transformed into sugar; he has extracted it from the brain, spleen, pancreas, kidney, and intestine. Glycogen is converted into dextrose by boiling in dilute hydrochloric acid; and when acted on by diastase, dextrine, maltose, and dextrose are formed. The proportion of glycogen found in the liver of the adult man is from 1.5 to 2 per cent.

G. ferment. The ferment which effects the conversion of glycogen into sugar. It has not yet been isolated, although there is no doubt of its presence in the liver and other parts of the body. It would appear to be contained in the blood, inasmuch as there is a more rapid conversion of glycogen into sugar in the liver when the circulation is quickened. Schiff has noticed the absence of this ferment in the liver of frogs during the latter part of the winter and in the early spring months.

Glycogenesis. (Γλυκός; γεννάω, to produce.) The formation of sugar. Especially applied to the formation of sugar in the animal body.

Glycogenic. (Γλυκός; γεννάω.) Relating to *Glycogenesis*.

G. acid. $C_6H_{12}O_7$. An acid, syrupy liquid formed by treating an aqueous solution of glycogen at 100° C. (212° F.) with bromine, and then with silver oxide.

G. matter. A term for *Glycogen*.

G. the'ory. See under *Glycogen*, *Glyco-hæmia*, and *Glycosuria*.

Glycogeny. (Γλυκός; γεννάω.) Same as *Glycogenesis*.

Glycohæmia. (Γλυκός; αἷμα, blood.) Healthy blood of Vertebrata always contains a small proportion of dextrose, or a sugar resembling it, varying, in different animals and in

different individuals, from .5 to 1 part per 1000. According to Bernard, the blood of man contains .9 per 1000, according to Pavy, it does not exceed normally .04 to .07 per 100. An excess of sugar in the blood is got rid of by the kidneys; small quantities may be injected into the blood without any excess being found in the urine, but if so much is injected that it exceeds .3 per 1000 of blood it passes into the urine. The normal proportion of sugar in the blood is exceeded and is diminished in different diseases, but at no time is it absent except just before death. Levulose has been found in the blood after a free use of farinaceous foods, and lactose in nursing women; but saccharose has never been found, and if it be injected into the blood in ever so small a quantity it is speedily removed from the body by the kidneys. The proportion of sugar in the blood of different parts of the circulatory system varies, according to most observers; in the left heart and arteries it is constant and at its highest proportion, in the veins it is distinctly lower, except in the vena cava inferior at the entrance of the hepatic veins, where the proportion suddenly rises. These observations of Bernard have been contested in detail by Pavy and Mering, but the weight of later evidence goes to show that venous blood is less rich in glucose than arterial blood, and that this excess is not derived from the alimentary canal by way of the thoracic duct, but from the liver through the hepatic veins. On the other hand, it would seem probable that Bernard has over-estimated the amount and constancy of the production of glucose in the liver, and that there is much evidence in favour of the view that in healthy conditions little is so manufactured. The amount of sugar in the blood is affected not only by different diseases as above mentioned, and by different foods as described under *Glycogen*, but also by certain drugs as curare, and by interference with the vaso-motor nerves of the liver, for which see *Glycosuria*.

The further question, what becomes of the sugar, be it little or much, which is contained in the blood, is also unsettled. According to Bernard and others, it is used up in the muscles, according to Pavy, it goes to the formation of fat.

G., alimen'tary. (*L. alimentum*, food.) The excessive amount of sugar in the blood which proceeds from the excessive use of farinaceous or saccharine foods.

Glycohæmic. Relating to *Glycohæmia*.

G. gan'grene. Marchal's term for *Gangrene, diabetic*.

Glycohyocholic acid. See *Hyo-glycocholic acid*.

Glycol. (Γλυκός, sweet; *alcohol*.) $C_2H_4O_2 = C_2H_4(OH)_2$. A substance obtained by Wurtz from ethylene di-iodide by treating it with silver acetates and decomposing the resulting ethylene diacetate with caustic potash. It is a viscous, colourless, odourless, sweetish liquid, soluble in water and alcohol, but not in ether; it boils at or about 197° C. (386.6° F.), has a specific gravity of 1.125, and a vapour density at 292° C. (557.6° F.)

It is the ethylene glycol, and the type of a class called *Glycols*.

G. e'thylene. The substance described under the chief heading.

Glycol'amide. $C_2H_5NO_2 = CH_2(OH) \cdot CO(NH_2)$. The amide of glycollic acid, isomer-

GLYCOLAMINE—GLYCO-URIL.

ous with glyccoll, obtained by the action of ammonia on ethyl glycolate. It forms colourless crystals, fusing at 120° C. (248° F.)

Glycolamine. A synonym of *Glycocoll*.

Glycoleu'cin. See *Glykoleucin*.

Glycolide. $C_4H_4O_4$. Formed during the dry distillation of tartaric acid, or by heating glycollic acid to 240° C. (464° F.) It is a white, colourless substance, insoluble in cold water.

Glycolig'nose. $C_{30}H_{48}O_{31}$. Erdmann's term for the substance which forms pine-wood. He considers it to be an ether of lignose. It is found in poplar-wood also. According to Bente, it is not a distinct substance.

Glycolinic acid. $C_2H_4O_4$. Friedländer's term for an acid supposed to be formed by the action of sodium amalgam on an alcoholic solution of ethyl oxalate. This is probably an error. According to Debuss, the only products are glycollic, glyoxylic, and tartaric acids.

Glycollic acid. $C_2H_4O_3 = CH_2(OH) \cdot CO_2H$. Obtained by Strecker by treating glyccoll with nitrous acid. It forms colourless, stellate crystals, very soluble in water, alcohol, and ether. It is an homologue of lactic acid. Also called oxyacetic acid. It occurs in unripe grapes, and in the leaves of the *Ampelopsis quinquefolia*.

Glyc'ols. A class of diatomic alcohols, discovered by Wurtz, of which ethylene glycol, usually called *Glycol*, is the type. They may be obtained from the haloid ethers of the dyad radicals, as the monad alcohols are obtained from their respective ethers. As well as the ethylene glycol, propylene, butylene, and amylene glycols are known. The name was given to mark the double analogy between glycerin and alcohol.

Glycoluric acid. $(NH_2)CO \cdot NH \cdot CH_2 \cdot CO_2H$. An acid obtained by Strecker and Rheineck from the action of baryta on glycolyl-urea. It is identical with hydantoic acid. It crystallises in monoclinic prisms.

Glycoluryl. Same as *Glycolyl-urea*.

Glycolyl. C_2H_3O . The radicle of glycollic acid and the other glycolyl compounds.

Glycolyl-ure'a. $C_4H_6N_4O_2$. A substance obtained by treating slightly acidulated allantoïn with a sodium amalgam. It crystallises in octahedral crystals, or in needles.

Glycomalic acid. $C_3H_5O_6$. A product of the reduction of oxalic ether. It is uncrystallisable, and very soluble in water.

Glyconin. Sichel's term for a mixture of four parts of yolk of egg and five parts of glycerin used in pharmacy. The *Glyceritum vitelli*.

G. emulsion of cod-liv'er oil. Close's formula is: add cod-liver oil 4 ounces very gradually with brisk stirring to glyconin or glyceritum vitelli, then aromatic spirit of ammonia one drachm, sherry 2 fluid ounces, dilute phosphoric acid 4 drachms, and essence of bitter almonds 2 drachms, in succession.

Glycoprotein. (Γλυκός, sweet; *protein*.) Schützenberger's term for the bodies of the formula $C_mH_{2m}N_2O_4$ ($m = 10$ or 12), which on crystallisation split up into leucins or leucins.

Glycorrhœ'a. Same as *Glycyrrhœa*.

Glycos'amine. $C_6H_{13}NO_5 = COH(CHOH)_4 \cdot CH_2 \cdot NH_2$. A product, along with acetic acid, of the decomposition of chitin by

dilute acids. It is only known as a hydrochlorate.

Glyc'osan. See *Glucosan*.

Glyc'ose. Same as *Glucose*.

Glycosides. (Γλυκός, sweet.) Same as *Glucosides*.

Glyc'osin. (Γλυκός.) $C_6H_8N_4$. A crystalline substance formed, along with glyoxalin, when glyoxal is warmed with aqueous ammonia. It is slightly soluble in water.

Glycos'mis. (Γλυκός; ὀσμή, a smell.) A Genus of the Nat. Order *Aurantiaçæ*.

G. citrifolia. (*L. citrus*, the citron tree; *folium*, a leaf.) Fruit pleasant to eat; leaves used as orange leaves.

Glycosu'ria. (Γλυκός; οὖρον, urine.) The presence of sugar in urine. In the normal condition the urine contains a trace of sugar only, but the term glycosuria is applied to the abnormal state in which a sensible amount is present. It is the external manifestation of the excessive presence of sugar in the blood. This excess may be produced by temporary causes, or may be a constant morbid process constituting the disease diabetes. The transitory form may be produced by puncturing the medulla oblongata a little above the point of the calamus scriptorius, by injuring the spinal cord at the origin of the brachial nerves, by division of the thoracic part of the sympathetic nerve, by injecting defibrinated arterial blood, weak solution of sodium chloride, solutions of sugar or inulin, and other substances into the portal vein, and by the administration, in large doses, of curare, strychnia, morphia, chloral, amyl nitrite, chloroform, carbonic acid, and other drugs, as well as by the ingestion of excessive quantities of starch and sugar. In all or most of these cases there is an interference with the hepatic circulation in the direction of excess, and from this it is argued that the cause of the permanent form, or diabetes, is to be looked for in vaso-motor paralysis affecting the liver. See *Glycœmia* and *Diabetes*.

G., alimen'tary. (*L. alimentum*, food.) Bernard's term for the condition in which sugar appears in the urine from the taking of an excess of starch or saccharine food.

G. in lacta'tion. (*L. lac*, milk.) The presence of sugar in the urine of nursing women, when the breasts are turgid with milk.

G. in pregn'ancy. The presence of sugar in the urine which sometimes occurs in the later weeks of pregnancy. It would appear to be confined to those cases in which there is milk in the breasts.

G., permanent. (*L. permaneo*, to remain.) The disease called *Diabetes*.

G., persi'stent. The disease *Diabetes*.

G., tempo'rary. (*L. temporarius*, belonging to time.) The occurrence of sugar in the urine from some cause acting for a short time only, such as the ingestion of excess of sugary or sugar-forming food, or the taking of certain drugs, as amyl nitrite, or the presence of some disease, as certain brain affections.

Glycosu'ric. (Γλυκός; οὖρον.) Relating to *Glycosuria*.

G. amauro'sis. A synonym of *Amaurosis, diabetic*.

Glyc'o-u'ril. $C_4H_6N_4O_2$. Obtained by acting on a hot solution of allantoïn with sodium amalgam. It forms octahedra, or pointed needles, slightly soluble in water. It is decomposed into

urea and glycoyl-urea by boiling with dilute sulphuric acid.

Glycyl. (Γλυκύς.) A synonym of *Pro-penyl*.

G. hydrate. Glycerin.

Glycym'eter. (Γλυκύς; μέτρον, a measure.) An instrument for measuring the quantity of sugar in a liquid.

Glycyphyton. (Γλυκύς, sweet; φυτόν, a plant.) A name of *Glycyrrhiza glabra*.

Glycyrrhetin. $C_{18}H_{26}O_4$. A brown resin, obtained, along with glucose, when glycyrrhizin is boiled with dilute acids. It is insoluble in water, soluble in alcohol and alkaline solutions.

Glycyrrhiza. (Γλυκύς; ῥίζα, a root. *F. réglisse*; *G. Süssholz*.) A Genus of the Nat. Order *Leguminosae*.

Also, U.S. Ph., same as *Glycyrrhiza radix*, B. Ph.

G. as'pera, Pall. The *G. asperima*.

G. asper'ima, Lin. fl. (*L. asper*, rough.) Supplies probably the Russian liquorice root.

G. echina'ta, Linn. (*L. echinatus*, prickly.) Prickly liquorice. Hab. Europe. Juice used in ringworm; root sometimes substituted for *G. glabra*.

G. gla'bra, Linn. (*L. glaber*, smooth.) The species supplying the official liquorice.

G. glandulif'era, W. K. (*L. glandula*, a small gland; *fero*, to bear.) A variety of *G. glabra*, with roughly glandular or pubescent stem, leaves, and pods.

G. læ'vis, Pall. (*L. lævis*, light.) The *G. glabra*.

G. lepidota. (Λεπιδωτός, scaly.) Hab. Southern United States. Used as *G. glabra*.

Glycyrrhizæ radix. (*L. radix*, a root. *F. réglisse*, *bois doux*, *racine douce*; *G. Spanische Süssholzwurzel*), the official name of the root of *G. glabra*, liquorice root. It is in long, cylindrical pieces, 2" to 1" thick, externally greyish-brown and longitudinally wrinkled, and internally tawny yellow. It has a sweet but somewhat acid taste. It is demulcent and laxative, and is said to promote secretion from a congested bronchial mucous membrane.

Glycyrrhizic acid. $C_{44}H_{86}NO_{18}$. The saccharine principle of liquorice root. It crystallises in needles and in hemispherical masses; it reduces cupro-potassic tartrate.

Glycyrrhizin. $C_{24}H_{36}O_9$. The glucoside contained in the root of the liquorice, *Glycyrrhiza glabra* and *G. echinata*. It is a yellowish powder, of a bitter and a sweet taste, slightly soluble in cold water, soluble in hot water, in alcohol, and in ether.

Glycyrrhizine. (*F. glycyrrhizine*; *G. Süssholzzucker*.) The saccharine juice of the *Glycyrrhiza glabra*.

Glycyrrhizinum ammonia'tum, U.S. Ph. Ammoniated glycyrrhizin. One hundred parts of liquorice root, in No. 20 powder, are macerated for twenty-four hours in a mixture of 95 parts of water with 5 parts of water of ammonia; it is then percolated with water until 500 parts are obtained. Sulphuric acid is added to the percolate so long as a precipitate is formed; this is collected on a strainer, washed with cold water, redissolved in water and water of ammonia, and again precipitated with sulphuric acid and washed, then redissolved in the water and water of ammonia in equal parts; the clear solution is spread upon plates

of glass, so that, on drying, the product may be obtained in scales, which are dark brown or brownish red, inodorous, very sweet, and soluble in water and alcohol. Used as liquorice root. Dose, 5—15 grains.

Glycyrrhœ'a. (Γλυκύς; ῥοία, a flow.) A flow of a sweet or saccharine substance from the body.

G. urino'sa. (*L. urina*, urine.) A term for *Diabetes*.

Glyc'ys. (Γλυκύς.) An old name for, probably, the *Artemisia abrotanum*.

Glycysan'con. (Γλυκύς, sweet; ἄγκων, the elbow.) Old name for a species of southern-wood, according to Turton, from its sweet taste and angular joints.

Glycyz'idē. (Γλυκυσιδή.) A term employed by Hippocrates and Dioscorides to designate several species of *Pæonia*.

Glykoleu'cin. $C_6H_{13}NO_2$. A chemo-lytic isomer of leucin obtained by Thudichum from brain albumins which were acted on by baryta. It is a pearl-white, sweet substance, less soluble in water than ordinary leucin.

Glyox'al. $C_2H_2O_2 = HOOC \cdot COH$. A solid, crystallisable substance, obtained as a secondary product in the preparation of glycollic acid by the action of nitric acid on alcohol. It is deliquescent and very soluble in water, alcohol, and ether. It is an aldehyde of oxalic acid, and is also called *Oxalaldehyde*.

Glyoxalic acid. Same as *Glyoxylic acid*.

Glyox'aline. $C_3H_4N_2 = C_3H_3N(NH)$. A crystalline substance formed, along with glycosin, when glyoxal is heated with aqueous ammonia. It forms fine prismatic crystals, or thick, nacereous prisms, having a somewhat fishy odour. It is soluble in water, alcohol, and ether.

Glyoxyl. The radiol of *Glyoxyl-urea*.

G. carbamide. Same as *Glyoxyl-urea*.

G. dicarbamide. $C_6H_8N_4O_3$. The same as *Allantoin*.

Glyoxyl-ure'a. $C_3H_4N_2O_3$. An isomer of allanturic acid formed, along with carbon dioxide and ammonia, when a salt of oxonic acid is decomposed by acetic acid. It crystallises in thick needles.

Glyoxylic acid. $C_2H_4O_4 = CHO \cdot CO_2H + H_2O$, or $CH(OH)_2 \cdot CO_2H$. A crystalline substance formed when the silver salt of dibromacetic acid is boiled with water. It forms small monoclinic crystals of acid taste, which melt when heated.

Glyox'ylin. The name of an explosive compound containing *Nitroglycerin*.

Glyphol'ecine. Channelled in a labyrinthine manner, like the Genus *Glyphis*.

Glyster. See *Clyster*.

G. herbs. See *Herba pro enemate*.

Glyz'ina, Fr. Codex. (*F. glycyrrhizine ammoniacale*.) Same as *Glycyrrhizinum ammoniatum*.

Gmelin-Heintz reaction. Same as *Gmelin's reaction*.

Gmel'in, Jo'hann Ge'org. A German botanist, born at Tübingen in 1709, died there in 1755.

Gmelin, Le'opold. A German physician and chemist, born at Göttingen in 1758, died at Heidelberg in 1853.

G.'s reaction. A test for the bile pigments by adding to a solution containing them some nitric acid which contains nitrous acid,

when a play of colours appears, passing from green through blue, violet, and red to yellow.

Gmelina. (*Gmelin*, the botanist.) A Genus of the Nat. Order *Verbenaceae*.

G. asiatica, Linn. Hah. India. Roots mucilaginous. Used as an emollient, depurative, and tonic.

G. parviflora, Roxb. (*L. parvus*, small; *flos*, a flower.) Demulcent. Used in gonorrhoea.

Gmünd. Austria, Circle Villach. A cold sulphur spring.

Gnampsis. (*Γνάμπτω*, to bend inwards. *F. courbure*; *G. Einbiegung*, *Krümmung*.) An incurvation or curvature.

Gnamp'tous. (*Γνάμπτω*. *F. courbé*; *G. gebogen*, *gekrümmt*.) Bent inwards; curved; curvated; incurved.

Gnaphalium. (*Γνάφαλιον*, the teal. *F. pied de chat*; *G. Ruhrkraut*.) A Genus of the Nat. Order *Compositae*. The cotton-weed.

G. albi'num. The *G. dioicum*.

G. arena'rium. Linn. The *Helichrysum arenarium*.

G. arven'se. Willd. The *Filago arvensis*.

G. congloba'tum. Münch. (*L. conglobo*, to gather into a ball.) The *G. luteo-album*.

G. dioi'cum. Linn. The *Antennaria dioica*.

G. gal'licum. Wall. (*L. gallicus*, French.) The *Filago montana*, Linn.

G. german'icum. Willd. The *Filago germanica*, Linn.

G. legitimum. Gärt. (*L. legitimus*, right.) The *Diotis maritima*.

G. leontopo'dium. The *Leontopodium alpinum*.

G. lu'teo-al'bum. Linn. (*L. luteus*, yellow; *albus*, white.) The Jersey cudweed. Used in catarrh.

G. margarita'cum. Linn. (*L. margarita*, a pearl.) Pearly cudweed, life everlasting. Hah. North America. A mild astringent. Used in chest and bowel diseases, and in hæmorrhages; it is also said to be anodyne.

G. min'imum. Smith. The *Filago minima*.

G. monta'num. Willd. The *Filago montana*, Linn.

G. orienta'lè. Linn. The *Helichrysum orientale*.

G. plantagin'eum. (*Plantago*.) The *Antennaria plantaginifolia*.

G. plantaginifolium. (*L. plantago*, plantain; *folium*, a leaf.) The *Antennaria plantaginifolia*.

G. polycephalum. Linn. (*Πολός*, many; *κεφαλή*, the head.) Catfoot; sweet-scented life everlasting. A mild astringent. Used as *G. margaritaceum*.

G. stæ'chas. Linn. The *Helichrysum stæchas*.

G. sylvat'icum. Linn. (*L. sylvæ*, a wood.) Highland cudweed. Flowers astringent and diaphoretic. Used in coryza.

G. tomento'sum. (*L. tomentosus*, woolly.) The *G. sylvaticum*.

G. vira'vira. Molina. Hah. Chili. Used as a diaphoretic.

Gnarr. (*Sax. gnyrran*, to gnash.) A warty excrescence of the stem of a tree.

Gnat. (*Sax. gnæt*. *F. cousin commun*; *G. Mücke*.) The *Culex pipiens*. Their bite is sharply stinging, and in some sensitive skins

produces papules, patches of urticaria, or boils with extensive inflammation of the skin.

Gnathalgia. (*Γνάθος*, the cheek; *ἄλγος*, pain. *F. gnathalgie*; *G. Wangenschmerz*.) Pain of the cheek; facial neuralgia.

Gnathankylo'sis. (*Γνάθος*, the jaw; *ἀγκύλωσις*, a stiffening of the joints.) Anchylosis of the jaw.

Gnathantropolypus. (*Gnathantrum*, the antrum, or cavity of the cheek-bone; *polypus*, a morbid excrescence. *F. gnathanthropolype*.) Polypus of the antrum Highmorianum.

Gnathantrum. (*Γνάθος*, the jaw; *ἄντρον*, a cavern. *F. gnathantré*; *G. Ober-Kinnbackenhöhle*.) The cavity of the malar bone, or the antrum Highmorianum.

Gnathic. (*Γνάθος*, the cheek-bone. *F. gnathique*.) Of, or belonging to, the cheek or superior maxilla.

G. index. (*L. index*, a pointer.) The number by which is indicated the relative projection of the jaws beyond the anterior surface of the cranium, estimated by the plan of Flower, which consists in taking the basinasal length or the distance between the anterior part of the foramen magnum and the root of the nose as 100, and reducing the actual basialveolar length or the distance between the anterior part of the foramen magnum and the centre of the anterior margin of the upper alveolar arch to the same proportion. This number is the gnathic index. In the English race this is 96, in the Chinese 99, in the Fijian 103, and in the native Australian 104.

Gnathite. (*Γνάθος*, the jaw.) The anten-nary and the masticating structures of Arthropoda.

Gnathitic. (*Gnathitis*. *F. gnathitique*; *G. Wangenentzündung betreffend*.) Of, or belonging to, *Gnathitis*.

Gnathitis. (*Γνάθος*, the cheek bone. *F. gnathite*; *G. innere Wangenentzündung*.) Internal inflammation of the cheek, or maxilla, according to Kraus.

Gnath'mus. (*Γναθμός*, the jaw.) The upper jaw.

Gnathobdel'lidæ. (*Γνάθος*, the jaw; *βδέλλα*, a leech.) A Family of the Subclass *Hirudinea*, being those having three jaws in the pharynx, often serrated, and folded longitudinally, and a spoon-shaped oral sucker in front of the mouth.

Gnathoceph'alus. (*Γνάθος*, the jaw; *κεφαλή*, the head.) A monstrosity having no distinct head, only very large jaws.

Gnathocynan'chè. (*Γνάθος*; *κυνάκη*, quinsy.) Cynanche parotidea.

Gnathogram'ma. (*Γνάθος*; *γράμμα*, the lines of a drawing. *G. Wangenzug*.) A line or furrow leading from the middle of the cheek to the *Rhinogramma*, and which alone, or in combination with this latter, is a sign in children of abdominal disease, according to Jadelot.

Gnathoneural'gia. (*Γνάθος*; *νεύρον*, a nerve; *ἄλγος*, pain.) Pain of a nerve of the cheek or maxilla, or maxillary neuralgia.

Gnathoparalysis. (*Γνάθος*; *παράλυσις*, paralysis.) Paralysis of the motor branches of the inferior maxillary nerve.

Gnathopharynge'us. (*Γνάθος*; *φάρυγξ*, the throat.) Same as *Mylopharyngeus*.

Gnathoplas'tic. (*F. gnathoplastique*.) Of, or belonging to, the operation of *Gnathoplasty*.

GNATHOPLASTY—GOBIO.

Gnathoplasty. (Γνάθος, the cheek; πλάσσω, to form. F. *gnathoplastic*; G. *Wangenbildung*.) The operation of restoring any deficiency of the cheek, the effect of a wound or lesion, by appropriating a sufficient portion of the sound parts contiguous.

Gnathoplegia. (Γνάθος; πληγή, a stroke.) Paralysis of the cheek.

Gnathopod. (Γνάθος; πούς, a foot.) A term applied by Spence Bate to the second and third maxillipedes of Crustacea.

Gnathorrhagia. (Γνάθος; ῥήγνυμι, to burst forth.) Severe bleeding from the inner surface of the cheeks.

Gnathoschisis. (Γνάθος; σχίσις, a division. G. *Kieferspalt*.) A congenital fissure of the jaw forming cleft palate, and often accompanied by hare-lip.

Gnathospasmus. (Γνάθος; σπασμός, spasm. G. *Wangenkampf*.) A synonym of *Trismus*.

Gnathostegite. (Γνάθος; στέγη, a roof.) A broad plate developed from the third thoracic appendages of the Brachyura.

Gnathostoma. (Γνάθος; στόμα.) A Genus of nematode worms.

G. hispidum. (L. *hispidus*, bristly.) Found in the stomach of the pig.

Gnathostomata. (Γνάθος; στόμα, the mouth.) A Division of the Suborder *Eucopopoda*, Order *Copepoda*, having all the rings well developed and the buccal pieces arranged for mastication; the upper lip is very prominent, and forms, with the lower bilobed lip, a buccal vestibule.

Gnathus. (Γνάθος. F. *joue*; G. *Backe*, *Wange*.) The cheek.

Also (F. *machoire*; G. *Kiefer*, *Kinnlade*), the jaw.

Gnaur. Same as *Gnarr*.

Gnawed. (Sax. *gnagan*, to gnaw.) Eaten away; eroded.

Gneiss. (G. *Gneiss*, a term applied to a granitic-looking rock at the bottom of the primary strata.) A name for the series of hard, crystalline, granitic schists, constituting the lowest portion of the metamorphic, non-fossiliferous strata. It differs from granite in the indistinctness and confused aggregation of the crystals of quartz, felspar, and other bodies which occur in both, but which in granite are large and distinct.

Gnetaceæ. The jointed firs; a Nat. Order of the Class *Gymnospermæ*. Small trees or shrubs with branched and jointed stems; opposite, entire, net- or parallel-veined leaves; unisexual flowers; and two- or three-celled anthers with porous dehiscence.

Gnetum. A Genus of the Nat. Order *Gnetaceæ*.

G. gne'mon, Linn. Hab. Moluccas. The boiled fruit and the seeds are eaten.

G. ovalifolium, Poir. (L. *ovalis*, oval; *folium*, a leaf.) Used as *G. gne'mon*.

Gnidian. See *Cnidian School*.

Gnidii grana. (L. *granum*, a seed.) Mezereon berries.

Gnidium. See *Cnidium*.

Gnomon. (L. *gnomon*; Gr. γνόμεν, an interpreter.) The index of a dial.

Gnomonical. (Γνώμων, the pin of a sun-dial.) In Botany, applied to a stalk which is bent at a right angle.

Gnoscopin. C₃₄H₃₆N₂O₁₁. An amor-

phous alkaloid discovered by Smith in opium. It melts at 233° C. (451.4° F.), and is soluble in chloroform and carbon disulphide, but not in ether.

Go'a powder. (F. *poudre de Goa*; G. *Goa-Pulver*.) An orange-yellow powder, darkening with age, contained in irregular interspaces in the wood of the *Andira araroba*, Aguiar. It has neither taste nor smell, is insoluble in water, slightly soluble in alcohol; when heated to 162° C. (323.6° F.) it melts. It may be partially sublimed, and on ignition is totally dissipated. Sulphuric acid dissolves it with a deep red colour; on pouring the solution into water the goa powder separates unchanged. It contains resin 2 per cent., woody fibre 5.5, bitter extractive 7, and 80 to 84 per cent. of chrysophanic acid, according to Atfield, chrysarobin, according to Liebermann. It is a gastro-intestinal irritant, producing vomiting and watery stools. It has been used in many skin diseases, especially ringworm, but is almost superseded by chrysophanic acid, which is derived from it.

Goadby's solution. A fluid in which to mount Zoophytes and other marine objects, consisting of bay salt 4 ounces, alum 2 ounces, corrosive sublimate 4 grains, dissolved in 4 parts of boiling water. For delicate preparations it should be diluted with several times its bulk of water. Arsenious acid may be substituted for the corrosive sublimate, and where the structure contains calcareous matter the alum should be omitted.

Goat. (Mid E. *goot*, *gote*; Sax. *gât*; G. *geiss*, from an Aryan form *ghaida*, from root *ghid*, probably meaning to play. F. *chèvre*; I. *capra*; S. *cabra*; G. *Ziege*.) The animals of the Genus *Capra*, especially the *Capra hircus*, the common goat, the flesh of which is eaten, and the milk much esteemed.

G's bane. A term given to some of the species of *Aconitum*.

G's beard, com'mon. The *Tragopogon pratense*.

G's beard, grey. The *Clavaria cinerea*.

G's beard mush'room. The *Clavaria coralloides*.

G's beard, purple. The *Tragopogon porrifolium*.

G's beard, yellow. The *Tragopogon pratense*.

G. mar'joram. The *Tragopogon pratense*.

G's milk. See *Milk*, goat's.

G's rue. The *Galga officinalis*; also the *Tephrosia virginiana*.

G's stones. See *Goatstones*.

G's thorn. The *Astragalus verus*.

G-weed. See *Goatweed*.

Goat beard. Same as *Goat's beard*.

Goats beard. See *Goat's beard*.

Goatstones. The *Orchis hircina*, from the resemblance of their roots to the testicles of a goat.

G., large military. The *Orchis fusca*.

Goatweed. The *Egopodium podagraria*.

G., shrubby. The *Capraria bifolia*.

Gobio. (Κωβίος, the gudgeon.) A Genus of the Family *Cyprinidae*, Suborder *Abdominalia*, Order *Teleostei*, Class *Pisces*.

G. criniger. (L. *crinis*, the hair; *gero*, to bear. F. *calou-outouvé*.) Hab. Indian seas. The flesh is poisonous to man and animals.

G. fluviatilis. Linn. (L. *fluviatilis*, be-

GOBIUS—GOITRE.

longing to streams. *F. goujon*; *I. ghiozzo*; *G. Gründling*.) The gudgeon, an esculent fish.

Gobius. Same as *Gobio*.

G. vulgaris. The *Gobio fluviatilis*.

Goblet. (*F. goblet*; dim. of Old *F. gobel*; from Low *L. cupellus*, a cup.) A large cup for drinking out of.

G., bitter. A cup made of quassia wood, in which water or wine is allowed to stand until it has dissolved some of the bitter principle, when it is drank as a stomachic.

G. cells. See *Cells, goblet*.

G., emetic. Same as *Cup, antimonial*.

G.-sha'ped. (*G. becherförmig*.) Having the shape of a cup or goblet, as the cup of a narcissus.

Goczal'kowitz. Germany, in Silesia. A strong sodium chloride spring, containing also carbonate of iron and small quantities of iodide and bromide of magnesium.

Godelheim. Germany, in Westphalia. An earthy chalybeate water arising in two springs, and containing small quantities of sodium, calcium, and magnesium chlorides, sulphates and carbonates, with iron and manganese carbonates, and free carbonic acid.

Goder'naux, powder of. A compound, formerly in great esteem, containing metallic mercury, calomel, antimony, and charcoal. It was used in skin diseases, epilepsy, and syphilis.

Godesberg. Germany, on the left bank of the Rhine. An alkaline chalybeate water, containing sodium chloride.

Godfrey's cordial. An old secret preparation of opium, one formula for which was, dissolve 2·5 ounces of carbonate of potassium in 26 pints of water, add 16 pints of molasses, heat over a gentle fire till they simmer, and scum; mix a pint and a half of laudanum, 2 pints of alcohol, and 4 drachms of oil of sassafras, and add them to the decoction. In some formulae coriander, anise, and caraway seeds were also employed.

Godomolla. The Javanese name of *Grangea maderaspatana*.

Geoffroy'a. A misspelling of *Geoffroya*.

G. inermis, Swartz. The *Andira inermis*.

Geoffroy'a. Same as *Geoffroya*.

Goëmin. (*F. goëmon*, seaweed.) Blondau's term for a mucilaginous substance obtained from Carrageen moss by boiling in distilled water and precipitating with alcohol. The precipitate is redissolved in water and evaporated, so as to form thin, transparent, elastic plates like isinglass, which soften and swell up in cold water. It is tasteless and odourless, neutral, and soluble in alkaline liquids.

Goëtre. Same as *Goitre*.

Gögging. Bavaria. A sulphur spring.

Goggles. (*E. goggles*, to roll the eyes; probably of Celtic origin.) A pair of spectacles with dark glasses and plush-edged wire sides, to protect the eyes from dust and sun glare. Originally they were made of horn, or of blackened ivory, having a small hole fitted with glass in the centre, in order that they might also be used to correct squinting by keeping the optic axes in the same direction.

Gohier. France, Département de Maine et Loire. Cold, weak chalybeate waters, containing a little free carbonic acid.

Goitre. (*F. goitre*; from *L. guttur*, the throat. *I. gozzo*; *S. papera*; *G. Kropf*.) A term applied in recent years to enlargements of the thyroid gland of any nature, but latterly by many restricted to the hypertrophic enlargements, to the exclusion of the inflammatory, cancerous, and other diseases of the gland. The term is of comparatively recent origin, although Fabricius Hildanus, in the seventeenth century, had applied the word *gutturiosi* to people suffering from this affection. By Galen and Paulus of Egina, and, following them, the Latin authors, it was called *bronchocele* and *tracheocele*. The School of Salerno applied to it the term *hocium*, and in the sixteenth century it was called *struma*, a term employed by many German authors of the present time; but the exact seat of the disease, the thyroid gland, was first demonstrated by Körtum in the eighteenth century. Goitre may be sporadic or endemic; it is more common in females than in males, and commences generally between the ages of seven and twenty. It is an hypertrophy of the different structures of the whole or of part of the thyroid gland, either in uniform proportion, or in preponderating excess of one or other tissue; the increase in size may be little above the natural, or it may be so great as to form a swelling which hangs over the upper part of the chest, or even, in rare instances, which reaches to the thighs. The surface of the tumour is smooth, fusiform, and often lobulated; the consistence varies from a soft pulp to a fibrous or a stony hardness; in some cases it contains cysts. It is seldom painful except by reason of its weight. As it grows it may compress the trachea so as to cause difficulty of breathing or suffocation and a hoarse voice; it may compress the oesophagus so as to cause difficulty or impossibility of swallowing; it may compress the carotid arteries so as to cause cerebral anæmia; it may compress the jugular veins so as to produce a livid face, with distended veins, somnolence, and cerebral hæmorrhage; and it may compress the nerves, such as the recurrent laryngeal, so as to cause aphonia, the brachial plexus so as to cause pains in the arms or even paralysis of motion and sensation, the phrenic so as to produce paralysis of the diaphragm, or the sympathetic so as to produce dilatation of the facial blood-vessels, exophthalmos, and unequal pupils; in addition, the goitrous tumour may be the seat of inflammation, of suppuration, or of hæmorrhage; and thus in many ways its progress may cause death. On the other hand, a goitre may undergo resolution, the hypertrophied parts undergoing fatty degeneration and absorption, or its growth may be arrested before it has become a source of trouble or of danger. The cause of goitre is not yet satisfactorily settled; it is commonly held that the presence of lime salts in the water habitually used for drinking is the morbid agent, and Virchow has suggested that some telluric influence, probably of a malarious character, is a necessary condition. For the varieties of goitre, see the subheadings.

G., accessory. (*L. accessus*, an approach.) Hypertrophy of the accessory thyroid glands.

G., acute. (*L. acutus*, sharp.) A term applied to the cases of goitre which proceed rapidly, especially to the quickly progressing cases of the epidemic form.

G., aerial. (*L. aer*, air. *F. goitre aérien*.)

GOITRE.

Larrey's term for a tumour of the neck containing air, which may have been either emphysema of the thyroid gland or of the surrounding tissues, or a hernia of the respiratory mucous membrane constituting *Tracheocèle*.

G., aneurysmatic. (Ανεύρυσμα, an aneurysm.) Walther's term for *G., vascular*, but restricted, after Heidenreich, to the form in which the arteries chiefly are dilated. The large arteries are mainly affected, but sometimes the arterioles are also much dilated, and become the subjects of minute aneurysms, and occasionally anastomose so frequently as to form a kind of erectile tissue. The walls of the vessels are seldom altered in structure, but sometimes they are calcareous. The tumour in many cases is pulsatile.

G., aqueous. (L. *aqua*, water.) Same as *G., cystic*.

G., calcareous. (L. *calx*, lime.) Same as *G., osseous*.

G., cancerous. Cancer of the thyroid gland.

G., colloid. (Κόλλα, glue; είδος, likeness.) The form in which the follicles of the gland have become filled with a viscous, transparent, yellowish or greyish, jelly-like substance, either secreted by the cells or a degenerative product. It often attains a very great size.

G., cystic. (Κύστις, a bladder. *F. goître kystique*; *G. Cystenkrankh.*) An enlargement of the thyroid gland accompanied by the formation of cysts, which may be single or multiple, and may contain a serous fluid rich in paralbumin, or a dark grumous substance consisting chiefly of blood exuded from vegetations on the interior of the cyst-wall, or a colloid substance containing little albumin, but much mucin, the result of degenerative changes in a colloid goitre. The cyst-wall is sometimes provided with trabecule, which form imperfect partitions, many of which enclose patches of unaltered gland tissue.

G., endemic. (Εν, in; δῆμος, a people.) The disease described under the chief heading.

G., epidemic. (Επιδημία, among the people.) A form of the disease which attacks in rapid succession a large number of individuals living together, such as soldiers in barracks, or prisoners in jail, or pupils in schools. Outbreaks of this form have only been observed in localities where goitre is endemic, or in the immediate neighbourhood of such places; inhabitants of non-goitrous places are attacked under these circumstances as freely as those belonging to districts where goitre is endemic, but it is chiefly the new-comers who suffer, and of these the younger persons rather than the elder. A good condition of health does not afford any chance of immunity. Epidemics of goitre are most common in the spring and autumn. The origin of the disease is unsettled. A chill got whilst sweating, by taking cold drinks, or by opening the dress at the throat, sleeping in close, ill-ventilated, overcrowded rooms, sudden changes of atmospheric temperature, unaccustomed compression of the neck by the dress, such as occurs in recruits, have all been suggested as causes, and, most importantly, perhaps, the water of the district. Some have supposed that the disease is infectious, and others that it is rheumatic in origin. Little is known of the morbid anatomy, save that the thyroid body in one case was red and vascular, and the epithelial cells were granular; and that

in another case the gland was greyish and hard, the connective tissue was hypertrophied, and two small cysts filled with a brownish glutinous fluid were found. At first the symptoms are purely local, only rarely is there much pain, and there is no fever; the gland enlarges steadily, sometimes producing hoarseness, or oppression in the breathing, or redness of the face, or protrusion of the eyeballs; occasionally a murmur is heard in the carotid arteries, and now and then there is enlargement of the cervical or submaxillary glands. After attaining its greatest size it remains stationary for some time, and then declines. The duration of the disease varies much; in some epidemics it lasts seven or eight days, in many fifteen to twenty, and in a few sixty to seventy days. The swelling usually subsides entirely; but occasionally chronic thickening or cystic enlargement persists.

G., exophthalmic. (Εξ, out; ὀφθαλμός, the eye.) A term for *Graves's disease*, in reference to the prominence of the eyes.

G., fibro-areolar. (L. *fibra*, a filament; *areola*, a small space.) The same as *G., fibrous*.

G., fibrous. (L. *fibra*, a filament. *F. goître fibreux*; *G. Faserkrankh.*) The form in which the connective tissue of the whole or of a part of a follicular goitre becomes thickened, and compressing the vesicles causes the tumour to contract and to become hard in the parts which have been invaded.

G., fleshy. (*F. goître charnu*.) Same as *G., fibrous*.

G., follicular. (L. *folliculus*, a small bag. *F. goître folliculaire*.) The ordinary form or type of the disease. It is a growth of the normal structure of the thyroid gland in a natural but excessive manner; the epithelial cells increase by fission, and the follicles by budding, and so solid outgrowths advance into the soft tissue; the connective tissue grows also, and in some cases cuts off fragments of these outgrowths, which themselves take on the same mode of growth; at a further stage the bud-like offshoots become softened in the centre and become vesicular. Sometimes this hyperplasia invades the whole gland, and sometimes it is confined to certain lobules, which occasionally grow in such fashion as to become pedunculated. The blood-vessels also participate in the excess of growth.

G., follicular, hyperplastic. (Υπέρ, in excess; πλάσσω, to form.) Same as *G., follicular*.

G., ganglionic. (Γάγγλιον, an excrescence under the skin.) Alber's name for the enlargement of the accessory thyroid glands, under the false impression that they were lymphatic glands or ganglions.

G., gelatinous. (*Gelatin*.) Same as *G., colloid*.

G., glandular. Same as *G., follicular*.

G., glandular, encysted. (Εν, in; κύστις, a bag.) Stromeyer's name for the form of follicular goitre in which the contents of the vesicles have atrophied and left merely a shell.

G., glandular, soft. Same as *G., follicular*.

G. leaf. A species of *Laminaria* chewed in India as a remedy for goitre.

G., lymphatic. (*Lymph*.) Same as *G., colloid*.

G., osseous. (L. *os*, a bone.) A fibrous goitre which has become infiltrated with calcareous salts.

GOITRED—GOLD.

G., paren'chymatous. (Παρίγχυμα, anything poured in beside.) Same as *G., follicular*.

G., pneu'mo-gut'tural. (Πνεύμα, wind; *L. guttur*, the throat.) Same as *G., aerial*.

G., pul'sating. (*L. pulso*, to beat.) Same as *G., aneurysmatic*.

G., retropharynge'al. (*L. retro*, behind; *pharynx*, the gullet.) The form of cystic or other disease of the thyroid gland in which a part of the growth lies behind the pharynx.

G., scir'rhous. (Σκίρρῶς, hard.) Same as *G., fibrous*.

G., se'rous. (*L. serum*, the watery part of the blood.) Same as *G., cystic*.

G., simple. A goitre which consists in simple hypertrophy of the thyroid gland, without cysts or other morbid structures.

G., sporadic. (Σποραδικός, scattered.) The form described under the chief heading.

G., stick. The stem of a seaweed, *Sargassum bacciferum*, used in South America as a remedy for goitre.

G., submaxillary. (*L. sub*, under; *maxilla*, the jaw.) Goitre affecting a thyroid gland which, by congenital defect, is placed above its natural situation; the enlarged lobes may extend behind the angles of the jaws and produce serious symptoms from the compression of neighbouring structures.

G., substernal. (*L. sub*; *sternum*, the breast bone.) A goitre in which the lower part of the gland, as it grows, passes behind the sternum and may produce symptoms of suffocation by its pressure on the trachea.

G., suff'ocating. (*L. suffoco*, to choke. *F. goitre suffocant*.) The form in which, from pressure of the tumour on the trachea, there is great dyspnoea.

G., varicose. (*L. varix*, a dilated vein.) The form, frequently congenital, of vascular goitre in which the veins, especially the peripheral veins, are largely dilated into sacculi, with thinning of their walls and disappearance of the transverse layer of unstriped muscular fibre-cells. The veins are frequently subject to calcareous and amyloid degeneration, and may burst and cause a thyroid apoplexy.

G., vas'cular. (*L. vasculum*, a small vessel.) A goitre in which the dilatation and growth of the blood-vessels exceed in proportion that of the cellular elements of the gland; it may be a *G., aneurysmatic*, or a *G., varicose*.

G., vesicular. (*L. vesicula*, a small blister.) Same as *G., aerial*.

Also, a synonym of *G., follicular*.

Goitred. Affected with *Goitre*.

Goit'rous. (*Goitre. F. goitreux*; *I. gozuto*; *G. kropfig, kropfartig*.) Relating to, or affected with, *Goitre*.

Gok'atu. The *Garcinia morella*.

Gok'hru. The fruit of *Pedaliu murex*. Used in India for nocturnal emissions, impotence, and incontinence of urine.

Golaise', la. Switzerland, Canton Val-lais, near Geneva. A sulphur spring.

Gol'coin. Same as *Glycoin*.

Gold. (*Sax. gold*; *G. Gold*; from Aryan root *ghar*, to be yellow. *L. aurum*; *F. or*; *I. oro*; *S. oro*.) Symb. *Au*; atomic weight 196.2. A bright-yellow metal, usually found native combined with a little silver. It sometimes occurs in small regular crystals. At 13° C. (55.4° F.) its sp. gr. is 19.265; according to

Pouillet, it fuses at 1381° C. (2517.8° F.), according to Becquerel, at 1037° C. (1898.6° F.) It is very soft, and is the most ductile of metals, and may be beaten out to an exceeding thinness, .0001 mm. It is unacted on by water or by oxygen; it is insoluble in all acids except aqua regia and selenic acid; alkalis and the nitrates also attack it. For goldsmiths' work and for coins it is alloyed with silver or copper, in order to obtain an amount of hardness fitting it for frequent use. Its ancient name was *Sol*.

G., ammo'nio-chlo'ride of. The *Auri et ammonii chloridum*.

G. and so'da, hydrochlo'rate of. See *Auri et sodii chloridum*.

G. and so'da, mu'riate of. Same as *Auri et sodii chloridum*.

G. and so'dium, chlo'ride of. The *Auri et sodii chloridum*.

G. and so'dium, chlo'ride of oxide of. The *Auri et sodii chloridum*.

G., chlo'ride. See *Auri chloridum*.

G., chlo'ride of, acid. The same as *Auri chloridum*.

G., chlo'ride of, yellow. The *G., chlo'ride of, acid*.

G., chlo'ride stain'ing solu'tion. Chloride of gold is used as a staining agent for microscopic preparations. A solution of one or two per cent. in water is employed, the tissues are soaked in it for a few minutes, washed in distilled water, and then placed in a one per cent. dilution of acetic acid in water for some minutes; the structure is again washed in water, put into glycerin, and exposed to the light. The nerves become blue or violet.

G., chlo'ride, test solu'tion of, U.S. Ph. One part of chloride of gold dissolved in twenty parts of distilled water.

G., crys'tal. Gold in crystals; *G., sponge*.

G., cups. (*Sax. copp*, a head.) The plants of the Genus *Ranunculus*.

G., cy'anide. See *Auri cyanidum*.

G., disulph'ide. Au_2S_2 . A black powder obtained by passing hydrogen sulphide into a solution of auric chloride.

G., foil. (*F. feuille*, a leaf.) A thicker form of *G. leaf*.

G., fulminating. $Au_2O_3(NH_3)_4$. See *Aurum fulminans*.

G., hydrochlo'rate of. The *Auri chlo'ridum*.

G., i'odide. See *Auri iodidum*.

G., knobs. The plants of the Genus *Ranunculus*.

G., leaf. A thin leaf of gold made by beating it out at first between pieces of vellum and then between pieces of goldbeaters' skin. It is used to cover pills, and a thicker kind is employed to fill cavities in teeth.

G., leaf elec'troscope. (*Electricity*; *Gr. σκοπέω*, to observe.) An instrument consisting of a metallic rod, to the lower end of which are attached two slips of gold-leaf, enclosed in a glass shade on a metal foot, and ending externally in a knob; when this is touched with a body charged with electricity the gold leaves diverge.

G., lith'arge. The *Plumbi oxidum semivitreum*, being litharge having a red colour.

G., monochlo'ride. Same as *Aurous chloridum*.

G., monox'ide. Same as *Aurous oxide*.

G., moss. A term applied to gold when

GOLDACH—GOMPHIOUS.

found in hair-like filaments consisting of a series of crystals connected with each other.

G., mu'riate of. The *Auri chloridum*.
G., nitromu'riate of. The *Auri nitromurias*.

G. of pleas'ure. The *Camelina sativa*.
G. of pleas'ure, wild. The *Camelina sativa*.

G. oxide. The *Auri oxidum*.
G. perchlo'ride. The *Auri chloridum*.
G., Percy'anide of. The *Auri cyanidum*.
G. peroxide. Same as *Auri oxidum*.
G. prepa'ed with tin. The Purple of Cassius.

G., pur'ple. Same as Cassius's purple.
G. size. See *Size, gold*.

G., sponge. A form of gold used by dentists for filling teeth, in which the metal is reduced to a crystalline mass of spongy texture. One form, in which the crystals are those of natural gold, is obtained by precipitating a solution of gold in aqua regia by means of oxalic or sulphurous acids; another form is in foliaceous crystals.

G. terchloride. The *Auri chloridum*.
G., terey'anide of. The *Auri cyanidum*.
G. teroxide. The *Auri oxidum*.

G., tests for. In solutions of gold salts ferrous sulphate gives a brown precipitate, forming in the blowpipe flame a bead of metallic gold; stannous chloride gives the brownish purple precipitate called the purple of Cassius.

G.-thread. See *Goldthread*.
G. trichloride. The *Auri chloridum*.
G. trihydroxide. The *Auri oxidum*.

G. trioxide. Au_2O_3 . A blackish-brown powder obtained by heating gold hydroxide to $100^\circ C$. ($212^\circ F$.)

Gold'ach. Switzerland, Canton St. Gallen, near Rorschach. A cold chalybeate spring containing some oxide of manganese.

Gold'bach. Bavaria, near Aschaffenburg. An alkaline, earthy chalybeate water, with some free carbonic acid.

Goldbeater's skin. (F. *baudruche*; I. *minugia*; G. *Goldschlägerhaut*.) The large intestine of the ox prepared so that little but the peritoneal covering remains. It is used to separate the gold leaves during the beating out; and in surgery is employed as an adhesive protection for cuts and abrasions, either simply or coated on one side with isinglass.

Gold'berg. Germany, in Mecklenburg. A chalybeate spring containing also sodium chloride, calcium chloride, calcium carbonate, and free carbonic acid.

Golde. The *Calendula officinalis*.

Gold'en. Like to, or consisting of, *Gold*.

G. bug. The *Coccinella septempunctata*.

G. chain. The *Cytisus laburnum*.

G. cud'weed. The *Tanacetum annuum*.

G. flower. The *Chrysanthemum segetum*.

G. knop. The *Coccinella septempunctata*.

G. locks. The *Polytrichum commune*.

G. locks, German. The *Linæysis vulgaris*; also the *Helichrysum arenarium*.

G. locks, Orient'al. The *Helichrysum orientale*.

G. lung-wort. The *Hieracium murorum*.

G. maid'enhair. The *Polytrichum commune*.

G. mar'casite. An old name for Zinc.

G. mouse-ear. The *Hieracium pilosella*.

G. ointment. See *Singleton's golden ointment*.

G. rod. The *Solidago virgaurea*.

G. rod, American. The *Solidago odora*.

G. rod, Cana'dian. The *Solidago canadensis*.

G. rod, fra'grant. The *Solidago odora*.

G. rod, rig'id. The *Solidago rigida*.

G. rod, sweet-scent'ed. The *Solidago odora*.

G. sax'ifrage. The *Chrysosplenium alternifolium*.

G. sax'ifrage, com'mon. The *Chrysosplenium oppositifolium*.

G. seal. The *Hydrastis canadensis*; also the *Frasera Walteri*.

G. sul'phide. Same as *G. sulphuret*.

G. sulphur. The *Antimonium sulphuratum*.

G. sulphuret. The *Antimonium sulphuretum*.

G. syr'up. Same as *Molasses*, the drainings from raw sugar.

G. this'tle. The *Scolymus maculatus*.

G. thread root. The *Coptis teeta*.

Gold'enbridge. Ireland, near Dublin. A sulphur water spring here, called the Waterloo spring.

Gold'ens. The *Chrysanthemum leucanthemum*.

Gold'ielocks. The *Helichrysum stæchas*, the *Chrysocoma linosyris*, and the *Ranunculus auricomus*.

Gold'ing. The *Calendula officinalis*, and the *Chrysanthemum segetum*.

Gold'shrub. The *Palicourea speciosa*.

Gold'thread. The *Coptis trifolia*.

Goll, Fried'rich. A Swiss anatomist of the present century, born at Zürich in 1829.

G., col'umn of. (F. *cordons de Goll*.) See *Column of Goll*.

G., tract of. Same as *Column of Goll*.

Gollindrin'era. The Mexican name of the *Euphorbia prostata*.

Golondri'na. A name given in Peru, according to Feuille, to a plant probably of the Genus *Opercularia*, which is used as a refrigerant in fevers.

Gom'bo. The *Hibiscus esculentus*.

Gom'mart. The *Bursera gummifera*.

Gommuti palm. The *Arenga saccharifera*.

Gomorte'geæ. (F. *gomortégées*.) A Series of the Family *Monimiaceæ*, having hermaphrodite flowers, two or three carpels with an ascending ovule, drupaceous fruit, albuminous seeds, and a straight embryo.

Gom'phia. (Γόμφος, a nail. G. *Nagelbeere*.) A Genus of the Nat. Order *Ochnaceæ*.

G. angustifo'lia. Vahl. (L. *angustus*, narrow; *folium*, a leaf.) Hab. India, Ceylon. Root and leaves bitter. Used in decoction as a tonic and stomachic, in dyspepsia with nausea.

Gomphi'asis. (Γομφίασις, toothache.) Pain in the teeth; also any uncomfortable sensation in the teeth, as from taking acids.

Also, looseness of the teeth in their sockets.

Gomphi'asmus. (Γομφιασμός, toothache.) Same as *Gomphi'asis*.

Gom'phiol. (Γομφίος, a grinder tooth; from γόμφος, a bolt, because they are like nails that are driven into wood. F. *dents molaires*; G. *Backenzähne*.) Old term for the molar or grinder teeth.

Gom'phious. (Γόμφος, a bolt. G. *nagelartig, keilförmig*.) Nail-like; conical.

GOMPHOCARPUS—GONGONHA TEA.

Gomphocarpus. (Γόμφος, a bolt; καρπός, fruit.) A Genus of the Nat. Order *Asclepiadaceæ*.

G. crispus. R. Brown. (L. *crispus*, curled.) Hab. South Africa. Root bitter and acrid. Used as a diuretic in dropsy, and as an antispasmodic in colic.

G. fruticosus. R. Brown. Hab. Syria. Found as an adulterant of senna leaves.

G. peduncula'tus. Linn. (L. *pedunculus*, a little foot.) Hab. Abyssinia. Roots esculent.

Gompholo'bium. A Genus of the Nat. Order *Leguminosæ*. The leaves of some species are used as food.

G. uncinatum. (L. *uncinatus*, furnished with prickles.) Hab. Australia. Said to be poisonous to sheep.

Gomphoma. Same as *Gomphosis*.

Gomphosia. A Genus of the Nat. Order *Cinchonaceæ*.

G. chlorantha. (Χλωρός, pale green; άνθος, a flower.) Bark, according to Weddell, mixed as an adulteration with genuine calisaya bark, from which it is distinguished by a peculiar odour, by a fasciculate disposition of the cortical fibres, and by containing in some of its vessels a ruby-coloured juice. It contains no alkaloid.

Gomphosis. (Γόμφωσις, a bolting together; from γομφώω, to fasten with a bolt or a nail. F. *gomphose*; I. *gonfosi*; S. *gonfosis*; G. *Nagelfügung*, *Einkeilung*.) A variety of the Class *Synarthrosis*, in which one bone is fixed into its socket as a nail into wood. The mode of fixture of teeth into their sockets is the only instance of this form of articulation in the body.

Gomphrena. (G. *Kugel-amaranth*.) A Genus of the Nat. Order *Amaranthaceæ*.

G. macrocephala. St. Hil. (Μακρός, large; κεφαλή, the head.) Hab. Brazil. Used as *G. officinalis*.

G. officinalis. Mart. (L. *officina*, a shop.) Hab. Brazil. Root, a stimulant and tonic. Used in fevers, diarrhoea, indigestion, and spasms. It is one of the substances called Paratudo in Brazil, meaning proper for all, that is, all diseases.

G. polygonoides. (Polygonum; Gr. είδος, likeness.) The *Achyranthes repens*.

Gomu'to palm. The *Arenga saccharifera*.

Gomu'tus. A Genus of the Nat. Order *Palmaceæ*.

G. gomu'to. The *Arenga saccharifera*.

G. saccharifer. Spreng. The *Arenga saccharifera*.

Gonacra'sia. Misspelling of *Gonacra'tia*.

Gonacra'tia. (Γονή, the semen; ακρατής, not having power over.) A synonym of *Spermatorrhœa*.

Gonade. Häckel's term for the sexual glands of the Medusæ.

Gonæ. (Γονή, the parts of generation.) Old term (Gr. γοναί), used by Hippocrates, *de Humid. Usu*, vi, 2, 3, for the sexual parts, male or female.

Gonagra. (Γόνυ, the knee; άγρα, a seizure. F. *gonagre*; G. *Knieficht*.) Gout occurring in the knee or knee-joint.

Gonal'gia. (G. *Knieschmerz*.) See *Gonyalgia*.

Gonan'gium. (Γόνος, offspring; αγγείον, a vessel.) The chitinous receptacle in which the sexual buds, planoblasts, or sporosacs of the Hydrozoa are produced.

Gonapophyses. (Γόνυ, the knee; απόφυσις, an offshoot.) Two pairs of elongated processes arising from the eighth and ninth somites of the cockroach and allied species.

Gonarthritis. (Γόνυ, the knee; άρθρον, a joint. F. *gonarthrite*; G. *Kniegelenkentzündung*, *Knieficht*.) Inflammation of the knee-joint; also gout of the knee.

Gonarthrocacé. (Γόνυ, the knee; άρθρον, a joint; κάκη, evil or disease.) A cancerous or ulcerated condition of the knee-joint; the disease formerly called white swelling of the knee-joint.

Gonarthromeningitis. (Γόνυ; άρθρον, a joint; μήνυγξ, a membrane.) Inflammation of the synovial membrane of the knee-joint.

Gonarthrotomy. (Γόνυ; άρθρον, a joint; τομή, a cutting.) Incision into the knee-joint; a proceeding which has been employed under antiseptic precautions, combined with free drainage, in the treatment of various forms of disease of the knee-joint.

Gonatalgia. See *Gonyalgia*.

Gonatan'cos. See *Gonyancon*.

Gonatocèle. See *Gonocèle*.

Gonatopterides. See *Gonyopterides*.

Gonatorrheuma. See *Gonyorrheuma*.

Gonaura. (Γονή, the semen; αύρα, a gentle wind. F. *gonaura*; G. *Samendunst*.) The *Aura seminalis*, or seminal vapour of old authors.

Gondret, Lou'is Fran'cois. A French surgeon, born at Auteuil in 1776, died in 1855.

G's ammoniacal caustic. Solution of ammonia two parts, mixed with one part each of mutton suet and oil which have been melted together. Used as a vesicant and revulsive.

G's pommade. Same as *G's ammoniacal caustic*.

Goné. (Γονή, produce; from γίνω, radical form of γίγνομαι, to be born.) Old term for the semen; also, applied by Heyschius to the uterus.

Gonecys'tic. (Γονή, the semen; κύστις, a bladder. F. *gonécystique*.) Of, or belonging to, the *Vesicula seminales*.

Gonecys'tides. (Γονή; κύστις.) The *Vesicula seminales*.

Gonecys'tis. (Γονή, the semen; κύστις, a bladder. F. *gonécyste*; G. *Samenbläschen*.) A term for a seminal vesicle, but usually applied in the plural, *Gonecystides*.

Gonecystitis. (Γονή; κύστις. G. *Samenbläschenentzündung*.) Inflammation of the vesicula seminales.

Gonecyston'cus. (Γονή; κύστις; όγκός, a tumour. F. *gonécystoncus*; G. *Samenbläschengeschwulst*.) A tumour or enlarged condition of a seminal vesicle, from obstruction of its excretory duct, inflammation, or the like.

Gonecystopy'osis. (Γονή, the semen; κύστις, a bladder; πύω, pus. F. *gonécystopyose*.) Suppuration in a seminal vesicle.

Gonepæ'us. (Γονή.) Same as *Spermatopæus*.

Gonepoie'sis. (Γονή; ποίω, to make. F. *gonépoise*; G. *Samenbereitung*.) The preparation and the secretion of the semen.

Gonepoiet'ic. (Γονή; ποίω.) Relating to the production and the secretion of the semen.

Gongon'ha tea. The leaves of *Ilex gongonha*. Used in Brazil.

Gongro'na. (Γόγγρος, an excrescence on trees.) Old term (Gr. γογγρόν), used by Hippocrates, *Epid.* vi, 3, l. 14, and explained by Galen, to signify all hard round tumours in tendinous parts, but specially a bronchocele.

Also, a term for a nerve-ganglion.

Also, an old term for a forceps for removing a foreign body from the gullet.

Gongrophthis'is. (Γογγρός; φθίσις, consumption.) Term for tubercular phthisis.

Gongros. (Γόγγρος, the conger eel.) The *Conger eel*.

Gongrus. Same as *Gongros*.

Gongulid'ion. (Dim. of γογγυλῖς, a turnip.) A small pill.

Gongulis. (Γογγυλῖς, a turnip.) An old name for a pill.

Gongylan'gium. (Γογγύλος, round; αγγέιον, a vessel.) The sporangium of cryptogams.

Gongylary. (Γογγύλος, round.) Relating to a *Gongyle*.

G. reproduction. Reproduction by means of gongyles.

Gongylé. (Γογγύλος, round.) A name for the turnip cabbage, which has a globular stem, as well as for the turnip.

Also, the same as *Gongylion*.

Gongyle. (Γογγύλος. F. *gongyle*; G. *Keimknoten*.) A round, hard, reproductive, simple body which is contained in the cuticular layer of the plant, and is detached by the progress of age, as in several of the Hepaticæ.

Gongyl'ion. (Γογγύλιος, round.) Old name (Gr. γογγύλιον), used by Hippocrates, *de Intern. Affect.* xliii, 33, and explained by Galen, to signify a small pill.

Gongyloid. (Γογγυλοειδής, roundish; from γογγυλῖς, a turnip; εἶδος, likeness.) Like a turnip; round.

Gongylone'ma. (Γογγύλος, round; νῆμα, a thread.) A sexually mature form of nematode worm.

G. contortum. Molin. (L. *contortus*, twisted.) Found in the œsophagus of *Ursus arctos*.

G. filiformè. Molin. (L. *filum*, a thread; *forma*, likeness.) Found in the abdomen of *Cynocephalus sphinx*.

G. minimum. Molin. (L. *minimus*, least.) Found in the stomach and liver of *Mus musculus*.

G. pulchrum. Molin. (L. *pulcher*, beautiful.) A filariform worm found in the wild hog, *Sus scrofa*.

G. spiralè. Molin. (L. *spira*, a coil.) Found in *Cervus dama*.

Gongylous. (Γογγύλος. F. *gongyle*; G. *rund*.) Round; globular.

Also, the same as *Gongyle*.

Gongylus. Same as *Gongyle*.

Gonia. (Γωνία, an angle. F. *gonie*; G. *Kniechen*, *Winkelchen*.) The same as *Goniolum*.

Gonian'con. See *Gonyancon*.

Gonic. (Γωνί, the semen. F. *gonique*.) Of, or belonging to, the semen; also, pertaining to the genital organs.

Gonid'ial. Relating to a *Gonidium*.

G. layer. The stratum lying between the cortex and the medulla of the stratified lichens which contains the gonidia.

Gonid'ium. (Dim. of γόνος, offspring.) An asexual reproductive organ of *Thallophytes*.

The gonidia of fungi are called conidia. The gonidia of lichens are now believed to be algæ, on which the lichen, an ascomycetous fungus, is parasitic; they are solitary or irregularly scattered throughout the thallus. See *Conidium*.

Gonigon'ium. (Γόνυ, the knee; γόνος. G. *Gliederstock*.) A joint-stem, a bulb-like part of a monocotyledon, the fibres of which do not proceed from the nodes but from the internodes. (Schlickum.)

Gonim'ic. Relating to a *Gonidium*.

G. layer. The layer in the thallus of a lichen which contains the gonidia in more or less regular order.

Gonimos. (Γωνί, the semen.) Fruitful; fecund; in which sense it was used (Gr. γόνιμος) by Hippocrates, *de Diet.* i, xxii, 14; also vital, and applied by him, i, xix, 9, to the fœtus in utero. It is opposed to *Agonos*.

Gonimous. (Γωνί, the semen. F. *gonimeux*; G. *zeugungsfähig*.) Having, or full of, semen; capable of generating; generative.

Goniocatheter. (Γωνία, an angle; καθετήρ, a catheter. F. *goniometer*.) Name by Carrière for an angulated or crooked catheter.

Goniocotes. (Γωνία; κοτίς, the back of the head.) A Genus of the Suborder *Mallophaga*, Order *Hemiptera*.

G. gí'gas. Meguin. (L. *gigas*, a giant.) A parasite of some *Gallinæe*.

G. haplog'onus. Nitzsch. (Ἀπλός, single; γόνος, offspring.) A parasite of the *Lophophorus impeyanus*.

G. hologaster. Burm. (Ὅλος, entire; γαστήρ, the belly.) A parasite of pigeons, partridges, and quails.

Gonio'des. (Γωνία; εἶδος, likeness.) A Genus of the Suborder *Mallophaga*, Order *Hemiptera*.

G. dissim'ilis. Nitzsch. (L. *dissimilis*, unlike.) A parasite of the quail, partridge, and like birds.

G. stylif'erus. (L. *stylus*, a stake; *fero*, to bear. F. *goniode à claque*.) A parasite of the turkey.

Goniomet'è. (Γωνία, an angle; μέλη, a probe. F. *goniomètre*; G. *Kniesonde*.) Name by Carrière for an angulated or crooked probe or sound.

Goniom'eter. (Γωνία, an angle; μέτρον, a measure. F. *goniomètre*; G. *Winkelmesser*.) An instrument for determining the measurement of the angles of crystals and minerals.

Also, an instrument for measuring the cranial and other angles.

G., anchylo'sis. (Ἀγκύλωσις, a stiffening of the joints.) An instrument consisting of two hinged pieces to be attached to the two segments of the affected limb, and having a graduated arc by which the angle they make with each other can be measured.

G., chest. A *Stethometer*.

G., fa'cial. Of *Bro'ca*. An instrument for measuring the facial angle on the living person, or on the skeleton, and for constructing the facial triangle of Cuvier. The base is composed of two flat pieces of wood joined at a right angle, one of them carrying a third piece, which can be moved parallel to the first on the second; the parallel branches are graduated and furnished with two screws for insertion into the external auditory canal. At the angle of junction of the first and second limbs is jointed a fourth limb carrying a projecting piece to be applied to the forehead, a

GONIOMETRY—GONOPHORE.

graduated arc is fixed on the first piece which declares the angle which the perpendicular limb forms with the base.

G., hand. An instrument first made in the last century by Carangeot, of Paris, for the measurement of crystals. It consists of a divided semicircle, to which two metallic rules are adapted; the one meeting the extremities of the semicircle is fixed, the other is movable on an axis at the centre of the circle of which the semicircular arc forms part; the crystal is placed between the two rules so that their edges may both be at right angles to the line of intersection of the two faces whose angular distance is to be measured, and the angle is then indicated on the divided semicircle.

G., parietal, of Qua'trefages. A pair of compasses with long articulated legs which may be applied on each side to the zygomatic arch and the parietal protuberance; a graduated arc on one of the legs near the middle joint registers the angle.

G., reflecting. (L. *reflecto*, to bend back.) An angle measurer for crystals invented by Wollaston. It consists of a divided circle carrying a movable axis, on which the crystal is fixed by means of wax, and is so placed that the angle of inclination which has to be measured is in a line with the axis of the instrument; this is then placed opposite a window so that a reflection of a window bar can be seen in one face of the crystal, the circle is now moved round till the window bar can be seen in the second face; the angle through which the crystal has been turned is marked by a pointer on the divided circle, and is the supplement of the required angle.

Goniomet'ry. (Γωνία; μέτρον.) The measuring of angles; the use of the *Goniometer*.

Gonion. (Γωνία, an angle.) The angle of the lower jaw.

Goniophyte. (Γωνία, an angle; φύτον, a plant.) Applied by Necker to a plant which has angular fruit.

Gonio'sis. (Γωνία, an angle.) Old term (Gr. γωνίσις), by Archigenes, for a species of pulse, high and sharp, indicative of debilitating and exhausting ailments, according to Galen, *de Præag. ex Puls.* ii, 11.

Gonios'toma. (Γωνία; στόμα, a mouth.) A Genus of the Nat. Order *Loganiaceæ*.

G. febrif'ugum. Spreng. (L. *febris*, fever; *fugio*, to put to flight.) The *Strychnos pseudoquina*.

Gonios'tomous. (Γωνία, an angle; στόμα, a mouth. F. *goniostome*.) Applied to a univalve shell in which the opening presents an angle more or less marked in a certain point of its circumference.

Gon'itis. (Γόνν, the knee.) Inflammation of the knee-joint.

Gonnag'ra. Same as *Gonagra*.

Gonoblastid'ium. (Γόνος, offspring; βλαστός, a sprout.) The process which carries a gonophore, or a sporosac, in *Hydrozoa*.

Gonobolia. (Γόνος, the semen; βολίζω, to throw a dart. F. *gonobolisme*; G. *Ausspritzung des Samens*.) Ejaculation of the semen.

Also, a term for *Spermatorrhœa*.

Gonobolism'us. Same as *Gonobolia*.

Gonocacé. (Γόνν, the knee; κάκη, an evil.) Term by J. F. Lobstein for white swelling of the knee.

Gonocalyz. (Γόνος, offspring; κάλυξ, a pod.) The bell-shaped disc forming the

swimming organ of the gonophore of the *Caly-cophoridae*.

Gon'occele. (Γόνος, the semen; κήλη, a tumour.) Effusion of the semen out of the ruptured seminal vesicles into the cellular texture; also, a swelling of the testicle and spermatic cord, from supposed retention of the semen.

Also, a synonym of *Spermatocœle*.

Gon'ocheme. (Γόνος, offspring; χήμη, a yawning.) According to Allman, a medusiform planoblast which gives origin directly to the generative elements.

Gonochor'isis. (Γόνος, sex; χάρισις, separation.) The separation of the sexes in two individuals.

Gonoch'orism. (Γόνος; χωρισμός, a separating.) Hæckel's term for the form of sexual generation in which the embryo, which in its early stage presents the same rudimentary sexual organs for both sexes, as it advances separates into one or other of the sexes by a combined process of atrophy of one part and development of another part of the primitive common sexual organ.

Gonococ'cus. (Γόνος, semen; κόκκος, a kernel.) The name given by Neisser to the micrococcus found in the discharge of gonorrhœa which he believes to be the specific agent in the production of the disease.

Gonocra'sia. See *Gonacratia*.

Gonocyst'ic. See *Gonecystic*.

Gonocyston'cus. See *Gonecystoncus*.

Gonocystopy'o'sis. See *Gonecystopyosis*.

Gonodis'cus. (Γόνος, offspring; δίσκος, a round plate.) The *Discus proliferus*.

Gonodos. (Γονή, the semen. F. *gonéux*; G. *spermatisch*.) Having, or full of, semen.

Gonoid. (Γονή, the semen; είδος, likeness.) Resembling the semen.

Also (Gr. γονοειδής), applied by Hippocrates, *Coac. Prænot.* 186, 362, 580, to a white, viscid, and thick discharge from the bowels, or to the drops of the urine having a similar appearance.

Gonolobus. (Γωνία, an angle; λοβός, a pod.) A Genus of the Nat. Order *Asclepiadaceæ*.

G. conduran'go. Triana. A species said to furnish one of the Condurango barks.

G. macrophyll'us. Mich. (Μάκρος, great; φύλλον, a leaf.) Root cathartic. Said to furnish an arrow poison.

G. tetrago'nus. (Τετράς, four; γωνία, an angle.) A species said to furnish one of the Condurango barks.

Gonon'cus. See *Gonyoncus*.

Gonoöphy'tum. See *Goniophyte*.

Gonophore. (Γόνος, offspring; φορέω, to bear. F. *gonophor*; G. *Befruchtungsträger*, *Geschlechtstheilträger*.) In Botany, a term by De Candolle for a prolongation of the receptacle which proceeds from the bottom of the calyx, and sustains the stamens and pistil, as in the *Anonaceæ*; it is an internode between the calyx and the corolla.

In Zoology (G. *Brutträger*), the receptacles of the reproductive elements or generative products of the *Hydrozoa*; they are medusoid buds formed from both cell-layers as an external process of the body wall, being the ultimate generative zooid.

G., medu'soid. (*Medusa*; είδος, likeness.) The *Gonophore* of animals described above.

GONOPHYSEMA—GONORRHŒA.

Gonophyse'ma. (Γόνυ, the knee; φύσημα, an inflation.) A swelling of the knee-joint.

Gonopoe'sis. See *Gonepoiesis*.

Gonopoetic. See *Gonepoietic*.

Gonopoie'us. (Γόνι, the semen; ποίω, to make. *F. gonopoie'*; *G. semenmachend.*) Favouring the secretion of semen; semen-making.

Gonopter'ides. (Γόνυ, the knee; πτερίς, the fern. *F. gonopterides*; *G. Gliederfarne.*) A term applied by Willdenow to a Class of plants comprehending the Families of the *Characeæ* and *Equisetaceæ*, which resemble the ferns, and have the stem articulated.

Gonorrheu'ma. (Γόνος, semen; ρεύμα, a flow.) A synonym of *Gonorrhœa*.

Gonorrhoblepharrhœ'a. (Γονόρροια, a flow of semen; βλέφαρον, the eyelid; ροία, a flow. *F. gonorrhoblepharrhœe*; *G. Augenliedertripper*, *Augentripper.*) Term for a gonorrhœal inflammation and discharge of purulent matter from the eye and eyelids.

Gonorrhœ'a. (Γόνος, semen; ροία, a flow. *F. gonorrhœe*; *I. gonorrœa*; *S. gonorrœa*; *G. Samenfluss.*) A term originally applied to a flux of semen; as well as to the disease now so called, especially the chronic stage known as gleet, because the discharge was formerly regarded as consisting of diseased semen.

Now (*F. blennorrhagie, chaude-pisse, goutte militaire*; *I. calda pissa, scolo, scolazione, scoloamento*; *Da. Drypper*; *Ru. Druipert*; *Swed. Dröppel*; *G. Tripper*; *Duss. percloi*; *Turk. belzouk*) exclusively applied to an inflammation of the mucous membrane of some part of the genito-urinary tract of venereal origin usually, commencing generally in the male at the fossa navicularis, and spreading backwards to the neighbourhood of the bulb; successive attacks are usually milder. It is accompanied by a purulent discharge, at first thin and semi-transparent, then thick and creamy or greenish, by pain in passing urine, often by painful erections at night, by œdematous swelling of the prepuce, and occasionally by abscesses of the lacuna, swelled testicle, conjunctivitis, and gonorrhœal rheumatism. When the discharge does not pass off with the inflammatory symptoms but continues for a long time it is known as gleet. The inflammation may spread to the bladder and the prostate, and to the lymphatics of the penis or groin, and may end in abscess in the submucous membrane or in the follicles, or in bubo; hæmorrhage from the urethra may occur, and phimosis or paraphimosis.

Gonorrhœa in the female is less common and less severe than in the male, and usually assails the vaginal mucous membrane or the vulva. When the latter is affected the parts become swollen and painful, a copious discharge is poured out from the mucous follicles, and the vulvo-vaginal glands may become inflamed and suppurate; the inflammation may spread to the uterus, especially to the canal of the cervix; the urethra is often implicated, but it is rarely the only seat of the disease. The inguinal glands may become enlarged and tender, peritonitis from extension of the disease may occur, and the ovaries may become inflamed, but gonorrhœal ophthalmia and gonorrhœal rheumatism are rare.

The cause of gonorrhœa is by some considered to be a specific poison usually propagated by contact, but occasionally, perhaps, generated

afresh in the female from the decomposition of retained vaginal mucus and of semen from indiscriminate intercourse, characterised by the presence of a special growth, the gonococcus, and occasionally capable of infecting the system and producing other forms of the disease, such as gonorrhœal rheumatism and some forms of gonorrhœal inflammation of the epididymis. On the other hand, many contend that gonorrhœa is in no degree a specific disease, but that it is a simple inflammation of mucous membrane caused by some local irritation which, in the nature of things, is usually some foul discharge in the genital organs; that the secondary complications, such as gonorrhœal rheumatism, are in no degree evidences of any specific disease, but are rather of a pyæmic nature caused by the absorption of pus, or some product of the purulent discharge; and that the gonococcus is not a structure special to gonorrhœa, but rather one of the forms of micrococcus found in pus under all circumstances; or, according to some, it is identical with the *Micrococcus ureæ* of Cohn, the cause of the alkaline fermentation of the urine.

G., abort'ive. (*L. abortio*, to set, to disappear.) Same as *G., irritative*.

G. bal'ani. (*L. balanus*, an acorn; the glans penis. *F. balanite*; *G. Eichelentzündung.*) The gonorrhœa of the glans penis. A term for a purulent discharge from the surface of the entire glans, which is inflamed and raw.

G., benig'nant. (*L. benignus*, mild.) A term for a muco-purulent discharge from the urethra consequent on mere irritation, and not the effect of venereal infection or lascivious inclination. It is often merely an excessive secretion of the mucous glands of the urethra.

G., catarrh'al. The milder form, especially as it occurs in those who have previously had the disease. There is generally little pain in micturition, very slight chordee, and a free muco-purulent or purulent discharge. The articular and ocular complications are said especially to follow this form of the disease.

G. catarrha'lis. (*Katάρρoος*, a running down.) Purulent discharge from the urethra not produced by impure connection.

G. chorda'ta. (*L. chorda*, a cord. *F. chaude-pisse cordée.*) Gonorrhœa with chordee.

G., chron'ic. (*L. chronicus*, long-lasting.) The sequel of an ordinary gonorrhœa when, after all other symptoms have disappeared, a creamy pus is still secreted, and may be pressed out of the urethra sometime after urination; it comes from the fossa navicularis, or from the anterior membranous portion of the urethra.

G. chron'ica. (*L. chronicus*, long lasting.) A synonym of *Gleet*.

G. contagio'sa. (*Contagious.*) Gonorrhœa produced by impure sexual connection.

G. corda'ta. See *G. chordata*.

G. dormien'tium. (*L. dormio*, to sleep.) The emission of semen in sleep, caused by dreaming of venery.

G., exter'nal. (*L. externus*, outward.) Inflammation of the mucous surface of the glans penis and of the prepuce. Also called *Balanitis*.

G. fœmina'rum. (*L. fœmina*, a woman.) Gonorrhœa in the female.

G. impu'ra. (*L. impurus*, impure.) Gonorrhœa from connection with a contaminated person.

G., inflam'matory, acute'. The ordinary form of gonorrhœa with marked symptoms.

GONORRHŒAL—GONOSTROMATOSORE.

G., ir'ritative. The form in which, a few days after connection, there is a little redness and swelling of the lips of the meatus and some semitransparent secretion, which, instead of proceeding further, aborts, as it were, and soon entirely subsides.

G., la'tent. Nöggerath's term for the period in which gonorrhœa does not make itself manifest by any external sign, a period which for most people extends for the whole period of life subsequent to an attack of gonorrhœa. In man it gives little trouble, but whoever has had gonorrhœa at any time of his life is liable, if he marries, to produce troubles in his wife; generally she will be sterile; she will be liable to frequent catarrh of the genital passages, to oöphoritis, or to acute perimetritis, and if by chance she become pregnant she will be in risk of a dangerous form of puerperal fever. This persistency is attributed by him to the persistence of the fungoid growth which is the cause of the disease.

G. laxo'rum. (L. *laxus*, loose.) The involuntary discharge of semen, or of a thin morbid secretion from the testes, or from them and the vesiculæ seminales, without erection of the penis, the effect of a relaxed state of the constitution.

G. libidino'sa. (L. *libidinosus*, full of sexual desire.) An emission of semen without sexual intercourse.

G. lon'ga. (L. *longus*, long.) A synonym of *Gleet*.

G. malig'na. (L. *malignus*, of an evil nature.) The same as *G. venerea*.

G. ma'rium. (L. *mas*, a male.) Gonorrhœa in the male.

G. muc'o'sa. (L. *mucosus*, slimy.) A term for *Gleet*, in reference to the character of the discharge.

G. mulie'bris. (L. *muliebris*, belonging to a woman.) Old epithet of *Leucorrhœa*.

G. non-contagio'sa. (L. *non*, not; *contagious*.) Gonorrhœa produced by some non-venereal cause.

G. noth'a inveter'a'ta. (L. *nothus*, spurious; *inveteratus*, kept for a long time.) A synonym of *Leucorrhœa*.

G. of rect'um. A form which has been said to occur as a result of unnatural crime, but the evidence is inconclusive.

G. oneirog'onos. (ὄνειρος, a dream; γόνος, the semen.) Emission of semen during sleep from a lascivious dream.

G. præputia'lis. (L. *præputium*, the foreskin.) A term for *Balanitis* affecting the prepuce only.

G. pu'ra. (L. *purus*, pure.) Same as *G. benigna*.

G. sic'ca. (L. *siccus*, dry.) A form of gonorrhœa supposed by some to exist, in which there is pain and scalding on passing water, but no discharge.

G. spu'ria. (L. *spurius*, false.) A synonym of *Balanitis*.

G., sub'acute. (L. *sub*, under; *acutus*, sharp.) Same as *G., catarrhal*.

G. syphilit'ica. (*Syphilis*.) A term which has been applied to the ordinary venereal gonorrhœa, but which it would be well to restrict to those cases of urethral discharge caused by a urethral chancre or by the contamination of vaginal discharge from a syphilitic woman.

G., u'terine. (L. *uterus*, the womb.) The inflammation in this form is usually limited to the lining membrane of the cervix, but may extend into the body of the womb, and spread through the Fallopian tubes to the peritoneum.

G. vene'rea. Ordinary gonorrhœa from venereal infection.

G. ve'ra. (L. *verus*, true.) *Spermatorrhœa*; nocturnal emissions.

G. virulen'ta. (L. *virulentus*, poisonous.) Ordinary venereal gonorrhœa.

G. vul'væ. (L. *vulva*, a wrapper; the vulva.) Gonorrhœa affecting the vulva only.

Gonorrhœ'al. (*Gonorrhœa*. F. *gonorrhéal*; G. *Gonorrhœe betreffend*.) Of, or belonging to, *Gonorrhœa*.

G. cysti'tis. See *Cystitis*, *gonorrhœal*.

G. iri'tis. See *Iritis*, *gonorrhœal*.

G. ophthal'mia. See *Ophthalmia*, *gonorrhœal*.

G. synovi'tis. See *Synovitis*, *gonorrhœal*.

Gonorrhœ'ic. Relating to, or resembling, *Gonorrhœa*.

Gonorrhoprostatitis. (*Gonorrhœa*; *prostatitis*. F. *gonorrhoprostatite*.) A term for inflammation of the prostate gland produced by gonorrhœa.

Gonorrhorchitis. (*Gonorrhœa*; *orchitis*.) Inflammation of the testicle caused by gonorrhœa.

Gonorrhorhinorrhœ'a. (Γονόρροια, gonorrhœa; ρίη, the nose; ροία, a flow.) A discharge from the nose produced by gonorrhœal infection.

Gonorrhosphilis. (*Gonorrhœa*; *syphilis*.) A term loosely applied sometimes to gonorrhœa supposed to be caused by syphilitic infection, and sometimes to syphilis supposed to be produced by a gonorrhœa.

Gonos. Same as *Gonè*.

Gónos. Same as *Gonia*.

Gonos'cheocele. (Γονή, the semen; ὄσχεος, the scrotum; κύστη, a tumour. F. *gonoscheocele*; G. *Samengefüßbruch*.) Term for a swelling of the testicle or epididymis from accumulation of the semen. The same as *Spermatocele*.

Gonose. (Γόνος, semen.) Full of, or possessing, semen.

Gonosome. (Γόνος, offspring; σῶμα, the body.) Allman's term for the entire assemblage of the reproductive or sexual zoids of the Hydrozoa.

Gonosper'mous. (Γωνία, an angle; σπέρμα, a seed. F. *gonosperme*.) Having angular seeds, as the *Phaseolus gonospermus*.

Gonosphere. (Γόνος, offspring; σφαίρα, a globe.) The irregular globule resulting from the conjunction of the antheridium and the oogonium in the reproduction of the Saprolegnie.

Gonos'pora. A Genus of *Monocystidæ*.

G. terebel'lae. Koll. A species which lives in *Terebella* and some allied species.

Gonostro'ma. (Γόνος, offspring; στρώμα, a stratum, or bed.) The *Discus proligerus*.

Gonostromatodis'cus. (Γόνος; στρώμα; διακός, a round plate.) The *Discus proligerus*.

Gonostro'matosore. (*Gonostroma*;

GONOSTROME—GOOSEBERRY.

L. sorus, a heap.) The elevation or prominence of the *Discus proliferus*.

Gonostrome. Same as *Gonostroma*.

Gonostromodiscus. Same as *Gonostromatodiscus*.

Gonostromosorus. Same as *Gonostromatosorus*.

Gonotheca. (Γόνος; θήκη, a case.) Same as *Gonangium*.

Gonus. Same as *Gonose*.

Gonoze'mia. (Γονί, the semen; ζημία, loss, or detriment. F. *gonozémie*; G. *häufiger Samenverlust*.) Excessive loss or discharge of semen.

Gonoze'mic. Of, or belonging to, *Gonoze'mia*.

Gonozo'id. (Γόνος, offspring; ζῶον, an animal; εἶδος, likeness.) Hincks's name for the sexual zoid enclosed in certain of the gonophores of Hydrozoa.

Gonten. Switzerland, Canton Appenzell. An earthy chalybeate water, 2800 feet above sea-level.

Gonuag'ra. Same as *Gonagra*.

Gonus. A Genus of the Nat. Order *Terebinthaceæ*.

G. amaris'simus, Lourd. (L. *amarus*, bitter.) The *Brucea sumatrana*, Roxb.

Gonyag'ra. See *Gonagra*.

Gonyalgia. (Γόνν, the knee; ἄλγος, pain. F. *gonalgie*; G. *Knieschmerz*.) Pain occurring in the knee.

Also, a term applied to the diseased condition of the knee-joint formerly called white swelling.

Gonyan'con. (Γόνν, the knee; ἄγκων, a curvature.) A bending or curvature of the knee.

Gonybat'ia. (Γόνν, the knee; βατῖω, to tread.) The act of progressing on the knees, instead of walking upright on the feet.

Gonycamp'sis. (Γόνν, the knee; κάμψις, a curvature.) Curvature of the knees.

Gonyclines. (Γονγκλιῆς, with bent knee.) One who walks with the knees bent forward.

Gonycrotus. (Γονύκροτος, knocking the knees together.) One who is knock-kneed.

Gonectypo'sis. (Γόνν, the knee; ἐκτύπωσις, a squeezing out.) Excurvation or outward curvature of the knees.

Gonyocel'le. (Γόνν; κήλη, a tumour. F. *gonyocèle*; G. *Kniebruch*, *Kniebruchschwulst*.) A swelling, or what has been called hernia of the knee.

Gonyon'cus. (Γόνν; ὄγκος, a tumour. F. *gonyonce*; G. *Kniegeschwulst*.) A swelling or tumour of the knee.

Gonyopter'ides. See *Gonopterides*.

Gonyorrheu'ma. (Γόνν, the knee; ῥέυμα, a flowing. F. *gonyorrheume*; G. *Knieschmerz*.) A swelling of the knees from rheumatism, as if produced by a flowing of the humours to the part.

Gonyscampo'sis. A false spelling of *Gonycamp'sis*.

Gonythe'ca. (Γόνν, the knee; θήκη, a cover.) Kirby's name for a concavity situated at the extremity of the thigh of insects, which is destined to receive the base of the tibia.

Gonytyl'e. (Γόνν; τύλη, a callus. F. *gonytyle*; G. *Knieschwièle*.) A callus, or a hard thick skin of the knee.

Gonzalo-al'oës. The wood of *Astرون fraxinifolium*.

Gooch, Benjamin. An English surgeon of Shottisham in Norfolk, who lived in the middle and end of the eighteenth century.

G's splint. A splint made of a thin piece of wood almost cut through into many longitudinal slips held together by the gluing to them of a facing of linen or leather. It may thus be adapted to the rounded surface of the limb.

Gooch, Robert. An English physician, born at Great Yarmouth in 1784. He was attached to St. Bartholomew's Hospital in London, and died in 1830.

G's can'nula, polypus. (L. *cannula*, a small reed.) A double tube of silver or other metal, open at each end and having an eye or a winch at the lower extremity. A wire or silk thread is passed up one tube and down the other, so that a loop is formed at the upper end, which, when passed round a polypus of the womb or nose, may be fastened to the eye or the winch at the lower end and tightened, so as to produce strangulation.

Good. (Mid. E. *good*, *gode*; Sax. *gód*; G. *gut*; perhaps from a Teutonic base *gad*, to suit.) Excellent.

G. Henry. Same as *G. King Harry*.

G. King Harry. The *Chenopodium bonus Henricus*.

Good, John Ma'son. An English physician, born at Epping in 1764, died at Sheperton in 1827. His chief work was his celebrated 'Study of Medicine.'

Goodenia'cea. A Nat. Order of epigynous, corollifloral Exogens of the Alliance *Campanales*, having an irregular, quinquipartite corolla with induplicate aestivation, two- or more celled ovary, and indusiate stigma.

Goodeniads. The plants of the Nat. Order *Goodeniaceæ*.

Goodye'ra. (*Goodyer*, an English botanist.) A Genus of the Nat. Order *Orchidaceæ*.

G. pubes'cens, R. Brown. (L. *pubescens*, downy.) Rattlesnake leaf, cancer weed. Hab. North America. Fresh leaves applied to scrofulous sores.

Goog'ul tree. The *Balsamodendron mukul* and the *B. Roxburghii*.

Goose. (Sax. *gós*; perhaps from the Aryan root *gha*, to gape. G. *gans*; Gr. *χίν*; S. *gansa*, *ansar*, *oca*; I. *oca*; F. *oie*, from Low L. *auca*, from L. *anser*.) The *Anser domesticus* and other species of *Anser*, as well as of some allied genera.

G. and gos'lings. The *Orchis bifolia* and *O. morio*, from the shape of the flowers.

G. flesh. Same as *G. skin*.

G. foot. See *Goosefoot*.

G. grass. The *Galium aparine* and other species of *Galium*.

Also, the *Potentilla anserina*.

G. grass, great. The *Asperugo procumbens*.

G. grease. The fat of the domestic goose. See under *Anser*.

G. pimples. Same as *G. skin*.

G. share. The *Galium aparine*.

G. skin. A term applied to the condition of skin called *Horripilatio*, from its likeness to the skin of a plucked goose.

G.-tan'sy. The *Potentilla anserina*.

G.-tongue. The *Achillaea ptarmica*.

Gooseberry. (The first part of the word is from the old French name of the fruit, *groisele*, *groselle*; and the other is the E. berry.)

GOOSEBILL—GORDIUS.

The fruit of the *Ribes grossularia* and its cultivated varieties. It is much eaten, and is slightly laxative when ripe. The ground seeds have been used as a substitute for coffee.

Goosebill. The *Galium aparine*, in reference to the serrated edges of the leaves and their resemblance to the rough edges of the mandibles of the goose.

Goosefoot. The *Chenopodium murale* and the *C. anthelminticum*.

G., angular-leaved. The *Chenopodium bonus Henricus*.

G. mercury. The *Chenopodium bonus Henricus*.

G., nettle-leaved. The *Chenopodium murale*.

G., smooth-seeded. The *Chenopodium viride*.

G., stink'ing. The *Chenopodium vulvaria*.

G., worm. The *Chenopodium anthelminticum*.

Goose'tongue. The *Achillea ptarmica*.

Göppingen. Germany, in Württemberg, between Stuttgart and Ulm. A mineral water containing calcium, sodium, and magnesium carbonate, with free carbonic acid.

Goräd'schewodsk. Russia, in the Caucasus, near Terek and Grosnoe. A mineral spring, of a temperature of 91° C. (195·8° F.), containing sodium carbonate, sulphate, and a little sulphide, with hydrogen sulphide, carbonic acid, and some naphtha.

Görbersdorf. Prussia, not far from Breslau. A cure place for consumption, 1750 feet above sea-level, where special attention is paid to diet and hygiene in aid of the atmospheric influence.

Gordius. (Γόρδιος, a king of Gordium, in Phrygia Major, famous for the inextricable knot on his chariot which Alexander the Great cut in two with his sword.) A Genus of the Order Nematoda, Class Nemethelmintha, so called because they wriggle themselves into apparent knots.

G. acil'i sulca'ti, Linstow. (L. sulco, to furrow.) Found in the abdomen of *Acilius sulcatus*.

G. acryd'il, Diesing. Found in the abdomen of *Acridium tuberculatum*.

G. agrotidis ripæ, v. Siebold. (L. ripa, a bank.) Found in the abdomen of *Agrotis ripæ*, Hübn.

G. aphidis galla'rum, Hartig. (L. galla, an oak apple.) Found in the larva of *Chermes abietis*.

G. aphrophoræ spuma'riæ, v. Siebold. Found in the abdomen of *Aphrophora spumaria*.

G. ap'odis cancrifor'mis, Diesing. (L. cancer, a crab; forma, likeness.) Found in *Apus cancriformis*.

G. aquaticus, Dujard. (L. aquaticus, living in water. F. dragonneau.) The hair worm of fresh water. In its early stage it is parasitic in insects and their larvæ. In former times this worm was supposed to be very destructive, causing, when taken in drinking water, parotitis and even death.

See also, *Malis Gordii*.

G. araneæ, Rudolphi. (L. aranea, a spider.) Found in a species of *Aranea*.

G. barbistidis perfora'ti, Diesing.

(L. perforatus, part. of perforo, to pierce through.) Found in the abdomen of *Barbistides perforatus*.

G. barbistidis serricaudæ, v. Siebold. (L. serra, a saw; cauda, a tail.) Found in the abdomen of *Barbistidis serricauda*.

G. blap's mortisa'gæ, Hope. (L. mors, death; saga, a female diviner.) Found in the abdomen of *Blaps mortisaga*.

G. blap's orienta'lis, v. Siebold. (L. orientalis, eastern.) Found in the abdomen of *Periplaneta orientalis*.

G. blap's productæ, Diesing. (L. productus, part. of produco, to stretch out.) Found in the abdomen of *Blaps gages*.

G. bom'bi, Hope. Found in the abdomen of *Bombus*, species unknown.

G. bom'bi terrestris, Hope. (L. terrestris, belonging to the earth.) Found in the abdomen of *Bombus terrestris*.

G. brachycerci unda'ti, v. Siebold. (L. undatus, part. of undo, to rise in waves.) Found in the abdomen of *Brachycerus undatus*.

G. bradyp'ori Lazman'ni, v. Siebold. Found in the abdomen of *Bradyporus Lazmanni*.

G. buprest'idis, Rudolphi. Found in *Buprestis*, species undescribed.

G. cal'athi cistelo'idis, v. Siebold. Found in the abdomen of *Calathus cisteloides*.

G. cal'athi Stephen'sii, Hope. Found in the abdomen of *Calathus Stephensii*.

G. callip'tami ita'lici, v. Siebold. (L. italicus, Italian.) Found in the abdomen of *Calliptamus italicus*.

G. car'abi alternan'tis, v. Siebold. (L. alterno, to alternate.) Found in the abdomen of *Carabus morbillosus*.

G. car'abi catenula'ti, Hope. (L. catena, a chain.) Found in the abdomen of *Carabus catenulatus*.

G. car'abi hortens'is, Diesing. (L. hortensis, belonging to a garden.) Found in the abdomen of *Carabus hortensis*.

G. car'abi moni'lis, Hope. (L. monile, a collar.) Found in the abdomen of *Carabus monilis*.

G. car'abi morbillo'si, Hope. (L. morbilli, measles.) Found in the abdomen of *Carabus Ultrichii*.

G. car'abi viola'cei, Hope. (L. violaceus, of violet colour.) Found in the abdomen of *Carabus violaceus*.

G. catoc'alæ frax'ini, v. Siebold. (L. fraxinus, the ash.) Found in the abdomen of *Catocala fraxini*.

G. chiron'omi plumo'si, Hope. (L. plumosus, feathery.) Found in the abdomen of *Chironomus plumosus*.

G. chordo'des, Diesing. Found in the abdomen of *Acanthodis glabrata*.

G. coc'ci, Hope. (Κόκκος, a berry.) Found in the abdomen of *Coccus*, species undescribed.

G. coleoptero'rum, Diesing. Found in *Carabus*, species undescribed.

G. colym'beti ferrugin'e'i, Diesing. (L. ferrugo, iron-rust.) Found in the abdomen of *Agabus ferrugineus*.

G. colym'beti stria'ti, v. Siebold. (L. striatus, part. of strio, to flute.) Found in the abdomen of *Cynalopterus striatus*.

G. corixæ stria'tæ, Ball. (L. striatus,

GORDIUS.

part. of *strio*, to groove.) Found in the abdomen of *Corixa striata*.

G. cy'chri rostra'ti, Hope. (L. *rostratus*, beaked.) Found in the abdomen of *Cychrus rostratus*.

G. cymindis humera'lis, v. Siebold. Found in the abdomen of *Cymindis humeralis*.

G. dras'si fusc'i, v. Siebold. (L. *fuscus*, dark, dusky.) Found in the abdomen of *Drassus fuscus*.

G. dras'si lucif'ugi, v. Siebold. (L. *lux*, light; *fugo*, to flee.) Found in the abdomen of *Drassus lucifugus*.

G. elachis'tæ cygnipenell'æ, v. Siebold. Found in the abdomen of *Elachista argente'lla*.

G. en'nomi cratæga'tæ, Hope. Found in the abdomen of *Opisthograptis cratægata*.

G. epei'ræ cerop'giæ, v. Siebold. Found in the abdomen of *Epeira ceropégia*.

G. epei'ræ diade'mæ, Diesing. Found in the abdomen of *Epeira diadema*.

G. eupre'piæ ca'jæ, v. Siebold. Found in the larva of *Arctia caya*.

G. eupre'piæ jacobæ'æ, v. Siebold. Found in the abdomen of *Callimorpha jacobæa*.

G. feron'niæ mad'idæ, Diesing. (L. *madidus*, wet, moist.) Found in the abdomen of *Steropus madidus*.

G. feron'niæ melana'riæ, v. Siebold. (L. *melania*, blackness, black spots.) Found in the abdomen of *Omasus vulgaris*.

G. feron'niæ metallica'æ, v. Siebold. (L. *metallicus*, metallic.) Found in the abdomen of *Pterostichus metallicus*.

G. feron'niæ nigrif'icæ, v. Siebold. (L. *nigritia*, black colour, blackness.) Found in the abdomen of *Omasus nigrita*.

G. feron'niæ striol'æ, Diesing. Found in the abdomen of *Abax striola*.

G. forfic'ulæ auricula'riæ, Diesing. (L. *auricula*, the ear.) Found in the abdomen of *Forficula auricularia*.

G. forfic'ulæ borea'lis, v. Siebold. (L. *borealis*, northern.) Found in the abdomen of *Forficula borealis*.

G. formica'rum, v. Siebold. (L. *formica*, an ant.) Found in the abdomen of the species of *Formica*.

G. galleru'cæ tanace'ti, Diesing. (L. *tanacetum*, tansy.) Found in the abdomen of *Galleruca tanacetii*.

G. gastrop'achæ quercif'oliæ, v. Siebold. (L. *quercus*, an oak; *folium*, a leaf; three-leaved.) Found in the abdomen of *Gastropacha quercifolia*.

G. gastrop'achæ querc'us, v. Siebold. (L. *quercus*, an oak.) Found in the larva of *Gastropacha quercus*.

G. gastrop'achæ trifol'ii, v. Siebold. (L. *tres*, three; *folium*, a leaf; three-leaved.) Found in the larva of *Gastropacha trifolii*.

G. gryll'i, Hope. (L. *gryllus*, a grasshopper.) Found in the abdomen of *Gryllus*, species undescribed.

G. gryll'i campest'ris, Blanchard. (L. *campester*, pertaining to a field.) Found in the abdomen of *Gryllus campestris*.

G. har'pali ænei, Hope. (L. *æneus*, brazen.) Found in the abdomen of *Harpalus æneus*.

G. har'pali azu'rei, v. Siebold. Found in the abdomen of *Harpalus azureus*.

G. har'pali binota'ti, Hope. (L. *bis*,

two; *noto*, to mark.) Found in the abdomen of *Anisodactylus binotatus*.

G. har'pali ruficor'nis, Hope. (L. *rufus*, red; *cornu*, a horn.) Found in the abdomen of *Harpalus ruficornis*.

G. hepi'oli hum'uli, Hope. (L. *humus*, the ground.) Found in the abdomen of *Epialus humulus*.

G. hydroph'ili, Deslongchamps. Found in the abdomen of *Hydrophilus*, species undescribed.

G. hylotru'pis baj'uli, v. Siebold. (L. *bajulus*, a carrier.) Found in *Hylotrupes bajulus*.

G. libel'lulæ flave'olæ, Diesing. Found in the abdomen of *Libellula flaveola*.

G. libel'lulæ variegat'æ, Diesing. (L. *variegatus*, to variegate.) Found in the abdomen of *Libellula variegata*.

G. lipar'idis dis'paris, Leuckart. Found in the abdomen and in larva of *Ocnieria dispar*.

G. lipar'idis mon'achæ, v. Nordmann. (L. *monachus*, a monk.) Found in the abdomen of *Ocnieria monacha*.

G. lipar'idis sal'icis, v. Siebold. Found in the abdomen of *Dasychira salicis*.

G. lycæ'næ betulæ, v. Siebold. (L. *betula*, the birch.) Found in the larva and abdomen of *Thecla betula*.

G. lycæ'næ querc'us, v. Siebold. (L. *quercus*, the oak.) Found in the larva and abdomen of *Thecla quercus*.

G. medinen'sis, Linn. The *Dracunculus*, or *Filaria medinensis*.

G. mise'liæ aprili'næ, v. Siebold. (L. *aprilis*, April.) Found in the larva of *Dichonia aprilina*.

G. noctuæ typic'æ, v. Siebold. (L. *typicus*, typical.) Found in the abdomen of *Nenia typica*.

G. notodon'tæ camel'inæ, v. Siebold. (L. *camelus*, a camel.) Found in the larva of *Lophopteryx camelinæ*.

G. notodon'tæ zie'zac, v. Siebold. Found in the larva of *Notodonta ziezac*.

G. oedip'odæ bigut'tulæ, v. Siebold. (L. *bis*, twice; *guttula*, a little drop.) Found in the abdomen of *Oedipoda biguttula*.

G. oedip'odæ cœrulescent'is, v. Siebold. (L. *cœruleus*, dark coloured.) Found in the abdomen of *Oedipoda cœrulescens*.

G. oedip'odæ migrato'riæ, Diesing. (L. *migrator*, a wanderer.) Found in the abdomen of *Oedipoda migratoria*.

G. oedip'odæ paralle'læ, v. Siebold. (L. *parallelus*, parallel.) Found in the abdomen of *Oedipoda parallela*.

G. orna'tus, Grenacher. (L. *ornatus*, adorned.) Found in the abdomen of a species of *Mantis*.

G. otiorhyn'chi ragusen'sis, v. Siebold. Found in the abdomen of *Otiorhynchus ragusensis*.

G. papillo'nis, v. Siebold. (L. *papilio*, a butterfly.) Found in several species of *Papilio*.

G. pelo'ris blapto'idis, Diesing. Found in the abdomen of *Labrus blaptoidis*.

G. phrygan'ææ, v. Linstow. Found in the abdomen of *Phryganea*.

G. phrygan'ææ gris'ææ, v. Siebold. Found in the abdomen of *Phryganea grisea*.

G. pilo'sus, Möbius. (L. *pilosus*, shaggy.)

GORDONIA—GOSSYPII LANA.

Found in the abdomen and in folliculi of *Blabera gigantea*.

G. platypter'icis fal'culæ, v. Siebold. (L. *falcula*, a small sickle.) Found in the larva of *Platypteryx falcataria*.

G. pœ'cili cu'prei, Hope. (L. *cupreum*, of copper.) Found in *Pœcilus cupreus*.

G. pristony'chi terrico'læ, Hope. (L. *terricola*, a dweller of the earth.) Found in the abdomen of *Pristonychus terricola*.

G. pustulo'sus, Baird. (L. *pustulatio*, pustulation.) Found in the abdomen of *Blaps similis*.

G. sa'gæ nato'læ, v. Siebold. Found in the abdomen of *Saga natolie*.

G. saturniæ py'ri, v. Siebold. Found in the larva and abdomen of *Saturnia pyri*.

G. se'ta, Müller. (L. *seta*, a bristle.) The *G. aquaticus*.

G. silphæ obscu'ræ, Goeze. (L. *obscurus*, obscure.) Found in *Silpha obscura*.

G. smerin'thus til'iæ, Hope. (L. *tilia*, the linden, or lime tree.) Found in the abdomen of *Smerinthus tilia*.

G. sphe'codis gib'bi, v. Siebold. (L. *gibbus*, a hunch or hump.) Found in the abdomen of *Dichroa gibbus*.

G. sphin'gis euphor'biæ, v. Siebold. Found in the larva and in the abdomen of *Sphinx euphorbiæ*.

G. sphin'gis ligus'tri, v. Siebold. (L. *ligustrum*, the privet.) Found in the larva of *Sphinx ligustri*.

G. sphod'ri leucopthal'mi, Hope. Found in the abdomen of *Sphodrus leucopthalmus*.

G. subbifur'cus, v. Siebold. (L. *sub*, under; *bifurcus*, two-pronged.) Found in the abdomen of *Silpha carinata*.

G. tenthre'dinis, Gmelin. Found in the larva of *Tenthredo*.

G. tricus'pida'tus, Meissner and v. Siebold. (L. *tres*, three; *cuspidus*, to make pointed.) Found in the abdomen of *Gryllus bordigalensis*.

G. vanes'sæ anti'opæ, v. Siebold. Found in the larva and in the abdomen of *Vanessa antiopa*.

G. vanes'sæ polychlo'ri, v. Siebold. Found in *Vanessa polychloros*.

G. vanes'sæ urti'cæ, Hope. (L. *urtica*, a nettle.) Found in the larva and abdomen of *Vanessa urtica*.

G. ves'pæ crabro'nis, v. Siebold. (L. *vespa*, a wasp; *crabro*, a hornet.) Found in the abdomen of *Vespa crabro*.

G. viola'ceus, Baird. (L. *violaceus*, violet.) Found in the abdomen of *Carabus violaceus*.

Gordo'nia. A Genus of the Nat. Order *Termitrömiaceæ*.

G. lasian'thus, Linn. (*Λάσιος*, hairy; *ἄνθος*, a flower.) Hab. North America. Contains much tannin, and is used as an astringent.

G. pubes'cens, Pursh. (L. *pubescens*, downy.) Used as *G. lasianthus*.

Gordwakes'falu. Hungary. An earthy chalybeate water with free carbonic acid.

Gor'get. (F. *gorgeret*; from *gorge*, a groove; from L. *gurgis*, an abyss. I. *gorgiereto*, gñda; S. *gorgeret*; G. *Wegweiser*, *Gorgeret*.) A steel instrument having the form of a channel, used for several operations, such as for fistula in ano, and for stone in the bladder.

G., blunt. (F. *gorgeret conducteur*.) A gorget with a probe point or beak and a handle bent at an angle with the channelled blade, which is somewhat conical, is about 6" long, and has blunt edges. It is used in lithotomy to dilate the wound and facilitate the introduction of the forceps, when the finger cannot be introduced into the bladder in consequence of the size of the prostate or the depth of the perinæum, by running the beak along the groove of the staff after the urethra has been divided by the knife.

G., cutting. (F. *gorgeret tranchant*.) An instrument sometimes used in lithotomy to effect the opening of the bladder through the prostate. It consists of a shallow gutter-shaped blade from 1" to 1.5" wide, with a projecting beak on one side of the end, which is oblique and forms a cutting edge; the handle is bent at an angle. The structures having been divided by a scalpel or other knife, and the membranous urethra opened, the beak of the gorget is introduced into the groove of the staff, and the instrument being pushed onwards its cutting edge divides the prostate and neck of the bladder. It was supposed to diminish the chances of a too extensive opening of the bladder.

G., fis'tula. A grooved wooden stem introduced into the rectum in the operation for fistula, into which the point of the bistoury is fixed after its passage through the sinus, so that the opposite wall of the intestine may not be injured.

G., hook'ed. (F. *gorgeret suspenseur*.) An instrument made like the ordinary blunt gorget, but with a recurved hook instead of a beak, used in supra-pubic lithotomy for introduction into the bladder and the retaining of it in close apposition to the wall of the abdomen.

G., lithot'omy. (*Λίθος*, a stone; *τομή*, section.) A gorget used in cutting for the stone. See *G., blunt*, *G., cutting*, and *G., hooked*.

Gorgo'nia. A Genus of the Order *Gorgoniaceæ*, Subclass *Alcyonaria*.

G. anti'pates. A name for the *Coralium nigrum*, or black coral.

Gorgonia'ceæ. An Order of the Subclass *Alcyonaria*, Class *Actinozoa*, having a sclerobasic, horny or calcareous, branched, erect axis, permanently rooted, and a smooth cœnenchyma.

Gori. Russia, in the Caucasus. A sulphur water, temp. 18° C. (64.4° F.), used in chronic skin affections, old ulcers, liver and spleen disease, bronchial catarrhs, rheumatism, mercurial dyscrasia, scrofula, and paralysis.

Gorse. (Mid. E. *gorst*; Sax. *gorst*.) The *Ulex europæus*.

Gos'selin, Ath'anase Lé'on G. A French surgeon of the present time, born in Paris in 1815.

G.'s frae'ture. A V-shaped fracture of the lower end of the tibia extending into the ankle-joint.

Gos'sum. An old name for *Bronchocele*. **Gossypii la'na**. (L. *gossypium*, the cotton tree; *lana*, wool.) Cotton wool.

G. radi'cis cor'tex, U.S. Ph. (L. *radix*, a root; *cortex*, bark. G. *Baumwollenwurzelrinde*.) The bark of the root of *Gossypium herbaceum* and other species of *Gossypium*. It is inodorous, has a slightly acid and faintly astringent taste, and contains an acid resin, soluble in alcohol, chloroform, and ether. It is

GOSSYPINA—GOULARD, THOMAS.

used as an emmenagogue and a producer of uterine contraction. Experiments on rabbits do not confirm its abortifacient powers. In large doses it produces stupor and impairment of motility and sensibility.

Gossypina. (*Gossypium*, cotton. *F. gossypine*.) A name by Thompson for cotton.

Gossypine. (*Gossypium*.) Thompson's name for the cellulose of cotton.

Also, in Botany, like to or resembling cotton.

Gossypium. (*L. gossypium*, the cotton tree. *F. cotonnier*; *G. Baumwollenbaum*.) A Genus of the Nat. Order *Malvaceæ*.

Also, B. Ph. (*F. cotton*; *I. cotone*; *S. algodon*; *G. Baumwolle*), cotton or cotton wool, the hairs of the seed of various species of *Gossypium* carded; in addition, the U.S. Ph. orders them to be freed from adhering impurities and deprived of fatty matter. It consists of white, soft filaments, which under the microscope are seen to be flattened, hollow, twisted bands, spirally striate, and thickened at the edges. It is soluble in strong alkaline solutions; nitric acid converts it into gun-cotton. It consists chiefly of cellulose, but contains also some vegetable wax, a fatty acid, pectic acid, and an albuminous substance. It is used in pharmacy for filtering purposes, and in medicine for the same object as a respirator. It is applied to burns and scalds and blistered surfaces, to erysipelas, and to wounds.

G. absorbens. (*L. absorbeo*, to suck up.) Absorbent cotton wool, prepared by treating bleached cotton alternately with hydrochloric acid and solution of soda and finally washing in water. Used as an application to wounds and sores.

G. acidi boracici. Cotton wool charged with 50 per cent. of boracic acid.

G. album. Haw. (*L. albus*, white.) Yields the short staple or upland cotton.

G. ammoniacalē. Cotton wool charged with gaseous ammonia, which it retains for some time. Used as a local application to rheumatic or gouty limbs.

G. anomalum. W. and Peyr. (*Ἀνώματος*, irregular.) Hab. Nubia. Cotton brownish.

G. arborum. Linn. (*L. arbor*, a tree.) Cultivated in America, Asia, and tropical Africa.

G. barbadensē. Linn. Hab. West Indies. Seeds yield by expression an oil used in cooking and for other general purposes. It furnishes the chief commercial sorts of cotton of North America, and many of those of Asia; it is extensively cultivated in tropical Africa.

G. benzoatum. (*G. Benzoeiwatta*.) Cotton wool impregnated with benzoic acid. Used as an antiseptic and stimulating dressing.

G. carbolicum. (*G. carbolisirte Baumwolle*.) Cotton wool charged with six per cent. or more of carbolic acid. Used as an antiseptic dressing.

G. depuratum. G. Ph. (*L. depuro*, to purify.) Cotton wool cleared from extraneous matters and almost free from oil.

G. fulminans. (*L. fulmino*, to thunder. *G. Schiessbaumwolle*.) A synonym of *Gum-cotton*.

G. hæmostatium. (*Αἰμόστασις*, a means of stopping blood.) Richter's term for cotton wool soaked in solution of chloride of iron and then dried.

G. herbaecum. Linn. (*L. herbaceus*, herb-like. *F. cotonnier*; *G. Baumwollenbaum*.) The cotton tree. Seeds and young buds mucila-

ginous; used in coughs. Seeds yield an oil. It furnishes the cotton of India, and some of that of Africa, and of Europe. See *Gossypii radialis cortex*.

G. hirsutum. Linn. (*L. hirsutus*, hairy.) The *G. herbaceum*.

G. hydrophilum. ("ὕδωρ, water; φιλέω, to love.) Absorbent cotton wool, consisting of ordinary cotton wool boiled in a solution of soda, so as to remove all oily matter and to render it capable of easily taking up water.

G. iodatum. (*F. cotton iodé*; *G. iodirte Baumwolle*.) Iodised cotton wool. Greenhalgh recommends that 16 parts of cotton wool should be soaked in a solution of 2 parts of potassium iodide, and one of iodine in 16 parts of glycerin and 4 of alcohol. It is to be dried and kept in a closed vessel.

G. nigrum. Haw. (*L. niger*, black.) Yields the long-staple or sea-island cotton.

G. peruvianum. De Cand. The *G. barbadense*.

G. peruvianum. Royle. According to Royle, it furnishes the cotton of Brazil, Peru, and other parts of South America.

G. prostratum. (*L. prostratus*, strewn on the ground.) The *G. herbaceum*.

G. punctatum. Guillem. The *G. herbaceum*.

G. punctatum. Schum. (*L. punctatus*, dotted.) The *G. barbadense*.

G. salicylicum. (*G. Salicylwatta*.) Cotton wool charged with salicylic acid. Used as an absorbent dressing.

G. saturninum. (*L. Saturnus*, an old name for lead. *G. Bleiwatte*.) Cotton wool soaked in a solution of lead acetate and dried.

G. vitifolium. Lamk. (*L. vitis*, a vine; *folium*, a leaf.) The *G. barbadense*.

Gostoa Kisfalud. Hungary, County Gömör. An earthy chalybeate water, containing free carbonic acid.

Göthe, Johann Wolfgang. The great German poet, born at Frankfort in 1749, died at Weimar in 1832.

G's bone. The interparietal bone of Rodents, first observed by Göthe.

Gonium. Old term for a hard bronchocele.

Go-to-bed at noon. The *Tragopogon pratense*, from the early closing of the flowers.

Goudron. See under *Royat*.

Gouge. (*F. gouge*; from Low *L. guvia*, a kind of chisel. *G. Hohlmeissel*.) A cutting chisel-shaped instrument with a channelled blade in line with the handle or bent at an angle. Used for the removal of carious bone, or other hard structures.

G. forceps. See *Forceps, gouge*.

Goulard, Thom'as. A French surgeon of the eighteenth century, born at Saint Nicolas de la Grave, near Montauban, who died about 1784.

G's balsam. A preparation of oil of turpentine, heated, to which the acetate of lead is added, constantly stirring till no more will dissolve. Used as an application to eroding and painful ulcers.

G's cerate. The *Ceratum plumbi subacetatis compositum*, B. Ph.

G's extract. (*F. extrait de Goulard*.) A solution of the acetate of lead. The *Liquor plumbi subacetatis*.

GOUPIA—GOUT.

G.'s lead wa'ter. The *Aqua plumbi Goulardi*.

G.'s lo'tion. The *Liquor plumbi subacetatis dilutus*.

G. powder. Acetate of lead.

G. wa'ter. (*G. Goulard'sches Wasser*.) Same as *G.'s extract*.

Also, the *Liquor plumbi subacetatis dilutus*.

Gou'pia. A Genus of the Nat. Order *Celastraceae*.

G. gla'bra. The *Glossopetalum glabrum*.

Gourd. (*F. gourde*, short for *gouhourde*, a corruption from *cougourde*; from *L. cucurbita*, a gourd. *F. calebasse*; *I. zucca*; *S. calabaza*; *G. Kürbiss*.) The fruit of *Cucurbita pepo*.

G., bit'ter. (*F. colocynthis*; *G. Koloquinthe*.) The *Cucumis colocynthis*, both plant and fruit.

G., bot'tle. The *Cucurbita pepo*.

G., com'mon. The *Cucurbita pepo*.

G. oil. An oil expressed from the seeds of various species of gourd and cucumber.

G. seeds. The seeds of the water melon, *Cucurbita citrullus*, the pumpkin, *Cucurbita pepo*, the common gourd, *Cucurbita lagenaria*, the musk melon, *Cucumis melo*, and the cucumber, *Cucumis sativus*. Used in emulsion with water as a demulcent in stranguery, bronchial affections, and intestinal disorders.

G. worm. The *Distoma hepaticum*, so called because it is somewhat of the shape of a gourd seed.

Gourn'ay en Bray. France, Département de la Seine-Inferieure. A cold, weak, earthy, chalybeate water.

Gout. (Old *F. goutte*, *goutte*; from *L. gutta*, a drop. *F. goutte*; *I. gotta*; *S. gota*; *G. Gicht*.) A disease known from very early times as *Podagra*, which obtained its present name long ago, when it was supposed to be a catarrhal affection, in which an acrid humour was formed in the body that dropped upon or distilled into the affected joint. At first, rheumatic and other affections of the joints were included along with true gout under the term *podagra*. Celsus and Galen, indeed, had glimpses of the differences between gout and rheumatism, but probably Caelius Aurelianus, in the sixth century, was the first who laid stress on the localisation of the disease in the feet, on the redness and heat and swelling of the affected joint, and on the consequent deformity from chalky deposit, as special circumstances indicating true *podagra*, although he did not separate it from rheumatism; at a later time Aetius recognised the hereditary character of the disease, and Paulus of Egina declared that it was caused by a thickening of the humours from which were distilled the chalk-stones; and so for several centuries the matter rested, other facts being by degrees added, such as the causation of *podagra* by excessive eating and drinking, combined with defective excretion, and its prevention and cure by moderation in diet, by the drinking of water instead of wine, and by the taking of regular and considerable exercise. At the end of the sixteenth century Baillou noted the distinction between gout and rheumatism, but it was reserved for Sydenham to draw in memorable lines the true lineaments of gout, and, differing from the earlier view that it was caused by the accumulation of a tartar in the blood which was de-

posited in the joints and formed chalk-stones, to revert to the opinions of the ancient physicians, and to express his belief that it was caused by the efforts of the system to expel from it a morbid agent developed by imperfect coction. At the very end of the eighteenth century Wollaston and Tennant discovered urate of soda in chalk-stones, and gave an impulse to the chemical idea of the formation of gout, which acquired precision when Bence Jones, in the early part of the present century, demonstrated the existence of urate of soda in the blood and the interstitial fluids of the body, and attained its apparent demonstration in Garrod's theory, that the disease is caused by defect of the kidney in ceasing to remove from the body the constantly produced urates of the blood, and that its local manifestation is a substituted eliminative process. That an excess of uric acid or urates in the system is an essential of gout is now admitted, but there is a disposition to recede, in company with Ord and Bristowe, from the idea of the purely chemical causation of the disease, and to refer its origin to some antecedent constitutional defect, hereditary or acquired, by reason of which certain tissues are prone to a degenerative change characterised by the excessive formation of uric acid, and to attribute the actual attack to some exciting cause, be it general, such as a chill, or local, such as an injury.

Gout is an eminently hereditary disease of middle life and of men, although it may occur in youth and in women; and not infrequently it is generated in one who has no hereditary disposition thereto. It may be produced or lighted up by excess in eating, especially of nitrogenous foods, or by the immoderate use of alcoholic drinks, especially in those who lead sedentary lives; its occurrence is helped by bodily fatigue, by mental worry, by defective excretions, and by everything that injures the health; specially are those subject to an attack who have become impregnated with lead. The structures of the joints are the first to become affected by the deposit of urate of soda on the articular surfaces and in the ligamentous tissues; the smaller joints, and especially the metatarso-phalangeal joint of the great toe being first attacked; but in the course of time the arteries, the cardiac valves, and the connective tissue of the kidney and liver undergo degeneration, and catarrhal conditions of the mucous membranes, and vesicular and scaly diseases of the skin occur.

G., acute'. (*L. acutus*, sharp.) An attack of acute gout usually comes on suddenly in the night with pain in the metatarso-phalangeal joint of the great toe, which becomes hot, swollen, and red; the pain increases, fever occurs, there are chills or rigors, a hot skin, and then perspiration, a quick pulse, and furred tongue. The febrile symptoms subside in the day, but recur in the evening, and are repeated during two or three days, when they decline, but the joint continues swollen, oedematous, and tender for some time longer, and the skin desquamates. Occasionally the attack passes off along with a critical discharge, such as a diarrhoea, a sweating, or a deposit of urates. An attack of gout usually recurs, at first at a distant period, it may be two or three years, afterwards at shorter and shorter intervals. In subsequent attacks other joints become affected, and each succeeding attack leaves them more disorganised and deformed from the deposit of urate of soda.

GOUTY—GRAAFIAN.

G., asthen'ic. (Ἀσθενής, weak.) Same as *G., atonic.*

G., aton'ic. (Ἀτονός, languid.) A form of the disease in which, although there is considerable thickening of the ligaments, and deposit in the periosteum, and effusion into the joints, there is no pain of consequence except on motion; but the general symptoms are usually severe, such as nausea, flatulence, acid eructations, vertigo, palpitation, and shortness of breath. It is in these cases that it is said that the patient is not robust enough to develop an attack of the gout.

G., blood in. Garrod was the first to show that the blood during an attack of acute or chronic gout invariably contains an excess of uric acid and some oxalic acid. The presence of excess of urea is also probable. The alkalinity of the blood is much diminished.

G., card'iac. (Καρδία, the heart.) A term applied to the condition of gouty persons when they suffer from symptoms referable to the heart, such as palpitation or fluttering, pain, and oppression in the breathing.

Also, applied to those cases of retrocedent gout in which the heart is affected.

G., cerebral. (L. *cerebrum*, the brain.) A term applied to the symptoms, such as headache, nausea and giddiness, which sometimes afflict gouty persons, without the development of much joint trouble.

Also, a term for those cases of retrocedent gout in which the brain appears to be affected.

G., cerebral apoplec'tiform. Same as *G., cerebral*, when the symptoms resemble those of apoplexy.

G., chron'ic. (L. *chronicus*, long-lasting.) A term applied to the forms of gout which are very persistent, and are not characterised by any great heat of the affected joints.

Also, to the disorders of the different organs which are supposed to be caused by a gouty condition.

G., diaphragmatic. (Διάφραγμα, a partition-wall.) A term for *Angina pectoris*, on the assumption that it is of gouty origin.

G., fly'ng. A term applied to gouty or rheumatic cases in which there is no swelling of the joints, but pain in their interior, which frequently changes its seat.

G., imperf'ect. Same as *G., chronic.*

G., invet'erate. (L. *invetero*, to retain for a long while.) Sydenham's term for *G., chronic.*

G., irreg'ular. Same as *G., chronic.*

G., ivy. The *Ajuga chamæpitys*.

G., lar'val. (L. *larva*, a mask.) A term applied to the functional visceral troubles which often precede an attack of articular gout when they are the only manifestations of the disease.

G., mispla'ced. Same as *G., retroce-dent.*

G., pa'per. The *Charta cum extracto Gnidii*; and also the *C. resinosa*.

G., prostatic. See *Prostatitis, gouty.*

G., rece'dent. (L. *recedo*, to go back.) Same as *G., retrocedent.*

G., reg'ular. Same as *G., acute.*

G., retroce'dent. (L. *retrocedens*, going back.) A term applied to the metastasis of gout to some internal organ or organs, whereby, on the sudden cessation of the inflammation of the joint, grave symptoms referable to the nervous or circulatory or digestive system appear.

G., re'trograde. (L. *retro*, backward; *gradior*, to step.) Same as *G., retrocedent.*

G., rheumatic. See *Rheumatic gout.*

G., saturnine. (L. *Saturnus*, an old name for lead.) Gout determined by saturation of the system with lead.

G., spi'nal. A term applied to cases in which symptoms of spinal irritation are produced by gouty thickening of, or deposits of urates in, the spinal membranes.

G. stone. Same as *Chalk-stone.*

G., suppres'sed. (L. *supprimo*, to press down.) A term applied to those cases in which symptoms of disturbance of internal organs is supposed to depend upon a gouty condition, in which the external articular inflammation is imperfectly developed.

G.-weed. The *Egopodium podagraria*.

G.-wort. The *Egopodium podagraria*.

Gouty. (*Gout*.) Relating to, of the nature of, or affected with, *Gout*.

G. apoplexy. See *Apoplexy, gouty.*

G. diath'esis. See *Diathesis, gouty.*

G. inflamma'tion. See *Inflammation, gouty.*

G. meningi'tis. See *Meningitis, gouty.*

G. rheumatism. See *Rheumatic gout.*

Gou'vieux. France, Département de l'Oise. A cold, weak, chalybeate water, with a little free carbonic acid.

Gou'zabam. The name in India of the stems, leaves, and flowers of several species of Echium; or, according to some, of *Cacalia Kleinia*. It is said to be tonic and diuretic, and is used in syphilis, leprosy, and rheumatism.

Gow'an. (Gael. *gugan*, a daisy.) The *Bellis perennis*, and also the different species of *Ranunculus* and other yellow flowers.

G., ewe. The *Bellis perennis*.

G., yellow. Several of the species of *Ranunculus*.

Gowk. A Scotch and North English name of the cuckoo.

G. meat. The *Oxalis acetosella*, from its blossoming at cuckoo time.

Gowland's lo'tion. Term for a preparation of an ounce of bitter almonds triturated with two ounces of sugar and two pounds of distilled water, adding to the strained liquor two scruples of corrosive sublimate previously ground with two drachms of rectified alcohol. Used in obstinate cutaneous diseases.

Gown. (Welsh *gwn*, a gown.) A loose robe, the outermost of a female's ordinary dress.

G., red. A synonym of *Strophulus*, in reference to its covering the whole body.

G., yellow. The jaundice of new-born children.

Gr. A contraction of *Gramme*, *Grana*, or *Gramm*.

Graaf, Re'gnier de. A Dutch anatomist, born at Schoonhoven in 1611, died at Delft in 1673.

Graaf'ian. (*Graaf*.) Relating to De Graaf.

G. fol'licles. (L. *folliculus*, a small bag. F. *follicules de Graaf*; G. *Graaf'schen Follikeln*.) The small vesicular bodies seen in the subserous cortical layer of the ovary, and the larger structures of the same nature more deeply situated in the stroma of the organ; each containing an ovum, and occasionally two ova.

The small follicles in the cortex of the ovary are about 1-1000th of an inch in diameter, and

GRABALOS—GRAFT.

consist of a single layer of flattened, granular cells, with a flattened, oval nucleus, surrounded by a delicate membrana propria derived from the germinal epithelium and enclosing the ovum. According to some, the smallest follicles possess no membrana propria, and Foulis believes that the cells are derived from the connective-tissue cells of the ovarian stroma. As the follicle develops, further layers of cells, which become columnar, are formed, the layer immediately surrounding the ovum becoming, by a thickening of one side, the discus proligerus, and the outer one the membrana granulosa. Soon a transparent fluid is poured out amongst the cells, the liquor folliculi, which becomes collected in a crescentic cavity, the follicular cavity; at the same time the membrana propria becomes thicker, and divides into an outer and fibrous part, the tunica fibrosa folliculi, containing the larger blood-vessels of the follicle, and an inner layer, the tunica propria folliculi, containing the plexus of capillaries, which converge to a non-vascular point in the middle of the most superficial part, the stigma or hilum, at which the rupture of the mature vesicle occurs, an occurrence which results in the formation of a corpus luteum.

G. vesicle. (*L. vesicula*, a small blister. *F. vésicule de Graaf*; *G. Graaf'schen Bläschen*.) Same as *G. follicle*.

Grabalos. Spain, Province of Logroño. A sulphur spring, 340 metres above sea-level.

Grabserbad. Switzerland, Canton St. Gallen. A cold sulphur spring.

Gracilaria. (*L. gracilis*, slender.) A Genus of the Family *Spharococcideæ*, Order *Florideæ*, Class *Carposporææ*.

G. compressa, Greville. Used to make a pickle.

G. confervoides, Greville. Supplies some *Ceylon moss*.

G. lichenoides, Ag. (*Λειχίν*, a lichen; *εἶδος*, likeness.) Hab. Indian Ocean. A species known as *Ceylon moss*.

G. tenax, Greville. (*L. tenax*, tenacious.) Used as a substitute for gum.

Gracilis. (*L. gracilis*, slender. *F. droit interne, sous-pubio-prétibial*, Ch.; *G. schlanker Schenkelmuskel*.) A long, slender muscle running almost vertically on the inner side of the thigh. It arises by an aponeurotic tendon from the lower border of the symphysis pubis on its own side of the body, and from the inner half of the pubic arch, and is inserted into the inner side of the upper end of the tibia by a tendon which curves round the inner tuberosities of the femur and tibia, and has a bursa between it and the internal lateral ligament of the knee. Its nerve supply is from the obturator nerve, and its blood supply from branches of the deep femoral artery. It is an adductor of the femur when this is in extension; it is also a flexor of the leg and a rotator of it inwards.

G. anterior. (*L. anterior*, in front.) The *Rectus femoris* muscle.

Grada'tio. (*L. gradus*, a step.) An old term for the exaltation of the qualities of metals, by which their weight, colour, and consistence are brought to a greater degree of perfection. (Rulandus and Johnson.)

Gradatory. (*L. gradus*, a step.) Suitable for walking.

In Biology, applied to the limbs of an animal when fitted for walking on dry land.

Gradien'tia. (*L. gradio*, to walk.) An Order of *Amphibia* equivalent to *Urodela*.

Graduate. (Low *L. graduatus*, one who has taken a degree; from *L. gradus*, a step.) One on whom a university degree has been conferred.

Also, to proceed to a degree.

Also (*F. graduer*; *I. graduare*; *S. graduar*; *G. abgraden*, in *Grade abtheilen*), to divide into degrees; to mark with divisions.

Graduated. (*L. gradus*, a step.) Marked with divisions; divided into degrees.

G. compress. A compress formed of a number of circular or other-shaped pieces of cotton cloth, each progressively decreasing in size, and the whole forming a sort of pyramid, the apex of which can be applied to the precise point wished, in cases of wounded arteries, or wherever pressure on a limited surface is needed.

G. solutions. Solutions of known strength used in volumetric analysis.

Graduation. (*L. gradus*.) The act of proceeding to a university degree.

The division of an instrument into degrees.

G. houses. The buildings in which weak natural solutions of common salt, or other salts, are concentrated by evaporation from extensive surfaces of twigs or faggots, over which they are caused to pass.

G. of salt waters. The process performed in *G. houses*.

Græa. (*Γραιά*.) An old woman.

Also, the pellicle which forms on milk when it is boiled.

Also, the folds of skin round the umbilicus.

Græna. Spain, near Granada. A sulphur spring, of a temp. of 35°–38° C. (95°–100·4° F.) There is also a chalybeate spring.

Gräfe, Albrecht von. A German surgeon and ophthalmologist, born at Finkenheerde, near Berlin, in 1828, died at Berlin in 1870.

G's, von, coin-catch'er. (*F. panier à bascule*.) A fine whalebone rod, 15" long, with a piece of watch-spring, 1·5" long, attached to its lower part, carrying on its distal end a hollow, flattened metal cone; the watch-spring is hinged to the inner surface of the apex of the cone, so as to allow of free motion of the latter, by which means a sort of basket is formed on either side of the stem, in which a coin may be caught. It is used for the removal of flattened foreign bodies from the œsophagus.

G's, von, cramp. The same as *Blepharospasmus*.

G's, von, operation for cat'aract. See *Cataract, extraction of, von Gräfe's*.

G's, von, serre nœud. See *Serre-nœud, von Gräfe's*.

Graft. See *Graft*.

Graft. (Old *F. graffe*; from *L. graphium*; from *Gr. γράφω*, a style, or anything sharpened towards the top; in reference to its being sharpened in order to be adapted to the stock. *F. greffe*; *G. Pfropfreis*.) The name for the branch or bud which is transferred from one plant and inserted into another, the stock, in the operation of grafting. The original form is *Graft*.

Also, to insert a part into another.

In Botany, the application of a young shoot of one plant upon an old stem of the same, or of a different, species. The surfaces applied are usu-

GRAFTING—GRAMEN.

ally made as broad as possible, and surrounded by clay to prevent desiccation, and to keep the parts in apposition. An actual continuity of tissue takes place with the result of producing changes in the graft of size, quality, epoch of inflorescence, longevity, and the like.

In Animal Physiology (F. *heteroplastie, greffe animale, suture transplantation, néoplastie, ente animale, autoplastie*), the adhesion to one animal of a part detached from the same or another animal. Thus, parts of the extremities partially or completely severed from the parent trunk have, when replaced, been known to grow to it again, and by refreshing the surface, new noses and eyelids have been formed by the application of portions of skin taken from the forehead, temple, arm, or thigh, the graft being altogether detached in some cases, but remaining adherent by a stalk in others. Reverdin has applied the property of portions of the skin growing when grafted to the healing of ulcers, and attempts have been made, though hitherto without much success, to replace cornea rendered opaque from disease by transparent cornea taken from man or from animals.

G., animal. See under the chief heading.

G., cutaneous. (L. *cutis*, the skin.) See *Skin grafting*.

G., epidermic. (Ἐπί, upon; δέρμα, the skin.) See *Skin grafting*.

G., perios'teal. (Περί, around; ὀστέον, a bone.) See *Osteoplasty*.

G. the'ory. A theory which attributes the causation of disease to organic particles detached from the body of a diseased person, which becoming engrafted into a healthy person set up a diseased process in his body similar to that which existed in the body of the person from which they were detached.

Grafting. (Participle of the verb to *Graft*. G. *Pfropfen*.) An operation by which a part, the graft or scion, of one plant is united to another, the stock, and they become completely joined by means of the cambium, or proper juice of the bark, exuding from the edges of each, and becoming organised, so that the vessels inscuate and form a complete union.

Also, any similar operation.

G., epidermic. (Ἐπιδερμής, the cuticle.) Same as *Skin grafting*.

G., skin. See *Skin grafting*.

Gra'hé's test. (G. *Grahe's Probe*.) A test for cinchona bark, applied by heating five or ten grains of the bark in a test tube to redness; if the bark be cinchona, whitish smoke and watery vapour are first given off, then the fumes become purplish or reddish, and a fine pulverulent film, which condenses to a thick oily carmine-coloured liquid, forms on the sides of the tube.

Grain. (Mid. E. *grein*, *greyn*; F. *grain*, seed; from L. *granum*, corn. G. *Korn*.) A name for all kinds of corn.

Also, a small hard seed.

Also, a term for a small pill, or any small hard particle.

Also, the fibres of wood or of other fibrous substance and their direction.

Also (F. *grain*; G. *Gran*), the twentieth part of a scruple, or sixtieth of a drachm in apothecaries weight; the seven thousandth part of a pound avoirdupois weight; the twenty-fourth part of a pennyweight troy. It is equal to .06479895 gramme.

G.s, Adriano'ple. Same as *G.s, Persian*.

G.s, Alge'rian. (F. *graines d'Alger*.) Same as *Semen-contra*.

G.s, Am'brette. (F. *grains d'Ambrette*.) The seeds of *Hibiscus abelmoschus*.

G.s, Ango'ra. A variety of *G.s, Persian*.

G.s, Avi'gnon. The dried fruits of *Rhamnus infectorius*.

G.s, Guin'ea. Same as *G.s of paradise*, from their place of growth.

G., horse. The *Cicer arietinum*.

G.s, Is'kilip. A variety of *G.s, Persian*.

G.s, ker'mes. (Kermes.) The dried hodies of the female *Coccus ilicis*.

G. lac. See *Lac, grain*.

G.s, mac'anet. The kernels of the fruit of the *Cerasus mahalet*. Used as a scent.

G.s, Mex'ican. The seeds of *Ricinus communis*.

G.s, Moluc'ca. The seeds of *Croton tiglium*.

G.s, More'a. Same as *G.s, Persian*.

G.s, musk. See *Musk in grains*.

G.s of paradise. (F. *graines de paradis*; G. *Paradieskörner*.) The seeds of the *Anomum granum paradisi*, *A. melegueta*, and perhaps other species.

G. oil. A term for *Fusel oil*.

G., oil'y. The *Sesamum orientale*.

G.s, Per'sian. The dried fruits of *Rhamnus amygdalinus* and *R. saxatilis*.

G., poi'sonous. (F. *graine vénéneuse*; I. *grani avvelenati*; G. *giftige Samenkörner*.) The seeds of plants used as grain which produce poisonous symptoms; such are the seeds of rye when affected with ergot, and of *Lathyrus sativus*.

G.s, scar'let. (F. *graines d'ecarlate*.) Same as *Chermes*.

G. spir'it. Alcohol obtained from grain, such as barley, oats, maize, or other.

G.s, Tilly. The seeds of *Croton tiglium*.

G. tin. See *Tin, grain*.

G.s, Tok'at. A variety of *G.s, Persian*.

G.s, Tur'key. Same as *G.s, Persian*.

G.s, worm. The seeds of *Chenopodium anthelminticum*.

Grallæ. (L. *grallæ*, stilts; cont. of *gradula*, dim. of *gradus*, a step; from *gradior*, to take steps. F. *échassiers*; G. *Stelzwögel*.) An Order of the Class *Aves*, having long legs, non-webbed toes, neck and bill long, body thin and compressed, wings powerful, often with a spur near the carpal joint. It includes cranes, plovers, storks, and herons.

Grallato'res. (L. *grallator*, one who goes on stilts.) A synonym of *Grallæ*.

Gram. Same as *Gramme*.

Also, the seed of the chick pea, *Cicer arietinum*.

G., Ben'gal. The *Cicer arietinum*.

G., black. A variety of *Phaseolus mungo*.

G., green. The *Phaseolus mungo*.

G. plant, horse. The *Dolichos uniflorus*.

Gram'at. France, Département du Lot. A cold, chalybeate, carbonated water. Used in anæmia, chlorosis, and digestive disorders.

Gram'en. (L. *gramen*, grass; from Aryan root *gar*, to eat.) Grass; herbs in general.

Also, the *Triticum repens*.

G. ægypti'acum. The *Dactylis glomerata*.

G. al'bum. (L. *albus*, white.) The *Triticum repens*.

GRAMIA—GRANA.

G. avena'ceum. (L. *avena*, the oat.) The wild oat grass, *Bromus arvensis*.

G. caninum. (L. *caninus*, belonging to a dog.) The dog's grass, *Triticum repens*.

G. citra'tum. The *Andropogon citratus*.

G. cru'cis. (L. *crux*, a cross.) The Egyptian cock's-foot grass, or grass of the cross. The roots and plants are used in the same manner as *Triticum repens*, in the early stages of dropsy, being supposed to correct the factor of the breath, and to relieve colics and nephritic disorders.

G. cyperioi'dis. (Κύπερος, a rush; εἶδος, likeness.) The same as *G. crucis*.

G. dact'ylon. The *Dactylis glomerata*.

G. dact'ylon aromaticum. (L. *aromaticus*, fragrant.) The *Andropogon citratus*.

G. dact'ylon esculen'tum. (L. *esculentus*, eatable.) The seeds of *Glyceria fluitans*.

G. Dioscor'idis. The grass of Dioscorides, or *Triticum repens*.

G. lolia'ceum. The *Lolium temulentum*.

G. maj'us. (L. *major*, greater.) The *Carex arenaria*.

G. man'na. The manna grass, *Glyceria fluitans*.

G. man'næ. The seeds of *Glyceria fluitans*, which, when husked, are eaten as food. They have a sweet taste.

G. officina'rum. (L. *officina*, a shop.) The *Triticum repens*.

G. orienta'lē. The *Andropogon schænanthus* and *A. citratus*.

G. ossifragum. The *Anthericum ossifragum*.

G. Parnas'si, Bank. The *Parnassia palustris*.

G. ru'brum. (L. *ruber*, red.) The *Carex arenaria*.

G. spica'tum. (L. *spicatus*, eared.) The *Phalaris canariensis*.

Gram'ia. An old term of the same meaning as *Glama*, or sordes of the eyes.

Gramina'ceæ. (L. *gramen*, grass. F. *graminées*; G. *Gräser*.) A Nat. Order of the Alliance *Glumales*, or of the Subclass *Glumaceæ*, Class *Monocotyledones*, having a one-celled ovary with a solitary, ascending ovule, and a laterally-lying, lenticular, naked embryo.

Gramina'ceous. (L. *gramen*, grass.) Like unto grass; belonging to the *Graminaceæ*.

Gramin'æ. Same as *Graminaceæ*.

Gramin'eal. Same as *Gramineous*.

Gramin'eous. (L. *gramen*. G. *gras-artig*.) Grass-like.

Graminic'ulous. (L. *gramen*, grass; *colo*, to inhabit. F. *graminicole*.) Living, or growing, among grass.

Graminifoli'ate. (L. *gramen*; *folium*, a leaf. F. *graminifolié*; G. *grasblättrig*.) Having leaves like those of grass; grass-leaved.

Graminifol'ious. Same as *Graminifoli'ate*.

Gramin'iform. (L. *gramen*; *forma*, likeness. F. *graminiforme*; G. *grasähnlich*.) Resembling grass; grass-like.

Graminivorous. (L. *gramen*, grass; *vor*, to devour. F. *graminivore*; G. *Grasfressend*.) Eating, or feeding upon, grass.

Graminology. (L. *gramen*, grass; Gr. λόγος, a discourse. F. *graminologie*; G. *Graslehre*.) A mongrel term for a treatise or dissertation on the grasses.

Gram'ma. (Γράμμα, a letter, or writing;

from γράφω, to write.) Term for a scruple; the twenty-fourth part of an ounce.

Grammar'thon. A Genus of the Nat. Order *Compositæ*.

G. scorpio'idēs. The *Aronica scorpioides*.

Gram'matical faults of speech.

The faulty use of words for the expression of ideas. The faults resulting from imperfect education should be distinguished from those made by educated persons, or from a bad habit, a desire for originality, or an absurd fancy, and also from those which result from disease, and form a complication of amnesia, aphasia, and paraphasia, and which are accompanied by grave disturbances of the intellect, particularly by weakness of the intellectual powers, or which constitute the expression of an insane caprice. The chief grammatical faults of speech may be included under the heads of interruption in the flow of words, imperfect grammatical diction or grammatical akataphasia, articles, pronouns, or auxiliary verbs being omitted, strong verbs being conjugated with a weak inflection, and the like.

Gram'mē. (Γραμμή, a line; from γράφω, to write. F. *gramme*.) The iris of the eye, from its linear appearance.

Gram'mē. (Γράμμα, a small weight used by the Greeks.) A unit of weight in the decimal system, being the weight of one cubic centigramme of distilled water at its greatest density, which occurs at a temp. of 4° C. (39·2° F.) in a vacuum in Paris. It is equal to 15·43234874 grains troy.

G. at'om. The quantity of a chemical element amounting to its atomic weight expressed in grammes.

G. equiv'alent. (L. *æquus*, equal; *valere*, to be worth.) The quantity of a substance which will combine with one gramme of hydrogen.

G. mo'lecule. The quantity of a chemical compound amounting to its molecular weight expressed in grammes.

Gram'me's magne'to-elec'tric machine'. A machine furnishing a continuous current, consisting of an endless coil of copper wire surrounding three soft iron rings, which are made to rotate between the poles of an electro-magnet.

Gram'mit'is. (Γραμμή, a line. G. *Strichfarrrn*.) A Genus of the Nat. Order *Filices*.

G. ceterach, Swartz. The *Asplenium ceterach*.

Grammopet'alous. (Γραμμή, a line; πέταλον, a flower-leaf.) Having linear petals.

Gran. Hungary, on the right bank of the Danube. An active purgative water, containing magnesium sulphate 12 parts and sodium sulphate 4 parts in 1000.

Grana. (L. nom. pl. of *gramum*, a grain. F. *graines*, grains; G. *Körner*, *Samenkörner*, *Samen*.) Grains.

G. act'es. (Ἀκτῆα, the elder tree. G. *Atticheeren*.) The dried berries of the elder tree, *Sambucus nigra*. Formerly used in dropsy.

G. avinonen'sia. (*Avignon*.) The dried unripe berries of the *Rhamnus infectorius*.

G. ce'dri. See *Semen cedri*.

G. cher'mes. Same as *Kermes*.

G. cni'di. Same as *G. gnidia*.

G. coccognid'i. (L. *coccum*, a berry; *gnidius*, gnidian.) The fruit of *Daphne gnidium*.

G. coc'culi. Same as *Cocculi fructus*.

GRANA—GRANDRY.

G. dil'la. Same as *G. tiglii*.

G. gnid'ia. The berries of the *Daphne gnidium*.

G. guineën'sia. The seeds of *Anomum grana paradiisi*.

G. infecto'ria cher'mes. (*L. infectorius*, serving for dyeing.) Same as *Kermes*.

G. lentis'ci. The dried buds of the *Pistacia lentiscus*. Used as an astringent and tonic in catarrhal affections of the respiratory and urinary mucous membranes.

G., Molucca'na. The seeds of the *Croton tiglium*; also called *Grana tiglii*.

G. moscha'ta. Same as *G. moschi*.

G. mos'chi. The seeds of *Hibiscus abelmoschus*.

G. ni'gra. (*L. niger*, black.) The dark-coloured cochineal grains.

G. orien'tis. (*L. oriens*, the east.) The fruit of *Anamirta cocculus*. Same as *Cocculus indicus*.

G. paradi'sl. See *Grains of paradise*.

G. re'gia mino'ra. (*L. regius*, royal; minor, less.) The seeds of *Euphorbia lathyris*.

G. secal'is degenera'ti. (*L. secale*, rye; *degeneratus*, deteriorated.) Ergot of rye.

G. sylves'tra. A variety of cochineal consisting chiefly of very small insects.

G. tig'lii. The seeds of the *Croton tiglium*.

G. til'l. Same as *G. tiglii*; or, according to some, the seeds of an allied species.

G. tritic'ea. (*L. triticeus*, like wheat.) The lesser cornua of the hyoid bone, from their shape.

G. veneno'sa. (*L. venenosus*, poisonous.) See *Grain, poisonous*.

G. virid'ia. (*L. viridis*, green.) Pistachio nuts, the fruit of *Pistacia vera*.

G. ze'lm. Ethiopian pepper, the fruit of *Unona ethiopica*.

Grā'na. Spain, near Guadix. A chalybeate spring.

Granada, Alha'ma de. See *Alhama de Granada*.

Granadilla. (*S.* dim. of *granada*, a pomegranate, because it has points at the top of the flower like the grains of the pomegranate. *F. granadille, passiflore*; *G. Passionsblume*.) The fruit of the *Passiflora quadrangularis*, and other species.

G., apple-sha'ped. The fruit of *Passiflora maliformis*.

G. peruvia'na. The seeds of the castor-oil plant, *Ricinus communis*.

Granate'æ. (*G. Granatbaumgewächse*.) A Tribe of the Order *Lythraræ*, having a pomaceous fruit and opposite leaves without oil-glands.

Also, Don's term for *Myrtaceæ*.

Granati fructus cortex. (*L. fructus*, fruit; *cortex*, bark. *F. écorce de granade*; *G. Granatpfelschale*.) The rind of the fruit of *Punica granatum*. Formerly in the U.S. Ph. It occurs in commerce in irregularly shaped, hard, brittle fragments of a reddish-brown colour on the outside, paler within, having no smell and an astringent, slightly bitter taste. It contains much tannin, and is used internally and externally as an astringent.

G. radi'cis cortex. *B. Ph.*, U.S. Ph. (*L. radix*, a root; *cortex*. *F. écorce de la racine de granadier*; *G. Granatwurzelrinde*.) The dried bark of the root of *Punica granatum*, the pomegranate. It is in quills or fragments of a

yellowish-grey colour on the outside, and yellow on the inside; it has a short fracture, little smell, and a bitterish, astringent taste. It contains tannic acid, chiefly the variety known as punico-tannic acid, mannite, and pelletierin; isopelletierin, methylpelletierin, and pseudopelletierin are also described. It is used as a tæniacuge. Dose, 20—30 grains. See *Decoctum granati radiceis*.

Gran'atin. An undetermined substance obtained by Landerer from the unripe fruit of the pomegranate, *Punica granatum*.

Also, a misprint of *Grenadine*.

Granatristum. (*L. granum*, a grain; *tristis*, sad; from the pustule in the centre, and the severity of the pain.) A term by Paracelsus, *Chir. v, tr. i, c. 5*, for *Anthrax*.

Grana'tum. (*L. granum*, a grain; because it is full of grains or seed. *F. grénade*; *G. Granatapfel*.) The fruit of the *Punica granatum*, the pomegranate.

Also, U.S. Ph., the bark of the root of *Punica granatum*. See *Granati radiceis cortex*.

Grand mal. (*F. grand*, great; *mal*, disease.) A term, borrowed from the French, applied to an epileptic fit.

Grande Rive, la. France, Département de l'Haute-Savoie. An earthy mineral spring by the Lake of Geneva, containing calcium, magnesium and sodium carbonate, and free carbonic acid.

Grand'eau's test. A test for digitalin, being the addition of sulphuric acid and bromine, which gives a red coloration, changing, on the addition of water, to emerald green.

With digitalin the coloration is violet, changing, on the addition of water, to light green.

Grandebalæ. Old term by Hadr. Junius for the hairs in the armpits, the use of which is to protect these parts, in which perspiration is profuse, against the fretting which the frequent and active motions of the arms might produce, according to Casp. Bauchinus, *Anat. ii, 2*.

Grandeyrol and Montaignut. France, Département du Puy de Dôme, a commune in the Arrondissement d'Issoire. Two chalybeate springs rise here.

Grandidentate. (*L. grandis*, large; *dens*, a tooth. *F. grandidenté*.) Applied to leaves having large teeth or indentations.

Grandiforate. (*L. grandis*; *flos*, a flower. *F. grandiflore*; *G. grossblumig, grossblüthig*.) Having large flowers.

Grandifoliate. (*L. grandis*; *folium*, a leaf. *F. grandifolié*; *G. grossblättrig*.) Having large leaves.

Grandines. Plural of *Grando*.

Grandinose. (*L. grando*, a hailstone. *G. hagelkornartig*.) Having, or full of, hail.

Grandinosum os. (*L. grandinosus*, full of hail; *os*, a bone.) Applied by Bartholin, *Anat. iv, 21, p. 743*, to the os cuboides, probably from its irregular form, like a hailstone.

Grando. (*L. grando*, a hailstorm, a hailstone. *F. grêle*; *G. Hagelstein*.) Hail, or a hailstone.

A synonym (*G. Hagelkorn im Augenliede*) of *Chalazion*.

Also, a synonym of *Cicatricula*.

Grand'rif. France, Département du Puy-de-Dôme. A cold alkaline water containing a little iron. Used in malarious affections.

Grand'ry. A French anatomist of the present century.

GRANELLUM—GRANULAR.

G., corpuscles of. The tactile corpuscles or end bulbs of the nerves in the papillae of the bill and tongue of some birds, as the duck. They are small, oval or spherical bodies, consisting of two or three or more large, granular, transparent, somewhat flattened, vertically arranged cells, tactile cells, containing a spherical nucleus and enclosed in a nucleated connective-tissue capsule; the capsule is penetrated by a medullated nerve fibre, which at once or soon loses its medullary sheath and is continued by its axis cylinder, from which branches terminate, according to Merkel, in each of the tactile cells, or, according to Ranvier and others, in the transparent substance, or tactile disc, between them, or, according to Klein, in minute swellings in the transparent intercellular substance.

Granel'lum. (Dim. of *L. granum*, a seed. *G. Körnchen*.) A small seed, a small grain.

Grange. Lancashire, on Morecambe Bay. A mild winter resort.

Grang'ea. A Genus of the Nat. Order Composite.

G. Andanso'nii, Cass. The *G. maderaspatana*.

G. latifolia, Lamk. (*L. latus*, broad; *folium*, a leaf.) Hab. Asia, Madagascar, and Abyssinia. Leaves stimulant, used as a condiment.

G. maderaspatana, Poir. Hab. India. Leaves used as a stomachic, deobstruent, and antispasmodic.

Gränichen. Switzerland, Canton Aargau. An earthy mineral water, containing calcium and magnesium carbonate, calcium and magnesium chloride, and free carbonic acid.

Granif'eræ. (*L. granum*, a grain; *fero*, to bear.) Agardh's term for *Endogæne*.

Granif'erous. (*L. granum*, a grain; *fero*, to bear. *F. granifere*.) Bearing, or producing, grain; also bearing a grain, or a granule, as the inner divisions of the calyx of *Rumex*.

Graniform. (*L. granum*; *forma*, shape.) Like the grains of corn.

Granilla. (*S. granilla*, small seed.) The dust or small grains of cochineal. Same as *Grana sylvestra*.

Gran'ite. (*I. granito*, a kind of speckled stone; from *grano*, corn; from *L. granum*, corn. *F. granit*; *G. Granit*.) An unstratified, irregular, amorphous rock, so called because of the granular crystalline appearance of its constituents, quartz, felspar, and mica. It varies from a close-grained, hard, rock-like, ordinary granite to a soft, pulverulent material like kaolin.

Granivorous. (*L. granum*, grain; *vor*, to devour. *F. granivore*; *I. granivoro*; *G. Körnerfressend*.) Eating or living on grains or seeds.

Grant, Robert Edmund. A Scottish anatomist, who was Professor of Zoology in University College, London; born at Edinburgh in 1793, died in London in 1874.

G's classification of animals. Radiata, or Cycloneurose class, including Polygastrica, Porifera, Polypiphera, Acalepha, Echinoderma.

Articulata, or Diploneurose class, including Entozoa, Rotifera, Cirrhopoda, Annelida, Myriapoda, Insecta, Arachnida, Crustacea.

Mollusca, or Cyclogangliate class, including Tunicata, Conchifera, Gasteropoda, Pteropoda, Cephalopoda.

Vertebrata, or Spinicerebrate class, including Pisces, Amphibia, Reptilia, Aves, and Mammals.

Grantrist'um. Same as *Granatristum*.

Gra'nula. Plural of *Granulum*.

Also, the same as *Granule*.

G. sanguinis. (*L. sanguis*, blood.) The corpuscles of the blood.

G. sem'inis. (*L. semen*, seed.) The Seminal granules.

Gra'nula-gon'ima. Clusters of two or more spherical cells, filled with green granular matter, seated beneath the cortical layer in lichens. (*M. C. Cooke*.)

Gran'ular. (*L. granulum*, a little grain. *F. granulaire*; *G. körnig*, gekörnt.) Of the nature or appearance of granulations or granules; consisting of, or containing, granules or grains.

G. ang'ina. (*F. angine granuleux*.) Chomel's name for follicular pharyngitis.

G. casts. See *Urinary casts*, granular.

G. conjunct'iva. The same as *Trachoma*.

G. cor'puscle. A term for a *Leucocyte*.

G. degenera'tion. (*L. degeneratio*, a changing for the worse.) The metabolic change of the protoplasmic tissues, which constitutes the condition called also *Cloudy swelling*. It is a common form of degradation of tissue, occurring in the heart, kidney and liver, especially in the infective diseases; and is not infrequently combined with fatty degeneration. The granules in most cases are soluble in acetic acid, but insoluble in alkalies or ether, indicating their albuminoid composition; but by some they are supposed to be micrococci.

G. degenera'tion of heart. See *Heart*, granular degeneration of.

G. degenera'tion of kidney. See *Kidney*, granular degeneration of.

G. disintegra'tion. (*L. dis*, neg.; *integro*, to make anew.) Same as *G. degenera'tion*.

G. eye'lid. Same as *Trachoma*.

G. forma'tion of Meynert. The fourth layer of the grey matter of the convolutions of the brain, consisting of small, irregular branched ganglion cells.

G. inflamma'tion of u'terus. See *Endometritis cervicalis granulosa*.

G. kid'ney. See *Kidney*, granular.

G. lay'er of den'tine. Same as *G. layer of Purkinje*.

G. lay'er of Graaf'ian fol'licle. The *Membrana granulosa* of a Graafian follicle.

G. lay'er of Purkin'je. (*Purkinje*.) The layer of the very fine interglobular spaces of Czermak, lying on the outer surface of the dentine of a tooth.

G. lay'er of retina. See under *Retina*.

G. lay'er of retina, exter'nal. The *Retina, nuclear layer of, outer*.

G. lay'er of retina, inter'nal. The *Retina, nuclear layer of, inner*.

G. lid. Same as *Trachoma*.

G. liv'er. Cirrhosis of the liver, from its granular appearance.

G. mening'i'tis. Same as *Meningitis, tubercular*.

G. ophthal'mia. See *Ophthalmia*, granular.

G. phthi'sis. See *Phthisis*, granular.

G. urethri'tis. See *Urethritis*, granular.

GRANULATE—GRANULE.

G. tin. The *Pulvis stanni*.

Gran'ulate. (L. *granulum*, a small grain. G. *körnelt*.) To form into granules or small grains; to make rough on the surface.

Also, the same as *Granulated*.

Also, the same as *Granuliferous*.

Gran'ulated. (L. *granulum*, a little grain. F. *granulé*; G. *granuliert*.) Of, or belonging to, or resembling, or consisting of, granulations or granules.

In Pharmacy, applied to substances which are made into small grains.

In Botany, applied to roots which consist of many small knots.

G. cit'rate of magne'sium. See *Magnesi citras granulatus*, U.S. Ph.

G. liv'er. Cirrhosis of the liver.

G. root. A root with small fleshy nodules scattered on its fibres.

G. sul'phate of i'ron. See *Ferri sulphas granulata*.

G. tin. See *Tin, granulated*.

G. zinc. (G. *gekörntes Zinc*.) See *Zinc, granulated*.

Granula'tion. (L. *granulum*, dim. of *granum*, a grain. F. *granulation*; I. *granulazione*; S. *granulacion*; G. *Granulation, Körnerbildung*.) The act of being formed into grains.

Also (G. *Körnchen*), the small grains themselves.

In Physics, the process of reducing a metal into small grains by fusing it, running it through a sieve or perforated plate, and then allowing it to fall into cold water.

In Anatomy and Histology, the term is applied to many small rounded bodies.

In Pathology, the bright-red, elevated spots which are seen in a wound which is *Healing by granulation*, as well as the process itself; the term is also applied to other small round bodies, such as small tubercular deposits.

G.s, conjunctival. (*Conjunctiva*.) A term applied to two different structures, hypertrophy of the papillæ of the mucous membrane and trachoma.

G.s, erethis'tic. (Ερεθιστικός, of irritation.) Painful, free-growing granulations which bleed easily.

G.s, exu'berant. (L. *exubero*, to grow luxuriantly.) The freely-growing, prominent granulations, called *Proud flesh*.

G.s, fat'ty. (F. *granulation graisseuse*.) Minute oil globules, or small molecular granules, which have undergone fatty degeneration. They dissolve in ether, but not in acetic acid.

G., fun'gous. (L. *fungus*, a mushroom.) Prominent, free-growing granulations; also called *Proud flesh*.

G.s, grey. Grey milary tubercle.

G., heal'ing by. See *Healing by granulation*.

G., melan'ic. The black pigment granules seen in *Melanosis*.

G.s, meninge'al. (Μήνιγξ, a membrane.) The *Pacchionian bodies*.

G.s, mili'ary. Same as *Tubercle, milary*.

G.s, molec'ular. Same as *Granules, molecular*.

G. of Bayle. (A French physician of the present century.) The small, hard, translucent granules forming milary tubercle.

G.s of Bright. (Bright, Richard. F. *granulations de Bright*.) Rayer's term for the yellowish-white granules seen in the large, white, granular kidney consequent on diffused nephritis with considerable affection of the connective tissue.

G.s of la'rynx. The elevations seen in *Laryngitis, glandular, chronic*.

G.s of Pacchio'ni. The *Pacchionian bodies*.

G.s of pha'rynx. See *G.s, pharyngeal*.

G.s, Pacchio'nian. The *Pacchionian bodies*.

G.s, pal'pebral. (L. *palpebra*, the eyelid.) Same as *G.s, conjunctival*.

G.s, pharynge'al. The small prominence of mucous membranes seen in follicular pharyngitis.

G.s, pig'ment. See *Pigment granules*.

G.sarco'ma. The ordinary form of simple or small round-celled *Sarcoma*.

G.-steno'sis. (Στένσις, a constriction.) Occlusion of the trachea occurring as a sequela of tracheotomy. The artificial opening made in this operation has a strong tendency to close, and granulation tissue grows rapidly, especially at the inner angle of the upper extremity of the wound, where there is no pressure from the cannula. If this instrument be removed before the swelling of the larynx has subsided, the inspiratory effort causes the vascular granulation tissue at this spot to swell, and it thus forms a plug, which closes the trachea and occasions death.

G. tis'sue. The tissue composing the new structures in a wound healing by granulation. It consists of loops of capillary blood-vessels surrounded by exudation corpuscles, some of them branched, which are joined together by a small amount of ground substance.

By some the cells are believed to be proliferated leucocytes which have escaped from the blood-vessels; by others they are supposed to be developed from the original cells of the structure.

The expression has also been used as a term for embryonal tissue.

G.s, tuber'cular. Same as *Tubercle, milary*.

G. tu'mour. A term for the simpler forms of *Sarcoma*.

Also, the same as *Granuloma*.

G.s, umbil'cal. (L. *umbilicus*, the navel.) The pale-red, fungoid-looking growth which sometimes sprouts up from the umbilicus of a young infant on the separation of the navel-string.

G., u'nion by. See *Healing by granulation*.

G.s, u'terine. (F. *granulations utérine*.) The same as *Endometritis cervicalis granulosa*.

Gran'ule. (L. *granulum*, a small grain. F. *granule*; I. *granuletto, granellino*; G. *Körnchen*.) A small particle, a small grain.

In Anatomy, it is applied to small round grains, such as the granules of the chyle, and to such structures as the Malpighian bodies of the spleen.

In Botany, the term is applied to a spore, a pollen cell, the minute bodies contained in pollen, or such like.

In Pharmacy, it signifies a small sugar- or other-coated pilule, usually containing a minute dose of some very active remedy, as aconitin or

GRANULIE—GRAPE.

digitalin; and also is applied to any very small pill, whatever its composition.

G.s., aggregated. (*L. aggrego*, to gather together in a heap.) Erasmus Wilson's term for minute masses of four, five, or six primitive granules.

G., Bütschli's. See *Nuclear spindle of Bütschli*.

G. cells. See *Cells, granule*.

G., glandular, of Malpighi. The Malpighian corpuscles of the spleen.

G.-layer of cerebellum. The inner nuclear layer of the grey matter of the cortex of the cerebellum. It consists of round or angular nuclei of neuroglia cells, leucocytes, and ganglion cells embedded in a fine network of neuroglia and, probably, of nerve-fibrils also.

G., lymph. A *Lymph corpuscle*.

G. mas'ses. The same as *Cells, giant*.

G.s., molec'ular. See *Molecular granules*.

G.s., nucleated. (*L. nucleus*, a kernel.)

Erasmus Wilson's term for an aggregated granule with a single layer of aggregated granules around it, the central aggregated granule having now become a nucleus.

G. of brain. The nerve-cells of the grey matter of the brain.

G. of Dioscorides. The *Granula de acido arsenioso*, Fr. Codex.

G. of o'vum. Same as *G. of Schrön*.

G. of Schrön. (*G. Korn des Keimflecks*.) A small, bright, apparently solid, body described by Schrön as existing in the germinal spot. Its nature and its presence even is doubtful; some believe it to be a vacuole.

G., pollin'ic. (*G. Pollenkorn*.) See *Pollen grain*.

G.s., prim'itive. (*L. primitivus*, first of its kind.) Erasmus Wilson's term for the first organic shape of the blastema of the liquor sanguinis.

G.s., sem'inal. See *Seminal granules*.

Granulie. (*L. granulum*.) A name given by Empis, in 1865, to a special inflammatory condition characterised by the development of granulations in organs, or on serous membranes, and distinct from the tubercular condition.

Granulif'erous. (*L. granulum*; *fero*, to bear.) Bearing granules or grain-like bodies.

Granuliform. (*L. granulum*, a little grain; *forma*, likeness. *F. granuliforme*.) Resembling little grains. Applied to a body composed of irregular grains.

Granulitis. Empis's term for acute military tuberculosis.

Granulo-ad'ipose. (*L. granulum*, a little grain; *adeps*, fat.) Containing, or consisting of, granules and fatty matter.

G. cast. A renal cast containing granular matter and oil globules.

Granulo-fat'ty. (*F. granulo-graisseuse*.) Relating to granules and to fat.

G. degeneration. The form of degeneration of tissue which combines the granular and fatty forms.

Granulo'ma. (*L. granulum*.) A term invented by Virchow to include certain neoplasms which generally do not advance in structure beyond the stage of granulation tissue, and which usually proceed to ulceration. Under this head he included syphilitic gummata, lupus, elephantiasis Græcorum, farcy, and glanders, to which others have added tubercle, yaws, and

actinomycosis. They are all infective, the contagium being in some, and probably in all, a special fungus.

G. fungoides. (*L. fungus*, a mushroom; *Gr. εἶδος*, likeness.) Auspitz's term for a rare disease of the skin which commences with larger or smaller red circumscribed spots of an eczematous appearance, from loss of epidermis, and out of which develop granulation tissue tumours, which may grow to the size of a small apple; it is accompanied by severe, and sometimes fatal, cachexia. By some the disease is believed to be a cutaneous lymphadenitis.

G., infective. (*G. infectiöse Granulationsgeschwülste*.) Ziegler's term for the class of diseases mentioned under the chief heading.

G. i'ridis. (*Iris*.) A small, non-malignant growth on the iris consisting of a vascular, small-celled, fibrillar tissue like a sarcoma. Wecker distinguishes a simple, a teleangiectatic, and a traumatic form.

G., syphilitic. A synonym of *Gumma*.

G., trichophytic. See *Trichophytic granuloma*.

Granulo'sa cells. (*G. Granulosa-zellen*.) The cells of the *Membrana granulosa*.

G. mem'brana. See *Membrana granulosa*.

Granulose. (*L. granulum*.) Nägeli's term for one of the two constituents which, according to him, constitute the starch granule, being the true starch; the other being a framework of cellulose or amylose. Granulose is soluble in the saliva, in solution of sodium chloride with a little hydrochloric acid, and in chromic acid; it is coloured blue by iodine.

Also, the same as *Granular*.

Granulosity. (*L. granulum*, a little grain. *F. granulosité*.) Term for a mass, or heap, of small tubercles, like little grains, or granules.

Granulous. (*L. granulum*, a little grain. *F. granuleux*; *G. gekörnelt*.) Having, or full of, granulations. Like to small grains.

G. disease. (*F. maladie granuleuse*.) Same as *Granulie*.

Granulum. Same as *Granule*.

Grain. (*L. granum*; akin to Sans. *jiona*, ground down. *F. grain*; *G. Korn*.) A grain or seed.

Also, the weight called *Grain*.

G. cnid'ium. See *Grana cnidii*.

G. infecto'rium. (*L. infectorius*, serving for dyeing.) The red round grain, about the size of a pea, found in Spain, Italy, and the South of France, many of them adhering to the branches of the scarlet oak, each being the nidus of a minute red insect, the *Coccus ilicis*.

G. ker'mes. The *G. infecto'rium*; *kermes* grain.

G. mos'chi. The seed of the *Hibiscus abelmoschus*.

G. parad'isi. See *Grains of paradise*.

G. re'gium. (*L. regius*, royal.) The seed of the *Ricinus communis*, or castor-oil plant.

G. tig'lium. The seed of *Croton tiglium*.

G. tinctor'ium. (*L. tinctor*, a dyer.) The *G. infecto'rium*.

Grape. (*F. grappe*, a bunch or cluster; because it grows in this form. *F. raisin*; *I. uva*; *S. uva*; *G. Traube*.) The fruit of the *Vitis vinifera*.

Ripe grapes are a highly esteemed fruit, easily

GRAPES—GRAPHITIC ACID.

digestible and nutritious; in large quantities they are laxative and diuretic. The fermented juice forms the various kinds of wine. When fresh it consists of water 760—840 parts, sugar 106—330, free acids, especially tartaric, 3·5—10·2, albuminous substances 5—20, pectin and other similar matters 2·5—30, and salts of potassium, calcium, magnesium, and, in small and occasional quantities, of iron, magnesium, and thallium, 2—4 parts in 1000; the skins and seeds, and occasionally the juice also, contain tannin. Dried grapes are *Raisins* or *Currants*.

G. cure. (F. *cure de raisin*; G. *Traubenkur*, *Weintraubenkur*.) The use of grape-juice without the skins and stones for the cure of diseased conditions. In moderate quantities, say 2 kilogrammes, about 4·5 lbs., of grapes daily, it is used as an adjuvant in the convalescence from fevers, as an alterative in serofula, chlorosis, and menstrual disturbances, and as a nutrient in anæmia. In larger amount, say 4 kilogrammes, about 9 lbs., of grapes daily, it acts as a deobstruent and laxative in abdominal plethora, constipation, hæmorrhoidal troubles, and in chronic catarrh of the respiratory mucous membrane. The mode of administration is to take the amount at three times; the larger portion, consisting sometimes of nearly half the daily amount, is eaten before breakfast, a fourth part of the whole is eaten an hour before midday dinner, and the remainder an hour before supper. Patients generally begin with 500 to 1000 grammes daily, and gradually increase to 3 to 6 kilogrammes. The effect of the diet is to increase the whole of the secretions of the alimentary canal and that of the kidneys; the albuminoids of the blood are diminished in quantity and the salts increased. Occasionally so much dyspepsia and mucous diarrhoea is produced as to render it necessary to suspend the treatment. The injurious effect of the acids of the grape juice on the mucous membrane of the stomach is said to be prevented by eating a little white bread with them. Bingen, Geisenheim, and Rüdesheim, on the Rhine; Kreuznach on the Nahe; Dürkheim and Neustadt in the Hardt Mountains; Botzen and Meran in the Tyrol; Bex in the Rhone Valley; Montreux and Vevey on the Lake of Geneva; Grüneberg in Silesia; and many other places, are among the localities to which people resort for the grape cure.

G.s, dried. See *Raisins*.

G. essence. An artificial flavouring liquid composed of two parts of chloroform, two of aldehyde, two of formic ether, ten of ænanthyl ether, one of methyl-salicylic ether, five of tartaric acid, three of succinic acid, and ten of glycerin.

G. flower. The *Muscari racemosum*.

G. flower, musc. The *Muscaria ambrosiæcæum*.

G. hyacinth. The *Muscari racemosum*.

G. lac. See *Lac, grape*.

G., sea-side. The *Coccoloba uvifera*.

G. sugar. Same as *Glucose*.

G. vine. The *Vitis vinifera*.

G. wort. The *Actæa spicata*.

Grapes. A term applied to advanced forms of *Grease* in horses when the granulations become large and hard.

Graphic. (L. *graphicus*; from Gr. γράφικος, belonging to painting or drawing; from γράφω, to write. F. *graphique*; G. *graphisch*.) Relating to the art of writing; written.

G. method. A mode of writing down the movements of a part of the body at the time of their production by an instrument constructed for the special purpose. In this manner the movements of the arterial pulse are recorded by the *Sphygmograph*, and those of the voluntary muscles by the *Myograph*.

G. representation. (L. *repræsentatio*, to bring before one.) The representation of a physical or biological phenomenon by the *G. method*.

G. symbols. See *Symbols, graphic*.

Graphidioïdes. (Γραφίς, a style; εἶδος, likeness. F. *graphioïde*; G. *griffelförmig*.) Resembling a style.

Applied to the styloid process of temporal bone; and also to that of the ulna.

Graphioïdes. Same as *Graphidioïdes*.

Graphioïdes. Same as *Graphidioïdes*.

Graphis. (Γραφίς, a style.) A Genus of gymnocarpous Lichens which grow on the bark of many trees, such as the species of *Cinchona*.

Graphis'cus. (Γραφίς, a style.) This word is erroneously given by Castells as the name of an instrument for extracting darts, invented by Diocles, and the authority of Celsus, vii, 5, t. 3, is stated; but the term employed there is Διοκλείου καθαίσκου, the latter being the analogue of a different word, *Cyathiscus*, which means a kind of probe with a small cup at one end for extracting anything from a cavity.

Graph'ite. (Γράφω, to write. F. *graphite*; I. *grafite*; G. *Graphit, Reissblei*.) One of the allotropic modifications of carbon, the other being the diamond. It is usually found in larger or smaller foliated or granular masses in the crystalline rocks, and sometimes in hexagonal crystalline tables. It is steel-grey in colour, soapy to the feel, and marks paper black; its sp. gr. is 2·015 to 2·583, according to the amount of the impurity it contains, which may be an oxide of iron or aluminium, silicon, calcium, or magnesium; it also always contains one per cent., more or less, of hydrogen. It is a good conductor of heat and of electricity. It is used, when mixed with clay, to make lead pencils, and when mixed with fire clay to make the black-lead crucibles used in metallurgical operations. It is also used to polish gunpowder and in electrotyping.

Also, see *Graphites depuratus*.

G. soap. (G. *Graphitseife*.) A soap recommended by Auspitz, containing 100 parts of graphite, reduced to powder and washed, and a mixture of one part of caustic soda lye with two parts of melted suet and cocoa-nut oil.

Graphites. Same as *Graphite*.

G. depuratus. (Low L. *depuro*; from L. *de*, intens.; *puro*, to purify.) Graphite purified by elutriation. Formerly used both externally and internally as an antiseptic, and in chronic scaly affections of the skin. Dose 5—2 grammes.

G. elutriatus. (L. *elutrio*, to wash out.) Same as *G. depuratus*.

Graphitic acid. (*Graphite*.) C₁₁H₄O₃. A yellow, minutely crystalline substance obtained by treating a mixture of one part of graphite and three of potassium chlorate with concentrated nitric acid, heating it on a water bath for three or four days, and washing the

GRAPHOIDES—GRATE.

solid residue, the latter operation being several times repeated. It is slightly soluble in pure water.

Graphoides. Same as *Graphidioides*. Also, an old term for the digastric muscle according to Parr.

Graphology. (Γράφω; λόγος, an account.) A study or description of handwriting in relation to the changes from the ordinary which occur in some diseases, such as general paralysis.

Graph'on. (Γράφω.) Symb. Gr.; at weight 33. A term applied by Brodie to the modification of carbon supposed to exist in graphite, which he believes to be a radical.

Graph'oscope. (Γράφω, to write; σκοπῶ, to see.) A lens, or a section of a lens parallel to its diameter, so large that, when placed before the eyes, visual lines pass through portions of the lens of equal thickness, and thus there is complete harmony between convergence and accommodation. Such a lens is generally used for the examination of pictures and photographs. Giraud Teulon has applied this principle in the construction of spectacles, each glass being cut from the sides of a large lens, ground to correct the error of refraction in any given case.

Graphospas'mus. (Γράφω; σπασμός, a spasm.) A term for *Writers' cramp*.

Grappa. Old term for disease.

Grasnawawo'da. Hungary, County Neutra. A chalybeate water.

Grass. (Sax. *gers, græs*; G. *Gras*. F. *herbe, gazon*; I. *erba*; S. *yerbas*.) A name applied to the plants of the Nat. Order *Gramineæ*; or generally to herbage on which cattle feed.

Also, a term for *Triticum repens*.

Also, a term for asparagus.

G., bear's. The *Yucca filamentosa*.
G., Bermu'da. The *Cynodon dactylon*.
G., bitter. The *Aletris farinosa*.
G., blue-ey'ed. The *Sisyrinchium bermudianum*.
G., brome. The *Bromus ciliatus*.
G., brome, bar'ren. The *Bromus sterilis*.

G., brome, soft. The *Bromus mollis*.
G., cana'ry. The *Phalaris canariensis*.
G., cocks'foot, Egypt'ian. The *Gramen crucis cyperoidis*.
G., couch. The *Triticum repens*.
G., dog. The *Triticum repens*.
G., eel. The *Zostera marina*.
G., five-leav'ed. The *Potentilla reptans*.

G., fote. The *Glyceria fluitans*.
G., gin'ger. The *Andropogon schænanthus*.

G., gin'ger, oil of. The oil obtained by distillation of the *Andropogon schænanthus*.
G., goat's. The same as *G., viper's*.
G., goose. The *Galium aparine*.
G., goose, great. The *Asperugo procumbens*.

G., In'dian, oil. The same as *Oleum andropogonis*.
G., knot. The *Polygonum aviculare*.
G., knot, whor'ed. The *Illecebrum verticillatum*.

G., leav'ed sea or'ache. The *Atriplex littoralis*.

G., lem'on. The *Andropogon citratum*.

G., lil'y. The *Sisyrinchium bermudianum*.

G., man'na. The *Glyceria fluitans*.

G., oat, wild. The *Bromus sterilis*.

G. of Parnas'sus. The *Parnassia palustris*.

G. oil. Same as *G., oil of*.

G., oil of. The oil of *Andropogon citratus*.

G. oil of Na'mur. The oil from *Andropogon calamus aromaticus*.

G., phys'ic. The *Sisyrinchium bermudianum*.

G., reed. The *Calamagrostis lanceolata*.

G., rib. The species of the Genus *Plantago*.

G., scor'pion, com'mon. The *Myosotis arvensis*.

G., scor'pion, great wa'ter. The *Myosotis palustris*.

G., scur'vy. The *Sisyrinchium bermudianum*, and the *Cochlearia officinalis*.

G., scur'vy, com'mon. The *Cochlearia officinalis*.

G., scur'vy, English. The *Cochlearia anglica*.

G., scur'vy, lem'on. The *Cochlearia officinalis*.

G., scur'vy, Scotch. The *Convolvulus soldanella*.

G., sea, Ice'land. The *Ulva latissima*.

G., silk. The *Yucca filamentosa*.

G., spar'row. The *Asparagus officinalis*.

G., spar'row, rock. The *Asparagus petraea*.

G., spring. The *Anthoxanthum odoratum*.

G., star. The *Aletris farinosa*.

G., sweet. The *Acorus calamus*.

G., tree. The species of *Xanthorrhæa*.

G., ver'nal, sweet-scent'ed. The *Anthoxanthum odoratum*.

G., viper's. The *Scorzonera hispanica*.

G., viper's, Hunga'rian. The *Scorzonera purpurea*.

G., wheat, creep'ing. The *Triticum repens*.

G., whit'low. The *Erophila vulgaris*.

G., whit'low, wall. The *Draba muralis*.

G., worm. The *Spigelia marylandica*.

G., wrack. The *Zostera marina*.

G., yel'low-ey'ed. The *Xyris bulbosa*.

Gras'sa. Old name for borax. (Ruland, and Johnson.)

Gras'ses. The Nat. Order *Graminaceæ*.

Grasshop'per. The animals of the Genus *Gryllus*. Many of the species have been eaten as food.

G. plague. A plague observed by Lebert in the Cantons of Vaud and Valais. In Sion, the chief town of the Valais, a grasshopper mass used to be solemnly held on the 1st of May each year. The eggs of this insect are long and large and laid in exposed positions, and their numbers are usually restrained, but under favourable conditions great swarms are developed.

G., wart-eat'ing. The *Gryllus verrucivorus*.

Gras'ville l'heure. France, Département de la Seine Inferieure. A cold, weak chalybeate water.

Grate. (Mid. E. *graten*; from Old F. *grater*, to scratch; Low. L. *crato*; Sw. *kratta*,

GRATELOUPIA—GRAVEL.

to scrape.) To rub, to scratch; to make a rubbing, or scratching, or creaking sound.

Grateloupia. A Genus of choristoporous Algæ.

G. alici'na, Ag. (*L. filix*, a fern.) One of the Algæ forming *Corsican moss*.

Gra'tia Dei. (*L. gratia*, grace; *Deus*, God.) A name given to the *Geranium Robertianum*, or herb Robert, the *Scutellaria galericulata*, and the *Helianthemum vulgare*, but chiefly to the *Gratiola officinalis*, or hedge hyssop.

Also, an old term for the plague, according to Forestus, *Schol.* vi, *Obs.* 21, because God chastens and recalls to grace by its infliction.

Also, an old name of a plaster made of wax, resin, lard, turpentine, mastic, olibanum, and sometimes verdigris; so called because of its excellent virtues.

G. Dei germano'rum. The *Geranium pratense*, or crowfoot crane's bill.

Grat'ing. (E. dim. of *grate*; from Low L. *grata*, a variant of *crata*, from L. *crates*, a hurdle.) A framework of bars.

Also (*E. grate*), creaking, rubbing.

In the plural, a term applied in Optics to the series of bright bands, separated by dark lines, produced by diffraction when a ray of monochromatic light is allowed to pass through a narrow slit.

G. fric'tion-sound. A variety of *Fric'tion-sound*, *pleural*, in which the sound is harsher and sharper than the rubbing friction-sound; it is more frequently heard at the period of absorption, and may be caused by irregularities in the exudation; the projections caused by subpleural miliary tubercle may also produce it.

Grati'ola. (L. dim. of *gratia*, grace, or favour, from its excellent qualities. F. *gratirole*; G. *Gnadenkraut*.) A Genus of the Nat. Order *Scrophulariaceæ*. The hedge hyssop.

G. ama'ra. (*L. amarus*, bitter.) Hab. Moluccas. Leaves very bitter.

G. cæru'lea. (*L. cæruleus*, dark blue.) The *Scutellaria galericulata*.

G. centauroi'des. The *G. officinalis*.

G. monnie'ra, Linn. The *Herpestes monniera*, H. B. and Kunth.

G. officina'lis, Linn. (*F. gratirole commune*, *herbe à pauvre homme*; I. *stancavallo*; G. *Gottesgnadenkraut*.) The hedge hyssop, native of the South of Europe, but cultivated in our gardens; the leaves, which have a bitter nauseous taste, purge briskly and cause vomiting in the dose of half a drachm of the dry herb, or a drachm infused in wine and water. Used in small doses as cathartic and diuretic for dropsical affections, as an anthelmintic, and as an emetic.

G. peruvia'na, Linn. Leaves and roots purgative and emetic; also used as a vulnerary.

G. tri'fida, Willd. The *Limnophila trifida*.

Gratiola'crin. A compound substance obtained by Waltz from the *Gratiola officinalis*. It is a mixture of fatty and resinous matters.

Gratiolare'tin. $C_{34}H_{25}O_6$. A yellow, amorphous, inodorous, tasteless mass, obtained by Waltz in treating gratiolin with dilute sulphuric acid. It is slightly soluble in alcohol and ether, insoluble in water.

Gratirole'tin. $C_{34}H_{25}O_{10}$. Waltz; $C_{40}H_{32}O_{12}$. Kraut. A crystalline substance obtained by acting on gratiolin with dilute sulphuric acid.

Grati'olin. $C_{40}H_{34}O_{14}$. A bitter resinous principle obtained from the *Gratiola officinalis* by Marchand. It crystallises in warty masses from alcohol, and in silky needles from water; it is insoluble in ether, slightly soluble in water, and easily soluble in alcohol.

Gratioloinic acid. $C_{28}H_{28}O_4$. A crystalline substance obtained from *Gratiola officinalis*. It forms satiny scales or leaves.

Gratiosolere'tin. $C_{34}H_{26}O_9$. Obtained along with glucose and hydrogratiosolere'tin by boiling gratiosolin with dilute acids.

Gratiosole'tin. $C_{47}H_{34}O_{17}$. A yellowish very bitter substance obtained, along with glucose, by acting on gratiosolin with dilute acids or alkalis; it is soluble in water and precipitated by tannic acid.

Gratiosolin. $C_{46}H_{42}O_{25}$. A glucoside contained in *Gratiola officinalis*, according to Waltz. It is an amorphous, slightly reddish substance, slightly soluble in water, and resolved into gratiosole'tin and glucose by diluted acids or alkalis.

Gratsch. A health resort near Meran, in the Southern Tyrol. It is 324 metres above the sea-level. See *Meran*.

Graus, Les. See *Olette*.

Grauwackë. See *Graywacke*.

Gravalos. See *Grabalos*.

Gra'vative. (*L. gravis*, heavy. F. *gravatif*.) Having weight; weighty. Applied to the feeling of pain accompanied by a sense of weight.

Grave. (Sax. *grafan*, to dig.) A place wherein to bury a dead body.

Also (*F. grave*; from *L. gravis*, heavy), sad; solemn; of a serious nature.

G. plant. The *Datura sanguinea*.

G. wax. An old term for *Adipocere*.

Grave'do. (*L. gravis*, heavy.) A term for coryza, because of the sense of heaviness in the head by which it is accompanied.

G. neonato'rum. (*L. neonatus*, new-born.) The disorder of new-born children; also called *Snuffles*.

Gravel. (Old F. *gravele*; dim. of Old F. *grave*, rough sand mixed with stones; probably of Celtic origin. F. *gravelle*; I. *renella*; S. *arenillas*; G. *Gries*.) Small pebbles or fragments of stones.

In Surgery (*G. Harngries*), a term applied to the aggregations of urinary crystals which can be recognised as masses by the naked eye; to the smaller masses and to unaggregated crystals the term sand is applied.

The term is also popularly used to indicate pain or difficulty in passing urine with or without any deposit.

G., bili'ary. (*L. bilis*, bile.) A term for gall-stone colic.

G., fit of the. A term applied to the pain and other symptoms accompanying the passage of sand or small calculi from the urinary organs.

G. grass. The *Galium verum*.

G., hair'y. A species of gravel containing hairs, phosphate of lime, ammoniaco-magnesium phosphate, and a little uric acid.

G., pile'ous. (*L. pileus*, a felt cap.) Same as *G., hairy*.

G. plant. The *Epigæa repens*.

G., red. Crystals of uric acid in the urine.

G. root. The *Eupatorium purpureum*.

GRAVEOLENCE—GRAVIDO-CARDIAC.

G., white. Phosphatic sandy deposits in the urine.

Graveolence. (*L. gravis*, heavy; *oleo*, to smell.) A strong foetid or offensive smell.

Graveolent. (*L. gravis*, heavy; *olens*, smelling. *F. graveolent*; *G. starkriechend*.) Having a heavy, or strong, or foetid smell.

Graveolentia. (*L. gravis*, heavy; *oleo*, to smell or stink. *F. graveolence*.) Old term for a stinking odour, which, occurring in the affection ileus, according to Lindenus, *Ex. iv.*, § 86, is a sign of death.

Graves, Robert James. An Irish physician, born in 1797, and died in Dublin in 1853.

G's disease'. The diseased condition also called Basedow's disease and exophthalmic goitre. It is characterised by enlargement of the thyroid, protrusion of the eyeballs, and persistent palpitation. Although protrusion of the eyeballs had been observed by many authors, the connection of the three morbid conditions was not noticed until Parry described it, in 1825, in no doubtful terms; but it was reserved for Graves, in 1835, to recognise the individuality of the disease exophthalmic goitre, and to Basedow, in 1840, to confirm, by his independent observations, the existence of this morbid entity. It occurs chiefly in young women at the age of puberty, who, by their temperament or their surroundings, are predisposed to neurotic disturbances, hysterical or otherwise. There is often a more or less long period of disturbance of health, during which palpitations of the heart, pulsations of the cervical arteries, and fulness of the head, are troublesome, before there is exophthalmos and goitre. The eyes become prominent and glistening, little by little they protrude between the eyelids and prevent them closing; sometimes one is more affected than the other; but the sight is not materially disturbed, neither is there usually inflammation. The thyroid body enlarges simultaneously or a little afterwards, and slowly; the swelling is pulsatile, variable in bulk, soft, and elastic, with an arterio-venous murmur and thrill. The action of the heart is quick, forcible, and sometimes irregular, the chest-wall is caused to vibrate, and the præcordial impulse is very notable; sometimes the cardiac trouble is purely functional, at others there is dilatation and hypertrophy of the walls, with a systolic basal murmur, often doubtless æmemic, extending to the arteries, and heard in the veins; and not infrequently there is atheromatous degeneration of the aorta and other vessels. With these symptoms signs of disturbance of the nervous system present themselves, capriciousness, irritability, insomnia, and nervous excitability; in some cases the neurosis becomes an acute and fatal mania; in others there are tremors or convulsive movements, or even epileptic fits, and very occasionally paralytic symptoms or visceral hyperæsthesia, or neuralgia. In this connection disturbances of secretion have been noticed, such as unilateral sweating, albuminuria, and glycosuria, and flushings of parts of the body of like vaso-motor origin. The respiration is hurried in consequence of the cardiac disturbance, there are seldom bronchial troubles, but occasionally death from asphyxia may be caused by pressure of the thyroid on the trachea. There is generally interference with the digestive functions, a capricious appetite, flatulence, constipation, diarrhoea, or jaundice, and there may be splenic

fulness. There is usually chlorosis and amenorrhœa, sometimes leucorrhœa and enlargement of the breast gland. The nutrition of the skin is disturbed, vitiligo may be present, urticaria or erythema may result, and the hair often falls off.

Death may occur from some accidental disease tempted into action by the grave defect of nutrition; some recover entirely, but more continue very slowly to degenerate. The actual cause of the disease is not clear. The alterations of structure found after death are variable; those seen in the orbit and the thyroid body and the heart are the result, direct or indirect, of passive dilatation of the blood-vessels of the parts; the most important, perhaps, are the degenerative changes which have been observed in the course of the sympathetic nerve in the neck, which lend probability to the suggestion that the accelerator nerves of the heart may be stimulated, or the vaso-motor nerves paralysed.

G's pills. Acetate of lead a scruple and opium one grain are mixed with some excipient, and divided into twelve pills. Given in epidemic cholera, one every half hour, until the rice-water discharges begin to diminish, then less frequently.

Gravid. (*L. gravidus*, burdened, pregnant; from *gravo*, to charge with a load. *F. enceinte*, *grosse*; *G. schwanger*.) Pregnant; heavy, big, or great with child.

G. uterus. The uterus, or womb, in the impregnated state, or during gestation.

Gravidin. (*L. gravidus*.) Stark's term for an albuminous substance in the urine of pregnant women, which he supposed to be the formative agent of the pellicular substance called *Kystein*.

Gravidism. (*L. gravidus*.) The whole of the conditions affecting the body which are produced by pregnancy.

Graviditas. (*L. graviditas*; from *gravidus*. *G. Schwangerschaft*.) Pregnancy.

G. abdominalis. See *Pregnancy, abdominal*.

G. extra-uterina. See *Pregnancy, extra-uterine*.

G. extra-uterina in ovario. See *Pregnancy, ovarian*.

G. extra-uterina secunda'ria. A synonym of *Metæcyesis*.

G. interstitia'lis. (*L. intersto*, to stand between.) See *Pregnancy, utero-tubal*.

G. mola'ris. A synonym of *Mole*.

G. ovarica. See *Pregnancy, ovarian*.

G. spuria. (*L. spurius*, false.) See *Pregnancy, false*.

G. tubaria. See *Pregnancy, tubal*.

G. tubo-abdomina'lis. See *Pregnancy, tubo-abdominal*.

G. uteri substan'tiæ. (*L. uterus*, the womb; *substantia*, substance.) Same as *Pregnancy, utero-tubal*.

G. uteri'na. (*L. uterus*.) Normal pregnancy, the fœtus being situated in the cavity of the womb.

Gravidity. (*L. gravidus*. *F. gravidité*, *grossesse*; *G. Schwangerschaft*.) The condition of a woman who is pregnant; pregnancy.

Gravido-cardiac. (*L. gravidus*; *Gr. καρδιά*, the heart.) Relating to pregnancy and the heart.

G. troubles. Peter's term for the disturbances of the heart's functions caused by

GRAVIFIC—GREASE.

pregnancy, which may vary from a passing hypertrophy to a permanent valvular lesion.

Gravific. (L. *gravis*, heavy; *facio*, to make.) Producing weight.

G. fluid. Lesage's term for the hypothetical fluid which he believed to be the cause of the phenomena of gravity.

Gravigrada. (L. *gravis*, heavy; *gradum*, a step.) Owen's term for the class of animals which included the Megatherium.

Gravigradia. (L. *gravis*, heavy; *gradior*, to march. F. *gravigrade*.) Marching or walking with a heavy tread. Applied by de Blainville to an Order of the *Mammalia*, comprehending those that tread heavily, as the elephant.

Gra'ville-l'heure. France, Département de la Seine Inférieure. A salt water, containing some iodine.

Gravimeter. (L. *gravis*, heavy; Gr. μέτρον, a measure. F. *gravimètre*.) A measurer of weight. A synonym of the areometer of Nicholson.

Gravimetric. Relating to *Gravimetry*.

G. analysis. See *Analysis, gravimetric*.

G. analysis of air. A measured volume of air, freed from ammonia and watery vapour by passing through tubes containing pumice stone moistened with sulphuric acid, is drawn through a series of curved weighed tubes containing caustic potash, and the proportional amount of carbonic acid calculated from the increased weight of the tubes by reason of the absorption of carbonic acid.

Gravimetry. (L. *gravis*; Gr. μέτρον.) The measurement of weight.

Gravis. (L. *gravis*, heavy; Gr. βαρύς; from Sans. *guru*; from Aryan *garu*, heavy. F. *grave*; G. *schwer*.) Heavy, painful, burdensome; great.

Gravitas. (L. *gravitas*, weight.) Same as *Gravity*.

Gravitation. (L. *gravitas*, weight. F. *gravitation*; I. *gravitazione*; S. *gravitation*; G. *Schwerkraft*.) The force with which every particle of matter attracts every other particle.

G. battery. A galvanic battery in which the different liquids are kept separate by a difference in their density, so that the use of a porous cylinder is avoided.

G., gen'eral. Same as *G., universal*.

G., laws of. That the force is inversely as the square of the distance; and that it is directly proportional to the amount of the mass.

G., terres'trial. (L. *terrestris*, belonging to the earth.) The force which tends to cause any body to fall towards the earth.

G., univer'sal. (L. *universalis*, belonging to the whole.) The force with which every portion of matter in the universe attracts every other particle.

Gravity. (L. *gravitas*, weight. F. *gravité*; I. *gravità*; S. *gravedad*; G. *Schwere*.) The state of being heavy, or of serious import.

A term often used in the same sense as *Gravitation*.

G., cen'tre of. See *Centre of gravity*.

G., force of. Same as *Gravitation*.

G., line of. The resultant of the lines of force of each individual molecule of a mass subjected to the action of gravitation.

G., specif'ic. (L. *specificus*, forming a particular kind. F. *pesantieur spécifique*; I. *pezo específico*; S. *pesadez específica*; G. *spezifische Schwere*.) The weight of a given volume

of a substance as compared with or related to the weight of an equal volume of some other substance which is taken as a standard of unity. The standard usually adopted for solids and liquids is pure distilled water at a temperature of 15.5° C. (59.9° F.), which is taken as unity; for gases atmospheric air is taken as unity.

G., specif'ic, of gas'es. See *Specific gravity of gases*.

Gray. (Sax. *græg*. F. *gris*; I. *grigio*; S. *gris*; G. *Grau*.) The colour of white mixed with black; ash-coloured.

G. bark. See *Bark, grey*.

G. cincho'na. See *Bark, grey*, and *Cinchona grisea*.

G. com'missure. The *Commissura cerebri mollis*.

G. goat's-beard. The *Clavaria coraloides*.

G. ipecacuan'ha. See *Ipecacuanha, grey*.

G. leech. The *Sanguisuga medicinalis*.

G. lo'tion. Same as *Black wash*.

G. matter of brain. See *Nervous tissue, gray*.

G. mil'let. The *Lithospermum officinale*. See *Graymill*.

G. myle. The *Lithospermum officinale*. See *Graymill*.

G. nick'ar-tree. The *Guilandina bonducella*.

G. oint'ment. The *Unguentum cinereum*.

G. oxide of antimony. The *Antimonii oxidum*.

G. plum. The fruit of *Perinacium excelsum*.

G. powder. The *Hydrargyrum cum creta*.

Grayling. The *Thymallus vulgaris*, Nilss. An excellent fish for the table.

Graymill. (A derivative of F. *grémil*, the name of a plant, and suggested, according to Skeat, by the other name *Milium solis*.) The *Lithospermum officinale*.

Grayness. The condition of being *Gray*.

G. of hair. The condition in which pigment ceases to be formed in the bulb of the hair, so that it grows without, or with little, colour.

Graywacké. (G. *grau*, grey; *Wacke*, a kind of rock.) A term originally used in Germany to designate the coarse grey slaty strata of the Transition rocks; now restricted to the hard, gritty, metamorphic sandstones of the Silurian, Cambrian, and Hypozoic strata which consist of grains or fragments of various minerals embedded in a hardened siliceous or argillaceous basis.

Grazing. (Etymon uncertain.) Rubbing or touching slightly.

G. fric'tion-sound. A term applied by Walsh to the most delicate form of pleural friction-sound. It is usually a single sound, audible over a small surface only, and chiefly confined to the dry period of pleurisy.

Grease. (F. *graisse*; from *gras*, fat, corpulent; from L. *crassus*, thick, fat. I. *grasso*; S. *grasa*; G. *Fett*.) Fat, especially the soft fat of animals.

In Veterinary Medicine (F. *caux aux jambes*; I. *garpe, riccinoli*; G. *Mauke, Wasserfluss an den Beinen*), a name given to two distinct diseases.

One, a non-specific inflammation of the skin of the heels and lower part of the legs of the horse; the tissues become engorged and discharge a sanious fluid, which may be aerid, fetid, and

GREAT—GREGARINA.

purulent. It is caused by moisture, working much in muddy roads and places, and an unhygienic stable, with want of cleanliness.

The other is a pustular affection, specific, in-
 oculable, and similar to vaccinia. See *Variola equina*.

Also, a term applied to the mucous fermentation of grape juice.

G. pox. The specific form of *Groase*.

G., pustular. See *Variola equina*.

G. tank. A special provision for the disposal of the waste water from the kitchen and scullery sinks, which is intended to prevent the inconvenience arising from its adherence to the sides of the channel and its consequent obstruction.

Great. (Mid. E. *gret, grete*; Sax. *gredit*; G. *gross*; perhaps related to L. *grandis*, great. F. *grand*; I. *grande*; S. *gran.*) Large.

G. adductor of thigh. The *Adductor magnus*.

G. anterior straight muscle of head. The *Rectus capitis anticus major*.

G. aorta. The *Aorta*.

G. complex muscle. The *Complexus*.

G. dorsal muscle. The *Latissimus dorsi*.

G. hyo-glossus. The *Hyo-glossus*.

G. oblique muscle of abdomen. The *Obliquus externus*.

G. oblique muscle of head. The *Obliquus capitis inferior*.

G. posterior artery of thigh. The *Profunda femoris* in Solipeds and other animals.

G. pox. An old name for *Syphilis*.

G. psosas muscle. The *Psoas magnus*.

G. serrate muscle. The *Serratus magnus*.

G. straight muscle of abdomen. The *Rectus abdominis*.

G. supermaxillo-nasal's. The *Supermaxillo-nasalis magnus*.

G. sympathetic. See *Sympathetic nerve, ganglionic cord of*.

G. testicular artery. (L. *testis*, the testicle.) The *Spermatic artery* of Solipeds and other animals.

G. trochanter. See *Trochanter, great*.

Greeds. (Sax. *grad.*) The *Polamogeton natans*.

Greek. Belonging to Greece.

G. valerian. The *Polemonium caruleum*.

Green. (Sax. *grène*; from Aryan root *ghra*, to be green. F. *vert*; I. *verde*; S. *verde*; G. *grün*.) The colour so called, as of growing plants. In the solar spectrum it comes between the blue and the yellow.

G. blind'ness. See *Green-blindness*.

G., Brighton. A mixture of impure acetate of copper and chalk.

G. broom. The *Genista tinctoria*.

G., Brunswick. See *Brunswick green*.

G. copperas. Sulphate of iron.

G. drops. A coloured solution of corrosive sublimate.

G., emerald. See *Emerald green*.

G., French. Same as *G., emerald*.

G. galls. The lighter shades of *Galls*, black, which possess a green tint.

G. glass. Same as *Glass, bottle*.

G. hel'lebores. The *Veratrum viride*.

G. hel'lebores root. See *Veratri viridis radix*, B. Ph.

G. hel'lebores, tincture of. See *Tinctura veratri viridis*.

G. iodide of mercury. The *Hydrargyri iodidum viride*.

G. la'ver. The *Uva latissima*.

G. leech. The *Sanguisuga officinalis*.

G., milk. A popular name for the *Colostrum*, from its colour.

G., mineral. Same as *G., mountain*.

G. mixture. The *Mistura ferri composita*.

G., moun'tain. Native green carbonate of copper, sometimes mixed with orpiment.

G., Neuwied'er. Same as *G., mountain*, or as *G., Schweinfurt*.

G., Paris. Same as *G., emerald*.

G. salt, Mag'nus's. See *Magnus's green salt*.

G. sauce. The *Rumex acetosa* and the *R. scutatus*.

G., Scheele's. The arsenite of copper.

G., Schweinfurt. The aceto-arsenite of copper.

G. sick'ness. A popular name for *Chlorosis*, from the colour of the face.

G. sloke. The *Uva latissima*.

G. soap. See *Sapo viridis*.

G.-stick frac'ture. See *Fracture, greenstick*.

G. tea. See *Tea, green*.

G. verditer. See *Verditer, green*.

G., Vien'na. Same as *G., Schweinfurt*.

G. vision. A condition observed occasionally after the administration of *santonin*. In one instance blue was mistaken for green.

G. vitriol. Sulphate of iron, or *Ferrous sulphate*.

G. vom'it. See *Vomit, green*.

G. waters. A popular name for the *Lochia* in the later stage, when the secretion becomes thin and of a dirty greenish colour.

G. wattle tree. The *Acacia decurrens*.

G. weed. The *Genista tinctoria*.

G., winter. See *Winter-green*.

Green-blind'ness. Paralysis of those nerve elements of the retina which, according to the Young-Helmholtz theory, are sensitive to green light rays.

Greenheart. The *Nectandra rodiei*.

G. bark. The *Nectandra cortex*.

Greenheart tree. The *Nectandra rodiei*.

Green'sand. The lower portion of the chalk system in the South of England. It is of differing appearance, varying from a close sand to a coarse nodular grit; and although usually green, a colour which is caused by an iron silicate, it is sometimes yellowish. It is usually divided into three layers, the upper and lower greensand, with the gault between them.

Green'stone. The hard granular-crystalline varieties of trap, consisting chiefly of felspar united with hornblende, augite, or hypersthene.

Green'weed. The *Genista tinctoria*.

G., dy'ers'. The *Genista tinctoria*.

Green'withe. The *Vanilla claviculata*.

Gregarina. (L. *gregarius*, in a herd.) A Genus of the Family *Gregarinida*.

G. falciformis. (L. *falciformis*, sickle-shaped.) The early stage of the round or oval *Gregarina* of Vertebrata. It is of semilunar form, is 0.009—0.016 mm. in length, and is sometimes quite clear and transparent, and at others

GREGARINÆ—GRESSURA.

granular for two thirds of its length. It frequently bends till the two poles almost touch, and then again becomes straight. It soon passes into the globular or oval form. See *Psorosperms*.

G. fus'ca, Bälz. Same as *G. pulmonalis*.

G. gigan'tea. (*L. giganteus*, belonging to the giants.) Lives in the intestine of the lobster.

G. ova'ta. (*L. ovatus*, egg-shaped.) Inhabits the intestine of the earwig, *Forficula auricularis*.

G. pulmo'nalis, Bälz. (*L. pulmo*, the lung.) A parasitic animal found by Bälz in the lungs of persons suffering from *Gregarinosis pulmonum*. It occurs in two forms: large, egg-shaped, psorosperm cysts, .13 mm. long and .07 mm. broad; and small, colourless, yellowish psorosperms, .01—'.04 mm. in diameter.

Gregarinæ. Same as *Gregarinidæ*.

Gregarinidæ. (*L. gregarius*, belonging to a flock.) A Class of the Subkingdom *Protozoa*, being one- or two-celled organisms having a nucleus, often a nucleolus, but never a contractile vesicle, or pseudopodia. They are vermiform or ovoid, with an outer limiting membrane, the cuticle or epicyte; occasionally within this a striated layer, which van Beneden believes to be muscular; and a protoplasmic zone or sarcocyte, which encloses the granular, viscid body of the organism, the entocyte; within this is the round or oval, clear nucleus, often possessing a nucleolus. Occasionally the body is divided by one or two partitions, so as to form a sort of head, which may bear hooklets or processes of attachment. They have no mouth and no digestive tube, but obtain their nutriment by osmosis. They possess the faculty of movement by gliding without any apparent contraction. Their act of reproduction is a sort of conjugation. Two Gregarinæ lie side by side, become contracted and surrounded by a cyst, are subjected to segmentation, by which are formed many small vesicles, which are transformed into reproductive corpuscles, called pseudonavicellæ by Frantzius, psorospermia by Lieberkühn, and spores by Schneider. Sometimes one Gregarina undergoes this change alone. On the rupture of the cyst the pseudonavicellæ escape, and give rise, according to Lieberkühn, to an amœboid body, from which two elongated filaments arise, the pseudofilaria, and which each become a Gregarina; or, according to Schneider, may develop into small falciform bodies, which, without passing through an amœboid stage, assume the parent form. The Gregarinidæ are parasitic on the internal organs, chiefly of the Invertebrata. Their exact nature is still unsettled, the falciform bodies being by some thought to be of a fungoid nature. The name was given by Léon Dufour, in reference to their occurrence in attachment to each other.

Gregarinosis. A disease produced by *Gregarinidæ*.

G. pulmo'num. (*L. pulmo*, the lung.) Bälz's term for a disease occurring in Japan, and characterised by chronic cough and dirty-red, bloody sputa, containing large numbers of *Gregarina pulmonalis*. It may be intermittent or constant; it may last for years, but it ultimately passes off, and during its course the patient has no other signs of illness.

Gregarinosis. Afflicted with, or possessing, Gregarinæ.

Gregarious. (*L. grex*, a flock. *G.*

gesellig, *hausenweise*.) Living or growing together, or in flocks or colonies.

Greg'ory, James. A Scottish physician, born in Aberdeen in 1758, died in Edinburgh in 1822. He was the author of the *Conspectus medicinæ theoreticæ*, and was Professor of Medicine in the University of Edinburgh from 1790 to 1821.

G.'s mix'ture. Same as *G.'s powder*.

G.'s pow'der. The powder now known as *Pulvis rhei composita*.

Greg'ory's salt. The crude hydrochlorate of morphia containing codeia, prepared by Gregory's process.

Greif'enberg. Bavaria. An alkaline, earthy, iron spring, containing small quantities only of the mineral constituents, amongst which is lithium carbonate. Used in all cases in which an increase of the secretions of the skin and kidneys and an improvement in the quality of the blood are indicated. It is situated nearly 2000 feet above sea-level, in a pleasant neighbourhood.

Greifs'wald. Prussia, in Pomerania. Strong salt springs, containing calcium chloride 1231 grains, magnesium chloride 713, sodium chloride 311, potassium chloride 55, magnesium bromide 12.36 grains, with a minute quantity of magnesium iodide, in 16 ounces.

Grem'ium. (*L. gremium*, the lap.) The vulva.

Grena'dia. Same as *Grenadine*.

Gren'adine. A name given by Latour de Frie to the mannite found in the bark of the root of the pomegranate, *Punica granatum*.

Gren'et's battery. A galvanic battery consisting of nine zinc plates and six carbon plates, three of the former being connected with two of the latter, dipped in a liquid consisting of 100 grammes of potassium bichromate dissolved in a litre of dilute sulphuric acid, 1 to 5.

Gren'etine. (From *Grenet*, of Rouen, its inventor.) A pure transparent gelatin obtained from the skin and cartilage of young animals.

Grenz'ach. Germany, in Baden, near Lörrach on the Rhine. A weak, alkaline saline mineral water.

Gré'oulx. France, Département des Basses-Alpes. Sulphur waters, containing iodine and bromine, of a temp. of 36° C. (96.8° F.) Used in chronic rheumatic and gouty affections, anæmia, chlorosis, and leucorrhœa.

Grésille'ment. (*F. grésil*, sleet.) A term applied to a bruit analogous to that which is caused by the fall of sleet.

Gressores. (*L. gressus*, a stepping. *G. Schreitvogel*.) Reichenow's term for an Order of *Aves*, including the Ibises, Storks, Flamingoes, and Herons.

Grosso'ria. (*L. gressus*.) A Suborder or a Group of the Order *Orthoptera*, having a long narrow body and exerted head, slender legs with ambulatory feet, and the posterior femora not enlarged. Such are the Mahtis and Phasma.

Grosso'rial. (*L. gressus*.) Applied to those birds in which three toes are directed forwards, two of them being united, and one backwards.

Gressu'ra. (*L. gressus*, part. of *gradior*, to proceed.) Old term, used by Hippocrates, Galen, and Foësius, for the perineum, or the space between the pudenda and anus.

GRESSUS—GRIPHOSIS.

Gres'sus. (L. *gradior*, to step.) The act of walking.

Grewia. (Grew, a botanist.) A Genus of the Nat. Order *Tiliaceæ*.

G. asiatica, Linn. An astringent.

G. columnaris, Sw. An astringent.

G. flava, De Cand. (L. *flavus*, yellow.) Hab. South Africa. Berries used to make an intoxicating liquor.

G. megalocarpos. (Μέγας, great; καρπός, fruit.) Hab. India. Plant said to be poisonous. Berries used as those of *G. flava*.

G. microcos, Linn. Hab. India. Juice astringent. Used in dysentery, and as a gargle in sore-throat.

G. oppositifolia, Buch. (L. *oppositus*, placed over against; *folium*, a leaf.) Hab. North India. Berries used to make sherbet.

G. orientalis, Linn. Hab. East Indies. An astringent. Berries used as *G. flava*, and in Malabar in the treatment of gout.

G. salvifolia, Linn. (L. *salvia*, sage; *folium*, a leaf.) The *Alangium decapetalum*.

Grey. (Sax. *græg*.) A kind of ash colour. Same as *Gray*.

G. lotion. A name for the *Black wash*.

Greywackë. See *Graywacke*.

Grias. A Genus of the Nat. Order *Onagraceæ*.

G. cauliflora, Linn. (L. *caulis*, a stem; *flos*, a flower.) Hab. West Indies. The anchovy pear. The fruit is pleasant to eat.

Grief. (Old F. *gref*, heavy, sad; from L. *gravis*, grave, sad. F. *douleur*; G. *Schmerz*.) Sorrow for something which is past. The feeling experienced by the mind by the loss or removal of the object of any of the faculties, the attainment of which had afforded gratification.

Grielum. Old name for parsley, *Carum petroselinum*.

Also, the *Smyrniun olusatrum*.

Gries. Austria, in the Tyrol, near Botzen. A climatic cure place for consumption, both in winter and summer.

Griesbach. Germany, in Baden. A mineral water place, 1600 feet above sea-level, containing a small quantity of calcium carbonate, a little silica and iron, and much free carbonic acid. There are two springs: one for drinking, with a temp. of 11.2° C. (52.16° F.); the other for bathing, with a temp. of 26° C. (78.8° F.) Used in anæmia, chlorosis, and atonic diseases of the female genital organs.

Griesbad. Bavaria. An earthy chalybeate water.

Griff. Same as *Griffo*.

Griffith, Moses. An English physician, born in 1720. He studied at Leyden, practised for some years in London, and died at Colchester.

G's mixture. The *Mistura ferri composita*, B. Ph.

G's pills. The *Pilule ferri compositæ*, U.S. Ph.

Griffo. The produce of a negro and a mulatto, containing one fourth white blood, and three fourths black.

Griffon. Same as *Griffo*.

Grigg. The *Calluna vulgaris*.

Grind. (Sax. *grindan*; from Sans. root *ghar*, to grind.) To rub into powder.

Grindbrunnen. Germany, near Frankfurt. A cold sulphur spring.

Grindelia. (After von Grindel, of Dorpat.) A Genus of the Nat. Order *Compositæ*.

Also, U.S. Ph., the leaves and flowering tops of *Grindelia robusta*. They have a warm, peculiar, and persistent taste, and contain a terebinthinate oil, a resin, and a crystalline substance with an alkaline reaction. Used in asthma, bronchitis with spasm, whooping-cough, and chronic cystitis; locally in burns and vaginitis.

G., fluid extract of. See *Extractum grindeliæ fluidum*.

G. glutinosa, Dunal. (L. *glutinosus*, gluey.) Used as *G. robusta*.

G. hirsutula, Hooker and Arnott. (L. dim. of *hirsutus*, hairy.) Hab. California. Used by Canfield as an antidote to the poisonous effects of the *Rhus diversiloba* by applying the bruised plant, or a decoction, to the affected part.

G. robusta, Nuttall. (L. *robustus*, strong.) Hab. the western side of North and South America. Supplies *Grindelia*, U.S. Ph.

G. squarrosa, Dunal. (L. *squarrosus*, scurfy.) Very similar to, and perhaps only a variety of, *G. robusta*, with which it is often mixed.

Grinder. (*Grind*.) One who, or that which, grinds.

Applied to the molar teeth, from their office.

G.'s asthma. A chronic form of lung disease resulting from the inhalation of metallic and siliceous dust, and therefore occurring in fork and needle, scissors and razor, grinders, and glasscutters. It commences with a dry and hacking cough, accompanied by scanty whitish expectoration; nausea and vomiting occur occasionally in the morning. On auscultation, puerile respiration is heard, with slight râles. After a time, the sputa become more abundant and reddish, and hæmoptysis may occur. The tissue of the lung then begins to break down, cavities form near the apices, and febrile symptoms supervene, with evening exacerbations, night sweats, emaciation, insomnia, dyspnoea, and death, which usually occurs at or about the age of thirty. The lungs are found to be studded with black knots, varying in size from a pin's head to a pea. See also *Pneumoconiosis*.

G.'s disease. Same as *G.'s asthma*.

G.'s rot. Same as *G.'s asthma*.

Grinding. (*Grind*.) The act or process of rubbing down into a powder.

G. of teeth. The rubbing of the teeth together so as to make a noise; an accompaniment of some diseased conditions, as the coma of typhus and the presence of intestinal worms.

G. pains. The pains of the first stage of labour.

Grip. (A late form of *gripe*, from F. *gripper*.) To seize; to hold fast.

G. grass. The *Galium aparine*, from its clinging to or gripping things that touch it.

Gripe. (Sax. *gripan*, to seize; from Aryan root *garbh*, to seize.) To hold fast.

G., cutting on the. A term for the mode of performing lithotomy called *Apparatus minor*, in reference to the seizing and holding fast of the stone by means of the finger in the rectum.

Griphomenos. (Γρίφος, a net; because it extends over the body like a net.) Old term (Gr. γριφόμενος), applied by Hippocrates, i. *Proorrh.* iii, 8, to pain that implicates the præcordia, or parts adjacent.

Griphosis. See *Gryposis*.

GRIPINGS—GROOVE.

Gripings. (*Gripe*.) Pains in the bowels.
Gristle. (Sax. *gristle*; dim. of *grist*; from the root of *grind*; in reference to grinding with the teeth required for eating it.) A name for cartilage.

Grit. (Mid. E. *greet*, *greot*; Sax. *greót*; G. *Gries*.) Gravel; coarse sand.

In Geology, a hard sandstone with the grains of quartz sharp-edged.

Grits. (E. *grit*, coarse sand; from Sax. *greót*, dust.) Same as *Groats*.

In America, fine hominy is called grits, and wheat prepared in the same way is likewise so designated. (Dunglison.)

Gritti, Rocco. A Milanese surgeon of the present time.

G's amputation. A transcondyloid amputation at the knee. A rectangular flap is taken from the front and a shorter flap from the back, the lower surface of the patella is removed, and the femur sawn through at the base of the condyles.

Gritty. (Sax. *greót*, the dust of stones.) Gravelly; sandy.

Grm. A contraction of *Gramme*.

Gn. A contraction of *Grain*.

Groan. (Sax. *gránian*, to lament.) To moan; a moan, or inarticulate noise, indicating pain or distress.

Groats. (Mid. E. *grotes*; cognate with Sax. *grút*, coarse meal. G. *Grütze*.) The seeds of the oat plant freed from their husks.

G., Cracow. (*Cracow*, in Poland.) A synonym of *Semolina*, from the place of its manufacture.

G., Emb'den. Ordinary groats crushed.

Grocer. (Formerly *grosser*; from Old F. *grossier*, one who sells in the bulk; from L. *grossus*, thick.) A term formerly meaning a wholesale dealer, now restricted to one who deals in tea, coffee, sugar, spices, and such like.

G's itch. A form of eczema, or of lichen agrius, on the fingers and hands, produced by the irritation of sugar in the handling of it.

Grodek. Austria, in Galicia. A cold sulphur spring.

Grog. (A dim. of *rogram*, a stuff made from silk and mohair; from F. *gros*, great; *grain*, grain, in reference to its coarse texture.) A mixture of spirit and water for drinking, which was first served out to sailors by Admiral Edward Vernon, who, because he wore *rogram* breeches, was called *Old Grog*.

G. blossoms. A popular term for *Aene rosacea* in a confirmed form.

Groin. (Of Scand. origin, from an unknown root. F. *aïne*; I. *anguinaja*; S. *ingle*; G. *Schambag*.) The place of junction of the abdomen and the anterior part of the leg.

Gromell. The *Lithospermum officinale*.

Gromwell. (The letter *w* is a modern addition, the Mid. E. word being *gromel* or *grumel*, which, according to Skeat, is derived from Old F. *grumel*, a dim. of *grume*, all kinds of grain.) The *Lithospermum officinale*.

G., corn. The *Lithospermum arvense*.

Gromyl. The *Lithospermum officinale*.

Gronoviusæ. Endlicher's term for *Loasaceæ*.

Groove. (Dut. *groef*, a channel. F. *canneure*, *rainure*, *gouttière*; I. *scanalatura*; G. *Rinne*, *Furche*.) A furrow, a channel.

G., auriculo-ventricular. See *Heart*, *furrow of*, *auriculo-ventricular*.

G., bicipital. See *Bicipital groove*.

G., cavernous. The winding furrow on each side of the body of the sphenoid bone which lodges the cavernous sinus and the internal carotid artery.

G., corneal. The place of junction of the cornea and the sclerotic.

G., dental. See *Dental groove*.

G. for Eustachian tube. A furrow formed by the margin of the lateral part of the posterior border of the great wing of the sphenoid bone, and that part of the petrous bone which lodges the cartilaginous part of the Eustachian tube.

G., infra-orbital. (L. *infra*, beneath; *orbita*, the orbit. F. *gouttière sous-orbitaire*; G. *Unteraugenhöhlenfurche*.) A furrow on the posterior part of the orbital surface of the superior maxillary bone, which soon becomes the infra-orbital canal.

G., interventricular. See *Heart*, *furrow of*, *interventricular*.

G., lacrimal. (L. *lacrima*, a tear. F. *gouttière du canal nasal*; G. *Thränenfurche*.) A vertical furrow with a slight inclination backwards and outwards, .5" long, on the nasal surface of the superior maxillary bone, between the nasal process and the antrum, which lodges the nasal duct; the groove is formed into a canal by the lacrimal and inferior turbinate bones.

G., mylo-hyoid. (Μύλον, a millstone; *hyoid*. F. *sillon mylo-hyoïdien*.) A groove, occasionally becoming a canal, extending downwards from the internal margin of the dental foramen on the internal surface of the ramus of the inferior maxillary bone, and giving lodgment to the mylo-hyoid nerve with its artery and vein.

G., nasal. (L. *nasalis*, belonging to the nose.) A longitudinal furrow, sometimes becoming a canal, on the inner surface of the nasal bone, which is occupied by a branch of the nasal nerve.

G., occipital. (L. *occiput*, the back of the head. F. *sillon de l'artère occipitale*.) A furrow on the inner side of the mastoid process of the temporal bone, internal to the digastric furrow, and lodging the occipital artery.

G., olfactory. (L. *olfacio*, to smell.) The depression of the cribriform plate of the ethmoid bone on each side of the crista galli for the olfactory bulb.

G., optic. (Ὀπτικός, belonging to the sight.) A narrow, transverse furrow on the hinder part of the upper surface of the body of the sphenoid bone, which terminates in the optic foramen and lodges the optic commissure.

G., primitive. See *Primitive groove*.

G., spiral, of humerus. A broad furrow, with a direction downwards and forwards, on the outer surface of the shaft of the humerus, extending from the deltoid impression to the external supracondylar ridge, and lodging the musculo-spiral nerve and the superior profunda artery and vein.

G., sternal. The *Furrow, sternal*.

G., subclavian. (L. *sub*, under; *clavicle*.) The shallow grooves on each side of the ridge of attachment of the scalenus medius; the anterior depression lodges the subclavian vein and the posterior one the subclavian artery.

G., subcostal. (L. *sub*, under; *costa*, a rib.) The furrow on the inner aspect of the inferior border of a rib for the intercostal vessels and nerve.

G., vertebral. (L. *vertebra*, a spine-bone.) The depression on the posterior surface of a vertebra on each side of the spinal process; the grooves of the cervical and dorsal vertebrae are bounded externally by the transverse processes, those of the lumbar vertebrae by the mammillary processes.

Grooved. (*Groove*.) Furrowed; channelled.

Gros. A French weight equal to 59.070 grains troy.

Gross, Samuel D. An American surgeon, born at Easton, Pennsylvania, in 1803, died in Philadelphia in 1884.

G's na'sal spud. An instrument with a scoop or spud at one end and a fine corkscrew or a hooked needle at the other, for the removal of foreign bodies from the nose.

Gross-Albertshofen. Bavaria, near Sulzbach. Mineral waters containing magnesium sulphate.

Grossa'les. An Alliance of epigynous Exogens, according to Lindley, having dichlamydeous polypetalous flowers, numerous minute seeds, and a small embryo lying in a large quantity of albumen.

Grossification. (L. *grossus*, thick; *fit*, to become.) Enlargement; the act or state of being, or becoming, gross or thick.

In Botany, the swelling of the ovary after impregnation of the ovules.

Grosskarben. Germany. A cold mineral water, containing sodium chloride, calcium carbonate, and free carbonic acid.

Gross-Schlagendorf. Hungary. A cold mineral spring, containing sodium chloride and sodium and calcium carbonate.

Grossula'ceæ. Mirbel's term for *Grossulariaceæ*.

Grossular. (*Grossularia*.) Like to a gooseberry in shape, or to a green gooseberry in colour.

Grossularia. (Perhaps from L. *grossulus*, a small unripe fig.) The gooseberry; and also the gooseberry tree, *Ribes grossularia*.

G. ni'gra. (L. *niger*, black.) The black currant, *Ribes niger*.

G. non-spinosa. (L. *non*, not; *spinosa*, thorny.) The *Ribes niger*.

G. ru'bra. The *Ribes ruber*.

G. vulga'ris. Rich. (L. *vulgaris*, common.) The *Ribes grossularia*.

Grossulariaceæ. (G. *Stachelbeerge-wächse*.) The currant words. A Nat. Order of epigynous calycifloral Exogens of the Alliance *Grossales*, having the fruit a pulpy berry, and parietal placentae.

Grossularie'æ. Same as *Grossulariaceæ* or as *Ribesiaceæ*.

Grossularin. (*Grossularia*.) A synonym of *Pectin*.

Grossus. (L. *grossus*, thick.) An unripe fig.

Grosswar'dein. Hungary. A sulphur spring, having a temperature varying from 38°–46° C. (100.4°–114.8° F.)

Gross-Wunitz. Bohemia. Mineral waters containing sodium and magnesium sulphates.

Grote's test. A test for Peruvian balsam; three drops of which are shaken with 2 c.c. of official ammonia water; if colophony be present it solidifies. Benzoin and storax cannot thus be detected.

Grotto dei Ser'pi. (L. *serpe*, a serpent.) A grotto near Braccano, in Italy; it is filled with warm vapour, and is resorted to by those affected with cutaneous diseases.

Ground. (*Grind*.) Reduced to powder, or to a meal.

Ground. (Sax. *grund*.) The surface of the earth.

G. air. (G. *Bodenluft*.) The air contained in the soil. This contains a large proportion of carbonic acid gas, due to the disintegration of organic substances. It is probably the chief supply of the carbonic acid gas of the atmosphere, for it has been found that the proportion of this gas in the air two centimeters above the soil level always contains three times as much as is contained in air examined at one meter above the soil level. So, also, the air blowing from a continent contains more CO₂ than that coming from the sea. The quantity of this gas may probably be taken as a measure of the unwholesomeness of the soil. In places where cholera is rife a considerable increase in the quantity of CO₂ is said to be observed during the rainy months.

G. ar'chel. The *Iecanora parella*.

G. cher'ry. The plants of the Genus *Physalis*.

G. flax'seed. See *Lini farina*.

G. furze. The *Ononis arvensis*.

G. hem'lock. An American variety of *Taxus baccata*.

G. holly. The *Gaultheria procumbens*.

G. ice. See *Ice, ground*.

G. ivy. (F. *lierre terrestre*; G. *Erde-pheu*.) The *Glechoma hederacea*, or gill. Also, the *Gaultheria procumbens*.

Formerly a term applied to the periwinkle, *Vinca minor*.

G. lamel'læ. See *Lamellæ, ground*.

G. lau'rel. The *Epigæa repens*.

G. line of the skull. A term applied to the distance from the anterior median point of the foramen magnum of the occipital bone to the root of the nose, or to the inferior extremity of the nasal spine of the frontal bone.

G. liv'erwort. The *Pellidæa canina*.

G. nut. The *Apios tuberosa*.

Also, the *Bunium* or *Carum bulbocastanum*, and the *Conopodium denudatum*.

G. nut oil. See *Oleum arachis*.

G. nuts. The *Arachis hypogæa*.

G. pea. The *Arachis hypogæa*.

G. pine. (F. *ivette*; G. *Erdeseihrauch*.) The *Ajuga chamæpitys*.

Also, applied to some of the species of *Lyco-podium*.

G. pine, French. The *Teucrium iwa*.

G. pine, stink'g. The *Camphorosma monspeliaca*.

G. plate. Klein's term for the basis of an endothelial or connective-tissue cell, in which lies the nucleus surrounded by a fibrillar network, often stretching to the margin of the ground plate.

G. plex'us of Ar'nold. (L. *plexus*, a weaving.) The plexus of cylinder axes on the bundles of non-striped muscular tissue derived from the sympathetic nerves.

G. sub'stance. The homogeneous matrix in which the structural elements of a tissue are embedded.

G. swell. The long heavy waves which, tending in-shore, and occurring without wind, are produced by a storm far away at sea.

GROUND-BERRY—GROWTH.

G. water. (*G. Bodenwasser.*) The water which, constantly moving towards a river or the sea, is always present at a higher or lower level below the surface of the ground. It is found to vary greatly with the nature of the soil, and to exercise a great influence on the forms and characters of the diseases prevalent in any district. Crystalline granular rocks like granite, slaty formations, and schists, allow water to flow off quickly, the air above them is commonly dry, and ague and malarial diseases are rare. Sometimes on weathering they give a reddish soil, which is unwholesome. Limestones and dolomite rocks resemble the former in the rapid discharge of water, but aguish affections are more common, and may exist at great elevations. The hard oolite is the best of the limestones, and the magnesian limestones the most unfavourable. Chalk, if not mixed with clay, is healthy; if mingled with marl it does not allow water to run off, and is often cold and moist. The deeper layers of chalk subjacent to the marly clay may receive the water that has percolated through the latter, and thus become a source of malaria. The permeable sandstones are, for the most part, wholesome; the soil and air are dry, but the drinking water is sometimes unwholesome. Quartz is always wholesome unless it lies deep and water rises through it. Quartz hills are the healthiest of all regions, and the water at their base is very pure. Sandy soils may be healthy or unhealthy. If in thick layers they are usually healthy; if mixed with vegetable debris, such, for example, as is observed in the south-western district of France, near the mouth of the Gironde, they are unwholesome. This kind of soil is impermeable to water, which consequently dissolves vegetable matter, becomes of a brownish-yellow colour, and acquires, even at a depth of six feet, a marshy odour. In other cases, sandy soils may become unwholesome in consequence of their containing an admixture of loam near the surface. Water coming from higher levels permeates these layers, and is there found at from three to four feet below the surface. Clay, dense marl, and alluvial soils are to be regarded with suspicion, since the water neither runs off nor percolates through them. Malarial affections are common. The constituents of the water vary, and it is often rendered impure by the presence of salts of lime and soda, and by that of organic substances. In such soils, thin layers of clay and lime often alternate, and there is a large admixture of vegetable matter, rendering both the air and water impure. Such soils are found over nearly a third part of India. Careful draining here becomes essential.

Malarious fever is increased both by a rise and by a fall in the ground water under certain circumstances. Enteric fever and dysentery are supposed to be influenced by the level of the ground water, and cholera also, according to Petenkofer, who is of opinion that epidemics of the latter disease are caused by the penetration of a soil, which has recently been made moist from a rise of the ground water, by the specific germ of a case of sporadic cholera.

Ground-berry. The *Gaultheria procumbens*.

Ground-heel. (*F. herbe aux ladres*; *G. Grundheil*; said to be from *Grind*, scab.) The *Veronica officinalis*, from its supposed beneficial influence over scabby eruptions.

Ground-sel. (*Sax. grundeswyllige*; from

grund, ground; *swelgan*, to swallow; from its great abundance. *F. senecion*; *G. Kreuzkraut*.) The *Senecio vulgaris*.

G., alpine. The *Senecio doronicum*.

G., common. The *Senecio vulgaris*.

Group. (*F. groupe*; from *I. groppo*, a knot; from *G. Kropf*, a crop, a maw.) A cluster; an assemblage.

In classifications of natural objects, a collection or assemblage of individuals or things having some resemblance or relationship to each other.

Grouse. (According to Skeat, a false form, evolved as a supposed singular from the older word *grice*; from Old *F. griesche*, gray.) The *Lagopus scoticus*. Much esteemed as food.

G. berry. The *Gaultheria procumbens*.

G. disease. An epizootic disease very destructive to the grouse, and caused by intestinal worms, *tæniæ* or strongyli, or both.

Grove, Sir William Robert, F.R.S. An English Judge of the Queen's Bench Division of the High Court of Justice, born at Swansea in 1811.

G's battery. A galvanic battery consisting of a glazed earthenware or ebonite vessel containing dilute sulphuric acid, 1 to 10, in which is immersed a cylinder of amalgamated zinc, within this is a porous cell of unglazed porcelain, containing nitric acid, in which is a plate of platinum foil forming the positive pole, the negative pole is attached to the zinc cylinder. There is no polarisation.

G's gas battery. A battery consisting of a cell containing two platinum electrodes, one in contact with oxygen, the other in contact with hydrogen gas.

Grow. (*Mid. E. growen*; *Sax. grōwan*.) To increase in size and bulk.

Growing. (*Grow.*) Increasing in size; proceeding to the adult condition.

G. cell. Same as *Growing-slide*.

G. pains. The neuralgic pains in the limbs which are not uncommon in young persons during the period of growth.

G. point. The extremity of the root, or other organ, of a plant where extension takes place; the *Punctum vegetationis*.

G. slide. See *Growing-slide*.

Growing-slide. A piece of apparatus for use on the stage of the microscope, whereby spores of *Algæ* or other objects may be kept moist, so that their growth may be observed continuously. Several forms have been made, one of the simplest being formed of a glass plate having a narrow slip of glass cemented on the lower margin, so as to form a ledge, and a little cup let into a hole near one end of it. An ordinary glass slide, on which the object to be watched is placed in an open cell or under a cover-glass, is laid upon the plate, the cup is filled with water or other fluid, and some cotton threads immersed in it and carried to the edge of the liquid in which the object is contained; as long as there is any fluid in the cup it will be conducted to the object and keep it moist.

Growth. (*Sax. grōwan*, to increase. *F. croissance*; *G. Vergrösserung*, *Zunahme*, *Zuwachs*.) The increase or augmentation of the body, or of its parts, without reference to number, structure, or function, and so distinct from, though nearly connected with, *Development*, which see.

Also, the increase of any morbid structure.

GRUB—GUACIN.

G.s., morbid. A term applied to tumours and excrescences.

G., vas'cular. (L. *vasculum*, a small vessel.) Same as *Nævus*.

Grub. (Mid. E. *grubben*, *grobben*, to grope in the dirt.) A common term for the larva of insects.

Also, the same as *Comedo*.

Grube'a. A Genus of sexually mature trematode worms.

G. coch'lear. Dising. (L. *cochlear*, a spoon.) Found in the branchiæ of the mackerel, *Scomber scombrus*.

Gruber, Ig'naz. An Austrian aural surgeon, born at Vienna in 1803, and died there in 1872.

G.'s ear-spec'ulum. A silver tube for the meatus, with a wide conical outer end for illuminating purposes.

Gru'dum. An old term for common barley, *Hordeum distichon*.

Gru'el. (Old F. *gruel*; from Low L. *grutellum*, dim. of *grutum*, meal; from Old Low G. *grut*, groats.) Oatmeal or groats boiled with water or milk so as to form a thickish fluid. It may be taken with cream, or butter, and sugar or salt, and it may be flavoured with ginger or cinnamon, or other spice; it may be made more nutritive by the addition of yolk of egg, and more reviving by the addition of wine or other alcoholic beverage.

G., oatmeal. A farinaceous food made by boiling common oatmeal in water for at least an hour and a half, and then straining through muslin. It may be taken with the addition of milk or cream and sugar, or better, with salt.

G., wa'ter. Same as *G., oatmeal*.

Gruff. (Dut. *grof*, coarse.) In Pharmacy, the coarse residue which will not pass through the sieve in pulverisation.

Gru'inal. (L. *gruina*, the geranium. F. *gruinale*.) Of, or belonging to, or resembling, the geranium.

Gruina'les. (L. *grus*, a crane. G. *Storchschnabelblüthige*.) Same as *Geraniales*.

Gru'ma. Old name for tartar. (Ruland.)

Grume. (Old F. *grume*, a knot; from L. *grumus*, a heap of earth.) A clot.

Gru'mel. The *Lithospermum officinale*. See *Gromwell*.

Gru'mose. Same as *Grumous*.

Grum'ous. (L. *grumus*, a little heap. F. *engrumé*; G. *krumig*, *geronnen*.) Thickened; clotted; curdled.

In Botany, bearing little clustered grains.

Also, applied to roots which consist of many tubercles or knots, as in *Ranunculus ficaria*.

Gru'mus. (L. *grumus*. F. *grumeau*; G. *Geronene*, *Klumpfehen*.) A clot of milk, or of blood; a curd.

Grund. Germany, in the Harz mountains. A climatic resort, 984 feet above sea-level, for cases of phthisis, according to Brockman, which are free from phlogistic irritation and from much congestion.

Grundhofer Sau'erbrunn. Germany, in Weimar. A chalybeate water.

Grü'nen. Switzerland, in Canton Bern. An earthy mineral water, containing calcium carbonate and free carbonic acid.

Grus. (L. *grus*, a crane.) A surgical instrument, or pair of forceps, like to a crane's bill.

Also, a Genus of the Order *Grallæ*, Class *Aves*.

G. ciner'ea, Bechst. (L. *cinereus*, ash-coloured.) The common crane. The eggs were formerly used in cancer and paralysis, and as a defence against poisonous animals; the powder of the head and eyes was employed in ulcers and fistulae.

Gru'tellum. A term for *Groats* and *Gruel*.

Gru'tum. Old term for coarse oatmeal. (Quincy.)

Formerly applied to a small, hard, white tubercle of the skin, like a millet seed, being a sebaceous gland distended with its retained secretion. Generally called *Milium*.

Gru'yère. Switzerland, Canton Fribourg. Noted for its cheeses.

G. cheese. A cheese made from goat's and cow's milk in Switzerland. According to Payen, it contains nitrogenous matter 31.5, fatty matter 24, saline substances 3, non-nitrogenous matter and loss 1.5, and water 40 parts, in 100.

Gryllus. (Γρύλλος, a pig, from its voice.) A Genus of the Suborder *Saltatoria*, Order *Orthoptera*.

G. verruciv'orus. (L. *verruca*, a wart; *voro*, to devour.) The wart-eating grasshopper, having green wings spotted with brown. It is used to destroy warts by the common people of Sweden, which it is said to do by biting off the excrescence and discharging a corrosive liquor into the wound. It is the *Deicticus verrucivorus*.

Gryphus pes. (L. *gryps*, a griffin; *pes*, a foot. G. *Greifenfuss*.) The Griffin's foot. An old name, used by Paré, *Chir.* xxii, 35, for an instrument for extracting moles from the uterus.

Grypho'sis. See *Gryposis*.

Gryphus. Old name for the philosopher's stone. (Castellus.)

Also, the same as *Gryphius pes*.

Gryporrhynch'us. (Γρυπός, curved; ῥύγχος, a snout.) The larval form of a *Tenia*.

G. pusil'us. Aubert. (L. *pusillus*, very little.) The larval form of *Tenia unilateralis* found in the gall bladder of *Tinca vulgaris*.

G. pusil'us, von Nordmann. The larval form of *Tenia macrocephala* found in the intestine of *Tinca vulgaris*.

Grypo'sis. (Γρύπωσις, a crooking.) A crookedness and curving of a part; applied to a disease of the nails, in which they are bent inwards and produce irritation of the soft parts below.

Gry'potes. (Γρυπότης.) Curvature, especially of the nose.

Grypotic. Relating to *Gryposis*.

Gry'pus. (Γρυπός, curved.) One who has a curved or aquiline nose.

Gt. An abbreviation of L. *gutta*, a drop.

Gtt. An abbreviation of L. *gutta*, drops.

Guachama'ca. An extract made from the milky juice of the bark of two South American trees, probably of the Nat. Order *Apocynaceæ*. It contains an alkaloid soluble in water, slightly soluble in absolute alcohol, and insoluble in ether and chloroform. It produces sleep and apparent muscular paralysis, like curare, but the respiratory movements and the cardiac action are unaffected. In large doses it is fatal.

Gua'cin. A light-brown, resinous, bitter, inodorous substance obtained by Fauré from the stem and leaves of *Mikania guaco*. It melts at 100° C. (212° F.), and is soluble in alcohol, ether, and boiling water. It produces vomiting,

GUACO—GUAIAECUM.

quickening of the pulse, sweating, and free secretion of urine rich in uric acid.

Gua'co. The name given in Central America and the West Indies to the *Mikania guaco* and other allied plants which are used by the natives as an antidote to, and preservative against, snake-bites. The substances employed under this name have also been considered antisyphilitic, febrifuge, and anthelmintic, and have been used in malignant cholera, in rheumatism, and in atonic deafness.

The name has also been given to the *Aristolochia anguicida*.

G. mora'do. (S. *morado*, violet.) The *Mikania cornifolia*.

Gua'dalupe. A chalybeate spring near the City of Mexico.

Gua'gno, Sant' Antonio di. Corsica. A sulphur bath, among forest-clad mountains, of a temp. of 41° C. (105·8° F.)

Guai'ac. Same as *Guaiacum*.

G., yellow. The yellow colouring matter of guaiacum resin. It has no smell, is bitter to taste, and neutral in reaction; concentrated sulphuric acid dissolves it, forming a beautiful blue colour.

Guaiaca'næ. Jussieu's term for *Ebenaceæ*.

Guaiacene. (F. *gaiacene*; G. *Guajacén*.) C_8H_8O . A product of the dry distillation of guaiacum resin. It is a light, colourless oil, smelling like bitter almonds, of sp. gr. ·874, vapour density 2·92, and boiling point 118° C. (244·4° F.) On exposure to the air it is oxidised and converted into *Guajol*.

Guaiaci lignum, B. Ph. (L. *lignum*, wood. F. *bois de gayac*; I. *legno guajaco*; S. *guayaco*; G. *Guajakholz*, *Pockenholz*, *Franzosenholz*.) The wood of *Guaiacum officinale* imported from St. Domingo and Jamaica, and reduced by the turning lathe to a coarse powder or small chips.

In U.S. Ph., the heart wood of *Guaiacum officinale* and *G. sanctum*.

Guaiacum wood is hard and heavy, the younger yellow, the elder greenish brown. When heated it has an agreeable odour, and when chewed a bitterish, pungent taste. It contains 26 per cent. of resin, and ·8 per cent. of a bitter extractive. It is a stimulant diuretic, and once had a reputation for the cure of syphilis; it is still contained in the compound decoction of sarsaparilla. It has also been given in chronic rheumatism and gout, scrofula, and chronic skin diseases.

G. res'ina, B. Ph., U.S. Ph. (F. *résine de gayac*; I. *resina de guajaco*; S. *resina de guayaco*; G. *Guajakharz*, *Guajakgomme*.) Guaiacum resin. The resin of *Guaiacum officinale*. It is the concrete juice of the tree, and is obtained by spontaneous exudation, or by means of incisions, or by heat applied to the wood, or by boiling the chips in a solution of common salt. It consists of irregular or globular glassy masses of a brownish or greenish-brown colour, having a resinous fracture, a slight but fragrant smell, and a taste which, at first slight, becomes pungent and lasting. Its sp. gr. is 1·2—1·23. It is soluble in alcohol, ether, and alkaline solutions, slightly so in water. It contains, according to Hadelich, in 100 parts 70·3 of guaiaconic acid, 10·5 of guaiaretic acid, 9·8 of guaiacum beta-resin, 3·7 of gum, ·8 of ash, 4·9 of guaiacic acid, guaiacum yellow, and impurities. It is stimulant and diaphoretic when aided by heat, diuretic when the patient is kept cool. It is said to be emmena-

gogue, and in large doses it is a purgative. It is used in chronic rheumatism and gout, in scrofula, secondary syphilis, and skin diseases. Dose, 10—30 grains (65—1·95 gramme).

Guaiacic acid. $C_6H_8O_3$. A substance obtained by Thierry from guaiacum resin and wood. It crystallises in colourless needles. It has been supposed to be the same as *Guaiaretic acid*, but is probably distinct.

Guai'acin. Landerer's term for a crystallisable substance found in guaiacum resin.

Guai'acol. (F. *gaiacol*.) $C_7H_8O_2 = C_6H_4 \cdot OCH_3 \cdot OH$. A phenol contained in wood tar, and also obtained in the dry distillation, at 205°—210° C. (401°—410° F.), of guaiacum resin. It is the methyl ether of pyrocatechin; and is a colourless oil having an odour like creosote and a taste as of cloves. It has a sp. gr. of 1·117, and boils at 200° C. (392° F.) It is soluble in alcohol and ether, slightly soluble in water.

Guaiaconic acid. (F. *acide gaiaconique*; G. *Guajakonsäure*.) $C_{16}H_{20}O_5$. A light-brown, amorphous substance composing, according to Hadelich, 70 per cent. of guaiacum resin. It is soluble in ether, chloroform, alcohol, and acetic acid, insoluble in water and benzol. It forms salts which are soluble in water and in alcohol, and is turned blue by oxidising agents.

Guaiacresinic acid. Same as *Guaiaretic acid*.

Guai'acum. A Genus of the Nat. Order *Zygophyllaceæ*.

Also, a term for *Guaiaci resina*.

G. a'frum, Linn. (L. *affer*, African.) The *Schotia speciosa*.

G. america'num. The *G. officinale*.

G. arbo'reum, De Cand. (L. *arbor*, a tree.) Hab. West Indies. Supplies some guaiacum wood and resin.

G. in lach'rymis. (L. *lachryma*, a tear.) Same as *G. in tears*.

G. in tears. Guaiacum resin in small round drops like tears, said to be obtained chiefly from *G. sanctum*.

G. lig'nium. See *Guaiaci lignum*.

G. mix'ture. See *Mistura guaiaci*.

G. officina'lë, Linn. (L. *officina*, a workshop.) Hab. West Indies. Supplies guaiacum wood and resin. The bark is said to be the most active part, but it is not found in commerce.

G. res'in. See *Guaiaci resina*.

G. sanc'tum, Linn. (L. *sanctus*, holy.) One of the official species in the U.S. Ph.

G. soap. See *Sapo guacinus*.

G. test for blood. The supposed blood-stain is dissolved in distilled water, or in a saturated solution of borax, to it a weak, freshly-made solution of pure guaiacum from the centre of a newly broken fragment is added, and if no blue colour be produced a little solution of peroxide of hydrogen is added, when should blood be present a blue colour will be manifest; for the peroxide of hydrogen oil of turpentine, ozonised by exposure to the air, may be substituted. Guaiacum is turned blue by many substances, and should this colour be produced from some of these substances in the suspected blood stain, the test is no longer applicable. Among them are gluten, milk, juice of carrot, horseradish, colechium, and other roots, nitric acid, chlorine, alkaline hypophosphites, pus, saliva, and many other substances.

G., tinc'ture of, ammo'niated. See *Tinctura guaiaci ammoniata*.

GUAIARETIC ACID—GUATTANI, CARLO.

G. wood. See *Guaiaci lignum*.
Guaiaretic acid. (F. *acide gaïarétique*; G. *Guajakharzsäure*.) $C_{20}H_{26}O_4$. One of the constituents of guaiacum resin discovered by Hlasiwicz. It is obtained by heating the resin with alcoholic potash, or with quicklime, decomposing the resulting salt with hydrochloric acid, and crystallising from alcohol. It is soluble in alcohol, ether, and benzol, insoluble in water. It is not coloured blue by oxidising agents. It forms one tenth of the entire resin.

Guaja'bo. The *Guava tree*.
Guajacen. C_5H_8O . Deville's name for a liquid product of the dry distillation of guaiacum resin having the above composition. Same as *Guaiacene*.

Guaja'va. The *Guava tree*.
Guajol. The crystalline plates formed on the exposure of guaiacene to the air. It is *Tiglic acid*.

Gualtheria. See *Gaultheria*.
Guana cortex. (L. *cortex*, bark.) The bark of the *Simaruba officinalis*.

Guanamine. $C_3H_5N_3$. A base formed by heating guanamine formate; it crystallises from the watery solution. It is a formo-guanamine. Other guanamines are formed in like manner by heating the guanidine bases of the fatty acids.

Guanarai'ba. The *Rhizophora gymnorhiza*, or mangrove tree.

Guanidine. $CH_5N_3=C(NH_2)_2(NH)$. A product of the decomposition of guanin by acting on it with potassium chlorate and hydrochloric acid. It is closely related to urea; it forms salts.

Guanin. $C_5H_5N_5O$. A substance obtained by Unger from Peruvian guano. By acting on it with nitrous acid xanthin is obtained, and from this latter theobromin and caffein may be produced. It is a normal constituent of the dung of birds. It occurs in the urine of spiders, and has been found by Virchow in the flesh of diseased pigs, as well as by others in the liver, pancreas, muscle, and fish-scales. It is a white, amorphous substance, soluble in potash, soda, and the mineral acids, but insoluble in water, alcohol, ether, and ammonia.

Guano. (Peruv. *huanu*, dung.) A manure consisting of the excrement of sea-fowl, which covers the small islands and cliffs near the coast, and in some spots lays in such enormous beds as could only be produced by the accumulation of thousands of years; it seems to have been used as a manure long before Peru was visited by the Spaniards. Guano was found in 1843, on the Island of Ichaboe, within two and a half miles of the mainland of Africa, and by the end of 1844 the whole of it was carried away. It was also discovered on one of the Malagas, at the entrance of Saldanha Bay, covering an extent of about eight miles, and of the thickness of from four to eight feet. It has been used both externally and internally in leprosy, in chronic eczema and psoriasis, in tinca capitis, and in scrofula.

Guanocholic acid. An amorphous, non-nitrogenous, biliary acid contained in Peruvian guano.

Guao. The Mexican name of the *Comocladia dentata*.

Guaqua'ra. The *Smilax china*.
Guarana, U.S. Ph. (From the name of a tribe of Indians, who use it as a condiment or

medicine.) A dried paste prepared from the seeds of the *Paullinia sorbilis*, a climbing plant indigenous to Brazil. It contains guaranin, tannic acid, gum, albumen, starch, and a greenish fixed oil. It is held to be stomachic, antifebrile, and aphrodisiac, and is used in migraine, or sick headache. It has also been employed in dysentery, diarrhoea, retention of urine, and paralysis.

G. bread. The dried paste called *Guarana*.

G., fluid extract of. See *Extractum guaranæ fluidum*.

G. tiva. The Brazilian name of the *Paullinia sorbilis*, and also the paste called *Guarana*.

Guaranhem. The Brazilian name of the bark *Monesia*.

Guaranin. A crystalline principle discovered by Martius in the fruit of *Paullinia sorbilis*, which has now been proved to be identical with *Caffein*.

Guara'po. A fermented liquor made, in Peru, of sugar-cane pulp and water.

Guard. (Old F. *garder*, to keep; from Old High G. *warten*, to watch.) To watch; to protect.

Also, an appliance or structure for protection.

In Anatomy, the fibrous sheath surrounding the phragmacone of a Belemnite.

Also, a protective of a bed made of waterproof or other material.

G. cells. (G. *Schliesszellen*.) The cells, generally two, which embrace the stomata of plants.

Guare'a. A Genus of the Nat. Order *Meliaceæ*.

G. Aubletii, A. de Jussieu. Bark emetic and purgative.

G. cathartica, Mart. (Καθαρτικός, fit for cleansing.) Used as *G. spicaflora*.

G. ceruua, Vell. (L. *cernuus*, bending down.) The *G. spicaflora*.

G. purgans, St. Hil. (L. *purgo*, to purge.) Said to be an oxytocic and abortifacient.

G. spicaeflora, Linn. (L. *spica*, a point; *flos*, a flower.) The bark is bitter, acrid, and astringent. Used as an anthelmintic.

G. trichilioides, Linn. Used as *G. spicaflora*.

Guarer'ba or'ba. The *Momordica elaterium*.

Guatemala'la. A State of Central America.

G. sarsaparil'la. The produce of *Smilax papyracea*. See *Sarsaparilla*, *Guatemala*.

Guattani, Carlo. An Italian surgeon, born at San Bartolomeo Bagni, in Novara, in 1707, died in Rome in 1765.

G.'s method of oesophagotomy. The incision through the skin is made on the left side, near the trachea, beginning just above the level of the cricoid cartilage, running obliquely downwards on the inner side of the sterno-mastoid and terminating just above the sternum. After section of the platysma, the sterno-hyoid and sterno-thyroid muscles are separated from each other, the left lobe of the thyroid gland is freed and pulled to the right side with a blunt hook, the carotid artery and jugular vein are similarly drawn to the right, and then, by a little manipulation with the fingers and the handle of the scalpel in close

GUATTERIA—GUILANDINA.

contiguity to the trachea, the œsophagus is exposed and opened.

Guatteria. A Genus of the Nat. Order Anonaceæ.

G. virga'ta, Dunal. (*L. virgatus*, made of twigs.) Fruit aromatic.

Gua'va. The fruit of *Psidium pyrifera* and *P. pomiferum*. It is pleasantly acidulous, and is used as a jelly and a marmalade.

G. tree, red. The *Psidium pomiferum*.

G. tree, white. The *Psidium pyrifera*.

Gua'ya. The *Psidium pomiferum*, Linn.

G. apple. The fruit of *Psidium pomiferum*.

Gua'yaquil. A town of Ecuador.

G. sarsaparil'la. The produce of an unknown species of *Smilax*.

Guaya'va. Same as *Guava*.

G. pyrifor'mia, Gärtner. (*L. pyrus*, a pear; *forma*, shape.) The *Psidium pyrifera*.

Guay'curu. The name of a drug used in Morocco, and probably the root of *Statice brachiensis*.

Gua'za. Same as *Haschisch*.

Guazu'ma. A Genus of the Nat. Order Byttneriaceæ.

G. tomento'sum, H. B. and Kth. (*L. tomentum*, a stuffing for cushions.) Bastard cedar. Hab. India. Decoction of inner bark used in elephantiasis; outer bark a sudorific, used in chest and skin diseases.

G. ulmifo'lia, Wall. (*L. ulmus*, an elm; *folium*, a leaf.) The *G. tomentosum*.

Gubernacular. (*L. gubernaculum*, a helm; guidance.) Steering; guiding.

G. cord. A fibrous structure, found in the scrotum of the male infant in the later months of foetal life, which surrounds the processus vaginalis of the peritoneum above and below, and is attached to the lower part of the scrotum. It consists of fibrous tissue from the subperitoneal fascia and the aponeurosis of the external oblique muscle, and from the superficial fascia and integument, as well as of muscular fibres from the internal oblique muscles. The processus vaginalis in its growth passes amongst its fibres; and when the testicle has completely descended it almost disappears.

G. sac. Allman's term for the fleshy structure, often furnished with stinging cells, which covers over the sexual buds whilst they are contained within the gonangium.

Gubernac'ulum. (*L. gubernaculum*; from *gubernare*, to steer.) That which guides or steers.

Also, a term applied to that one of the two flagella, possessed by some Infusoria, such as the Heteromastix, which is directed backwards, the other being called the *Tractellum*.

G. den'tis. (*L. dens*, a tooth.) The solid pedicle of fibrous tissue which connects the dental sac of the permanent teeth with the gum in the early stage of their development.

G. Hunte'ri. The *G. testis*, after John Hunter.

G. tes'tis. (*L. testis*, a testicle. *G. Leiband des Hodens*.) Hunter's term for the conjoined Gubernacular cord and *Plica gubernatrix*.

G. tes'tis Hunte'ri. The *G. testis*, after John Hunter.

Gudgeon. (*F. gujon*; *G. Gründling*.) The *Gobio fluviatilis*. It is eatable. According

to Dioscorides, it was of use against the bite of a mad dog. When roasted was formerly used in dysentery.

Guilder rose, com'mon. (From *Guilderland* in Holland.) The *Viburnum opulus*.

G. rose, meal'y. The *Viburnum lantana*.

Gueril'a. The flowers of *Pyrethrum carneum* and *P. roseum*. Used for destroying fleas, lice, and other body insects; the basis of many insect powders.

Guern'sey. A British island in the English Channel.

G. eye'stone. The operculum of *Turbo pullus*. See *Eyestone*.

Guesal'aga. Same as *Cestona*.

Guesalivar. See *Santa Agueda*.

Guettarda. A Genus of the Nat. Order Rubiaceæ.

G. coccin'ea, Aubl. The *Isertia coccinea*.

G. specio'sa, Linn. (*L. speciosus*, splendid.) Used in the treatment of wounds and ulcers.

Guevin'ia. A Genus of the Nat. Order Proteaceæ.

G. avella'na, Endl. (*L. Avella*, a city of Campania, celebrated for its hazel nuts.) Hab. South America. Kernels of fruit pleasant eating.

Gug'gar tree. The *Balsamodendron mukul*.

Gug'gul. Same as *Elemi*, Bengal.

Gugul tree. The *Balsamodendron mukul*.

Gul'ac. The same as *Guaiaci resina*.

G., ammonia'ted tincture of. See *Tinctura guaiaci ammoniata*.

G. mixture. See *Mistura guaiaci*.

G., tincture of. See *Tinctura guaiaci*.

G. yellow. The yellow colouring matter of guaiacum resin. It crystallises in quadratic octahedra.

Gul'acol. See *Guaiacol*.

Guiana. A Province of the northern coast of South America.

G. al'monds. Brazil nuts, the fruit of *Caryocar tomentosum*.

G. bark. The bark of *Portlandia hexandra*. Used as a febrifuge.

Gui'bertes, Les. France, Département des Hautes-Alpes, near Briançon. A mineral spring, 1429 mètres above sea-level. The waters have a temp. of 47° C. (116·6° F.), and contain, along with small quantities of salts, some hydrogen sulphide.

Guibour'tia. A Genus of the Nat. Order Leguminosæ.

G. copallif'era, Bennet. (*Copal*; *L. fero*, to bear.) Supplies the copal of Sierra Leone.

Guider. (*F. guider*, to direct.) A term for the tendon of a muscle.

Guido'nia. A Genus of the Nat. Order Bixaceæ.

G. adstrin'gens, H. Bn. (*L. adstringo*, to bind together.) Hab. Peru. Used as a cicatrizer of wounds.

G. esculen'ta, H. Bn. The *Casearia esculenta*.

G. ova'ta, H. Bn. The *Casearia ovata*.

Guiland'ina. (In honour of Melchior Wieland, named *Guilandinus*.) A Genus of the Nat. Order Leguminosæ.

GUILLON—GULLET.

G. bon'duc, Linn. The fruit, bonduc seeds, is used in intermittent fevers and as an anthelmintic; externally, the seeds are applied to hydrocele; the oil extracted from them is used in convulsions and paralysis. The leaves are said to be deobstruent and emmenagogue, and the root astringent.

G. bonducella, Linn. A variety of the plant which supplies *Bonduc* seeds. The *G. bonduc*.

G. dioi'ca, Linn. The *Gymnocladus dioica*.

G. echina'ta, Spreng. The *Cæsalpinia echinata*.

G. morin'ga. The *Moringa pterygo-sperma* and the *M. aptera*.

G. nu'ga. The *Cæsalpinia nuga*.

G. sappan. The *Cæsalpinia sappan*.

Guillon. France, Département du Doubs. A cold sulphur spring. Used in lymphatic affections, neuralgia, inveterate syphilis, and skin diseases.

Guillotine. (*Guillotin*, its inventor.) A machine for cutting off the head.

Also, applied to an apparatus for removing the tonsil.

G., Fahn'estock's. (F. B. Fahnstock, of Lancaster, Philadelphia.) An instrument for the removal of the tonsil, originally consisting, as described by the inventor in 1832, of a metallic cannula terminating in a circular cleft ring, and carrying a stem armed with a similar circular blade having an inner concentric cutting edge. When placed over the tonsil the blade is withdrawn, and cuts through the tonsil from behind forwards. Many alterations have been made in the instrument. The ring has been made elliptical by Guersant; a pronged fork to transfix and hold the tonsil has been added at the suggestion of Velpeau; and side guards to keep the mouth open by Ewens of Bristol.

G., Macken'zie's double. An adaptation of two guillotines on Physick's principle by Morell Mackenzie whereby both tonsils may be removed at the same time.

G., Physick's. (*Physick*, of Philadelphia.) A modification of the uvulatomer invented in 1827. It consists of a metallic frame ending in a grooved ring, into which slides a knife with a convex cutting edge, and having at the other extremity a handle set at an angle; it thus cuts from before backwards. Morell Mackenzie has modified the instrument, so that the handle can be applied to either side of the shank.

G., Störk's. See *Störk's guillotine*.

Guil'no. The *Bromus catharticus*.

Guimara'ens, Cal'das de. Spain, Entredouro of Mino. Sulphur springs, of a temp. of 32°—57° C. (89·6°—134·6° F.)

Guine'ea. A State on the West Coast of Africa.

G. amo'mum, large-seed'ed. The *Amomum macrosperrum*.

G. corn. The *Sorghum bicolor* and *S. vulgare*.

G. corn, ne'gro. The *Sorghum vulgare*.

G. cu'bebs. The *Piper Afzelii*.

G. fe'ver. One of the thirty forms of intermittent fevers enumerated by Shannon.

G. fowl. The *Numidia meleagris*. Used as the domestic fowl.

G. grains. The seeds of *Amomum melegueta*, and *A. grana paradisi*.

G. grass. The *Panicum jumentorum*.

G. hen. Same as *G. fowl*.

Also, the *Fritillaria meleagris*, from the likeness of its spotted petals to the feathers of the bird.

G.-hen weed. The *Petiveria alliacea*.

G. oil palm. The *Elais guineensis* and *E. melanococca*.

G. palm. The *Elais guineensis*.

G. peach. The fruit of *Sarcocephalus esculentus*.

G. pep'per. (F. *poivre de Guinée*.) A term for Cayenne pepper.

Also, the same as African cubebs, the fruit of *Piper Afzelii*.

Also, a name of the *Capsicum annum*.

G. plum. The fruit of *Parinarium excelsum*, which contains an edible farinaceous substance surrounding the stone.

G. pods. The fruit of *Capsicum frutescens*.

G. sor'rel. The *Hibiscus sabdariffa*.

G. weed. The *Petiveria alliacea*.

G. worm. (F. *ver de Guinée*.) The *Filaria medinensis*.

Guirila. See *Guerila*.

Guitera. Corsica, not far from Ajaccio. A sulphur spring, of a temp. of 40°—55° C. (104°—131° F.) Used in chronic rheumatism, uterine disturbances, and skin diseases.

Guizo'tia. A Genus of the Nat. Order Compositæ.

G. abyssin'ica, Cass. The *G. oleifera*.

G. oleif'era, De Cand. (L. *oleum*, oil; *fero*, to bear.) Furnishes an oil called niger-seed oil.

Gula. (L. *gula*, the gullet; from Aryan root *gar*, to devour.) The gullet.

Also, the chitinous plate which supports the submentum in many Insecta.

Gulæ imbecillitas. (L. *imbecillitas*, weakness.) Paralysis of the pharynx.

G. princip'ium. (L. *principium*, a beginning.) The pharynx.

Gulan'cha. The *Tinospora cordifolia*.

Gulf. (F. *golfe*; from late Gr. *κόλπος*; var. of Gr. *κόλπος*, the bosom, a bay. I. *golfo*, S. *golfo*; G. *Meerbusen*.) A large indentation of a coast and the sea enclosed in it.

G. stream. A current of warm water, arising in equatorial regions, which issues from the Gulf of Mexico, touches the southern shore of North America, and runs in a north-westerly direction across the Atlantic Ocean to the coast of Ireland and the north-west of Europe.

G. weed. The *Sargassum bacciferum*.

Guliel'ma. (After Carolina Wilhelmina, Latinised *Gulielma*, wife of Maximilian I, of Bavaria.) A Genus of the Nat. Order of *Palmaceæ*.

G. specio'sa. (L. *speciosus*, splendid.) The peach palm. Hab. South America. Fruit and growing bud esculent.

Gull. (Cornish *gullan*; Welsh *gwyllan*; Bret. *gwelan*, F. *mouette*; I. *gabbiano*, *mugnajo*; S. *gaviota*; G. *Möve*.) The birds of the Genus *Larus*. The eggs are very good; the flesh is poor, but in some countries is eaten as food, especially in Lent.

Gulla. See *Gula*.

Gullet. (F. *goulet*; from L. *gula*; from Aryan root *gar*, to devour.) The food canal from the mouth to the stomach, consisting of pharynx and œsophagus; or, according to some, the œsophagus only.

GUM.

Gum. (F. *gomme*; from L. *gummi*; from Gr. κόμμι, gum. I. *gomma*; S. *goma*; G. *Gummi*.) The mucilage of vegetables, transparent and brittle when dry, and of an insipid taste, soluble in water in all proportions, but not in alcohol or oil.

The term is also applied to the chief constituent of gum arabic, which is better designated by the term arabin, or *Arabic acid*.

The gums, $(C_6H_{10}O_5)_n$, are all amorphous and insoluble in alcohol, they swell up or dissolve in water, are not coloured by iodine, and are converted into glucose by boiling with dilute sulphuric acid.

Also, applied to the sticky secretion which occasionally collects in the inner canthus of the eye.

Also, see *Gums*.

G. acacia. See *Acacia gummi*.

G. acacia, mucilage of. See *Mucilage acacie*.

G. acajou. A gum derived from the *Cassipoum pomiferum*.

G., acaroid. Same as *Acaroid resin*.

G. adragant. A synonym of *Tragacantha*, B. Ph.

G. agati. The gum yielded by the seeds of *Agati grandiflora*.

G. ammoniacum. See *Ammoniacum*.

G. animé. See *Animé gum*.

G. arabic. (*Arabia*, the country whence it was first chiefly obtained.) See *Acacia gummi*.

G. arabic, yellow. The produce of *Acacia arabica*.

G., artificial. A synonym of *Dextrin*.

G., Australian. A gum obtained in Australia from *Acacia pycnantha*, *A. decurrens*, and *A. homalophylla*.

G. bandage. See *Bandage, gum*.

G., Baquaquis. Same as *G., lignirodium*.

G., Barbary. The gum arabic which is obtained from Mogador, and is partly furnished by *A. nilotica*. It occurs in brownish tears or vermiform fragments.

G., Barbary, brown. Same as *G., Barbary*.

G., Basso'ra. See *Bassora gum*.

G. ben'jamin. The balsamic resin, benzoin, obtained from *Styrax benzoin*.

G., black'boy. A red resin obtained from several species of *Xanthorrhæa*.

G. boil. See *Gum-boil*.

G., Botany-bay. (*Botany Bay*, in New South Wales.) A term for *Acaroid resin*, from the district whence it comes.

G., British. A synonym of *Dextrin*.

G., brittle. The gum derived from *Acacia albidia*. It is in small irregular fragments, or in vermicular pieces, dull and wrinkled externally, of a vitreous fracture, and varying from white to greenish or yellowish in colour. It is bitter to the taste and easily soluble in water.

G., brown. The produce of *Eucalyptus resinifera*. An astringent.

G., bu'tea. Same as *Butea kino*.

G., Cape. A pale-yellow or brownish gum in tears, produced by the *Acacia horrida*.

G., caran'na. See *Coranna*.

G., cash'ew. A slightly astringent gum produced by the *Anacardium occidentale*.

G. cath'eter. See *Gum-catheter*.

G., Chag'ual. A gum from Chili, derived from a Bromeliaceous plant, probably a species of *Puya*.

G., cher'ry. The gum derived from several species of *Prunus*.

G., cher'ry-tree. The exudation from the several kinds of *Cerasus*.

G. chew'ing. The habit, not uncommon in the United States, of chewing a gummy substance, whereby a flow of saliva is excited, which is swallowed. The substance used is the gum of the spruce fir, or a preparation, called gum mastic, of paraffin with some sweetening substance.

G. cis'tus. The *Cistus ladaniferus*.

G. copal. See *Copal*.

G., cot'ton-tree. A gum produced by the *Eriodendron anfractuosum*.

G. cum'bi. Same as *Dikamali*.

G., doc'tor. Same as *Hog gum*.

G. drag'on. A synonym of *Tragacanth*.

G., East India. A variety of gum acacia imported from Bombay. It occurs in pieces of various size and colour, and is often adulterated with another gum containing bassorin.

G., elas'tic. (F. *gomme elastique*; G. *Federharz*.) A term for *Caoutchouc*.

G. el'emi. See *Elemi*.

G., elephantine. The gum furnished by the *Feronia elephantum*. It is very similar to gum arabic.

G., Emba'vi. A gum arabic in fine grains.

G. euphorb'ium. The produce of *Euphorbia antiquorum*.

Also, the same as *Euphorbium*.

G., ferment'able. A substance found in unripe beet-root, and formed during the mucic fermentation of sugar. It is amorphous, soluble, dextrorotatory, and yields dextrose when boiled with a dilute acid.

G., French. The gum obtained from the species of *Prunus* growing in France.

G., gal'am. See *Galam gum*.

G. ged'da. A variety of *G., Turkey*.

G. gon'aké. (The native name.) The red, bitter gum furnished by *Acacia Adansonii*. It is frequently mixed with Senegal gum.

G. gon até. Same as *G. gonake*.

G., grass-tree. A resinoid exudation from *Xanthorrhæa hastilis* and other species. It is of a reddish yellow in mass, a greenish yellow in powder; it is insoluble in the saliva, has an aromatic, astringent taste, and burns with a fragrant smell; when treated with nitric acid it yields picric acid. It is used in Australia for diarrhoea.

G., green. An adulterant of *G., Senegal*.

G. guai'acum. See *Guaiaci resina*.

G., hem'lock. A synonym of *Canada pitch*, obtained from the hemlock spruce, *Pinus canadensis*.

G., hog. See *Hog gum*.

G.-hogg. See *Hog-gum*.

G., India. See *G., East India*.

G., indig'enous. Same as *Gummi nostras*.

G., i'vy. See *Ivy gum*.

G. ju'niper. A synonym of *Sandarach*.

G. ki'no. See *Kino*.

G., Kor'dofan. Same as *G., Egyptian*.

G., Kut'i'ra. The produce of *Cochlospermum gossypium* and a *Sterculia*. It is used in India to stop the heat in mares, and has been employed by Sedgwick, with some apparent

GUMBOIL—GUMA.

success, in reducing the erotic inclinations of insane women.

G. kuttee'ra. Same as *G.*, *Kutira*.

G. lac. See *Lac*.

G. lan'cet. See *Lancet*, gum.

G., larch. See *Larch* gum.

G., ligniro'dium. The finest kind of *G.*, *Senegal*.

G., Madagas'car. A gum resembling *G. acadjou*.

G. mag'uey. A translucent gum obtained from the *Agave americana*, containing malate of calcium and arabic acid or an allied body.

G. mas'tic. See *Mastic*.

Also, see under *G.*, *chewing*.

G. mes'quite. See *Mesquite* gum.

G., Mezqui'te. Same as *Mesquite* gum.

G., Mog'ador. Same as *G.*, *Barbary*.

G., Moroc'co. Same as *G.*, *Barbary*.

G., New Hol'land. Same as *G.*, *Botany-bay*.

G. no'pal. A gum furnished by some cactaceous plants. It is insoluble in water, and somewhat like to Bassora gum.

G. nuts, In'dian. The fruit of *Strychnos potatorum*.

G. of eye. The thickened secretion of the Meibomian glands and conjunctival surface which sometimes collects at the inner canthus of the eye, or glues the eyelids together.

G., Orenburg. Same as *Briançon manna*.

G. pa'lus. A synonym of *Kino*.

G. pars'nep. The *Opoponax chironium*.

G. pas'sages. The intercellular spaces in plants which contain a gummy substance, as in the cactuses and cycads.

G., pec'toral. (*L. pectus*, the chest.) A substance prepared by dissolving equal quantities of gum acacia and sugar in water, and then evaporating to a gummy consistence. Used for the relief of cough.

G. plant. The several species of the Genus *Grindelia*.

G. plas'ter. The *Emplastrum gummosum*.

G. pow'der. The *Pulvis gummosus*, *G. Ph*.

G., pure. The soluble portion of gum arabic; also called *Arabin*.

G. rash. A synonym of *Strophulus*.

G., red. A synonym of *Strophulus inter-tinctus*.

G., red, of Austra'lia. See *Gummi rubrum*.

G., red, rank. A synonym of *Strophulus confertus*.

G. res'in. See *Gum-resin*.

G., Salabre'da. Same as *G.*, *brittle*.

G. san'darach. See *Sandarach*.

G. sas'sa. See *Sassa* gum.

G., Sava'kin. Same as *G.*, *Suakin*.

G., seed. The gummy matter or mucilage obtained from flax seed, quince seed, and other seeds.

G. sen'eca. Same as *Gum, Senegal*.

G. sen'ega. Same as *Gum, Senegal*.

G., Sen'egal. A variety of gum arabic from the ports at the mouth of the Senegal River. It is obtained from many species of *Acacia* and other genera, and occurs in roundish or oval pieces of a yellowish or reddish colour, or, when very pure, colourless.

G., Sen'naar. A gum arabic collected near the Blue Nile.

G., Sen'nari. Same as *G.*, *Sennaar*.

G., seraph'ic. A term for *Sagapenum*

G., Sic'ily. A gum probably furnished by some species of *Prunus*.

G., Sua'kin. A brittle, semipulverulent gum exported at Alexandria. It is a product of *Acacia stenocarpa* and *A. seyal*.

G. suc'cory. The *Lactuca perennis*.

G. suc'cory, blue. The *Catananche cœrulea*.

G. suc'cory, rush'y. The *Coronilla juncea*.

G., Suma'tra. A term for *Gutta-percha*.

G., sweet. The *Liquidambar styraciflua*.

G., tal'ba. Same as *G.*, *Suakin*.

G., tal'ca. Same as *G.*, *Suakin*.

G., tal'ka. Same as *G.*, *Suakin*.

G. thus. (*L. thus*, frankincense.) Same as *Frankincense*.

G. tor. Same as *G. turic*.

G. trag'acanth. See *Tragacantha*.

G. tree. The name in Australia for many of the species of *Eucalyptus*.

G. tree, blue. The *Eucalyptus globulus*.

G. tree, brown. The *Eucalyptus resinifera*.

G. tree, elas'tic. The *Hevea guianensis*.

G. tu'ric. A variety of *G.*, *Turkey*.

G., Tur'key. The gum arabic which is obtained from Egypt and the neighbouring countries, such as Darfur and Kordofan. It consists of small irregular fragments, whitish, or yellowish, or reddish yellow.

G. wa'ter. (*F. eau de gomme*.) A solution of gum acacia in water, half an ounce or an ounce to two pints, with the addition of some flavouring, such as lemon peel. Used as a demulcent in sore-throat and cough.

Also, a synonym of *Mucilago acacia*.

G., wat'tle. Same as *G.*, *Australian*.

G. wax. A term for *Liquidambar*.

G., white. A synonym of *Strophulus albidus*.

Also, a name for the *Liquidambar styraciflua*.

G., yellow. A term for jaundice in a new-born child.

Gum'boil. An alveolar abscess affecting the superficial part of the gum.

Gum-cath'eter. A catheter made of layers of silk or other webbing soaked in a solution of india rubber. They are sometimes mounted on curved stylets to give them a special form.

Gum-res'in. (*L. gummi*, gum; *resina*, resin. *F. gomme-resine*; *G. Gummiharz*, *Schleimharz*.) An inspissated vegetable juice, which consists, when fresh, of gum, resin, sometimes essential oil and salts in emulsion with water. It is excreted by special organs in the stem, in the roots, or in the fruit of a plant consisting of spaces lined with cells, or of vessels composed of long cells placed end to end, or of ramified cells. When the juice exudes from the plant, or flows after incision, it loses water and becomes more or less solid. Gamboge, scammony, asafetida, and myrrh are gum-resins.

G. pas'sages. The intercellular spaces in plants which contain the gum-resin, as in *Umbellifera*.

Guma. Old name for hydrargyrum, or mercury. (Ruland, and Johnson.)

G. paradi'si. Old term for auripigmentum, or orpiment. (Ruland, and Johnson.)

GUMMA—GUMMI.

Gum'ma. (L. *gumma*, for *gummi*, gum. F. *gomme*; I. *gomma*; S. *goma*; G. *Gummknöten*, *Gummigeschwulst*.) A form of granulation tumour occurring in different parts of the body, and constituting one of the manifestations of the influence of syphilis on the body, most usually during the later period of the disease. Gum-mata occur in the skin and subcutaneous connective tissue, in the liver, spleen, testicles, brain and its membranes, muscles, periosteum, and bones. They are softish in texture, and reddish-grey in colour, when young; as they grow older they become firmish and greyish-yellow, and may equal a walnut in size. They are surrounded by a translucent fibrous substance, irregular in outline, and closely attached to the surrounding structures. They are fairly vascular when young, but when they get old contain fewer vessels, and often undergo central caseous degeneration. They consist of small cells like leucocytes, and some giant cells, as well as the cells of granulation tissue implanted in a structureless matrix, which is permeated by blood-vessels. As the gumma grows the matrix becomes fibrillated, and at a later stage, under caseous degeneration, the cells becoming shrunken, and are sometimes represented only by the nuclei and the intervening tissue, consisting largely of granules, fat globules, stearic acid crystals, and cholesterin plates. These three stages may frequently be seen to form three zones in a growing gumma, the youngest stage being outermost. In addition to the caseation, gummata may undergo calcification; they may soften and suppurate, or produce a serpiginous ulceration; they may become quiescent and surrounded by cicatricial tissue; or they may become absorbed.

The origin of the term has been attributed to Fracestor in 1530, by some, and to Massa in 1532, by others, but, according to Besnier, the term was used earlier, as by Almenar in 1512.

Also, the same as *Guma*.

G. gallicum. (L. *gallicus*, belonging to the French.) A syphilitic *Gumma*.

G., scrofulo-tuberculous. (*Scrofula*; *tubercle*.) Same as *G., scrofulous*.

G., scrofulous. (*Scrofula*.) A term applied by Besnier to many local diseases of scrofulous origin having some resemblance in origin and growth to the syphilitic gumma. Such are cold abscesses, certain cutaneous tubercles, glandular enlargements, some forms of rupia, scrofulous synovitis, and periostitis, and such like.

G., syphilitic. The disease described under the chief heading.

Gummata. Plural of *Gumma*.

Gum'matous. Relating to a *Gumma*.

G. infiltration. (L. *in*, into; F. *filtrer*, to strain.) The swelling of a part produced by the deposition of a gumma.

G. infiltration, circumscribed. (L. *circum*, around; *scribo*, to write.) The syphilitic disease of bone also called *Node*.

G. infiltration, diffuse. (L. *diffusus*, spread about.) The form of syphilitic disease caused by the deposit of the material of a gumma in a widespread part of bone-tissue.

G. node. See *Node, gummatous*.

G. syphiloderm. See *Syphiloderm, gummatous*.

G. tumour. Same as *Gumma*.

G. ulcer. An ulceration of a part of the skin which is the seat of a gumma. It is often

large and has a hard base and edges. The spots of rupia are gummatous ulcers, the secretion from which dries into a crust as it forms.

Gum'mi. (Κόμμι, gum.) The same as *Gum*.

G. acaciæ. See *Acaciæ gummi*.

G. acaciæ arabicæ. Same as *Acaciæ gummi*.

G. acanthinum. (Ἀκανθα, the tree whence gum arabic is obtained.) The name used by Celsus for *Acaciæ gummi*.

G. acaroides. Same as *Acaroid resin*.

G. ad podagrum. (L. *ad*, for; *podagra*, gout.) A synonym of *Cambogia*.

G. adstringens Fothergillii. (L. *adstringo*, to bind.) A term for *Kino*.

G. africanum. The gum from *Acacia vereke*.

G. ammoniacum. See *Ammoniacum*.

G. ammoniacum expurgatum, Fr. Codex. (L. *expurgo*, to purify. F. *gomme ammoniacque purifiée*.) Ammoniacum dissolved in alcohol, strained, and then evaporated to a proper consistence.

G. animé. See *Anime gum*.

G. animé occidentalis. (L. *occidentalis*, western.) Same as *Anime gum*.

G. arabicum. (*Arabia*.) The *Acaciæ gummi*, from its source.

G. astragali tragacanthæ. Tragacanth, an exudation from the *Astragalus verus*.

G. australe. See *Gum, Australian*.

G. babylonicum. Same as *G. arabicum*.

G. bo'gia. A synonym of *Cambogia*.

G. bre'lis. A synonym of *Caranna*.

G. chi'bou. A spurious kind of gum elemi.

G. copalli'num. A term for *Copal*.

G. de Go'a. (L. *de*, from.) Gamboge, so called from a place whence it comes.

G. de Je'mu. A term for *Cambogia*.

G. elasticum. A term for *Croucheou*.

G. electum. (L. *electus*, picked.) Gum arabic which has been selected, the masses containing impurities having been rejected.

G. elemi. See *Elemi*.

G. euphor'bium. A term for *Euphorbium*.

G. Gaman'dra. A term for gamboge.

G. gaman'dræ. A synonym of *Cambogia*.

G. gambien'së. A synonym of *Kino*.

G. git'ta. Same as *Cambogia*.

G. Go'a. A term for gamboge.

G. gut'tæ. A term for *Cambogia*.

G. hed'eræ. (L. *hedera*, ivy.) See *Ivy gum*.

G. junip'eri. A term for *Sandarach*.

G. ki'no. See *Kino*.

G. lab'dani. Same as *Ladanum*.

G. lac'cæ. Same as *Lac*.

G. lada'num. See *Ladanum*.

G. la'mac. A synonym of *Acaciæ gummi*.

G. lari'cis. (L. *larix*, the larch.) Same as *Briançon manna*.

G. laxati'vum. (L. *laxativus*, relieving.) A term for gamboge.

G. leu'cum. (Λευκός, white.) The *Acaciæ gummi*.

G. mimo'sæ. Same as *Acaciæ gummi*.

G. nos'tras. (L. *nostras*, native.) A name applied in different countries to gums yielded by indigenous trees. In England it is cherry-tree gum.

GUMMI-RESINA—GUNNERA.

G. Orenburgen'së. Same as *Briançon manna*.

G. pan'acis. (*Panax*.) A synonym of *Opopanax*.

G. peruvia'num. A term for gamboge.

G. philosopho'rum. See *Kibric*.

G. ru'brum. (*L. ruber*, red.) Botany-bay kino, red gum of Australia. The produce of *Eucalyptus resinifera* and other species. It has been used as an astringent in chronic diarrhœa, and as a lozenge in relaxed conditions of the throat.

G. ru'brum adstrin'gens Gambien'së. (*L. ruber*, red; *adstringo*, to bind.) A synonym of *Kino*.

G. ru'brum astrin'gens. (*L. ruber*, red; *adstringo*, to bind.) The astringent gum of *Butea frondosa*, called *Butea kino*.

Also, the red gum of *Eucalyptus resinifera*.

G. ru'brum Gambien'së. Same as *G. rubrum adstringens Gambiense*.

G. saracen'icum. Same as *Gum arabic*.

G. scorpio'nis. Same as *Acaciæ gummi*.

G. sen'eca. Same as *Senegal gum*.

G. sen'ega. Same as *Senegal gum*.

G. sen'egal. See *Senegal gum*.

G. sen'eka. Same as *Senegal gum*.

G. senegalen'së. Same as *Senegal gum*.

G. serapio'nis. Same as *Acaciæ gummi*.

G. theba'icum. (*L. thebaicus*, belonging to Thebes.) A term for *Acaciæ gummi*.

G. tragacantha. See *Tragacantha*.

G. Uralen'së. Same as *Briançon manna*.

Gum'mi-resi'na. See *Gum-resin*.

G. ammoni'acum. See *Ammoniacum*.

G. asafœ'tida. See *Asafœtida*.

G. gal'banum. See *Galbanum*.

G. gut'tæ. A term for *Cambogia*.

G. gut'ti. A term for *Cambogia*.

G. hed'era. (*L. hedera*, the ivy.) The gum-resin obtained in the Levant and Southern Europe from the ivy, *Hedera helix*. It is in irregular, yellowish, or reddish-brown pieces, with translucent, garnet-red edges, of a slightly bitter and acrid taste, and a balsamic smell when heated. It was formerly used as a nervine stimulant.

G. myrr'ha. See *Myrrha*.

G. olib'anum. See *Olibanum*.

Gum'mic. (*L. gummi*.) Relating to *Gum*.

G. acid. Frémy's name for *Arabic acid*.

Also, $C_6H_{10}O_{10}$, Reichard's name for an acid substance produced in the decomposition of glucose by cupric acid in alkaline solution. It is supposed to be tartronic acid, perhaps mixed with other acids.

Gummido'des. (Κόμμι, gum; εἶδος, likeness.) Mucilaginous; gum-like.

Gum'milene. (*L. gummi*, gum.) An artificial gum made by the action of diastase on starch.

Gummio'des. (Κόμμι, gum; εἶδος, likeness.) Mucilaginous; gum-like.

Gummosac'charum. (*L. gummi*, gum; *saccharum*, sugar. *F. mucosucere*; *G. Schleimzucker*.) Term for mucosaccharine matter.

Gummos'itas. (*L. gummosus*, full of gum.) A syphilitic gumma.

Gum'mous. (*L. gummi*, gum. *F. gommeux*; *G. gummig*.) Having, or full of, gum.

Gum'my. Sticky; tenacious; of the consistence, or appearance, of *Gum*.

G. tu'mour. A *Gumma*.

Gums. (*Sax. góna*, the palate, jaws; from Aryan root *gha*, to gape. *L. gingiva*; *F. gencive*; *L. gengiva*; *S. encia*; *G. Zahnfleisch*.) The red, fleshy-looking substance which covers the alveoli and the necks of the teeth. The gums consist of dense connective tissue, having a close adhesion to the alveolus, and forming a sort of sheath to the neck of each tooth. They are covered with a very vascular mucous membrane, which possesses papillæ only at the free edge.

G., blue line of. A bluish or blackish line at the free edge of the gums, first pointed out by Burton as an indication of chronic lead poisoning.

G.s, green line of. A greenish line at the free edge of the gums seen in chronic copper poisoning. The line is said by Corrigan to be purple red.

G.s, red line of. A reddish line on the free edge of the gums, supposed to be an indication of phthical tendencies.

G.s, spongy. A spongy swelling of the gums from dilatation of the capillary vessels of the papillæ, with interstitial thickening. The condition occurs in weakly persons who neglect the cleansing of the teeth, after the administration of mercury, and in scurvy.

Gum. (Of doubtful etymology; perhaps from Welsh *gun*, a bowl.) A firearm or engine for throwing projectiles.

G. cot ton. See *Guncotton*.

G. shot. See *Gunshot*.

Gun'cotton. (*G. Schiessbaumwolle*.) $C_{12}H_{11}O_2(NO_3)_9$. An explosive substance discovered by Schönbein, and made by soaking cotton wool in a strong mixture of nitric and sulphuric acids, removing the acid by washing with water, and drying. It has the aspect of ordinary cotton wool, is insoluble in water, in dilute acids, and in alkalies; it is soluble in alcohol, ether, and glacial acetic acid, as well as in strong solution of potash. It is *Trinitro-cellulose*, a form of *Pyroxylin*.

The term is also applied to the lower nitrated forms of *Pyroxylin*.

G., ethe'ral solution of. A term for *Collodium*.

G., sol'uble. The same as *Pyroxylinum*, U.S. Ph.

Gundelia. A Genus of the Nat. Order *Compositæ*.

G. tournfort'ia, Tourn. (*F. cardonette*.) Used as a digestive, carminative, and diuretic. Its juice, known in Persia as *Torab el Ghey*, is used as an emetic.

Gune. A name applied to a scaly skin affection of the natives of the Kingsmill Islands.

Gun'ga. Same as *Gunjah*.

Gunjah. Native term for the dried plant of the *Cannabis indica* which has flowered, and from which the resin has not been removed.

Gun'metal. An alloy of copper, containing nine parts of copper and one of tin.

Gunne'ra. (J. Ernst *Gunner*, a bishop of Bronthelm.) A Genus of the Nat. Order *Urticaceæ*.

G. chilén'sis, Lamk. Hab. Chili. Roots and leaves used as an astringent in diarrhœa.

G. macroceph'ala. (Μακρός, long; κεφαλή, the head.) Hab. Java. Fruit stimulant.

G. perpen'sa. (*L. perpensus*, weighed carefully.) Hab. South Africa. Fresh leaves

GUNPOWDER—GUSTATORY.

applied to wounds and ulcers, and infused as a demulcent. A decoction of the plant is used in stomach disorders and a tincture in gravel.

G. scabra. (*L. scaber*, rough.) Leaf-stalks esculent.

Gunpowder. An explosive mixture of charcoal, sulphur, and nitre in different proportions, more or less approximating to three parts of carbon, two of sulphur, and fifteen molecules of nitre. It has been used as an application to ringworm.

G., burns from. Burns from the explosion of gunpowder are usually extensive, and on healing often present blackish tattoo marks from embedding of particles of carbon in the corium.

G. tea. See *Tea*, gunpowder.

G., wounds from. See *Wounds from gunpowder*.

Gunshot. Made by the shot of a gun.

G. wounds. See *Wounds, gunshot*.

Günthersbad. Prussia, near Erfurt. A sulphur spring and a chloride of sodium spring are found here.

Guragie spice. The seeds of *Amomum korarima*.

Gurgeatio. (*L. gurgus*, a whirlpool.) A term for the *Sweating sickness*.

Gurges. (*L. gurgus*, a whirlpool.) An old term for the pharynx.

Gurgina balsam. Same as *Gurjun balsam*.

Gurgitel'lo. See under *Ischia*.

Gurgling. (*L. gorgogliare*, to bubble up; from *gorgo*, a whirlpool; from *L. gurgus*, a whirlpool. *F. glou-glou*; *G. Glucken, Rieseln*.) The sound made when air passes through a liquid, or when water flows in a broken current through the narrow neck of a bottle. It is heard in the large bronchial tubes and in pulmonary cavities when they contain fluid. It may also be both heard and felt in the abdomen, as over the cæcum in enteric fever, and in a dilated stomach containing both gas and fluid.

Gurgulio. (*L. gurgulio*, the gullet; akin to Sans. root *grī*.) Old term sometimes used for the throat in general, sometimes for the trachea or windpipe, sometimes for the gullet, sometimes for the uvula, and sometimes for the penis.

Also, a kind of worm generated in meal. (Castellus.) Same as *Curculio*.

Gurgun. See *Gurjun*.

Gurgunic acid. See *Gurjunic acid*.

Gurjun balsam. A viscid, balsamic liquid obtained by incising and then charring the trunk of *Dipterocarpus lavis*, *D. turbinatus*, and other species. It is a reddish-brown, transparent liquid, of sp. gr. .964, having the odour and taste of copaiba without its acidity, from which it differs in becoming turbid and semi-solid when heated to 110° C. (230° F.) It is used in gonorrhœa, and in leprosy both externally and internally. Dose, 10–30 drops (.6–1.9 c.c.).

G. oil. Same as *G. balsam*.

G. oil, volatile. $C_{20}H_{32}$. A light oil, having a density of .9044 at 15° C. (59° F.), obtained by the distillation of *G. balsam*. It is slightly soluble in absolute alcohol and in acetic acid, very soluble in amylie alcohol. It is levogyrous.

Gurjunic acid. $C_{31}H_{44}O_5 + 3H_2O$. A crystalline substance contained in the transparent semi-fluid resin left after the distillation of the

volatile oil from gurjun balsam. It is soluble in ether and alcohol, and melts at 220° C. (428° F.), and solidifies on return to 180° C. (356° F.)

Gurnard. (Old *F. groughant*, *grounard*; from *grogner*, to grunt; from *L. grunnio*, to grunt. *F. groudin*; *I. triglia*; *G. Knurrs-fisch*.) The *Trigla gurnardus*; named from the grunting noise it makes when taken out of the water.

Gur'nigel. Switzerland, in Canton Bern. Two sulphur springs and an iron spring, 3000 feet above sea-level, having a mild climate.

Guru nut. Same as *Kola nut*.

Guru nuts. The fruit of *Sterculia acuminata*.

Gussenbauer, Carl. An Austrian surgeon, born at Ober-Vellach, in Carinthia, in 1842, a Professor of Surgery in the University of Prague.

G.'s su'ture. See *Suture*, Gussenbauer's.

G.'s vo'cal appa'rat'us. See *Vocal apparatus*, Gussenbauer's.

Gustation. (*L. gustatio*; from *gusto*, to taste.) The act of tasting; the exercise of the sense of taste.

Gustative. (*L. gusto*. *F. gustatif*; *I. gustativo*; *S. gustativo*.) Relating to taste.

G. bud. (*F. bouton gustatif*.) See *Taste-bud*.

G. nerve. Same as *Gustatory nerve*.

G. nerves. The nerves which serve the sense of taste, especially the lingual nerve.

Gustatory. (*L. gusto*.) Relating to taste.

G. anæsth'esia. Impairment or loss of the sense of taste. It may be complete or incomplete; total, in regard to its intensity, including, therefore, all the varieties of sapid qualities, or partial; and, in regard to its area, circumscribed or diffused. It may also be centric or peripheric. Peripheric gustatory anæsthesia may be produced by all conditions which prevent or render difficult the action of sapid substances upon the gustatory nerves, such, for example, as cold, heat, dryness, thick coating of fur. Centric gustatory anæsthesia may result from lesion of the origins of the glosso-pharyngeal and fifth nerves; and anæsthesia may be the consequence of lesion of the glosso-pharyngeal, trigeminal, and lingualis trunks, and of certain sections of the facial nerve.

G. buds. Same as *Taste buds*.

G. bulbs. (*G. Geschmacksknospen, Geschmackszwiebeln*.) The terminal organs of the gustatory or lingual nerve on the inner side of the furrow surrounding the papillæ circumvallatæ. The *Taste gobllets*.

G. cells. See *Cells, gustatory*, or *Taste cells*.

G. cups. (*G. Geschmacksbecher*.) Schwalbe's term for the *Taste gobllets*.

G. discs. (*Δίσκος*, a quoit.) The disc-like structures on the gustatory nerves of frogs, analogous to the *Taste gobllets* of higher animals.

G. folds. The low folds of membrane upon the surface of the papillæ circumvallatæ of the tongue, and running vertically in the direction of its axis.

G. gob'lets. The *Taste gobllets*.

G. hyperæsth'esia. A condition in which there is increased delicacy in the sense of taste, so that very small quantities of sapid substances may be perceived. It is an occasional symptom of hysteria.

GUSTAVIA—GUTTA-PERCHA

G. nerve. (F. *nerf gustatif*; G. *Geschmacksnerv*.) The *Lingual nerve*.

G. nerves. See *Taste, nerves of*.

G. organs. The organs of taste.

G. papillæ. See *Papillæ, gustatory*.

G. paræsthesia. (Παραίσθησις, to misperceive.) Peculiar subjective sensations of taste. They are most commonly described as sourish or bitter, sweet or insipid. The affection is an occasional symptom of hysteria.

G. pore. The aperture on the outer surface of the *Taste goblets*.

G. region. The parts of the tongue and of the inside of the mouth which are endowed with taste. In this region are included the hinder part of the tongue, near the papillæ circumvallatæ, to which the lingual branch of the glossopharyngeal nerve is distributed; the tip and margins of the tongue, to a variable extent, supplied by the lingual nerve of the fifth pair; the lateral part of the soft palate and the glossopalatine arch supplied from the glossopharyngeal nerve; and possibly the hard palate and the laryngeal opening also.

G. sensations. The sensations produced by the excitation of the terminal organs and nerves of the gustatory region by sweet, acid, salt, and bitter substances. The intensity of the sensations depends on the force and duration of the excitation and the number of nerve-elements affected.

Gustavia. A Genus of the Nat. Order *Myrtaceæ*.

G. speciosa, De Cand. (L. *speciosus*, showy.) Fruit is said by Humboldt to turn children, who eat it, yellow for a day or two.

Gustus. (Γεύομαι, to taste. F. *gout*; G. *Geschmack*, *Schmecken*.) The sense of taste.

Gut. (Sax. *gut*; from Aryan root *ghud*, to pour.) The intestines, or intestinal canal.

G., blind. The *Cæcum*.

G. cleaners. The conditions under which these men work, surrounded by a moist atmosphere and the most offensive odours, do not appear to be such as to induce disease. The odours are not very diffusable, but may still, in summer, affect the public and become a nuisance. The water used for cleansing purposes might, then, be disinfected by chloralum or chlorinated soda.

Gutenberg. Switzerland, near Solothurn. An earthy mineral water, 500 feet above sea-level.

Guthrie, George James. An English surgeon, born in 1785, died in 1856.

G.'s amputation. A mode of amputation at the hip-joint, performed by first making an incision on the outer side of the limb a little above the trochanter major and carried in a downward convex line to its termination in front of the tuber ischii, the flap is thus cut from without inwards; as is the anterior flap, which is made from the same points, and stretches downwards to about five inches below the hip-joint.

G.'s ligature of axillary artery. An incision is made from the edge of the axilla to the lower border of the acromion, and the artery is completely exposed by the division of the pectoralis major and minor in the same direction.

G.'s muscle. The *Transversus perinei*.

Gutt. An abbreviation of *Gutta*.

Gutta. (L. *gutta*, a drop. F. *goutte*; G. *Tropfen*.) A drop of any liquid matter; a

minim, or the sixtieth part of a fluid drachm. See *Gutta*.

Also, a name for gamboge.

Also, a name for gout.

Also, $C_{10}H_{16}$, Baumhauer's term for the hydrocarbon which constitutes pure gutta percha as it issues from the tree, and by the oxidation of which the different bodies found in commercial gutta percha are derived.

G. ca'dens. (L. *cado*, to fall.) A variety of metallic tinkling heard in pneumothorax, resembling the falling of a drop of water into some fluid; which, according to Skoda, is produced by a rhonchus in a bronchial tube which opens into the cavity of a pneumothorax, and so obtains a metallic resonance; but which, according to Leichtenstern, may also be caused by the actual falling of a drop of fluid in the cavity of a hydro-pneumothorax.

G. gaman'dræ. A synonym of *Cambogia*.

G. gam'ba. A synonym of *Cambogia*.

G. gam'bir. The produce of *Uncaria gambir*.

G. gam'u ad podag'rum. (L. *ad*, for; *podagra*, gout.) A term for gamboge.

G. nigra. See *Gutta nigra*.

G. opa'ca. (L. *opacus*, shady.) A term for cataract, from the dull appearance through the cornea.

G. per'cha. See *Gutta-percha*.

G. rosa'cea. (L. *roseus*, rosy.) The red tubercles on the nose and cheeks in *Aene rosacea*.

G. ro'sea. (L. *roseus*, rosy.) Same as *G. rosacea*.

G. ro'sea syphilit'ica. A synonym of *Corona veneris*.

G. ru'bea. (L. *rubeus*, red.) Same as *G. rosacea*.

G. sere'na. (F. *goutte serene*; G. *schwarzer Staar*.) A term for amaurosis, from the bright and transparent appearance through the cornea.

G. tab'an. A term for *Gutta-percha*.

Gutta-percha. (Mal. *getah*, corruption of *gutta*, the gum or concrete juice of a plant; *Pertjah*, the name of the Island of Sumatra, from whence it is obtained.) The native name of the exuded juice of *Isonandra gutta*, a tree indigenous to Singapore and its vicinity, and collected like caoutchouc, to which it bears some resemblance. It is whitish in colour, often having reddish streaks, of a feeble smell, tasteless, unctuous in feeling, hard at ordinary temperatures, soft and plastic at 66°–71° C. (150°–8°–159°–8° F.), and very tenacious. It is insoluble in water, alcohol, alkalies, and weak acids; soluble in ether, volatile oils, turpentine, bisulphide of carbon, chloroform, benzol, and benzin. According to Baumhauer, at first it is composed solely of *Gutta*, but by oxidation other resins are formed, among them being fluavil and alban. It is applicable to many purposes for supports, as splints; it may be used as a vehicle for caustics; and in solution it is applied as a defensive dressing.

G., solution of. See *Liquor gutta-perche*, U.S. Ph.

G. tis'sue. Gutta percha in a very thin leaf. Used as a waterproof covering to dressings to prevent evaporation.

G., white. A purified gutta percha used by dentists, and obtained by dissolving it in

GUTTA TABAN—GUTTURO-TETANIC.

chloroform, precipitating by alcohol, boiling in water, and then rolling into cylinders.

Gutta taban. Same as *Gutta-percha*.

Guttæ. Plural of *Gutta*.

G. Abbatis Rous'seau. The *Vinum opiatum*.

G. ac'idæ ton'icæ. The *Elixir acidum Halleri*.

G. ama'ræ secun'dum Bau'mé, Fr. Codex. (F. *gouttes amères de Baumé*.) St. Ignatius's bean, rasped, 500 grammes, carbonate of potash 5 grammes, and soot one gramme, macerated in alcohol of 60° 1000 grammes for ten days in a closed vessel, and filtered.

G. ammoni'aci. See *Ammoniacum in granis*.

G. cephal'icæ. (Κεφαλικός, for the head.) An old remedy for headache, consisting of oil of canella and an ammoniacal liquor distilled from raw silk.

Also, ammonium carbonicum pyro-oleosum 22 grammes, oil of lavender 4, and alcohol 46, mixed and distilled.

G. ni'græ. (L. *niger*, black.) Same as *Black drops*.

G. ni'græ Britan'nicæ, Fr. Codex. (F. *gouttes noires Anglaises*.) Acetic acid of 1·060 sp. gr. 60 grammes is mixed with distilled water 540 grammes, and in 3 quarts of it are macerated for ten days opium 100 grammes, saffron 8 grammes, and nutmeg 25 grammes; after which it is heated in a water bath for half an hour, pressed, and strained; to the marc the remainder of the dilute acetic acid is added, macerated for 24 hours, pressed, and strained; the two products are mixed and filtered, sugar 30 grammes is then dissolved in the product, and it is evaporated to 200 grammes.

Guttæfera. A Genus of the Nat. Order *Guttifera*.

G. vera, König. (L. *verus*, true.) The *Garcinia morella*.

Guttalis cartila'go. (L. *guttur*, the throat; *cartilago*, cartilage.) An old term, used by Bartholin, *Anat.* ii, 11, p. 443, for the ary-tænoid cartilage.

Gut'tate. (L. *gutta*, a drop. G. *betropft*, *getropft*.) Spotted as if by drops.

Gutta'tim. (L. *gutta*, a drop. F. *goutte à goutte*.) A word occurring in prescriptions, and signifying drop by drop.

Gut'ter. (Old F. *gutiere*; from L. *gutta*, a drop.) A channel for water.

G. tree. The *Cornus sanguinea*.

Gut'teria. (L. *guttur*, the throat.) A synonym of *Goitre*.

Gut'te'ta. Old epithet of a powder, described by L. Riverius, *Prax. Med.* i, 8, and much extolled for obstinate pains of the head.

Gutti, G. Ph. (L. *gutta*, a drop.) Gamboge. See *Cambogia*.

Guttif'eræ. (Mod. L. *gutti*, gamboge; *fero*, to bear. G. *Guttilbäume*.) A Nat. Order of thalamifloral Exogens of the Alliance *Guttiferales*, having simple, opposite, exstipulate leaves, symmetrical flowers, hypogynous, equilateral petals, adnate, non-beaked anthers, and sessile, peltate, or radiate stigmas.

Guttifera'les. (L. *gutti*, gamboge; *fero*, to bear.) An Alliance or Cohort of hypogynous Exogens, having cyclic, monodichlamydeous flowers, imbricated or twisted corolla, stamens indefinite, and axile placentæ.

Gut'tulate. (L. *guttula*; dim. of *gutta*,

a drop.) In Botany, presenting small, round vesicles.

Gut'tule. (L. *guttula*. G. *Tröpfchen*.) A small drop.

Gut'tur. (L. *guttur*, the throat. F. *gorge, gosier*; G. *Gurgel, Kehle*.) The throat, in special reference to the trachea.

G. globo'sum. (L. *globus*, a ball.) A term for *Goitre*.

G. tu'midum. (L. *tumidus*, swollen.) A term for *Goitre*.

Gut'tural. (L. *guttur*, the throat. F. *guttur*.) Of, or belonging to, the throat.

G. ar'tery, inf'erior. The inferior thyroïd artery.

G. ar'tery, supe'rior. A former name for the superior thyroid artery.

G. canal'. (F. *conduit guttural*, *Chaus-sier*.) The *Eustachian tube*.

G. car'tilage. The *Arytænoid cartilage*.

G. cough. A hollow-sounding cough; a cough produced from irritation in the throat.

G. duct. The *Eustachian tube*.

G. fos'sa. See *Fossa, guttural*.

G. glands. Same as *Glands, pharyngeal*.

G. her'nia. A synonym of *Goitre*.

G. plex'us. See *Plexus, guttural*.

G. pouch'es. Two large air-sacs lying side by side in the median plane of the pharynx of the horse and allied animals. They extend from the lower border of the Eustachian tube downwards, and are lined with a continuation of its mucous membrane. They are irregular in shape; their upper part corresponds to the base of the occipital and sphenoid bones, their outer surface to the inner surface of the parotid gland and the neighbouring muscles and nerves, and their hinder surface to the atlas and flexor muscles of the head. They communicate both with the pharynx and the cavity of the tympanum by the Eustachian tube, and usually contain air. Their functions are not known.

G. sound. A sound produced in the throat, or like one produced in the throat.

G. voice. A thick, deep tone of voice, as if confined to the throat.

Guttural'is. (L. *guttur*.) Relating to the throat.

G. cartila'go. The *Arytænoid cartilage*.

G. her'nia. Same as *Guttural hernia*.

Gut'turals. See *Consonants, guttural*.

Gut'turis os. (L. *guttur*; *os*, a bone.) The hyoid bone, from its position.

Guttur'nia. (L. *gutturium*, a ewer with a narrow neck, from which water was poured over the hands.) The ary-tænoid cartilages.

Guttur'niform. (L. *gutturium*; *forma*, resemblance. F. *gutturiforme*.) Of, or belonging to, or resembling, a water pither. Formerly applied to the ary-tænoid cartilage.

Gut'turo-maxillary. (L. *guttur*, the throat; *maxilla*, the jaw.) Relating to the throat and the jaw.

G. ar'tery. (F. *artère gutturo-maxillaire*.) Chaussier's term for the internal maxillary artery.

Gut'turo-pal'atine. (L. *guttur*; *palatum*, the roof of the mouth.) Relating to the palate and the throat.

G. nerve. The posterior palatine nerve.

Gut'turo-tetan'ic. (L. *guttur*, the throat; *tetanus*, spasm of the neck.) Relating to tetanus and to the throat.

GUTTURO-TETANY—GYMNOCARPOUS.

G. stam'mering. Colombat's term for the form of stammering which is produced by spasmodic contraction of the throat. Same as *Gutturo-tetany*.

Gutturo-tet'any. (L. *guttur*, the throat; *tetany*. F. *beguiment ouvert*.) In this form of speech-disturbance the closure of the glottis which is required for the utterance of a vowel is unduly prolonged, and develops into a spasm of the glottis. In this form, which may, under the influence of emotion, affect even healthy persons, the mouth remains open. The pronunciation of the letter *g* hard, which requires complete closure of the glottis, may also become spasmodic. When the stuttering affects the letters *k* and *q* there may be spasm of the glottis, combined with a closure of the posterior part of the oral canal, and, in the case of *k*, of the nasal cavities also.

Guy, an'odyne bal'sam of. See *Balsamum anodynum Guïdonis*.

Guy'on, Jean Casimir Felix. A French surgeon, born in the Isle of Bourbon in 1831.

G.'s inject'or. A bulbous tube, to which a syringe is attached, and having perforations in the bulb. Used to administer injections of nitrate of silver, or other salts, in gleet; the bulbous end, by causing pain, marks the position of the seat of inflammation.

Guyton-Morveau, Lou'is Ber'nard. A French physician, born at Dijon in 1737, and who died there in 1816.

G.'s fumiga'tion. See *Fumigation*, *Guytonian*.

Gyalec'tiform. (*Gyalecta*, a genus of lichens; L. *forma*, shape.) A term applied to the waxy, ureolate apothecia of lichens.

Gy'ion. (Γυ'ιον.) A limb, or a member of the human body, but especially the principal, as the hands or feet.

Gy'ium. Same as *Gyion*.

Gym'na. (Γυμνός, naked; from the feeling of shame and desire to cover or hide. F. *parties honteuses*; G. *Schamtheile*.) Term for the pudendum.

Gymnade'nia. (Γυμνός; ἄδην, a gland.) A Genus of the Nat. Order *Orchidaceæ*.

G. conop'sea. Rich. Flowers used in dysentery and epilepsy.

Gymname'bæ. (Γυμνός; ἀμαβα.) Hertwig's term for an Order of *Amæba* having no skeleton.

Gymnan'thous. (Γυμνός, naked; ἄνθος, a flower. F. *nudiflore*; G. *nacktblumig*.) Having naked flowers.

Gymna'sium. (Γυμνάσιον; from γυμνός, naked; because those who performed exercises in it were stripped naked. F. *gymnase*; G. *Gymnasium*.) This word (Gr. γυμνάσιον) not only signified the place, otherwise called *Palaestra*, where the athletes and others exercised themselves, but also the exercise itself, according to Hippocrates.

Gymnas'tes. (Γυμναστής, the trainer of the professional athletes. F. *gymnaste*; G. *Gymnast*.) A manager of, or a performer in, a gymnasium.

Also, one who treats diseases by means of *Gymnastics*.

Gymnas'tic. (Γυμναστικός, skilled in athletic exercises. F. *gymnastique*; G. *gymnastisch*.) Of, or belonging to, the method of curing diseases by exercise; or to that branch of science

which treats of rules to be observed in all kinds of exercise for procuring health.

Gymnastics. (Γυμναστικός. F. *art gymnastique*; G. *Gymnastik*.) The science or system by which, anciently, disease was treated, and health maintained through the regular practice of active exercises. The use of bodily exercises for the cure of disease or deformity.

G., med'ical. (L. *medicus*, curative.) Physical exercises, of whatever kind, employed for the purpose of restoring or improving the health of the body, or of a part of it.

G., oc'ular. (L. *oculus*, the eye.) The regular and voluntary movement of the eye, or its fixation for a definite time on some object, so as to overcome the spasmodic tremors of nystagmus.

G., Swe'dish. A system of curative exercises developed by Ling for the purpose of restoring the power of partially paralysed or parietic muscles; consisting chiefly of synergic movements, which are of two kinds: semipassive, or those executed with resistance on the part of the patient; and semiactive, or those executed with resistance on the part of the operator.

Gymnax'ony. (Γυμνός; ἄξων, an axle.) In Botany, the condition in which the placenta grows beyond the ovary and alters its position.

Gymne'ma. (Γυμνός, naked; νῆμα, a thread.) A Genus of the Nat. Order *Asclepiadaceæ*.

G. lactif'erum. Brown. The cow-plant of Ceylon, *Asclepias lactifera*, Linn.

G. sylvest'rè. R. Brown. (L. *sylvestris*, belonging to a wood.) Hab. India. Used externally and internally as an antidote for snake-bites. The leaves when chewed destroy for a time the faculty of tasting saccharine substances.

Gymne'trous. (Γυμνός, naked; ἦτρον, the part from the navel, or navel, to the pubes. F. *gymnètre*.) Having a naked or smooth belly; applied to those fishes which have no anal fins.

Gymnoas'ci. (Γυμνός; ἄσκος, a leathern bag.) A Suborder of the Order *Ascomycetes*, in which the ascæ are not enclosed in a receptacle, but are free on the branches of the mycelium in groups or thick layers.

Gymnoblas'tæ. (Γυμνός; βλαστή, a germ.) Bartling's term for those dicotyledonous plants which have a naked embryo.

Gymnoblas'tea. (Γυμνός; βλαστός, a bud.) An Order of the Class *Hydroidea*, consisting of aggregated polypites having no hydrothecæ or gonangia.

Gymnoblas'tous. (Γυμνός, naked; βλάστη, a germ. F. *gymnoblaste*; G. *nacktkeimend*.) Having a naked or exposed embryo.

Gymnobranch'ia. (Γυμνός, naked; βράγχια, gills.) A Group of the Suborder *Dermatobranchia*, Order *Opisthobranchia*, being naked, marine molluscs with conical, cutaneous appendages or dorsal branchiæ.

Gymnocar'pous. (Γυμνός; καρπός, fruit. F. *nacktfürchtig*.) Having naked fruit. Applied by Mirbel to those plants in which the fruit is not covered by any accessory organ; and by Persoon to those fungi in which the reproductive corpuscles are situated on the exterior.

Also, applied to those apothecia of lichens in which the thalamium is not enclosed by the excipulum; or in which the fertile hyphæ grow to the outside and form spores on the surface.

GYMNOCIDIUM—GYMNÆCEIA.

Gymnocid'ium. The enlargement at the base of the sporotheca of urn-mosses.

Gymnocladus. (Γυμνός, naked; κλάδος, a young branch.) A Genus of the Nat. Order *Leguminosæ*.

G. canadensis. Lamk. The *G. dioica*.

G. dioica. H. Brogniart. (F. *chicot du Canada*.) Coffee tree. Hab. North America. Seeds yield a laxative oil; roasted, they are used as coffee. Leaves cathartic.

Gymnocyte. (Γυμνός; κύτος, a cell.) Häckel's term for a naked or wall-less cytode having a nucleus.

Gymnocytoide. (Γυμνός; κύτος, a cell.) Häckel's term for a cytode without a proper cell wall and nucleus.

Gymnodontes. (Γυμνός; ὄδους, a tooth. *G. Wachtzähner*.) A Suborder of the Order *Plectognathi*. Jaws prolonged into a beak clad with a cutting dental plate.

Gymnog'enous. Of, or pertaining to, the *Gymnogens*.

Gymnogens. (Γυμνός, naked; γένος, offspring.) A class of flowering plants having the stemwood concentrically or uniformly arranged, the youngest being at the outside, two or more cotyledons, and naked seeds. It includes the Orders *Cycadaceæ*, *Pinaceæ*, *Taxaceæ*, and *Gnetaceæ*.

Gymnog'natha. (Γυμνός, naked; γνάθος, the cheek.) Burmeister's term for the combined Orders *Neuroptera* and *Orthoptera*.

Gymnogramma. (Γυμνός; γράμμα, a letter. *G. Nacktfarn*.) A Genus of the Nat. Order *Filices*; so called because the lines of sori are uncovered.

G. ceterach. The *Asplenium ceterach*.

Gymnogynous. (Γυμνός; γυνή, a female.) Applied to a plant which has a naked ovary.

Gymnolæmata. (Γυμνός, naked; λαίμος, the gullet.) Allman's term for a Division of *Polyzoa*, being those in which the mouth possesses no epistome. By some it is ranged as an Order of the Subclass *Ectoprocta*, Class *Bryozoa* or *Polyzoa*.

Gymnomonera. (Γυμνός; μονήρης, single.) A Division of the Order *Monera*, being those which are not encysted and are reproduced by division.

Gymnomyces. (Γυμνός; μύκης, a fungus.) The same as *Coniomycetes*.

Gymnophiona. (Γυμνός; ὄφις, a snake.) A synonym of *Ophiomorpha*.

Gymnophthalmata. (Γυμνός; ὀφθαλμός, the eye.) Forbes's term for the naked-eyed Medusæ, or those in which the sense-organs or marginal corpuscles are not covered by folds of membrane.

Gymnoplast. (Γυμνός; πλαστός, formed.) A term applied to cells or masses of protoplasm which are supposed to have no cell-wall, as leucocytes.

Gymnopteris. (Γυμνός; πτέρις, a fern.) A Genus of the Nat. Order *Filices*.

G. ceterach. The *Asplenium ceterach*.

Gymnorhynchus. (Γυμνός; ῥύγχος, a snout. *G. Nachtrüssel*.) A larval form of cestode worm.

G. horridus. Goodsir. (L. *horridus*, bristly.) Found in the liver of the sunfishes, *Orthogoriscus*. According to Cobbold, the same as *G. reptans*.

G. reptans. Rudolphi. (L. *repto*, to

creep.) Found in the ray and sunfish. The *Anthocephalus reptans*.

Gymno'sis. (Γυμνωσις, a stripping.) The denudation or stripping bare of a part or structure or tissue.

Gymnoso'mata. (Γυμνός, naked; σῶμα, the body.) A Section of the Order *Pteropoda*, or an Order of the Class *Pteropoda*, having neither shell nor mantle. They have a distinct head, and the branchiæ are either absent or external.

Gymnoso'matus. (Γυμνός; σῶμα.) Relating to the *Gymnosomata*.

G. teeth. Milne-Edwards's term for teeth which consist of dentine only without any layer of enamel or cement, such as are found in many fishes.

Gymnosper'mæ. (Γυμνός, naked; σπέρμα, a seed.) Same as *Gymnospermia*.

Gymnosper'mia. (Γυμνός; σπέρμα.) An Order of the Linnean System, comprising the didynamous plants which have naked seeds.

Also, a Division of the Class *Dicotyledones*.

Gymnosper'mic. Same as *Gymnospermous*.

Gymnosper'mous. (Γυμνός, naked; σπέρμα, a seed. F. *gymnosperme*; G. *Nacktsamig*.) Having naked seeds; bare-seeded.

Gymnosporangæ. (Γυμνός; sporangium.) A Division of the *Uredineæ*, in which the teleutospores are two-celled on gelatinous stalks.

Gym'nospore. (Γυμνός; σπόρος, seed.) A naked spore.

Gymnospor'ous. (Γυμνός; σπόρος, seed. G. *Nacktsporig*.) Having uncovered spores.

Gymnostom'atous. (Γυμνός, naked; στόμα, a mouth. F. *gymnostome*; G. *Nacktmündig*, *Nacktmundig*.) Name given by Bridel to those mosses in which the orifice of the urn is naked, being destitute of teeth or peristome.

Gymnostomous. Same as *Gymnostomatous*.

Gymnotæni'idæ. (Γυμνός; ταινία, a band.) Van Beneden's term for the *Tæniæ* which possess neither a proboscis nor a circle of hooklets.

Gymnotre'moid. (Γυμνός; τρήμα, a hole; είδος, likeness.) A naked spot like a perforation.

Gymno'tus. (Γυμνός; νῶτος, the back. F. *gymnote*; G. *Nacktrücken*.) A Genus of the Suborder *Apoda*, Order *Teleostei*, Class *Pisces*.

G. electricus. Linu. (G. *Zitteraal*.) The electric eel. See *Electric fishes*.

Gynæ'caner. (Γυνή, gen. γυναικός, a woman; άνήρ, a man.) An effeminate or womanish man.

Gynæcan'thë. (Γυνή; άνθος, a flower.) The *Tamus communis*.

Gynæca'ron. (Γυναικάριον, dim. of γυνή, a woman. G. *Weibchen*.) Term for a little woman, or female.

Gynæca'rium. Same as *Gynæcarion*.

Gynæcatop'tron. (Γυνή, a woman; κάτοπτρον, a speculum. G. *Weiberspiegel*.) A vaginal speculum.

Gynæcatop'trum. Same as *Gynæcatoptron*.

Gynæce'a. Same as *Gynæccia*.

Gynæcei'a. (Γυναικεία; from γυνή, a woman.) Old term, used by Hippocrates, *Epid.* vi, i, t. 7, for the menses.

The term has also been used to signify the

GYNÆCEOUS—GYNATRESIA.

female generative organs, the process of menstruation, the liquor amnii, and the lochia.

Gynæceous. (Γυναικεῖος; from γυνή, a woman. F. *gynécé*; G. *weiblich*, *Weiber betreffend*.) Of, or belonging to, a woman.

Gynæceum. (Γυναικείον, the woman's part of the house; from γυνή, a woman.) An assemblage of women, according to Galen, *Meth. Med.* i, 2.

In Botany (F. *gynécée*), the female sexual part of a flower, or the *Pistil*, being the innermost floral whorl formed of a single carpel, or a collection of carpels, at the apex of the floral axis, or *Receptacle*; the lower part is the *Ovary*, enclosing an *Ovule* or many, which is attached by a *Funiculus* to a part of the tissue called the *Placenta*; above the ovary is the *Style*, one or several, each surmounted by the *Stigma*. When the receptacle is elevated, so that the base of the gynæceum is manifestly above the origin of the stamens the flower is hypogynous; when the receptacle is cup-shaped, with the andræceum on the edge, and the gynæceum at the bottom, the flower is perigynous; and in both cases the gynæceum is said to be superior. When the receptacle surrounds and forms part of the wall of the gynæceum the flower is epigynous and the gynæceum inferior.

Also, anciently applied to a conclave of qualified midwives, who sometimes had important judicial duties to perform, according to Rhodius, *ad Scribon.* n. 122.

Also, an old term for stibium, or antimony, because women adorned or improved the edges of the eyelids and the eyelashes by its use. (Goræus.)

Gynæci'a. Same as *Gynæceia*.

Gynæco- (Γυνή, gen. γυναικός, a woman.) In compound words signifies woman or female.

Gynæcological. (Γυνή; λόγος. F. *gynécologique*.) Of, or belonging to, *Gynæcology*.

Gynæcologist. (Γυνή; λόγος.) One who devotes himself to the study and treatment of diseases of women.

Gynæcology. (Γυνή, a woman; λόγος, a discourse. F. *gynécologie*.) A treatise or dissertation on, or the science of the nature, characteristics, and diseases of woman.

Gynæcomania. (Γυνή, a woman; μανία, madness. F. *gynécomanie*.) Term for a species of insanity consisting in an excessive desire for women.

Gynæcomas'thum. (Γυνή; μαστός, the breast.) Same as *Gynæcomaston*.

Gynæcomas'tia. (Γυνή; μαστός.) The state of a *Gynæcomastos*, whether occurring independently, or as a result of atrophy of the testicles.

Gynæcomas'ton. (Γυνή; μαστός, the breast, in late authors the female breast.) Old term (Gr. γυναικομαστόν), used by Galen, in *Defin. Med.*, for an unnatural enlargement of the breast in either sex.

Gynæcomas'tos. (Γυνή; μαστός, a breast. F. *gynécomaste*.) Term for a man with large breasts like those of a woman.

Gynæcomas'tum. Same as *Gynæcomaston*.

Gynæcomas'tus. Same as *Gynæcomastos*.

Gynæcoma'zia. (Γυνή; μαζός, the breast; in late authors a man's breast.) The condition of a *Gynæcomaston*.

Gynæcomor'phous. (Γυνή, a woman; μορφή, form. F. *gynécomorphe*.) Having the form of a woman, or of a female.

Gynæcomystax. (Γυνή; μύσταξ, the beard.) Old name (Gr. γυναικομύσταξ), used by Rolfinkius, *de Part. Genit.* ii, 34, for the hairs on the female pudendum.

Gynæcopath'i'a. (Γυνή; πάθος, suffering.) A disease of womankind.

Gynæcopath'ic. (Γυνή; πάθος.) Relating to the diseases of women.

Gynæcoph'o'nous. (Γυνή; φωνή, a voice. F. *gynécophone*.) Having the voice of a woman.

Gynæ'cophore. (Γυνή; φορέω, to bear.) Bilharz's term for the canal in the male *Bilharzia hæmatobia* which lodges the female worm.

Gynæcophoric canal. Same as *Gynæcophore*.

Gynæcophor'idæ. (Γυνή; φορέω.) Weinland's term for the intestinal worms of which the male carries the female in a gynæcophoric canal, as the *Bilharzia hæmatobia*.

Gynæcoph'orus. (Γυνή; φορέω, to bear.) Diesing's generic term for the *Bilharzia hæmatobia*.

G. hæmato'b'ius. The *Bilharzia hæmatobia*.

G. mag'nus, Cobbold. (L. *agnus*, great.) Found in the vena cava of *Arceuthobius fuliginosus*.

Gynælog'ia. Same as *Gynæcologia*.

Gynæma'nia. Same as *Gynæcomania*.

Gynæpath'ic. Same as *Gynæcopath'ic*.

Gynan'dria. (Γυνή, a female; ἀνήρ, a male. G. *Weibmännigkeit*.) A synonym of *Hermaphroditism*.

Also, the twentieth Class of Linnæus's system of classification of plants in which the stamens are united to the pistil, as in orchids.

Gynan'dric. (Γυνή; ἀνήρ.) Same as *Gynandrous*.

Gynan'drious. (Γυνή; ἀνήρ.) Same as *Gynandrous*.

Gynan'drophore. (Γυνή; ἀνήρ; φορέω, to bear.) A prolongation of the receptacle of a flower, which elevates the andræcium and the gynæcium above the perianth, as in the Magnolia and Passion flower.

Gynandrop'is. (Γυνή; ἀνήρ; ὄψις, appearance.) A Genus of the Nat. Order *Capparidaceæ*.

G. pentaphyl'la, De Cand. The *Cleome pentaphylla*.

Gynan'drous. (Γυνή; ἀνήρ. G. *Weibmännig*.) Having the stamens and pistils united.

Also, being the subject of hermaphroditism, with the appearance of female organs predominating.

Gynan'drus. (Γυνή; ἀνήρ.) Same as *Gynanthropus*.

Gynan'therous. (Γυνή; ἀνθή.) Having the stamens converted into pistils. (M. C. Cooke.)

Gynanthro'pus. (Γυνή, a woman; ἀνθρωπος, a man.) Old name, referred to by Riolanus, according to P. Zacchias, *Quæst. Med.-Leg.* vii, 1, q. 8, n. 6, for an hermaphrodite in whom the male character predominates.

Gynatres'ia. (Γυνή, a woman; ἀ, neg.; τίτρημι, to perforate. F. *gynatresie*.) Term for obliteration, as well as for imperforation, of the vagina or female genital canal.

GYNE—GYRI.

Gynē. (Γυνή.) A woman.
Gynæceum. See *Gynæceum*.
Gynæchoscope. (Γυνή, a woman; ἦχος, sound; σκοπῶ, to examine. F. *gynéchoscope*, *stéthoscope aux femmes*; G. *Frauenchoskop*.) Name given to a stethoscope or instrument for examining the sounds in the chest, abdomen, or other organs of women.
Gynæchoscopium. Same as *Gynæchoscope*.
Gynechos'copon. Same as *Gynechoscope*.
Gynechos'copum. Same as *Gynechoscope*.
Gyneci'a. Same as *Gynæcia*.
Gynecology. See *Gynæcology*.
Gynecopathic. Same as *Gynæcopathia*.
Gynecopathy. Same as *Gynæcopathia*.
Gynepathia. Same as *Gynæcopathia*.
Gyni'aci. (Γυνή, a woman.) Diseases peculiar to women.
Gynida. (Γυνή, a woman.) Old name for an hermaphrodite.
Gynoarion. Same as *Gynoarium*.
Gynoarium. (Γυνή; ὠάριον, a small egg.) A term for the ovary.
Gynobase. (Γυνή, a female; βάσις, a base. G. *Stempelboden*.) A prolongation or enlargement of the receptacle of a flower on which the gynæcium is carried.
Gynoba'sic. (Γυνή; βάσις. G. *Stempelbodenständig*.) Relating to a *Gynobase*.
G. style. See *Style*, *gynobasic*.
Gynoba'sis. (Γυνή; βάσις. G. *Stempelboden*.) Same as *Gynobase*.
Gynocardia. (Γυνή; καρδία, the heart.) A Genus of the Nat. Order *Bixaceæ*.
G. odor'ata. R. Brown. (L. *odoratus*, sweet-smelling.) Seeds supply *Chaulmugra* oil.
G. oil. Same as *Chaulmugra* oil.
Gynocardic acid. Found by Moss in *Chaulmugra* oil, and said to be its active principle. It has been used successfully in the same cases as the oil.
Gynocid'ium. An enlargement situated at the base of the pedicel of the capsule of mosses.
Gynodiœcious. (Γυνή; δῖς, twice; οἰκία, a house.) Diœcious, with some flowers hermaphrodite, and others female.
Gynœcium. See *Gynæceum*.
Gynophore. (Γυνή, a female; φορέω, to bear. G. *Stempelträger*.) In Botany, a term applied by Mirbel to a stalk-like prolongation of the thalamus beyond the calyx, which bears the ovary. It is an internode of the floral axis.
In Zoology, a term applied to the generative buds or gonophores of Hydrozoa which contain ova only; or to the branches upon which the female gonophores are borne.
Gynoplastic. (Γυνή; πλαστικός, fit for moulding.) Relating to the closing of unnatural openings in the female organs of generation; or to the opening of closed or dilatation of contracted natural openings of the same organs.
Gynopode. Same as *Podogyne*.
Gynopogon. A Genus of the Nat. Order *Apocynaceæ*.
G. stella'ta. Labill. The *Alyxia stellata*.
Gynospore. (Γυνή, a female; σπόρος, seed.) The large spore of Selaginellæ; called also *Macrospore*.
Gynostegium. (Γυνή; στέγη, a roof.) The sheath of a gynæcium.
Gynosteme. (Γυνή; στήμων, a thread.

G. *Griffelsäule*.) A column consisting of the united stamens and pistil, or andrœcium and summit of the gynæceum, as in the *Aristolochia* and the *Orehis*.
Same as *Androstylium*.
Gynostemium. Same as *Gynosteme*.
Gypsoph'ila. (Γύψος, chalk; φιλέω, to love. G. *Gypskraut*.) A Genus of the Nat. Order *Caryophyllaceæ*.
G. mura'lis. Linn. (L. *muralis*, belonging to a wall.) Used as *G. struthium*.
G. saxif'raga. Linn. (L. *saxum*, a stone; *frango*, to break.) Used as *G. struthium*.
G. stru'thium. Linn. (L. *struthio*, an ostrich.) Levant soap root. Used as *Saponaria officinalis*, as a lithontriptic.
Gypsophy'ton. (Γύψος, chalk; φυτόν, a plant.) The *Pimpinella saxifraga*, from its reputed lithontriptic properties.
Gyp'so-steatoma. (*Gypsum*; *steatoma*.) Lebert's term for a pustule of acne containing calcium sulphate.
Gyp'sum. (L. *gypsum*, chalk; from Gr. γύψος; probably from Pers. *jabsin*, lime. F. *gypse*; I. *gesso*; S. *yeso*; G. *Gyps*.) A natural form of calcium sulphate.
G. band'age. Same as *Bandage*, *plaster-of-Paris*.
G. us'tum. (L. *ustus*, burnt. G. *gebrannter Gyps*.) Plaster of Paris.
Gyp'syweed. The *Lycopus sinuatus* and the *L. virginicus*.
Gy'rant. (L. *gyrans*, part. of *gyro*, to turn round in a circle.) Turning round an axis.
Gy'ratæ. (L. *gyratus*, part. of *gyro*.) Swartz's name for the *Polypodiaceæ*.
Gy'rate. (L. *gyratus*; from *gyro*. F. *gyrate*; G. *gewunden*, *gedreht*.) Turning or turned in a circle.
Gy'rating. (L. *gyrus*.) Turning in a circle.
G. move'ments. Same as *Circus move'ments*.
Gy'ration. (L. *gyro*.) A synonym of *Giddiness*.
In Botany, a turning round, as of a climbing stem.
Also, the rotation of the liquid contents of the cells of certain low plants discovered by Corti of Modena in 1772; often called *Cyclosis*.
Gy'renbad. Switzerland, Canton Zürich, 2200 feet above sea-level. A mineral water, containing calcium and magnesium carbonate, a very small amount of iron, and free carbonic acid.
Gy'renceph'ala. (Γύρος, a ring; ἐγκέφαλος, the brain.) The third of Owen's Groups or Subelasses of *Mammalia*, being those in which the cerebral hemispheres are folded into more or less numerous gyri, and overlap, to a greater or less extent, the cerebellum and olfactory lobes. It includes the Cetacea, Ungulata, and Quadrumana.
Gy'ri. Plural of *Gyrus*.
G. bre'ves. (L. *brevis*, short.) The short, straight convolutions forming the island of Reil. They have a slightly hooked extremity.
G. cerebell'i. (L. *cerebellum*, the little brain. G. *Kleinhirnwindungen*, *Randwülste des Kleinhirns*.) The laminae of the cerebellum.
G. cere'bri. (L. *cerebrum*, the brain.) The convolutions of the brain.
G. coch'leæ. (*Cochlea*.) The windings of the scalæ of the cochlea.

G., development of. In regard to the development of the convolutions, Kölliker remarks that the olfactory lobes are the only well-developed lobes of the brain in man, the others being mere folds, which are more or less continuous with each other, and are only termed lobes for the sake of convenience. The olfactory lobes are club-shaped processes of the lower wall of the hemispheres, and which are close to the middle line in from three to five months' embryos, and may be traced back to the floor of the Sylvian fissure. The Sylvian fissure, which separates the frontal from the temporal lobes, appears about the beginning of the third month. It is bounded by the operculum about the seventh month. The convolutions of the island of Reil first appear towards the close of foetal life. The separation of the occipital from the parietal lobes by the parieto-occipital fissure occurs about the beginning of the third month.

Kölliker distinguishes two kinds of convolutions. First, those which owe their origin to the foldings of the thin walls of the hemispheres, which may be termed primary or primitive convolutions; and secondly, those which proceed from outgrowths of the surface of the hemispheres, which may be termed secondary. The sulci separating them may, with His, be termed total and cortical. The primitive sulci and convolutions develop, though at a different rate in different brains, about the third month, attain their maximum development at the fourth month, and disappear again, with certain exceptions, about the fifth month, so that at the sixth month the outer surface of the brain is again smooth. The primitive sulci which bound the primitive gyri are the sulcus hippocampi, the sulcus parieto-occipitalis, the sulcus calcarinus, the Sylvian fissure, and the lateral fold of the choroid plexuses. The secondary gyri of the surface, or the cortical convolutions, begin to appear at the close of the fifth or commencement of the sixth month. At this period the central sulcus appears as a shallow depression; the frontal region is still smooth, with the exception of small lateral sulci, the sulcus præcentralis and sulcus frontalis inferior. The parietal surface is mapped out by the appearance of the sulcus interparietalis anterior, and more posteriorly by the sulcus partly belonging to the occipital lobes, named the sulcus interparietalis posterior or sulcus occipitalis longitudinalis superior. Externally to this the occipital lobes are smooth. In the temporal region the sulcus temporalis superior runs parallel to the upper extremity of the Sylvian fissure and separates the superior and middle convolutions at what subsequently becomes their posterior extremity. The sulci on the lower surface of the temporal and occipital lobes are visible, viz., the sulcus occipito-temporalis medialis and the sulcus temporalis inferior. The median or internal face exhibits the sulcus calloso-marginalis, which constitutes the upper boundary of the gyrus fornicatus, in the seventh month, during which indications of nearly all the principal gyri and sulci are formed. On the upper surface of the frontal lobes the sulcus frontalis inferior, and then the sulcus frontalis superior, both become well-marked. The three frontal convolutions are now, therefore, defined. More posteriorly is the sulcus centralis, which, however, does not extend far downward and outward. From above the posterior extremity of the fissure of Sylvius the sul-

cus temporalis superior and the sulcus parieto-occipitalis are seen. Laterally, the Sylvian fissure with its branches is very prominent. Inferiorly, the posterior extremity of the first temporal sulcus is seen, and consequently the first temporal gyrus, and there is an indication of the second. Lastly, on the orbital surface the sulci orbitales are visible. There are finally elevations corresponding to the uncus and gyrus hippocampi, but the under surface of the brain is generally smooth. In the ninth month the frontal lobes exhibit very distinctly the three frontal convolutions and the two sulci parietales. The parietal lobes exhibit the gyrus parietalis superior with two secondary convolutions on the left side, whilst the gyrus parietalis inferior consists of two parts, the gyrus supramarginalis and the gyrus angularis. The former is prolonged into the first temporal convolution, the latter into the second temporal convolution. The occipital lobes present three convolutions; the temporal lobes three lateral and two inferior convolutions.

The convolutions are much more feebly developed in some groups of animals than in others. Hence Owen's classification of the Myelencephala, including the Monotremata and Marsupials; the Lissencephala, including the Rodents, Insectivora, and Chiroptera; the Gyrencephala, including the rest of the Mammalia with the exception of Man; and the Archencephala, which is represented by Man alone.

G. fasciculi arcuati. (*L. fasciculus*, a bundle; *arcuatus*, arched.) The *Gyrus temporalis inferior*, the *G. temporalis medius*, and the *G. temporalis superior*.

G. frontales. (*L. frons*, the forehead. *G. Stirnwindungen*.) The convolutions of the frontal region of the cerebrum, being the *Gyrus centralis anterior*, *G. frontalis inferior*, *G. frontalis medius*, *G. frontalis superior*, and *G. rectus*.

G. intestinalis. (*L. intestinum*, a gut.) The loops or convolutions of the intestines.

G. occipitales. (*L. occiput*, the back of the head.) The *Gyrus occipitalis primus*, *G. occipitalis secundus*, *G. occipitalis tertius*, and *G. descendens*.

G. of island of Reil. The *G. operii*.

G. operii. (*L. opertus*, hidden.) The convolutions of the *Island of Reil*.

G. orbital. (*L. orbita*, an orbit.) The convolutions on the under surface of the frontal lobe of the cerebrum, lying on the orbital plates of the frontal bone. See *Gyrus orbitalis externus*, *G. orbitalis internus*, *G. orbitalis lateralis*, *G. orbitalis medius*, and *G. orbitalis transversus*.

G. primitivi. (*L. primitivus*, first of its kind. *G. Urwindungen*.) The earliest convolutions seen in the developing brain, being those situated around the hinder branch of the fissure of Sylvius.

G. supraorbitalis. (*L. supra*, above; *orbita*, the orbit.) The *G. orbitales*.

G. temporales. (*L. tempora*, the temples.) The convolutions of the temporal region of the cerebrum; being the *Gyrus temporalis inferior*, *G. temporalis medius*, *G. temporalis superior*, *G. occipito-temporalis lateralis*, and *G. occipito-temporalis medialis*.

G. temporales transversi. (*L. transversus*, turned across. *G. quere Schläfenwindungen* of Heschl.) Three or four variable convolutions on the posterior part of the upper

GYRIS—GYRUS.

surface of the temporal lobe of the cerebrum; the anterior one is constant, the *Gyrus temporalis transversus anterior*.

G. unciformes. (L. *uncus*, a hook; *forma*, shape.) The *G. operi*, in reference to their slightly hooked extremity.

Gyris. (Γῦρις, the finest meal.) Starch, or fine meal; also pollen.

Gyrocarpæ. (Γυρός, round; καρπός, fruit.) Nees von Esenbeck's name for the *Combreteaceæ*.

Gyrocauterium. (Γῦρος, a ring; καυτήριον, a branding iron.) A circular cautery.

Gyrodactylidæ. (Γυρός, round; δάκτυλος, a finger.) Schmarda's term for a Family of trematode Entozoa which live in the mucus of the branchiæ of fishes.

Gyrodactylus. (Γυρός; δάκτυλος.) A Genus of the Family *Gyrodactylidæ*.

G. elegans, von Nordm. (L. *elegans*, neat.) Found in the gills of *Gasterosteus aculeatus*.

Gyroma. (Γυρώω, to round. *G. Krcisschüsselehen*.) A term for the globular protuberance on the thallus of some lichens. Also, the elastic ring surrounding the capsule of ferns.

Gyromia. (Γυρώω, to round.) A Genus of the Nat. Order *Trilliaceæ*.

G. virginica, Nutt. The *Medeola virginica*.

Gyrophora. (F. *tripe de roche*.) A Genus of the Family *Umbilicariæ*, Suborder *Lichenes*.

G. cylindrica, Ach. Lives on rocks. Used as food.

G. neecy. The *G. pellita*.

G., fringed. The *G. cylindrica*.

G. pellita, Ach. (L. *pellitus*, covered with skins.) Lives on northern mountains. Used as Iceland moss.

G. proboscidea, Ach. Hab. northern mountains. Nutritive but bitter. Said to produce colic.

G. pustulata, Ach. The *Umbilicaria pustulata*.

Gyrophoric acid. An acid obtained from *Gyrophora* or *Umbilicaria pustulata*. It forms small, soft, colourless, tasteless, odourless crystals, nearly insoluble in water, slightly soluble in alcohol. It is an uncertain substance.

Gyropsoriasis. (Γῦρος, a circle; ψωρίασις, a skin disease.) Psoriasis occurring in circular patches.

Gyropus. (Γυρός, round; πούς, a foot.) A Genus of the Family *Mallophaga*, Suborder *Aptera*.

G. dicotylis, Mac. (Δίς, twice; κοτύλη, a small cup.) Lives on the peccary.

G. gracilis, Nitzsch. (L. *gracilis*, slender. F. *gyrope grêle*.) Lives on the guinea-pig.

G. hispidus, Nitzsch. (L. *hispidus*, bristly.) Lives on the sloths.

G. longicollis, Nitzsch. (L. *longus*, long; *collum*, the neck.) Lives on the agouti.

G. ovalis, Nitzsch. (L. *ovalis*, egg-shaped. F. *gyrope ovale*.) Lives on the guinea-pig.

Gyrose. (L. *gyrus*.) Curved backward and forward in turns.

Gyrostemonæ. A Nat. Order of the *Monochlamydeæ*, having unisexual flowers, two, suspended, campylotropal ovules, hooked embryo, inferior radicle, and mealy albumen.

Gyrosyphilidochthus. (Γυρός, round.) Same as *Cyclosyphilidochthus*.

Gyrotrope. (Γῦρος, a circle; τρέπω, to turn.) A *Commutator*.

Gyrous. (Γῦρος.) Having, or full of, circles.

Gyrus. (L. *gyrus*, a circle; from Gr. γῦρος, a ring. *G. Kreis*, *Windung*.) A circle.

A term applied to the several convolutions of the brain, and to the windings of the cochlea.

G., angular. See *G. angulatus*.

G. angularis, Huxley. (L. *angulus*, an angle. F. *pli courbe* of Gratiolet; *G. zweite* or *mittlere Scheitellappenwindung* of R. Wagner, *zweite* or *mittlere Scheiteltbogenwindung* of Bischoff.) The posterior division of the *Lobulus parietalis inferior*. It is connected in front with the lobulus supramarginalis, curves over the end of the sulcus temporalis superior, is continuous below with the gyrus temporalis medius, and is connected with the occipital lobe by means of the gyrus occipitalis secundus, and sometimes the gyrus occipitalis tertius.

G., annectant, first external, Huxley. (L. *annecto*, to join on.) The *G. occipitalis primus*, Ecker.

G., annectant, second external, Huxley. The *G. occipitalis secundus* in part.

G., antero-parietal, Huxley. The *G. centralis anterior*.

G., antero-temporal, Huxley. The *G. temporalis superior*.

G., ascending frontal, Turner. The *G. centralis anterior*.

G., ascending parietal, Turner. The *G. centralis posterior*.

G., bridging, first, Turner. The *G. occipitalis primus*.

G., callosal, Huxley. The *G. fornicatus*, in reference to its relationship to the corpus callosum.

G. callosus. See *G., callosal*.

G. centralis anterior, Ecker. (L. *centralis*, belonging to the centre; *anterior*, in front. F. *quatrième circonvolution centrale* of Pozzi, *premier pli pariétal ascendant* of Gratiolet, *circonvolution transversale pariétale antérieure* of Foville; I. anterior portion of *processi anteroidei verticali di mezzo*, Rolando; *G. vordere Centralwindung*, Huschke.) The antero-parietal gyrus of Huxley, the ascending frontal gyrus of Turner, the transverse or ascending or fourth frontal convolution. A convolution bounding anteriorly the fissure of Rolando. It commences behind the bifurcation of the fissure of Sylvius, and runs upwards and backwards to the margin of the great longitudinal fissure of the brain; at its commencement and at its termination it joins with the *G. centralis posterior*, thus closing the fissure at each end. It gives origin to the three frontal convolutions.

G. centralis posterior, Ecker. (L. *posterior*, hinder. F. *circonvolution pariétale ascendante* of Pozzi, *c. transverse médio-pariétale* of Foville, *deuxième pli ascendant* of Gratiolet; I. hinder part of *processi anteroidei verticali di mezzo* or *gyrus postrolandicus* of Rolando; *G. hintere Centralwindung*.) The postero-parietal gyrus of Huxley, the ascending parietal convolution of Turner. A convolution bounding the fissure of Rolando posteriorly, at the upper and lower ends of which it joins the *G. centralis anterior*. Its lower half lies in front of the sulcus interparietalis. It gives origin to the

GYRUS.

convolutions of the parietal lobe, included in the *Lobulus parietalis superior* and *L. parietalis inferior*.

G. choroïdeus anterior. (*Choroid* membrane; *L. anterior*, in front.) The anterior of the two enlargements of which the developing choroid plexus of the embryo consists; being a fold of the pia mater, which invaginating pushes before it a thin medullary leaflet of the membrana obturatoria quarti ventriculi, which ultimately constitutes the epithelium of the plexus.

G. choroïdeus posterior. (*L. posterior*, hinder.) The posterior of the two enlargements of which the developing choroid plexus of the embryo consists. It is constituted by the non-invaginated part of the pia mater and membrana obturatoria.

G. cinguli, Burdach. (*L. cingulum*, a girdle. *G. Zwinge*.) The *G. fornicatus* of Ecker.

G., connecting, first, Turner. The *G. occipitalis primus*.

G. corporis callosi. (*L. corpus*, a body; *callosus*, hard.) The *G. fornicatus* of Ecker.

G. crista'tus. (*L. cristatus*, crested. *F. circonvolution crêtée* of Rolando.) The *G. fornicatus*, so called by Rolando from its likeness to the crest of a cock.

G. cunei, Ecker. (*L. cuneus*, a wedge. *F. seconde pli de passage interne* of Gratiolet, *pli de passage pariéto-temporal inférieur* of Pozzi; *G. Zwickelwindung*, *untere* or *fünfte Scheitelbogenwindung* of Bischoff, *pli de passage cunco-limbique* of Broca.) A small convolution joining the hinder end of the gyrus fornicatus and the apex of the cuneus.

G. dentate. The *G. dentatus*.

G. denta'tus, Huxley. (*L. dentatus*, toothed. *F. corps godronné*.) A small, notched, grey convolution in the fissura hippocampi, beginning behind the splenium of the corpus callosum, on the median surface of the *G. hippocampi*, and descending underneath the tænia hippocampi to the inferior surface of the fasciculus uncinatus, where it terminates. It is not so well developed in man as in some of the lower animals.

G. descen'dens, Ecker. (*L. descendo*, to go down.) A small, fusiform convolution of the occipital lobe lying on the margin of the great longitudinal fissure between the two branches of the calcarine fissure, close to the cuneus.

G. fornica'tus, Arnold. (*L. fornicatus*.) The gyrus fornicatus of Ecker, the *Isthmus gyri fornicati*, and the gyrus hippocampi combined.

G. fornica'tus, Ecker. (*L. fornicatus*, arched. *F. seconde circonvolution frontale interne* and *c. crêtée* of Pozzi, *c. de l'ourlet* of Foville, *pli du corps calleux* and *p. de la zone externe* of Gratiolet; *I. processo anterioideo cristato* of Rolando; *G. Zwinge* of Burdach, *Bogenwulst* and *äusseres Gewölbe* or *fornix periphericus* of Arnold.) The callosal gyrus of Huxley, the convolution of the corpus callosum of other authors. A convolution which commences near the anterior perforated space under the genu of the corpus callosum, turns round its anterior end, runs along its upper surface, and curving round its posterior extremity, ends in the gyrus hippocampi. Its origin is in relation with the septum pellucidum, the middle root of the olfactory nerve, and the gyrus rectus; soon it gives off a branch to the middle part of the gyrus frontalis superior; before its termination it joins the præcuneus,

sends a branch to the apex of the cuneus, the gyrus cunei, and joins the gyrus occipito-temporalis medius. It lies upon the corpus callosum, and above is separated from the median face of the gyrus frontalis superior by the sulcus calloso-marginalis.

G., fron'tal, ascend'ing, Turner. The dorsal portion of the *G. centralis anterior*.

G. fronta'lis infe'rior. (*L. frontalis*, belonging to the forehead; *inferior*, lower. *F. troisième circonvolution frontale* of Pozzi, *étage frontal inférieur*, or *é. frontal premier*, or *pli sourcilier*, of Gratiolet; *G. dritte Stirnwindung*, *untere Stirnwindung*.) The infero-frontal gyrus of Huxley, Broca's convolution, and third frontal convolution of many authors. A convolution of the frontal lobe forming its lower and outer portion. It arises from the lower part of the gyrus centralis anterior, arches around and above the ascending branch of the fissure of Sylvius to the orbital surface of the lobe, on which it runs to its hinder end, and here is also called the posterior orbital convolution. It assists in the formation of the operculum of the insula of Reil, and is the convolution supposed to be associated with articulate speech. It is separated from the gyrus frontalis medius by the sulcus frontalis inferior, and its inferior border forms part of the fissure of Sylvius.

G. fronta'lis inter'nus primus. (*L. internus*, inner; *primus*, first. *F. première circonvolution frontale interne* of Pozzi, *second pli*, or *pli de la zone externe du lobe fronto-pariétal* of Gratiolet.) The same as *G. marginalis*.

G. fronta'lis me'dius, Ecker. (*L. medius*, in the middle. *F. seconde circonvolution frontale* of Pozzi, *étage frontal moyen* of Gratiolet; *G. mittlere Stirnwindung*.) The medio-frontal gyrus of Huxley, the middle frontal convolution of other authors. A convolution of the frontal lobe which proceeds from the gyrus centralis anterior on the outer side and below the gyrus frontalis superior; increasing in size and complexity it runs forwards and turns round the margin of the frontal lobe, where it diminishes in size and terminates at the posterior part of the orbital surface of this lobe, where it is called the middle orbital convolution. At its commencement it is more or less separated from the gyrus centralis anterior by the sulcus præcentralis; it is divided from the gyrus frontalis superior and from the gyrus frontalis inferior by the sulcus frontalis inferior. Its central dorsal part is often very complex.

G. fronta'lis pri'mus, Ecker. (*L. primus*, first.) The dorsal part of the *G. frontalis superior*.

G. fronta'lis pri'mus, Meynert. The dorsal part of the *G. frontalis inferior*.

G. fronta'lis rec'tus. The *G. rectus*.

G. fronta'lis secun'dus. (*L. secundus*, second. *G. zweite Stirnwindung*.) The *G. frontalis medius*.

G. fronta'lis super'ior. (*L. frontalis*, belonging to the forehead; *superior*, upper. *F. première circonvolution frontale* and *gyrus rectus* of Pozzi, *étage frontal supérieur*, or *é. frontal troisième*, of Gratiolet, and his *pli de la zone externe*; *G. erste Stirnwindung*, *obere Stirnwindung*, *erste* or *obere Stirnwindungszug* of Bischoff.) The supero-frontal gyrus of Huxley with the gyrus rectus, the superior frontal convolution of other authors. A convolution of the frontal lobe which arises by one or more sources

GYRUS.

from the upper end of the gyrus centralis anterior, extends along the angle of the great longitudinal fissure to the anterior extremity of the lobe, and curves round it in tapering form to its lower surface, where it bounds the median fissure; here it is called the inner orbital convolution, or the gyrus rectus.

This gyrus is subject to many variations from the presence of secondary sulci, so that subordinate gyri are formed, which on the dorsal aspect sometimes again rejoin it, and sometimes join the gyrus frontalis medius. Another sulcus sometimes divides its inner aspect into two more or less distinct gyri. It is separated from the gyrus fornicatus by the sulcus calloso-marginalis, from the gyrus frontalis medius by the sulcus frontalis superior, and occasionally from the gyrus centralis anterior by an extension of the sulcus præcentralis.

G. frontalis tertius, Ecker. (*L. tertius*, third.) The *G. frontalis inferior*.

G. frontalis tertius, Meynert. The dorsal part of the *G. frontalis superior*.

G. fronto-parietalis medialis. The upper or dorsal part of the *G. frontalis superior*.

G. hippocampi, Burdach. (*Hippocampus*. *F. circonvolution à crochet* of Vieq d'Azyr, *pli unifornne* or *pli temporal moyen interne* and *lobule d'hippocampe* of Gratiolet; *G. Ammons-windung*, *Seepferdefusswulst*.) The uncinate gyrus of Huxley, the superior occipito-temporal convolution of other authors. It lies at the inferior median edge of the temporal lobe, having on its upper surface the fissura hippocampi, and on its lower the fissura occipito-temporalis inferior. It arises beneath the posterior extremity of the corpus callosum from the gyrus fornicatus, the gyrus cuneus, and the lingual lobule, and terminates in the gyrus uncinatus at the beginning of the transverse portion of the fossa Sylvii, behind the substantia perforata lateralis. Its anterior half is covered by a reticular layer of white nerve substance derived from the tænia of the corpus callosum.

G. infero-frontal, Huxley. The dorsal part of the *G. frontalis inferior*.

G. inframarginalis. (*L. infra*, beneath; *margo*, a margin.) The *G. temporalis superior*.

G. lingualis. (*L. lingua*, the tongue. *G. Zungenwindung*.) The *G. occipito-temporalis medialis*, Pansch.

G. marginalis, Turner. (*L. marginalis*, relating to a margin.) The median or inner aspect of the *G. frontalis superior*, being that which appears on the inner surface of the great longitudinal fissure of the cerebrum.

G. marginalis externus. (*L. externus*, outward. *G. äussere Bogenwindung*.) Schwalbe's term for *G. fornicatus* of Arnold.

G. marginalis inferior. (*L. margo*, a margin; *inferior*, lower.) The *G. temporalis superior*.

G. marginalis internus. (*L. internus*, inner. *G. innere Bogenwindung*.) Schwalbe's term for the parts below the corpus callosum, divisible into two limbs; the upper one consisting of the lamina septi pellucidi with the columns and body of the fornix, and the lower one consisting of the tænia hippocampi and the fascia dentata.

G. medialis fronto-parietalis, Pansch. The median or inner aspect of the *G. frontalis superior*, also called *G. marginalis*.

G. medialis occipitalis. The *Cuneus*. **G., medio-frontal**, Huxley. The dorsal part of the *G. frontalis medius*.

G., medio-occipital, Huxley. The *G. occipitalis secundus* in part.

G., medio-temporal, Huxley. The *G. temporalis medius*.

G. occipitalis descendens. (*L. descendens*, to pass down.) The *G. descendens*, Ecker.

G. occipitalis extremus. (*L. extremus*, last.) The *G. descendens*, Ecker.

G. occipitalis inferior, Pansch. The *G. occipitalis tertius*.

G. occipitalis medius, Pansch. The *G. occipitalis secundus*.

G. occipitalis primus, Ecker. (*L. primus*, first. *F. première circonvolution de passage* of Pozzi, *pli de passage supérieur externe* and *pli occipital supérieur* of Gratiolet; *G. erste obere Hinterlappenwindung* of Wagner; *obere innere* or *vierte Scheitelbogenwindung* of Bischoff; *oberer Zug der hinteren Centralwindung* of Huschke.) The first external annectant gyrus of Huxley, the first bridging or connecting gyrus of Turner. It proceeds from the posterior and median extremity of the lobulus parietalis superior, along the upper end of the fissura parieto-occipitalis, to the cuneus, thus connecting the parietal and occipital lobes.

The term has been applied by Wagner to the *Cuneus*; and by others to the convolution here described and the cuneus together.

G. occipitalis secundus, Ecker. (*L. secundus*, second. *F. pli occipital moyen* and *deuxième pli de passage externe* of Gratiolet; *G. zweite Hinterlappenwindung* of Wagner; *hintere* or *dritte Scheitelbogenwindung* of Bischoff.) The second annectant gyrus of Huxley. A convolution which runs from the posterior extremity of the occipital lobule behind the sulcus occipitalis transversus to the gyrus angularis.

G. occipitalis superior. (*L. superior*, upper.) The *G. occipitalis primus* and the *Cuneus*.

G. occipitalis tertius, Ecker. (*L. tertius*, third. *F. pli occipital inférieur* and *troisième* and *quatrième pli de passage externe* of Gratiolet; *G. dritte untere Hinterlappenwindung* of Wagner.) An annectant convolution running from the hinder end of the occipital lobe to the gyrus temporalis inferior and the gyrus temporalis medius.

G. occipito-temporalis. The *G. occipito-temporalis lateralis*, Pansch.

G. occipito-temporalis inferior. (*L. inferior*, lower.) The *G. occipito-temporalis lateralis*.

G. occipito-temporalis lateralis, Pansch. (*L. lateralis*, belonging to the side. *F. première circonvolution temporo-occipitale* of Pozzi, *quatrième circonvolution temporale* of Broca; *G. Spindelläppchen* of Pansch, *spindel-förmiges Läppchen* of Huschke, *unterer äusserer Hinterhauptswindungszug* and the *dritte untere Schläfenwindung* of Bischoff.) The fusiform lobule. A variably-shaped convolution on the outer side of the sulcus occipito-temporalis inferior which separates it from the gyrus occipito-temporalis medialis; on its own outer side is the inferior temporo-sphenoidal fissure, which separates it from the gyrus temporalis inferior. It is generally broad in the middle and tapering at the ends, its hinder end being in connection

GYRUS.

with the gyrus descendens and the gyrus temporalis inferior.

G. occip'ito-tempora'lis media'lis, Pansch. (L. *medialis*, belonging to the middle. F. *seconde circonvolution temporo-occipitale* of Pozzi, *circonvolution à crochet, pli unciforme* of Vieq d'Azyr; G. *Zungenlappchen* of Huschke, *untere innere Hinterhauptswindung* of Bischoff.) The lingual lobule. A club-shaped convolution bounded on the outer side by the sulcus occipito-temporalis, which separates it from the gyrus occipito-temporalis lateralis, and on the inner by the fissura calcarina.

G. occip'ito-tempora'lis supe'rior. The *G. occipito-temporalis medialis*.

G. olfacto'rius. (L. *olfacio*, to smell.) The *G. rectus*.

G. olfacto'rius exter'nus. (L. *olfacio*; *externus*, outer.) The external root of the olfactory tract.

G. olfacto'rius inter'nus. (L. *internus*, inner.) The inner root of the olfactory tract.

G. orbita'lis exter'nus, Weissbach. (L. *orbita*, an orbit; *externus*, outer.) The outer division of the supraorbital portion of the *G. frontalis medius*.

G. orbita'lis inter'nus, Weissbach. (L. *internus*, within.) The inner division of the supraorbital portion of the *G. frontalis medius*.

G. orbita'lis latera'lis, Pansch. (L. *lateralis*, belonging to the side.) The supraorbital portion of the *G. frontalis inferior*.

G. orbita'lis media'lis, Pansch. (L. *medialis*, relating to the middle.) The *G. rectus*.

G. orbita'lis me'dius, Pansch. (L. *orbita*; *medius*, in the middle.) The supraorbital portion of the *G. frontalis medius*.

G. orbita'lis me'dius, Weissbach. The middle part of the supraorbital portion of the *G. frontalis medius*.

G. orbita'lis transver'sus, Weissbach. (L. *transversus*, turned across.) The supraorbital portion of the *G. frontalis inferior*.

G. pari'etal, ascend'ing, Turner. The *G. centralis posterior*.

G. parieta'lis infe'rior, Pansch. (L. *inferior*, lower.) The *Lobulus parietalis inferior*.

The term is applied by R. Wagner to the *Lobulus supramarginalis* of Ecker.

G. parieta'lis me'dius. (L. *medius*, in the middle. G. *mittlere Scheitellappenwindung*.) The *G. angularis*.

G. parieta'lis pri'mus, R. Wagner. The *Lobulus parietalis superior* and *Præcuneus* of Ecker.

G. parieta'lis secun'dus, R. Wagner. (G. *zweite Scheitellappenwindung*.) The *G. angularis*.

G. parieta'lis supe'rior, Pansch. (L. *superior*, upper.) The *Lobulus parietalis superior*, Ecker.

G. parieta'lis ter'tius, R. Wagner. (L. *tertius*, third. G. *dritte Scheitellappenwindung*.) The *Lobulus supramarginalis* of Ecker.

G. pari'eto-occipita'lis latera'lis. (L. *lateralis*, belonging to the side.) The *G. occipitalis secundus*.

G. pari'eto-occipita'lis media'lis. (L. *medialis*, belonging to the middle.) The *G. occipitalis primus*, Ecker.

G. posterucia'tus. (L. *post*, behind; *cruciat*, from *crux*, a cross.) The hinder segment of the sigmoid gyrus.

G. poste'rior, Gratiolet. (L. *posterior*, hinder.) The *G. transversus*.

G. pos'tero-pari'etal, Huxley. The *G. centralis posterior*.

G. postfronta'lis. (L. *post*, behind; *frons*, the forehead.) The *G. posteruciat*.

G. postroland'icus, Broca. (L. *post*, behind; *fissure* of *Rolando*.) The *G. centralis posterior*.

G. præcrucia'tus. (L. *præ*, in front; *cruciat*, from *crux*, a cross.) The portion of the sigmoid gyrus which lies in front of the *Sulcus cruciat*.

G. præfronta'lis. (L. *præ*; *frons*, the forehead.) The same as *G. præcruciat*.

G. præroland'icus, Broca. (L. *præ*, in front of; *fissure* of *Rolando*.) The dorsal portion of the *G. centralis anterior*.

G. rec'tus. (L. *rectus*, straight.) The part of the gyrus frontalis superior which is situated on the orbital surface of the frontal lobe.

G. roland'icus ante'rior, Pansch. (*Rolando*, fissure of; L. *anterior*, in front.) The dorsal portion of the *G. centralis anterior*.

G. roland'icus poste'rior, Pansch. (L. *posterior*, behind.) The *G. centralis posterior*.

G., sig'moid, Flower. (Σ; εἶδος, likeness.) The arcuate convolution which surrounds the outer end of the sulcus cruciat of the fox and other carnivora.

G., supe'ro-fron'tal, Huxley. The dorsal part of the *G. frontalis superior*.

G. supramargina'lis. (L. *supra*, above; *margo*, a margin.) The *Lobulus supramarginalis*.

G. tempora'lis infe'rior, Ecker. (*Temporal bone*; L. *inferior*, lower. F. part of the *troisième circonvolution temporale* of Broca and of Pozzi, *étage inférieur du lobe temporo-sphénoïdal* and *pli temporal inférieur* of Gratiolet; G. *untere oder dritte Schläfenwindung*.) The inferior temporo-sphenoidal convolution. A convolution on the under surface of the temporal lobe lying between the gyrus occipito-temporalis lateralis from which it is separated by the inferior temporo-sphenoidal fissure and the gyrus temporalis medius, with which it frequently fuses anteriorly.

G. tempora'lis inframargina'lis, Huschke. (L. *infra*, below; *margo*, a margin.) The same as *G. temporalis superior*.

G. tempora'lis me'dius, Ecker. (L. *medius*, in the middle. F. part of the *seconde circonvolution temporale* of Broca and of Pozzi, *pli temporal moyen* and *partie descendante du pli courbe* of Gratiolet; G. *mittlere oder zweite Schläfenwindung* of Wagner and Huschke.) The medio-temporal gyrus of Huxley, the middle temporo-sphenoidal convolution of other authors. A convolution on the outer and under surface of the temporal lobe lying between the first and second temporo-sphenoidal fissures. At its upper and hinder end it joins the gyrus angularis, and below and in front it fuses with the gyrus temporalis inferior.

G. tempora'lis pri'mus, Wagner. (G. *erste obere Schläfenwindung*.) The *G. temporalis superior*.

G. tempora'lis secun'dus. (L. *secundus*, second. G. *zweite Schläfenwindung* of Wagner.) The *G. temporalis medius*.

G. tempora'lis supe'rior, Huschke.

GYTHIUM—HABENULA.

(Temporal bone; *L. superior*, upper. *F. première circonvolution temporale* of Broca and of Pozzi, *pli temporal supérieur*, or *pli marginal inférieur*, or *pli marginal postérieur* in apes, of Gratiolet, *partie inférieure de la circonvolution de l'encéinte de Foville*; *G. erste obere Schlafenswindung* of Wagner; *erste* or *äussere obere Schlafenswindungsgruppe* of Bischoff.) The antero-temporal gyrus of Huxley, the upper temporo-sphenoidal convolution of other authors. A convolution lying between the fissure of Sylvius and the sulcus temporalis superior; it arises at the hinder end of the temporal lobe, and runs along its outer surface to the lobulus supramarginalis, and in some degree to the gyrus angularis.

G. temporalis tertius, R. Wagner. (*L. tertius*, third. *G. dritte Schlafenswindung*.) The *G. temporalis inferior*.

G. temporalis transversus anterior. (*L. transversus*, turned across; *anterior*, in front.) Heschl's name for the anterior and constant one of the *Gyri temporales transversi*.

G. temporo-occipitalis. The *G. occipitalis tertius*.

G. temporo-sphenoidal, inferior, Turner. The *G. temporalis inferior*.

G. temporo-sphenoidal, superior, Turner. The *G. temporalis superior*.

G. transeundus. (*L. transeo*, to cross over.) The part of the *G. frontalis superior*

which surrounds the anterior ramus of the fissure of Sylvius.

G. transiti'vus, Huschke and Henle. (*L. transitivus*, passing over.) The dorsal part of the *G. frontalis inferior*.

The term has also been applied to the secondary gyrus connecting the posterior extremity of *G. centralis anterior* and the *G. frontalis inferior*.

G. transito'rius. (*L. transitorius*, passing through.) Same as *G. transeundus*.

G. transversus, Weissbach. (*L. transversus*, turned across.) The *G. orbitalis transversus*.

G. un'cinatè, Huxley. (*L. uncinatus*, furnished with hooks. *G. Ammonswindung*.) The *G. hippocampi*. See *G. uncinatus*.

G. uncinatus. (*L. uncinatus*. *G. Hakenwindung*, *Hakenwulst*.) The hook-like extremity of the *G. hippocampi*. See *G. uncinatè*.

Gythium. Greece, on the Laconian coast. A cold sulphur spring is found here, and also a spring containing sodium, calcium, and magnesium chloride, with traces of iodine and bromine.

Gy'izy. Hungary, County Honth. Several springs rise here, all containing sodium chloride, calcium, magnesium, and sodium carbonate, sodium sulphate, and free carbonic acid. It is said, but probably erroneously, that sodium acetate has been found. The waters are used in gout, rheumatism, and many eye diseases, and in chronic skin affections.

H.

H. The initial letter of *L. hora*, an hour. Used as an abbreviation.

Also, the initial letter of *L. haustus*, a draught. Also, the symbol of *Hydrogen*.

H. s. The initial letters of *L. hora somni*, at the hour of sleep, or bedtime. Used in prescriptions.

Haar'lem drops. (*Haarlem*, in the Netherlands.) Same as *Dutch drops*.

H. oil. The same as *Balsam, sulphur*.

Hab'azis. Same as *Habea-assis*.

Hab'bi. The *Hagenia abyssinica*.

Hab'bi-tchogo. The native name of the pear-shaped tubers of *Oxalis anthelmintica*. Used in Abyssinia as a tæniacide.

Hab'bi-tsalim. Same as *Habbi-zelim*.

Hab'bi-tsalmo. The native name of the *Jasminum floribundum* and *J. abyssinicum*. Used in Abyssinia as an anthelmintic.

Hab'bi-ze'lim. The Abyssinian name for a mixture of *Jasminum floribundum* and *Olea chrysophylla*. Used as a tæniacide.

Hab bu-nil. The name given by the Arabian physicians to the seeds of *Pharbitis nil*.

Hab'ea-as'sis. The esculent rhizome of *Cyperus esculentus*.

Hab-el-kalim'bat. The *Pistachia terebinthus*.

Habena. (*L. habena*, a thong; *from habeo*, to hold. *F. frein*; *G. Zügel*, *Riemen*.) A term used for *Frænum*.

Formerly (*F. bride*, *retinaeule*; *G. Zaum*, *Zaumbinde*) applied to a bandage for keeping the lips of wounds together; a uniting bandage.

Habe'næ. Plural of *Habena*.

H. of pine'al gland. See *Habenula of pineal gland*.

Habena'ria. A Genus of the Nat. Order *Orchidaceæ*.

H. bifo'lia, Brown. (*L. bis*, twice; *folium*, a leaf. *G. Stendelwurz*.) Butterdy orchis. Root yields *Salap*.

Habe'nula. (*L. dim. of habena*, a rein.) A structure in the shape of a rein.

In Anatomy, a small, superficial, grey nucleus of the optic thalamus, situated above and in front of the entrance of the posterior commissure.

H. arcua'ta. (*L. arcuatus*, arched. *G. bedecktes Band*.) The innermost zone of the membrana basilaris of the cochlea.

H. denticula'ta. (*L. denticulatus*, furnished with small teeth.) Same as *H. perforata*.

H. exter'na. (*L. externus*, outer.) The *H. perforata*.

H., gan'gion of. See *Ganglion of habenula*.

H. gangliona'ris. The *Ganglion spirale* of the cochlear nerve.

H. inter'na. (*L. internus*, internal.) The *Labium vestibulare*.

H. of pine'al gland. The medullary striae of the pineal gland.

H. pectina'ta. (*L. pecten*, a comb.) The outer zone of the membrana basilaris of the cochlea.

H. perfora'ta. (*L. perforatus*, part. of *perforo*, to bore through. *G. durchbrochenes Band*.) The space at the junction of the membrana basilaris with the labium tympanicum of

HABENULAR—HÆMACYTOMETER.

the lamina spiralis ossea which is perforated for the transmission of nerve fibres to the organ of Corti.

H. sulcata. (L. *sulcatus*, part. of *sulco*, to furrow.) The *Labium vestibulare*.

H. tecta. (L. *tectus*, part. of *tego*, to cover. G. *bedecktes Band*.) The inner zone of the *Membrana basilaris* which supports the organ of Corti.

Habe'nular. (L. *habenula*. F. *habenulaire*.) Ribbon-like; floating like a thong.

Haberdepois. Term for the weights which butchers were ordered to provide in the reign of Henry the Eighth.

Hä'bernbad. Switzerland, Canton Bern. A sulphur spring and a whey cure.

Hab'hal-habash'i. The Arabian name of *Cardamomum majus*.

Habilla. (S. dim. of *haba*, a bean.) A little bean.

H. de Carthage'na. Same as *Bean of Carthage'na*.

Habit. (Old F. *habit*, a garment, a use; from L. *habitus*, condition. F. *habitude*; I. *abito*; S. *habito*; G. *Gewohnheit*.) The ordinary condition or constitution of the body; the tendency to repeat certain actions; the organic disposition which results from the repetition of certain actions.

In Biology (G. *Aussehen*), the general appearance and manner of life of a living thing.

H., apoplec'tic. Same as *Apoplectic constitution*.

H. of body. The constitution or temperament of the body.

Habitat. (L. *habitat*, third person sing., pr. tense, indie. mood, of *habito*, to dwell, or inhabit. F. *habitation*; G. *Bewohnung, Wohnung, Standort*.) The natural abode or place of growth of an animal or a plant; the geographical range of the natural growth of a living thing.

Habitation. (F. *habitation*; from L. *habitato*, a dwelling; from *habito*, to dwell. F. *habitation*; I. *abitazione*; S. *habitation*; G. *Bewohnung, Wohnung*.) A place of abode. The situation or country in which plants grow and animals dwell; the climate and place naturally selected, as it were, by an organised being.

Habitativity. (F. *habitativité*; from L. *habito*, to dwell.) The instinct which attaches a person to his own special country or manner of living.

Habitual. (L. *habitus*, the state or quality of the mind or body. F. *habituel*; I. *abituale*; S. *habitual*; G. *gewöhnlich*.) Of, or belonging to, the habit or state or disposition of the mind or body. Formed or acquired by repetition or custom. Applied to diseases to which the body has become accustomed.

H. characters. The characters which are common to the several individuals of a species or kind.

Habitude. (F. *habitude*; from L. *habito*, condition. G. *Gewohnheit*.) The being accustomed to the same act or custom by frequent repetition; habit.

Habitu'do. Same as *Habitude*.

Habitus. (L. *habitus*, state.) Same as *Habit*, and *Habit of body*.

H. apoplec'ticus. A disposition towards apoplexy. Same as *Apoplectic constitution*.

H. corporis. (L. *corpus*, a body.) Same as *Habit of body*.

H. phthis'icus. See *Phthysical habit*.

H. quadra'tus. (L. *quadratus*, square.) The square-built, short-necked habit of body said to conduce to apoplexy.

H. torosus. (L. *torosus*, fleshy.) The brawny, fleshy build of body said to conduce to apoplexy.

Habroma'nia. (Ἀβρός, light, gay; μανία, madness.) Term for delirium in which the patient is cheerful or merry.

Habrone'ma. (Ἀβρός, graceful; νῆμα, a thread.) A Genus of sexually mature nematode worms.

H. mus'cæ. Carter. (L. *musca*, a fly.) Found in the head and rostellum of the *Musca domestica*.

Hab'roneme. (Ἀβρός; νῆμα.) Having the appearance of fine threads.

Hab'zeli. The native name of *Unonia æthiopica*.

Habz'elia. (Habzeli.) A Genus of the Nat. Order *Anonaceæ*.

H. æthiop'ica. A. De Cand. The *Unona æthiopica*.

H. aromatica. A. De Cand. The *Unona aromatica*.

Hach'ich. Same as *Haschisch*.

Hach'isch. See *Haschisch*.

Hack'berry. The *Celtis occidentalis*.

Also, the *Prunus padus*.

Hack'elthal. Bavaria, near Haag. A mineral water, containing sodium, calcium, and magnesium carbonates, sodium chloride, and much free carbonic acid.

Hack'isch. Same as *Haschisch*.

Hack'ly. Covered with fine irregular points.

Hæ'cub. A name for the *Gundelia tournefortia*.

Hæ'ddock. (Mid. E. *haddoke*; of uncertain origin. F. *égrefin*; G. *Schellfisch*.) The *Gadus aeglefinus*, a delicate-fleshed, easily digestible fish. Its liver is said to furnish some cod-liver oil.

Hæ'did. (Arab.) Old name for iron. (Ruland, and Johnson.)

Hæ'dschî. A Turkish name for *Haschisch*.

Hæcce'itas. Old term, used by Libavius, *Tr. de Igne Naturæ*, c. 25, *fin.*, signifying the quinta essentia, or specific essence of the alchemists, a vital active principle by which medicines operate.

Hæ'dus. (L. *hædus*, a kid. F. *chevreau*; G. *Böckchen, Ziegenböcklein*.) A kid or young goat; the young of *Capra hircus*.

Hæmacelino'sis. (Αἷμα, blood; κηλίς, stain.) A term applied by Rayer to *Purpura*.

Also, applied to *Cyanosis*.

Hæmachro'in. (Αἷμα, blood; χροά, colour.) A synonym of *Hæmatin*.

Hæmachro'ses. (Αἷμα; χροάσις, a colouring.) Diseases in which the colour of the blood is morbidly changed, as cyanosis.

Hæmac'ous. (Αἱμακτός, mingled with blood.) Bloody.

Hæmacy'anin. (Αἷμα, blood; κύανος, blue. F. *hémacyanine*.) A blue colouring matter which has been detected in the blood by Lassaigne and Lecanu, and in the bile by Sanson.

Hæmacytom'eter. (Αἷμα, blood; κύτος, a hollow; μέτρον, a measure.) An in-

HÆMADONOSOS—HÆMANTHUS.

strument for the enumeration of blood-corpuscles in a given volume of blood.

The principle of the method was first adopted by Vierordt, who formed lines of diluted blood on a microscopic slide and counted the corpuscles in a definite length. Malassez counted them in a capillary tube, and Hayem adopted a cell of known depth and an eyepiece for the microscope ruled in squares, by which two elements the volume of blood under observation could be determined.

H., Gowers'. (William R. Gowers, an English physician of the present time.) This consists of a glass slide, the centre of which is ruled into .1 mm. squares, and surrounded by a glass ring .2 mm. thick. It is provided with measuring pipettes, a vessel for mixing the blood with a solution of sulphate of soda of sp. gr. 1.015, glass stirrers, and guarded needle. In using it 995 cubic mm. of the saline solution are placed in the mixing jar; 5 cubic mm. of blood drawn from the finger are blown into the solution. The two fluids are well mixed with the stirrers, and a small drop of this solution is placed in the centre of the cell, the cover glass gently laid on so as to touch the drop, which thus forms a layer 1.5 mm. thick between the slide and cover glass, and pressed down by two brass springs. In a few minutes the corpuscles have sunk to the bottom of the layer of fluid and rest on the squares. The number in the squares is then counted, and this multiplied by 10,000 gives the number in a cubic millimeter of blood. The instrument is a modification of Hayem's apparatus.

H. solution. The solution used by Gowers for diluting the blood. It consists of sodium sulphate 104 grains, acetic acid one drachm, and distilled water 6 ounces.

Hæmadon'osos. (Αἱμάς, a stream of blood; νόσος, disease. F. *hæmadonose*; G. *Blutgefäßkrankheit*.) A disease of the blood-vessels.

Hæmadon'osus. Same as *Hæmadon'osos*.

Hæmadostenosis. (Αἱμάς, a stream of blood; στένσις, a contraction. F. *hæmadosténose*; G. *Blutgefäßverengerung*.) A contraction or obliteration of the vessels through which the blood flows.

Hæmadosteo'sis. (Αἱμάς, a stream of blood; ὀστέον, a bone. F. *hæmadostéose*; G. *Blutgefäßverknöcherung*.) Ossification of the blood-vessels.

Hæmadrom'eter. Same as *Hæmodrometer*.

Hæmadromom'eter. Same as *Hæmodromometer*.

Hæmadynam'eter. Same as *Hæmodynameter*.

Hæmadynam'ics. (Αἱμα; *dynamics*.) The physics of the circulation of the blood.

Hæmadynamom'eter. See *Hæmodynamometer*.

Hæmagas'ter. See *Hæmatogaster*.

Hæmagas'tric. (Αἱμα, blood; γαστήρ, the stomach. F. *hémagastrique*.) Of, or belonging to, effusion of blood in the stomach.

H. fe'ver. A synonym of *Yellow fever*.

H. pes'tilence. A term used by Copland for yellow fever.

Hæmago'ga. (G. *bluttreibende Mittel*.)

Medicines having the property called *Hæmagogue*.

Hæ'magogue. (Αἱμα, the blood; ἄγω, to expel. F. *hémagogue*; I. *emagogo*; S. *hemagogo*; G. *bluttreibend*.) Remedies which are employed to favour the accession of the catamenia, or of the hæmorrhoidal discharge.

Hæmagog'um. (Αἱμα; ἄγω.) The *Pæonia officinalis*.

Hæ'mal. (Αἱμα, the blood.) Of, or belonging to, the blood or to the blood-vascular system.

H. a'lae. (L. *ala*, a wing.) A term applied to the lateral portions of the hæmal arch.

H. arch. Term employed by Owen to distinguish the inferior hoop of the typical vertebra. It is formed dorsally by the centrum, laterally by a pair of symmetrically situated bones named the pleurapophyses, beyond which is another pair, the hæmapophyses, and inferiorly by a bone, sometimes bifid, called the hæmal spine. The hæmal arch is so called because it encircles the essential part of the vascular system.

H. axis. Term applied by Professor Owen, in his Homologies, to the central organ and large trunks of the vascular system.

H. canal'. (Αἱμα; L. *canalis*, a canal.) The space in Owen's typical vertebra bounded by the hæmal arch.

H. cavity. The cavity included within the hæmal arch containing the heart and great vessels with the respiratory organs and the alimentary canal and its derivatives.

H. flex'ure. (L. *flexura*, a bending.) The flexure of the alimentary canal of Mollusca towards the heart and great blood-vessels.

H. spine. (F. *hémépine*.) Term used by Professor Owen, in his Homologies, for that part of the ideal typical vertebra below the canal in which are lodged the central organ and large trunks of the vascular system; the homologue of the sternum and ensiform cartilage, or, in the abdomen, the linea alba.

H. system. The circulatory system.

H. tube. Same as *H. cavity*.

Hæmaleu'cin. (Αἱμα, blood; λευκός, white. F. *hémaleucine*.) Hatin's term for the buffy coat of the blood.

Hæmaleuco'sis. (Αἱμα; λευκός.) Hatin's term for the production of the buffy coat of the blood, or *Hæmaleucin*.

Hæmalop'ia. (Αἱμάλωψ, a bloodshot place.) Effusion of blood under the conjunctiva; bloodshot eye.

Also, effusion of blood into the eye, either into the anterior chamber, or the vitreous body, or under the retina.

Also (αἱμα, blood; ὤψ, the eye), red vision; a condition in which all things look blood-red.

Also, a synonym of *Hypohæma*.

Hæmalop'is. Same as *Hæmalopia*.

Hæmalops. (Αἱμάλωψ, a bloodshot place.) A bloodshot eye.

Also, a sugillation on the face.

Hæmamoe'ba. (Αἱμα, blood; ἀμαβα. F. *hémamibe*.) A term for a *Leucocyte*, in reference to its amoeboid movements.

Hæman'thine. (Αἱμα, blood. G. *blutroth*.) Of a blood-red colour.

Hæman'thus. (Αἱμα, blood; ἄνθος, a flower; from its colour. F. *hémante*; G. *Blutblume*.) A Genus of the Nat. Order *Anaryllidaceæ*.

H. coccin'eus. (L. *coccineus*, scarlet.)

HÆMANTLION—HÆMATELYTROMETRA.

Hab. South Africa. Fresh leaves used as an antiseptic application to foul ulcers and to carbuncles. Bulb diuretic; used in dropsy and asthma.

H. toxica'rius, Ait. (Τοξικόν, arrow poison.) The blood-flower, or African tulip. The juice of the bulb is used by the Hottentots to poison their arrows.

Also, called *Brunsvigia toxicaria*.

Hæmantlion. (Αἷμα; ἀντλήω, to draw water.) An exhausting syringe with a chamber for the purpose of withdrawing blood from the living body for investigation.

Hæmaperitonorrhag'ia. (Αἷμα; περιτόναιον, the peritoneum; ῥήγνυμι, to break forth.) Effusion of blood into the peritoneal cavity.

Hæmaphæ'ic. Relating to, or containing, *Hæmaphæin*.

H. urine. Urine of a reddish-amber colour which occurs in cases of grave alterations of the condition of the blood-corpuscles, accompanied by liver disturbance. It assumes a mahogany colour on the addition of nitric acid.

Hæmaphæ'in. (Αἷμα, blood; φαῖός, of a brown, fawn, or dusky colour. F. *hæmaphéine*.) Simon's term for a brownish substance obtained from the blood in some cases of jaundice. It is soluble in alcohol, insoluble in ether and water. It is probably a mixture of hæmatosin and biliverdin. Some have supposed that it is the substance which gives the pale amber colour to the urine of the healthy adult.

Hæmaphæ'ina. (Αἷμα; φαῖός.) Same as *Hæmaphæin*.

Hæmaphæ'ism. (Αἷμα; φαῖός. F. *hémaphéisme*.) A brownish-red colouration of the urine, which is not dependent upon the presence of bile acids.

Hæmaph'obus. See *Hæmatophobus*.

Hæmapoiet'ic. (Αἷμα, blood; ποιέω, to make.) Blood-forming; blood-making.

Hæmapophys'ial. (F. *hémaphophysial*.) Of, or belonging to, an *Hæmapophysis*.

Hæmapophys'is. (Αἷμα; ἀπόφυσις, an offshoot.) Owen's term for the pair of symmetrically situated bones which intervene between the pleurapophysis and the hæmal spine, and form the lateral parts of the hæmal and ventral arch of a vertebra.

Hæmapor'ia. See *Hæmatapor'ia*.

Hæmap'tysis. See *Hæmoptysis*.

Hæmarthron. (Αἷμα, blood; ἄρθρον, a joint.) Effusion of blood into a joint, so as to distend it; generally the result of injury.

Hæmarthros. Same as *Hæmarthron*.

Hæmarthro'sis. (Αἷμα, blood; ἄρθρωσις, a jointing.) Effusion of blood into a joint. It is caused by injury, and in time becomes absorbed.

Hæmas. (Αἱμάς, a stream of blood.) An old term for a blood-vessel.

Hæmastatics. (Αἷμα, blood; στατική, the science of bodies at rest. F. *hémastatique*; I. *emastatica*; S. *hemastatica*; G. *Hämastatik*.) The section of physiology which relates to the laws of the equilibrium of the blood in the vessels.

Hæmasthen'o'sis. (Αἷμα, blood; ἀσθένεια, debility. F. *hémasthénose*; G. *Blut-schwächung*.) Poverty or deterioration of the blood.

Hæmatachom'eter. See *Hæmato-chometer*.

Hæ'matal. (Αἷμα, blood.) Same as *Hæmal*.

Hæmatallos'copy. (Αἷμα; ἄλλος, other; σκοπέω, to observe. F. *hématalloscopie*.) Taddei's term for the medico-legal examination of the blood in regard to its recognition and its differentiation.

Hæmatanago'gë. (Αἷμα, blood; ἀναγωγή, a bringing up. F. *hématanagoge*; G. *Blutauswurf*.) Rejection or vomiting of blood.

Hæmatangei'on. (Αἷμα; ἄγγειον, a vessel.) A blood-vessel, especially a small one.

Hæmatangion'osus. (Αἷμα, blood; ἄγγειον, a vessel; νόσος, a disease. F. *hématangionose*; G. *Blutgefässkrankheit*.) A disease of the blood-vessels.

Hæmatangion'osus. Same as *Hæmatangionosus*.

Hæmatangio'sis. (Αἷμα; ἄγγειον. F. *hématangiose*.) Disease of the blood-vessels.

Hæmatapor'ia. (Αἷμα; ἀπορία, defect. F. *hémaporie*; G. *Blutmangel*.) A term synonymous with *Anæmia*; that is, a wasting from poverty of the blood.

Hæmatapor'ic. Of, or belonging to, *Hæmatopor'ia*.

Hæmataporrho'sis. (Αἷμα, blood; ἀπό, from; ῥόπος, serum. F. *hémaporrhose*.) The separation of the serum from the blood, as is exhibited in the profuse discharges of cholera.

Hæmatapos'tasis. (Αἷμα; ἀπόστασις, a departure. F. *hématapostase*.) A metastasis, or transposition of the blood to another part.

Hæmataposte'ma. (Αἷμα, the blood; ἀπόστημα, an abscess. F. *hématapostème*; G. *Blutabscess*.) An abscess containing blood.

Hæmatau'chen. (Αἷμα; αὐχὴν, the neck.) Matthews Duncan's term for a distension of the neck of the womb with retained menstrual blood, the body of the womb being undilated. It may be produced by an imperforate hymen, by atresia of the vagina, or by other physical obstruction to the menstrual flow.

Hæmataulics. (Αἷμα; αἰλος, a tube. F. *hémataulique*.) A term applied by Magendie to the laws regulating the movements of the contents of the vascular system.

Hæmatau'ris. (Αἷμα; L. *auris*, the ear. F. *hématareille*.) Term for hæmorrhage in the internal ear.

Hæmate'ate. A compound of hæmatein with an alkali.

H. of ammo'nium. A dark-violet granular powder deposited when an ammoniacal solution of hæmatoxylin is exposed to the air.

Hæmatec'lysis. (Αἷμα, blood; λύσις, a dissolution. F. *hémateclysis*; G. *Auflösung des Blutes*.) A dissolution, or separation of the constituent parts, of the blood.

Hæmate'in. (F. *hémateine*; I. *emateina*; G. *Hämatein*.) C₁₆H₁₂O₆. A substance obtained by treating hæmatoxylin with a little ammonia, exposing it to the air to form hæmateate of ammonia, and decomposing this with acetic acid. When dry it has a deep green colour with a metallic lustre. It is soluble in alcohol and water, sparingly in ether; it unites readily with bases.

Hæmatele'um. (Αἷμα, blood; ἔλαιον, oil. F. *huile de sang*; G. *Blutöl*.) Term given by Babington, *Med.-Chir. Trans.*, vol. xvi, to a concrete oil existing in the blood.

Hæmate'lytrometra. (Αἷμα; ἔλν-

HÆMATEMESIS—HÆMATIN.

τρον, a sheath; μήτρα, the womb.) A collection of menstrual blood in the uterus and vagina from imperforate hymen.

Hæmatemesis. (Αἷμα, blood; ἐμέω, to vomit. F. *hémátémèse*; I. *ematemesi*; S. *hematemesis*; G. *Blutbrechen, Magenblutung*.) Vomiting of blood, which may be caused by disease of the stomach, as an ulcer; by congestion of its mucous surface from disease in other parts, as hepatic cirrhosis; or by some change in the blood itself, the result of some general disease, as scurvy and yellow fever; or it may first have proceeded from the œsophagus, as in malignant disease; or the nostrils, as in epistaxis; or it may have been introduced into the stomach from without, as by the bursting into it or into the œsophagus of an aneurysm. It may also be caused by wound or injury. If the bleeding be slow the vomit is dark-coloured; if it be active the vomit will be florid.

H., men'strual. (L. *menstruus*, monthly.) Same as H., *vicarious*.

H., vica'rious. (L. *vicarius*, substituted.) Vomiting of blood substituted for the menstrual discharge.

Hæmatemetic. (F. *hémátémétique*.) Of, or belonging to, *Hæmatemesis*.

Hæmatencephalic. (F. *hématen-céphalique*.) Of, or belonging to, *Hæmatencephalon*.

Hæmatenceph'alon. (Αἷμα, blood; ἐγκέφαλον, that which is within the head. F. *hématen-céphale*; G. *Hirnblutung*.) A bleeding within the eranium.

Hæmatenceph'alum. Same as *Hæmatencephalon*.

Hæmatepagog'ë. (Αἷμα; ἐπαγωγή, introduction. F. *hématepagoge*; G. *Blutcongestion*.) Congestion of blood in a part.

Hæmatepigastrium. (Αἷμα; ἐπιγάστριον, the epigastrium.) Hæmorrhage between the peritoneum and the abdominal muscles.

Hæmatepis'chesis. (Αἷμα; ἐπισχέσις, a retention or suppression of a secretion. F. *hémátépische*.) A stagnant condition of the blood.

Hæmaterethica. (Αἷμα; ἐπιθίζω, to arouse.) A family of diseases, according to Schultz, including erythrosis, chlorosis, cyanosis, hæmorrhage, and blood congestion.

Hæmaterous. (Αἷμα, the blood. F. *hémátère*; G. *blutig*.) Belonging to, or of the nature or appearance of, blood; sanguinolent; bloody; applied to the alvine secretion and others.

Hæmater'ythrum. (Αἷμα; ἐρυθρός, red.) A synonym of *Hæmatin*.

Hæmatexosto'sis. (Αἷμα; ἐξοστωσις, an osseous tumour on the surface, or in the cavity, of a bone. F. *hématexostose*.) An exostosis or bony tumour with distinct blood-vessels.

Hæmather'ma. (Αἷμα; θέρμη, heat. F. *hématherme*.) Latroille's term for those animals that have warm blood.

Hæmather'mous. (Αἷμα, blood; θερμ, heat.) Having warm blood; warm-blooded.

Hæmathidro'sis. (Αἷμα, blood; ἵδρωσις, a sweating. F. *hémathidrose*; G. *Blutschwitzen*.) A sweating of blood, or the oozing out of blood-coloured perspiration by the pores of the skin. It is a bleeding from the

capillaries of the sweat glands. It may be vicarious menstruation; it occurs sometimes in yellow fever and in hæmophilia.

Hæmathi'on. (Αἷμα; θείον, sulphur.) A green, amorphous, albuminoid body which separates on cooling from a solution of oxyhæmoglobin in sulphuretted hydrogen water.

Hæmathoracograph'ion. (Αἷμα; θώραξ, the chest; γράφω, to write.) Term applied by Ceradini to the *Kardiopneumograph* of Landois.

Hæmatho'rax. See *Hæmatothorax*.

Hæmati'asis. (Αἷμα, the blood.) A term which has the same meaning as *Hæmatonosis*.

Hæmatic. (Αἱματικός, charged with blood.) Bloody; containing, full of, or relating to, blood.

Also, of a blood-red colour.

Also, applied to a substance which is able to improve the quality of the blood.

H. acid. A substance obtained by Treviranus when carbonised blood is heated to redness with sodium carbonate and the residue treated with alcohol, from which it is deposited in yellow crystals.

H. cri'sis. See *Crisis, hæmatic*.

H. crys'tals. A synonym of *Hæmatoidin*.

H. cyst. See *Cyst, sanguineous*.

H. poi'son. See *Poison, hæmatic*.

H. transforma'tion. Burdach's term for the passage of the unaltered principles of the blood into the ordinary secretions, and their change into pus cells.

Hæmatica. (Αἱματικός.) Good's term for diseases of the sanguineous function.

Also, a term for medicines which improve the quality of the blood.

Hæmatics. (Αἷμα, the blood.) The doctrine or consideration of the blood.

Also, the consideration of the signs and diagnosis deducible from the condition of the blood.

Hæmatidro'sis. See *Hæmathidrosis*.

Hæmatie. (Αἷμα, blood. F. *hématie*.) Gruithuisen's term for a red blood-corpuscle.

Hæmatim'eter. See *Hæmatometer*.

Hæmatim'etry. See *Hæmatometry*.

Hæmatin. (Αἷμα. F. *hématine*; I. *hematina*; G. *Hämatin*.) $C_{68}H_{70}N_8Fe_2O_{10}$, or $C_{34}H_{35}N_4FeO_5$, or, according to Thudichum, $C_{32}H_{32}FeN_4O_6$. A bluish-black, metallic-looking, amorphous substance obtained from defibrinated blood by mixing it with a large quantity of a ten per cent. solution of common salt, which causes the blood globules to separate; these are dried, rubbed up with some fifteen times their weight of glacial acetic acid, and heated till they are dissolved; the solution is diluted with five or six times its volume of water, and set aside for some weeks for crystals of hæmin or hydrochlorate of hæmatin to separate; these may be dissolved in a very dilute solution of potassium hydrate, and the solution treated with hydrochloric acid, which throws down the hæmatin. It is insoluble in water, alcohol, and ether, soluble in diluted acids, in solutions of the caustic alkalis, and in acidulated ether and alcohol. It can be heated without decomposition to $180^{\circ}C$. ($356^{\circ}F$.); at a higher temperature it burus, evolving hydrocyanic acid, and leaving as ash 12.6 per cent. of pure oxide of iron. Hæmatin exists in the red blood-corpuscles, in combination with proteids, as *Hæmoglobin*, of which in the dog it forms 4 per cent. Hæmatin in acid solu-

HÆMATINIC—HÆMATOCELE.

tion, formed by adding acetic acid to a solution of hæmoglobin, gives a spectrum with four absorption bands in the yellow and green; in alkaline solution, as by the addition of excess of ammonia to the acid solution, it gives one absorption band between the yellow and the red. When boiled with solution of potash it forms a green liquid. Its name was given to it by Hünefeld in 1827.

Also, sometimes erroneously used for *Hæmatin*.

H., acid. Same as *Hæmatoporphyrin*.

H. chloride. Same as *Hæmin*.

H., hydrochlorate of. Same as *Hæmin*.

H., iron-free. Same as *Hæmatoporphyrin*.

H., reduced. Stokes's term for Hoppe-Seyler's *Hæmochromogen*.

Hæmatin'ic. (Αἱματικός, of blood.) Relating to *Hæmatin*.

Also, an agent which increases the amount of hæmatin in the blood.

H. crystals. A term for *Hæmatoidin*.

Hæmatin'ica. (Αἱματικός, of blood.) Medicines which augment the number of the red corpuscles or the amount of hæmatin in the blood; chalybeates.

Hæmatin'ics. Same as *Hæmatinica*.

Hæmatinometric. (*Hæmatin*; Gr. μέτρον, a measure.) Relating to the measurement and the amount of hæmatin.

H. cell. (F. *cuve hæmatinométrique*.) A small glass cell, the two faces of which are parallel, and one centimeter apart, in which to place diluted blood for examination by the spectroscope.

Hæmatinop'tysis. (*Hæmatin*; Gr. πτύσις, a spitting.) The expectoration of sputa containing crystals of hæmatin.

Hæmatinous. Relating to, or containing, *Hæmatin*.

Hæmatin'um. Same as *Hæmatin*.

Hæmatinuria. (*Hæmatin*; Gr. οὖρον, urine.) The passing of urine containing the colouring matter of the blood without the corpuscles. See *Hæmaturia, intermittent*.

H., intermittent. Same as *Hæmaturia, intermittent*.

H., paroxys'mal. Same as *Hæmaturia, paroxysmal*.

Hæmatis'chesis. (Αἷμα, blood; ἵσχω, to hold or repress. F. *hématischèse*.) The stoppage of natural or morbid discharges of blood.

Hæmatisch'etic. (F. *hématisché-tique*.) Of, or belonging to, *Hæmatischesis*.

Hæmatis'mus. (Αἷμα, the blood. F. *hématisme*; G. *Blutung*.) Bleeding; hæmorrhage.

Hæmatisth'mic. (F. *hématisthmique*.) Of, or belonging to, *Hæmatisthmus*.

Hæmatisth'mus. (Αἷμα, blood; ἰσθμός, the fauces or throat. F. *hématisthme*.) Hæmorrhage from the fauces or throat.

Hæmatite. (Αἱματικός, blood-like. F. *hématite*; I. *ematita*; S. *hematides*; G. *Blutstein*.) Fe_2O_3 . A term applied to an ore of iron consisting chiefly of ferric oxide. In its crystalline form it is called specular iron ore; it also occurs in a columnar, a granular, a botryoidal, and an earthy condition. It occurs at Ulverstone and near Whitehaven, in Belgium and Westphalia, in the Island of Elbad, and, in North America, in Missouri and on the southern shore

of Lake Superior. When finely levigated it was used in hæmorrhages and fluxes of all kinds.

H., brown. $\text{Fe}_2\text{O}_3 + \text{Fe}(\text{OH})_3$. An iron ore occurring in a dark-brown mass, or in a fibrous and scaly condition, or, more rarely, in rhombic prisms. It occurs in Glamorganshire, in Northamptonshire, and Lincolnshire, the North of Ireland, Germany, France, Spain, and Sweden. Also called *Limonite*.

H., red. The substance described under the chief heading.

Hæmat'ites. See *Hæmatite*.

Hæmatit'ic. (Αἱματικός, blood-like.) Brown-red in colour.

Hæmatit'inus. (Αἱματικός, the hæmatite.) Old name (Gr. *αἱματίωνος*) for a certain collyrium mentioned by Galen, *de Simpl. Facult.*, prepared from the hæmatite.

Hæmatit'is. (Αἷμα, blood. F. *hématite*; G. *Entzündung des Blutes*.) See *Hæmitis*.

Hæmatitis. (Αἱματικός, blood-like.) Same as *Hæmatite*.

Hæmat'uria. (*Hæmatie*; Gr. οὖρον, urine.) The presence of blood-corpuscles in the urine.

Hæmat'mos. (Αἷμα, blood; ἀτμός, vapour.) The halitus of the blood.

Hæmatob'ia. Plural of *Hæmatobium*.

Hæmatob'ium. (Αἷμα, blood; βίος, life. F. *hématobé*; G. *Blutthier*.) Term by Reichenbach for a blood corpuscle as the only living thing in the blood.

Also, an animal parasite of the blood, as the *Filaria sanguinis hominis*.

Also, any living organism, either plant or animal, in the blood.

Hæmatoblast. (Αἷμα; βλαστός, a bud.) Hayem's term for certain discoid, non-nucleated, yellowish or greenish corpuscles found in the blood of viviparous Vertebrata. They are smaller than the red blood-corpuscles, 1 to 4 micro. m. m. in diameter, and are by him believed to originate in the protoplasm of the lymph corpuscles, and by Pouchet in the plasma by segmentation of the nuclei of the leucocytes, and by a gradual process of transformation to become converted into red blood-corpuscles; Malassez conceives that they are derived from the nucleated cells of the medulla of bone. They are by some thought to be the same as the blood-plates of Bizzozero, and to take no part in the formation of the red blood-corpuscles.

Also, Wissoczky's term for the cells of the mesoderm from which the first blood-discs and blood-vessels originate.

Hæmatobranchia'ta. (Αἷμα, blood; βράγχια, the gills of a fish.) A Group of *Arachnida* represented by the king crab. In these animals the respiratory lamellæ contain blood, and the hind part of the body is fused into a terminal spine.

Hæmatocathart'ic. (Αἷμα, blood; καθαρτικός, cleansing. F. *hémato cathartique*; G. *blutreinigend*.) Purifying the blood; applied to medicines for this purpose.

Hæmatocele. (Αἷμα, blood; κήλη, a tumour. F. *hématocele*; I. *ematocèle*; S. *hematocele*; G. *Blutgeschwulst, Blutbruch*.) A tumour consisting of extravasated blood. When the word is used alone it usually signifies hæmatocele of the tunica vaginalis.

H., anté-u'terine. (L. *ante*, before; *uterus*, the womb.) The form of intraperitoneal pelvic hæmatocele in which the blood is

HÆMATOCELE.

chiefly collected in front of the womb, between it and the bladder and abdominal walls.

H., arte'rial. A term for aneurysm.

H., catame'nial. (Καταμήνια, the menses.) Intraperitoneal pelvic hæmatocele caused by regurgitation through the Fallopian tube from obstruction to the natural flow of the menses, or from disturbance of the function produced by chill or by excessive sexual intercourse.

H., cephal'ic. (Κεφαλή, the head. F. *hématocele céphalique*.) A vascular tumour of the pia mater seen in some anencephalous monsters.

H., circumu'terine. (L. *circum*, around; uterus, the womb.) Same as *H., peri-uterine*.

H., extraperitonæ'al. See *H., pelvic*, *extraperitonæ'al*.

H., funic'ular. (L. *funiculus*, a small cord. F. *hématocele funiculaire*.) Same as *H. of spermatic cord*.

H., intracel'lular. (L. *intra*, within; cellular tissue.) Same as *H., pelvic*, *subperitonæ'al*.

H., intraperitonæ'al. Same as *H., pelvic*, *intraperitonæ'al*.

H., intratestic'ular. (L. *intra*, within; testiculus, the testicle.) Same as *H. of testicle*, *parenchymatous*.

H., mens'trual. (L. *menstrualis*, monthly.) Same as *H., catamenial*.

H., of neck. A cystic tumour of the neck containing blood. It may be originally a serous cyst which, from accident or other cause, has bled internally; or it may be, what is called, a true blood cyst, having, or not having, a communication with one of the large veins. There is occasionally pulsation over the whole or part of its surface, propagated from the underlying carotid artery.

H., of spermatic cord, difuse'. (L. *diffusus*, spread out. F. *hématocele diffuse du cordon*; I. *ematocèle diffusa del cordone spermatico*; G. *diffuse Blutbruch des Samenstranges*.) An effusion of blood into the areolar tissue of the spermatic cord. It begins in the inguinal canal, and gradually extends downwards into the scrotum. It arises from rupture of a branch of the spermatic vein, generally produced by violence or straining.

H., of spermatic cord, encyst'ed. (Έν, in; κύστις, a bag.) A rare condition in which the bleeding from the ruptured vessels has not continued and the effused blood has become surrounded by a distinct membrane.

H., of tes'ticle, encyst'ed. (Έν; κύστις.) An effusion of blood into a small cyst, which sometimes develops in the neighbourhood of the epididymis.

H., of tes'ticle, parenchym'atous. (Παρέγχυμα.) An effusion of blood into the substance or parenchyma of the testicle.

H., of tu'nica vagina'lis. A collection of blood in the tunica vaginalis of the testicle, most frequently traumatic in origin, but occasionally arising without external cause. It may attain a large size, and if allowed its natural course may, after the blood has remained fluid for many months, become harder from absorption of the fluid part of the blood and deposit of fibrin on the walls of the tunica vaginalis, which in some cases become calcified; occasionally the contents decompose, and suppuration and sloughing may result.

H., of tu'nica vagina'lis, sponta'neous. (L. *spontaneus*, of one's free will.) Bleeding into the tunica vaginalis from rupture of a vein without apparent physical cause. It often assumes a large size, and is uncommon.

H., of tu'nica vagina'lis, traumati'c. (Τραυματικός, of wounds.) The form of the disease which is produced by a blow or crush, which causes rupture of a vein ramifying on the surface of the testicle; or from the wound of a vessel in the operation for hydrocele. It is much the more common form of the disease.

H., parame'tric. (Παρά, near; μήτρα, the womb.) Same as *H., pelvic*, *subperitonæ'al*.

H., pel'vic. (*Pelvis*.) An effusion of blood into the cellular tissue of the pelvic structures, or into the recto-uterine pouch. It occurs in the course of various diseases or disorders. It may be caused by the rupture of an extra-uterine embryo, of an ovarian tumour, of a varicose vein, or of an aneurysm, or of a blood-vessel from any cause greatly engorged; or by rupture of, or by regurgitation from, an obstructed and distended Fallopian tube; or from a uterus distended with menstrual blood from occlusion of its mouth or of the vagina. It may be caused by external injury, by violent coitus, or by operations on the pelvic organs. It may occur in the course of some general disease, as purpura or scurvy, or some local disease, as some forms of peritonitis. The intraperitonæ'al form may result from rupture of a vessel in any part of the abdomen when the blood can escape into the cavity of the peritonæum, though generally the term pelvic hæmatocele is confined to the masses of blood which have a pelvic origin. The blood may collect in the sac of the peritonæum, forming the variety called intra-peritonæ'al pelvic hæmatocele, or it may be effused into the pelvic connective tissue, forming the variety extra-peritonæ'al pelvic hæmatocele; and a compound variety may result from the bursting of the latter into the peritonæal cavity. The actual occurrence of the hæmorrhage may be preceded by dull pains, but generally, if it be at all extensive, there is a sudden acute pain in the pelvic region, followed by symptoms of shock, and no indications of inflammation. There is great prostration, pallor, coldness of surface, and lowness of temperature, vomiting, small and rapid pulse, hiccup, and tympanites; there is tenesmus, bladder disturbance, and efforts to expel something from the vagina, where, on digital examination, there may generally be felt in the posterior fornix, a soft, pulpy, obscurely fluctuating projection, which in a day or two becomes firmer, and sometimes irregular from partial coagulation; not infrequently there is metrorrhagia. The os uteri is generally high up and tilted a little backwards from pressure of the body of the womb upwards and forwards; sometimes it is laterally displaced. Speedily, twenty-four hours after the occurrence of the bleeding it may be, inflammation sets in with rigors, abdominal tenderness, and high temperature, and death may occur in a very short period; or suppuration may result; or recovery may take place with absorption of the clot, after more or fewer exacerbations from renewed bleeding or recurrent inflammation.

H., pel'vic, cataclysm'ic. (*Pelvis*; Gr. κατακλυσμός, a deluge.) Barnes's name for those cases of intraperitonæ'al pelvic hæmatocele

HÆMATOCELE—HÆMATOCYANOPATHIA.

in which the effusion of blood is so sudden as to destroy or threaten life at once.

H., pel'vic, encysted. (Ἐν, in; κύστις, a bladder.) The form in which the blood is confined by natural tissue or by inflammatory exudation.

H., pel'vic, extraperitonæ'al. (L. *extra*, without; Gr. περιτόναιον, the membrane covering the viscera.) The form of pelvic hæmatocele in which the blood is effused into the subperitonæal connective tissue of the pelvis; that is, outside the cavity of the peritonæum.

H., pel'vic, intraperitonæ'al. (L. *intra*, within; Gr. περιτόναιον, the membrane covering the viscera.) The form of pelvic hæmatocele in which the blood is effused into the cavity of the peritonæum, occupying in large part Douglas's pouch.

H., pel'vic, non-encysted. (L. *non*, not; Gr. ἔν, κύστις, a bladder.) The form in which the blood lies loose in the peritonæal cavity.

H., pel'vic, peritonæ'al. Same as *H., pel'vic, intraperitonæ'al.*

H., pel'vic, subperitonæ'al. (L. *sub*, under; *peritonæum*.) Same as *H., pel'vic, extraperitonæ'al.*

H., perime'tric. (Περί, around; μήτρα, the womb.) Same as *H., pel'vic, extraperitonæ'al.*

H., peri-u'terine. (Περί, around; L. *uterus*, the womb.) Effusion of blood into the tissues around the womb. A form of *H., pel'vic, extraperitonæ'al.*

The term has also been applied to those cases of intraperitonæal pelvic hæmatocele in which the blood-clot covers the uterus on all surfaces.

H., peri-vagi'nal. (Περί, *vagina*.) Effusion of blood into the walls of the vagina; a condition which occasionally presents itself during labour.

H., pudend'al. (L. *pudenda*, the external female genital organs.) Effusion of blood into the cellular tissue of the labium or other part of the pudendum. It results from rupture of a blood-vessel of the bulb of the vestibule, and may be caused by injury or muscular effort; it is most commonly a result of labour. It forms a somewhat painful swelling, fluctuating when recent, sometimes of distinct outline; and occasionally producing difficulty in micturition, from extension to the urethra. It may become absorbed, may burst and discharge clot and fluid contents, or it may undergo suppuration.

H., re'tro-u'terine. (L. *retro*, behind; *uterus*, the womb.) Effusion of blood into Douglas's pouch. A form of *H., pel'vic, intraperitonæ'al.*

H., scro'tal. (L. *scrotum*, the bag for the testicles.) Effusion of blood into the scrotum. It may be parietal or vaginal.

H., scro'tal, pari'etal. (L. *scrotum*; *paries*, a partition.) Effusion of blood into the areolar tissue of the scrotum.

H., scro'tal, vagi'nal. Same as *H. of tunica vaginalis.*

H., sponta'neous. (L. *spontaneus*, of one's free will.) The form of blood tumour which occurs without any apparent external injury.

H., traumati'c. (Τραυματικός, relating to wounds.) Hæmatocele resulting from some physical cause or injury.

H., u'terine. (L. *uterus*, the womb.) The same as *H., pel'vic.*

H., vagi'nal. (L. *vagina*, a sheath.) Same as *H., peri-vaginal.*

Hæmatocelê. Same as *Hæmatoccele.*

H. arterio'sum. (L. *arteria*, an artery.)

A term for aneurysm.

H. extra-peritonæ'um. See *Hæmatoccele, extraperitonæ'al.*

H. intra-peritonæ'um. See *Hæmatoccele, intraperitonæ'al.*

Hæmatoceph'alus. (Αἷμα, blood; κεφαλή, the head. F. *hæmatocéphale*.) Name given by Geoffrey Saint-Hilaire to a monstrosity in which the effusion of blood into the cerebral hemispheres has produced a marked deformity.

Also, a sanguineous tumour of the head. Also, a vascular tumour of the pia mater, seen sometimes in anencephalous monsters.

Hæmatocereb'riform. (Αἷμα; L. *cerebrum*, the brain; *forma*, shape.) Resembling blood and brain.

H. disease'. A term for encephaloid cancer.

Hæmatochez'ia. (Αἷμα, blood; χέζω, to evacuate the bowels. F. *hæmatochésie*.) Term for a bloody stool.

Hæmatochom'etry. (Αἷμα; τάχος; μέτρον.) A misspelling of *Hæmotachometry*.

Hæmatoch'roin. (Αἷμα; χροά, colour.) Lassaig's term for hematin.

Hæmatoch'roite. (Αἷμα; χροά, colour.) A synonym of *Hæmatin*.

Hæmatochro'sis. (Αἷμα, blood; χροά, colour. F. *hæmatochrome*.) A morbid blood-like colour of the skin.

Hæmatochyl'uria. (Αἷμα; chyle; urine.) The presence of blood and chylous material in the urine; usually caused by the presence of the *Filaria sanguinis hominis*.

Hæmatochy'sis. (Αἷμα, blood; χύσις, effusion. F. *hæmatochyse*; G. *Blutung*.) Old term, used by Th. Willis, in *Pharm. Rat.* ii, iii, c. 1, for a flow or flux of blood; hæmorrhage.

Hæmatocel'ia. (Αἷμα, blood; κοιλία, the belly. F. *hæmatocellie*.) The effusion or escape of blood into the peritoneal cavity.

Hæmatocel'iac. (Αἷμα, blood; κοιλακός, belonging to the belly. F. *hæmatocelliaque*; G. *blutiger Bauchfluss*.) Of, or belonging to, blood from the belly.

H. pass'ion. Dysentery when the alvine discharges contain blood.

Hæmatocol'ica. (Αἷμα, the blood; L. *colica*, the colic. F. *hæmatocolique*; G. *Blutkolik*.) Sanguineous colic, or that in which the stools are mixed with blood.

Hæmatocol'pus. See *Hæmatokolpos*.

Hæmatocrist'al. (Αἷμα; F. *cristal*.) Mayer's term in 1827 for blood crystals.

Hæmatocry'a. (Αἷμα; κρύος, icy cold.) Owen's term for the cold-blooded Vertebrata; Pisces, Amphibia, and Reptilia.

Hæmatocry'al. (Αἷμα; κρύος.) Relating to the *Hæmatocrya*.

Hæmatocry'an. Same as *Hæmatocryal*.

Hæmatocrys'tallin. (Αἷμα; κρύσταλλος, crystal. F. *hæmatocrystalline*; G. *Blutkristall*.) A name given to *Hæmoglobin* when it is obtained in a crystalline condition.

Hæmatocyani'na. See *Hæmocyanin*.

Hæmatocyano'pathia. (Αἷμα, blood; κύανος, blue; πάθος, disease. F. *hæmatocyano'pathie*.) A term for *Cyanosis*.

HÆMATOCYANOSIS—HÆMATOLYTIC.

Hæmatocyano'sis. (Αἷμα, blood; κυάνωσις, the induction of a blue colour.) The same as *Cyanosis*.

Hæmatocyst. Same as *Hæmatocystis*.

Hæmatocyst'stē. Same as *Hæmatocystis*.

Hæmatocyst'is. (Αἷμα, blood; κύστις, a bladder. F. *hæmatocyste*; G. *Blutbalg*, *Blutblase*, *Hämatokyste*.) Ritgen's term for a cyst containing blood.

Also, a term for effusion of blood into the urinary bladder.

Also, a term for encysted *Hæmatoma*.

Hæmatode. Same as *Hæmatodes*.

Hæmatodes. (Αἷμα, blood; εἶδος, likeness.) Having, or conjoined with, blood; bloody; full of blood.

Applied to the disease called *Fungus hæmatodes*, and to *Ancurysm by anastomosis*.

H. fungus. See *Fungus hæmatodes*.

Hæmatodiarrhœa. (Αἷμα, the blood; διάρροια, a flowing from the belly. F. *hæmatodiarrhée*; G. *blutiger Durchfall*.) A term for diarrhœa with blood in the fecal discharges; bloody or sanguinolent diarrhœa.

Hæmatodynam'ics. See *Hæmadynamics*.

Hæmatodynamom'eter. See *Hæmadynamometer*.

Hæmatodyscra'sia. (Αἷμα; δυσκρασία, bad temperament.) A diseased condition of the blood.

Hæmatode'ma. (Αἷμα, blood; οἶδημα, a tumour. F. *hématoédème*; G. *Blut-œdem*, *blutartiges Œdem*.) A swelling or tumour containing blood; bloody œdema.

Hæmatogast'ēr. (Αἷμα, blood; γαστήρ, the stomach. F. *hæmatogaster*.) Effusion of blood into the stomach.

Hæmatogastr'icus. Same as *Hæmagastrie*.

Hæmatogen'es'is. (Αἷμα, blood; γένεσις, production.) The origin, formation, and development of blood.

Hæmatogen'ic. (Αἷμα; γένεσις.) Having reference to the formation or development of blood.

Also, the same as *Hæmatogenous*.

Hæmatog'enous. (Αἷμα; γένος, kind.) Having origin in the blood; blood-derived.

H. albumin'uria. Bamberger's term for the form of albuminuria which is not caused by disease of the kidney structure, but such as occurs in febrile conditions as those of pneumonia, diphtheria, and erysipelas; in congested conditions, as in valvular disease of the heart and emphysema; and in conditions of convulsion, as epilepsy. He attributes its causation to the slowing of the blood current, to some functional disturbance of the Malpighian epithelium permitting the passage of albumen, to vaso-motor influences, and to certain chemical changes in the blood, resulting in the production of an albuminous body which passes through the walls of the Malpighian vessels, as ovum-albumin and hæmoglobin do in contradistinction to serum-albumin.

H. ic'terus. (L. *icterus*, jaundice.) An affection that occurs when bilirubin is formed from extravasated blood by the action of the connective-tissue corpuscles, so that bile pigments, in addition to colouring the tissues, pass into the urine. See also *Jaundice*, *hæmatogenous*.

Hæmatoglo'bin. Same as *Hæmoglobin*.

Hæmatoglobinu'ria. Same as *Hæmoglobinuria*.

Hæmatoglob'ulin. Same as *Hæmoglobin*.

Hæmatograph'ia. (Αἷμα, blood; γράφω, to write. F. *hæmatographie*; G. *Beschreibung des Blutes*.) A description of, or the consideration of, the blood, its nature and quality.

Hæmatohidro's'is. Bartholin's term for *Hæmathidrosis*.

Hæmatohyster'ic. (Αἷμα, blood; ὕστέρα, the womb.) Relating to the accumulation of blood in the uterus.

Hæmatoid. (Αἷμα, blood; εἶδος, likeness. F. *hématoïde*.) Resembling blood.

H. can'cer. The form of encephaloid cancer called *Fungus hæmatodes*.

Hæmatoid'in. (Αἱματοειδής, resembling blood. F. *hématoïdine*.) $C_{32}H_{36}N_4O_6$. Virchow's term for the bright-yellow, fine needles, or rhomboidal crystals, which are found in old extravasations of blood. They are insoluble in water, alcohol, ether, glycerin, and acetic acid, and soluble in liquid ammonia. Hæmatoidin gives the same colour-reaction as bilirubin, and is by many believed to be identical with it. It sometimes occurs in the urine, and is found in the corpora lutea. The latter is also called *Hæmohitein*.

Hæmato'in. A derivative of hæmoglobin containing no iron, obtained by Preyer, and probably the same as *Hæmatoporphyrin*.

Hæmatokelido's'is. See *Hæmokelidosis*.

Hæmatokol'pos. (Αἷμα, blood; κόλπος, a gulf, the vagina. F. *hémato-colpe*.) An effusion of blood into the vagina.

Also, a collection of blood, or of menstrual secretion, in the vagina.

H. hymena'lis. (Ἵμην, a membrane.) A collection of menstrual blood in the vagina from imperforation of the hymen.

H. latera'lis. (L. *lateralis*, belonging to the side.) Distension of one vagina, when there is a double vagina, with blood or retained menstrual fluid.

Hæmatokop'ris'is. (Αἷμα; κόπρις, a dunging.) Brinton's term for the discharge of blood by stool, as in *Melæna*.

Hæmatokrys'tallin. See *Hæmatocrystallin*.

Hæmat'olin. $C_{46}H_{48}N_6O_8$. Hoppe-Seyler's term for a derivative from hæmatin by the action of concentrated sulphuric acid. It is insoluble in sulphuric acid and in solutions of caustic alkalis. It is a black insoluble substance.

Hæmatology. (Αἷμα, blood; λόγος, a discourse. F. *hématologie*; G. *Blutlehre*, *Hämatologie*.) The doctrine, history, or description of the nature and constitution of the blood.

H., patholog'ical. (Πάθος, suffering; λόγος, an account.) The investigation of the characters of the blood in disease.

Hæmatol'y'ses. (Αἷμα; λύσις, solution.) The diseases in which there is defective coagulability of the blood.

Hæmatol'y'sis. (Αἷμα; λύσις.) Solution, or defective power of coagulation, of the blood.

Hæmatolyt'ic. (Αἷμα; λυτικός, able

HEMATOMA—HÆMATOMEDIASTINUM.

to dissolve.) Having power to diminish the number of red corpuscles in the blood. Applied to medicaments which are supposed to have this property.

Hæmato'ma. (Αἱματώω, to turn into blood. F. *hématome*; G. *Blutgeschwulst*.) A bloody tumour or fungus.

A swelling containing blood; especially applied to a blood swelling of the outer ear.

H., arter'ial. The mass formed of tissue infiltrated with semisolid blood which occurs on the rupture of an artery in the interior of an organ.

H. auriculà'rè. (L. *auricula*, the outer ear.) See *H. auris*.

H. au'ris. (L. *auris*, the ear. F. *othématome*; G. *Othématom*, *Ohrblutgeschwulst des Geistenkrankens*.) An effusion of blood, or of bloody serum, between the cartilage of the ear and its perichondrium, occurring in all the varieties of insanity. It is found generally on the anterior surface of the auricle, near the fossa of the antihelix; sometimes the colour of the skin is unaltered at first, but it is generally bluish-red or reddish, painful, and tender. It may grow to the size of a hen's egg. At first the anterior wall is thinner and more elastic than the posterior wall, which contains the ear-cartilage, but subsequently the anterior wall may become firm from the development of new cartilage. The tumour may burst, but more frequently it gradually shrivels, leaving a white, puckered, and often nodular, auricle.

H. au'rium. See *H. auris*.

H., circumscribed. (L. *circum*, around; *scribo*, to write.) A blood tumour with a distinct outline.

H., cyst'ic. Same as *Hæmatocystis*.

H., diffus'ed. (L. *diffusus*, spread abroad.) A blood tumour with no distinct outline, the fluid being infiltrated into the tissues without any definite boundary.

H. funiculi spermatici. (L. *funiculus*, a small cord; *sperma*, seed.) Same as *Hæmatocèle of spermatic cord*.

H. intravagina'lis (L. *intra*, within.) Same as *Hæmatocèle of tunica vaginalis*.

H. la'bii. (L. *labium*, the lip.) Same as *Hæmatocèle, pudendal*.

H. neonato'rum, (Νέος, new; L. *natus*, born.) Same as *Cephalhæmatoma*.

H. of au'ricle. (L. *auricula*, the outer ear.) See *H. auris*.

H. of dura ma'ter. (L. *durus*, hard; *mater*, mother.) A form of meningeal hæmorrhage, consisting of one or more flattened oval sacs containing blood, situated on the under surface of the dura mater and most frequently in the neighbourhood of the vertex. They may be three or four inches in diameter, often an inch thick, and may occur on one or on both sides of the mediau line. They are caused by a chronic pachymeningitis, which results in the formation of several layers of false membrane, consisting of fine reticulated fibres enclosing many thin-walled blood-vessels; some of these give way and bleeding repeatedly takes place, which is confined to a more or less limited spot. In the course of time the sac becomes so large that pressure is made on the subjacent cerebrum, and more or less paralysis, dulness of intellect, and stupor result; sometimes there are twitchings of the muscles of the face and limbs. Sooner or later, after increasing stupor proceeding to coma, and sometimes convulsions, the patient dies.

H. of ear. See *H. auris*.

H. of eye'lid. An effusion of blood into the tissues of the eyelid from violence; usually called a black eye.

H. of heart. Same as *Cardiac concretions*.

H. of na'sal sep'tum. (L. *nasus*, the nose; *septum*, an inclosure.) A blood-swelling on one or both sides of the septum nasi, produced by a blow, or sometimes arising spontaneously. The blood collects under the mucous membrane, and forms a smooth swelling with, generally, a purplish colour.

H. of pan'creas. See *Pancreas, hæmatoma of*.

H. of pin'na. (Pinna.) Same as *H. auris*.

H. of scalp. A collection of blood in the scalp, usually resulting from injury. It may occupy three positions; beneath the skin, beneath the occipito-frontalis aponeurosis, and beneath the pericranium. The two former are generally small and circumscribed, the latter large and ill-defined. See *Cephalhæmatoma*.

H. of u'terus. A tumour growing from, or attached to, the inner surface of the womb, consisting chiefly of blood clot; it generally arises from retention of a piece of the placenta, after abortion or labour at full time, into which bleeding has taken place; it may become so large as to project through the os uteri. It has been also described under the terms placental uterine polypus, and fibrinous uterine polypus.

H. ova'rii. (Ovary.) An effusion of blood into the stroma of the ovary or into a Graafian follicle; it may occur as a form of vicarious menstruation.

H. palpebra'rum. (L. *palpebra*, an eyelid.) See *H. of eyelid*.

H., pel'vic. Same as *Hæmatocèle, pelvic*.

H., peri-u'terine. (Περί, around; L. *uterus*, the womb.) Same as *Hæmatocèle, peri-uterine*.

H. placen'tæ. (L. *placenta*, a cake; the afterbirth.) A blood clot in the placenta.

H., retro-u'terine. Same as *Hæmatocèle, retro-uterine*.

H. sacca'tum. (L. *sacca*, a bag.) An encysted blood tumour.

H. scarlatino'sum. (Scarlatina.) A dark red or bluish engorgement of the structures under the lower jaw in some cases of scarlet fever; there is often great swelling spreading down the neck and on to the cheeks. It is dependent upon inflammation of the areolar tissue spreading from the fauces and resulting in hæmorrhage.

H. tu'nicæ vagina'lis tes'tis. Same as *Hæmatocèle of tunica vaginalis*.

H. u'teri. See *H. of uterus*.

H. u'teri polypo'sum. (Polypus.) See *H. of uterus*.

H. vaginæ. Same as *Hæmatocèle, vaginal*.

H. vul'væ. (L. *vulva*, the female external organs of generation.) Same as *Hæmatocèle, pudendal*.

Hæmatomanti'a. (Αἷμα, the blood; μαντεία, a divination. F. *hématomantie*.) Term for diagnosis formed by examining the condition of the blood.

Hæmato'matous. Of, or belonging to, or having, the disease *Hæmatoma*.

Hæmatomediastinum. (Αἷμα,

HÆMATOMETACHYSIS—HÆMATOPHTHOSES.

blood; *L. mediastinum*, the membranous septum of the chest. *F. hæmatomédiastin.*) Effusion of blood in the mediastinum.

Hæmatometach'ysis. (*Αἷμα*, the blood; *μετά*, beyond; *χύσις*, an effusion. *F. hæmatometachyse.*) The transfusion of blood.

Hæmatom'eter. (*Αἷμα*, blood; *μέτρον*, a measure. *F. hæmatomètre*; *G. Blutmessgefäß*, *Blutmesswerkzeug*.) An instrument for measuring the force of blood. Same as *Hæmadynamometer*.

Also, an instrument for numbering the blood-corpuscles.

Hæmatom'etra. (*Αἷμα*, the blood; *μήτρα*, the womb. *F. hæmatomètre*; *G. Mutterblutfluss*.) A term for hæmorrhage from the womb.

Also, a filling of the womb with blood.

Also, a collection of blood or menstrual fluid in the cavity of the uterus, from occlusion of its orifice, or of the vagina.

H. lateralis. (*L. lateralis*, belonging to the side.) Distension of one half of a double uterus with blood or menstrual fluid from an occlusion of the outlet.

H. vetularum. (*L. vetula*, an old woman.) A collection of blood in the cavity of the uterus of women at the climacteric period or after. It is commonly caused by endometritic processes affecting chiefly either the os internum or the os externum, and producing obliteration of the canal, or by malignant or other organic disease of the cervix having the same effect. The contained fluid is most frequently watery and alkaline, the uterine walls are generally thin, the muscular structure atrophied, and the connective tissue increased in quantity; when the obstructing cause is of a malignant or of a fibroid nature, the fluid contains more or less blood. There may be spontaneous cure of the form produced by endometritis by the cessation of the inflammation and the absorption of the deposit with consequent escape of the contents of the womb.

Hæmatomet'ria. (*Αἷμα*, blood; *μετρώω*, to measure. *F. hæmatométrie*; *G. Blutmesskunst*, *Blutmessen*.) The measuring of blood.

Also, the same as *Hæmatometra*.

Hæmatom'etry. (*Αἷμα*; *μέτρον*, a measure.) The numeration of the blood-corpuscles.

Hæmatom'ma. (*Αἷμα*, blood; *ὄμμα*, a sight or spectacle. *F. hæmatomme*; *G. Blutauge*.) Same as *Hæmalopia*.

Hæmatom'phalocèle. (*Αἷμα*, blood; *ὀμφαλός*, the navel; *κίλη*, a tumour. *F. hæmatomphalocèle*; *I. ematonfalo*; *S. hematonfalo*; *G. Blutnabelbruch*.) A tumour at the navel, or an umbilical hernia, turgid with blood, and presenting many varicose veins.

Hæmatom'phalum. (*Αἷμα*, blood; *ὀμφαλός*, the navel. *F. hæmatomphale*.) A term for a tumour about the navel containing blood.

Hæmatom'yces. (*Αἷμα*, blood; *μύκης*, a fungus. *F. hæmatomyce*; *G. Blutschwamm*.) Term for *Fungus hæmatodes*.

Hæmatomy'e'lia. (*Αἷμα*; *μυελός*, marrow. *F. hæmatomyélie*.) Ollivier's term for hæmorrhage into the substance of the spinal cord. See *Spinal cord, hæmorrhage of*.

Hæmatomyeli'tis. (*Αἷμα*; *μυελός*.) A form of acute central myelitis in which

the paralysis occurs suddenly from hæmorrhage into diseased structures of the spinal cord.

Hæmatom'yzus. (*Αἷμα*; *μύζω*, to suck in.) A Genus of the Suborder *Mallophaga*, Order *Hemiptera*.

H. elephantis. Piaget. A louse living on the elephant.

Hæmaton'cia. (*Αἷμα*, blood; *ὄγκος*, a tumour. *F. hæmatoncie*.) A term for the formation or growth of a *Hæmatoncus*.

Hæmaton'cus. (*Αἷμα*, blood; *ὄγκος*, a tumour.) A term for *Fungus hæmatodes*.

Also, a term for *Nævus*.

Hæmaton'osis. (*Αἷμα*, blood; *νόσος*, disease. *F. hæmatonose*; *G. Blutkrankheit*.) A term by Lobstein, *Anat.* § 49, for disease or morbid alteration of the blood.

Also, a term for an hæmorrhagic disorder.

Hæmaton'osos. (*Αἷμα*, blood; *νόσος*, disease. *F. hæmatonose*.) Term for disease of the blood.

Hæmaton'osus. Same as *Hæmatonosos*.

Hæmatopathi'a. A better spelling of *Hæmopathia*.

Hæmatoped'e'sis. (*Αἷμα*, blood; *πηδάω*, to leap. *F. hæmatopédèse*.) Old term for the spurting of the blood from a wounded artery. Quincy renders it a bloody sweat.

Hæmatopericar'dium. (*Αἷμα*, blood; *περικάρδιον*, the membranous bag enveloping the heart. *F. hæmatopéricarde*.) A term for effusion of blood into the pericardium. It is a result of rupture or perforation of the heart-walls from injury or disease, or from the bursting of an aneurysm. It occurs also occasionally in small extravasations under the pericardium in some general diseases, as scurvy. There is usually pain in the region of the heart, faintness, difficulty of breathing, feebleness of pulse, coldness of surface, and more or less speedy death.

Hæmatophæ'on. Same as *Hæmaphæin*.

Hæmatophæ'um. Same as *Hæmaphæin*.

Hæmatoph'agous. (*Αἷμα*, blood; *φαγεῖν*, to eat. *F. hæmatophage*.) Blood-eating; applied to those insects which seek the blood of animals for their sustenance, as the flea; and also applied to an *Hæmatozoon*.

Hæmatophil'ia. See *Hæmophilia*.

Hæmatophlebœs'tasis. Same as *Hæmatophlebotasis*.

Hæmatophlebost'asis. (*Αἷμα*, blood; *φλέψ*, a vein; *στάσις*, the act of standing.) Old term (*Gr. αἱματοφλεβοστάσις*), used by Galen, in *Ezeg. Diet. Hippocr.*, for a suppression of blood, overflowing and swelling out the veins by its own impetus; as if it were *αἱματος φλεβῶν στάσις*.

Hæmatophob'ia. (*Αἷμα*; *φόβος*, fear. *G. Blutschau*.) The dread of blood, so that on seeing it nausea or fainting results.

Hæmatophth'al'mia. (*Αἷμα*, blood; *ὀφθαλμία*, a disease of the eye. *F. hæmatophthalmie*.) A term for inflammation or congestion of the eye.

Hæmatophthal'mus. (*Αἷμα*; *ὀφθαλμός*, the eye.) A blood-shot eye.

Hæmatoph'thoses. (*Αἷμα*; *φθορά*, corruption.) An order of diseases, according to Fuchs, in which the blood is corrupted.

Hæmatophyllous. (Αἷμα; φύλλον, a leaf.) Having leaves of a blood-red colour.

Hæmatophysalis. (Αἷμα, blood; φουσάλλis, a bleb. F. *hæmatophysale*; G. *Blutblase*.) A bleb or vesicle containing blood.

Hæmatophyte. (Αἷμα; φυτόν, a plant.) A microscopic vegetable which lives in the blood, such as the *Spirochæte Obermeyer*i of relapsing fever.

Hæmatopinus. (Αἷμα; πίνω, to drink.) A Genus of the Family *Pediculidæ*, Suborder *Aptera*, Order *Rhynchota* or *Hemiptera*.

H. acanthopus, Denny. (Ἀκανθα, a thorn; πούς, a foot.) Lives on the field mouse.

H. affinis, Burmeister. (L. *affinis*, bordering.) Lives on the field mouse.

H. camelii, Redi. (L. *camelus*, a camel.) Lives on the camel.

H. crassicornis, Burm. (L. *crassus*, thick; *cornu*, a horn.) Lives on the deer.

H. euryster-nus, Steph. (Εὐρύς, wide; στέρνον, the breast.) Lives on the ox.

H. leptoccephalus, Ehrenberg. (Λεπτός, fine; κεφαλή, the head.) Lives on the hyrax of Syria.

H. leucophæus, Burm. (Λευκός, white; φαῖς, dusky.) Lives on the dormouse.

H. lyriocephalus, Denny. (Λύριον, a lyre; κεφαλή, the head.) Lives on the hare.

H. phocæ, Lucas. (Φώκη, a seal.) Lives on the seal.

H. phthiriop'sis. (Φθίρι, a louse; ὥψis, appearance.) Lives on the Cape buffalo.

H. piliferus, Denny. (L. *pilus*, a hair; *fero*, to bear.) Lives on the dog.

H. sacca'tus, P. Gerv. (L. *saccus*, a bag.) Lives on the Egyptian goat.

H. serra'tus, Denny. (L. *serratus*, saw-shaped.) Lives on the common mouse.

H. sphærocephalus, Burmeister. (Σφαῖρα, a ball; κεφαλή, the head.) Lives on the squirrel.

H. spic'ulifer, Gerv. (L. *spiculum*, a little sharp point; *fero*, to bear.) Lives on the Algerian mouse.

H. spin'iger, Denny. (L. *spina*, a spine; *gero*, to bear.) Lives on the water vole.

H. spinulo'sus, Denny. (L. *spinula*, a small spine.) Lives on the brown rat.

H. stenop'sis, Burm. (Στενός, narrow; ὥψ, the eye.) Lives on the domestic goat.

H. suis, Denny. (L. *sus*, a swine.) Lives on the pig.

H. tenuiro'stris, Burm. (L. *tenuis*, thin; *rostrum*, a beak.) Lives on the horse and ass.

H. tubercula'tus, Burm. (L. *tuberculum*, a small lump.) Lives on the Italian buffalo.

H. ventrico'sus, Denny. (L. *ventricosus*, pot-bellied.) Lives on the hare.

Hæmatop'isy. (Formed on the lines of *Hydropsis*, substituting αἷμα, for ὕδωρ.) A collection of blood in an organ.

H., u'terine. (L. *uterus*, the womb. F. *hæmatopisie utérine*.) Capuron's term for the retention of the menses in the cavity of the uterus from malformation.

Hæmatoplane'sis. (Αἷμα, blood; πλάνησις, an error. F. *hæmatoplanèse*.) A misdirection of the blood, or of its globules.

Hæmatopla'nia. (Αἷμα; πλάνη, an

error. F. *hæmatoplanie*; G. *Verirrung des Blutes*.) The same as *Hæmatoplanesis*.

Also, applied to a transposition, or metastasis of natural or morbid discharge, as hæmatemesis or epistaxis occurring in place of menstruation or of bleeding piles.

H. menstrua'lis. (L. *menstrualis*, belonging to the monthly courses of women.) Vicarious menstruation.

Hæmatoplasma. (Αἷμα, blood; πλάσμα, a formation. F. *hæmatoplasme*; G. *Blut-Plasma*.) Term for the plastic principle or plasma of the blood.

Hæmatoplast. An incorrect spelling of *Hæmatoblast*.

Hæmatoplastic. (Αἷμα; πλαστικός, fit for moulding. F. *hæmatoplastique*; G. *blutbildend*.) Blood-forming.

H. substance. The cellular substance from which, in the early stage of the embryo, the blood-corpuses are formed.

Hæmatopoleth'ora. (Αἷμα, blood; πληθώρα, fullness. F. *hæmatopléthore*.) Fullness of blood; a term of the same signification as *Plethora*.

Hæmatopœ'a. (Αἷμα; ποιέω, to make.) Same as *Hæmatopœietica*.

Hæmatopœ'ous. (Αἷμα; ποιέω. G. *blutbildend*.) Blood-making.

Hæmatopœ'sis. Same as *Hæmatopœiosis*.

Hæmatopœis'is. (Αἷμα, blood; ποιήσις, a making. F. *hæmatopœise*; G. *Blutbereitung*.) The assimilation of the chyle to blood; blood-making; the same as *Hæmatosis*.

Hæmatopœiet'ic. (Αἷμα; ποιητικός, capable of making. F. *hæmatopœietique*; G. *blutmachend*.) Of, or belonging to, *Hæmatopœiosis*.

Hæmatopœiet'ica. (Αἷμα; ποιητικός.) Medicines which help to the formation of blood.

Hæmatopor'ia. See *Hæmatoporia*.

Hæmatopor'phyrin. (Αἷμα, blood; πόρφυρος, purple.) $C_{66}H_{74}N_8O_{12}$. Hoppe-Seyler's term for a brown flocculent substance, free from iron, obtained by treating hæmatin with concentrated sulphuric acid, filtering the solution through asbestos, and precipitating with water. It is soluble in water and in solutions of caustic alkalies, but insoluble in concentrated solution of potassium sulphate.

Hæmatopos'ia. (Αἷμαποσιῶ; from αἷμα; πόσις, a drinking.) A drinking of blood.

Hæmatop'ota. (Αἷμαποσιῶ, to drink blood.) A Genus of the Family *Tabanidæ*, Tribe *Tanystomata*, Suborder *Brachycera*, Order *Diptera*.

H. pluvia'lis, Linn. (L. *pluvialis*, pertaining to rain. G. *Regenbremse*.) The clegg, horse-fly; its bite is severe. It attacks man.

Hæmatops. (Αἷμα, blood; ὥψ, the eye.) A bloodshot eye.

Hæmatop'sia. (Αἷμα, blood; ὄψis, sight.) The condition of a congested eye.

Hæmatop'tys'ia. Same as *Hæmatop'tysis*.

Hæmatop'tysis. Same as *Hæmatop'tysis*.

Hæmatorrhachis. (Αἷμα, blood; ράχis, the spine. F. *hæmatorrhachis*.) Ollivier's term for an effusion of blood into the spinal canal under or upon the spinal membranes. See *Meningeal hæmorrhage, spinal*.

Hæmorrhag'ia. Same as *Hæmor-rhagia*.

Hæmator'rhœ. (Αἷμα, blood; ῥοή, a flowing.) Same as *Hæmorrhage*.

Hæmorrhœa. (Αἷμα, blood; ῥοία, a flow. *F. hæmorrhée*; *G. Blutfluss*.) A flowing or excessive discharge of blood of a passive kind; hæmorrhage.

Hæmorrhophe'sis. (Αἷμα, the blood; ῥόφησις, suction. *F. hæmorrhophésie*; *G. Blutausgang*.) Absorption of the blood.

Hæmatorrho'sis. (Αἷμα, blood; ῥρός, serum. *F. hæmorrhose*; *G. Blutvermolkung*.) The separation of the serum of the blood, as in the liquid discharges of cholera.

Hæmatorr'rhysis. (Αἷμα; ῥόσις, a flowing.) A flowing of blood; hæmorrhage.

Hæmatosalping'itis. (Αἷμα; σάλπιγξ, a trumpet.) Hæmorrhage into the Eustachian tube. (Robin.)

Hæmatosal'pinx. (Αἷμα; σάλπιγξ, a trumpet.) Distension of the closed Fallopian tube with blood. It may be due to general congestion of the sexual organs, or may complicate distension of the uterus from retained menstrual fluid. The membrane of the tube is dark, the epithelium detached, and the surface villous. The part affected is usually the fimbriated extremity. Menstruation is generally irregular and painful. There is severe pain during coition. Digital examination, vaginal or rectal, discovers an elongated sausage-like tumour.

Hæmatos'checele. (Αἷμα, blood; ὄσχεον, the scrotum; κήλη, a tumour. *F. hæmatoschécele*; *G. Bluthodensacksbruch*.) A sanguineous swelling of the scrotum; an oschecele containing blood.

Hæmatos'cheum. (Αἷμα; ὄσχεον.) An effusion of blood into the scrotum.

Hæmatoscope. (Αἷμα; σκοπέω, to observe.) An instrument invented by Hermann to regulate the thickness of the layer of the diluted blood when examined by the spectroscope. It consists of a circular brass box having a plate of glass at one end, and at the other a close-fitting metallic tube, also closed with glass and acting as a piston. At the upper part of the outer cylinder is a bulbous tube for the reception of the fluid.

Hæmatos'copy. (Αἷμα, blood; σκοπέω, to see. *F. hæmatoscopie*.) An examination of the blood, and of the blood-discs.

Hæmatosep'sis. (Αἷμα, blood; σήψις, putrefaction. *F. hæmatosepsie*; *G. Fäulniß des Bluts*.) Putridity or impurity of the blood. Same as *Septicæmia*.

Hæmato'sic. Relating to *Hæmatosin*.

Also, the same as *Hæmatotic*.

Hæmatosin. (*F. hæmatosine*.) Chevreul's name in 1814 for *Hæmatin*.

Hæmatosis. (Αἱματώσις, to make bloody. *F. hæmatose*; *G. Blutbereitung, Blutbildung*.) The process of sanguification, or the formation of blood, especially of blood-corpuscles; blood-making.

Also, an old term for hæmorrhage.

Also, the process of oxygenisation of the blood, by which the dark-red colour of venous blood becomes converted into the bright red of arterial blood.

Hæmatospilia. (Αἷμα, blood; σπῖλος, a spot. *F. hæmatospilie*.) A name by Alibert for *Purpura*.

Also, a synonym of *Ecchymosis*.

Hæmatospongo'sis. (Αἷμα, blood; σπόγγος, a sponge. *F. hæmatospongose*.) The formation or growth of the *Fungus hæmatodes*.

Hæmatospon'gus. (Αἷμα, blood; σπόγγος, a sponge. *F. hæmatospongus*; *G. Blutschwamm*.) A term for the disease called *Fungus hæmatodes*.

Hæmatostatica. See *Hæmostatica*.

Hæmatos'teon. (Αἷμα; ὀστέον, a bone.) Effusion of blood into a bone.

Hæmatosymphore'sis. (Αἷμα, blood; συμφόρησις, a collected multitude. *F. hæmato-symphorèse*; *G. Blutcongestion*.) Term for congestion of blood.

Hæmatosynago'gë. (Αἷμα, blood; συναγωγή, a collection. *F. hæmatosynagoge*; *G. Blutanhäufung, Blutcongestion*.) A term for congestion of blood.

Hæmatotelangio'sis. See *Hæmotelangiosis*.

Hæmatother'ma. (Αἷμα, blood; θερμή, heat.) Owen's term for the warm-blooded Vertebrata, Aves, and Mammalia.

Hæmatother'mal. (Αἷμα; θερμή.) Relating to the *Hæmatotherma*.

Hæmatothoracic. Of, or belonging to, thoracic hæmorrhage, or *Hæmatothorax*.

Hæmatotho'rax. (Αἷμα, blood; θώραξ, the chest.) Bleeding into the cavity of the pleura. See *Hæmothorax*.

Hæmatot'ic. (*F. hæmatotique*.) Of, or belonging to, *Hæmatosis*.

H. sense. Recamier's term for the seventh of his sixteen senses, being the sense which regulates the due oxidation of the blood in respiration.

Hæmatotox'ic. Same as *Hæmatoxic*.

Hæ'matous. (Αἷμα, blood. *F. hæmateux*.) Relating to the blood and its vessels.

Hæmatox'ic. (Αἷμα, blood; τοξικόν, arrow poison.) Having, or belonging to, a vitiated or poisoned state of the blood.

Hæmatox'in. The same as *Hæmatin* and *Hæmatoxylin*.

Hæmatox'yl. Genitive singular of *Hæmatorylon*.

H. lig'num, B. Ph. (*L. lignum*, wood. *F. bois de Campêche*, *bois d'Inde*, *bois de sang*; *L. legno di Campeggio*; *S. palo de Campeche*; *G. Campescheholz*, *Blauholz*, *Blutholz*.) Logwood. The sliced heart-wood of *Hæmatorylon campechianum*. It is hard, compact, and heavy, deep red in colour, becoming purplish black by exposure, of a slight peculiar odour, and a sweetish, somewhat astringent, taste. It contains a volatile oil, a resinous matter, a brown substance like tannin, another brown substance soluble only in alcohol, a glutinous substance, free acetic acid, salts, and a colouring matter, hæmatoxyl. It is an astringent. Used as *Extractum hæmatoryli*.

Hæmatox'yl. $C_{16}H_{14}O_6$. A crystalline substance obtained from logwood, *Hæmatorylon campechianum*. It is obtained by digesting the aqueous extract in alcohol, evaporating it, adding water, and again evaporating, when shining, yellowish-rose coloured crystals are deposited, which are bitterish, acrid, slightly astringent in taste, soluble in boiling water, alcohol, and ether; when quite pure, according to Erdmann, the crystals are colourless and sweet. It is not itself the colouring matter, but is the cause of the colour of logwood by the joint action with it of an alkaline base and oxygen.

HÆMATOXYLON—HÆMATURIA.

H. solution. A staining solution for microscopic purposes, made by adding one gramme of a concentrated alcoholic solution of hæmatoxylin to 100 grammes of a solution of alum in water (1 gramme to 800).

Hæmatoxylin. (Αἷμα, blood; ξύλον, wood; from its blood-like colour. *F. bois de Campêche*; *G. Blutholz, Blauholz, Campescheholz, Kampescheholz*.) A Genus of the Nat. Order Leguminosæ.

H. campechianum. Linn. (*F. campeche*; *G. Kampescheholz*.) The logwood tree. Hab. Campeachy, Honduras Bay, and Jamaica. Furnishes logwood, *Hæmatoxyli lignum*.

H., extract of. See *Extractum hæmatoxyli*.

Hæmatoxylum. Same as *Hæmatoxylin*.

Also, U.S. Ph., the heart-wood of *Hæmatoxylin campechianum*. See *Hæmatoxyli lignum*, B. Ph.

Hæmatozemia. (Αἷμα, blood; ζημία, loss or detriment. *F. hæmatozémie*; *G. habituellen Blutverlust*.) Term for habitual or periodic discharges of blood.

Hæmatozemic. (*F. hæmatozémique*.) Of, or belonging to, *Hæmatozemia*.

Hæmatozoaria. (Αἷμα; ζῷον, an animal.) The animals which live in the blood.

Hæmatozoön. (Αἷμα, blood; ζῷον, an animal. *F. hæmatozoaire*; *G. Blutthierchen*.) An animal living in the blood.

Hæmatozymosis. (Αἷμα, blood; ζύωσις, fermentation. *F. hæmatozymose*; *G. Blutgährung*.) Carus' term for a supposed fermentation of the blood.

Hæmatozymotic. (*F. hæmatozymotique*.) Of, or belonging to, *Hæmatozymosis*.

Hæmaturesis. (Αἷμα; οὐρήσις, a making water. *G. Blutharnen*.) The passing of bloody urine. Same as *Hæmaturia*.

Hæmaturia. (Αἷμα, blood; οὐρία, to make water. *F. hæmaturie*; *L. ematuria*; *S. hematuria*; *G. Blutharnen*.) The presence of blood in the urine. It may be derived from any part of the urinary apparatus, and may be due to injury, or local disease, or general disorder affecting the character of the blood, or the presence of Entozoa. When there is much blood, or when it has proceeded from the urethra or bladder, and has not been long retained, the urine may be red or reddish brown; when it proceeds from the kidneys and is not very copious the urine is usually smoke-coloured; it may be uniformly diffused through the urine, or may be deposited in coagula.

H. brazilien'sis. The hæmaturia produced by the presence of *Filaria sanguinis hominis*.

H., cystic. (Κύστις, a bladder.) The form in which the blood is derived from the bladder. It may be produced by the presence of a calculus, and may occur from congestion or inflammation of the bladder, or from villous or malignant disease of its walls. The urine is all coloured with blood, but the first passed is often the palest, and the last much more bloody.

H. ejaculatoria. (*L. ejaculo*, to cast forth.) A discharge of blood accompanying the ejaculation of the semen.

H., endemic. (Ἐν, in; δῆμος, a people.) Hæmaturia prevalent in a certain district, as from the presence of the *Bilharzia hæmatobia*.

H., filarial. Blood in urine caused by

the presence in the body of the *Filaria sanguinis hominis*.

H., intermit'tent. (*L. intermitto*, to break off temporarily. *F. hæmaturie intermit'tente*, *h. passagère*; *L. ematuria intermittente*; *G. intermitterende Hæmaturie*.) The presence of the colouring matter of blood in urine after severe rigors, recurring at irregular intervals, first described by George Harley. It occurs much the most commonly in adult males who have been exposed to malarious influences, but not exclusively so. The attack usually commences by a feeling of chilliness and by uneasiness in the loins, often after an exposure to cold; the chilliness becomes a shiver, the aching extends to the limbs, the face becomes pallid, or dusky, or sallow, there is a distinct lowering of temperature, there may be nausea or vomiting and retraction of the testicles, and then, in half an hour, or an hour or more, some turbid urine, dark-coloured like porter, is passed, of sp. gr. 1015 to 1035, acid or faintly alkaline, containing an excess of urea and much albumin. Shortly afterwards the temperature rises without sweating, and the patient feels well; the next passed urine may be normal in appearance or nearly so, but it still contains albumin. The attacks may recur once or twice in the day, or on the second day, or they may occur only once a week, or at longer intervals, which are seldom regular; they may be continued for years and then be got rid of. They render the person anæmic, and sometimes seem to be the precursor of cirrhosis of the kidney. The urine deposits a copious brownish sediment, consisting of granular blood pigment containing few entire corpuscles, many granular, and epithelial, and hyaline tube casts, and numerous small crystals of calcium oxalate. The nature of the disease is not known; it is never fatal.

H., intertropical. (*L. inter*, between; *tropic*.) Same as *H. brazilien'sis*.

H., paroxys'mal. (Παροξυσμός, exacerbation.) Same as *H., intermit'tent*.

H., prostat'ic. (*Prostate* gland.) The form in which the blood is derived from the prostate. It may be produced by congestion, ulceration, or malignant disease. The urine may be either uniformly bloody, or the last passed may contain the whole or most of the blood.

H., renal. (*L. ren*, the kidney.) The form in which the blood is derived from the vessels of the kidney. It may be produced by the presence or passage of a calculus, and may occur from renal congestion, some forms of nephritis, in malignant disease of the kidney, and in pyelitis. The blood is generally intimately mixed with the urine, which is more or less smoke-coloured; often there are blood casts of the renal tubules, or of the ureter; and usually the special signs of the causative disease, pus, tube casts, or other structures.

H. semina'lis. (*L. semen*, seed.) Same as *H. ejaculatoria*.

H. stillatic'ia. (*L. stillaticius*, dropping.) Hæmorrhage from the urethra, which often occurs in drops.

H., supplement'ary. (*L. supplementum*, from *suppleo*, to fill up.) A bleeding from some part of the urinary organs, which ensues upon, or takes the place of, some natural function or diseased function.

H., symptomatic. (Συμπτωμα, a falling in, a symptom.) Bleeding from some part

HEMATURIC—HEMOCOCCL.

of the urinary passages, which is a symptom of some general disease, as scurvy.

H., tests for. The blood-corpuscles, sometimes normal, sometimes globular, sometimes crenate, and sometimes granular masses, may be seen under the microscope; they may be reddish-brown in colour, or, as more frequently happens, colourless.

The colouring matter of the red corpuscles may be recognised by putting two or three drops of the urine into a test tube and adding a drop of freshly prepared tincture of guaiacum and a little ozonic ether; these are shaken together, and then allowed to stand. The ether will rise to the surface and be coloured blue if hæmoglobin have been present. The presence of saliva in the urine and the administration of iodine will invalidate the test.

The spectrum analysis of urine containing a minute quantity of blood shows absorption lines between D and E in the yellow and green.

H., urethral. (Ουρήθρα, the passage for the urine.) The form in which the blood is derived from the urethra. It may be the result of congestion or inflammation of the mucous membrane, or may be caused by a wound or bruise, as in the passage of a catheter. It usually flows without any connection with the passage of the urine; or it may pass with the first or even with the last drops of urine.

H., vesical. (L. *vesica*, the bladder.) Same as *H., cystic*.

Hæmaturic. (F. *hématurique*.) Of, or belonging to, *Hæmaturia*.

Hæmaulica. See *Hæmataulics*.

Hæmautograph. (Αἷμα, blood; αὐτός, one's-self; γράφω, to write.) The apparatus used in *Hæmautography*.

Hæmautographic. Relating to *Hæmautography*.

Hæmautography. (Αἷμα, blood; αὐτός, one's-self; γράφω, to write.) The tracing of the pulse curve obtained by opening a large artery in such a manner that the stream of blood strikes against a piece of paper slowly moving in front of it. It closely resembles a sphygmographic tracing, and consists of a primary wave, a dicrotic wave, and slight vibrations in the downward falling line.

Hæmax'is. (Αἷμαξις, a letting of blood. F. *hémarris*; G. *Blutlassen*, *Blutentziehen*.) A term for bloodletting, or bleeding.

Hæmencephalus. (Αἷμα; ἐγκέφαλος, within the skull.) Sanguineous apoplexy, cerebral or meningeal hæmorrhage.

Hæmendocardium. (Αἷμα; ἐνδον, within; καρδία, the heart.) Inflammation of the lining membrane of the heart. (Dunglison.)

Hæmenteria. (Αἷμα; ἐντέρον, an intestine.) A Genus of the Family *Rhynchobdellidae*, Order *Hirudinea*. Leeches which live in the swamps of Mexico and the Amazons. They attack man.

H. gili'ana, de Filip. Hab. Amazons. Attacks man.

H. mexica'na, de Filip. Hab. Mexico. Used as the common leech. Attacks man.

H. officina'lis, de Filippi. (L. *officina*, a shop.) Hab. Mexico. Used in Medicine as the leech.

Hæmer'ythrin. (Αἷμα; ἐρυθρός, red.) A synonym of *Hæmatin*.

Hæmic. (Αἷμα.) Relating to blood.

H. asth'ma. Asthma caused by a disor-

dered condition of blood, as is supposed to exist in gout and syphilis.

H. disease'. A disease of the blood.

H. dyspnœ'a. (Δύσπνοια, difficulty of breathing.) Difficulty of breathing produced by defect of the blood either in quantity or quality, as in anæmia, scurvy, and cholera.

H. mur'mur. See *Murmur*, *hæmic*.

Hæmidrosis. (Αἷμα, blood; ἰδρώς, sweat. F. *hémidrose*; G. *Blutschwitzen*.) A morbid discoloration of the perspiration, which is of a reddish hue, probably owing to the colouring matter of the blood. See *Hæmathidrosis*.

Hæmin. (Αἷμα. F. *hémine*.) $C_{31}H_{35}N_4FeO_2 \cdot HCl$. Hydrochlorate of hæmatin, according to Hoppe-Seyler, or *Hæmatin chloride*. A bluish-black or dark-brown crystalline substance obtained when a drop of blood is heated with glacial acetic acid and a little sodium chloride and evaporated. It forms rhombic plates or prisms, sometimes arranged in radiating bundles. It is insoluble in water, alcohol, ether, chloroform, and cold dilute acetic and hydrochloric acids, soluble in caustic alkalies, boiling acetic and hydrochloric acids, and concentrated sulphuric acids. Its alkaline solution is dichroic, brown by transmitted, olive green by reflected, light. Thudichum believes it to be a crystalline form of hæmatin, devoid of chlorine. It was first obtained by Teichmann in 1853, and is found in the blood of Vertebrata and of earthworms. It is also known as Teichmann's blood-crystals.

Hæmis'chesis. See *Hæmatischesis*.

Hæmischetic. See *Hæmatischetic*.

Hæmitis. (Αἷμα, blood. F. *hémite*.) Piorry's term for an inflammation of the blood which he assumed to exist in inflammatory diseases, and which was the cause of the buffy coat.

Hæmoarthritis. (Αἷμα; ἄρθρον, a joint.) A term for acute rheumatism.

Hæmobium. See *Hæmatobium*.

Hæmocardiorrhag'ia. (Αἷμα, blood; καρδία, the heart; ῥίγνωμι, to burst forth.) Hæmorrhage into the substance of the heart.

Hæmocar'dium. (Αἷμα; καρδία.) Bleeding into the muscular structure of the heart.

Hæmocerch'nos. (Αἷμα, blood; κέρχνος, the sound produced by a feeling of roughness in the windpipe, or by the presence of mucus in the lungs; as an adjective, it signifies dry, or rough.) An old term (Gr. αἰμόκερχνος), used by Galen, in *Exec. voc. Hippocr.*, for blood excreted by the mouth with a rattling sound in the fauces; also for bloody excretions ejected in a somewhat dry form.

Hæmocho'rin. (Αἷμα; χρώω, to colour.) Same as *Hæmatin*.

Hæmo'chrome. (Αἷμα; χρώμα, colour.) The colouring matter of the blood. A synonym of *Hæmatin*.

Hæmocho'rogen. (Αἷμα, blood; χρώμα, colour; γεννάω, to produce.) $C_{34}H_{36}N_4FeO_4$. Hoppe-Seyler's name for a product, along with proteids, of the action of reducing agents on hæmoglobin in the absence of oxygen.

Hæmochromom'eter. (Αἷμα; χρώμα, colour; μέτρον, a measure.) An apparatus for calculating the amount of hæmoglobin in a liquid by comparison with a standard solution of normal colour.

Hæmocho'rosis. See *Hæmatochrosis*.

Hæmococ'cl. (Αἷμα; κόκκος, a kernel.) Nedsvetski's name for certain very minute

spherical bodies, which he has observed in the blood, capable of executing movements of locomotion, and of undergoing change of form.

Hæmocæliac. See *Hæmatocæliac*.

Hæmocolic. See *Hæmatocolica*.

Hæmocryphia. (Αἷμα, blood; κρύφιος, hidden.) Retention or suppression of a natural or a morbid discharge of blood.

Hæmocyanin. (Αἷμα, blood; κυάνεος, dark blue.) Frèdricque's name for the substance, containing copper, which gives the blue colour to the blood of the octopus. It becomes colourless when deprived of oxygen.

It has been proposed by Gamgee to restrict this term to the colourless derivative, and to call the blue substance *Oxy-hæmocyanin*.

Also, the same as *Hæmacyanin*.

Hæmocyanosis. (Αἷμα; κυάνεος. F. *hémocyanose*.) The dark colour of the blood as seen in asphyxia and cyanosis.

Also, the same as *Cyanosis*.

Hæmocytolysis. (Αἷμα; λύσις, a cell; λύσις, a loosing.) The solution of the red corpuscles of the blood within the vessels by which hæmoglobin is set free, and may be excreted by the kidneys.

Hæmocytometer. (Αἷμα; κύτος, a hollow, a cell; μέτρον, a measure.) An instrument for determining the number of the blood-corpuscles. Same as *Hæmacytometer*.

Hæmodes. See *Hæmatodes*.

Hæmodia. (Αἱμωδία, to have the teeth benumbed. F. *hémodie*.) A term (Gr. αἱμωδία), used by Galen, *de Loc. Affect.*, ii, 6, for the sensation of the teeth being set on edge; then called stupor of the teeth with pain.

Hæmodiarrhœa. See *Hæmatodiarrhœa*.

Hæmodias'mus. (Αἱμοδιασμός.) Same as *Hæmodia*.

Hæmodipsa. (Αἷμα, blood; δίψα, thirst.) A great love for bloodletting.

Hæmodora'ceæ. The blood-roots. A Nat. Order of epigynous petaloid Monocotyledons of the Alliance *Narcissales*, or a Family of the Order *Liliifloræ*, being herbs or shrubs with fibrous roots; superior, tubular, hexapetaloid, scarcely imbricated flowers; three stamens opposite the petals, or six, introrse anthers; albuminous seeds, with the radicle remote from the hilum.

Hæmodorum. A Genus of the Nat. Order *Hæmodoraceæ*.

H. panicula'tum. (L. *panicula*, a tuft.) Hab. Western Australia. Roots esculent when roasted. They contain a red colouring matter.

H. spica'tum. (L. *spica*, an ear.) Hab. Western Australia. Roots esculent when roasted. They contain a red colouring matter.

Hæmodrom'eter. Same as *Hæmodromometer*.

Hæmodrom'ograph. (Αἷμα, blood; δρόμος, speed; γράφω, to write.) An instrument for registering the velocity of the blood. See under *Hæmodromometer*.

Hæmodromometer. (Αἷμα; δρόμος, speed; μέτρον, measure.) An instrument for determining the velocity of the blood in the vessels.

H., Chau'veau and Lor'tet's. In this form the cross arms of a T-shaped brass tube are inserted into the vessel. An arm is perforated, and over the hole a piece of caoutchouc is tightly stretched. A needle is passed through the caoutchouc and projects into the lumen of

the vessel. The current of blood presses this in a certain direction, and causes the portion of the needle lying outside the membrane to move in the opposite direction. The extent of movement indicates the velocity of the blood.

H., Volk'mann's. This form of the instrument is composed of a short metallic tube, to which is connected a glass U-shaped tube, which is filled with an alkaline solution. Two stopcocks with a triple passage traversing them allow the blood either to run straight through the metallic tube in its original course, or to be suddenly diverted into the glass tube. The rapidity with which it traverses this tube gives the measure of the velocity of the blood.

Hæmodynam'ics. (Αἷμα; δύναμις, power.) The science of the forces connected with the motion of the blood. The same as *Hæmodynamics*.

Hæmodynamom'eter. (Αἷμα; δύναμις; μέτρον, a measure. F. *hémodynamomètre*; L. *emodinamometro*; G. *Blutdruckmesser*.) An instrument for determining the pressure of the blood against the walls of the blood-vessels. The simplest form is that employed by Stephen Hales, who inserted into one of the large arteries of a horse a brass pipe, to which a glass tube was connected, about nine feet in length. He found the blood rose about nine feet in the tube. An improved form was suggested by Poisseuille in 1829, which consists of a bent tube containing mercury in the bend, and is furnished with a stopcock. One limb is inserted into the vessel, the other is open. The pressure is determined by the height of the column of mercury, which corresponds to the difference in the levels of the mercury in the two limbs when the stopcock is opened. Ludwig added a float of ivory, which rests on the mercury in the open limb, and to which is attached a long rod bent at the free extremity, by means of which the variation in pressure can be registered. In this instrument the blood current is stopped, and it only shows the pressure of the blood in the parent trunk, not that which exists against the walls of the vessel in which it is inserted.

Modifications of Poisseuille's hæmodynamometer are now used, in which the ends of a divided artery are connected by the cross limbs of a T-shaped tube, through which the blood continues to flow, the lateral pressure being taken by the upright limb of the tube, to which a Poisseuille's manometer is attached. In man the blood pressure in the carotid is estimated at about 150 mm. of mercury.

Hæmodyscra'sia. (Αἷμα; δυσκρασία, a bad temperament of the body.) A disease depending upon a bad condition of the blood.

Hæmœde'ma. See *Hæmatœdema*.

Hæmœndocard'ium. (Αἷμα; ἔνδον, within; καρδία, the heart.) An extravasation of blood beneath the endocardium. It may occur in minute points, in larger spots, or in ecchymoses.

Hæmogas'tric. (Αἷμα, blood; γαστήρ, the stomach. F. *hémogastrique*.) Having blood in the stomach; applied to certain forms of pestilential fever in which blood is vomited.

H. fe'ver. A synonym of *Yellow fever*.

Hæmoglo'bin. (Αἷμα, blood; L. *globus*, a round body. F. *hémoglobine*.) Symb. Hb. $C_{600}H_{960}N_{154}FeS_3O_{179}$, Præyer; $C_{636}H_{1025}N_{164}FeS_3O_{189}$, Hüfner. The principal solid ingredient of the red corpuscles of the blood of vertebrate animals. It

HÆMOGLOBINÆMIA—HÆMOMETER.

is obtained in several ways, based on the effecting the solution of the hæmoglobin of the blood-corpuscles either in the serum or in added water, and then causing it to crystallise under the influence of alcohol or water, or both. Hæmoglobin is a colloid, but when combined with oxygen, as oxyhæmoglobin, crystallises according to the rhombic system in plates, or prisms, or tetrahedra, in the squirrel in hexagonal plates; they are bluish red by transmitted light, scarlet by reflected light; the solution is dichroic, red by reflected light, green by transmitted light; before crystallisation it is not diffusible, and decomposes peroxide of hydrogen, after crystallisation it diffuses freely, and has no action on peroxide of hydrogen. It has been proposed by Hoppe-Seyler to call the oxygenated crystalline hæmoglobin *Oxy-hæmoglobin*, and to give the term hæmoglobin to the reduced form. It amounts to 12 or 15 per cent. of the blood; it is reduced in quantity during pregnancy, and is in the largest amount in the new-born. After food the proportion is lessened from the dilution of the blood. It is reduced in quantity in convalescence from fevers, in phthisis, cancer, gastric ulcer, pernicious anæmia, leucocythemia, and wasting diseases.

In addition to oxygen and carbon monoxide, hæmoglobin forms distinct compounds with nitric oxide, cyanogen, and acetylene.

Hæmoglobin in a more or less pure form has been used successfully in anæmic conditions.

H., carbonic-monoxide. A stable compound in which carbonic monoxide replaces the oxygen of oxyhæmoglobin; it is of a cherry-red colour and resists putrefaction.

H., insoluble. A modification of hæmoglobin found in old strumous cysts filled with blood. It is a brick-red substance consisting of small, very refractile globules, insoluble in water and alcohol.

H., oxygenated. See *Oxyhæmoglobin*.

H., reduced. (*F. hémoglobine réduite.*) The form of hæmoglobin which contains no additional oxygen, as does oxyhæmoglobin, and which is not susceptible of crystallization.

Hæmoglobinhæmia. (*Αἷμα; L. globus; Gr. αἷμα, blood.*) The condition in which hæmoglobin is diffused into the liquor sanguinis, as occurs in some cases of hæmophilia.

Hæmoglobinometer. (*Hæmoglobin; Gr. μέτρον, a measure.*) An instrument devised by Gowers for the estimation of the proportion of hæmoglobin in the blood. It consists of two similar glass tubes, one of which contains a coloured solution of the same tint as a mixture of 20 c.mm. of blood in 2 c.c. of water, that is, 1 in 100. The second tube is graduated so that 2 c.c. are divided into 100 parts, each division thus containing 20 cubic mm. of fluid. Twenty cubic mm. of blood are then taken up by a pipette, ejected to the bottom of the graduated tube, into which a few drops of distilled water have previously been placed, the two well shaken, and then further water added until the tint is the same as that of the standard solution; the amount of dilution necessary to effect this is noted, and then the proportion of hæmoglobin to the natural may be calculated.

Hæmoglobinuria. (*Hæmoglobin; Gr. οὖρον, urine.*) The presence of the red colouring matter of the blood in the urine without any of the blood structures, thus differing from hæmaturia. The hæmoglobin is dis-

solved out of the red corpuscles while within the blood-vessels, and then transudes along with the other constituents of the urine. It occurs when the blood of an animal of another species is transfused into the veins; and it has been observed after severe burns, in septicæmia, scurvy, purpura, and typhus; after the respiration of arseniuretted hydrogen, and in poisoning by carbolic acid, phosphorus, and other substances which produce solution of the red corpuscles.

It is also an intermittent affection of unknown origin, called *Hæmaturia, intermittent*.

H., infantile epidemic. (*L. infans, a young child; Gr. ἐπιδήμιος, prevalent among a people.*) Winkel's term for a disease attacking infants at the breast in the Dresden Lying-in Hospital. Hæmoglobin in the urine, petechiæ, and jaundice were among the indications of blood disease.

H., paroxysmal. Same as *Hæmaturia, paroxysmal*.

Hæmoglobinuric. Relating to *Hæmoglobinuria*.

Hæmoglobulin. Same as *Hæmoglobin*.

Hæmographion. (*Αἷμα, blood.*) A term for a *Kymographion*.

Hæmohydrarthrosis. (*Αἷμα; ὕδωρ, water; ἄρθρον, a joint.*) Effusion of blood into a joint, so as to resemble hydrarthrosis.

Also, hydrarthrosis accompanied by effusion of blood into the joint.

Hæmoid. (*Αἷμα; εἶδος, likeness. F. hémorde.*) Resembling blood.

Hæmotelidosis. (*Αἷμα; κηλιδωσις, defilement. F. hémotelidose.*) Rayer's term for *Purpura*.

Hæmolutein. (*Αἷμα; L. luteus, yellow.*) A yellow colouring matter extracted from the corpora lutea by the aid of chloroform, of the same nature, probably, as *Hæmatoidin*.

Hæmomanometer. (*Αἷμα; μέτρον, a measure.*) An instrument for determining the pressure of the blood in the vessels. It usually consists of a bent tube containing mercury in the bend. One end of the tube is inserted into the vessel, and to prevent coagulation a little saline solution is usually first placed in the proximal end of the tube. This shows the blood pressure when the blood is at rest. Another form, showing the blood pressure against the walls of the vessel when the blood is in motion, consists of a T-shaped proximal portion, which is inserted into the two ends of a divided vessel, and which, consequently, does not interfere with the passage of the blood.

Hæmomedastinum. (*Αἷμα; L. mediastinus, belonging to one standing in the middle.*) An effusion of blood into the mediastinum from a penetrating wound, or from rupture of a vessel of the heart, or from the bursting of an aneurysm.

Hæmomere. (*Αἷμα, blood; μέρος, a part. G. Blutgefäßsegment.*) A segment of the blood-vascular system corresponding phylogenetically with a metamer of the body.

Hæmometachysis. See *Hæmatometachysis*.

Hæmometer. (*Αἷμα, blood; μέτρον, a measure. F. hémomètre.*) The same as *Hæmodynamometer*.

H. of Majendie. (*Majendie, a French physiologist.*) In this instrument the lower portion of the manometer is replaced by a

large receptacle filled with mercury, communicating, on the one hand, with a tube containing an alkaline solution, the end of which is inserted into the vessel; and on the other hand, with a vertical tube, in which the mercury oscillates with the varying pressure.

Hæmometra. (Αἷμα, blood; μήτρα, the womb.) Retention of menstrual secretion in the uterine cavity from obstruction.

Hæmometrectasia. (Αἷμα, blood; μήτρα; ἔκτασις, extension. F. *hæmometrectasie*.) A dilatation or distension of the womb from internal hæmorrhage.

Hæmoncia. See *Hæmatoncia*.

Hæmoncus. See *Hæmatoncus*.

Hæmonephrorrhagia. Same as *Nephromorrhagia*.

Hæmophoritis. (Αἷμα, blood; ὄον, an egg; φορέω, to bear. F. *hæmophorite*; G. *Eierstockentzündung mit Bluterguss*.) Inflammation of the ovary with effusion of blood; sanguineous oöphoritis.

Hæmopathia. (Αἷμα; πάθος, affection.) Lobstein's term for a disease produced by disorder of the blood.

Hæmopathology. (Αἷμα; πάθος; λόγος, an account.) The account of the diseased conditions of the blood.

Hæmopericardium. See *Hæmatopericardium*.

Hæmoperitonæum. (Αἷμα, blood; περιτόναιον, the peritoneum. F. *hæmopéritoine*.) Excessive effusion of blood into the peritoneum.

Hæmopexiæ. (Αἷμα; πήξις, a congealing. G. *Hæmopexien*.) A term applied to those diseases in which there is increased coagulability of the blood.

Hæmophæum. Same as *Hæmaphæin*.

Hæmophein. Same as *Hæmaphæin*.

Hæmophilæ. (Αἷμα; φιλία, fondness for. F. *hæmophilie*; I. *emofilia*; G. *Bluterkkrankheit*.) The congenital, and often hereditary, disposition to hæmorrhage, either spontaneous or as a result of even the slightest injuries, and to swellings of the joints. Males are eleven times more frequently affected than females. The probable duration of life is not very accurately known. According to Granddier, one half of the subjects of hæmophilia die before they are eight years old, and fewer than an eighth of the whole number live till they are twenty-one. The nature of the morbid condition is unknown; the physical structure of the blood-vessels exhibits nothing certain; and although Tardieu has described the blood as pale, serous, and not prone to coagulation, the observation is not generally confirmed; neither has the later statement by Klebs, that it contains the micrococcus *Monas hæmorrhagicum*. In addition to the bleeding from injured and free surfaces, blood may be effused under the skin and into the connective tissue, especially of the inner side of the thigh, of the popliteal space, and of the neighbourhood of the false ribs. The swellings of the joints are sometimes due to intra-articular extravasations of blood, and at other times appear to be of a rheumatic character.

H. neonatorum. (Νέος, new; L. *natus*, born.) Congenital hæmophilia.

Klebs has found a micrococcus in the blood of children suffering from this disease, the *Monas hæmorrhagicum*. This has since been doubted.

Hæmophilic. Relating to *Hæmophilia*.

Hæmophobia. Same as *Hæmatophobia*.

Hæmophobus. (Αἷμα, blood; φόβος, fear.) One who is afraid of, or opposed to, bloodletting.

Hæmophthalmia. (Αἷμα; ὀφθαλμός, the eye. F. *hæmophthalmie*; I. *emofthalmia*; G. *hæmophthalmus*.) Hæmorrhage into the interior of the eye. It is often the result of contusions, of surgical operations, such as iridectomy, of separation of the ciliary margin of the iris, and of the rupture of weakened blood-vessels from violent straining or coughing. The blood is usually either in the anterior chamber or in the vitreous humour.

Also, the same as *Hæmatophthalmia*.

H. externa. (L. *externus*, outward.) Effusion of blood into cellular tissue of the orbit and eyelids.

H. interna. (L. *internus*, within.) Effusion of blood into the anterior chamber or into the vitreous humour of the eye.

Hæmophthalmus. See *Hæmatophthalmus*.

Hæmophthisis. A misspelling of *Hæmoptysis*.

Hæmophy'salis. See *Hæmatophy'salis*.

Hæmō'pis. (Αἷμα, blood; πίνω, to drink.) A Genus of the Order *Hirudinea*, Class *Annelida*, characterised by having distinct jaws with few, rather large, but slightly prominent, teeth. The body is rather more rounded than that of the leech. It cannot make its way through the skin, but can draw blood from a mucous membrane.

H. ceylania. Moq. Tand. (G. *Iand-blutegel von Ceylon*.) Small, extremely thin animals, stretching almost to a thread, with about 100 indistinct rings. The cephalic extremity 3-lobed. Jaws with about 20 low teeth. Schmarda recognises four varieties of this species: var. *unicolor*, var. *viatata*, var. *brunnea*, and a fourth which is brownish black with a brownish band on the back. It is a true pest in Ceylon, and is found up to a height of 4000 feet. It sleeps in the earth during the dry season.

H. nigra. Sav. (L. *niger*, black.) The *Aulastoma gulo*.

H. sanguisor'ba. Savig. (L. *sanguis*, blood; *sorbeo*, to suck in. G. *Rossegel*.) The same as *H. vorax*, Moquin Tandon.

H. sanguisuga. Müller. (L. *sanguis*; *sugo*, to suck.) The same as *H. vorax*, Moquin Tandon.

H. vorax. Moquin Tandon. (L. *vorax*, devouring. F. *hémopis chevaline*; G. *Rosslutegel*, *Pferdeegel*.) The horse-leech. Back olive coloured or brownish, with six rows of black spots. Belly slate grey, margins yellow. It has a length of 20 cm. and has 97 rings. Found along the Mediterranean coasts, and especially in Algeria. It is apt to enter the mouths of domestic animals in drinking, and attaches itself to the gums, fauces, stomach, or air passages, and it is occasionally found in man.

Hæmoplanc'is. See *Hæmatoplanesis*.

Hæmopla'nia. See *Hæmatoplania*.

Hæmoplas'ma. See *Hæmatoplasma*.

Hæmoplas'tic. See *Hæmatoplastic*.

Hæmopleth'ora. See *Hæmatopleth'ora*.

HÆMOPNEUMOTHORAX—HÆMORRHAGE.

Hæmopneumothorax. (Αἷμα, blood; πνεῦμα, wind; θώραξ, the chest.) An effusion of blood along with the presence of air in the pleural sac.

Hæmopoësis. See *Hæmatopoiesis*.

Hæmopoetic. See *Hæmatopoietic*.

Hæmopoësia. See *Hæmatopoesia*.

Hæmoproctos. (Αἷμα, blood; πρωκτός, the anus. F. *hæmoproctie*; G. *Mastdarm-blutfluss*.) A discharge of blood from the bowels.

Hæmoproctus. Same as *Hæmoproctos*.

Hæmop'sis. See *Hæmopis*.

Hæmop'tic. Of, or belonging to, *Hæmoptoe*.

Hæmop'toë. (Αἷμα, blood; πτώω, to spit.) Same as *Hæmoptysis*.

Hæmopto'ic. (Αἷμα; πτώω.) Of, or belonging to, *Hæmoptysis*. A misspelling of *Hæmopt'ic*.

H. fe'ver. See *Fever, hæmoptoic*.

Hæmopto'sis. (Αἷμα; πτώσις, a fall.) Same as *Hæmoptysis*.

Hæmopt'yic. (Αἱμοπτυνικός, spitting blood.) Relating to *Hæmoptysis*.

Hæmopt'yica. (Αἱμοπτυνικός, spitting blood.) Remedies which are useful for the restraint of hæmoptysis.

Hæmoptys'ic. (Αἷμα; πτύσις, a spitting.) Relating to *Hæmoptysis*.

Hæmopt'ysis. (Αἷμα, blood; πτύσις, a spitting. F. *hæmoptysie*; I. *emottisia, emottisi*; S. *hemoptisis*; G. *Bluthusten, Blutspeien, Blutsputten*.) The expectoration of blood, or of mucus or pus or other matters mixed with blood, the blood being derived from the pulmonary structure, or from the bronchial mucous surface, or from a blood-vessel which has opened into some part of the respiratory passages; and the cause may be found in some local disease of the lungs or bronchial tubes, such as a pulmonary apoplexy, or a tubercular ulcer of the bronchial mucous surface; or in some general disease, such as purpura or hæmophilia.

H. calculo'sa. (L. *calculus*, a small stone.) Expectoration of blood along with calcareous masses.

H. interna. (L. *internus*, within.) A term for extravasation of blood into the pleural cavity, or *Hæmothorax*.

H. larynge'a. (Λάρυγξ, the larynx.) A spitting of blood derived from the larynx.

H. phthis'ica. (Φθίσις, consumption.) A term for pulmonary phthisis, having reference to the frequency of blood-spitting in that disease.

H. plethor'ica. (Πληθώρα, repletion of blood.) Cullen's term for spitting of blood when no external force has been used, or no usual evacuation suppressed, or where there is no cough.

H. trachea'lis. (L. *trachea*, the wind-pipe.) The spitting of blood derived from the trachea.

H. vica'ria. (L. *vicarius*, substituted.) Spitting of blood produced by the suppression of some accustomed evacuation.

H. violent'a. (L. *violentia*, force.) Spitting of blood produced by external violence.

Hæmoptys'mus. (Αἷμα, blood; πτυσμός, a spitting.) Spitting of blood.

Hæmorm'e'sis. (Αἷμα; ὁρμησις, rapid motion.) A term which has been used to signify active congestion of blood or hyperæmia.

Hæmor'r'hachis. (Αἷμα; ῥάχis, the spine.) Bleeding into the spinal canal.

Hæmorrhage. (Αἱμορραγία, violent bleeding; from αἷμα, blood; ῥίγνυμι, to break forth. F. *hémorrhagie*; I. *emorragia*; S. *hemorrhagia*; G. *Hämorrhagie, Blutung, Blutfluss*.) An escape of blood from the blood-vessels. It may either be spontaneous, when it is due to some alteration in the quantity or quality of the blood, to some change in the coats of the blood-vessels, or to alterations of blood pressure; or it may be traumatic, when it proceeds from injury. Active hæmorrhages occur in those of a sanguineous temperament, of a plethoric constitution, and in those of a scrofulous diathesis; passive hæmorrhages occur in renal, hepatic, and cardiac disease, producing venous congestion. When hæmorrhage occurs from a large vessel, it usually proves fatal, unless arrested by art. In the case of lesion of the smaller vessels, stoppage of the flow is effected materially by four processes, the contraction of the muscular tunic and the retraction of the elastic tunic of the arteries, the coagulation of the blood, and syncope, or the temporary failure of the heart's action. Hæmorrhage is favoured by external high temperature, the sudden reduction of the pressure of the atmosphere, and by posture.

H., accidental. (L. *accido*, to happen.) Hæmorrhage produced by some adventitious cause.

In Midwifery, the term is used to denote those hæmorrhages from the womb occurring in the course of pregnancy which are caused by a partial separation of the placenta from the walls of the uterus, the placenta being situated in its normal position, as distinguished from placenta previa. The separation of the placenta from its natural attachment may be caused by external violence, by a sudden flow of blood to the uterus, as under great emotion, or by irregular or excessive contraction of the uterine walls. A debilitated and badly nourished system from poverty, intemperance, or exhausting diseases, the occurrence of smallpox or acute atrophy of the liver, a fatty degeneration or atrophy of the placenta, and a dead fœtus, have been recognised as predisposing causes of the hæmorrhage.

H., active. Hæmorrhage in which the blood flows freely and is of arterial hue, and which is the result of plethora or active congestion.

H., adynam'ic. (Ἀδυναμία, want of strength.) The bleeding which occurs in those conditions of body in which loss of vital power is marked.

H., alve'olar. (L. *alveolus*, a small hollow.) Hæmorrhage from the socket whence a tooth has been drawn.

H., ant'e-partum. (L. *ante*, before; *partus*, birth.) Bleeding from the womb during some part of labour but before the birth of the child, such as occurs in placental presentation.

H., arterial. (Ἀρτηρία, the windpipe.) Bleeding taking place from an artery. The blood escaping is scarlet, and issues in jets from the proximal side, but slowly also, and of a darker colour, from the distal side, except where there is a free anastomosis, when it may be scarlet and in jets from this side also.

H., asthen'ic. (Ἄ, neg.; σθένος, strength.) Hæmorrhage resulting from exhaustion of the system and relaxation of the blood-vessels.

HÆMORRHAGE.

H. by exhalation. (L. *exhalo*, to breathe out.) Term employed by Bichat to designate idiopathic or spontaneous capillary hæmorrhage where no lesion could be seen, as opposed to hæmorrhage from rupture of blood-vessels.

H. by exuda'tion. (L. *exudo*, to press forth.) The same as *H. by exhalation*.

H., capillary. (L. *capillus*, the hair.) An oozing from the surface of the skin or mucous membrane, no vessel being visibly ruptured. Capillary hæmorrhages are also seen in the substance of the skin, brain, lungs, and other organs.

H., cerebellar. (*Cerebellum*.) Hæmorrhage into the substance of the cerebellum; when in large quantity, especially if it be into the middle lobe, there are sudden apoplecticiform symptoms, and speedy death from pressure on the medulla oblongata; when in small quantity and of slower progress, there is generally severe headache, often at the occiput, and vomiting. There may be hemiplegia, either cross or direct, especially if the hæmorrhage takes place into the lateral lobes, difficulty of speech, occasionally strabismus, twitching of the facial and ocular muscles, and rigidity of the cervical muscles. If there is no hemiplegia, there is usually difficulty of walking.

H., cerebral. See *Cerebral hæmorrhage*.

H., cerebral meninge'al. See *Meningeal hæmorrhage, cerebral*.

H., climacter'ic. A hæmorrhage which occurs at the *Climacteric*.

H., collat'eral. (L. *collatero*, to admit on both sides.) Bleeding occurring in the course of acute inflammations.

H., complemen'tary. (L. *complementum*, that which fills up.) A bleeding from some other part which succeeds to a hæmorrhage, such as the menses, which is shorter in duration than natural.

H., consec'utive. (L. *consequor*, to follow.) Traumatic hæmorrhage which does not follow immediately upon the injury.

H., constitu'tional. Term applied by Pinel and Brichteau to hæmorrhages dependent on conditions of the system, and not upon accidental lesion.

Also, a natural bleeding, such as the menses.

H., critical. (*Kρίσις*, a separating.) Hæmorrhage occurring at the turning point of a fever or other affection, and directly leading to recovery or to a fatal issue. Such critical hæmorrhages may occur from the nose, uterus, or hæmorrhoidal vessels.

H., cuta'neous. (L. *cutaneus*, relating to the skin.) Bleeding from the surface of the skin without apparent solution of continuity.

H., cutic'ular. (L. *cutis*, the skin.) Same as *H., cutaneous*.

H., death by. When bleeding becomes serious the paleness of surface, coldness, oppression in breathing, buzzing in the ears, giddiness, and great sensation of weakness which accompany the faintness arising from a moderate loss of blood, are succeeded by loss of voice, dilatation of the pupils, a comatose condition, involuntary evacuations of the urine and fæces, convulsions, and death.

H., de'vious. (L. *devius*, out of the way.) Same as *H., supplementary*.

H., dyscra'sic. (*Δυσκρασία*, bad temperament.) Bleeding depending on a bad con-

stitution of the blood and the blood-vessels, as the hæmorrhages of scurvy.

H., essen'tial. (L. *essentia*, the being of a thing. F. *hémorrhagie essentielle*.) A hæmorrhage which occurs without a distinct physical cause, and is itself supposed to be the initial disorder.

H., exter'nal. (L. *externus*, outside.) Bleeding taking place through the skin or through the mucous membrane of the mouth, nose, or conjunctiva.

Also, a hæmorrhage with immediate expulsion of the blood.

H., fe'brile. (L. *febrilis*, belonging to fever.) Hæmorrhage taking place with febrile symptoms, high temperature, frequent, full, and bounding pulse.

H., fortu'itous. (L. *fortuitus*, casual.) Same as *H., accidental*.

H. from blad'der. See *Hæmaturia cystica*.

H. from kid'neys. See *Hæmaturia renalis*.

H. from pros'tate. See *Hæmaturia prostatica*.

H. from ure'thra. See *Hæmaturia urethralis*.

H., gas'tro-intest'inal. (L. *gaster*, the belly; *intestina*, the bowels.) Bleeding from some part of the alimentary canal.

H., habit'ual. (L. *habitus*, custom.) A bleeding from some part, as the rectum and the nose, which takes place at more or less regular intervals without any apparent exciting cause and with no detriment to the general health. It may take place either continuously in small quantities, or frequently with short intervals. Bleeding from the gums in scurvy is an example of the former, hæmorrhoids of the latter.

H., idiopath'ic. (*Ἰδιοπαθής*, affected for one's self.) Bleeding which is not caused by any apparent pre-existent local disease or injury.

H., inev'itable. (L. *inevitabilis*, unavoidable.) Same as *H., unavoidable*.

H., interme'diary. (L. *inter*, between; *medius*, in the midst.) Traumatic bleeding occurring between the arrest of the primary bleeding and the time when true secondary bleeding may come on. It is the result of reaction after shock or depression.

H., inter'nal. (L. *internus*, within.) Bleeding without external manifestation into the connective tissue or into one of the cavities of the body from a wound or a contusion, or an ulceration, or into the expanded uterus after confinement.

H., interstit'ial. (L. *interstitium*, a space between.) Hæmorrhage occurring in the substance of the organs or tissues, as between the laminae of the cornea or retina.

H., intra'cran'ial. (L. *intra*, within; *cranium*, the skull.) Hæmorrhage taking place within the skull. See *Cerebral hæmorrhage*, *Hæmorrhage, cerebellar*, and *Meningeal hæmorrhage, cerebral*.

H., intramus'cular. (L. *intra*, within; *musculus*, a muscle.) A circumscribed extravasation of blood into the substance of a muscle. It may occur in the heart-walls.

H., light'ning. (F. *hémorrhagie foudroyante*.) Hæmorrhage which is very copious, very short in duration, and mortal.

H., mechan'ical. (*Μηχανικός*, relating

HÆMORRHAGE.

to machines.) Bleeding resulting from distension of the capillaries in active or passive congestion.

Also, the same as *H.*, *traumatic*.

H., mediate. (*L. medius*, in the middle.) Traumatic hæmorrhage occurring more or less slowly.

H., meninge'al. See *Meningeal hæmorrhage*.

H., men'strual. (*L. menstrualis*, monthly.) A term for the *Menses*.

H., na'sal. (*L. nasus*, the nose.) See *Epistaxis*.

H., natural. The *Menses*.

H., non-critical. (*L. non*, not; *Gr. κρίσις*, a separating.) Willis's term for hæmorrhage occurring in disease, but having no decisive influence on the course or result of the affection.

H. of cerebellum. See *H., cerebellar*.

H. of cerebrum. See *Cerebral hæmorrhage*.

H. of cord. See *Spinal hæmorrhage*.

H. of medulla oblongata. See *Medulla oblongata, hæmorrhage of*.

H. of membranes of brain. See *Meningeal hæmorrhage, cerebral*.

H. of membranes of spinal cord. See *Meningeal hæmorrhage, spinal*.

H. of spinal cord. See *Spinal cord, hæmorrhage of*.

H., organ'ic. (*Ὀργανον*, an implement.) Hæmorrhage accompanying and caused by some organic disease, as cancer.

H., parenchymatous. (*Παρέγχυμα*, the special substance of the viscera.) A capillary traumatic hæmorrhage from the tissues of an injured part. It flows in a steady stream, and the colour of the blood is intermediate between that of arterial and of venous blood. It may be primary, intermediary, or secondary, and may accompany scorbutic troubles.

H., pas'sive. (*L. passivus*, from *patior*, to allow.) Hæmorrhage occurring without any increase in the activity of the circulation of a part, such, for example, as is seen to take place from the gums in scurvy; also, hæmorrhage occurring with impeded circulation, and consequent venous congestion, as in some forms of cardiac disease.

H. pau'lo-post-par'tum. (*L. paulo*, a little; *post*, after; *partus*, birth.) Barnes's term for that form of primary post-partum hæmorrhage in which the uterus has been for a short time contracted and afterwards relaxes again.

H., pericar'dial. See *Hæmopericardium*.

H., period'ical. External or internal bleeding occurring at stated intervals; occasionally it is vicarious to menstruation, but not infrequently it has no connection with any disturbance of the menstrual flow. Called also *H., habitual*.

Also, any bleeding occurring at definite intervals, such as menstruation.

H., physiolog'ical. (*Physiology*.) A natural or normal bleeding, such as the menses.

H., pleth'o'ic. (*Πληθώρα*, fulness.) Hæmorrhage caused by an excessive amount of the blood or of the red corpuscles.

H., post-mor'tem. (*L. post*, after; *mors*, death.) Bleeding from a wound involving a fair-sized vein may occur some days after death, from putrefactive changes, whereby gases are

developed in the heart and vessels, or outside the vascular system when pressure is exerted on the heart, and in each case blood may be squeezed out of the wound.

H., post-par'tum. (*L. post*, after; *partus*, birth.) Hæmorrhage from the womb occurring after the birth of the child. See *H., post-partum, primary*, and *H., post-partum, secondary*.

H., post-par'tum, pri'mary. (*L. post*; *partus*; *primus*, first.) A bleeding from the womb which occurs within the first twenty-four hours after the birth of a child. It may happen while the placenta is still in the womb or after it has been removed, and depends on defective uterine contraction, so that the vessels of the site of the placenta remain unoccluded; or on laceration of the cervix uteri or of some part of the vagina or vulva. The defective uterine contraction may depend upon general conditions, such as anæmia, chronic alcoholism, hæmophilia, emotion, or a too free use of anæsthetics; or on local conditions, such as protracted labour, retention of urine, or uterine myoma.

H., post-par'tum, sec'ondary. (*L. post*; *partus*; *secundus*, second.) Bleeding from the womb occurring at a later period of the puerperal state than the first twenty-four hours after the birth of a child. It may be caused by retention of a portion of the placenta or of the membranes, the presence of a clot of blood, congestion of the womb, malignant disease or myoma, inversion or flexion of the womb, sexual or other emotion, imperfect involution, or some general disease or debility.

H., pri'mary. (*L. primus*, first.) Traumatic hæmorrhage occurring immediately on the receipt of a wound.

H., primi'tive. (*L. primitivus*, first of its kind.) Same as *H., primary*.

H., pud'en'dal. See *Pudendal hæmorrhage*.

H., puer'peral. (*L. puerpera*, a lying-in woman.) Same as *H., post-partum, secondary*.

H., pul'monary. (*L. pulmo*, the lung.) See *Pulmonary hæmorrhage*.

H., recur'rent. (*L. recurro*, to come back.) Traumatic hæmorrhage coming on again some time after the cessation of the primary hæmorrhage.

H., recur'ring. Same as *H., recurrent*.

H., retard'ed. Traumatic hæmorrhage which comes on in spite of the presence of the obstacle, such as a clot, which had arrested it at first.

H., sec'ondary. (*L. secundus*, second. *F. hémorrhage secondaire*.) Traumatic hæmorrhage which comes on some time after the primary hæmorrhage has been arrested.

By some authors the term is restricted to those traumatic hæmorrhages which set in after the fifth or sixth day from the injury, and so appear subsequently to the occurrence of suppurative or ulcerative changes; and to those hæmorrhages which result from the spontaneous rupture of the sac of a traumatic aneurysm.

H., sep'tic. (*Σηπτικός*, putrefying.) Hæmorrhage occurring in the course of such diseases as yellow fever and scurvy, from a supposed septic condition of the blood.

H., spi'nal. See *Spinal hæmorrhage*.

H., spi'nal meninge'al. See *Meningeal hæmorrhage, spinal*.

H., sponta'neous. (*L. spontaneus*, of

HÆMORRHAGIA.

one's free will.) Bleeding occurring without visible lesion of the vessels.

H., sthenic. (Σθένος, strength.) The same as *H., active*.

H., supplementary. (L. *suppleo*, to complete.) A hæmorrhage from such parts as the nose or lungs, which is substituted for an arrested hæmorrhage from some other organ, as the womb.

H., surgical. The same as *H., traumatic*.

H., symptomatic. Bleeding which is a symptom of some disease.

H., traumatic. (Τραῦμα, a wound.) Hæmorrhage resulting from a cut, rupture, puncture, or laceration of a vessel or structure.

H., ulcerous. Bleeding resulting from the opening of a blood-vessel by means of the ulcerative process, as in cancer.

H., umbilical. (L. *umbilicus*, the navel.) Bleeding in a child a few days old from the stump of the umbilical cord, after its separation, from too luxuriant or flabby granulations.

Also, bleeding in the infant from the navel about or soon after the separation of the umbilical cord from defective coagulability of the blood, caused by some general influence, such as congenital syphilis, jaundice, hæmophilia, a morbid state of the coats of the blood-vessels of the part, or imperfect nutrition from the bad health of the mother.

Also, bleeding from the cut end of the umbilical cord in a new-born child from too loose a ligature.

H., unavoidable. The bleeding from the womb which depends upon the implantation of the placenta over, or partially over, the cervix in Barnes's cervical zone. See *Placenta previa*.

H., uterine. (L. *uterus*, the womb.) Hæmorrhage proceeding from the vessels of the mucous membrane of the uterus.

Also, hæmorrhage resulting from the surface of tumours developing in the interior of the uterus.

Also, hæmorrhage from the interior of the womb occurring during or after labour.

H., vaginal. (Vagina. G. *Scheideblutung*.) The slight bleeding from the vagina which is sometimes seen in female children of a few days old; it sometimes accompanies the enlargement of the breast-gland which occurs at the same period.

H., venous. (L. *vena*, a vein.) Bleeding proceeding from a vein. The blood flows continuously and is of a dark colour.

H., vesical. See *Vesical hæmorrhage*.

H., vicarious. The same as *H., critical*.

Also, a discharge of blood from some part of the body in consequence of the suppression of an habitual hæmorrhage in some other part, as when epistaxis occurs after the cessation of the menses.

Hæmorrhag'ia. See *Hæmorrhage*.

Also, an order of some classifications of skin diseases, such as that of Plenck and of Willan, in which there is an escape of blood from the blood-vessels into the tissue of the skin; it includes purpura and scorbutus.

H. activa n'aris. (L. *activus*, active; *naris*, the nostril.) Bleeding from the nose; epistaxis.

H. atonica. (Άτονος, slack, languid.)

One of Good's two divisions of hæmorrhage, being that which is accompanied with general laxity or debility, and weak vascular action; blood attenuate, and of a diluted red.

H. bronch'ica. (L. *bronchia*, the bronchial tubes.) A term for *Hæmoptysis*.

H. cer'ebri. (L. *cerebrum*, the brain.) Bleeding into the brain; cerebral hæmorrhage.

H. enton'ica. (Έντονος, strained.) One of Good's two species of hæmorrhage, being that which is accompanied with increased vascular action; the blood florid and tenacious.

H. fau'cium. (L. *fauces*, the upper part of the throat.) Bleeding from the fauces.

H. gas'trica. (Γαστήρ, the belly.) Bleeding from the stomach; hæmatemesis.

H. gingiva'rum. (L. *gingivæ*, the gums.) Bleeding from the gums.

H. hæmatemesis. Same as *Hæmatemesis*.

H. hæmatu'ria. Same as *Hæmaturia*.

H. hæmop'tysis. Same as *Hæmoptysis*.

H. hepatic'a. (Ήπατικός, affected in the liver.) Bleeding from the liver. See *Hepathæmorrhag'ia*.

H. hep'atis. (L. *hepar*; from Gr. ήπαρ, the liver.) See *Hepathæmorrhag'ia*.

H. intestino'rum. (L. *intestina*, the bowels.) Bleeding from the bowels; discharge of blood by the stools.

H. muc'o'sa. (L. *mucosus*, slimy.) The discharge of whitish mucus from the bowels which sometimes accompanies piles.

H. Nabothi. The mucous discharge from the vagina, sometimes streaked with blood, which is a common sign of commencing labour.

H. narin'ea. (L. *naris*, a nostril.) Bleeding from the nose; epistaxis.

H. na'rium. (L. *naris*. G. *Nasenbluten*.) Bleeding from the nose.

H. na'sl. (L. *nasus*, the nose.) Bleeding from the nose.

H. o'ris. (L. *os*, the mouth.) Bleeding from the mouth.

H. pe'nis. (L. *penis*, the male organ.) Bleeding from the penis.

H. per anastomo'sin. (Αναστόμωσις, an opening.) Bleeding through fine apertures, which were called stomata, in the blood-vessels.

H. per cu'tem. (L. *per*, through; *cutis*, the skin.) A synonym of *Hæmathidrosis*.

H. per diabro'sin. (L. *per*; Gr. διάβρωσις, ulceration.) Hæmorrhage resulting from the perforation of a blood-vessel by an ulcerative process, malignant or other.

H. per diæ'resin. (L. *per*; Gr. διαίρεσις, a dividing.) Bleeding from rupture or division of a blood-vessel by wound or injury.

H. per diapede'sin. (Διαπήδησις, a leaping through.) Hæmorrhage by exhalation; that is, without manifest rupture of tissue of blood-vessel.

H. per rhex'in. (L. *per*; Gr. ῥήξις, a breaking.) Bleeding from rupture of a blood-vessel.

H. proc'tica. (Πρωκτός, the anus.) The bleeding from piles.

H. pulmona'lis. (L. *pulmo*, the lung.) Bleeding from the lungs.

H. pulmo'nis. (L. *pulmo*, the lung.) Bleeding from the lungs; hæmoptysis.

H. re'num. (L. *ren*, the kidney.) Bleeding from the kidneys.

HÆMORRHAGIÆ—HÆMORRHOIDAL.

H. spina'lis. (L. *spina*, the spine.) Bleeding into the spinal canal.

H. universa'lis. (L. *universalis*, belonging to the whole.) A synonym of *Purpura hæmorrhagica*.

H. uteri'na. (L. *uterus*, the womb.) Bleeding from the womb; uterine hæmorrhage. Also, a term for *Menorrhagia*.

H. ventric'u'li. (L. *ventriculus*, the stomach.) Bleeding from the stomach; hæmatemesis.

H. vesic'æ. (L. *vesica*, a bladder.) Bleeding from the urinary bladder.

Hæmorrhag'ia. (Αἷμα, blood; ῥήγνυμι, to burst forth.) Hæmorrhages or fluxes of blood. Term for an Order of the Class *Pyrexia*, of Cullen's Nosology.

H. cuta'neæ. (L. *cutaneus*, belonging to the skin.) The affections of the skin characterised by hæmorrhage into its substance, such as *Petechia*.

Hæmorrhag'ic. (Αἷμα; ῥήγνυμι. F. *hémorrhagie*.) Of, or belonging to, hæmorrhage; relating to a flow of blood.

H. ap'oplexy. (Ἀποπληξία; from ἀποπλῆσσω, to cripple by a stroke.) Cerebral hæmorrhage which produces apoplectic symptoms.

H. convul'sions. The epileptiform convulsions which are caused by a severe and rapid hæmorrhage, or more rarely in certain susceptible persons from a somewhat slight hæmorrhage. They are not necessarily of fatal import, but in some cases are caused by a comparatively small loss of blood.

H. diath'esis. (Διάθεσις, a condition.) Same as *Hæmophilia*.

H. ef'fort. See *Molimen hæmorrhagicum*.

H. ero'sion. See *Erosion, hæmorrhagic*.

H. exuda'tion. See *Exudation, hæmorrhagic*.

H. fe'ver. See *Fever, hæmorrhagic*.

H. fo'ci. Same as *Apoplectic foci*.

H. glauco'ma. See *Glaucoma hæmorrhagicum*.

H. in'farct. See *Infarctus, hæmorrhagic*.

H. infarc'tion. See *Infarctus, hæmorrhagic*.

H. infarc'tus. See *Infarctus, hæmorrhagic*.

H. infiltra'tion. (F. *infiltrer*, to creep in.) The charging of a tissue with blood which has escaped from its capillary vessels.

H. pulse. See *Pulse, hæmorrhagic*.

H. remit'tent fe'ver. See under *Fever, hæmorrhagic*, and subheadings.

H. retini'tis. See *Retinitis, hæmorrhagic*.

H. sarco'ma. See *Sarcoma, hæmorrhagic*.

H. spots. See *Petechia*.

H. ul'cer. See *Ulcer, hæmorrhagic*.

Hæmorrhagif'erous. (Αἱμορραγία, bleeding; L. *fero*, to bear. F. *hémorrhagifère*.) Rochoux's term signifying accompanied by effusion of blood.

Hæmorrhagip'arous. (L. *hæmorrhagia*; *pario*, to produce.) Able to provoke hæmorrhage for the purpose of acting as a critical discharge; such are general and local blood-lettings, leeches, scarification, and cupping.

Hæmorrhagoph'thisis. (Αἱμορραγία, hæmorrhage; φθίσις, consumption. F.

hémorrhagophthisie.) Pulmonary consumption accompanied by attacks of hæmorrhage; hæmorrhagic phthisis.

Hæmorrhaphil'ia. (Αἷμα, blood; ῥέω, to flow; φίλεω, to love, to be wont.) Same as *Hæmophilia*.

Hæmorrhelco'ma. (Αἱμόρροια, a flow of blood; ἔλκοςμα, an ulcerated tumour. F. *hémorrhelcoma*; G. *Hämorrhoidal-Geschwür*.) An hæmorrhoidal ulcer.

Hæmorrhelco'sis. (Αἱμόρροια; ἔλκωσις, ulceration. F. *hémorrhelcose*.) The formation of an hæmorrhoidal exculcation.

Hæmorrhenterorrh'æ. (Αἱμόρροια, a flow of blood; ἔντερον, an intestine; ῥοία, a flow. F. *hémorrhentéorrhée*; G. *Hämorrhodiarrhœ*.) Hæmorrhoidal diarrhœa.

Hæmorrhin'ia. (Αἷμα, blood; ῥίν, the nose. F. *hémorrhinie*; G. *Nasenbluten*.) Bleeding from the nose; epistaxis.

Hæmorrhinorrhag'ia. (Αἷμα; ῥίν; ῥήγνυμι, to burst forth.) Bleeding from the nose.

Hæmorrhoblennorrh'æ. (Αἱμόρροια, a flow of blood; βλέννα, mucus; ῥοία, a flow. F. *hémorrhoblennorrhée*; G. *eine Schleimhaut-Hämorrhöidablennorrhœ*.) Term for hæmorrhoidal blennorrhœa.

Hæmorrhobronchorrh'æ. (Αἱμόρροια, a flow of blood; βρόγχος, the wind-pipe; ῥοία, a flow.) A chronic bloody discharge from the bronchial tubes; a bronchorrhœa in which the expectoration is tinged with blood.

Hæmorrhocryph'ia. (Αἱμόρροια; κρύπτω, to hide. F. *hémorrhocryphie*; G. *Hämorrhoidalblutflussverhaltung*.) A retention or interruption of the hæmorrhoidal discharge of blood.

Hæmorrhocystorrh'æ. (Αἱμόρροια, a flow of blood; κύστις, a bladder; ῥοία, a flow. F. *hémorrhocystorrhée*.) A mucous sanguineous discharge from the bladder.

Hæmorrhodiarrh'æ. (Αἱμόρροια; διάρροια, diarrhœa.) Diarrhœa with blood in the stools.

Hæmorrh'æ. (Αἷμα, blood; ῥοία, a flow. G. *Blutfluss*.) A passive discharge or flowing of blood; passive hæmorrhage. Auctently applied to any hæmorrhage or discharge of blood, which is its strict and simple meaning.

H. petechia'lis. (*Petechia*.) A synonym, by Adair, of *Purpura hæmorrhagica*.

H. pulmona'lis. (L. *pulmo*, the lung.) Bleeding from the lungs; hæmoptysis.

H. uteri'na. (L. *uterus*, the womb.) Uterine hæmorrhage.

H. vaso'rum hæmorrhoida'lium. (L. *vas*, a vessel; hæmorrhoids, piles.) Bleeding piles.

H. ventric'u'li. (L. *ventriculus*, the stomach.) Bleeding from the stomach; hæmatemesis.

H. via'rum urina'rium. (L. *via*, a way; *urina*, urine.) Bleeding from the urinary passages.

Hæmorrh'oic. (Αἱμορροια, a flow of blood. F. *hémorrhôique*; G. *blutflüssig*.) Of, or belonging to, bleeding, or *Hæmorrhœa*.

Hæmorrhoid'al. (Αἱμόρροια, liable to discharge blood. F. *hémorrhôidal*.) Of, or belonging to, the disease hæmorrhoids, or piles.

H. artery, external. (F. *artère hémorrhôidale inférieure*; G. *äussere Mastdarmschlagader*.) The *H. artery, inferior*.

HEMORRHOIDALIS—HEMORRHOIDES.

H. artery, inferior. (L. *inferior*, lower. F. *artère hémorrhoidale inférieure*; G. *untere Mastdarmschlagader*, *Afterschlagader*.) A branch of the external pudic artery as it enters the perineal space; often there are two or three branches. It perforates the perineal fascia, traverses the fat of the ischio-rectal fossa, and is distributed by many branches to the levator ani, the sphincter ani, and the skin and superficial structures of the posterior part of the perineum. It anastomoses with its fellow of the opposite side and with the middle and superior hæmorrhoidal arteries.

H. artery, inter'nal. The *H. artery, superior*.

H. artery, mid'dle. (F. *artère hémorrhoidale moyenne*; G. *mittlere Mastdarmschlagader*.) A branch of the internal iliac artery, 1·7 mm. in diameter; it runs to the lateral wall of the lower portion of the rectum, where it is distributed, anastomosing with the inferior and superior hæmorrhoidal arteries and with the inferior vesical and uterine arteries; it gives branches also to the vesiculæ seminales and prostate, or to the vagina. It not infrequently arises from the internal pudic artery, or from the inferior vesical artery.

H. artery, superior. (L. *superior*, upper. F. *artère hémorrhoidale supérieure*; G. *obere Mastdarmschlagader*.) The continuation of the inferior mesenteric artery which, after crossing the left common iliac vessels, reaches the mesorectum, between the folds of which it courses and divides into two branches, that run on each side of the rectum for a little way, then divide into smaller branches, which penetrate the muscular coat and pass between it and the mucous coat at regular distances from each other to the internal sphincter, where they form loops and join the branches of the middle and inferior hæmorrhoidal arteries. It is occasionally absent, and sometimes gives origin to the middle colic artery, and to branches to the liver or the kidneys.

H. capsule. See *Capsule, hæmorrhoidal*.

H. flux. See *Flux, hæmorrhoidal*.

H. herb. The *Ranunculus ficaria*.

H. nerve, external. (L. *externus*, outer. G. *äusserer Mastdarmnerv*.) The *H. nerve, inferior*.

H. nerve, inferior. (L. *inferior*, lower. G. *unterer Mastdarmnerv*.) A terminal branch of the pudic nerve, or one sometimes directly derived from the division of the sacral plexus called the pudendal plexus. Its branches supply the skin of the posterior part of the perineum and the external sphincter of the anus. It communicates with the inferior pudendal and superficial perineal nerves.

H. nerve, me'dian. The *H. nerve of fourth sacral*.

H. nerve of fourth sa'cral. (G. *mittlerer Mastdarmnerv*.) A branch of that part of the fourth sacral nerve which does not join the sacral plexus. It supplies the external sphincter of the anus.

H. nerves of fourth sa'cral. Four to six delicate nerves arising from the loop of the fourth sacral; they join with branches of the inferior hypogastric plexus, and are distributed to the levator ani, and to the adjoining part of the rectum; and form also the inferior vesical and some of the vaginal nerves.

H. nerves, superior. (G. *obere Mastdarmnerven*.) Branches of the inferior mesenteric plexus of the sympathetic system which join the hæmorrhoidal plexus, and are distributed to the upper half of the rectum.

H. plexus of nerves. (L. *plexus*, a plaiting. G. *Mastdarmnervengeflecht*.) A wide-meshed plexus of slender sympathetic nerve fibres derived from the upper and hinder part of the inferior hypogastric and hæmorrhoidal plexus, and in small measure from the inferior mesenteric plexus. The filaments derived from the plexus are distributed to the walls of the rectum.

H. plexus of nerves, me'dian. Same as *H. plexus of nerves*.

H. plexus of veins. (L. *plexus*, a weaving.) A large, freely anastomosing plexus of veins at the lower end of the rectum, from which the several hæmorrhoidal veins arise.

H. va'rix. See *Varix, hæmorrhoidal*.

H. vein, external. The *H. vein, inferior*.

H. vein, inferior. A vein accompanying the inferior hæmorrhoidal artery, which empties ultimately into the internal iliac vein. It commences in the ischio-rectal fossa and establishes a communication between the systemic and portal systems of vessels.

H. vein, inter'nal. The *H. vein, superior*.

H. vein, mid'dle. A vein which accompanies the middle hæmorrhoidal artery, and empties ultimately into the internal iliac vein.

H. vein, superior. (L. *superior*, that is above.) This vein commences in the large hæmorrhoidal plexus around the lower end of the rectum, and discharges its contents into the inferior mesenteric, ultimately into the portal vein. It is destitute of valves.

H. ves'sels. See *H. arteries* and *H. veins*.

Hæmorrhoida'lis. Same as *Hæmorrhoidal*.

H. fe'bris. (L. *febris*, a fever.) A fever of an ephemeral type, according to Vogel, attended with backache, and terminated on the fourth day by the occurrence of piles.

H. no'dus. (L. *nodus*, a knot.) A term for a blind pile.

Hæmorrhoid'eous. (F. *hémorrhôide*.) Same as *Hæmorrhoidal*.

Hæmorrhoid'es. (Αἰμορροΐς, liable to bleed; a pile.) Hæmorrhoids; piles.

H. al'bæ. (L. *albus*, white.) Same as *H. mucosæ*, from the colour of the mucus.

H. apertæ. (L. *apertus*, open.) Bleeding piles.

H. cæcæ. (L. *cæcus*, blind.) Blind or non-bleeding piles.

H. criticæ. (Κριτικός, able to discern.) Piles which supervene on inflammatory diseases and constitute a crisis.

H. exter'næ. See *Piles, external*.

H. fluen'tes. (L. *fluo*, to flow.) Bleeding piles.

H. furen'tes. (L. *furo*, to rage.) Inflamed and painful blind piles.

H. inter'næ. See *Piles, internal*.

H. marisco'sæ. (L. *marisca*, a fig.) Bleeding piles, so called from their shape and appearance.

H. mucosæ. (L. *mucus*, slime.) Piles which secrete mucus.

HÆMORRHOIDOCAUSTER—HÆMORRHOPHESIS.

H. non-fluen'tes. (L. *non*, not; *fluo*, to flow.) Blind or non-bleeding piles.

H. o'ris. (L. *os*, the mouth.) Bleeding from the mouth.

Also (F. *hémorrhôides de bouche*), an epithet for the turgid veins, or the discharge of blood from them, of the palate, uvula, and fauces, arising from the suppression of the accustomed hæmorrhoidal discharge.

H. period'icæ. (Περιοδικός, coming round at stated times.) Piles which return at stated intervals, like the menses.

H. u'teri. (L. *uterus*, the womb.) An epithet for varicose veins in and around the genital organs of women.

H. vesic'æ. (L. *vesica*, the bladder.) An epithet applied to varicose veins around the neck of the bladder.

Also, applied to those cases of bleeding from the bladder which appear to be vicarious to bleeding piles.

Hæmorrhoidocaus'ter. (Αἱμορροῖς; καυστήρ, a burner.) An instrument for the cure of piles by cauterisation.

Hæmorrhoidr'osis. (Αἱμορροΐς; ὑδρωσις, a sweating.) Diffused oozing of blood from a pile.

Hæmorrhoids. (L. *hæmorrhôis*, piles; from Gr. αἱμορροΐς, discharging blood; from αἷμα, blood; ροία, a flow. F. *hémorrhôides*; I. *emorroidi*, *morici*; S. *hæmorrhoides*, *almorranas*; G. *Hämorrhoiden*, *goldene Ader*.) Piles. One or more swellings situated near the anus. The swellings consist essentially of thickened and dilated vessels, chiefly veins; sometimes the veins are sacculated and convoluted, and now and then adjoining sacculi open into each other and form a sort of cavernous tissue. The walls of the vessels are hypertrophied, and the perivascular connective tissue is thickened and indurated. Nodular masses of bluish-white colour and firm consistence are thus formed, which vary much in size and degree of tenderness. They may either be sessile or pedunculate. When seated on the skin outside the anus they are termed external, when on the mucous membrane internal. Piles are occasioned, in most instances, by circumstances impeding the portal circulation. Hence they occur in those who are much confined in a sedentary position, those who suffer from constipation, or from straining in consequence of stricture of the urethra, or from hepatic congestion and disease. In some cases they appear to be hereditary. Piles are liable to inflammation, and then become very tense, livid, and exquisitely painful. They bleed when a motion passes, and the pain is aggravated owing to the motions being hard and scybalous, which again results from the unhealthy condition of the mucous membrane. Phleboliths may form in the veins. See also *Piles*.

H., external. (L. *externus*, outward. F. *hémorrhôides externes*; I. *emorroidi externi*; G. *äussere Hämorrhoiden*.) Piles which are situated at the edge of the anus outside the sphincter. At first they are dilated veins, which then become inflamed, and increase in size by deposit in their walls and dilatation of their lumen; the surrounding areolar tissue and skin become hypertrophied and indurated, and the blood in the veins may become coagulated; the vessel may give way and the blood may be poured out into the surrounding tissue; in time

it is absorbed, and the pile may disappear. More frequently a little lump is left, which undergoes again the same processes, and at last becomes permanent. External piles may be one or many, small or large; when quiescent they are not painful, but exquisitely tender when inflamed.

H., flesh'y. See *Piles*, *fleshy*.

H., internal. (L. *internus*, within. F. *hémorrhôides internes*; I. *emorroidi interni*; G. *innere Hämorrhoiden*.) Piles situated in their origin within the edge of the anus. They are more liable to bleed than external piles, indeed hæmorrhage is often the earliest symptom. As they grow they become protruded externally in the act of defecation, or when walking, or at other times, and by the constriction of the sphincter become very painful until they are returned; they produce much backache, which extends to the thighs; there is a mucous discharge from the anus, and often bladder trouble of some sort. When they are inflamed there may be much constitutional disturbance, and when they are long-lasting the general health suffers. As they grow they protrude permanently, and often become surrounded by a ring of external piles.

H., in'tero-exter'nal. (L. *intus*, within; *externus*, outward.) A pile that is partly covered with skin and partly with mucous membrane.

H., ure'thral. Same as *Urethra*, *vascular tumour of*.

Hæmorrhôip'arous. (L. *hæmorrhôis*, a pile; *pario*, to produce.) Having power to produce piles; applied to aloes.

Hæmorrhôis. (Αἱμορροΐς, from αἷμα, blood; ροίω, to flow. F. *hémorrhôide*; G. *goldene Ader*.) A pile; a hæmorrhoid.

H. ab exa'nia. (L. *ab*, from; *ex*, out; *anus*, the fundament.) A synonym of *Prolapsus ani*.

H. cæ'ca. (L. *cæcus*, blind.) Cullen's term for blind piles.

H. cruen'ta. (L. *cruentus*, bloody.) A bleeding pile.

H. flu'ens. (L. *fluo*, to flow.) Cullen's term for internal piles without external tumour or bearing down of the anus.

H. proce'dens. (L. *proceedo*, to go forth.) A synonym of *Prolapsus ani*.

H. pro'cidents. (L. *procido*, to fall forwards.) Cullen's term for external piles caused by bearing down of the anus or prolapsus ani.

H. tu'mens. (L. *tumeo*, to swell.) Cullen's term for piles consisting of external swellings around the anus which may be bloody or mucous.

Hæmorrhôis'chesis. (Αἱμορροΐα, a discharge of blood; σχίσσις, a checking. F. *hémorrhôischesie*.) A retention or suspension of an hæmorrhoidal discharge.

Hæmorrhometrorrhœ'a. (Αἱμορροΐα, a discharge of blood; μήτρα, the womb; ροία, a flow. F. *hémorrhometrorrhée*.) A mucosanguineous discharge from the womb from hæmorrhoidal distension of its blood-vessels; hæmorrhoidal metrorrhœa.

Hæmorrhonephrorrhœ'a. (Αἱμορροΐα, a discharge of blood; νεφρός, the kidney; ροία, a flow.) A bloody mucous discharge from the kidney.

Hæmorrhophe'sis. (Αἱμορροΐα; ρόφησις, a supping up. F. *hémorrhophèse*; G. *Blutaufsaugung*.) Absorption of blood.

Hæmorrhophil'ia. (Αἱμόρροια; φίλ-
ω, to love.) Same as *Hæmophilia*.

Hæmorrhophil'is. Same as *Hæmor-
rhophil'ia*.

Hæmorrhoproctorrhœ'a. (Αἱμόρ-
ροία, a discharge of blood; πρωκτός, the anus;
ροία, a flow. F. *hémorrhoproctorrhée*; G. *hämorrhoidalische Mastdarm-Blennorrhœe*.) A
discharge of blood and mucus from the bowels;
an hæmorrhoidal flow of mucus from the
anus.

Hæmorrhoscop'ia. (Αἱμόρροια, a
flow of blood; σκοπέω, to see, or inspect.) The
same as *Hæmatoscopy*.

Hæmorrhurethorrhœ'a. (Αἱμόρ-
ροία, a flow of blood; οὐρήθρα, the urethra;
ροία, a flow. F. *hémorrhurethorrhée*; G. *hämorrhoidalische Harnröhren-Blennorrhœe*.) A
sanguineous and mucous discharge from the
urethra.

Hæmorrh'ysis. (Αἱμόρρυσις.) A dis-
charge of blood.

Hæmos'cheocele. See *Hæmatosche-
ocele*.

Hæmoschistoceph'alus. (Αἷμα,
blood; σχίστος, cloven; κεφαλή the head.) A
monstrosity with defective cranial arch, through
which protrudes a congested mass of imperfectly
developed brain or other tissue.

Hæmoscope. Same as *Hæmatoscope*.

Hæmoscop'ia. See *Hæmatoscopy*.

Hæmospas'ia. (Αἷμα, blood; σπᾶω,
to draw to. F. *hémospasie*.) The employment
of means for effecting revulsion by forming a
vacuum over a considerable extent of surface of
the body, being in fact an extension of the
principle of dry cupping, as in *Junod's boot*.

Hæmospas'ic. Relating to *Hæmospa-
sia*.

H. system. The method of treating
diseases by the revulsive method called *Hæmo-
spasia*.

Hæmospas'tic. Relating to *Hæmo-
spasia*.

Hæmosphærid'ina. (Αἷμα, blood;
σφαίριδιον, a globule.) The same as *Hæmoglo-
bulin*.

Hæmostas'ia. (Αἷμα, blood; στάσις,
a standing. F. *hémotase*, *hémotasié*.) A
stoppage, standing, or stagnation, of the blood,
as in an inflamed part.

Also, the production of an arrest of the circula-
tion of the blood, as by a ligature.

Also, the arrest of bleeding.

Hæmostas'is. Same as *Hæmostasia*.

Hæmostatic. (Αἷμα, blood; στατικός,
relating to a standstill. F. *hémotatique*; G. *blutstillend*.) Having the power or property of
staunching or stopping a flow of blood.

Relating to *Hæmostasis*.

H. collo'dion. See *Collodium hæmostat-
icum*.

H. ex'tract. A term applied to Bonjean's
ergotine.

H., Paglia'ri's. See *Pagliari's styptic*.

Hæmostatica. See *Hæmostatics*.

Hæmostatics. (Αἷμα; στατικός.)
Agents which have the power of restraining or
stopping bleeding.

H., exter'nal. (L. *externus*, without.)
Agents for the suppression of hæmorrhage which
are applied from without, such as ligature of the
bleeding vessel, compression, the caustic, caustic,
cold, very hot water, turpentine, spirit,

perchloride of iron, tannin, styptic colloid, and
other astringents.

H.s, inter'nal. (L. *internus*, within.)
Agents for the suppression of hæmorrhage which
are administered from within, as lead, gallic
acid, turpentine, and ergot of rye.

Hæmotachometer. (Αἷμα; τάχος,
swiftness; μέτρον, a measure.) An instrument
invented by Vierordt to measure the velocity of
the blood current in the arteries. It consists of
a flat rectangular metal box with glass sides; on
each narrow edge is a tube, one for entrance and
the other for exit of blood, the former being
placed at a lower level than the latter; in the
box is suspended a pendulum, the lower end of
which hangs against the inner opening of the
entrance tube, and outside is a curved graduated
scale by which the movements of the pendulum
may be measured. The entrance tube is at-
tached to an artery, and as the blood flows
through the box the rapidity of the current is
measured by the extent to which the end of
the pendulum is projected from the perpen-
dicular.

Hæmotachom'etry. (Αἷμα; τάχος;
μέτρον.) The measurement of the rapidity of
the circulation of the blood.

Hæmotelangi'osis. (Αἷμα, blood;
telangiosis. F. *hémotelangiöse*.) Lobstein's term
for disease of the capillaries or minute branches
of blood-vessels.

Also, the same as *Telangiectasis*.

Hæmotex'ia. Same as *Hæmotexis*.

Hæmotex'is. (Αἷμα, blood; τήξις, a
dissolution. F. *hémotexie*.) Dissolution or
putrefactive liquefaction of the blood.

Hæmoth'rax. (Αἷμα; θώραξ, the
chest.) Bleeding into the cavity of the pleura
or chest. It may be derived, by wound or rupture,
from the heart, the lungs, the large blood-vessels
or some of the smaller ones, as the intercostal
and internal mammary vessels, and from the
bursting of an aneurysm. When the effusion of
blood is large there is great oppression of the
breathing, and a sense of suffocation from pres-
sure on the lungs; there is great pallor and
coldness of surface, dilated pupils and glassy
eyes, weak, fluttering pulse, syncope and death.
If the effusion is small in quantity and not
very sudden or repeated there may be recovery.
Valentin has described a deep violet-coloured
ecchymosis extending from the angles of the
false ribs towards the quadratus lumborum as a
common sign of great value in diagnosis. There
is dulness of percussion at the back of the chest,
increasing in extent as the bleeding increases,
the respiratory murmur and vocal fremitus are
wanting, and when the pressure is great the
breathing becomes tubular.

Hæmotox'ic. See *Hæmatotoxic*.

Hæmotroph'ia. (Αἷμα; τροφή, nou-
rishment.) Excess of sanguineous nourishment.
(Dunglison.)

Hæmot'rophy. Same as *Hæmotrophia*.

Hæmot'us. (Αἷμα, blood; οὖς, the ear.)
A synonym of *Hæmatoma auris*.

Hæmotyphenter'itis. (Αἷμα, blood;
τύφος, stupor; έντέρον, an intestine. F. *hémotyphenterite*; G. *Darmbluttyphus*.) A term
for Piorry's Entérite typhobémique.

Hæmure'sis. (Αἷμα; οὐρησις, a making
water.) Same as *Hæmaturia*.

Hæmu'ria. The same as *Hæmaturia*.

Hæmydor. (Αἷμα, blood; ὕδωρ, water.)

HEMYDRIA—HAIR.

F. hemydor; *G. Blutwasser*.) The serum of the blood.

Hemydria. (Αἷμα; ὑδωρ.) A watery condition of the blood.

Hereditarious. Same as *Hereditary*.

Hæreditas. (*F. hérédité*.) Same as *Heredity*.

Hæsita'tio. (*L. hæsitatio*; from *hæsito*, to stick fast.) A term for stammering.

Hævea. See *Hevea*.

Hæffa-falo. The native name of *Bryonia scrobiculata*, given in Abyssinia as an adjuvant to koussou as a tæniacide.

Hag'berry. (*Sax. haga*, a hedge.) The *Prunus padus*.

Hage'nia. (After *Hagen*, of Königsberg.) A Genus of the Nat. Order *Rosaceæ*.

H. abyssin'ica, Lamarck. The *Brayera anthelmintica*.

H. anthelmint'ica, Lam. The *Brayera anthelmintica*.

Hager. (Arab.) The *Armenius lapis*.

Hag'gard. (A corruption, according to Skeat, of *hagged*, meaning hag-like. *F. hagard*; *G. hager*.) Lean, and worn, and hollow-eyed.

Hag'iar. Same as *Hager*.

Hagiosper'mum. (Ἅγιος, holy; σπέρμα, seed.) Old name for the seed of the *Artemisia santonica*.

Hagioxy'lym. (Ἅγιος, holy; ἔλυν, wood.) Old name for *Guaiacum*, from its healing virtues.

Hag-ta'per. The *Verbascum thapsus*.

Hahn'emann, Samuel Fried'-rich Christian. A German physician, the founder of homeopathy, born in Meissen in 1755, died in Paris in 1843.

Hahn'emann's black oxide of mercury. The *Hydrargyrum oxydulatum nigrum*.

H.'s sol'uble mer'cury. The *Hydrargyrum oxydulatum nigrum*.

Hahn'emannism. (*Hahnemann*.) A synonym of *Homœopathy*.

Ha'dinger. A German physicist of the present century.

H.'s polarised brush'es. (*G. Haidinger'sche Polarisationsbüschel*.) A brush-like image seen when polarised blue light or the blue sky is looked at through a Nicol's prism, and which moves with the eye. According to Von Helmholtz, it is due to the yellow-coloured elements of the macula lutea being slightly doubly refracting, and at one part absorbing more, and at another less, of the rays entering the eye.

H.'s tufts. Same as *H.'s polarised brushes*.

Hail. (*Sax. hagel, hagol*; *G. hagel*. *F. grêle*; *I. grandine*; *S. granizo*.) Frozen drops of rain. A term used as a synonym of *Chalazion*.

Haimara'da. The *Vandellia diffusa*.

Hair. (*Mid. E. heer, her*; *Sax. hær, hēr*; *G. Haar*; from an unknown root. *F. poil*; *I. pelo*; *S. pelo*.) A small filament growing from the skin or outer covering of an animal or a plant, or from some part of the internal surface, as the lining of the nostrils.

Also, any structure resembling this in appearance.

The hairs of an animal vary in length and in substance; the thicker and stronger ones are called *Bristles*.

Hairs are found in man on all parts of the skin except the palms of the hands and the soles of the feet, the dorsal surface of the first phalanges of the fingers and toes, the glans penis, and the inner surface of the prepuce.

lances of the fingers and toes, the glans penis, and the inner surface of the prepuce.

Hair is composed chiefly of keratin, or a modification of it. According to Von Laer, it contains carbon 50·6 hydrogen 6·36, nitrogen 17·14, oxygen 20·85, and sulphur 5 per cent. It also contains a small quantity of silica, and other mineral substances, amounting to from ·3 to 1·85 per cent. Water exists in variable proportion of about 13 per cent. The amount of sulphur varies within considerable limits, but is highest in red hair. See *H.*, *ash of*.

In animals hairs act as a protection, and to some extent as an organ of touch. They also tend to prevent loss of heat by conduction and radiation. In the case of the cilia and the vibrissæ of the ear and nose, they prevent the entrance of insects and other foreign bodies. A hair is composed of a root, a stem, and a point. The root is implanted in a recess in the skin, the hair-follicle; the stem is cylindrical, but sometimes more or less flattened. The hair of the negro is usually oval on section, and is of smaller diameter than that of the straight-haired races. It is very coarse in the Japanese. It is composed of cells, which are so elongated as to form fibres. Some hairs are hollow and contain a medulla, which however is absent in woolly hair; and most hairs present transverse striæ, named the hair cuticle. The coverings of a hair, as seen on transverse section, are, next to the cuticle, Huxley's layer of the inner root-sheath, Henle's layer of the inner root-sheath, the outer root-sheath, the hyaline membrane circularly disposed fusiform cells, and longitudinally arranged fibrous tissue. One or two sebaceous glands open near the orifice of each hair-follicle. A few unstriated muscle-fibres are attached to the follicle and serve to erect the hair.

H., a'reated. See *Trichosis area*.

H., ash of. The composition of the ash of hair is said to be calcic sulphate and carbonate, sodic and potassic sulphates, silicates, iron oxides, and manganese.

H.s, au'ditory. (*L. audio*, to hear.) See *H.-cells, auditory*.

H. balls. Roundish masses of felted hair found in the intestinal canal of ruminants, horses and other animals. See *Bezoar*.

H.-bed. Unna's term for the middle zone of the primitive hair-follicle.

H.s, bed. Unna's term for the non-papillary hairs of the fœtus arising from processes of the epithelium of the *H.-bed*.

H.-bell. A supposed correction, probably wrong, of the spelling of *Harebell*.

H., bod'y of. See *H.*, *shaft of*.

H., bristly. See *Trichosis setosa*.

H. bulb. (*F. bulbe du poil*; *G. Haar-kolben, Haarknopf, Haarzwiebel*.) The enlarged end of the *H.-root*, hollow at bottom so as to clasp and be connected with the *H.-papilla*. It is composed of polyhedral epithelial cells embedded in a matrix, and continuous with the cells of the outer root-sheath; the lower row of cells immediately upon the papilla are short columnar cells, from them the new cells grow, and push up the earlier formed ones to form the cells of the several parts of the hair.

H.-cap moss. The *Polytrichum juniperinum*.

H.-cells, au'ditory. (*L. audio*, to hear.) Cells estimated variously at from 16,400 to 20,000 arranged in two series in the organ of

HAIR.

Corti of the internal ear. There is one row of inner cells, which rests on a layer of small granular cells; the outer cells, numbering about 12,000 in man, are arranged in three or four rows, and rest upon the membrana basilaris. See *H.-cells, inner*, and *H.-cells, outer*.

H.-cells, in'ner. A single row of columnar or conical, nucleated, epithelial cells resting on a layer of small granular cells, and lying between the inner rods of the organ of Corti and the inner supporting cells; their free surface is crowned with a bundle of stiff hairs. They extend the whole length of the scala media.

H.-cells, outer. Three to five rows of conical, nucleated, epithelial cells resting on the membrana basilaris, and lying between the outer rods of the organ of Corti and the outer supporting cells; their free surface possesses a horse-shoe-shaped crown of stiff hairs, and their lower surface is connected by a branched process with the membrana basilaris and with the subjacent cells of Deiters. They extend the whole length of the scala media.

H.-cone, prim'itive. (*L. primitivus*, first of its kind.) The epithelial buds from which the hair takes origin. See *H., development of*.

H., cuticle of. (*L. cuticula*, the thin external skin. *G. Haaroberhäutchen*.) See under *H., shaft of*, and *H.-follicle*.

H., develop'ment of. The hair is an epidermic formation, and in the human fœtus appears first at the end of the third or beginning of the fourth month as a solid, cylindrical, epithelial bud from the stratum Malpighii of the skin, which penetrates the corium; amongst the meshes of a fine capillary plexus the bud grows, and becomes surrounded by a fine homogeneous membrane continuous with one which limits the Malpighian layer, and soon having around it a dense mass of spherical and spindle-shaped cells, which grow at the apex of the bud and form a vascular papilla which invaginates itself into the bud and forms the hair-papilla; from this and from the central cells of the bud the hair is formed; and from the outer cells of the bud and from the neighbouring part of the corium the hair-follicle is developed.

H. dye. A preparation containing lead, silver, bismuth, pyrogallie acid, sulphur, walnut juice, or other material for staining the hair.

H., epider'mis of. (*Epidermis*, the outer skin.) Same as *H., cuticle of*.

H., extra'neous. See *Trichosis hirsuties*.

H., fall'ing off of. See *Alopecia*.

H., felt'ing of. (*Felt*.) The matting together of the hairs. It occurs sometimes after a long illness from neglect, and exists in the condition called *Plica polonica*.

H.-fib'res. See under *H., shaft of*.

H.-follicle. (*L. folliculus*, a small bag. *F. follicule pileux*; *G. Haarbalg, Haarsack, Haarasche*.) A cylindrical depression in the skin for the reception of the root of the hair, extending, according to the size of the hair, throughout the corium more or less deeply into the subcutaneous tissue, in the adipose stratum of which it terminates as an invagination of the *H.-papilla*; its mouth is narrower than its extremity, and near it one or more sebaceous glands open. It consists of several layers; an outer fibrous coat, continuous with the fibrous tissue of the hair-papilla, and consisting of longitudinal bundles of connective tissue having many corpuscles with numerous blood-vessels and

nerves, but no elastic fibres; next, but chiefly confined to the lower part of the hair-follicle, is a single layer of spindle-shaped cells with oblong nuclei arranged in circular fashion, and believed to be unstriated muscular fibre-cells; and within these is a transparent, hyaline basement membrane, the glassy membrane, continuous with the basement membrane of the corium and the hair-papilla. Next to the glassy membrane is the epidermic coat of the follicle, or outer root-sheath, consisting of thick stratified epithelium, continuous with and like to that of the stratum Malpighii of the skin, at the mouth of the follicle, and thinning towards the end of the follicle, where it is continuous with the cells of the hair-bulb; the outermost cells are columnar, the innermost squamous, and the layers of intervening ones more or less polyhedral. The inner root-sheath and cuticle form part of the *H.-root*.

H.-follicle mite. (*G. Haarsackmilbe*.) The *Acarus folliculosus*.

H.-follicle, prick'le lay'er of. The outer root-sheath, inasmuch as it is continuous with, and derived from, the layer of prickle cells of the stratum Malpighii.

H., fork'ed. See *Trichosis distrix*.

H.-glands. (*G. Haarbalgdrüse*.) The sebaceous glands which open into the hair-follicle near its external orifice.

H.s, gland'ular. A plant-hair possessing a cavity filled with some special secretion.

H.-grass. The plants of the Genus *Aira*, in imitation of that word.

H., grey'ness of. The grey tint of hair is due to the presence of cavities in the medulla which contain air, and to a general deficiency of pigment in the hair cells.

H., growth of. See *H., development of*, and *H., new formation of*.

H., Henle's lay'er of in'ner root-sheath of. See under *H.-root*.

H., Huxley's lay'er of in'ner root-sheath of. See under *H.-root*.

H.s, internal. (*L. internus*, within. *G. innere Haare*.) The growths from the cells of certain plants, as *Aspidium*, which project into the spaces called air-chambers.

H.-knob. (*G. Haarknopf*.) Henle's term for the unabsorbed part of the root of a dead hair just before it falls off. See *H., new formation of*.

H.-li'chen. Same as *Lichen pilaris*.

H.-like. (*F. capillaire*; *G. haarfein, haarförmig*.) Finely drawn out like a hair.

H., mat'ted. The *Plica polonica*.

H., medulla of. (*L. medulla*, marrow.) See under *H., shaft of*.

H., mus'cles of. (*G. Haarbalgmuskel*.) The *Arrectores pili*.

H., nerves of. Nerve fibres enter the hair-follicles, but their distribution is unknown.

H., new forma'tion of. The development of new hairs to replace those which fall out at the term of their natural life. In the case of the eyelashes it has been ascertained that each takes about 100 days to attain maturity. The new hair appears to be developed from a new papilla, the old papilla becoming atrophied.

H.s, olfac'tory. (*L. olfacio*, to smell.) Delicate fibres projecting from the free extremity of the long narrow olfactory cells of the frog.

H.-papilla. (*L. papilla*, a small teat. *G. Haarpapille, Haarkeim*.) The nipple-like

HAIRY.

process of the corium on which the bulb of the hair is implanted, and from which it grows. It is composed of connective tissue; it is vascular and contains nerves.

H., papillary. (L. *papilla*.) Unna's term for a complete hair and hair-follicle.

H.-pick'ers, diseases of. In the process of hair picking clouds of dust are raised which, with stiff fragments of hair, excite coughing, and create permanent irritation of the trachea and bronchi. The picking and dressing of hair from Russia and Siberia has been known to excite malignant pustule and glanders, probably from the hair being taken from putrefying carcasses, or from the bodies of animals affected with contagious disease.

H.-pigment. (L. *pigmentum*, paint.) The colouring matter of hair; it consists of granular dark matter, chiefly occupying the medulla of the hair-shaft and the spaces between the hair-fibres; and of diffused colouring matter in the substance of the fibres.

H.-pith. Same as *H.*, medulla of.

H., plaited. A synonym of *Plica polonica*.

H.-point. (F. *point du poil*; G. *Haar-spitze*.) The apex or distal extremity of a hair. In weak and unhealthy hair it is often frayed and broken.

H.-root. (F. *racine du poil*; G. *Haarwurzel*.) The part of the hair which is enclosed in the hair-follicle. It is lighter in colour and softer than the stem, and is enlarged at the end forming the hair-hulb; it consists of the continuation of the shaft of the hair in the centre clothed with its cuticle, and surrounded by the inner root-sheath. This latter structure consists of three layers; the innermost, the cuticle of the root-sheath, consists of a layer of delicate imbricated downward-projecting epithelial scales, which fit into the upward-projecting scales of the cuticle of the shaft of the hair, and are continuous with the superficial cells of the hair-bulb. Immediately outside this is the innermost, or Huxley's, layer of the inner root-sheath, consisting of a single or double layer of horny, flattened, cubical cells, each containing the remains of a nucleus; and then the outermost, or Henle's, layer of the inner root-sheath, consisting of a single layer of non-nucleated, flattened, cubical cells, which in some places are separated from each other so as to give the appearance of perforations.

H., root-sheath of. (G. *Haarwurzel-scheide*.) The epidermic substance which adheres to the root of the hair when it is pulled out; it consists of the outer and inner root-sheath.

H., root-sheath of, cuticle of. (L. *cuticulum*, a thin skin.) See under *H.-root*.

H., root-sheath of, inner. See under *H.-root*.

H., root-sheath of, outer. See under *H.-follicle*.

H.-sac. The outer fibrous coat of the *H.-follicle*.

H. salt. A term for native magnesium sulphate, from its occurrence as a hair-like efflorescence on the walls of new or damp buildings.

H., sensitive. See *Trichosis sensitiva*.

H., shaft of. (F. *corps du poil*; G. *Haarschaft*.) The part of the hair which projects beyond the skin. It is generally cylindrical, but is occasionally more or less flattened; in its natural condition it tapers towards the point;

the hairs of straight-haired races are coarser and thicker than those of woolly-haired races, the former are nearly circular on section, and the latter oval. The shaft or body of the hair is composed in main part of the hair-fibres; they are straight, long, thin, longitudinal, flattened fibres, or narrow long scales, composed of hyaline horny substance, having a thin longish remnant of a nucleus; towards the bulb they become spindle-shaped; they are connected by a small amount of matrix. In coloured hairs the pigment is contained both in the interstitial matrix and in the hair fibres, in the former in granules, in the latter diffused; in white hairs there are many spaces filled with air. In many hairs the axis is occupied by a row or rows of polyhedral cells containing air bubbles, fat granules, and pigment; this axis is the medulla or pith. On the outside is the cuticle of the hair, consisting of fine imbricated scales, the edges of which are seen under the microscope as fine waved lines.

H.-shaped. Slender like a hair.

H., stem of. Same as *H.*, shaft of.

Hs., tactile. (L. *tactilis*, that may be touched. F. *poils tactile*; G. *Gefühlshaar*.) The large hairs which occur about the mouth of many animals, such as the dog and cat; each has a very large follicle deeply situated in the subcutaneous tissue, and surrounded by a thick hair-sac, which contains blood-sinuses separated by trabeculae of unstriped muscular fibre; the papilla is large, and around the follicle, especially near the sebaceous glands, a large number of nerves ramify, so as to form a sort of collar, in the substance of the outer hair-sheath. The eyelashes, the hairs which grow inside the nostrils, and some of those on the cheeks in man, possess the same structures.

H.-tail worm. The *Gordius aquaticus*.

H., trichomatose. (Ὠπίξ, a hair.) The affection called also *Plica polonica*.

H. tumour. A dermoid cyst containing hair.

H. worm. (G. *Haarwurm*.) The *Gordius aquaticus*, and other species.

H. worm, cutaneous. (L. *cutis*, the skin.) The worm supposed to be the cause of *Malis Gordii*.

H. worm, intestinal. (L. *intestina*, the bowels.) The *Gordius aquaticus*, when it is found in the intestine of an animal.

H. worm, muscular. The *Dracunculus medinensis*.

H. worms. The animals of the Family *Gordraceae*.

Hairy. (Hair. F. *velu*, *poilu*; I. *capelluto*, *peloso*; S. *peludo*, *cabelludo*; G. *haarig*.) Clothed, or covered, with hair.

In Botany, restricted to that pubescent covering in which the hairs are individually distinguishable.

H. china car'domum. The fruit of *Anomum villosum*.

H. melas'toma. The *Melastoma hirta*.

H. men. See under *Hypertrichosis*.

H. mint. The *Mentha aquatica*.

H. moles. See *Moles, hairy*.

H. riv'er weed. The *Conferva rivalis*.

H. scalp. (F. *périrâne*; G. *Schädelknochenhaut*.) That part of the integument of the head which is covered with hairs.

H. sedge. The *Carex hirta*.

H. sheep's scab'ious. The *Jasione montana*.

H. shrub trefoil. The *Cytisus hirsutus*.

H. tree-moss. The *Usnea plicata*.

Haj-Stub'nya. Hungary, County Thurocz. A long-known thermal mineral water of a temp. of 41° C. (111.2° F.), containing sodium sulphate 7.265 grains, magnesium sulphate 3.379, calcium sulphate 2.358, calcium carbonate 3.179, and a little magnesium carbonate and silicic acid, in 16 ounces; with free carbonic acid. Kitaibel has also found iron, alumina, and extractive. Used in digestive troubles. Called in German *Stuben*.

Hak too woo. The Chinese name of *Anemone cernua*.

Hake. (Norw. *hake-fisk*, hook-fish. F. *merluche*; G. *Rothauge*.) The *Merluccius vulgaris*. It is used as food; and the liver supplies an oil which is used as a substitute for, and an adulterant of, cod-liver oil.

Hala jira. The native name of *Nigella indica*.

Halatinous. (Ἀλάτινος, made of salt.) Saline; salt.

Halatium. ("Als, salt.) Old name for a medicine which was composed of salt and purgative substances. (Gorriæus.)

Halberd. (Old F. *halebarde*; from Mid. H. G. *Helmbarte*, an axe to split a helmet; from *Helm*, a helmet; and *Barte*, an axe; according to Skeat, the original meaning was a long-handled axe, from Mid. High G. *Halim*, a handle.) An ancient military weapon with a variously-formed head and a long shaft, like a combination of spear and battle-axe.

H-shaped. Formed like a spear or halberd.

H. weed. The *Calea jamaicensis*.

Halchémia. ("Als, salt; χέω, to pour out. F. *halchémie*.) Old term for the art of fusing salts.

Halcyon. See *Alcyon*.

Halcyonœum. See *Alcyonium*.

Haldestein. Switzerland, Canton Grisons, close to Chur. An alkaline earthy mineral spring.

Haléc. The herring, *Clupea harengus*.

Also, an old term for the sediment from *Garum*.

Halec'oré. See *Halicore*.

Halelœum. ("Als, salt; ἔλαιον, oil.) Old term (Gr. ἀλέλαιον), used by Foësius, in *Econ.*, p. 27, for a mixture of salt and oil, applied to swellings of the joints.

Halep. Turkey. A town in the north-east of Syria, near Antioch. Here are sulphurous springs, in repute amongst the Turks for diseases of the head. The remains of colossal aqueducts and large public baths attest the former grandeur of the city.

Hales, William. An English surgeon of the eighteenth century.

H.'s for'ceps. The instrument described as *Forceps, urethral*.

Halesia'ceæ. Don's name for the *Styracaceæ*.

Half. (Sax. *healf*; G. *halb*. F. *moitié*, *demie*; I. *meta*, *mezzo*; S. *mitad*.) One of two equal parts of a thing.

Half-adherent. (L. *adhæreo*, to stick to.) Same as *Half-inferior*.

Half-bath. A slipper or hip bath, in which the lower half of the body can be immersed.

Half blood. A term applied to one born of the same mother but not by the same father, or *vice versa*.

Also, the same as *Half-breed*.

Half-breed. The offspring of two different races.

Half-caste. Term applied to the progeny of a white man and a black woman, or *vice versa*.

Half-equitant. (L. *equito*, to ride.) Applied to the form of vernation called also *Obvolute*.

Half-gill. A term for the branchial filaments of one side of the branchial sac of the lower fishes, inasmuch as it, with the septum and the filaments of the other side, represents the single gill of the higher fishes. Also called *Demibranchia*.

Half-inferior. (L. *inferior*, lower.) Applied to an ovary which is only partially adherent to the calyx, as in *Saxifraga*.

Half-superior. (L. *superior*, upper.) Applied to a calyx which is only partially adherent to the ovary, as in *Saxifraga*.

Half-ter'ete. (L. *teres*, round.) In Botany, a term applied to a structure which is long and narrow, cylindrical with the exception of one flat face.

Half-vision. Same as *Hemiopia*.

Halibut. (Mid. E. *hali*, holy; *butte*, a place.) The *Hippoglossus vulgaris*, used as food; so called because it was good eating for holy days.

Hal'ica. See *Alica*.

Halica'cabum. ("Als, the sea; κακάβη, nightshade. F. *coqueret*; G. *Judenkirsche*.) A name for the *Physalis alkekengi*, or winter cherry, because it grows on the sea shore.

Halica'cabus. Same as *Halicacabum*.

Halices. Old term, used by Avicenna, l. i, *Fen.* 3, *doct.* 2, c. 13, for yawning after sleep.

Halichon'driæ. ("Als, salt; χόνδρος, cartilage.) An Order of the Class *Spongia*; being sponges of various shapes, with no cortical layer; the siliceous spicules simple and usually uniaxial, connected by a more or less resisting plasmatic structure disposed in a network or enclosed in the fibres of the parenchyma.

Halic'oré. ("Als, the sea; κόρη, a maiden.) The dugongs. A Genus of the Order *Sirenia*; or of the Suborder *Herbivora*, Order *Cetacea*.

H. australis. Owen. Hab. Australian seas. Used as *H. indica*. See *Dugong* oil.

H. ceta'cea. Mig. Same as *H. dugong*.

H. du'gong. Mig. Used for *Dugong* oil.

H. in'dica. Desm. Hab. Indian Ocean. The dugong. Flesh somewhat like beef. Oil used as a substitute for cod oil. See *Dugong* oil.

Halidrys. ("Als, the sea; δρῦς, a tree.) A Genus of the Suborder *Fucaceæ*, Order *Fucoidæ*.

H. nodo'sa. Lyngh. The *Fucodium nodosum*.

H. siliquo'sa. Lyngb. (L. *siliqua*, a pod.) Hab. European coasts of the Atlantic. Used like *Fucus vesiculosus*. It contains much mannite.

H. vesiculo'sa. The *Fucus vesiculosus*.

Halieut'ic. (Ἀλιεύς, one who has to do with the sea.) Of, or belonging to, or obtained from, the sea.

Halieuticon. (Ἀλιευτικός, for fishing.) Old term for a certain plaster, according to

HALIGRAPHY—HALLUCINATION.

Ætius, l. xv, cap. de Empl. Discussor. et Attractor.

Halig'raphy. ("ἅλς, a salt; γράφω, to write. *F. haligraphie.*) A treatise or dissertation on the nature and quality of salts.

Halimar. (Arab.) Old name for copper. (Ruland, and Johnson.)

Halimetric. Relating to *Halimetry*.

H. analysis. (Ἀνάλυσις, a loosing.) The mode of estimating the quality of beer, adopted by Fuchs, of Munich, by means of saline solutions, which indicate the amount of alcohol and of extractives.

Halimetry. ("ἅλς, salt; μέτρον, a measure.) The measurement of the amount of saline matter in a solution.

Halimous. ("ἅλιμος, belonging to the sea; from ἅλς, the sea. *F. halime, marin, maritime.*) Of, or belonging to, the sea; marine; maritime.

Also ἅλς, salt. *G. salzig*, of, or belonging to salt; saline; salt.

Halimus. ("ἅλιμος.) The *Atriplex halimus*, and the *A. portulacoides*.

Halina'trum. Same as *Halinitrum*.

Halinitrum. ("ἅλς, salt; νίτρον, nitre.) Old name (*Gr. ἀλινίτρον*), used by Fr. Hofmannus, in *Clav. ad Schroed.*, p. 3, for nitre; saltpetre.

Halinous. ("ἅλιος, made from salt; from ἅλς, salt.) Containing, or consisting of, salt; saline.

Halio'tis. ("ἅλς, the sea; οὖς, the ear. *F. haliotide, halyotide; G. Meerohr, Seeohr.*) A Genus of univalve shells, so called from its resemblance to the human ear; also called Venus's ear and sea ear.

H. tubercula'ta, Linn. (*L. tuberculum*, a small swelling.) Sea ear. An esculent mollusc, especially when pickled.

Halis'mus. ("ἅλς, salt. *F. halisme; G. Salzbildung.*) The formation of salt.

Halistere'sis. ("ἅλς, salt; στέρησις, deprivation.) The condition in which the bones become deprived of their salts to a greater or less extent.

H. os'sium. (*L. os*, a bone.) The condition described under the chief heading.

Halit'uous. (*L. halitus*, a vapour. *F. halitueux; I. alitoso; S. halituoso; G. dunstig, dampfend.*) Having, or full of, vapour; charged with vapour; rising in vapour, as the breath during cold.

H. heat. (*F. chaleur halitueuse.*) Heat of the body accompanied by a slight moisture on the skin.

H. skin. (*F. peau halitueuse.*) A skin covered with slight moisture.

Halitus. (*L. halitus*, vapour; from *halo*, to give forth the breath.) A vapour.

A word used by Bennet to denote the mode of fumigation in the treatment of phthisis by infusions of herbs.

H. o'ris fœ'tidus. (*L. os*, the mouth; *fœtidus*, stinking.) An unpleasant smell from the mouth.

H. san'guinis. (*L. sanguis*, blood. *F. haleine.*) The odour, peculiar to each animal, which is given off from the blood when freshly drawn; it may be rendered more conspicuous by the addition of a little strong sulphuric acid.

H. vita'lis. (*L. vitalis*, belonging to life. *G. Lebenshauch.*) The breath of life.

Hall. Austria, near to Linz, 1200 feet above

sea-level. A non-thermal mineral water containing, according to Netwald, sodium chloride 145.89 grammes, calcium chloride 3.819, magnesium chloride 3.414, magnesium iodide .371, sodium iodide .079, magnesium bromide .674, and iron carbonate .114 grammes in 10,000 grammes; with free carbonic acid. Used for drinking, and in baths for the cure of goitre, torpid serofulous diseases, chronic rheumatism, tertiary syphilis, chronic metritis, diseased conditions of the ovaries, testes and prostate, joint diseases, and skin affections.

Hall. Austria, in the Tyrol, near Innsbruck. A salt spring containing sodium chloride 1941 grains, magnesium bromide .36 grain, and traces of sodium iodide, in 16 ounces. Used in catarrhal conditions of the different mucous membranes and serofula.

Hall. Germany, Würtemberg. A saline water chiefly containing common salt. Used in serofula.

Hall, Mar'shall. An English physician, born in Nottinghamshire in 1790, died in London in 1857.

H.'s ready method of artificial respiration. See under *Artificial respiration*.

Hallè. (ἅλλῃ, in another place.) Old term, applied by Hippocrates, *de Fractib.*, xi, 7, *Foësius, Econ.*, p. 30, to the blood when it forsakes the surface and rushes upon the internal parts, under the influence of fear.

Hallè. Germany, in Prussia, district of Merseberg. A salt spring, containing traces of iodide and bromide of magnesium. Used in catarrhal affections of the mucous membranes. It has a temperature of 11.6° C. (52.88° F.)

Halleck's spring. United States of America, New York State, Oneida County. A saline water, containing sodium chloride 4.68 grammes, calcium chloride .78, magnesium chloride .2, and calcium sulphate .3 gramme, in a litre, with some free carbonic acid.

Hallein. Austria, near Salzburg. A salt spring. Used in serofula.

Hallelu'jah. (Heb. *halelu Jah*, praise ye the Jehovah.) A name for the *Oxalis acetosella*, because of its flowering between Easter and Whitsuntide, the time when the psalms ending with this word were sung.

Haller. A Swiss anatomist and physiologist, born at Bern in 1708, died there in 1777.

H.'s acid elix'ir. The *Elixir acidum Halleri*.

H.'s cones. The *Coni vasculosi*.

H.'s net'work. The *Rete vasculosum testis*.

H.'s pas'sage. The narrow passage connecting the auricular cavity and the ventricular cavity in the early stage of the heart of the mammalian embryo.

Halleria'ceæ. Link's name for a part of the *Scrophulariaceæ*.

Hallex. (*L. hallex.*) The great toe.

Hallucina'tio. See *Hallucination*.

H. hypochondri'asis. Same as *Hypochondriasis*.

H. verti'go. Same as *Vertigo*.

Hallucina'tion. (*L. hallucinatio*; from *hallucino*, to wander in mind. *F. hallucination; I. allucinazione; S. hallucinacion; G. Sinnes-Täuschung, Missgriff.*) A sensation perceived by the mind without any external cause capable of producing it.

HALLUS—HALONIUM.

H., hypnagogic. (Ὕπνος, sleep; ἀγυγός, leading.) The hallucinations which occur in a half-waking sleeping condition.

H., motor. (L. *motus*, movement.) A false sensation of movement, as in giddiness.

H., psychic. (Ψυχή, the soul.) An hallucination which is purely mental, having no relation to any supposed exterior object.

H., psycho-sensorial. (Ψυχή; L. *sensorium*, the place where the senses reside.) An hallucination taking origin in an abnormal activity of the perceptive centre of general sensibility, or in that of some special sense.

H., unilateral. (L. *unus*, one; *lateralis*, belonging to the side. F. *hallucinations dédoublées* of Michéa.) A sensory hallucination referrible to one side only.

Hallus. (L. *hallus*; from Gr. ἄλλομαι, to leap upon.) Name for the great toe, especially when it over-rides the second toe.

Hallux. Same as, and a corruption of, *Hallus*.

In Zoology, the innermost of the five digits which normally belong to the hind foot of a vertebrate animal.

The hallux may be, in some degree, opposable to the other toes, as in monkeys, lemurs, and opossums.

H. valgus. (L. *valgus*, bent outwards.) Hüter's term for the displacement of the great toe outwards, as in *Bunion*.

Halme. (ἄλμη, brine.) A term with the same signification as *Muria*.

Halmirys. Island of Chio. A cold mineral spring, containing sodium sulphate.

Halmyrax. Old name for a kind of nitre found upon the earth in valleys and plains, or in a lake of Media, according to Pliny. (Goræus.)

Halmyris. (ἄλμυρίς, anything salt.) Old name (Gr. ἄλμυρίς), used by Hippocrates, *de Humid. Usu*, vii, 8; also, for a species of the *Brassica oleracea*, or sea-cabbage. (Goræus.)

Halmyrodes. (ἄλμυρός, salty; εἶδος, likeness. F. *halmyrode*.) Having saltiness or acidity; full of acidity; briny.

Anciently applied (Gr. ἄλμυροδής) to the humours; also, by Hippocrates, *Épid.*, vi, i, 29, to fevers in which the patient's skin was said to communicate to the touch an itching sensation, such as is felt from handling salt and other saline bodies.

Halmyros. (ἄλμυρός, saltv. F. *halmyre*.) Of, or belonging to, salt; saline.

Halmyrous. (ἄλμυρός.) Saltish, saline.

HALO. (L. *halos*, a circle round the sun or moon; from Gr. ἅλως, a threshing floor, the disc of sun or moon, and later the ring round them. F. *halo*; I. *alone*; S. *halon*; G. *Hof*.) The luminous circle which surrounds the sun, moon, or stars, when their rays are refracted in their passage through a mist.

Term (F. *aréole*, *halo*) for the areola or brownish circle around the female nipple.

Also, applied to the red margin around pustules, which is also named *Areola*.

Also, in the plural, applied to the concentric layers of yellow and white yolk seen in the hen's egg.

H. signatus. (L. *signatus*, part of *signo*, to set a mark upon.) Sir Charles Bell's term for the series of markings arranged in annular fashion seen on the anterior surface of the

vitreous humour when the ciliary processes are removed.

Halochym'ia. (ἅλς, a salt; χυμία, the art of melting or dissolving solid matter. F. *halochimie*; G. *Salzchemie*.) Libavius's term for the branch of chemistry which treats of the history, nature, and quality of salts.

Halodera'um. (ἅλς, salt; δέραιον, a collar. G. *Salzhalsband*.) Kirby's term for a linen or cotton band or collar, containing hot salt, to be applied around the neck as a remedy against croup.

Halogen. (ἅλς; γεννάω, to produce.) Berzelius's term for an electro-negative body which forms salts in combination with an electro-positive metal; such are fluorine, chlorine, bromine, and iodine, to which may be added cyanogen. The halogens are univalent, one atom replacing an atom of hydrogen.

H. elements. The substances named under the chief heading.

Halogenium. (ἅλς, salt; γένναω, to produce. F. *halogène*.) A term for chlorine.

Halogenous. (ἅλς; γεννάω. F. *halogène*; G. *salterzeugend*.) Having power to form salts.

Halog'e'tum. A Genus of the Nat. Order *Chenopodiaceæ*.

H. tamariscifolium, Meyer. The *Anabasis tamariscifolia*.

Halography. (ἅλς, a salt; γράφω, to write. F. *halographie*; G. *Salzbeschreibung*.) A description of the variety of salts.

Haloid. (ἅλς; εἶδος, likeness.) Like to a salt. Berzelius's term for a salt formed by the combination of a halogen with an electro-positive metal.

At the present time the term is used as a convenient appellation of the chlorides, bromides, iodides, fluorides, and cyanides.

H. e'thers. Compounds formed by the substitution of an atom of a halogen for one of hydrogen in a hydrocarbon, or for one of hydroxyl in the corresponding alcohol.

H. salts. See under chief heading.

Haloi'dum oxyg'enat'um. (ἅλς; εἶδος; oxygen.) A term for potassium chlorate.

Halology. (ἅλς, a salt; λόγος, a discourse. F. *halologie*; G. *Salzlehre*.) A treatise upon, or the consideration of, the salts.

Halom'eter. (ἅλς, a salt; μέτρον, a measure. F. *halomètre*; G. *Salzmaas*.) An instrument for measuring the external form, angles, and planes of salts.

Halona'tron. See *Halonitrum*.

Hal'ones. A misspelling of the word *Halo* when used in the plural in reference to the yolk of an egg.

Haloni'tis. (*Halonium*. F. *halonite*.) Inflammation of the areolar texture.

Haloniol'ithus. (*Halonium*; λίθος, a stone.) A cellular concretion; a porous calculus.

Halonit'rum. (ἅλς, salt; νίτρον, nitre. F. *halonitre*; G. *Mauersalpeter*.) Old name for the efflorescence found on the damp walls of places inhabited by men or the lower animals, being a mixture of subcarbonate of soda and ammonia.

Hal'onium. (L. dim. of *halos*, the luminous circle round the sun, moon, and planets in a certain state of the atmosphere.) A small space.

Also, inflammation of the subcutaneous areolar

HALOPEGE—HAMELIA.

tissue, in reference to the accompanying halo of redness of the skin.

Also, the same as *Areola*.

Halope'gæ. ('Αλς; πηγή, a spring.) Salt or brine springs; mineral waters containing chiefly sodium chloride.

Halophil. ('Αλς; φιλέω, to love. F. *halophile*.) Berzelius's term for the extractives of the urine.

Haloph'ilous. ('Αλς, salt; φιλέω, to love. F. *halophile*; G. *meerbewohnend*.) Salt-loving; applied to plants that grow in soil that is impregnated with salt, or to animals living in salt water.

Halophyte. ('Αλς, salt; φυτόν, a plant. F. *halophyte*; G. *Salzpflanze*.) A plant that grows in soil impregnated with sea salt, such as various members of the Salsolaceæ or Chenopodiaceæ.

Also, a plant containing much salt, as the *Salicornia*.

Halophytum. Same as *Halophyte*.

Haloraga'ceæ. ('Αλς, salt; ῥάξ, a grape.) The mare's tails. A Nat. Order of epigynous, calycifloral Exogens of the Alliance *Myrtales*, being herbs or shrubs with small, and frequently incomplete, and unisexual flowers; open, minute calyx; and solitary, pendulous seeds.

Halorage'æ. R. Brown's term for *Haloragaceæ*.

Halos. Same as *Halo*.

Halotech'nia. ('Αλς, salt; τέχνη, an art. F. *halotechnie*; G. *Salzbereitung, Salzverfertigung*.) An old chemical term for that branch of the science which treats of salts.

Halot'richous. ('Αλς; θρίξ, gen. τριχός, hair.) A term used to describe the fibrillar appearance of some crystalline salts.

Halot'yîé. ('Αλς; κύλη, a cushion or bolster. F. *halotyle*; G. *Salzpolster*.) A cushion or pillow, filled with hot salt, as a remedial appliance against croup.

Hals'brücké. Germany, in Saxony, near Freiberg. A chalybeate water, containing hydrogen sulphide.

Halte'rate. (F. *haltéré*.) Provided with *Halteres*.

Halte'res. ('Αλτήρες, weights held in the hand to give an impetus in leaping.) The same as *Dumb-bells*.

Also (F. *balanciers*; G. *Schwingkolben, Schwinger*), the rudimentary hind wings of dipterous Insecta, generally consisting of round knobs or capitate filaments.

Halteripterous. ('Αλτήρες; πτερόν, a wing.) Having wings provided with *Halteres*.

Halucina'tio. See *Hallucinatio*.

Halur'gia. ('Αλς, salt; ἔργον, a work. F. *halurgie*.) The process of forming, extracting, or producing, salts.

Hal'ux. See *Hallux*.

Hal'ved. (Half.) Divided into half.

In Botany, having one half really or apparently absent.

Halycódes. ('Αλυκώδες, like salt. F. *halycodé*; G. *salzig, salzartig*.) Having, or full of, salt; saline.

Halycous. Same as *Halycodes*.

Halygraph'ia. See *Halography*.

Halyme'nia. ('Αλς, the sea; ὑμνή, a membrane.) A Genus of the Order *Flori'deæ*, Class *Carposporceæ*.

H. palma'ta. Ag. The *Rhodymenia palmata*.

Halymet'ric. A misspelling of *Hali-metric*.

Halymus. See *Halimus*.

Hal'ysis. ('Αλυσις, a chain.) A Genus of cestode worms.

H. la'ta. Zeder. The *Bothriocephalus latus*.

H. membra'ncea. (L. *membranaceus*, of skin.) The *Bothriocephalus latus*.

H. so'lium. Zeder. The *Tenia solium*.

Ham. (Sax. *hamm*. F. *jarret*; I. *garretto*; S. *jairete*; G. *Kniekehle*.) The part of the leg behind the knee-joint.

Hamal'gama. Old, and more correct, spelling of *Amalgam*.

Hamamelida'ceæ. The witch hazels. A Nat. Order of epigynous, calycifloral Exogens of the Alliance *Umbellales*, being small trees or shrubs with alternate leaves; deciduous stipules; imbricated corolla; a capsular, two-valved, loculicidal fruit; and two-celled introrse anthers, with deciduous valves.

Hamame'lis. (Ἀμαμηλίσ, a tree with a fruit like the pear.) A Genus of the Nat. Order *Hamamelidaceæ*.

Also, U.S. Ph., the fresh leaves of the *Hamamelis virginica*, collected in autumn. Used in the preparation of *Extractum hamamelidis fluidum*.

H., flu'id ex'tract of. See *Extractum hamamelidis fluidum*, U.S. Ph.

H. virginia'na. See *H. virginica*.

H. virgin'ica. Linnæus. (G. *Zauberstrauch*.) The witch-hazel. Hab. United States of America. The leaves are official, U.S. Ph.; they and the bark are said to be useful internally in hæmorrhages, hæmorrhoids, and most chronic discharges from inflamed mucous membranes; and externally in hæmorrhoids, sprains, contusions, and ophthalmia. A tincture of the bark allays the irritation of nettle-rash and the bites of insects.

Hamarthrit'is. ('Ἄμα, at once; ἄρθρι-τις, gout.) Gout in all the joints at the same time.

Ha'mate. (L. *hamus*, a hook. F. *hameçoné*; G. *mit Haken versehen*.) Having, or provided with, a hook at the tip; applied to plants which have parts of this appearance.

H. bone. (G. *Hakenbein*.) The *Unciform bone*.

H. pro'cess. The unciform process of the unciform bone.

H. pro'cess of eth'moid. See *Process, uncinatæ, of ethmoid bone*.

Hamb'ach. Prussia, near Trier. A non-thermal, alkaline, earthy, chalybeate water, springing from the grauwacke.

Hamb'ara. Same as *Amber*.

Hamb'ro. Same as *Hamburg*.

Hamb'rus. Same as *Amber*.

Hamb'urg. A city of Germany.

H. blue. Copper carbonate mixed with lime and exposed to the air.

H. oint'ment. (G. *Hamburger Salbe*.) One part of cacao butter mixed with two or three of almond oil.

H. pow'der. Roasted and ground peas and other cereals coloured with Venetian red, and used for the adulteration of chicory.

H. white. A mixture of one part of white lead and two parts of barium sulphate.

Hame'lia. A Genus of the Nat. Order

Rubiaceæ, found in America, the species of which are said to be antiscorbutic.

Ha'miform. (L. *hamus*, a hook; *forma*, resemblance. F. *hamiforme*; G. *hakenförmige*.) Resembling a hook.

Hamig'erous. (L. *hamus*, a hook; *gero*, to carry. F. *hamigère*.) Bearing hooks.

Ha'milose. (L. *hamulus*, a little hook. F. *hamuleux*; G. *hakerig*, *kurzhakig*.) Having, or full of, little hooks.

Ham'ilton, Frank Has'tings. An American surgeon of the present time, born at Wilmington, Virginia, in 1813.

H's thigh splint, double. A form of apparatus used in fretful children for fracture of the thigh, consisting of a Liston's long splint applied to each leg, and attached by their extremities to a transverse bar.

Ham'ma. (ἄμμα, a knot; from ἀπτω, to bind. F. *brayer*; G. *Bruchband*.) A bond, knot, connection, or fastening; used in relation to bandages.

Also, formerly applied to a truss for hernia.

Ham'ma. Algeria, Province of Constantine. Bicarbonated chalybeate waters from several sources, of a temp. of 35°–37° C. (95°–98.6° F.)

Ham'ma de ga'bés, el. Tunis. A sulphur water from several springs, having a temp. of 34°–45° (93.2°–113° F.) It is supposed to be the *Aque lacipitaneæ* of the Romans.

Ham'ma, el. Africa, Tunis, near Tozer. Sulphur waters, of a temperature of 37° C. (98.6° F.) Used in rheumatic affections and skin diseases.

Ham'mam. An Arabic word signifying a bath or hot spring.

Ham'mam aïda. Asiatic Turkey, Anatolia, near Yerma. A mineral water of which the composition is unknown.

Ham'mam-aneg'ned. Algeria, Province of Algiers. A hot sulphur spring.

Ham'mam-Ber'da. Algeria, Province of Constantine, near Heliopolis. A saline mineral spring, of a temp. of 29° C. (84.2° F.), containing much free carbonic acid.

Ham'mam-Bough'ra. Algeria, Province of Oran, near Tlemcen, 232 metres above sea-level. A thermal spring, temp. 48° C. (118.4° F.), of unknown composition.

Ham'mam, el. Algeria, Province of Constantine, on the road from Batua to Biskra. A saline spring, of a temp. of 36° C. (96.8° F.) It is the *Aque Herculis* of the Romans.

Ham'mam-Mé'louan. Algeria, not far from Algiers, at the foot of Mount Atlas. A saline water, of temp. of about 40° C. (104° F.), from two springs, containing sodium chloride 36 parts in 1000, with a small quantity of iron and traces of arsenic. Used in chronic articular rheumatism, abdominal engorgements, and old ulcers and wounds.

Ham'mam-Mer'dés. Same as *Ham'mam-Ber'da*.

Ham'mam-Meskou'tin. Algeria, near Guelma. Thermal waters, of a temp. of 95° C. (203° F.), containing sodium chloride 6.4 grains, magnesium chloride 1.2, calcium sulphate 5.879, sodium sulphate 2.72, calcium carbonate 3.97 grains, and traces of arsenic, iodine, and iron, with much free carbonic acid and a little hydrogen sulphide in 40 ounces. In the neighbourhood are other springs distinctly ferruginous.

Ham'mam-nba'il-na'dor. See *Nba'il-nador*.

Ham'mam-ok'kous. See *Okkous*.

Ham'mam-ouennou'gha. See *Ksenna*.

Ham'mam-ou'led-a'li. See *Ouled-ali*.

Ham'mam-ou'led-messa'oud. See *Ouled-messaoud*.

Ham'mam-rir'ha. Algeria, near Miliana. Mineral waters from several sources, containing small quantities of calcium and magnesium bicarbonate and calcium sulphate. A cold spring, temp. 17°–18° C. (62.6°–64.4° F.), contains a moderate quantity of iron; the hot springs, of which the chief use is made, vary in temperature from 47°–67° C. (116.6°–152.6° F.), and are employed as baths in chronic rheumatism and the results of wounds.

Ham'mam-sala'hin. See *Salahin*.

Ham'mam-sét'if. See *Sétif*.

Ham'mam-sey'nour. Algeria, near Souk-aras. A chalybeate water, containing small quantities of bicarbonate of sodium and calcium, with much free carbonic acid. Used in anæmia, chlorosis, and malarial cachexia.

Ham'mam-si'di-a'it. See *Sidi-aït*.

Ham'mam-si'di-a'li-ben-youb. See *Sidi-ali-ben-youb*.

Ham'mam-si'di-bel-kheir. See *Sidi-bel-kheir*.

Ham'mam-si'di-cheik. See *Sidi-cheik*.

Ham'mam-si'di-djaballah. See *Sidi-djaballah*.

Ham'mam-si'di-hay'ia. See *Sidi-hayia*.

Ham'mam-si'di-trab. See *Sidi-trab*.

Ham'mer. (Sax. *hamor*; G. *Hammer*. F. *marteau*; I. *martello*; S. *martillo*.) A tool with a cross head for driving nails and for similar purposes.

In Anatomy, a term for the malleus.

H. bone. The *Malleus*.

H. cramp. Same as *Palsy*, *hammer*.

H. palsy. See *Palsy*, *hammer*.

H. percuss'ion. See *Percussion hammer*, *Winterich's*.

H., ther'mal. (Θέρμη, heat.) A name for *Corrigan's cautery*.

Ham'mer-toe. A term applied to a distortion of the second toe, consisting in extreme extension so that it is bent upwards at an angle, the two terminal phalanges being flexed.

Ham'mock. (Of West Indian origin; S. *hamaca*.) A hanging bed or place of rest, consisting of strong netting attached at each end to two fixed points and hanging above the ground. Richard Davy has made good use of the hammock in the transport of sick persons.

Hammond's battery. (Professor W. A. Hammond, a New York physician.) A modification of the voltaic pile, consisting of a series of perforated zinc and copper plates, each pair soldered together and separated from the neighbouring pair by a piece of flannel, and the whole resting on a vulcanite plate; a copper wire is soldered to the uppermost zinc plate and the lowermost copper plate. The battery is put into action by pouring strong vinegar on to the top.

Ha'mose. (L. *hamus*, a hook. F. *hame-*

HAMPSTEAD—HAND.

gonné; G. *hakenförmig*.) Having a hooked or hook-like appearance; hooked.

Hampstead. England, Middlesex. A seldom-used chalybeate spring exists here.

Hamstring. A term applied to the several tendons of the posterior thigh muscles in the ham.

H., inner. The tendons of the semimembranosus, the semitendinosus, the gracilis, and the sartorius muscles.

H. muscles. The flexors of the leg, being the biceps flexor cruris, the semimembranosus, and the semitendinosus muscles, to which some add the gracilis, and the sartorius.

H., outer. The tendon of the biceps flexor cruris.

H. tendons. (*Τένον*, a tendon.) The tendons of the posterior thigh muscles in the ham.

Hamular. (L. *hamus*, a hook. F. *hamulaire*; G. *hakenförmig*.) Of, or belonging to, a hook; curved like a hook.

H. process of humerus. A hook-like process occasionally found in front of the internal condylar ridge of the humerus; also called *Supracondylar* process.

H. process of lachrymal bone. (G. *Thränenhacken*.) The hook-like process at the lower part of the crest or of the posterior section of the external surface of the lachrymal bone. It curves forward in the lachrymal notch of the superior maxillary bone, and forms the outer part of the orifice of the nasal duct.

H. process of sphenoid bone. (G. *Flügelhacken*.) The slender hooked termination of the internal plate of the pterygoid process of the sphenoid bone which is directed backwards and outwards, and in which plays the tendon of the tensor palati muscle.

Hamularia. (L. *hamulus*, a little hook. F. *hamulaire*; G. *Hakenwurm*.) A Genus of nematode worms, the head of which is terminated in an obtuse point, and is furnished with two prominent hooks or projections. Now included under *Filaria*.

H. lymphatica, Treutler. The *Filaria bronchialis*.

H. sub-compressa, Rud. (L. *sub*, under; *compressus*, pressed together.) The *Filaria bronchialis*.

Hamulate. (L. *hamulus*.) Having a little hook at the top.

Hamuli. Plural of *Hamulus*.

H. frontales. (L. *frons*, the forehead.) Two small hooked processes on the lower part of the anterior surface of the ethmoid bone which contribute to the formation of the foramen cæcum of the frontal bone.

Hamulose. (L. *hamulus*.) In Botany, covered with little hooked hairs.

Hamulous. (F. *hamuleux*; G. *kurzhakig*.) Same as *Hamular*.

Hamulus. (L. *hamulus*, dim. of *hamus*, a hook. F. *hameçon*; G. *Häkchen*.) A little hook, or any similar object.

The hook-like portion of the pterygoid process of the sphenoid bone.

Also, a term for the unciform bone.

In Botany, a hooked bristle.

H. cartilaginæus. (L. *cartilago*, cartilage.) The end of the limbus laminae spiralis at the helicotrema.

H. frontalis. See *Hamuli frontales*.

H. lachrymalis. See *Hamular process of lachrymal bone*.

H. laminae spiralis. (L. *lamina*, a plate; *spira*, a coil.) The same as *H. of cochlea*.

H. of cochlea. The hook-like termination of the lamina spiralis in the third spiral of the cochlea.

H. ossis hamati. (L. *os*, a bone; *hamatus*, hooked.) The hook-like process of the unciform bone.

H. ossis uncinati. (L. *os*, a bone; *uncinatus*, hooked. G. *Haken des Hakenbeins*.) The hook-like process of the unciform bone.

H. pterygoideus. The *H. of pterygoid bone*.

H. trochlearis. (*Τροχαλία*, the sheaf of a pulley.) The *Spina trochlearis*.

Hamus. (L. *hamus*, a hook. F. *hameçon*; G. *Haken*.) A hook.

An old term for a hooked instrument for extracting a dead child from the womb.

Applied, in Botany, to certain species of pubescence formed of bristles bent at their point into a hook.

Han'au. Germany, near Frankfurt. An earthy, saline, chalybeate water.

Han'cock, Hen'ry. An English surgeon, born in London in 1809, died at Chute in 1880.

H.'s amputation. A mode of removing the greater part of the foot by sawing through the os calcis vertically and bringing the surface into contact with a transverse section of the astragalus.

H.'s operation. An operation for the relief and cure of glaucoma. It proceeded on the assumption that glaucoma was associated with spasm of the ciliary muscle, and that the division of the muscle would relieve the tension. The operation consisted in introducing the point of a triangular Beer's knife, or better, of a lancet-shaped double-edged knife, into the ciliary region about one sixth of an inch from the cornea to the depth of about one fourth of an inch without opening the anterior chamber and without wounding the lens. The knife entered the vitreous, and the wound left after its withdrawal was about one sixth of an inch long, and was directed radially from the margin of the cornea. Slight prolapse of the vitreous usually takes place, and sometimes, owing to division of the periphery of the cornea or iris, the aqueous humour escapes. There is but little hæmorrhage, and the relief of the tension is immediate.

Hancornia. A Genus of the Nat. Order *Apocynaceæ*.

H. speciosa, Gomez. (L. *speciosus*, handsome.) Hab. Brazil. Furnishes some caoutchouc.

Hand. (Sax. *hand*. F. *main*; I. *mano*; S. *mano*; G. *Hand*.) The organ of prehension in man, consisting of the wrist or carpus, of the broad portion or palm formed by the metacarpus, and its coverings; and of five fingers, the first of which is called the thumb.

Also, applied to that part of birds which is analogous to the hand in man, forming the third portion of the anterior extremity which supports the wing; it is elongated, has one finger, and vestiges of two others.

H., amputation of. The hand may be removed at the wrist-joint by either a circular, an elliptical, or a flap method, making the flap from the structures of the palm.

HAND.

H., arteries of. The arteries of the hand are the terminal branches of the radial, ulnar, and interosseous arteries. These form two arches, the superficial and the deep palmar arches, from which most of the digital arteries are given off. The superficial palmar arch is chiefly derived from the ulnar artery, though it is often completed by the superficialis volæ of the radial. It supplies the three inner fingers and the inner side of the index. The deep arch is chiefly formed by the radial artery, but is completed by the profunda branch of the ulnar; it supplies recurrent branches, from its concavity, to the carpus, and, from its convexity, three superior perforating branches and three palmar interosseous arteries. The radial artery also gives off the superficialis volæ, the anterior radial carpal, the posterior radial carpal, the first dorsal interosseous artery, the dorsal arteries of the thumb, the dorsal artery of the index fingers, the princeps pollicis, and the radial branch of the index. The ulnar artery supplies the posterior ulnar carpal, which may anastomose with the posterior interosseous artery and the anterior ulnar carpal. A branch of the anterior artery, named the median, is sometimes of large size, and supplies the palm of the hand.

H., articulations of. The superior articulation of the hand, if the wrist be included, takes place between the radius and triangular fibro-cartilage above and the scaphoid, semilunar, and pyramidal, or cuneiform bones below. It presents anterior and posterior external and internal ligaments, and there is a single simple synovial membrane. The movement is free; it admits of extension and flexion, adduction and abduction, and of circumduction. Rotation is very slight, if any. The carpal bones are arranged in two rows; the bones of each row play but little over each other, but the two rows move with moderate freedom upon one another. The distal surface of the first row is concave, the proximal surface of the second row is convex. The two rows are united by dorsal, palmar, and lateral ligaments. The bones of the first row, the pisiform being excepted, are united by dorsal and palmar ligaments, and by interosseous ligaments, which are situated on each side of the semilunar bone. The bones of the second row have also dorsal and palmar ligaments, and usually three interosseous ligaments between the os magnum and unciform, the os magnum and trapezoid, and the trapezium and trapezoid. There is one synovial membrane, which passes between the two rows of carpal bones, and which sends two processes between the three bones of the first row, and three processes downwards between the four bones of the second row. It is continued below into the inner four carpometacarpal and three intermetacarpal articulations, and it occasionally communicates with the wrist-joint. The pisiform bone has its own ligaments and synovial membrane. The wrist also presents a strong anterior annular and a feeble posterior annular ligament. In regard to the carpometacarpal and intermetacarpal articulations, the four inner metacarpal bones are bound together by the transverse metacarpal ligament at their distal extremities. Between these proximal articulations is a synovial membrane continuous with that of the intercarpal joint. The bones are held together by three dorsal and three palmar, and by strong interosseous ligaments. They are also

connected with the carpus by dorsal and palmar ligaments and by an interosseous band. The articulation of the first metacarpal bone with the trapezium presents a capsular ligament and distinct synovial membranes. In the metacarpophalangeal and interphalangeal articulations the bones are kept in place by two lateral ligaments and an anterior ligament. A synovial membrane is present in each joint.

H., artificial. An apparatus, mainly made of metal, with fingers, used when the hand has been amputated. The chief form consists of a broad ring enclosing the upper arm, hinged to a case for the forearm, to the distal end of which is attached, by a kind of ball-and-socket joint, the artificial hand with its fingers. Rotation, flexion, and extension are accomplished by the aid of the other hand, and provision is made for fixing it in any position. The end of the forearm is enclosed in a leathern sheath within the case, having at its lower part a coarse male screw received into a female screw, and passing through a metal plate, which moves along with the screw in the movements of pronation and supination; metal rods pass from it to the first phalanges of the artificial fingers, with which they are hinged, and each successive phalanx is attached to the proximal one, so that flexion of the latter produces flexion of the former through the action of a lever rod.

H., bones of. The bones of the hand, if the wrist be included, are the two rows of carpal bones, eight in number, the metacarpal bones, five in number, and the phalanges, which are fourteen in number, making twenty-seven in all.

H., chol'era. See *Cholera hand*.

H., club. See *Club hand*.

H., contracted. See *Dupuytren's contraction*.

H., dislocations of. The hand may be dislocated at the wrist; see *Wrist, dislocations of*.

The individual bones of the carpus may be displaced, especially the os magnum.

The metacarpal bones may be dislocated forwards or backward; that of the thumb by far the most frequently.

The several phalanges may be dislocated in a forward or backward direction.

H., dropped. See *Dropped hand*.

H., excisions in. The chief excisions practised in the hand are those of the metacarpal bones, of the metacarpophalangeal joint, and of the interphalangeal joints. See under *Excision*.

H., fas'ciæ of. See *Fascia of hand, superficial, and F., palmar*.

H., feed'ing. See *Hand-feeding*.

H., fractures of. These may affect the carpal bones, the metacarpal bones, or the phalanges. Those of the carpus and distal phalanges are rare, of the metacarpal bones and proximal phalanges more common. Such fractures usually proceed from external violence, as from falls and blows, but occasionally from muscular action.

H., ligaments of. See *H., articulations of*.

H., malforma'tions of. A double hand has been observed in a few instances, each hand being somewhat imperfect; supernumerary digits are not uncommon, either with or without supernumerary metacarpal bones, and sometimes with supernumerary carpal bones. Not infrequently two or more of the fingers are united by a web. Parts of the hand may be hy-

HAND-FEEDING—HAPLOGENEOUS.

peritrophied, and parts of it may be arrested in development.

H., muscles of. The muscles of the palm of the hand are divided into three sets: those of the thenar eminence, including the abductor pollicis, the opponens pollicis, the flexor brevis pollicis, and the adductor pollicis; those of the hypothenar eminence, including the palmaris brevis, the abductor minimi digiti, the flexor brevis minimi digiti, and the opponens or adductor minimi digiti; and those of the central palmar region, including the four lumbricales, the three palmar interossei, and the four dorsal interossei.

H., nerves of. The nerves of the hand are chiefly derived from the median, ulnar, and radial trunks. The median nerve appears below the lower border of the anterior annular ligament of the wrist in front of the flexor tendons, and divides into an external branch, which supplies the abductor pollicis, the opponens pollicis, the outer head of the flexor brevis pollicis, and gives off digital branches, which supply the palmar aspect of the thumb and radial side of index finger; and an internal branch, which supplies the two outer lumbricales and gives palmar digital branches to the contiguous sides of index, middle, and ring fingers. The median also gives a small continuous branch above the annular ligament, which supplies the upper part of the palm. The ulnar nerve enters the palm beneath the annular ligament, behind and to the inner side of the ulnar artery, and gives superficial branches to the palmaris brevis and the integument of the inner side of the little finger and contiguous sides of the little and ring fingers. It also gives off deep branches to the muscles of the little finger, the interossei, the two inner lumbricales, the adductor pollicis, and the inner head of the flexor brevis pollicis. The radial nerve supplies the outer side and ball of the thumb by its external branch, and by its internal branch the integument of three and a half fingers. A few twigs for the hand come from the external cutaneous nerve and from the posterior interosseous nerves.

H., palm of. The surface of the hand which is exposed when the radius is supinated. The skin is hairless and marked by various folds, to which in cheiromancy much importance is attached. It is firmly adherent to the subjacent fascia. On the thumb side it presents the ball of the thumb or thenar eminence, and on the opposite side the hypothenar eminence. On removing the skin the palmaris brevis is seen on the inner side, and elsewhere a dense layer of fat, with some small palmar branches of the median and ulnar nerves. On clearing these away the strong palmar fascia, into which the palmaris longus is attached above, appears with the transverse ligament at the roots of the fingers. Immediately beneath the palmar fascia is the superficial palmar arch of the ulnar artery, the arch being completed by the superficialis volæ branch of the radial, the branches of the median and of the ulnar nerves.

Hand-feeding. The feeding of an infant by other means than by sucking the mother's or a wet-nurse's breast.

Hand'al. Same as *Handala*.

Handala. Old name for the *Cucumis colocynthis*, or colocynth.

Hand'ed fu'cus. The *Fucus palmatus*, from its shape.

Hand'ful. (F. *poignée*; I. *pugnetto*; S. *puñado*; G. *Handvoll*.) Such quantity as may be contained in the hand.

Hand'kerchief. (E. *hand*; *kerchief*, a square piece of cloth to cover the head; from Old F. *couvrechef*; from *couvrir*, to cover; *chef*, the head.) A square piece of linen, silk, or other material for wiping the nose, or for tying round the neck.

H. band'ages. See *Mayor's handkerchiefs*.

Hang. (Sax. *hangian*. F. *suspendre*; G. *hängen*.) To suspend the body by a cord attached to some part, usually the neck.

Hang'ing. (Hang. F. *suspension*; G. *Hängen*.) Suspending; death by suspending the body from the neck by a cord round it; the force applied in constriction being the weight of the body itself.

H., death by. Death by hanging is caused by asphyxia, along with congestion of the brain, or cerebral hæmorrhage, or injury to the upper part of the spinal cord, from fracture or displacement of the cervical vertebrae; in judicial hanging this latter is the usual form of death.

Hang'nail. (Either from E. *hang*; *nail*; or from Sax. *angnagel*, a sore by the nail.) A small piece of epidermis partially detached but hanging to the true skin by one end, and causing irritation by movement. It is usually situated near to a nail.

Hanly's spa. Same as *Sutton spa*.

Hapantismus. ('Απας, all. F. *hapantisme*.) Term for total adhesion of one part to another.

Haph'é. ('Αφή, a touching.) Old term for touch.

Haphemetric. ('Αφή, the sense of touch; μέτρον, a measure.) Relating to the measurement of the sense of touch.

H. comp'ass. Beale's term for a compass with a graduated arc for measurement of the amount of separation of the points of the limbs, and used as an *Æsthesiometer*.

Haphon'osi. ('Αφή; νόσος, a disease.) Diseases of the sense of touch.

Haplae'né. ('Απλός, simple; acne. F. *haplae'né*; G. *die einfache Hautjinne*.) A synonym of *Acne simplex*. See *Acne*.

Haplancylobleph'aron. ('Απλός, simple; *ancyloblepharon*, adhesion of the eyelids to each other.) Simple ancyloblepharon.

Haploae'né. The same as *Haplae'né*, according to Bateman. The herpes pustulosus miliaris of Alibert.

Haploblepharoclei'sis. ('Απλός, simple; βλέφαρον, the eyelid; κλείω, to shut.) The same as *Haplancyloblepharon*.

Haplocar'dia. ('Απλός; καρδιά, the heart.) A synonym of *Brachyopoda*, in reference to the single ventricular heart.

Haplochronionephritis. ('Απλός; χρόνιος, late; νεφρίτις, a disease in the kidneys.) Simple chronic inflammation of the kidneys.

Haplodermi'tis. ('Απλός, simple; *dermitis*, inflammation of the derma, or true skin. F. *haplodermite*; G. *die einfache Haut-entzündung*.) An imperfectly constructed term for simple inflammation of the skin.

Haploerythran'chè. ('Απλός; ἐρυθρός, red; ἀγχω, to strangle.) Simple inflammatory sore throat.

Haplogen'eous. ('Απλός, simple; γεννάω, to produce. F. *haplogéné*.) A term

HAPLOLICHEN—HARDENING.

applied by Fries to vegetables formed of anomalous subfilamentous cellulose.

Haploli'chen. ('Απλός, simple; ὕψος, height.) Term for *Lichen simplex*.

Haplomelas'ma. ('Απλός, simple; μέλασμα, blackness.) Same as *Melasma simplex*.

Haplomor'pha. ('Απλός; μορφή, form.) An Order of the Subclass *Hydroidea*, being the true Medusæ, having no hydraform trophosome.

Haplopap'pus. ('Απλός; πάππος, down.) A Genus of the Nat. Order *Compositæ*.

H. discoi'deus, De Cand. Hab. Mexico. Used in hysteria and impotence.

Haplop'athes. ('Απλοπαθής, being simply passive.) Simply ill, not suffering from a complicated disease.

Haplopathi'a. ('Απλός, simple; πάθος, disease. F. *haplopathie*.) A simple or uncomplicated disease.

Haplopath'ic. Relating to *Haplopathia*.

Haploperistomatous. ('Απλός; περί, around; στόμα, a mouth. F. *haploperistomate*.) Applied by Nees von Esenbeck to mosses provided with a simple peristome.

Haplopet'alous. ('Απλός; πέταλον, a flower leaf.) Applied to a plant in which the corolla is formed of a single petal.

Also, having one row only of petals.

Haplophym'a. ('Απλός; φύμα, a tumour.) A simple, non-malignant tumour.

Haplopityri'asis. ('Απλός; πτυρίασις, a scaly disease.) Term for *Pityriasis simplex*.

Haplopo'gonous. ('Απλός; πώγων, a beard.) Having a simple beard; used by Nees von Esenbeck as *Haploperistomatous*.

Haploscope. ('Απλός, single; σκόπεω, to see.) An instrument devised by Volkmann for the purpose of measuring the amount of the deflection of a line under the conditions described below. If, when the visual axes are horizontal and approximately parallel, two points are marked on a distant vertical screen at the place where the right and the left axis respectively reach the screen, and are looked at through a tube applied to each eye, the images of the two marks will cover each other and they will be seen as one. Again, if a vertical line be drawn through one or other mark, and looked at in the same way, there will be seen an image of a vertical line in the centre. But if a line be drawn vertically upwards from one mark and in the same direction downwards from the other and the two again looked at through a tube, the resultant line seen will, in most persons, not be a straight line, but one bent in the middle at the point where each begins; so that in order to get an image of a straight line one half line must be inclined through a small angle varying from 0° to 1·5° in different persons.

Haplospo'reæ. ('Απλός; σπορά, seed.) Decaisne's term for those *Algæ* which have simple spores, being the larger part of *Fucaceæ*.

Haplostemonopet'alous. ('Απλός; στήμων, a stamen; πέταλον, a petal. F. *haplostemonopétale*.) Applied by Wachendorff to those plants which have the stamens of the same number as the divisions of the corolla.

Haplostemonous. ('Απλός; στήμων, a thread, a stamen.) Having one series of stamens only.

Haplotax'is. ('Απλός; τάξις, order.) A better spelling of *Aplotaxis*.

Haplotom'i'a. ('Απλός, simple; τίμνω, to cut.) Term (Gr. *ἀπλοτομία*), used by Galen, *Introductio* c. 18, for a simple incision, or section.

Haplozygie'æ. ('Απλός; ζυγόν, a yoke.) A Division of *Umbelliferae*, according to Bentham and Hooker, having compound umbels, and fruit with only primary costæ.

Hapsich'olous. ('Αψις, a touching; χολή, bitter anger. F. *hapsichole*; G. *auffahrend, jähzornig*.) Testy; irritable; easily provoked to anger.

Hapsicor'i'a. ('Αψις, a touching; κόρος, satiety. F. *hapsicorie*; G. *Ekel, Widerwille*.) Fastidiousness. Old term for a kind of loathing. (Quincy.)

Hapsis. ('Αψις, a touching; from ἅπτομαι, to touch.) A term used by Hippocrates for mental alienation, or a distraction of the mind.

Also, an old name, used by Wallis, *de Anim. Brutorum*, i, 11, for the sense of touch.

Also, formerly applied to the close appliance of bandages.

Hapsus. Old name, used by Hildanus, *de Cista Militari*, for a compress of lint, or the like.

Hap'tic. ('Αψις, a touching. F. *haptique*; G. *fühlend*.) Of, or belonging to, touch.

Haptodysphor'i'a. ('Απτός, subject to the sense of touch; δυσφορία, pain hard to be borne.) The sensation of painfulness to the touch of things not usually so.

Haptogen'ic. Same as *Haptogenous*.

Haptogenous. ('Απτω, to fasten to; γεννάω, to produce.) Closely surrounding.

H. membrane. (L. *membrana*, a skin. F. *membrane haptogène*.) Ascherson's term for the soapy pellicle which is formed around a globule of albumen when it is placed in contact with an oily fluid.

Also, applied to the albuminous membrane which was supposed to surround the oil-globules of milk.

Haptot'ics. ('Απτομαι, to touch.) Zennich's term for the doctrine of the phenomena of touch, or sensation.

Hard. (Sax. *heard*; G. *hart*. F. *dur*; I. *duro*; S. *duro*; L. *durus*.) Firm; solid.

H. am'adou. The *Polyporus igniarius*.

H. bast. Thick-walled *Bast-fibres*.

H. Carthage'na bark. The bark of *Cinchona cordifolia*.

H. chan'cre. See *Chancre, hard*.

H. fern. The *Lomaria spicant*.

H. hack. The *Spiræa tomentosa*.

H. pal'ate. See *Palate, hard*.

H. Pita'ya bark. Same as *Carthage'na bark, hard Pita'ya*.

H. pulse. See *Pulse, hard*.

H. soap. See *Sapo durus*, B. Ph.

H. sore. Same as *Chancre, hard*.

H. water. See *Water, hard*.

H. yellow Carthage'na bark. Same as *Carthage'na bark, hard*.

Hard-beam. The *Carpinus betulus*, from the hardness of its wood.

Hard'eck. Bavaria, in the Oberpfalz district. A chalybeate water, containing sodium bicarbonate 1·2 grain, sodium chloride 2·5, sodium sulphate 5·25, potassium chloride 1·25, and iron carbonate ·45 grain, in 16 ounces, with much free carbonic acid.

Hard'ening. (Hard. F. *durcissement*; I. *induramento*; G. *Verhärten*.) The process of becoming, or the condition of being, hard.

HARDER, JOHANN JACOB—HARITCH.

H. fluids. Liquids used to harden tissues in order to be able to make sections for the microscope, and to prevent them absorbing water to the detriment of their definition. Many fluids are used, alcohol, solutions of potassium or ammonium bichromate, of chromic acid, of osmic acid, of picric acid, and others.

H. of cellular tissue. See *Œdema of cellular tissue*.

Harder, Johann Jacob. A Swiss anatomist, born at Basel in 1656, where he died in 1711. He was successively professor of rhetoric, of physics, of anatomy and botany, and of theoretical medicine, in the university of his native city.

H., gland of. An albuminous gland situated at the inner side of the orbit in Batrachia, Reptiles, in some of which it is very large, Birds, and Mammals. It is constantly associated with the nictitatory membrane, and is obsolete in Man and some of the higher Quadrumana. The secretion is discharged into the conjunctival sinus between the nictitatory membrane and the conjunctiva bulbi. In the Toad the Harderian gland is pyriform, and constituted of many acini. The wall of each acinus is composed of a homogeneous membrana propria lined with a layer of delicate, columnar, finely granular cells. The gland is large in Lizards, and presents a tubular character. In Birds the gland is large and of tubular type, and presents a number of small glandular tubes opening by groups into common excretory ducts. The gland cells are cylindroid in form. In Mammals it is interesting to notice that the ill-developed eye of the Mole is in relation, on its inner side, with a large sebaceous gland. It attains its highest development in the Rodents, where it is composed of an inferior larger part, the *pars rosea*, and a superior smaller part, the *pars alba*. The duct is common to both. Both are compound acinous glands. The cells lining the acini contain many fat drops, and the secretion is an oily one, and yellowish; leicithin and cholesterolin have been found in it.

Harderian gland. See *Harder, gland of*.

Hardesia. A name for the *Lapis hibernicus*, or Irish slate. Administered as a remedy for internal bruises.

Hardhack. The *Spiræa tomentosa*.

Hardness. (*Hard*, F. *durété*; I. *durezza*; S. *durezza*; G. *Härte*.) The state or quality of being hard; the capacity of a substance to scratch another.

In Physics, the word is also used to denote an absence of fragility; thus, a diamond possesses hardness in the former sense and not in the latter.

H., scale of. A mode of an approximate numerical expression of the hardness of a substance by the comparing it with the following substances as numbered :—1, green laminated talc; 2, rock salt or crystallised gypsum; 3, transparent calc spar; 4, crystalline fluor spar; 5, transparent apatite; 6, cleavable felspar; 7, transparent quartz; 8, transparent topaz; 9, corundum, or cleavable sapphire; 10, diamond, this being the highest in the scale.

Hardock. The *Aretium leppa*.

Hardwickia. A Genus of the Nat. Order Leguminosæ.

H. pinna'ta, Roxb. (L. *pinnatus*, feathered.) Hab. India. Yields, on incision, a

thick, dark-brown oleo-resin, somewhat like copaiba.

Hare. (Sax. *hara*. F. *lièvre*; I. *lepre*; S. *liebre*; G. *Hase*.) The *Lepus timidus*. Used as food.

H. bell. See *Harebell*.

H.'s ear. (F. *buplèvre*, *l'oreille de lièvre*; G. *Hasenohrlein*.) The *Bupleurum rotundifolium*.

H. eye. See *Lagophthalmus*.

H.'s foot. The *Trifolium arvense*.

Also, applied to the ferns of the Genus *Davallia*.

H. foot tre'foil. (F. *pied de lièvre*.) The *Trifolium arvense*.

H.'s let'tuce. The *Sonchus oleraceus*.

H.-lip. See *Harelip*.

H.'s pal'ace. The *Sonchus oleraceus*.

H.'s pars'ley. The *Anthriscus sylvestris*.

H.'s this'tle. The *Sonchus oleraceus*.

Harebell. The *Campanula rotundifolia*. It has been suggested, but probably erroneously, that the word should be hairbell, in reference to the slender stalks.

Also, sometimes, erroneously applied to the *Scilla nutans*.

Harelip. (*Hare*; *lip*. F. *bec de lièvre*; I. *labio leporino*, *labio fesso*; S. *lubi hendido*; G. *Hasenscharte*.) A fissure of the upper lip resulting from an arrest of development at or about the mouth, so called from its resemblance to the cleft upper lip of the hare and like animals.

H., complicated. Harelip in which the malformation extends to the boues. There may either be a separate and projecting intermaxillary bone, with the central incisors implanted upon it, or the single or double fissure may extend far back through the alveolus and the hard and soft palate. The columna nasi may be deficient.

H., doub'le. Harelip in which there are two fissures, one on either side of the middle line, leaving a median triangular piece broad above.

H. nee'dles. Same as *H. pins*.

H. pins. See under *Suture, harelip*.

H., sing'le. Harelip with only one fissure. It is usually a little asymmetrical, and situated on the left side of the median line. It may affect either the margin of the lip only, or extend to the nose, and the edges of the fissure may be either in close approximation or widely divergent below.

H. su'ture. See *Suture, harelip*.

Haren'gus. The herring, *Clupea harengus*.

Har'icot. (F. *haricot*, of doubtful etymology.) The *Phaseolus vulgaris*.

H.s blancs. (F. *blanc*, white.) The ripe seeds of the *Phaseolus vulgaris*. Used as food. According to Payen, they contain nitrogenous matter 25.5, starch and other matters 55.7, cellulose 2.9, fat 2.8, mineral substances 3.2, and water 9.9 per cent.

H., snail-like. (F. *haricot limaçon*.) The *Phaseolus caracalla*.

H., Span'ish. The *Phaseolus multifidus*.

H.s verts. (F. *vert*, green.) The unripe pods of *Phaseolus vulgaris* and *P. multiflorus*. They are boiled whole or sliced, and eaten as food, with or without further frying.

Har'if. The *Galium aparine*.

Har'itch. The *Galium aparine*.

HARKANYI—HARRODSBURG SPRINGS.

Harkanyi. Hungary, County Barany, in a beautiful mountainous neighbourhood. A muriated alkaline weak sulphur spring, of a temp. of 59° C. (138·2° F.) It is used in chronic gout, rheumatism, abdominal congestions, piles, lymphatic and scrofulous diseases, rickets, uterine disorders, and rheumatic paralyses.

Harlequin. (F. *arlequin*, a word of doubtful origin.) One of the characters in a pantomime, wearing a dress covered with lozenge-shaped spangles and colours.

Hætus. See *Fœtus*, *harlequin*.

Harlock. A misspelling, according to Prior, of *Harlock*.

Harlow Carr. Yorkshire, close to Harrogate. Several mild sulphur springs and a chalybeate spring are found here.

Harma. Old term for a collyrium, described by Paulus Ægineta, vii, 16, Adams's Transl., vol. iii, p. 554, and Scribonius, n. 28, efficacious against roughness of the eyelids.

Harmal wild rue. The *Peganum harmala*.

Harmala. Wild rue, the *Peganum harmala*.

Harmalia. (*Αρμαλία*, food. F. *harmalie*; G. *Nahrungsmittel*.) Old term for food, or aliment.

Harmalin. $C_{13}H_{14}N_2O$. A white, crystalline alkaloid obtained from the seeds of *Peganum harmala*. It has a slightly bitter taste, and colours the saliva yellow. It is slightly soluble in water and in ether, freely in boiling alcohol. It crystallises in rhombic octahedra. It was discovered by Göbel in 1837.

Harmattan. A wind of the Guinea coast and Cape de Verd islands, blowing from the interior to the coast for several days at a time three or four times a year. It is very arid, shrivelling the vegetation and irritating the expiratory mucous membrane, yet it is not pestilential, for endemic fevers and contagious disorders diminish when it blows. It has been said that whilst it blows old ulcers dry up, and vaccination is ineffectual.

Harmel. The Arabic name of *Peganum harmala*.

Harmin. $C_{13}H_{14}N_2O$. A crystalline alkaloid contained in the seeds of *Peganum harmala*. It is insoluble in water, slightly soluble in alcohol and ether. It crystallises in long, very thin, shining, four-sided, rhombic prisms. In solution it has a bitter taste. It was discovered by Fritsch in 1847.

Harmonia. See *Harmony*.

Harmonic. Relating to *Harmony*.

H. motion, simple. The periodic backwards and forwards motion along an apparent straight line executed by the ball of a conical pendulum performing circular motion, or by a point in the circumference of a rotating circle, when seen from infinite distance on the plane of its motion. The acceleration of velocity as the central point is neared and the retardation as it is left, are proportional to the distance from that point. The length of the swing from the centre to the circumference is termed the amplitude.

H. ratio. (L. *ratio*, relation.) The ratio between numbers whose reciprocals are in arithmetical proportion.

H. tones. See *Harmonics*.

Harmonics. (*Αρμονία*, proportion; harmony.) The science of musical sounds.

Also (G. *harmonische Töne*), the series of

secondary tones which may be heard, each fainter than the preceding, when any given note, the primary tone, is sounded on a musical instrument.

Harmonometer. (*Αρμονία*; *μέτρον*, a measure.) A portion of the upper wall of the aqueduct of Sylvius. (Robin.)

Harmony. (F. *harmonie*; from L. *harmonia*; from Gr. *ἀρμονία*, a joint, proportion, harmony; from *ἀρμόζω*, to fit together; I. *armonia*; S. *armonia*; G. *Einklang*, *Harmonie*.) The fitting, adaptation, and adjustment to each other of the parts of a whole.

In Physics, the just proportion and concord of two or more sounds.

In Physiology, the accord which exists among the several functions of the body.

In Anatomy, the same as *Sutura harmonia*.

Harmophanous. (*Αρμός*, a joint; *φαίνω*, to show.) Hæly's term for a crystalline substance which exhibits marks as of natural joinings.

Harmos. (*Αρμός*, a fitting.) A term for the joint called *Sutura harmonia*.

Also, formerly used to denote that part of the gums which lies between the teeth.

Harro. Spain, Province of Lagroño. A sodium chloride and sulphur spring of a temp. of 13°–16° C. (55·4°–60·8° F.)

Harpage. (*Αρπαγή*, seizure.) An old term for forceps.

Also, the same as *Harpa*.

Harpalycæ. (*Αρπαλύκη*, the daughter of the Thracian king Harpalycus, brought up as a warrior.) A Genus of the Nat. Order *Compositæ*.

H. al'ba, Don. The *Prenanthes alba*.

Harpax. Old term for amber. (Goræus.)

Also, a mixture of quicklime and sulphur.

Harpirrhyn'cus. (*Αρπυιαι*, the Harpies; *ρύγχος*, a snout.) A Genus of the Family *Trombididæ*, Order *Acarina*.

H. ni'dulans, Megnin. (L. *nidulus*, to build a nest.) Lives in colonies on the feathers of many birds.

Harpoon. (Du. *harpoen*; from F. *harpon*, a cramping iron; from Old F. *harpe*, a dog's claw.) A dart or barbed spear for striking whales.

H., Mid'deldorpf's. See *Middeldorpf's harpoon*.

Harpyia, Ochs. (*Αρπυιαι*.) A Genus of the Family *Notodontidæ*, Suborder *Bombycina*, Order *Lepidoptera*.

H. vinula, Linn. (G. *Hermelinspanner*.) The larva exudes, from an orifice below the head, a fluid which is said to be very irritating and acrid.

Harrison, Ed'win. An English physician of the nineteenth century.

H's groove. A slight groove passing outwardly in a transverse direction from the xiphoid cartilage over the attachment of the diaphragm, seen in persons who have long-continued difficulty of breathing, and caused by the dragging of the diaphragm on the superficial soft parts.

Harrodsburg springs. United States of America, in Mercer Co., Kentucky. A mineral water, containing magnesium sulphate 1·6752 gramme, calcium sulphate ·6144, magnesium bicarbonate ·0258, calcium bicarbonate ·2586, and iron bicarbonate ·03 gramme in a

HARROGATE—HARTSHORN.

litre; this is the Salom spring, the Grenville spring contains less magnesium sulphate, and more carbonate. Used in chronic disturbances of a catarrhal nature of the abdominal organs, in rheumatism, dropsy, periostitis, and tertiary syphilis.

Harrogate. England, Yorkshire. A town in a healthy, bracing district, 400 feet above sea-level, with several athermal mineral springs, sulphur and chalybeate.

The sulphur springs are numerous. The Old Sulphur spring contains sodium chloride 111·708 grains, potassium chloride 1·199, magnesium chloride 6·035, calcium chloride 5·451, calcium carbonate 3·721, magnesium carbonate ·748, sodium sulphhydrate ·652, barium chloride ·82, magnesium bromide ·285 grains in 20 ounces, and minute quantities of lithium, ammonium and strontium chlorides, and magnesium iodide; there are carbonic acid 5 012 cubic inches and hydrogen sulphide 1·27 cubic inches in the same quantity. The Strong Montpellier Sulphur spring contains sodium chloride 103·421, potassium chloride ·602, magnesium chloride 7·249, calcium chloride 9 992, calcium carbonate 1·094, sodium sulphide 1·813, strontium chloride ·352, iron carbonate ·052, and small quantities of barium and strontium sulphates, sodium nitrate, ammonium chloride, with traces of iodides, bromides, fluorides, and lithium; it contains carbonic acid 7·5 cubic inches in the same quantity. There are some other sulphur springs with less common salt. They are used in chronic catarrhal and non-irritative atonic disorders of the stomach, in chronic constipation, in congested conditions of the liver, in chronic jaundice, in malarial enlargements of the spleen, in chronic gout, whether showing itself in the usual joint troubles, or in bronchial conditions, or in kidney disturbance, in chronic rheumatism, in chronic eczema, psoriasis and other skin diseases, in uterine congestions, and in corpulence. They are used for drink, as baths, and in spray.

The chalybeate waters are also numerous. The Kissingen spring contains sodium chloride 84·325 grains, potassium chloride 2·678, magnesium chloride 8·174, calcium chloride 10·917, iron carbonate 1·199, barium carbonate ·267, minute quantities of calcium carbonate, ammonium chloride, strontium chloride, and barium carbonate, with traces of bromides, iodides, and lithium, in 20 ounces. The Tewit well contains almost no sodium chloride, and less iron than the Kissingen. The Chloride of Iron spring is a very strong chalybeate; it contains iron carbonate 1·381 grains, iron chloride 1·652, sodium chloride 34·695, calcium chloride 11·752, with small quantities of barium salts and magnesium bromide. There are other iron waters: one, the Alum well, contains ferric sulphate 9·84 grains, ferrous sulphate 8·67, aluminium sulphate 11·19 grains in 20 ounces; all are charged with a certain amount of carbonic acid gas. They are used in anæmic conditions, in lymphatic diseases, in amenorrhœa, in atonic dyspepsia and diarrhœa, and in weak conditions of the musculature of the heart; the Chloride of Iron spring being the most powerful, and the Kissingen spring having a slightly aperient action.

H. chalybeate water, artificial. Sodium chloride 250 grains, crystallised calcium chloride 46, crystallised magnesium chloride 22, sodium sulphate 2, sodium bicarbonate 45, and ferrous chloride 8 grains; the sodium bicarbonate

is dissolved in half a gallon of water, and mixed with a solution of the other salts in half a gallon of water.

H. sulphur salts, artificial. Potassæ sulphas cum sulphure 6 drachms, potassæ bitartaras 1 ounce, magnesie sulphas 6 ounces; mix. Dose, a teaspoonful in a tumbler of warm water early in the morning.

H. sulphur water, artificial. Sodium chloride 500 grains, crystallised calcium chloride 150, crystallised magnesium chloride 90, and sodium sulphide 120 grains, dissolved in half a gallon of water, and mixed with a solution of sodium bicarbonate 250 grains in half a gallon of water.

Harrowgate. See *Harrogate*.

Harsh. (Mid. E. *harsk*; Dan. *harsk*, rancid; G. *harsch*.) Rough.

H. respiration. See *Respiration, harsh*.

Har'strong. (G. *Harnstrenge*, stranguary.) The *Peucedanum officinale*, from its use in bladder troubles.

Hart. (Sax. *heort*. G. *Edel-Hirsch*.) A stag of five years old, when the crown antler is formed.

H. berry. The *Bilberry*.

H.'s clover. The *Melilotus officinalis*.

H. crop. The *Bilberry*.

H.'s horn. See *Hartshorn*.

Also, the *Plantago coronopus*, from its furcated leaves.

H.'s pen'nyroyal. The *Mentha cervina*.

H.'s thorn. The *Rhamnus catharticus*.

H.'s tongue. (F. *langue de cerf*; G. *Hirschzunge*.) The *Scolopendrium vulgare*, from the shape of the frond.

H.'s truff'les. The *Elaphomyces granulatus*.

H. wort. See *Hartwort*.

Hartfell. Scotland, in Dumfriesshire, near Moffat. A strong chalybeate water, containing iron sulphate, 36·7 grains in a gallon; another spring is said to contain as much as 591.

Hartlepool. England, on the coast of Durham. A chalybeate spring, containing some sodium sulphate, was at one time in existence here.

Hartmann, Ar'thur. A German surgeon, born in Württemberg in 1849, and now living in Berlin.

H.'s can'nula. (L. *cannula*, a small reed. G. *Hartmann'sche Paukenröhrechen*.) A small silver tube fitted, by means of an india-rubber tube, to the nozzle of a syringe; it is used for washing out the tympanic cavity when the membrana tympani is perforated, the point of the cannula being introduced through the perforation.

Hartmann, Jo'hann. A Bavarian physician, born at Amberg in 1568, died in Marburg in 1631.

H., elix'ir of. Fifty parts of camphor dissolved in 350 parts of alcohol, and coloured with one part of saffron.

Hartog'ia. A Genus of the Nat. Order *Rutaceæ*.

H. betuli'na, Berg. The *Barosma betulina*.

Harts'horn. The horn of certain kinds of the hart or stag; the substance *Cornu cervi*. Also, the popular term for the preparation *Aqua ammoniac*, because ammoniacal gas in the liquid form was originally called the spirit of harts'horn, being obtained from animal substances.

H. and oil. A liniment composed of solution of ammonia and oil; originally it was

three parts of spirit of hartshorn and four parts of oil of sweet almonds.

H., burnt. See *Cornu ustum*.

H., red. The *Tinctura lavandulæ composita*.

H. shavings. The shavings of the horn of the stag, *Cervus elaphus*; used to form a nutritive jelly.

H., spirit of. See *Liquor volatilis cornu cervi*.

H., vol'atile salt of. The *Ammoniacum carbonicum pyro-olcosum*.

Hartwort. The *Laserpitium siler*, and the *Tordylium maximum*.

H., French. The *Seseli tortuosum*.

H. of Marseilles'. The *Seseli tortuosum*.

H., shrub'by. The *Bupleurum fruticosum*.

H., small. The *Tordylium officinale*.

Harun'do. See *Arundo*.

Harvest. (Sax. *hærfest*; G. *Herbst*. F. *moisson*; I. *messe*; S. *cosecha*.) The time of ingathering of ripe crops; also, the crop itself.

H. bells. The *Gentiana pneumonanthe*, from its season of flowering.

H. bug. See *Bug*, *harvest*, and *Leptus autumnalis*.

H. ticks. The species of the Genus *Leptus*.

Harvesters' disease'. Duclaux's term for a disorder to which persons working out of doors in the hot summer of 1859 were subject. It began suddenly with headache, giddiness, and duskiness or cyanosis of the face and general surface, with staggering walk, and pain at various parts of the spinal column.

Harzburg. Germany, in Brunswick, on the northern border of the Harz mountains. A strong, cold, salt water, containing 61 to 66 parts of sodium chloride in 1000. Used in scrofula and lymphatic enlargements.

Hasacium. Old name for *Sal ammoniacum*. (Ruland, and Johnson.)

Hasch'isch. The Arabian name of the dried tops of the *Cannabis sativa*, var. *indica*.

Hasch'ischin. Same as *Cannabin*.

Hash'ish. Same as *Haschisch*.

Hash'isk. Same as *Haschisch*.

Has'sall, Arthur Hill. An English physician of the present time, born at Teddington in 1817.

H.'s corpuscles. See *Corpuscles of Hassall*.

Has'san-Ka'lê. Asia Minor, a place near Erzeroum, on the banks of the Araxes. Here are thermal springs, and a large establishment has been erected for the reception of patients resorting to them. They are in high repute in cutaneous and rheumatic affections.

Hassel'tia. A Genus of the Nat. Order *Apocynaceæ*.

H. arbor'ea, Blume. (L. *arbor*, a tree.) Hab. Java. Milky sap a drastic and dangerous purgative. Used against tapeworm when mixed with honey or boiled in water.

Hasta. (L. *hasta*, a spear. F. *lance*; G. *Lanze*, *Spieß*.) A spear. Applied to many objects supposed to resemble it.

A name for the penis.

Also, a term for a *Perforator* used in *Craniotomy*.

H. nuptialis. (L. *nuptialis*, belonging to a wedding.) The penis.

H. regia. (L. *regius*, royal.) The *Asphodelus luteus*.

H. vir'ilis. (L. *virilis*, belonging to a man.) The penis.

Hastate. (L. *hasta*, a spear. F. *hasté*; G. *spießförmig*.) Like a spear or halberd; halberd-shaped; applied to sagittate leaves which have the basal lobes directed outwards at right angles to the midrib, as in the *Rumex acetosella*.

Hastate-auricled. (L. *hasta*; *auricula*, the outer ear.) Applied to a hastate leaf in which the lobes are distinct from the blade, as in *Solanum dulcamara*.

Hastated. Same as *Hastate*.

Hasta-lanceolate. (L. *hasta*, a spear; *lancea*, a light spear.) In Botany, between spear-shaped and lance-shaped.

Hasta-sagittate. (L. *hasta*; *sagitta*, an arrow.) In Botany, between spear-shaped and arrow-shaped.

Hastella. ((L. dim. of *hasta*.) Old name for a splint shaped like a spear, used in fractures, according to Avicenna.

Hastifoliæ. (L. *hasta*; *folium*, a leaf. F. *hastifolié*; G. *spießblättrig*.) Having spear-shaped leaves.

Hastiform. (L. *hasta*; *forma*, likeness. F. *hastiforme*; G. *spießförmig*.) Resembling a spear.

Hastings. England, Sussex. There is a chalybeate spring here.

Hastula. (L. *hastula*, a little spear; dim. of *hasta*, a spear.) A Genus of the Nat. Order *Liliacæ*.

H. regis. (L. *rex*, a king.) The *Asphodelus ramosus*.

Hat. (Sax. *hæt*; Icel. *hattr*; perhaps connected with L. *cassis*, a helmet. F. *chapeau*; I. *cappello*; S. *sombrero*; G. *Hut*.) A covering for the head.

In Botany, the pileus of fungi.

Hatch'et. (F. *hachette*; from *hacher*, to hack.) A small axe.

H.-shaped. Applied to leaves having this shape.

Hather. Same as *Heather*.

Hatters. (*Hat*.) Makers of hats.

H., diseases of. Hatters, in order to remove hair from skins, brush over the hairy surface with a solution of acid nitrate of mercury, often mingled with a solution of arsenic and of corrosive sublimate; after being dried the skin is brushed or beaten. The nitrons acid fumes given off in the preparation of the solution of the acid nitrate produce much irritation of the respiratory tract, whilst the dust leads to the occasional occurrence of symptoms of mercurial poisoning and anæmia. Emaciation and premature old age are observed in the workmen.

Haud. Old name for wood; applied by the Arabians to the *Agallochum*, by way of eminence.

Haugh nut. The tuber of *Carum bulbocastanum*.

Haulm. (Sax. *healm*.) The stem or straw of a gramiaceous plant.

Haunch. (F. *hanche*; from Old High G. *enchâ*. F. *jesse*; G. *Hintertheil*, *Hinterbacken*.) That part of the body between the ribs and thigh; the hip and buttock.

H. bone. The ilium.

Haust. An abbreviation, used in prescriptions, of L. *haustus*, a draught.

HAUSTELLATA—HAY-ASTHMA.

Haustella'ta. (L. *haustus*, part. of *haurio*, to draw up.) A synonym of *Epizoa*.

Also, an old division of *Insecta*, including those with a suctorial mouth or proboscis.

Haustellate. (L. *haustus*. F. *haustellé*.) Adapted for drawing up fluids. Having an *Haustellum*.

Haustellum. (L. *haustus*, part. of *haurio*, to draw up. F. *sucoir*; G. *Saugrüssel*, *Schöpfbrüssel*.) The elongated mouth or proboscis of a great number of insects, which is constructed in a manner to serve the purpose of suction.

Haustorium. (L. *haustor*; from *haurio*, to draw.) The suckers of the stem of *Cuscuta*, and such like plants, which penetrate the host-plant. Used in the plural.

Also, the projections on the mycelium of parasitic fungi which penetrate the tissue of their host and draw nourishment from it.

Haustra. (L. pl. of *haustum*, a machine for drawing water.) Hollows; sac-like or dish-like structures.

H. coli. (Κόλον, the large intestine.) The sacculi of the colon, which are arranged in three longitudinal rows separated by the *tænia coli*, and the several sacculi of each row separated by intervening constrictions.

Haustus. (L. *haustus*, a drink; from *haurio*, to draw. F. *potion*; G. *Tränkehen*, *Arzneitränk*.) A liquid preparation forming one dose; a draught.

H. antily'ss. (Ἀντί, against; λύσσα, raging madness.) A mixture containing *Meloe majalis*, sulphate of iron, and vinegar, formerly official in the Saxon Pharmacopœia, and used against the bite of a rabid dog.

H. niger. (L. *niger*, black.) The *Infusum sennæ compositum*.

Hauterive. France, Département d'Allier, near Vichy. An alkaline chalybeate water, containing sodium bicarbonate, iron bicarbonate, and much free carbonic acid.

Haut mal. (F. *haut*, high; *mal*, a disease.) A French term for epilepsy in its full development.

Ha'ver. (Dut. *haver*; G. *Hafer*.) The oat, *Avena sativa*.

Havers, Clopton. An English anatomist, who lived in London during the end of the 17th and the beginning of the 18th centuries.

H., canal's of. Vascular channels traversing compact bone, and containing either an artery or a vein, or both kinds of vessels. They usually run in a longitudinal direction in the long bones, but are connected by cross channels.

H., canalic'uli of. Same as *H., canals of*.

H., glands of. Same as *H., mucilaginous glands of*.

H., lamell'æ of. See *Lamella, Haversian*.

H., mucilag'inous glands of. Fringed vascular folds that may be found in all synovial membranes. They may give off secondary non-vascular folds. They were regarded by Havers as the apparatus for secreting synovia.

H., spa'ces of. See *Haversian spaces*.

Haversian. Relating to Clopton Havers.

H. canals'. See *Havers, canals of*.

H. fringes. Same as *Havers, mucilaginous glands of*.

H. lamell'æ. See *Lamella, Haversian*.

H. spaces. The canelli of spongy bone.

H. sys'tem. Term applied to the Haversian canal, its concentric lamellæ of bone, and the lacunæ with their canaliculi.

Haw. (A short form of *hawberry*, the berry of the *haw*, or hedge.) The fruit of the hawthorn, *Cratægus oxyacantha*.

Also, the *Membrana nictitans*.

H., black. The *Viburnum prunifolium*.

Hawk. (W. *hochi*. G. *räusperrn*.) To clear the throat of phlegm by an effort which is not a cough.

Hawk. (Sax. *hafoc*, *heafoc*; G. *Habicht*; from Teut. base *hab*, to seize. F. *faucon*; I. *falcone*; S. *halcon*.) Common name of some of the species of the Genus *Falco*.

H. nut. The tuber of the *Carum bulbocastanum*, probably corrupted from hognut.

H.-weed. See *Hawkweed*.

Hawk'bit. Same as *Hawkweed*.

H., autum'nal. The *Oporinia autumnalis*.

Hawk'weed. A name for the plants of the Genus *Hieracium*, because hawks were thought to clear their eyes with them.

H., broad-leav'ed, Hunga'rian. The *Hypochaeris maculata*.

H., great'er. The *Sonchus arvensis*.

H., les'ser. The *Hypochaeris minima*.

H., long-root'ed. The *Hypochaeris radicata*.

H., mouse-ear, com'mon. The *Hieracium pilosella*.

H., small. The *Oporinia autumnalis*.

H., wall. The *Hieracium murorum*.

Hawthorn. (E. *haw*, a hedge; *thorn*.) The *Cratægus oxyacantha*.

Hay. (Mid. E. *hey*; Sax. *hig*; G. *Heu*. F. *foin*; I. *fieno*; S. *heno*.) Cut grass dried.

H. asthma. See *Hay-asthma*.

H., camel's. The *Andropogon schænanthus*, or sweet rush.

H. erythe'ma. (Ἐρυθμα, from ἔρυθαινω, to make to blush.) An affection of the bare legs of mowers, described by Baruch as erythema æstivum. There is redness, oedematous swelling, and a vesicular eruption on the skin, with severe itching and burning. He believes it to be caused by the action of the juice of the *Ranunculus acris*.

H. fe'ver. Same as *Hay-asthma*.

H. saf'ron. See *Saffron, hay*.

Hay-asthma. (*Hay*; Gr. ἄσθμα, short-drawn breath. F. *asthme de foin*, *maladie de foin*, *fièvre de foin*, *asthme d'été*, *bronchite d'été*, *catarrhe d'été*; I. *asma del fieno*, *a. dei mietitori*; G. *Heufieber*, *Heuasthma*, *Sommercatarrh*, *Fröhsommercatarrh*.) Hay fever, summer catarrh, Bostock's catarrh, rose catarrh. A disorder occurring in early summer in specially susceptible persons, characterised by a catarrhal condition of the ocular, nasal, and respiratory mucous membranes, and very commonly accompanied by asthmatic troubles. It was first described by Bostock, as occurring in himself, in 1819. It commences by itching of the edges of the eyelids, of the inner canthus, and of the nostrils, with congestion and swelling of the mucous membranes of the eye and nose, oedema of the eyelids, violent sneezing, and great discharge and lachrymation, with pain in the eyeballs. In severe and in repeated cases the irritation spreads downwards to the throat and fauces, there is tightness of the chest, cough, and oppression in the breathing. In some cases these latter asthmatic conditions are the sole manifestations of the disease, in others, the coryza is the only symptom, and in others, there is an accompany-

HAYMAIDS—HEADACHE.

ing urticaria. Persons of British and American race, of a nervous temperament, and with an hereditary proclivity, most frequently exhibit the susceptible idiosyncrasy. Males are more frequently attacked than females, and adults than children or old people. The cause of hay asthma is now generally admitted to reside in the pollen of flowers, especially in that of graminaceous flowers, and of these the *Anthoxanthum odoratum* and the *Holcus odoratus* are supposed to supply the most active irritant, but the pollen of many other grasses, of rye, wheat, oats and barley, and of many other plants, such as the rose, will produce the disease. In the American autumn form the *Ambrosia artemisiifolia* is said to be the chief cause of the disease. The dust of several other substances, such as ipecacuanha, powdered linseed, and, according to Morell Mackenzie, lycopodium, produce symptoms quite resembling hay asthma, as well as the odorous emanations of some fruits, and of some animals, as the cat, rabbit, and guinea-pig. Helmholz believed that certain vibrios generally found in the nasal mucus were the cause, being stimulated into action by the summer heat.

Haymaids. The *Nepeta glechoma*.

Hay'o. The *Erythroxylon coca*.

Hayriff. The *Galium aparine*, or goose-grass.

Ha'zel. (Sax. *hæsel*. G. *Hazelnuss-staude*; F. *coudrier*, *noisetier*; I. *nociuolo*; S. *avellano*.) The *Corylus avellana*.

H., beak'ed. The *Corylus rostrata*.

H. crottles. The *Sticta pulmonacea*.

H. nut. (G. *Hazelnuss*; F. *noisette*; I. *nociuola*; S. *avellana*.) The nut of the *Corylus avellana*.

H. nut oil. The oil from the seeds of *Corylus avellana*; it is pale yellow, thick, sp. gr. .924, solidifies at -19° C. (-2° F.), and is not a drying oil. It constitutes 50 to 55 per cent. of the seed.

H. nut, snap'ing. The *Hamamelis virginiana*.

H. nut tree. The *Corylus avellana*.

H., witch. The *Sorbus aucuparia*, and the *Hamamelis virginiana*.

H.-wort. The *Asarum europæum*, so called, according to Prior, from the similarity of its calyx to the involucre of a nut.

Ha'zeline. An alcoholic distillate of the *Hamamelis virginica*.

Ha'zelraw. The *Sticta pulmonacea*.

Hb. Contraction of *Herba*.

Head. (Sax. *heafod*, the head. F. *tête*; I. *testa*; S. *cabeza*; G. *Kopf*.) The uppermost or anterior part of the animal body, including, in Vertebrata, the skull or cranium, and the face.

Also, applied to the upper end of a long bone, as the head of the femur; to the origin of a muscle; the beginning of a part; and to any round protuberance which can be supposed to resemble a head.

In Botany, the same as *Capitulum*.

H., after-com'ing. A term applied to the foetal head when it is the last part of the child to be born, as in breech or foot presentation.

H. ben'zoin. See *Benzoin*, head.

H., bones of. The head is composed of eight bones, viz. the occipital, two parietal, the frontal, two temporal, the sphenoid, and the ethmoid.

H., development of. See *Cranium*, development of.

H., fo'e'tal. The head of the fœtus contains the same bones as that of the adult, fairly closely united at the base, but separated from each other on the vault; the separation at the line of the sutures is trivial, but at the junction of the sutures, the fontanelles, it is much greater, notably at the anterior and posterior fontanelle. In addition to the adult bones there are the ossa triquetra. The basilar and squamous parts of the occipital bone are chiefly united by cartilage. These arrangements allow of a change of shape of the foetal head during labour, inasmuch that the head becomes longer and narrower by approximation or even overlapping of the cranial bones.

H., fo'e'tal, circum'ferences of. The measurement round the head of the fœtus before it has been moulded by labour are, according to Barnes, three: the *greatest* circumference, being that running round the head on the plane of the maximum diameter, 16"; the *small* circumference, being that running round the head at the plane of the sub-occipito-bregmatic diameter, 11" to 12"; and the *equatorial* circumference, being that running round the head at the plane of the occipito-frontal diameter, 14".

H., fo'e'tal, diam'eters of. The measurements between certain points of the foetal head before it has been moulded by labour are, according to Barnes: the *maximum* diameter, being that extending from the tip of the chin to the most distant point of the skull, 5.3"; the *occipito-mental* diameter, being that extending from the occipital protuberance to the tip of the chin, 5.25"; the *occipito-frontal* diameter, being that extending from the occipital protuberance to the root of the nose, 4.5"; the *sub-occipito-bregmatic* diameter, being that extending from the point of meeting of the occiput and the nucha to the middle of the anterior fontanelle, 4.25"; the *bi-parietal* diameter, being that extending from one parietal protuberance to the other, 4"; the *bi-temporal* diameter, being that extending between the points of origin of the two fronto-parietal sutures, 3.5"; and the *bi-mastoid* diameter, being that extending between the two mastoid processes, 3". See also, *Cranial diameters*, foetal.

H., lock'ing of. See *Head-locking*.

H. of a bone. The globular articulating surface of a bone.

H. of water. The water lying above the aperture in a vessel or reservoir from which it is issuing.

H. pan. The cavity of the skull.

H. presenta'tion. See *Presentation*, head.

H. turn'ing. See *Version*, cephalic.

H., water in. A synonym of *Hydrocephalus*.

Head'ache. (*Head*; *ache*. F. *douleur de tête*, *cephalalgie*; I. *mal di capo*, *mal di testa*, *cefalalgia*; S. *dolor de cabeza*; G. *Kopfschmerz*.) Pain in the head; it may be general or confined to one spot, slight or severe, dull or sharp, sudden or slow in growth, and long-lasting or speedy in its departure. It may be caused by a local disease or a general disorder; and is probably seated in the sensory nerves of the cranial integuments of the skull, or of the membranes of the brain. Hughlings Jackson says that frontal headache is generally due to disturbances in the digestive

HEAD-CLEANERS, DISEASES OF—HEALALL.

organs, headache at the vertex to cerebral trouble, and occipital headache to anæmia or disorders of the circulation.

Also, a name of the red poppy, *Papaver rhæas*, because of the effect of its odour.

H., anæmic. (A, neg.; αἷμα, blood.) A form of nervous headache affecting chiefly the brow, the temples, and the vertex. The pain is dull and tensive, and is relieved by the recumbent, but aggravated by the erect, posture. It is usually associated with pallor, palpitation of the heart, faintness and dyspnœa, and is common in chlorosis and anæmia.

H., bilious. A name often given to megrim; but also very frequently applied to the headache, with vomiting of bile, from disordered digestion.

H., chron'ic. Good's *Cephalæa intensa*.

H., congestive. (L. *congestio*, a heaping together.) Pain in the head produced either by active congestion of the cerebral blood-vessels, as in plethora; by emotional excitement, or hypertrophy of the left ventricle of the heart, when it is accompanied by giddiness on stooping and a beating in the ears; or by passive congestion, as in valvular disease of the heart, asthma, or anæmia.

H., gout'y. The headache connected with gout; it is frontal, and often accompanied by giddiness and mental depression.

H., hyperæmic. (Υπέρ, above; αἷμα, blood.) The same as *H., congestive*.

H., hysterical. (Ἵστίρα, the womb.) Headache appearing periodically in the hysterical. There is usually much tenderness of the scalp. The pain is seated in the occipito-frontalis and other muscles of the head and in particular branches of the fifth pair of nerves. It is described often as being like to a nail driven into the head, hence its name *Clavus*. It is increased at the menstrual period and by mental trouble.

H., intermit'tent. (L. *intermitto*, to leave off for a time.) Pain in the head which comes in paroxysms.

H., intermit'tent sick. Same as *Megrim*.

H., nerv'ous. Same as *Megrim*.

H., neurasthenic. (Νεύρον, a nerve; ἄ, priv.; σθένος, strength.) Term applied by Erb to a form of headache occurring in patients depressed by severe mental or bodily exertion, night-watching, or sexual excesses. The pain is of a heavy, dull, oppressive and deep-seated character. It is often accompanied by occipital tenderness.

H., organ'ic. W. H. Day's term for the severe and fixed headache which accompanies intracranial disease.

H., pyrexial. (Πυρέσσω, to be feverish.) The headache which accompanies a fever or a severe inflammation. It is seldom very severe, is dull and deep-seated, and increased by stooping.

H., rheumat'ic. (Ρευματικός.) Headache characterised by violent tearing pain localised in the muscles of the head and in the fascia of the occipito-frontalis muscle. The scalp is tender. It is usually due to exposure to cold.

H., sick. Same as *Megrim*; see also *Hemicrania*.

Also, used in the same sense as *H., bilious*.

H., structural. (L. *structura*, a building.) Headache which is caused by disease of

the brain or of its membranes, or of the skull bones. It is generally fixed, often accompanied by nausea and vomiting, with apparent stomach disturbance, and is increased by stooping.

H., stupid. Good's *Cephalæa gravans*.

H., sympathet'ic. (Συμπαθητικός, affected by like feelings.) The headache which is caused by disease or disturbance of the digestive or reproductive organs.

H., syphilitic. (*Syphilis*.) Headache which Fournier describes as occurring with special frequency in syphilitic women. It belongs to the secondary symptoms. It is constant, deep-seated, and severe, but liable to paroxysmal increase, especially at night.

H., throbb'ing. Good's *Cephalæa pulsatilis*.

H., toxæmic. (Τοξικόν, poison; αἷμα, blood.) Pain in the head depending upon excessive temperature of, or the presence of morbid matter in, the blood, as in fevers and uræmia, after excess in alcohol and tobacco, in cases of chronic lead poisoning, and after the inhalation of sulphuretted hydrogen.

H., toxic. The same as *H., toxæmic*.

H., uræmic. (Ούρον, urine; αἷμα, blood.) Headache occurring in the course of chronic kidney disease from defective excretion of urea. It may be a heavy weight over the forehead or on the top of the head, or it may be a dull pain in the orbits or at the occiput.

H., u'terine. (L. *uterus*, the womb.) Peaslee's term for a headache referred to a circular or oval patch on the top of the head which is relieved by pressure, and which he believes to be very distinctive of affections of the womb.

Head-cleaners, diseases of. Head-cleaners, or butchers who clean the heads of animals and prepare them for food, are only exposed to those diseases which result from being constantly exposed to wet whilst at work.

Head-fold. (G. *Kopffalte*.) An inflection of the layers of the blastoderm beneath the cephalic extremity of the vertebrate embryo, which assists in raising it above the neighbouring parts of the ovum.

Head-gargle. A disease of cattle.

Head-kidney. The *Pronephros*.

Head-lock'ing. The entanglement of the head of one of twins with that of the other, as by the hitching of the chin of one on to the chin of the other when one presents by the breech and the other by the head, or even when both present by the head; or, as when both heads present and so closely follow each other that the head of the second locks under the chin of the first.

Head-mould. The bones of the skull.

Head-mould-shot. An old name for the condition of the skull in which the bones ride, or are shot, over each other at the sutures. (Dunghlison.)

Head'ed. (Head. F. *capité*, *capitulé*; G. *geknopt*, *knopfig*, *kopfförmig*.) Having heads or objects resembling heads.

Head'y. (Head. F. *capiteux*; I. *testardo*; G. *berauschend*.) Easily affecting the head; quickly intoxicating. Applied to alcoholic drinks having this property.

Heal. (Sax. *hælan*; G. *heilen*. F. *guérir*; I. *guarire*; S. *curar*.) To make sound; to cure of a disease or injury.

Heal'all. A term applied to the *Prunella*

HEALING—HEARING.

vulgaris, the *Scrophularia nodosa*, and to the *Collinsonia canadensis*.

H., narrow leaf'ed. The *Galeopsis ladanum*.

Healing. (*Heal.* F. *guérison*; G. *Heilung*, *Heilen*.) Curing of an illness; restoration and union of a wound.

H. art. The art of medicine in its broadest sense.

H. by first intention. Union of the edges of a wound without the apparent intervention of granulations.

H. by granulation. See *Union by granulation*.

H. by scab. See *Union by scabbing*.

H. by second intention. Same as *H. by granulation*.

H. by third intention. Billroth's term for the direct union of two already granulating surfaces which have been closely applied to each other.

H. piece. See under *Touch, royal*.

Healing-spring. United States of America, Virginia, Bath County. A mineral water from two springs, one 29°44' C. (85° F.), the other 31°11' C. (88° F.). One pint of the hotter spring contains magnesium carbonate .246 grain, ferrous carbonate .034, calcium carbonate 2.34, ferrous sulphate .013, silicic acid .228, magnesium sulphate .924, and potassium sulphate .316; the other spring is similar but with slightly smaller quantities of salts.

Also, the name of one of the sources of *Orkney springs*.

Health. (Sax. *hæls*. F. *santé*; I. *salute*, *sanità*; S. *salud*, *sanidad*; G. *Gesundheit*.) The proper disposition and condition of the several parts of the body, for performing their respective functions without impediment or sensation of weariness.

Health'y. (*Health*.) Sound, whole, not diseased. Also, tending towards or assisting health.

H. pus. See *Pus, healthy*.

Hear. (Mid. E. *heren*; Sax. *hýran*, *hëran*; G. *hören*. F. *entendre*; I. *udire*; S. *entender*.) To perceive by means of the ear or organ of hearing.

Hearing. (Akoñ; L. *auditus*; F. *ouïe*; I. *udito*; S. *oido*; G. *Gehör*.) The faculty of perceiving sonorous vibrations.

Also, the excitation of the terminal organs of the auditory nerve by the vibration of the fluid contents of the labyrinth. The intensity of the perception of sound is determined by the amplitude of the waves. The pitch is determined by the number of the vibrations. The interval between the lowest tone audible, which is 16 single vibrations, and the highest, which is 41,000, amounts to rather more than 11 octaves.

H., a'crid. Good's *Paracusis acris*.

H., binaural. (L. *bi-*, a prefix signifying two; *auris*, the ear.) Hearing with both ears simultaneously.

H., doub'le. The perception of one sound at two different times; also the recognition by each ear of the same sound at the same time but in a different key.

H., exal'ted. (L. *exalto*, to raise.) An unduly acute perception of sounds common to many disturbances of the nervous system, both functional and organic.

H., hard'ness of. Same as *Deafness*.

H., illu'sory. (L. *illudo*, to sport with.)

The hearing of sounds without any external cause for them.

H., limits of. According to Helmholtz, the human ear cannot discern a note which is the product of less than 16 vibrations in the second, or one of more than 41,000, which is upwards of eleven octaves. These are the extreme limits, but the average limit is much below these ranges.

H., loss of. Same as *Deafness*.

H., or'gan of. The terminal apparatus of the auditory nerve. In some of the lower forms of animal life, as in the Protista, no organ of hearing can be recognised, though it may exist in a generalised condition, since vibrations of the element in which they live excite movements. When present the organ of hearing is usually, but not always, seated in the head.

In Vermes and Mollusca, it appears in the form of a vesicle attached to the extremity of the auditory nerve, or implanted on the nerve centre itself, that is to say, upon the inferior œsophageal ganglion. The internal surface of the vesicle is lined with ciliated epithelium, and it contains one or more otoliths. In Cephalopoda the organ is imbedded in the cartilage of the head, and the membranous vesicle is surrounded by perilymph.

In Crustacea, especially in the Decapoda, the organ of hearing is situated in the basal joint of the inner pair of antennæ. It consists of a vesicle having an opening which communicates with the exterior, and contains otoconia, or ear-dust.

In air-breathing Arthropoda, the organ has been chiefly recognised amongst the Orthoptera, Coleoptera, and Diptera. In the Locustidæ it is situated in the tibia of the anterior pair of feet, in Acrididæ in the metathorax above the third pair of feet. No organ of hearing has been hitherto discovered in Arachnida, in Myriapoda, nor in any of the Echinodermata.

In the higher Vertebrata the organ of hearing is usually divisible into an external, a middle, and an internal ear. It is derived from the ectoderm, which at an early period presents a thickening above the myelencephalon, and extends inwards, giving rise to a vesicle. The vesicle at first communicates with the exterior, but is subsequently cut off from it, and comes to be enclosed in the hinder and lateral portion of the cartilaginous cranial capsule. The primitive otocyst then forms a complex cavity system or membranous labyrinth, with which the auditory nerve is connected, and around which the adjoining portions of the skull form the osseous labyrinth.

In Pisces, there is no external ear nor auditory meatus. The middle ear is absent. The internal ear is represented by a vestibule and three semicircular canals. The membranous vestibule is often connected with the air-bladder, as in Percoidæ, Sparoidæ, and Cyprinoidæ. It presents several subdivisions, and contains otoliths, which are often very large.

In Amphibia, there is no external ear or auditory meatus. The membrana tympani is exposed on the surface immediately beneath the skin. There is a columella fitting into the fenestra ovalis, and traversing the tympanum. The relatively large membranous labyrinth exhibits a vestibule, three semicircular canals, and the rudiment of a cochlea.

In Reptilia, there is no external ear; a rudimentary external meatus appears in lizards,

HEART.

except in Ophidia and Amphisbænidae. There is a tympanic membrane and cavity, a columella, and a fenestra rotunda, in addition to the fenestra ovalis. The labyrinth is smaller than in Pisces. The vestibule has an external opening, the spiracle, which is the modified first branchial cleft. The vestibule is divided into the utriculus, with which the semicircular canals are connected, and the sacculus from which the rudimentary cochlea springs. In Crocodilia there is a rudiment of an external ear and three Eustachian tubes, one median, and two lateral.

In Aves, a rudiment of an external ear exists, and there is a tympanum and tympanic cavity. The tympanic cavities communicate with the pharynx by means of a single median Eustachian tube. The stapes is columelliform. There are both a fenestra ovalis and a fenestra rotunda, and the cochlea is straight. There are three semicircular canals, the anterior vertical canal being relatively large.

In Mammalia, the organ of hearing is divisible into three parts: an external, a middle, and an internal part. The external ear presents almost always an auricle surrounding the external auditory orifice. To this succeeds the external auditory meatus, which is closed by the tympanum. The middle ear consists of the tympanic cavity, containing the ossicula auditus, malleus, incus, os orbiculare, and stapes, as well as some muscles and nerves; anteriorly the tympanic cavity is brought into connection with the cavity of the pharynx by means of the Eustachian tube. The internal ear presents the vestibule, the semicircular canals, and the cochlea. This is the essential part of the whole organ, and in this region the auditory nerve, which enters by the internal auditory meatus, is distributed.

H., perverse'. (*L. perverto*, to place in an opposite direction.) The form of deafness in which articulate sounds are heard better in a noise, as of a railway carriage in motion.

H., perverted. (*L. perverto*, to place in an opposite direction.) The presence of auditory sensations which are not produced by external impressions in a normal fashion.

H. trumpet. An *Ear trumpet*.

Heart. (*Mid. E. herte*; *Sax. heorte*; *G. Herz*; *L. cor*; *Gr. kardia*; *Sans. hrid*; ultimately probably from Aryan root *kard*, to swing about. *F. cœur*; *I. cuore*; *S. coração*; *Port. coração*.) The hollow muscular organ by which the blood is driven through the blood-vessels. The inner part or centre of a thing.

In various members of the groups of Cœlentata, Vermes, and Echinodermata, a pulsating organ exists, which constitutes a segment of the vascular system, and effects a movement of the fluid they contain.

In the Arthropoda, the heart is systemic, its general form being that of an elongated tube running along the dorsum and divided by dissepiments into a series of chambers. The septa being so arranged as to constitute valves, which permit the movement of the blood, when the chamber contracts, in the forward, but not in the backward, direction. The heart is surrounded by a loose pericardium. The venous blood enters the several chambers by apertures, guarded by valves, which communicate with the intra-pericardiac space; arterial vessels are given off from the anterior and posterior extremities of the heart. In the Arachnida, the cardiac pul-

sating tube lies in the abdomen, and the number of chambers is reduced from eight, as in Insecta and Scorpionida, to about three.

In Brachiopoda, a saccular organ lying above the stomach is regarded as the heart, and receives its blood from the gills, through one or two vessels, which are enlarged and represent auricles. It is surrounded by a pericardium.

In the Lamellibranchiata, it lies in the middle line of the body, just below the back; there are two lateral auricles, and it gives off an anterior and a posterior aorta. In Gasteropoda, there may be two auricles, as in *Haliotis*, or more frequently only one. The ventricle is always in close relation with the respiratory organs, being placed in front of them in Prosobranchiata, and behind them in Opisthobranchiata. In most Lamellibranchiata and Gasteropoda the heart is divided into two limbs, which embrace the hind gut.

In Tunicata, the heart is a short sac, which either communicates directly with the body-cavity or opens into a vascular system, which in parts has a lacunar character.

In Pisces, the heart consists essentially of a single auricle and ventricle. The auricle receives blood from a sinus venosus situated behind it, and partly enclosed in the pericardium. Between the auricle and ventricle are two membranous valves. The cavity of the ventricle is continued into the arterial trunk given off from it, and commences by an enlargement, named the bulbus arteriosus; several valves are situated between the ventricle and the bulbus arteriosus. The venous blood contained in the heart is driven to the gills for aeration.

In Amphibia, the auricle begins to be divided into two chambers, in some the division is complete; the ventricle remains single. The systemic veins open into the right, the pulmonary veins into the left, auricle; the ventricle drives mixed blood to the lungs or gills, and to the system.

In Reptilia, there are, as in the higher Amphibia, two auricles and one ventricle; the right auricle receives the systemic, the left the pulmonary, veins. The ventricle begins to have a septum, which in the crocodile is complete, dividing the ventricle into two cavities, and thus forming an almost complete four-chambered heart.

In Aves, the heart presents four chambers, and the pulmonary and systemic circulations are completely separated.

In Mammalia, the heart is four-chambered, presenting two auricles and two ventricles. It is enclosed in the pericardium and lies between the two lungs, and behind the lower two thirds of the sternum, projecting in man about three inches into the left, and one inch into the right, side of the thorax. In man it presents a base, an apex, an anterior and posterior surface, and a right and left border. The base is formed by the auricles, is connected with the great vessels, and is directed upwards, backwards, and to the right. It corresponds to the fifth, sixth, seventh, and eighth vertebrae. The auricles are separated from the ventricles by a deep transverse groove named the auriculo-ventricular furrow. In this furrow lie the coronary arteries and veins, lymphatic vessels and nerves and fat. The apex of the heart is formed by the point of the left ventricle, and is directed downwards, forwards, and to the left. It corresponds to the fifth intercostal space of

HEART.

the left side, two inches below and one to the inner side of the left nipple. The anterior surface is formed chiefly by the right ventricle, and presents the anterior interventricular groove, in which runs the right coronary artery. It corresponds to the interval between the upper border of the third costal cartilages and a horizontal line drawn from the sternum to the situation of the apex. The posterior surface is formed chiefly by the left ventricle, presents the posterior interventricular groove, in which runs the left coronary artery, and rests on the diaphragm. The right border is thin, and is formed by the right ventricle; the left border is thick, and is formed by the left ventricle. The right auricle presents the openings of the superior and inferior venæ cavæ, of the coronary vein, and of from one or two to ten or twelve venæ Thebesii, as well as the auriculo-ventricular opening. The valvula Thebesii is connected with the valvula Eustachii in 5 per cent. of subjects. A communication exists between the right and left auricles in 42 per cent. of subjects. The right ventricle presents the auriculo-ventricular opening, guarded by the tricuspid valves, and the opening of the pulmonary artery, guarded by the semilunar valves. In about 30 per cent. of cases the right auriculo-ventricular valve has only two cusps. A moderator band is sometimes present. The left auricle presents four or five openings of the pulmonary veins, from one to eight foramina Thebesii, and the left auriculo-ventricular opening, guarded by the tricuspid valve. The left ventricle presents the auriculo-ventricular and the aortic openings. The aortic, as well as still more frequently the pulmonary, valves are subject to variety, two, and sometimes four, instead of three being developed. See *Auricle* and *Ventricle*.

In the condition of moderate and equable distension of all the cavities the average length of the heart, in the male, from apex to the upper part of the left auricle is, according to Krause, 149 mm., its breadth near the sinus circularis 108 mm., and its circumference at this point 244 mm. When empty its length is about 129 mm., and its greatest breadth 95 mm. The volume varies from 218—358 c. c., the mean being from 250—280 c. c., and the weight is on the average 292 grammes in men, or from 9·388 oz.; in women it is one sixth less. It increases with age. The sp. gr. of the left ventricle is 1·049. The relative weight of the heart to the rest of the body is 1:169 in men, and 1:162 in women. When greatly distended the capacity of the cardiac cavities may vary from 536—813 cub. cm., the average being 638 c. cm. The four cavities are of about equal capacity. The muscular mass of the left ventricle is about twice as great as that of the right. The mass of the right auricle is to that of the left as 1:1·5. The sp. gravity of the muscular tissue is 1·069.

H., abscess of. (F. *abcès du cœur*; I. *ascesso del cuore*; G. *Herzeiterung*, *Herzabscess*.) Circumscribed suppurative in the muscular structure of the heart. It may occur in the course of *Myocarditis*; or it may be of pyæmic origin.

H., abscess of, pyæmic. (Πύον, pus; αἷμα, blood.) Small, slightly elevated, ill-defined collections of puriform material occurring occasionally in the course of pyæmia, especially when in connection with destructive

inflammation of a bone; and most frequently situated at the base of the left ventricle and in the columnæ carneæ. They consist of muscular tissue in a state of granular or fatty degeneration, infiltrated with granular debris, altered blood-corpuscles, and pus-cells. The neighbouring pericardium or endocardium is usually inflamed. They may burst into the cavity of the heart or of the pericardium.

H., aneurysm of. (Ἀνευρύσμα, a widening.) See *Aneurysm, cardiac*.

H., aneurysm of, active. Corvisart's term for *H., hypertrophy of, with dilatation*.

H., aneurysm of, acute partial. A form of aneurysm of the heart that is usually observed in the anterior wall of the left ventricle, near the apex. It is attributed by Schrötter to rupture of the endocardium, either owing to its being the seat of inflammation, or to its overlying an inflamed spot at which suppuration takes place, the pus in making its exit rupturing the endocardium. In either case the wall of the heart is weakened at one place, and it gradually yields to the internal pressure. The cavity is filled with fibrinous coagula, which do not however offer much resistance to extension, and death results from rupture of the sac. Its course is usually rapid.

H., aneurysm of, chronic. (L. *chronicus*, long-lasting.) An affection which follows fibroid induration of the heart's substance. It is most common in the left side. It may attain the size of the fist. It usually occurs in middle or advancing age. It may be the result of syphilitic myocarditis. There may be two or more. The symptoms resemble those of chronic myocarditis.

H., aneurysm of, passive. A term for *H., dilatation of*.

H., angina of. Same as *Angina pectoris*.

H., apex of. (L. *apex*, the tip of a thing. F. *pointe du cœur*; G. *Spitze des Herzens*.) The blunt inferior free extremity of the heart. It is formed in man by the left ventricle.

H., apex-beat of. The impulse on the chest-walls caused by the systole of the heart. It is felt in the fifth intercostal space, a little on the inner side of a line drawn vertically through the nipple.

H., apoplexy of. See *Cardiac apoplexy*.

H., arteries of. The coronary arteries. See *Coronary artery of the heart, right and left*.

H., atrium of. (L. *atrium*, the hall of a Roman house. G. *Vorhof des Herzens*.) The main part of the auricles into which the great veins directly pour their blood, to distinguish it from the auricular appendix or auricle proper.

H., atrophy of. (Ἀτροφία, want of nourishment. F. *atrophie du cœur*; G. *Herz-atrophie*.) Wasting of the muscular structure of the heart, or of a part of it. When general it is caused by diseases which cause general wasting of the body, as cancer, phthisis, diabetes, and mesenteric disease. When partial it may be caused by mitral disease, by disease of the coronary arteries, or by the pressure of mediastinal tumours. The fat surrounding the heart becomes gelatinous, the pericardium is wrinkled, the cavities small, the walls thin. The muscular structure is generally brownish, sometimes it is pale, and it is usually firm; the muscular fibres are diminished in size, and perhaps in number.

HEART.

It is accompanied by the signs of a feeble circulation and a tendency to faint; the pulse is small and weak; the area of cardiac dulness is lessened, the apex-beat is feeble, and the heart-sounds indistinct. For the microscopic anatomy see the subheadings.

H., atrophy of, brown. The condition which occurs in most cases of cardiac atrophy, in which the muscle-cells become small and filled with granules of a brownish yellow or blackish colour, lying in large numbers around the poles of the nuclei; often there is fatty degeneration of the muscle-cells also. The pigment is an altered form of hæmoglobin.

H., atrophy of, yellow. The condition which occurs in those cases of cardiac atrophy in which the muscular structure is pale; sometimes from the yellow colour of granules of degeneration, and sometimes from interstitial fatty or fibroid growth.

H., auricles of. See under *Auricle*.

H. beat. (*G. Herzschlag*.) Same as *H.*, apex-beat of.

H., beating of. The contraction of the cardiac musculature, which, under the influence of exercise, increased external temperature, some poisons, mental emotions, and other causes, as disease, becomes unusually powerful, and can both be felt by the person himself and be perceived by the eyes and bands of others.

H., body. (*G. Körperherz*.) The left side of the heart, inasmuch as it is connected with the circulation through the body, as distinct from the lungs.

H., bone of. (*G. Herzknoche*.) An ossification occurring in the cartilage observed in many Ruminants, as in the sheep, ox, deer, camel, camelpard, antelope, and pig, and in some Pachyderms. It occupies the interventricular and interauricular septum. It is occasionally double. A cartilaginous or ossified rod may also be occasionally found in old Solipeds in the septum of the auricles in front of the opening of the inferior vena cava.

H., branchial. (*Βράγχια*, the gills. *F. cœur branchial*.) A contractile dilatation of the venæ cavæ of Cephalopods before their entry into the respiratory organ; beyond this dilatation the veins are called branchial arteries.

H., calcification of. (*L. calx*, lime; *fio*, to become.) See *H.*, degeneration of, calcareous.

H., can'cer of. See *H.*, malignant disease of.

H., capacity of. This has been variously estimated for each of the four cavities by Vierordt at 172 cub. centim., or 182 grammes, and by Volkmann at 187.5 grammes, or about 1-27th of the total weight of the blood.

H., caudal. (*L. cauda*, a tail.) A pulsating dilatation of the caudal vein of eels.

H., cirrho'sis of. (*Κίρρως*, reddish-yellow.) Same as *H.*, degeneration of, fibroid.

H. clot. (*G. Herzgerinnsel*.) See *Cardiac concretions* and its subheadings.

H. clo'ver. The *Medicago maculata*, from the figure of a heart on its leaf; it was supposed to defend the heart against the noisome vapour of the spleen.

H., congest'ion of. (*L. congestus*, an accumulating.) Distension of the coronary veins of the heart from dilatation of the cavities of the right heart, the result of valvular disease, or of emphysema, or of other obstructive cause.

There may be serous or sanguinolent effusion into the pericardium, with ecchymosis both of it and the endocardium; the basal connective tissue may be cedematous, and when long-existent the wall of the heart may be hardened from increase of connective tissue, the muscular fibres having undergone fatty or fibroid degeneration. This condition was first described by Sir W. Jenner.

H., connective-tissue hypertrophy of. Quain describes an excessive development of the intermuscular connective tissue of the heart producing increase of volume, as differing from the morbid condition described by Jenner as fibroid disease resulting from congestion, and compares it with Gull and Sutton's arterio-capillary fibrosis. The enlargement is uniform and frequently great; the heart-walls are firm, tough, and leathery, the edges do not collapse when cut, but remain stiff and prominent; the colour varies from pale buff to deep purple, according to the amount of increase of connective tissue and the excess of blood present; the fibrillar tissue is increased in quantity and the connective-tissue cells in number; the muscular fibre-cells are more numerous, compressed, and sometimes degenerated.

H., covering mem'brane of. The visceral part of the *Pericardium*; also called *Epicardium*.

H., death begin'n'ing at. See *Death*, modes of.

H., degenera'tion of, albu'minoid. See *H.*, degeneration of, amyloid.

H., degenera'tion of, am'yloid. A rare condition. See *Amyloid degeneration*.

H., degenera'tion of, calca'reous. (*L. calx*, lime.) The deposit of calcareous particles in the substance of the muscular fibre-cells or in the connective tissue, or of calcareous plates in pericardial adhesions or deposits.

H., degenera'tion of, cartilag'inous. A term applied to what would appear to be very hard patches of fibroid degeneration of the cardiac musculature, no true cartilage having been found there.

H., degenera'tion of, col'loid. (*Κόλλα*, glue; *είδος*, likeness.) Same as *H.*, degeneration of, vitreous.

H., degenera'tion of, fatty. (*L. degeneratio*, a changing for the worse. *F. dégénérescence grasseuse du cœur*; *I. degenerazione grassosa del cuore*; *G. fettige Entartung des Herzens*.) The process and the condition of conversion, in a greater or less degree, of the tissue of the muscular fibres of the heart into fatty matter. The fattily-degenerated heart is often enlarged and dilated; its muscular tissue when cut is of a brownish yellow or buff colour, having a patchy appearance; it is soft, easily broken, and more or less greasy. Under the microscope the muscular fibres are seen to have lost in greater or less degree their striation, and to have become studded with fatty particles, at first minutely granular, then by coalescing forming large oil masses. Fatty degeneration may result from pericarditis, and from arterial degeneration which interferes with nutrition; it may occur during the acute specific fevers, in purpura, in chronic cachectic diseases, Bright's disease and gout, and in phosphorus poisoning. Complete rupture of the heart may occur, causing sudden death; or partial rupture, causing cardiac apoplexy. There is more or less shortness

HEART.

of breath, a tendency to fainting, which may be fatal, feebleness of pulse, weakness of cardiac impulse, and indistinctness of the first sound.

H., degeneration of, fibro-cartilaginous. See *H., degeneration of, cartilaginous.*

H., degeneration of, fibroid. (L. *fibra*, a fibre; Gr. εἶδος, likeness. *F. degenerescence fibroïde du cœur*; I. *degenerazione fibroide del cuore*; G. *fibröse Entartung des Herzens*.) The conversion of the muscular fibres of the heart into, or their replacement by, fibrous tissue. It especially affects the walls of the ventricles. In few cases does the disease affect the whole organ, generally it occurs in patches, which become dense, firm, inelastic, and greyish white, and under the microscope show great increase of the connective-tissue elements at the expense of the muscular fibres, which become fatty, or granular, or converted into fibrous tissue. It is a cause of irregular dilatation, of aneurysm of the heart, and of cardiac stenosis. It may be a sequel of myocarditis, it may be induced by syphilis, and it may occur in hypertrophy, especially that form which is part of Bright's disease. When a considerable patch of the cardiac muscle is affected it may cause dyspnoea, lividity, and oppression; and in certain positions may interfere with the action of the auriculo-ventricular valves. See also *H., congestion of*, and *H., connective-tissue hypertrophy of*.

H., degeneration of, granular. (L. *granulum*, a small grain. *F. degenerescence granulaire du cœur*.) A form of degeneration in which the muscle-fibres of the heart contain rows of brownish granules. See also *H., degeneration of, parenchymatous*.

H., degeneration of, parenchymatous. (Παράγχυμα, the substance of the viscera.) The form of degeneration met with in the acute specific fevers and septicæmia in which the heart structure is softened and of a dirty-greyish colour, the muscular fibre-cells are granular, turgid, and have lost their markings, and contain fatty granules and pigment molecules.

H., degeneration of, pigmentary. (L. *pigmentum*, paint. *F. degenerescence pigmentieuse du cœur*; G. *Pigmententartung des Herzens*.) The occurrence of shining, yellowish granules in the muscular fibre-cells of the heart. It is to be seen in the parenchymatous degeneration, in atrophy of the heart, and sometimes in jaundice.

H., degeneration of, vitreous. (L. *vitrum*, glass.) The condition, which sometimes occurs in the heart-musculature, described under *Degeneration, vitreous*.

H., degeneration of, waxy. Same as *H., degeneration of, vitreous*.

H., degeneration of, yellow. A synonym of *H., degeneration of, fatty*.

H., development of. The heart is entirely derived from the mesoblastic layer of the ovum. In the cartilaginous fishes and Amphibia it is single from the commencement, but in Teleosteans, in Birds in part, and in Mammals, there are originally two tubes, which subsequently coalesce. These are at first situated on the ventral side of the pharynx, and each receives posteriorly a vitelline vein from the sinus terminalis, and is prolonged anteriorly into an aortic artery. The two arteries become the first or primitive aorta, and subsequently unite to form the dorsal aorta. After the coalescence

of the two primary tubules the heart appears as a median tube, which soon becomes curved forward and to the right, in which condition it may be seen in the human embryo of three weeks. The division into auricle, ventricle, and bulbus arteriosus is now visible. The auricular portion is placed dorsally and to the left of the ventricular part, and early presents two projecting pouches, which are the rudiments of the future auricular appendages. In the next stage the originally single cavity of the auricle, ventricle, and bulbus arteriosus becomes subdivided into two by the formation of septa, the ventricular septum in man appearing about the sixth week, and the auricular septum about the eighth week of foetal life. The auricular septum is not completed, an aperture being left posteriorly and below, which is the foramen ovale. At this time, or a little later, the Eustachian valve forms, separating the left superior cava or great coronary sinus from the inferior cava, and directing the current of blood from the latter to the foramen ovale. The membrane closing the foramen ovale gradually grows up from below. The bulbus arteriosus becomes divided by a septum into two channels about the seventh week; the anterior being connected with the right ventricle below and becoming the pulmonary artery, the posterior being connected below with the left ventricle and becoming the aorta. The valves appear about the seventh or eighth week.

H., diastolē of. (Διαστολή, a drawing asunder.) The relaxation of the heart. It is not identical with the pause, for this includes the auricular contraction. It occupies in a heart beating 55 times a minute 0·4 sec., the auricular contraction occupying 0·177 sec. The variation in the number of cardiac beats in a given period is chiefly due to a difference in the duration of the diastole. The duration of the diastole of the auricle is longer than that of the ventricle.

H., dilatation of. (*F. dilatation*, from *dilato*, to expand; from L. *dilatatus*, spread abroad. *F. dilatation du cœur*; G. *Herzverweiterung, Herzdilatation*.) Uniform increase of size of all or some of the cavities of the heart. Partial dilatation of one or more of the heart's cavities constitutes aneurysm of the heart.

Dilatation is the result of weakness or degenerative changes of the musculature of the heart, and is caused by the internal blood-pressure; it often accompanies hypertrophy.

H., dimensions of. See under chief heading.

H., displacements of. The presence of the heart in a position other than the normal one caused by pressure or traction, the base being much less affected than the apex. The displacing cause may be slow in its action, and then the physical signs are the main symptoms of the condition; but it may be extreme or sudden, and then weight or oppression or acute pain in the cardiac region, palpitation, irregularity of pulse, dyspnoea, and duskiess of complexion or cyanosis may occur. The heart may be pushed to the left by a hydrothorax, or a pneumothorax, or a tumour of the right side of the chest, or by a liver tumour, or it may be dragged that way by a contracting left lung. It may be pushed to the right by a hydrothorax, or a pneumothorax, or a tumour of the left side of the chest, or it may be dragged that way by a contracting right lung. It may be pushed downwards by emphysema, or aneu-

HEART.

rysm, or other tumour, or dragged that way by depression of the diaphragm from any cause, or by its own weight in a diaphragmatic hernia. It may be pushed upwards by ascites, a pregnant uterus, ovarian dropsy, an abdominal tumour, a large liver, or flatulent distension of the intestines or the stomach; and it may be dragged in that direction by pleural contraction. It may be pushed backwards by hydropericardium, or dragged that way by dorsal kyphosis. It may be pushed forward by an aneurysm, or a mediastinal tumour, or by large bronchial glands. See also *H.*, *misplacement of, congenital*.

H., displacements of, congenital. See *H.*, *misplacement of, congenital*.

H.'s-ease. The pansy, *Viola tricolor*; also the *Polygonum persicaria*.

H., ectopia of. See *Ectopia cordis* and *Ectocardia*.

H., embolism of. (Ἐμβόλισμα, that which is put in.) The occurrence of an embolus or blood clot in the heart, which has been formed in a vein and conveyed there by the blood stream.

H., entozoa of. (Ἐντός, within; ζῷον, an animal.) The *Cysticercus* and the *Echinococcus* have been found in the musculature of the heart, and also free in its cavities and in that of the pericardium; the *Strongylus gigas* has been found in the heart cavity of a dog.

H., fatty. An excessive development of fat around the heart.

Also, the same as *H.*, *degeneration of, fatty*.

H., fatty degeneration of. See *H.*, *degeneration of, fatty*.

H., fatty growth of. Same as *H.*, *infiltration of, fatty*.

H., fatty hypertrophy of. (ὑπέρ, above; τροφή, nutrition.) Same as *H.*, *infiltration of, fatty*.

H., fatty infiltration of. See *H.*, *infiltration of, fatty*.

H., fibro-cartilage of. A mass of fibrous tissue situated at the base of the heart in the angle between the aortic and the two auriculo-ventricular openings. It sends processes into the septum of the ventricles.

H., fibroid degeneration of. See *H.*, *degeneration of, fibroid*.

H., fibroid disease of. See *H.*, *degeneration of, fibroid*.

H., fibroid patch of. See under *H.*, *degeneration of, fibroid*.

H., fibrosis of. Same as *H.*, *degeneration of, fibroid*.

H., fibrous rings of. Two rings of dense fibrous tissue which surround the auriculo-ventricular orifices, and from which many of the muscular fibres arise.

H., foetal. Just previous to birth the heart of the fœtus presents the peculiarities of a fully-formed Eustachian valve placed at the opening of the inferior vena cava into the right auricle, and a patent foramen ovale. There is also a communicating vessel between the left division of the pulmonary artery and the arch of the aorta, named the ductus arteriosus, which has an important influence on the course of the blood through the heart. The venous blood descending from the head and upper extremities by the superior vena cava descends through the anterior part of the right auricle into the right ventricle, from whence it is discharged into the pulmonary artery, and then, as the lungs are not yet acting into the ductus arteriosus,

and so into the aorta. The arterialised blood ascending from the placenta and entering the right auricle by the inferior vena cava is directed by the Eustachian valve through the foramen ovale into the left auricle, from whence it passes into the left ventricle, and is thence propelled into the aorta, and from this vessel into the innominate, left carotid, and left subclavian vessels, to the head and upper extremities, part joining with that which has traversed the ductus arteriosus, so that mixed blood is transmitted to the body generally. After birth the foramen ovale closes, the ductus arteriosus contracts to a cord, and the Eustachian valve ceases to perform any active function.

H., furrow of, anterior longitudinal. (*G. vordere Längsfurche des Herzens*.) A groove on the front of the heart, lying towards the right side, and extending from the auriculo-ventricular furrow to a point a little to the right of the apex, where it joins the posterior longitudinal furrow. It marks the septum of the ventricles and lodges the anterior coronary vessels with the lymphatics and nerves.

H., furrow of, auriculo-ventricular. (*F. sillon auriculo-ventriculaire*; *G. Quersfurche des Herzens*.) A deep transverse or circular groove on the outer surface of the heart at the point of junction of the auricles and ventricles, and separating it into an auricular and a ventricular portion; it is interrupted in front by the origin of the pulmonary artery.

H., furrow of, interventricular. See *H.*, *furrow of, anterior longitudinal*, and *H.*, *furrow of, posterior longitudinal*.

H., furrow of, longitudinal. Same as *H.*, *furrow of, interventricular*.

H., furrow of, posterior longitudinal. (*G. hintere Längsfurche des Herzens*.) A groove on the back part of the heart, lying towards the right side, and extending from the auriculo-ventricular furrow to a point a little to the right of the apex, where it joins the anterior longitudinal furrow. It marks the septum of the ventricles and lodges the posterior or coronary vessels with the lymphatics and nerves.

H., furrow of, transverse. Same as *H.*, *furrow of, auriculo-ventricular*.

H., ganglia of. (*Ganglion*.) The heart in Mammals receives its nervous supply from the cardiac plexus, which is situated at the base of the heart, and contains many small collections of ganglion cells. The cardiac plexus receives two sets of branches, a first set from the vagus, which are in part direct and in part indirect, in the latter case emanating from the superior and inferior laryngeal nerves and from the pulmonary branches of the vagus, and a second set from the great sympathetic, each of the cervical and the first dorsal ganglia contributing one or more cardiac nerves. When the branches proceeding from the cardiac plexus are followed into the substance of the heart, they are found to form a plexus, in which small ganglia are intercalated. No nerves can be seen with the microscope in the muscular tissue of the apex.

H., granular degeneration of. See *H.*, *degeneration of, granular*.

H., hæmorrhage into the walls of. See *Cardiac apoplexy*.

H., hydatids of. See *Hydatids of heart*.

H., hyperplasia of. (ὑπέρ, above; πλάσις, conformation.) Increase in number of the muscular fibres of the heart.

HEART.

H., hypertrophy of. (Υπέρ, above; τροφή, nutrition. F. *hypertrophie du cœur*; I. *ipertrofia del cuore*; G. *Hypertrophie des Herzens*.) Increase in size of the heart from excessive development of muscular tissue. It is a result of overwork of heart, whether due to severe general exercise of the muscles, or to an effort to overcome an obstruction to the circulation of the blood, as in valvular disease, or an impediment to its own action, as caused by an adherent pericardium. It occurs in Bright's disease of the kidney, especially in connection with a contracted granular kidney, from a cause which is not yet settled; Bright suggested that the altered composition of the blood caused increased action of the heart, either directly by stimulating it, or indirectly by passing badly through the capillaries; Traube believed it to be a conservative and compensatory change produced by increased arterial tension, the result of defective action of the secreting structure of the kidneys, and the consequent diminished flow of blood through them; G. Johnson believes that in Bright's disease the blood becomes morbidly changed so as to be less fitted to nourish the tissues, that the minute arteries resent the passage of this abnormal blood through their walls, and to overcome this the muscular structure of the arteries and the heart becomes hypertrophied; Gull and Sutton contend that Bright's disease is a disease of the general system, but often commencing in the kidneys, and characterised by degenerative hyaline-fibroid changes in the coats of the arterioles and capillaries of the greater part of the vascular system, which impedes the circulation of the blood and produces the hypertrophy. Increase in size of the heart may also be the result of excessive palpitation of nervous or toxic origin. It is often accompanied by dilatation. The muscular structure is generally firm, and only excessive in quantity; sometimes when there is much dilatation it is soft and palish, having undergone some degeneration. Under the microscope the muscular fibres are well marked and very numerous; occasionally non-striped muscle-cells are seen, and not infrequently excess of connective tissue. Hypertrophy of the heart may produce oppression in the breathing, palpitation, and a dry cough. The pulse is generally full and tense; there may be cerebral symptoms, such as giddiness, headache, muscæ, or buzzing, and there is a tendency to bleeding from the nose or lungs.

H., hypertrophy of, compensatory. (Υπέρ; τροφή; L. *compenso*, to counterbalance. F. *hypertrophie compensatrice du cœur*.) Hypertrophy of the heart produced by some obstruction to the circulation, such as an affection of the lung or a diminution in the size of the valvular opening, or by some impediment to its own action, as an adherent pericardium.

H., hypertrophy of, concentric. (Υπέρ; τροφή; F. *concentric*, to join in one centre. F. *hypertrophie concentrique du cœur*; G. *concentrische Herzhypertrophie*.) A term applied to those cases of hypertrophy of the heart in which the cavities are smaller than natural, in the belief that the growth took place chiefly on the inner surface of the cardiac wall. It is probable that most cases of concentric hypertrophy are strong healthy hearts arrested in contraction by death, though Rokitsansky believes that it sometimes occurs as a reality.

H., hypertrophy of, connective-

tissue. See H., connective-tissue hypertrophy of.

H., hypertrophy of, excentric. (Υπέρ; τροφή; ἐκκεντρος, out of the centre. F. *hypertrophie excentrique du cœur*; G. *excentrische Herzhypertrophie*.) The same as H., hypertrophy of, with dilatation.

H., hypertrophy of, with dilatation. A condition in which there is an increase in the volume of the cardiac muscle accompanied with an enlargement of the cavities. It results from the yielding of the walls of the heart when that organ is called upon to perform work beyond its normal capacity, and is hence more common on the right, than on the left, side. The most common conditions leading to hypertrophy with dilatation of the right heart are constriction of the arterial orifice, or of the pulmonary artery, or an alveolar lung disease; compression of the capillary system of the lungs, by pleuritic effusion, tumours, spinal curvatures, or emphysema, by clots in the pulmonary artery, disease of the mitral valve, causing distension of the pulmonary system; atheromatous changes in the pulmonary artery. The left heart becomes dilated from valvular disease of the aortic orifice, constriction of that orifice or of the aorta itself, and Bright's disease. The symptoms are usually an increased impulse, which is both more easily felt and seen, and extends over a larger space, especially downwards; increased area of dullness on percussion. The second sound is usually intensified and accentuated. A peculiar chink is sometimes heard over the apex.

H., hypoplasia of. (Υπό, beneath; πλάσις, conformation.) Defect in size of the heart.

H., impulse of. (G. *Herzschock*.) The H.-beat.

H., infiltration of, calcareous. (L. *calx*, lime.) A deposit of lime salts, chiefly carbonate, in the muscular fibre-cells of the heart, in one case converting many of them into solid cylinders.

Calcareous salts may also be deposited in the connective tissue between the muscular fibre-cells.

H., infiltration of, fatty. (F. *infiltrer*, to creep in. F. *hypertrophie graisseuse du cœur*; G. *fettige infiltration des Herzens*.) The excessive growth of fat about the heart, which not only more or less covers its surface, but penetrates between the muscular fibres, and compressing them, impedes their contraction, and leads to atrophy and degenerative changes.

H., inflammation of. (G. *Herzentzündung*.) See *Endocarditis*, *Myocarditis*, and *Pericarditis*.

H., inhibitory nerves of. The cardiac branches of the vagus nerve. When these are stimulated, the heart beats more slowly, or its action is altogether stopped in diastole; after a short time, though the stimulus may still be applied, the heart recommences to contract. If the vagus be divided in the neck and the stimulus be applied to the distal stump, the arrest of the heart's action is effected, showing that the inhibitory nerves are efferent or centrifugal; if, on the other hand, the stimulus is applied to the proximal stump, the opposite vagus being intact, the stoppage is also produced, showing that the effect may be produced in a reflex manner.

H., irritable. A condition of the heart,

HEART.

noticed especially in the army in active service, and characterised by palpitation, pain over the region of the apex, rapid pulse, shortness of breath, sometimes headache, and dizziness. It was frequently observed in soldiers during the American Civil War, and was considered by Hartshorne to be due to cardiac muscular exhaustion. Maclean associated it with the white pericardial spots on the heart.

H. leaf. Same as *H. clover*.

H., left. (*G. linkes Herz*.) The left ventricle and the left auricle with its appendage.

H., lining membrane of. The *Endocardium*.

H., lymph. Muscular rhythmically-pulsating segments of the lymph-vascular organs which are found in various members of the Vertebrata.

H., lymphatic. Same as *H., lymph*.

H., lymphatics of. The lymphatics of the heart exist in large numbers both under the endocardium and the pericardium, and in the substance of the heart itself, commencing by lacunæ lined with endothelium. The lymphatics of the ventricles are to a great extent independent of those of the auricles, and join a trunk which lies in the anterior longitudinal groove, turns to the left round the aorta, and passes to the glands between the trachea and the aorta. The lymph is finally discharged into the right innominate vein.

H., malformations of. (*F. mal*, wrong; *L. formatio*, a shaping. *F. malformations du cœur*; *G. Herzmisbildungen*.) Congenital deformities of the heart; they are many and various. The septum may be wholly or partially undeveloped; the aorta and pulmonary artery may be imperfectly differentiated from the primitive arterial trunk, or their origins may be misplaced; the foramen ovale may remain open, or may be closed too soon; the ductus arteriosus may continue patent, or may never have been developed; or there may be defects in the formation of the valves.

H., malignant disease of. A rare disease, but most of the forms of malignant disease have occurred. The right heart is more frequently affected than the left, and the outer or inner surface more frequently than the substance of the musculature. It is most usually a secondary affection.

H., malposition of. See *H., displacements of*, and *H., misplacement of, congenital*.

H., misplacement of, congenital. (*L. congenitus*, born together with.) The heart may occupy a wrong position within the thorax; by retaining the median position as it does in the early fœtus; by being transposed to the right side, a condition called *Dextrocardia*; by its long axis being in the transverse axis of the thorax, or in the antero-posterior axis. *Dextrocardia* is rarely unaccompanied by transposition of other viscera.

The heart may also occupy a wrong position by being situated outside the thorax; as in the abdomen from defect of the diaphragm; on the external surface of the body from congenital fissure of the sternum; or at the root of the neck.

H., motor centres of. The cardiac ganglia, the most important and effective of which are situated in the auricles.

H., murmurs. See under *Murmurs, cardiac*.

H., muscles of. See *H., musculature of*.

H., musculature of. The muscular tissue of the heart consists of bundles of fibres connected by vascular fibrous connective-tissue, and arranged in lamellæ. In the auricles the superficial fibres run transversely over both venous sinuses, and are most numerous on the anterior surface; some dip in at the interauricular septum; of the deeper fibres which are proper to each auricle, some form loops, which are attached at their extremities to the corresponding auriculo-ventricular rings. Others are annular in form, and encircle the auricular appendices, the venæ cavæ, the coronary and pulmonary veins, and the annulus ovalis. In the ventricles the fibres of the outermost layer arising from the auriculo-ventricular ring wind spirally downwards from right to left over both ventricles, and having arrived at the apex, form a whorl, and bending abruptly upwards become continuous with the fibres of the muscoli papillares of the left ventricle in particular. The subjacent layers of fibres become successively more and more horizontal, and then once more gradually more and more vertical. Pettigrew distinguishes seven layers, of which the fourth is nearly horizontal. Some fibres encircle the pulmonary orifices.

The histological characters of cardiac muscle-fibres are that they possess no distinct sarcolemma, that their nuclei are more numerous and more centrally situated than other striated fibres, that they are frequently branched and present many anastomoses, that the striation is indistinct, and that the nerves do not form plates at their extremities.

The physiological characters are that the fibres cannot be thrown into a state of tetanus; that a single excitation induces a contraction, which, by reason of the anastomosis of the fibres, spreads over a large area, and is apt to recur rhythmically; that there is a refractory period, so that when an excitation of mean intensity has acted and a contraction has followed, a second, third, or fourth may be applied without contraction occurring, and then contraction takes place; that a stimulus sufficiently strong to induce contraction at all always produces a maximum contraction, which is not true of striated muscle generally. If the heart has been in repose for some time, however, a second, third, or fourth excitation seems to improve its nutrition, and the height to which the lever of the manometer rises is progressively higher and higher, forming staircase beats, till a maximum is obtained.

H., nerves of. See *H., ganglia of*.

H., neuralgia of. A term for *Angina pectoris*.

H., ossification of. (*L. os*, a bone; *fit*, to become.) A term formerly applied to extreme conditions of atheroma of the coronary arteries and calcareous deposit on or in the heart structure or in the pericardium.

H., palpitation of. See *Palpitation*.

H., parasitic disease of. See *H., entozoa of*.

H. pea. The plants of the Genus *Cardiospermum*.

H., polypus of. (*Πολύπους*, a morbid excrescence in the nose. *G. Herzgewächs*.) An adherent fibroid cardiac concretion.

H., position of. See under chief heading.

H., pulmonary. (*L. pulmo*, the lung. *G. Lungenherz*.) The right side of the heart,

HEART.

inasmuch as it is connected with the circulation through the lungs.

H., rhythm of. (Ῥυθμός, measured motion.) The due and normal sequence and relationship of the *H. sounds*.

H., right. (G. *rechtes Herz*.) The right ventricle and the right auricle with its appendage.

H., rupture of. (L. *rumpo*, to break. F. *rupture du cœur*; I. *rottura del cuore*; G. *Ruptur des Herzens*, *Herzzerreissung*.) Laceration of the muscular walls of the heart may be produced by some cause acting from within, and is then said to be spontaneous; or from some cause acting from without, such as a blow or other violence.

Rupture of the heart from injury without a perforating wound is not common; it usually involves the pericardium also. It may be complete, involving the whole thickness of the muscular wall, or partial, as in the tearing across of a columnar carnea. Death is usually instantaneous; sometimes life is prolonged for a few hours. The right ventricle and the left auricle are the parts most frequently ruptured.

Spontaneous rupture probably never occurs unless the muscular tissue of the heart has undergone some degeneration or disease; it most commonly happens in persons over sixty years of age, and of these most frequently in men, and is usually caused by physical exertion or mental excitement. The left ventricle is the most frequent seat of the rupture, especially its anterior wall. The rent is usually irregular in outline, more or less in the direction of the muscular fibres, completely or only partially through the wall, one or several small ones, and generally having ecchymosed margins. It is the result of overstrain of a muscle in a state of fatty degeneration, or softened from a defective blood supply caused by atheromatous arteries, or disintegrated by an internal hæmorrhage, or by suppuration, or destroyed by ulceration. The symptoms vary in character; there may be very severe local pain, acute dyspnoea, and death in one or two minutes; or the pain and dyspnoea may be less urgent, and upon them may come somewhat slowly great collapse, a very thready pulse, profuse perspiration, and death delayed for a few hours. In some cases there is simply sudden death.

H., sclero'sis of. (Σκληρός, hard.) A term applied to the patches of greyish, translucent, fibroid tissue on the surface of the heart, such as occur in the stage of repair of *Myomalacia cordis*.

H. seed. The name of the plants of the Genus *Cardiospermum*.

H., septum of. (L. *septum*, a wall. F. *cloison du cœur*; G. *Kammerscheidewand*.) The muscular division between the two sides of the heart.

H.-sha'ped. (F. *en forme de cœur*, cordiforme; G. *Herzförmig*.) Having the shape of a heart; as a leaf having the base with a median cleft and rounded borders, and the apex pointed; cordate.

H., size of. See under chief heading.

H., softening of. A term formerly applied to the condition of the cardiac wall when it is softer than normal; this may depend on various pathological conditions, among which are fatty degeneration and acute myocarditis. See also *Myomalacia cordis*.

H. sounds. (F. *bruits du cœur*; G. *Herztöne*.) The sounds of the heart are two in number, one dull and prolonged, the other

shorter, sharper, and terminating more abruptly. They have been likened to the syllables *tüb, düp*. They are heard most distinctly on the left side of the chest, over a space about three inches in diameter, between the sternum and the nipple. The first sound lasts about two fifths of a second, the second one fifth of a second. The sounds are followed by a pause, lasting about two fifths of a second. The events synchronous with the first sound are the closure and sudden tension of the auriculo-ventricular valves, the impulse of the heart, the contraction of the ventricular walls, the opening of the semilunar valves, and the sudden expulsion of the blood contained in the ventricles into the pulmonary artery and the aorta. The events synchronous with the second sound are the closure and sudden tension of the pulmonary and aortic semilunar valves, the entrance of the blood into the auricles, and to some extent into the ventricles, and the opening of the auriculo-ventricular valves. The causes of the two sounds have been much discussed. Most physiologists, however, agree that the second sound is exclusively due to the sudden tension and vibration of the semilunar valves of the aorta and pulmonary artery, and that the chief factor in the production of the first sound is the sudden tension and vibration of the auriculo-ventricular valves. Some think it is to the latter cause that the first sound is exclusively due; but many consider that there is a muscular element, since it is loud and prolonged in hypertrophy of the heart, and can also be heard when the heart contains no blood, and when the valves are held back. The difficulty is that unlike the contraction of ordinary striated muscle, which is of the nature of a tetanic spasm, the cardiac muscular contraction has been proved to consist of a single shock, which, it is contended, cannot produce a sound.

The mitral valve sound is best heard at or a little above the situation of the apex beat; that of the tricuspid valve at, and a little inwards and upwards from, the place of junction of the cartilage of the right fifth rib with the sternum. The aortic valve sound is best heard over the first right costal cartilage close to its junction with the sternum, where the aorta is nearest the surface; that of the pulmonary valves at the inner end of the second left intercostal space, or lower, at the edge of the sternum.

For morbid sounds see under *Murmur*.

H. sounds, fœtal. See *Fœtal heart sounds*.

H. stroke. Same as *Apex-beat*.

H., syphilitic disease of. Syphilis is usually expressed in the heart structure as an inflammatory fibroid thickening, sometimes including a caseous mass, but rarely as a gumma.

H., systolê of. (Συστολή, a contraction.) The contraction of the cardiac muscles, by which in life the blood contained in the cavities of the heart is driven into the vessels. The whole heart becomes more cylindrical, twists a little to the right, so that more of the left ventricle is turned forwards, and whilst the apex is drawn up the base descends a little. It lasts during the first and second sounds. The two auricles contract simultaneously, and immediately afterwards the two ventricles contract simultaneously. The duration of the auricular systole in a heart beating 60 times per minute is about 0.177 of a second, the duration of the ventricular systole

HEARTBURN.

about 0·4 sec., and the duration of the diastole or period of rest is about 0·423 sec. With varying frequency of the pulsations in a given time the duration of the diastole is found to be the most variable element. The systole of the ventricles is synchronous with the impulse of the heart against the walls of the chest, with the closure of the auriculo-ventricular valves, the opening of the aortic and pulmonary semilunar valves, and with the rush of blood from the cavity of the ventricles into the arteries.

H., thrombosis of. See *Cardiac thrombosis* and *C. concretions*.

H., trabeculæ of. (L. *trabecula*, dim. of *trabs*, a beam.) The *Columnæ carneæ*.

H. trace. The record on smoked paper made by the needle of a *Cardiograph*.

H., tricoellian. (Τρεῖς, three; κοιλία, a hollow.) A malformed heart having three cavities only, two auricles and one ventricle, the ventricular septum being absent.

H., trotting. A familiar term for *H.*, irritable.

H., tubercle of. Tubercle is rare and generally occurs in the miliary form in connection with the visceral pericardium, but is sometimes seen as a caseous mass.

H., univentricular. (L. *unus*, one; *ventriculus*, a ventricle.) The same as *H., tricoellian*.

H., valves of. The aortic, pulmonary, mitral, and tricuspid valves, the valve of Thebesius, and the Eustachian valve, which are described under their respective names.

The pulmonary and aortic valves are bellying pouches in the lumen, and placed at the origin, of the respective vessels, with the hollow facing in the direction of the blood current; when the heart contracts the stream of blood washes them onwards, so that they lie closely to the walls of the vessels; when the heart dilates the backward rush of the blood distends and pushes back the pouches, so that they meet and stop the ebbing current by blocking the canal.

The mitral and tricuspid valves are clapper valves of a somewhat triangular shape, the base surrounding the circumference of the auriculo-ventricular orifices, and their apices attached by tendinous threads to the walls of the ventricles into which they project. During the ventricular systole they lie back against the cardiac walls and allow of the passage of the blood from the auricle, but during the diastole they are caught by the current of blood trying to return, and so block up the passage.

H., valvular disease of. See under *Valve*.

H., veins of. The coronary veins. These correspond in their distribution to the branches of the coronary artery. The left is the largest, and arising near the apex of the heart lies in the anterior interventricular furrow, reaches the transverse auriculo-ventricular furrow, runs to the left, and joins with the right coronary or smaller vein which ascends along the posterior interventricular furrow to form the sinus communis venarum cordis, which after a short course opens into the lower and posterior segment of the right auricle, the opening, which is from 11—14 mm. wide, being guarded by the valvula Thebesii. A few veins, the venæ cordis minimæ, or veins of Thebesius, open into the right auricle directly.

H., ventricles of. See under *Ventricle*.

H., vortex of. (L. *vortex*, a whirl. F. *tourbillon du cœur*; G. *Wirtel des Herzens*.)

The part of the apex of the heart where the fibres of the external layer of the musculature turn round in a spiral on their return.

H., weight of. See under chief heading.

H., whorl of. Same as *H., vortex of*.

H. wood. See *Heartwood*.

H., work done by. The amount of mechanical work done by the human heart is variously determined by various authors according to the different estimates of the capacity of the ventricles. Taking Volkmann's estimate that the left ventricle expels 188 grammes (4·144648 lh.) at each systole, and Donders' estimate that this is done at a pressure of about 250 mm. (9·8425 in.) of mercury, which is equal to a column of blood 3·21 metres (10·53169 ft.) high, the work done at each beat would amount to 188 × 3·21, being 60348 kilogrammeters (4·365 foot pounds). If the number of beats be taken at 75 in the minute, the daily work done by the left ventricle will amount to 65175·84 kilogrammeters (471416·85 foot pounds, or 210·454 foot tons). Houghton shows a different result. He estimates the amount of blood expelled at each systole as 3 oz., and the pressure as equal to a column of 9·923 ft. of blood, the work done at each beat being thus 1·86 foot pounds, and the daily work of a heart beating 75 times in a minute being 89·706 foot tons.

The right ventricle being supposed to exert a pressure of one third of the amount exerted by the left, the total daily work of the ventricles is 86901·12 kilogrammeters (618555·8 foot pounds, or 280·605 foot tons). According to Houghton, the addition for the action of the right ventricle should be five thirteenths of that of the left, making 124·208 foot tons. To these amounts something should be added for the contraction of the auricles.

H., wounds of. Wounds of the heart are divided into penetrating and non-penetrating; those which enter one of the cavities, and those which involve the cardiac walls only. The right ventricle is the most frequent seat, then the left, and afterwards, in much smaller numbers, the auricles. They are most commonly produced by gunshot wounds, and are then lacerated; when caused by cutting instruments they may be of the incised or the punctured form. Non-penetrating wounds are the least frequent, constituting not more than 10 per cent. of the whole number; these may be rapidly fatal if a coronary vessel is injured, or recovery may take place. Perforating wounds are very often fatal; the recoveries are most frequent the nearer to the apex is the injury; least frequent when the auricles are involved, the average being 15 or 17 per cent. Death is often immediate, but may be delayed, the greatest number occurring within seven days. Collapse is an early symptom; sometimes there is dyspnoea; great anxiety occurs after a short time, and is caused, according to Fischer, from compression of the heart and lungs by the effused blood, and the pulse is generally small, irregular, and intermittent.

Heartburn. (*Heart*; *burn*. F. *ai-greurs*; G. *Herzbranden*, *Herzbrand*.) A hot, burning sensation at the lower part of the chest, spreading upwards and sometimes downwards, frequently accompanied by eructations of wind and acid, acrid fluid. It is caused by putrefactive fermentation of the food, and is common in pregnancy, in dilatation of the stomach, and in

HEARTSCALD—HEAT.

catarrhal conditions of the gastric mucous membrane.

Heartscald. Same as *Hearthburn*.

Heart's-ease. The pansy, *Viola tricolor*, from its supposed cardiac properties.

Heart-wood. The older and more central wood of an exogenous stem. Also called *Duramen*.

Heartwort. The *Laserpitium album*.

Heat. (L. *calor*. F. *chaleur*; G. *die Wärme*.) An affection or condition of matter which is now considered to be a mode of motion. The sources of heat are either permanent, as the sun and the internal heat of the earth; or artificial, as chemical action and friction. It is communicated by radiation and by conduction. With one or two exceptions, an accession of heat invariably occasions increase of volume. Heat is everywhere present. It is indispensable for the development of all organised beings, yet if carried beyond a certain point it destroys all.

Also, the sensation produced by this condition of matter.

Also, in Physiology, the period of sexual excitement in the females of most animals.

H., absolute. (L. *absolutus*, complete.) An old term for the whole quantity of caloric supposed to exist in a body.

H., absorption of. (L. *absorbeo*, to swallow up.) The non-transmission, or taking into its substance, by a body of the heat rays which fall upon it; the property depends on the faculty possessed by the molecules of the body in question of vibrating in harmony with the heat vibrations.

H., acrid. (L. *acer*, pungent. F. *chaleur acre*.) The febrile heat of the skin which produces a pungent or biting sensation in the hand of a person touching it.

H., animal. The heat which is rendered manifest in the performance of the acts of animal life. In all animals, as long as life lasts, heat is generated. In poikilothermous or cold-blooded animals it is only a few degrees above the temperature of the surrounding medium, but in homothermous animals it is tolerably uniform, and is usually maintained at or near a temperature of 38° C., or 100·4° F. In man, the mean temperature is 37° C., or 98·6° F. It is several degrees higher in Carnivora, and still higher in birds. It varies slightly in different parts of the body. The highest temperature is in the blood returning from the liver. The lowest is in the extremities. It is but little influenced by climate, the temperature of the Hindu and of the Esquimaux being almost identical. It is chiefly generated in the muscles and glands. Fick found that one gramme of muscle of the leg of the frog in contracting raised one milligramme of water 3·1° C. (5·58° F.) The fluid secreted by the salivary glands in active secretion is from 1° to 1·5° C. (1·8° F. to 2·1° F.) higher than the temperature of the blood. It is regulated by conduction and by radiation from the skin, and by evaporation from the skin and lungs. The loss by conduction, radiation, and evaporation from the skin is 77·5 per cent. of the whole; the loss by evaporation of water from the lungs is 14·7 per cent. The loss in warming the expired air is 5·2 per cent., and in warming the food 2·6 per cent. There is also a regulating influence exerted by the nervous system on the production, more heat being generated when the body is exposed to cold. See *Temperature*.

H. apoplexy. (Ἀποπληξία. F. *apoplexie de chaleur*; I. *apoplessia da afa*; G. *Hitzschlag*.) A term applied to the cerebro-spinal form of *Heatstroke*.

H. asphyxia. See *Sunstroke*.

H., atomic. See *Atomic heat*.

H., capacity for. Same as *H., specific*.

H., conduction of. (L. *conduco*, to draw together.) The passage of heat from one body to another which is in contact with, and colder than, itself. Bodies vary very much in their capacity for the conduction of heat. Silver is a good conductor, bismuth a bad one, among the metals; while wood, hair, and feathers are worse.

H., conductivity of, co-efficient of. The figure representing the quantity of heat which will pass in a second, as the unit of time, through a plate a centimetre long, as the unit of length, and a gramme in weight, as the unit of mass, the two sides of which have a difference of 1° C. in temperature.

H., convection of. See under *Convection*.

H., diffusion of. (L. *diffusus*, spread abroad.) The irregular reflection of heat rays from the surface of a body analogous to the diffusion of light rays.

H., dry. Term employed to denote the application to the skin of such substances as flannel, chamomiles, hops, and bran at an elevated temperature.

H., dynamical equivalent of. The quantity of work required to generate a certain quantity of heat. According to Joule, 772·43 foot-pounds are required to warm by 1° F. one pound of water, weighed in vacuo, that is from 60° F. to 61° F.; according to Regnault, 771·81 foot-pounds are required; or it requires 1389·26 foot-pounds to heat water from 0° to 1° Cent.

H., dynamical theory of. Same as *H., undulatory theory of*.

H., dyspnoea. (Δύσπνοια, difficulty of breathing.) Difficulty of breathing produced by exposure to a high temperature. It is probably caused by the direct effect of the superheated blood on the respiratory centre.

H., emission of. (L. *emitto*, to send forth.) Same as *H., radiation of*.

H., emission theory of. (L. *emitto* to send forth.) The theory which assumes that heat is a subtle imponderable fluid, formerly called caloric, which surrounds the molecules of every body from which it may be emitted; each molecular envelope of heat repels each other envelope.

H. eruption. An old term for *Eczema*.

H.-exhaustion. A condition occurring in those exposed to a high temperature, especially amongst engineers on steamships in the tropics, characterised by profuse sweating, clammy skin, a rise in the temperature of the body, increased frequency of respiratory acts and beats of the heart, with nausea and vertigo.

H., expansion by. (L. *expando*, to open wide.) The increase in bulk which occurs to all substances with increase of temperature. Gases expand most, solids least; water is the only body which deviates from this rule.

H., external. (L. *externus*, outward. F. *chaleur extérieure*.) Heat generated outside the living body.

Also, heat applied to the body by vapours, fluids, or solids.

Also, heat of the body which makes itself sensible to the person touching it.

HEAT.

H. focus. (L. *focus*, a fireplace.) The point at which heat rays reflected from a concave surface, or refracted by a lens, meet or tend to meet.

H., free. Heat recognisable by the thermometer, as opposed to latent heat; or heat absorbed during change of state.

H., generation of. The conversion of some other form of energy into heat.

H.-givers. Term formerly applied to the carbohydrates and hydrocarbons when consumed as food, because it was considered that it was by their oxidation exclusively that the heat of the body was maintained. It is now known, however, that whilst they undoubtedly yield the largest proportion of the heat so generated, the proteids also aid in this process, and undergo combustion.

H., hectic. (*Hectic*.) The heat of skin which accompanies hectic fever, and is most felt in the cheeks, the palms of the hands, and the soles of the feet.

H., internal. (L. *internus*, within. F. *chaleur interne*.) Heat generated within the body.

Also, a term for a morbid sensation of heat within the body without distinct or proportionate elevation of temperature.

H., latent. (L. *lateo*, to lie hid. F. *chaleur latente*; G. *gebundene Wärme*.) Heat which is given to a substance and does not warm it. Heat which is lost or gained during change of state. The quantity of heat which must be communicated to a body in a given state, in order to convert it into another state, without changing its temperature. A vessel containing ice and water at 32° F., to which heat is applied, remains at 32° till all the ice is melted. The heat which is thus apparently lost was termed by Black latent heat. It is set free again during the passage of water into the solid form. The latent heat of fusion of ice is 79.25 thermal units Centigrade. If one kilo of ice be put into 79½ kilogrammes of water at 1° C., and left till the whole is melted, the result will be 80½ kilogrammes of water at 0° C. The latent heat of steam is 536.5. It should be remembered that latent heat no longer exists as heat, but has become another form of energy in effecting molecular changes.

H., latent, of fusion. (L. *fusus*, spread out.) The heat which is spent in the change of a solid to a liquid state.

H., latent, of vapour. The heat which is spent in the change of a liquid to a gaseous state.

H., mechanical equivalent of. The amount of heat required to raise the temperature of water from 0° C. to 1° C., being 41,573,025,475 ergs. See *H., dynamical equivalent of*.

H., mechanical theory of. The *H., undulatory theory of*.

H., moist. The vapour of water, or water itself in the liquid form, or water impregnated with various remedies, at a temperature considerably above that of the surrounding air, or of the parts to which it is applied. It is used to relax the cutaneous or superficial capillaries, to promote secretion, to soften tissues and to render them supple and yielding, and to relieve pain. See *Vapour baths, Fomentation*.

Also (F. *chaleur halitueuse*), a term employed to denote a hot but perspiring skin.

H., molecular. (L. *moleculus*, a small

mass.) The same in relation to compound bodies that *Atomic heat* is to simple elements, substituting molecule for atom.

H., molecular theory of. The *H., emission theory of*.

H., mordicant. (L. *mordico*, to bite.) Same as *H., acrid*.

H., nervous. A sensation of heat which comes and goes, now a slight shiver, then a flush of warmth.

H., polarisation of. See *Polarisation of heat*.

H., prickly. The same as *Urticaria*.

H., pungent. Sharp, biting, or burning heat. The term is usually applied to gustatory sensations, such, for example, as the taste of capsicum, or of the bulb of *Ranunculus acris*.

H., radiant. (L. *radio*, to emit beams. F. *chaleur rayonnante*; G. *strahlende Wärme*.) Heat rays emitted from a body and transmitted through the air.

H., radiant theory of. The *H., emission theory of*.

H., radiated. (L. *radiatus*, beaming.) Heat which is transmitted by radiant heat rays. See *H., radiation of*.

H., radiation of. (L. *radio*, to emit beams. F. *rayonnement de la chaleur*.) The emission of heat rays from a body which are propagated through the air, without heating it, by means of the vibrations which it communicates to the ether; it can thus take place through a vacuum. Radiant heat rays pass in a straight line through an homogeneous medium, but may be refracted in like manner as light rays, and are subject to interference like these. Radiation of heat takes place in all directions; its intensity is in proportion to the temperature of the body from whence the heat rays proceed, is inversely as the square of the distance, and is diminished in proportion to the obliquity of the impact of the rays.

H. rays. The waves of vibrating ether which produce the phenomena of heat.

H., red. (F. *rouge de fer*; G. *Rothglüh-hitze*.) The heat at which iron when heated first assumes a red colour in the dark.

H., reflection of. (L. *reflecto*, to bend back.) The turning back of certain of those heat rays which fall upon a surface, the others being absorbed and heating the body. The angle of reflection is equal to the angle of incidence, and both incident and reflected rays are in the same plane with the normal of the reflecting surface.

H. regulating centre. An intracranial nerve-centre for the regulation of the body heat supposed to exist by some, but its situation has not been determined.

H. rigor. See under *Rigor mortis*.

H., scattered. Same as *H., diffused*.

H., sensible. (F. *chaleur apparente, c. sensible*; G. *freie, entbundenes Wärme*.) Heat which is given to any substance and warms it, in opposition to latent heat, or the heat lost during change of state.

H., septic. (Σηπτικός, putrefying.) The febrile heat which accompanies pyæmic and septic conditions. It is pungent to the feel, alternates irregularly with perspirations, and is accompanied by a feeble, quick pulse.

H., specific. (L. *specificus*, forming a particular kind. F. *chaleur spécifique*.) The quantity of heat required to raise a body through

HEATH—HEAVY.

a given number of degrees. This quantity differs for different bodies, and is expressed in figures calculated on the assumption that the specific heat of water is represented by unity. It varies inversely as the atomic weight of the substance.

H. spectrum. (L. *spectrum*, an image.) The invisible part of the spectrum beyond the red.

H. spots. A form of urticaria in which smooth, rounded elevations appear, varying in size from a split pea to a threepenny-piece, of a rose-red colour, and firm to the touch. They are usually attended with much itching and uneasiness. They are sparsely scattered over the body, and usually disappear in the course of a day or two.

The term is also applied to *Eczema solare* and to *Freckles*.

H.-stroke. See *Heatstroke*.

H., terres'trial. (L. *terrestris*, belonging to the earth.) The heat peculiar to the globe, not dependent on the penetration of solar heat, but caused by the centre of the earth being still in a molten condition.

H., transference of. (L. *transfero*, to convey over.) The passage of heat from a hotter to a colder body, or to a colder part of the same body, by conduction or convection.

H., transmis'sion of. (L. *transmitto*, to carry across.) The conveyance of heat from a hotter to a colder body by radiation, conduction, or convection.

H., undulatory the'ory of. (L. *undulatus*, furnished with little waves.) The theory, now generally accepted, which regards heat as a mode of motion; that the molecules of hot bodies are in a state of vibration, greater in range and more rapid in execution according to the height of the temperature; that they heat other bodies brought into contact with them by communicating the motion directly to their molecules; and that they heat bodies at a distance from them by setting up vibrations in the ether of space, which are communicated to such other bodies as they reach, and thus cause them to get hotter. Heat is thus a form of energy, and may be transmuted into other forms.

H., unit of. (F. *calorie*; G. *Wärmeeinheit*.) The quantity of heat required to raise a unit mass of water, 1 kilogramme or 1 gramme or 1 milligramme or 1 lb., as the case may be, from zero to 1° C. is called the thermal unit centigrade, or calory. It is generally taken as equivalent to 425.5 gramme-meters, or the energy required to heat 1 gramme of water 1° C.; this would raise a weight of 425.5 grammes to the height of 1 meter; or a weight of 425.5 grammes, if allowed to fall from a height of 1 meter, would by its concussion produce sufficient heat to raise 1 gramme of water, 1° C.

H., vi'tal. The heat which is generated as the result of chemical processes in the body.

Heath. (Sax. *hæð*; G. *Heide*. F. *bruyère*; I. *erica*; S. *brezo*.) A wild open country.

Also, a common name for the plants of the Genus *Erica*.

H. bram'ble. (F. *la ronce bleue*; G. *Bocksbeerenstrauch*.) The *Rubus cæsius*, or dewberry plant.

H. cock. The black-game, *Tetrao tetrix*.

H., com'mon. The *Erica vulgaris*.

H. or'der. The Nat. Order *Ericaceæ*.

H. pea. The *Orobis tuberosus*.

H. pine. The *Coris monspeliensis*.

H. spurge. The *Daphne candicans*.

Heath-ber'ry. The crowberry, *Empetrum nigrum*.

Heath'er. Same as *Heath*.

Heath'worts. The plants of the Nat. Order *Ericaceæ*.

Heat'stroke. (F. *coup de la chaleur*; I. *colpo da afa*; G. *Hitzschlag*.) An affection of the nervous system caused by exposure to great heat, either in the direct rays of the sun or in a highly heated room, as the engine-room of a steamer or an overcrowded barrack, in the tropics. The symptoms vary considerably. In some cases, especially those caused by direct exposure to the sun's rays, cardiac symptoms, sudden syncope, pale, cold, and clammy skin, weak, slow pulse, gasping breathing, giddiness, dilated pupils, and drowsiness, are the most prominent; death, frequently with convulsions, may occur, or complete recovery may take place. In other cases the cerebro-spinal symptoms are the chief; in these the attack comes on gradually; after nausea, giddiness, great weakness, and frequency of micturition, there is delirium, contracted pupils, pungently hot skin, quick, sharp pulse, and very high temperature, as much as 107° F. (41.66° C.); death frequently occurs after convulsions, or tetanic contractions and coma; if recovery supervene there are often serious sequelæ, headache, epilepsy, or imbecility. In still other cases the pulmonary conditions predominate, and death from asphyxia may ensue. But in many instances these forms are more or less mixed. The morbid appearances consist in congestion of the internal organs, sometimes chiefly of the brain, often mainly and enormously of the lung; the blood is always fluid. The mortality is great; frequently half the attacks prove mortal.

Heautogno'sis. (ἑαυτοῦ, of himself; γνώσις, knowledge. F. *heautontognosie*; G. *Selbsterkenntniss*.) Term for self-knowledge.

Heautontogno'sia. See *Heautognosia*.

Heautophon'ics. (ἑαυτοῦ, of himself; φωνή, the voice.) Same as *Autophony*.

Heaviness. (Heavy. F. *pesanteur*; I. *peso*; S. *pesadez*; G. *Schwere*.) Weight.

In Medicine, used to denote a tendency to sleep.

Hea'ving. (E. *heave*; from Sax. *hebban*; G. *heben*.) The effort to vomit.

Heavy. (Sax. *hefig*; from *hebban*, to heave. F. *lourd*, *pesant*; I. *pesante*, *grave*; S. *pesado*, *grave*.) Hard to heave, having considerable weight; also having a sensation of weight.

H. cal'cined magne'sia. A synonym of *Magnesia ponderosa*.

H. carbonate of magne'sium. See *Magnesia carbonas ponderosa*.

H. carburetted hy'drogen. A synonym of olefiant gas or *Ethene*.

H. magne'sia. See *Magnesia ponderosa*.

H. pine. The *Pinus ponderosa*.

H. spar. Barytes or native barium sulphate. It is generally mixed with small quantities of alumina, oxide of iron, silica, calcium carbonate, and strontium sulphate.

HEBDOMADAL—HECASTOPHYLLUM.

H.-stone. A term for the mineral *Tungsten*.

Hebdom'adal. (ἑβδομάς, seven. F. *hebdomadaire*; G. *wöchentlich*.) Of, or belonging to, the number seven.

H. cy'cle. See *Cycle*, *hebdomadal*.

H. fe'ver. See *Fever*, *hebdomadal*.

Hebdomada'ria. (ἑβδομάς.) An intermittent fever the paroxysm of which occurs every seventh day.

He'bē. (ἡβή, puberty.) Old term, used by Dieterus, n. 371, Hippocrates, *Aph.* iii, 27, 28, v. 7, for the hair which grows about the pudendum; also, for the place where the hair grows; also, for the age when it begins to grow, or puberty.

Hebelo'ma. A Genus of the Suborder *Hymenomyces*, Order *Basidiomycetes*.

H. crustulinifor'mis. The *Agaricus crustuliniformis*.

Hebenon. The hemlock, *Conium maculatum*.

Some suppose that the juice of cursed hebenon of Shakspeare is the crude oil of tobacco, *Nicotiana tabacum*.

Hebephre'nia. (ἡβή, puberty; φρήν, the mind. F. *hébephénie*.) A term by Hecker and Kahlbaum for the intellectual disturbance which affects some people at or immediately after the time of puberty. It is a form of insanity attacking girls more frequently than boys, and may be hereditary, or caused by masturbation or overwork.

Heb'erden, William. An English physician, born in London in 1710, died there in 1801.

H.'s ink. The *Mistura ferri aromatica*.

Heb'erden, William. An English physician, son of the above, born in London in 1767, died in 1845.

H.'s nodos'ities. (L. *nodositas*, knottiness.) The nodes on the phalanges in *Osteoarthritis*.

H.'s rheu'matism. A term for *Osteoarthritis*.

Heb'etate. (L. *hebes*, blunt.) Having a soft blunt point.

Hebe'ter. (ἡβητήρ, youthful.) A young man.

Hebe'tes. (ἡβητής, youthful.) A young man.

Hebe'tic. (ἡβή, puberty. F. *hébétique*; G. *jugendlich*.) Of, or belonging to, puberty; youthful; juvenile.

Heb'etidenta'ti. (L. *hebes*, blunt; *dentatus*, toothed.) A Suborder of *Rodentia*, with small teeth, including only an extinct form.

Heb'etude. (L. *hebetudo*; from *hebetō*, to make blunt. F. *hébétude*; S. *stupidexza*; G. *Stumpfheit*.) Dulness of intellect; bluntness of the senses.

The term has been applied to the earliest stage or first degree of stupor occurring in concussion of the brain or apoplexy, or other less severe brain affections or disturbances, in which the patient lies with the eyes partly open and can answer questions when roused.

Hebetu'do. See *Hebetude*.

H. an'imi. (L. *animus*, the mind.) Imbecility.

H. den'tium. (L. *dens*, a tooth.) The setting on edge of the teeth.

H. men'tis. (L. *mens*, the mind. G. *Stumpfsinn*.) Dulness of intellect, imbecility.

H. vi'sus. (L. *visus*, sight.) Dulness or weakness of sight short of blindness. Same as *Asthenopia*.

H. vo'cis. (L. *vox*, the voice.) The weakness of voice, depending on atony of the vocal cords, which occurs in those who have to exert the voice much.

Hebra, Fer'dinand Ritter von. An Austrian physician, born at Brünn in 1816, died in Vienna in 1880.

H.'s oint'ment. Equal parts of simple lead plaster and linseed oil heated together and mixed.

Hebraden'dron, Graham. A Genus of the Nat. Order *Clusiaceae*.

H. cambogioides, Linn. The *Garcinia morella*, Desrousseaux.

H. picto'rium, Linn. The *Garcinia pictoria*.

Hebrews, medicine of. Medical art was, among the Hebrews, practised from early times by a special profession, the Ropheim, and is already mentioned in the ancient book of the Covenant, which embodies the oldest fundamental laws. They may possibly have derived much of their knowledge from the Egyptians. During their sojourn in Egypt, however, they had Hebrew midwives. The operation of Cæsarian section was practised from a very early period both on dead and living women. Their art seems for the most part to have been limited to surgery and the cure of external diseases; but the physicians, many of whom belonged to the prophetic order, enjoyed great respect and confidence, and were very generally employed, especially after the time of the exile, when even the smaller towns had their medical practitioners, though the priestly Book of Chronicles severely blames King Asa for "not having consulted God but the physicians."

In later times the priests and Levites, who officiated barefooted at the temple, had a special physician to cure the colds to which they were liable; the Essenes particularly were celebrated for their knowledge of medicine and the natural sciences. The remedies used by the ancient Hebrews were chiefly ointments, especially of balsam, leaves of trees, cataplasms, especially of figs, mineral baths, river baths, oil baths, animal warmth for restoring the circulation. Music was employed for dispelling melancholy; fish-gall put on the eye to cure blindness. Of inward medicines, honey only is mentioned in the Old Testament; several others occur in the Mishna and Talmud, where also many surgical manipulations are alluded to, even the insertion of artificial teeth. The Levitical law, which is of very late origin, appointed the priests, not so much to practise, but to exercise the inspection and control over the sick and persons suspected of some endemic malady, especially leprosy, and it gives, in this respect, directions which seem to prove very careful observation. The laws of Purification had, of course, an important sanitary influence. The dietary laws also were partially, though by no means exclusively, suggested by sanitary considerations. (Dr. Kalisch in 'British Medical Journal'.)

Hecastophyllum. (ἑκαστός, each; φύλλον, a leaf.) A Genus of the Nat. Order *Leguminosæ*.

H. moneta'rium. A species which furnishes an astringent similar to kino.

HECATOGRAMMA—HEDEOMA.

Hecatogram'ma. Same as *Hectogramme*.

Hecatophyll'ous. Same as *Hecatophyllous*.

Hecatophyll'um. Same as *Hecatophylla*.

Hecato'nia. (Ἑκατόν, a hundred.) A Genus of the Nat. Order *Ranunculaceæ*.

H. palus'tris, Lour. (*L. paluster*, belonging to a marsh.) The *Ranunculus sceleratus*.

Hecatontaphyllum. (Ἑκατοντάφυλλος.) Same as *Hecatophylla*.

Hecatophyll'a. (Ἑκατόν, a hundred; φύλλον, a leaf.) The *Rosa centifolia*.

Hecatophyll'ous. (Ἑκατόν, a hundred; φύλλον, a leaf. *F. hecatophylle*.) Having leaves composed of a hundred pairs of folioles.

Hec'decane. (Ἑξ, six; δέκα, ten.) $C_{16}H_{24}$. A paraffin which boils at 278° C. (532° 4' F.)

Hecdec'atyl al'cohol. Same as *Cetyl alcohol*.

Hechingen. Germany, in Hohenzollern, near Tübingen, 470 metres above sea-level; a cold, earthy, saline, mineral water, containing hydrogen sulphide and a trace of iodine.

Heck'berry. The *Prunus padus*.

Heck'inghausen. Prussia, between Schwelm and Gemarke; an earthy chalybeate water containing hydrogen sulphide and free carbonic acid.

Hect'are. (Ἑκατόν, a hundred; *F. are*, a measure of surface; from *L. area*, a space.) A French measure of 100 ares, or 10,000 square metres, and equal to 2·4711431 square acres.

Hec'teus. (Ἑκτεύς.) A Greek measure containing nearly two gallons.

Hectic. (*F. hecticque*, sick of a continual fever; from *L. hecticus*; from Gr. ἑκτικός, habitual, consumptive; from ἕξις, habit. *I. etico*; *S. hectic*; *G. hektisch*.) Of, or belonging to, the constitution, or habit of body.

H. fe'vér. (*F. fièvre hecticque*; *I. ettica febbre*; *G. hektisches Fieber*.) The febrile condition which occurs in connection with wasting diseases, such as pulmonary phthisis, large suppurations, caries of bones, scrofulous joint diseases, and malignant diseases. The symptoms are slow in advance, with gradual emaciation and loss of strength, then comes some chilliness in the early part of the day, some heat in the evening, and some perspiration at night; the chilliness may become a rigor; the heat, although the temperature does not often rise much above 4° F., may be oppressive, causing flushed cheeks, and dry burning palms and soles; and the sweating may be profuse, and especially copious on the head and chest. As the causative disease progresses the symptoms get more pronounced, the temperature does not probably rise in the evening above 103° F., and in the morning may be even subnormal, the appetite fails, the strength ebbs, emaciation proceeds, the pulse quickens, the tongue becomes very red, then dry and aphthous, the bowels, which had probably been constipated, are loose, and the urine loaded with lithates, the skin is dry and scaly, the fingers grow bulbous, and exhaustion becomes death, unless the primary disease is itself curable.

H. fe'vér, idiopath'ic. (Ἰδιος, peculiar; πάθος, suffering.) A term applied to the feverish condition that sometimes occurs when

the system is reduced by an exhausting condition or disorder without suppuration, as in suckling women and in diabetic persons.

H. flush. Same as *H. spot*.

H. heat. See *Heat, hectic*.

H. pulse. The small, quick, often hard pulse of hectic.

H. sect. A sect of the old Greek eclectic physicians, but of their special doctrines nothing is known.

H. spot. The flushed cheek of hectic fever; generally bright red and well defined against the otherwise pallid skin.

H. state. (*F. état hecticque*.) Same as *Hecticity*.

Hectic'ity. (Ἑκτικός. *F. hecticité*.) The condition of weakness and emaciation caused by *Hectic fever*.

Hecticopy'ra. (Ἑκτικός; πύρ, a fever. *F. hectopyre*.) Hectic fever.

Hecticopyr'etos. (Ἑκτικός; πυρετός, a fever.) Same as *Hecticopyra*.

Hectocot'ylë. Same as *Hectocotylus*.

Hectocotylised. Converted into a *Hectocotylus*.

H. arm. A term applied to that arm of a Cephalopod which becomes developed as a reproductive agent, but which does not actually become detached as a *Hectocotylus*.

Hectocot'ylius. (Ἑκατόν, a hundred; κότυλη, a small cup. *F. hectocotyle*; *G. Hectocotylus*.) A modified arm of the dibranchiate Cephalopods, which serves as the male genital organ. It is generally rolled into a spiral, and terminates in a filamentous or flabelliform structure and a vesicular pouch, which is called a Needhamian vesicle, and contains spermatophores. During the reproductive act the spermatophores are conveyed into the pallial cavity of the female by the hectocotylised arm, which itself is sometimes detached from the male and remains, capable of independent movement, in the pallial cavity. When this happens a new arm is developed from the place of detachment.

H. octop'odis. (Ὀκτώ, eight; πούς, a foot.) Cuvier's name for the detached hectocotylus, which he believed to be a parasitic worm.

Hec'togramme. (Ἑκατόν, a hundred; *gramme*.) A French weight of 100 grammes; equal to 3·5273936 oz. avoirdupois; or 1543·23488 grains.

Hec'tolitre. (Ἑκατόν, a hundred; *litre*.) A French metrical measure of 100 litres, equal to 3·531658 English cubic feet; or 22·0096677 imperial gallons; or 2·7512085 imperial bushels.

Hectometre. (Ἑκατόν, a hundred; *metre*.) A French measure of 100 metres, or 109 yards, 1 foot, 1·079 inch; or 3937·079 English inches.

Hectostere. (Ἑκατόν; στερεός, solid.) A French solid measure containing 100 cubic metres, and equal to 3531·66 English cubic feet.

Hecusiapocau'sis. (Ἑκούσιος, of free will; ἀπόκαυσis, a burning.) Spontaneous combustion.

Hecusiempre'sis. (Ἑκούσιος; ἐμπρησις, a conflagration.) Spontaneous combustion.

Hedeo'ma. (Ἠδός, sweet.) A Genus of the Nat. Order *Labiata*.

Also, the pharmacopœial name, U.S. Ph., of the leaves and tops of *Hedeoma pulegioides*, American pennyroyal. It is a gently stimulating aromatic. Used as a carminative in flatulent

HEDERA—HEDRICA.

colic; as a diaphoretic in catarrhal conditions of the throat and chest, and in rheumatism; and as an emmenagogue, in infusion. See also *Oleum hederæ*.

H. Drummondii, Benth. Hab. America. Properties as *H. pulegioides*.

H., oil of. When fresh, this oil is clear yellow in colour, with a penetrating odour; sp. gr. .948. It is used in the United States as an emmenagogue and carminative. It has also been misused to procure abortion. The *Oleum hederæ*, U.S. Ph.

H. piperita, Benth. (*L. piperatus*, peppered.) Hab. America. Properties as *H. pulegioides*.

H. pulegioides, Persoon. (*Pulegium*; Gr. *πίκος*, likeness. *F. pouliot americana*; *G. Amerikanischer Poley*.) Hedcoma, American pennyroyal. Hab. North America. The species supplying *Hedcoma*, U.S. Ph.

Hedera. (*L. hedera*, the ivy; from Gr. *ἕδρα*, a seat, from its clinging habit. *F. terre*; *L. edera*; *S. hiedra*; *G. Epheu*.) A Genus of the Nat. Order *Araliaceæ*.

H. acida. (*G. Hederasäure*.) ($C_{15}H_{26}O_4$.) The same as *Hedera-tannica*.

H. arborea. (*L. arboreus*, belonging to a tree.) The *H. helix*.

H. helix, Linn. ("Ἑλῆξ, a spiral. *F. terre*; *G. Epheu*.) The ivy, the leaves of which are used in Germany against the atrophy of children, and are applied here by the common people to running sores, and to keep issues open, and boiled in wine to destroy vermin. The berries were anciently employed as a purgative and emetic, and an extract was made from them by water, the *Extractum purgans*; more lately they were recommended as an alexipharmic and sudorific in small doses. A resinous juice, the *Gummi-resina hederæ*, exudes from the stalk abundantly in warm climates, which possesses corroborant, astringent, and antispasmodic qualities. The ivy is said to be a sudorific, and a preventive of drunkenness.

H. terrestris. (*L. terrestris*, belonging to the earth. *F. terre terrestre*; *G. Erdepheu*.) The *Nepeta glechoma*, or ground-ivy.

H. umbellifera, De Cand. The *Aralia umbellifera*.

Hedera-ceous. (*L. hedera*, the ivy. *F. hédéracé*, *hédéré*; *G. epheuartig*.) Belonging to, or having an arrangement of parts as in, the Genus *Hedera*.

Hedera-glycoside. $C_{33}H_{54}O_{11}$. Silky acicular crystals obtained from the dry alcoholic extract of ivy leaves, washed with cold benzol, and treated with boiling acetone. They melt at $233^{\circ} C.$, are lævo-rotatory in alcoholic solution; insoluble in water and chloroform, slightly soluble in ether, soluble in hot alcohol.

Hederal. Same as *Hederaceous*.

Hedera-tannic acid. (*L. hedera*, the ivy; *tannin*. *G. Hederagerbsäure*.) An acid obtained from the residue of ivy seeds after extraction of hederinic acid by successive treatment with boiling water, acetic acid, sugar of lead, and ammonia. A yellow precipitate of hedera-tannate of lead falls, which can be decomposed by solution of hydrogen sulphide. It is an amorphous and tasteless mass giving acid reaction.

Hederia. Same as *Hederin*.

Hederic. (*L. hedera*. *F. hédérique*.) Relating to the *Hedera*.

H. acida. (*G. Hederinsäure*.) ($C_{15}H_{26}$

$O_4 + H_2O?$) An acid obtained by Posselt from the fresh seeds of *Hedera helix* after extraction with ether and alcohol. It consists of colourless, bitter crystals, soluble in alcohol, but insoluble in water and ether.

Hederiform. (*L. hedera*; *forma*, shape. *F. hédériforme*.) Like to the ivy.

Hederine. (*L. hedera*, ivy. *F. hédérine*; *L. ederina*; *S. hederina*; *G. Epheugummi*.) Same as *Gummi hederæ*.

Also (*F. hédérine*), a name given by Vandamme and Chevalier to a bitter alkaloid obtained from the seeds of the ivy, *Hedera helix*; it appears to be a febrifuge like quinine.

Hederinic acid. Same as *Hederic acid*.

Hederula. (*L. dim. of hedera*, ivy.) The *Nepeta glechoma*.

H. aquatica. (*L. aquaticus*, found in water.) The *Lemna trisulca*.

Hedge. (*Sax. hege*. *G. Hecke*; *F. haie*; *L. siepe*; *S. seto*.) A fence formed of close-growing bushes.

H. bedstraw, great. The *Galium mollugo*.

H. bells. The *Calystegia sepium*.

H. dead-nettle. The *Stachys sylvatica*.

H. garlic. The *Sisymbrium alliaria*.

H. hog. See *Hedgehog*.

H. hyslop. The *Gratiola officinalis*.

H. mustard. The *Sisymbrium officinale*.

H. mustard, broad-leaved. The *Sisymbrium irio*.

H. mustard, stinking. The *Sisymbrium alliaria*, or Jack in the hedge.

H. nettle. The *Stachys sylvatica*; also the *S. palustris*.

H. parsley. The *Torilis anthriscus*.

H. taper. The *Verbascum thapsus*.

H. thorn. Same as *Hawthorn*.

H. vine. The *Clematis vitalba*.

H. woundwort. The *Stachys sylvatica*.

Hedgeberry. The *Prunus padus*.

Hedgehog. (*F. hérisson*; *L. riccio spinoso*; *S. erizo*; *G. Igel*.) The *Erinaceus europæus*. A very excellent food. Its fat was formerly official, and was used in diarrhoea.

H. crystals. The globular masses of sodium urate found in the urine which are provided with points or prickles.

H. mushroom. The *Hydnum erinaeum*.

H. parsley. The *Caucalis daucoides*.

H., sea. (*F. hérisson marine*; *G. Seeigel*.) The *Echinus marinus*, or urchin.

Hedgemaids. Same as *Haymaids*.

Hedra. ("Ἑδρα, a sitting place; from *ἕζομαι*, to sit.) A seat; a night-stool; a privy. Old term, used by Lindenus, *Ex. iv*, § 99, for the anus.

Also, a term for the excretions of the belly.

Also, the facette of a crystal.

Also, formerly applied, in Surgery, to a kind of fracture of the skull in which the mark of the missile was evident, and to the bottom of abscesses and sinuses.

Hedraophthalmia. ("Ὠδραῖος, sitting; *ὀφθαλμός*, the eye.) Same as *Edriophthalmia*.

Hedrica. ("Ἑδρικός, belonging to the seat or bowels; from *ἕδρα*, the breech.) Medicines which produce an action of the bowels.

HEDRICOUS—HEGEMONY.

Hed'ricous. (Ἑδρικός.) Sitting; not movable; belonging to the anus, or to the stools.

Applied formerly to remedies proper to affections of the anus, according to Paulus Ægineta, iii, 50, Adams's Transl., vol. i, p. 600.

Hedriophthalma. A better spelling of *Edriophthalma*.

Hed'rocele. (Ἑδρα, the breech; κύλη, a tumour.) A hernia through the ischiatic notch. Also, a term for prolapsus ani.

Hedrosyrinx. (Ἑδρα, the anus, or seat; σύριξ, a fistula. F. *hedrosyrinx*; G. *Mastdarmfistel*, *Gesässfistel*.) A fistula in ano.

Hedru'ris. (Ἑδρα, a sitting place; οὐρά, a tail.) A sexually mature form of nematode worm, living only in Reptiles and Amphibia.

H.androph'ora, Nitzsch. (Ἄνθρωπος, a male; φορέω, to bear.) Found in the stomach of the *Bombinator igneus* and of *Triton teniatus*.

H. arma'ta, Ferr. (L. *armatus*, armed.) Found in the oral cavity of *Emys picta*.

H. sire'donis, Baird. Found in the stomach of *Siredon mexicanus*.

Hedwig, Johan'nes. A German botanist, born at Kronstadt, in Transylvania, in 1730, died at Leipsic in 1799.

Hedwig'ia. (Hedwig.) A Genus of the Nat. Order *Terebinthaceæ*.

H. bal'sam. (F. *baume du sucrier*, *resine de Gommart balsamifere*; G. *Bergzuckerbalsam*, *Schweinbalsam*.) A balsam obtained from *H. balsamifera*. Used for the same purposes as copaiba. Its smell resembles that of turpentine, and, on distillation with water, it yields a yellow ethereal oil.

H. balsamif'era, Wartz. (L. *balsamum*, balsam; *fero*, to bear. F. *sucrier des montagnes*.) The *Bursera balsamifera*.

Hedwigia'ceæ. (Hedwig.) A Family of the Suborder *Grimmiaceæ*, mosses living on rocks.

Hedycar'pus. (Ἠδύς, sweet; καρπός, fruit.) A Genus of the Nat. Order *Sapindaceæ*.

H. malaya'nus. Furnishes an edible fruit called Tampui.

Hedych'ium. A Genus of the Nat. Order *Zingiberaceæ*.

H. spica'tum, Smith. (L. *spica*, a point.) Root aromatic, fragrant and carminative. Supposed by Royle to be the lesser galangal of Ainslie. Used as a preventive of the attacks of insects on clothes.

Hedychro'on. (Ἠδύχροος, of sweet complexion; from ἡδύς, sweet to taste or smell; χροά, colour.) Old term for a confection invented and described by Paulus Ægineta, vii, 11, Adams's Transl., vol. iii, p. 510, consisting of pastils formed of many aromatic substances; it was of an agreeable colour.

Hedychrou'm. Same as *Hedychroon*.

Hedyc'rea. (Ἠδύς; κρέας, flesh.) A Genus of the Suborder *Chrysobalanaceæ*, Nat. Order *Rosaceæ*.

H. inca'na, Willd. The *Licania incana*.

Hedynos'mous. (Ἠδύς, sweet; ὀσμή, odour. F. *wohlriechend*.) Sweet-smelling.

Hedynos'mum. (Ἠδύς; ὀσμή.) A Genus of the Nat. Order *Piperaceæ*.

H. arbores'cens, Swed. (L. *arboresco*, to grow into a tree.) Hab. Jamaica. Used as an antispasmodic.

H. Bonplandia'num, H. B. K. Hab. Brazil, Columbia. Used in pernicious fevers, lumbago, and megrim.

H. gran'i'zo, Lindl. Hab. South America. Said to be antisyphilitic.

H. nu'tans, Sw. (L. *nuto*, to nod.) Tobacco bush. Hab. Jamaica. Used in spasms and dyspepsia.

Hedynos'mus. (Ἠδύσσυμος; from ἡδύς, sweet; ὀσμή, odour.) Having an agreeable odour. Old term applied to *Mentha piperita*, or mint. (Quincy.)

Hedyo'tis. A Genus of the Nat. Order *Cinchonaceæ*.

H. umbella'ta, Lam. (*Umbel*.) Indian madder. Hab. Coromandel. Leaves expectorant. Used in asthma and consumption.

Hedypha'ryn'x. (Ἠδύφαρυγξ, sweet to the throat; from ἡδύς; φάρυγξ, the gullet.) Sweet and pleasant to the throat.

Hedypho'nia. (Ἠδύφωνος; from ἡδύς, agreeable; φωνή, the voice.) A pleasant or agreeable voice.

Hedyp'honous. (Ἠδύφωνος.) Having an agreeable voice.

Hedypneus'tous. (Ἠδύπνευστος; from ἡδύς; πνέω, to breathe. F. *hedypneuste*.) Having an agreeable or pleasant breath.

Also, having an agreeable smell.

Hedypno'is. (Ἠδύπνοις; from ἡδύς; πνέω, to breathe.) Sweet breath.

An old name for the *Leontodon taraxacum*, or dandelion. (Quincy.)

Also, a Genus of the Nat. Order *Compositæ*.

H. onobry'ches, Linn. The *Onobrychis sativa*.

H. tarax'acum, Scop. The *Taraxacum dens-leonis*.

Hedysare'æ. A Tribe of the Nat. Order *Leguminosæ*, with the filaments generally connate, and the legume transversely jointed, each joint one-seeded.

Hedysarum. (Ἠδύσαρον, a plant of the vetch kind.) A Genus of the Nat. Order *Leguminosæ*.

H. alha'gi, Linn. The *Alhagi maurorum*, Tourn.

H. ganget'icum, Roxb. (Beng. *salpany*.) Hab. India. Used in fevers and dysentery. The *Desmodium gangeticum*.

H. glycyrrhisa'tum. (Γλυκύς, sweet; ῥίζα, a root.) The *Astragalus glycyphyllos*.

H. triflo'rum, Linn. The *Desmodium triflorum*, De Cand.

H. tubero'sum, Roxb. The *Pueraria tuberosa*.

Hedys'ma. (Ἠδύς, pleasant.) Old term (Gr. ἡδυσμα), applied by Galen, *de Aliment. Fac.* iii, 11, to all condiments; strictly, to ointments of a liquid consistence and having an agreeable odour, according to Hippocrates.

Hedysma'tion. (Ἠδυσμάτιον, dim. of ἡδυσμα, seasoning.) A small sweet; a bonbon.

Hel. (Sax. *hela*. F. *talon*; I. *calcagno*; S. *talón*; G. *Ferse*.) The projecting hinder part of the foot.

H. club'foot. A term for *Talipes calca-neus*.

H. string. The *Tendo Achillis*.

Hegemonic. (Ἡγεμονία, a leading the way. F. *hégémonique*.) Of, or belonging to, a principal function or office.

H. func'tions. (G. *Hauptverrichtungen*.) The functions of the highest value in the animal economy.

Hegem'ony. (Ἡγεμονία, a leading the way. F. *hégémonie*; G. *Anführung*, *Hauptlei-*

HEIDELBERG—HELCOSTOMATURIA.

tung, Hauptsache.) A dignity, or chief office, or function.

Heidelberg. Germany, in Baden. A celebrated university city 300 feet above sea-level. Used by the Germans as a climatic cure place, as well as a place for whey and milk cures.

Heiden. Switzerland, Canton Appenzell. A climatic and whey-cure place 2400 feet above sea-level; there is a sulphur spring also containing some iron.

Heidenhain, Rudolf Peter Heinrich. A German physician, born in Marienwerder in 1834, and now Professor of Physiology in the University of Breslau.

H's dem'ilunes. (F. *demi*, from L. *dimidium*, half; *luna*, the moon.) Crescentic masses in the acini of the submaxillary and orbital glands of the dog and the sublingual gland of the rabbit, lying outside the mucous cells, and consisting of granular, polyhedral cells, with a spherical nucleus. According to Heidenhain, they replace, by multiplication of their constituent cells, the mucous cells which are used up by violent stimulation of the gland; according to Klein, they are collapsed mucous cells.

H's tetanometer. See *Tetanometer, Heidenhain's*.

Height. (Sax. *heddthu*. F. *hauteur*; I. *altezza*; S. *altura*; G. *Höhe*.) The condition of being high; that which is high; the distance between the bottom and the top of a thing.

Heilbrunn. See *Adelheidsquelle*.

Heilbrunnen. Prussia, in Mayer district, not far from Tönnisstein. A mineral spring containing sodium and calcium carbonate, with free carbonic acid.

Heilige Kreuzbad. Austria, near Hall, in the Tyrol; a weak, earthy, saline, sulphur spring.

Heiligenstadt. Austria, near Vienna. A climatic cure-place where there is a chalybeate spring.

Heilstein. Prussia, near Aix-la-Chapelle. An earthy, alkaline spring containing much free carbonic acid.

Heim, Ernst Lud'wig. A German physician of Berlin, born at Sulz, in Saxe-Meiningen, in 1747, died in 1834.

Heimia. (After *Heim*.) A Genus of the Nat. Order *Lythraceæ*.

H. salicifolia. Link. and Ott. (L. *salix*, a willow; *folium*, a leaf.) Hab. Mexico. A sudorific and powerful diuretic.

Heinecké, Christian Fried'rich. A German physician, born at Abbenrode, near Goslar, in 1766, died in 1840 in Bernburg.

H's arsenical solution. Sodium arseniate 3 grammes, mint water 64, cannella water 48, tincture of opium 4 grammes.

Heinrichbrunnen. Prussia, in Neisse district. An earthy chalybeate water.

Heinrichsbad. Switzerland, Canton St. Gallen. A whey-cure place, 2400 feet above sea-level, in the neighbourhood of which are two cold chalybeate springs, used in anæmic conditions.

Heisch, Charles. An English chemist of the present century.

H's test for sewage in water. The addition to the suspected water of sugar and its exposure to light. If sewage matter is present the water becomes milky from the growth of small, spherical micrococci in racemose groups, which develop a mycelium.

Heis'ter, Lo'renz. A German surgeon, born at Frankfurt in 1683, died at Helmstädt in 1758.

Hekistothers. ("Ηκιστος, least; θερμη, heat.) Plants which are able to live for a great part of the year under snow, deprived of light and heat.

Helcenteritis. ("Ελκος, an ulcer; εντερον, an intestine. F. *helcentérite*.) Ulcerous inflammation of the bowels; the condition occurring in enteric fever.

Helcid'rion. See *Heleydrion*.

Helcoc'acé. (Ελκος, an ulcer; κάκη, corruption. F. *helcocace*; G. *ein bosartiges Geschwür*.) A malignant ulcer; also termed *Cachelcoma*.

Helco'des. ("Ελκος, an ulcer; είδος, likeness. F. *helcode*; G. *geschwürartig*.) Having, or full of, ulcers.

Helcède'ma. ("Ελκος, an ulcer; σίδημα, a tumour. F. *helcède'me*.) Ulcerous oedema, or an oedematous ulceration.

Hel'coid. ("Ελκος, an ulcer; είδος, likeness. F. *helcoide*; G. *geschwürähnlich*.) Resembling an ulcer.

Helcology. ("Ελκος, an ulcer; λόγος, a discourse. F. *helcologie*.) The doctrine or history of ulcers.

Helco'ma. (Ελκώω, to ulcerate. F. *helcoma*; G. *Geschwür, Helkom*.) Old term for ulceration.

Helcomatic. (F. *helcomatique*.) Of, or belonging to, *Helcoma*.

Helcome'nia. ("Ελκος, an ulcer; μήν, a month. F. *helcoménie*.) The aberration, or metastasis, of the catamenia to an ulcer.

Helco'nia. ("Ελκος.) An ulcer of the cornea.

Helcophthal'mia. ("Ελκος, an ulcer; ὀφθαλμός, the eye. F. *helcophthalmie*.) Ulcerous ophthalmia.

Helcophthalmu'ria. ("Ελκος, an ulcer; ὀφθαλμός, the eye; οὖρον, the urine. F. *helcophthalmurie*.) A term for the metastasis of the urine to the ulcerated eyes.

Helcoplasty. ("Ελκος; πλάσσω, to form.) Skin-grafting on to an ulcerated surface.

Helcopoë'sis. ("Ελκος; ποίησις, a making.) The establishment of an ulcer by means of an issue.

Hel'cos. ("Ελκος, a wound.) An ulcer.

Helco'sis. ("Ελκωσις, ulceration; from ελκώω, to wound sorely, to ulcerate. F. *helkose*; G. *Geschwürbildung, Verschwärung*.) The progress or formation of ulceration.

H. cer'e'br'i. (L. *cerebrum*, the brain.) Suppuration in the brain.

H. laryng'is. Same as *Laryngeal phthisis*.

H. pulmona'lis. Same as *Phthisis pulmonalis*.

H. rena'lis. (L. *ren*, the kidney.) Suppuration and ulceration in the kidney.

H. u'teri. (L. *uterus*, the womb.) Ulceration of the womb producing wasting.

H. vesicæ. (L. *vesica*, the bladder.) Ulceration of the mucous membrane of the urinary bladder.

Helcostaphylo'ma. ("Ελκος, an ulcer; σταφύλωμα, a disease of the eye. F. *helcostaphylôme*; G. *Augentraubengeschwür, verschwärendes Staphylom*.) Staphyloma with ulceration.

Helcostomatu'ria. ("Ελκος; στόμα, the mouth; οὖρον, urine.) Ulceration of the

HELCOSEPHILIDOTHUS—HELIANTHUS.

mouth with an effusion of an offensive fluid supposed to be urine.

Helcosyphilidoch'thus. ('Ελκος, an ulcer; *syphilis*; λήψις, a scale. F. *helcosyphilidoch'thus*; G. *verschwürendes Knotensyphilid.*) An ulcerating syphilitic tubercle or condyloma.

Helcosyphilol'epis. ('Ελκος, an ulcer; *syphilis*; λήψις, a scale. F. *helcosyphilol'epis*.) An ulcerating squamous syphilide.

Helcot'ic. ('Ελκωτικός, ulcerating. F. *helcotique*.) Of, or belonging to, ulceration.

Helcotrau'ma. ('Ελκος, an ulcer; τραύμα, a wound. F. *helcotraume*; G. *Wundverschwörung*.) An ulcerous wound.

Helcoxero'sis. ('Ελκος, an ulcer; ξήρωσις, dryness. F. *helcoxerose*.) Dry ulceration; dryness of an ulcer.

Helc'tic. ('Ελκτικός, fit for drawing; from ἔλκω, to draw. F. *helctique*; G. *anziehend, ziehend, zusammenziehend*.) Drawing to; attractive. Same as *Epispastic*.

Helc'tica. ('Ελκτικός.) Drawing or blistering medicines; epispastics.

Hel'cus. Same as *Helcos*.

Helcyd'rión. ('Ελκώδριον, dim. of ἔλκος, an ulcer.) Old term for a little ulcer.

Also, a small ulcer on the cornea.

Helcyd'rium. Same as *Helcydrión*.

Hel'cysis. ('Ελκυσις; from ἔλκω, to draw. F. *helcypse*; G. *Ziehen*.) A drawing; traction.

Helcys'ma. ('Ελκύω, to draw. F. *exume d'argent*; G. *Gezogene*.) Old term (Gr. ἔλκυσμα), used by Galen, Dioscorides, and Paulus Aegineta, for the scoriae or dross of silver.

Helcys'ter. ('Ελκύω, to draw. F. *crochet*; G. *Haken, Häkchen*.) Old name (Gr. ἔλκυστήρ), for an iron hook, or crochet, for extracting the foetus, according to Hippocrates, *de Morb. Mul.* xvi, 6.

Helenekil'dé. Sweden, in Zealand. A water containing carbonic acid.

Hel'enene. C₁₀H₂₆. A yellow liquid obtained by distilling helenin with anhydrous phosphoric acid. It has an acrid taste, and an odour of acetene.

Helenin. (F. *hélénine, camphre d'aunée*; G. *Alantcampher, Helenöl*.) C₂₁H₂₈O₃, Gerh. and Dumas; C₁₆H₂₆O₅, Hoyer; C₆H₅O, Kaller. A substance obtained by Valentin Rose from the root of *Inula helenium*. It forms four-sided friable columnar crystals of feeble smell and taste and of neutral reaction. It melts at 72° C. (161.6° F.), and boils with partial decomposition at 275° C. (527° F.); insoluble in water, soluble in hot potash lye.

The substance first examined by Gerhardt, and to which his formula refers, is shown by Kaller to have been a mixture of pure helenin and inula-camphor, the true helenin having the formula C₆H₅O.

According to Valenzuela, helenin is very useful in bronchitis, bronchopneumonia, and whooping-cough, while under its use tubercular infiltration becomes absorbed. De Korab reports that it diminishes reflex action, notably, the faucial excitability, that it improves the appetite, and that, hypodermically administered, it acts as an antipyretic. Moreover, that it is a powerful antiseptic, and very destructive to the bacillus of tubercle, both when grown in sterilised blood serum and when injected into or present in the body.

Also, C₆H₁₀O₅, the same as *Inulin*.

Helen'ium. ('Ελένιον, a certain herb; from 'Ελένη, daughter of Jupiter; because it was said to have sprung from her tears.) The *Inula helenium*.

Also, a Genus of the Nat. Order *Compositæ*.

H. autumnal'is. Linn. (L. *autumnalis*, belonging to the autumn.) Swamp sunflower. Hab. North America. When dried and powdered, used as a sternutatory in coryza and headache.

H. in'dicum. The *Helianthus tuberosus*.

H. parvifol'ium. Nutt. (L. *parvus*, small; *folium*, a leaf.) Hab. America. Properties as *H. autumnale*.

H. tenuifol'ium. Nutt. (L. *tenuis*, thin; *folium*.) Hab. America. Said to be poisonous to animals, producing convulsions and death.

Hel'eocho'ry'son. See *Heliocorysum*.

Hel'eo'phobia. See *Heliophobia*.

Hel'iac. ('Ηλιακός, of the sun; from ἥλιος, the sun. F. *héliaque*.) Of, or belonging to, the sun; solar.

Helian'themum. ('Ηλιος, the sun; άνθεμον, a flower. G. *Sonnenröschen*.) A Genus of the Nat. Order *Cistaceæ*.

H. anglicum luteum. (L. *anglicus*, English; *luteus*, yellow.) The *H. vulgare*.

H. canadens'e. Michaux. Hab. North America. Frostwort; rockrose. Astringent and aromatic. Used in scrofula, diarrhoea, and syphilis; as a gargle in scarlatinal sore throat, and as a wash in prurigo.

H. corymbo'sum. Michaux. (L. *corymbus*, a cluster of ivy berries.) Hab. North America. Used as *H. canadense*.

H. fuma'na. Mill. (L. *fumus*, smoke.) Hab. Europe. Astringent.

H. gutta'tum. Mill. (L. *guttatus*, spotted.) Hab. Europe. Astringent.

H. vulga're. Gärtn. (L. *vulgaris*, common.) Hab. Europe. Dwarf cistus. Astringent.

Helian'thic acid. Same as *Heliantho-tannic acid*.

Helian'thoid. (*Helianthus*; Gr. εἶδος, likeness. F. *hélianthoïde*.) Resembling the *Helianthus*.

Helian'tho-tan'nic acid. (G. *Helianthgerbsäure*.) C₁₄H₉O₈. An acid obtained from the decorticated seeds of the sun-flower. Greenish yellow, amorphous; soluble in water and spirit, but not in ether.

Helian'thus. ('Ηλιος, the sun; άνθος, a flower, from the likeness of its broad yellow disc, and from its turning to the sun, as its course varies. F. *hélianthe*; G. *Sonnenblume*.) A Genus of the Nat. Order *Compositæ*. The sun-flower.

H. an'nuus. Linn. (L. *annuus*, annual. F. *tournesol, grand soleil*; G. *Sonnenblume*.) The seeds yield an oil and have been made into a nutritious bread, and the young plant is boiled and eaten in some countries as an aphrodisiac. The pith of the stem is used for moxas.

H. lenticula'ris. (L. *lens*, a lentil.) Seeds used as food.

H. petiolar'is. (L. *petiolus*, a little foot.) Seeds used as food.

H. platyceph'alus. Cass. (Πλατύς, broad; κεφαλή, the head.) The *H. annuus*.

H. tubero'sus. Linn. (L. *tuberosus*, full of swellings. F. *topinambour*; G. *Erdbirn*,

HELIASIS—HELIGMA.

Grundbirn.) The Jerusalem artichoke, the root of which is cultivated for culinary purposes. It is said to be diuretic, and to give a terebinthinate odour to the urine.

Heliasis. (Ἡλιασις, exposure to the sun.) Same as *Heliosis*.

Helical. (Ἑλικῆς, a spiral.) Of, or belonging to, the *Helix*.

Helical'is. Same as *Helical*.

H. major. (*L. major*, greater.) See *Helicis major*.

H. minor. (*L. minor*, less.) See *Helicis minor*.

Helicene. Same as *Helicoidin*.

Helichry'sum. (Ἥλιος, the sun; χρυσός, golden. *F. immortelle*; *G. Sonnengold*, *Immortelle*.) A Genus of the Nat. Order *Compositæ*.

H. arena'rium. De Cand. (*L. arenarius*, pertaining to sand.) German goldilocks. Hab. South Europe. A stimulant in paralysis.

H. auricula'tum. (*L. auriculatus*, ear-shaped.) Used as *H. nudifolium*.

H. nudifolium. (*L. nudus*, naked; *folium*, a leaf.) Caffre tea. Hab. South Africa. Demulcent in pulmonary affections.

H. orienta'le. Tourn. (*L. orientalis*, eastern. *F. immortelle jaune*.) Hab. Crete. Root astringent.

H., sand. The *H. arenarium*.

H. serpyllifolium. (*L. serpyllum*, thyme; *folium*, a leaf.) Hab. South Africa. Hottentot's tea. A demulcent in pulmonary affections.

H. stœ'chas. De Cand. (Στροχάς, lying in rows. *F. stœchas citrin.*) Hab. South Europe. Used in catarrhs.

Heliciform. (Ἑλικῆς, a spiral; *L. forma*, resemblance. *F. heliciforme*; *G. schraubenförmig*.) Having the form of the snail's shell; spirally wound.

Helicin. (*F. helicine*.) $C_{13}H_{16}O_7$. Orthoformylphenyl glycoside. The glycoside of salicylic acid. Crystallises from its watery solution in white pencil-like needles. Taste bitter, reaction neutral; melts at $175^{\circ}C$., forming an oily fluid; dissolves in 64 parts of water at $8^{\circ}C$. On boiling with acids or alkalies splits into glycoside and salicylic acid.

Also (*L. helix*, the snail), the mucus of the snail.

Also (*L. helix*, the snail. *F. helicine*), a name given by Oscar Figuier for a sulphurous smelling oil which he discovered in the garden snail. According to Gobley it contains no sulphur, and is a mixture of different fatty matters.

Helicine. (Ἑλικῆς, anything which assumes a spiral shape. *F. helicine*; *G. spiralförmig*, *Schneckenförmig*.) That which is winding, tortile, or spiral.

H. arteries. (*F. artères helicines*; *G. Rankenschlagadern*.) Arterial twigs proceeding from the profundæ penis branches of the pudic arteries, and from the dorsalis penis artery, which, after entering the cavernous tissue, run in the substance of the trabeculæ, and project into the intratrabeular spaces, forming peculiar curling and somewhat dilated vessels, bound down by small fibrous bands, and so named by Müller. They are best seen in injected specimens, and are most abundant in the posterior part of the corpora cavernosa of man. They terminate in capillary branches, which supply the surrounding sheath.

Helicis major. (*Helix*; *L. major*, greater. *F. grande muscle de l'hélix*; *G. grosser Leistenmuskel*.) This muscle lies vertically along the anterior margin of the pinna; below it is attached to the process of the helix, above it terminates near the highest point of the auricle.

H. minor. (*L. minor*, less. *F. petit muscle de l'hélix*; *G. kleiner Leistenmuskel*.) A small obliquely running muscle lying upon and attached to that portion of the helix which springs from the bottom of the concha.

Helicogy'rate. (Ἑλικῆς, a spiral; γυρός, a ring.) Having a spirally wound ring, as the spore cases of Trichomanes.

Helicoid. (Ἑλικῆς, a spiral; εἶδος, likeness. *F. helicoides*; *G. spiralförmig*.) Resembling that which is, or is disposed in a, spiral.

H. cyme. See *Cyme*, *helicoid*.

H. dichot'omy. See *Dichotomy*, *helicoid*.

H. frac'ture. See *Fracture*, *helicoid*.

H. inflores'cence. See *Inflorescence*, *helicoid*.

Helicoid'al. (Ἑλικῆς; εἶδος. *F. helicoid'al*.) Same as *Helicoid*.

Helicoid'in. $C_{25}H_{34}O_{14}$. A substance resembling helicin, but on treatment with acids and alkalies splits into glycoside, salicylic acid, and saliretin. It appears to be a compound of salicin and helicin.

Helicomo'nas. (Ἑλικῆς, a spiral; μόνος, single.) A genus of pathogenic fungi, according to Klebs.

H. syphilit'ica. Klebs' term for the fungoid growth which he has found in syphilis.

Helico'neæ. A Tribe of the Nat. Order *Musaceæ*, having the seeds solitary, and the fruit a capsule bursting through the partitions.

Helico'nia. A Genus of the Nat. Order *Musaceæ*.

H. psittaco'rum. (Ψιττακος, a parrot.) Hab. West Indies. Root esulent.

Helicotre'ma. (Ἑλικῆς, a spiral; τρήμα, a hole. *F. helicotre'me*; *G. Schneckenloch*.) A small opening at the apex of the cochlea which establishes a communication between the scala tympani and the scala vestibuli; the name was given by Breschet.

Helicte'reæ. A Tribe of the Nat. Order *Sterculiaceæ*, having simple leaves and perfect flowers.

Helic'teres. (Ἑλικτήρ, anything twisted.) A Genus of the Nat. Order *Byttneraceæ*, so called from their twisted carpels.

H. corylifo'lia. Wight. (*L. corylus*, a beech tree; *folium*, a leaf.) Root bitter and stomachic.

H. iso'ra. Linn. Hab. India. Fruit used in infantile colic and flatulence, and as an application to ulcers of the ears; juice of the root used in gastralgia, abscesses, and skin diseases; a decoction of the flowers and fruit is considered a tonic and stimulant. It is the *Isora corylifolia*, Schott and Endl.

H. sacaro'ha. Aug. St. Hil. Hab. Brazil. Used in venereal disorders.

Helic'ule. (Ἑλικῆς, a spiral. *F. helic'ule*.) Name by H. Cassini for the spiral vessels of plants.

Heliencephali'tis. (Ἥλιος, the sun; ἐγκέφαλον, the brain. *F. heliencephal'ite*.) Inflammation of the brain caused by insolation, or exposure to the sun's rays.

Helig'ma. (*Helix*, the border of the ex-

HELIGMUS—HELIOTROPIUM.

ternal ear. *F. heligma*.) Name by Illiger for the prominence of the helix of the ear.

Helig'mus. (ἑλιξ, a spiral. *F. heligme*; *G. Hirnwindungen*.) A term (*Gr. οἱ ἑλιγμοί*) by Erasistratus for an anfractuosity or a convulsion of the brain.

Helig'mus. (ἑλιγμός, a rolling or winding.) A sexually mature nematode worm.

H. longicir'rus, Dujardin. (*L. longus*, long; *cirrus*, a curl.) Found in the intestines of *Platessa vulgaris*.

Helioca'es. (ἥλιος, the sun; καίω, to burn.) Old name for a dry compound medication, described by Paulus Ægineta, vii, 13, Adams's Transl., vol. iii, p. 538, formed of flesh roasted or parched to the utmost degree.

Heliochry'sous. (ἥλιος, the sun; χρῶσος, gold. *F. heliochryse*; *G. goldglänzend*.) Shining like gold; gold-like.

Heliochry'sum. (ἥλιος, the sun; χρῶσος, gold.) The *Tanacetum annuum*.

Heliod'orus. A Roman surgeon of the time of Trajan.

H., fas'cia of. (*L. fascia*, a band.) A bandage or apparatus for the support of the mammary gland.

Helio'id. (ἥλιος, the sun; εἶδος, likeness. *F. helioides*.) Resembling the sun. Applied to a body, that is round, and has its circumference radiated with hair-like points.

Helio'myeli'tis. (ἥλιος, the sun; μυελός, marrow. *F. heliomyélite*.) Myelitis arising from insolation, or exposure to the sun's rays.

Helion'osus. (ἥλιος; νόσος, a disease.) A disease produced by the sun's rays; especially sunstroke.

Helio'phobe. (ἥλιος; φόβος, fear. *F. heliophobe*.) One whose eyes suffer from the sun's rays.

Helio'phobia. (ἥλιος; φόβος, fear. *F. heliophobia*.) The fear of the sun's rays on the retina, such as occurs in albinism. Same as *Photophobia*.

Helio'phy'tum. (ἥλιος; φυτόν, a plant.) A Genus of the Nat. Order *Boraginaceæ*.

H. fo'e'tidum, O'Shaug. (*L. foetidus*, stinking.) The *Heliotropium indicum*.

Helio'proth'esis. (ἥλιος; πρόθεσις, a placing before.) Blanchet's term for a proceeding which he adopts for giving sight to the blind when the retina is still sensitive. He makes a puncture in the antero-posterior axis of the eye and introduces an apparatus, called a phosphore, which is a tube of enamel with glasses at each end, and which, he says, is successful in restoring sight.

Helio'sydra'cium. (ἥλιος; ψυδράκιον, a pustule. *F. heliosydracie*; *G. Sonnenfriesel*.) Term for solar psydrium, or a pustule raised by exposure to the sun's rays.

Helioscop'ic. (ἥλιος; σκοπέω, to behold. *G. sonnenwendig*.) Turning to the sun.

Helioscop'ios. (ἥλιος, the sun; σκοπέω, to behold or regard.) A name for the *Helianthus annuus*, or sunflower, because it turns towards the sun.

Helio'sis. (ἥλιωσις, exposure to the sun. *F. heliose*.) The heating of the body in the sun's rays; insolation. A remedy among the ancient physicians for many affections of

the body, as dropsy, paralysis, and inflammation of the kidneys, according to Gorræus.

Also (*F. insolation*; *G. Sonnenstich*), a term for sunstroke.

Also, a term applied to the spots on the leaves of plants produced by the heat of the sun's rays.

Heliother'apy. (ἥλιος, the sun; θεραπεία, medical treatment. *G. Sonnenbehandlung*.) The treatment of disease by the exposure of the body to the direct rays of the sun. It is said to be useful in such general diseases as chlorosis, and in such local diseases as rheumatically stiffened joints; it is also asserted by Duclaux that exposure to direct sunlight for some hours is fatal to pathogenous micrococci.

Heliotrope. (ἥλιος, the sun; τρέπω, to turn. *F. heliotrope*; *G. Sonnenwende*.) The *Heliotropium europæum*; also the *Crocophora europæa*.

Also, the blood-stone, worn as a charm against urinary calculi and epilepsy.

Heliotrop'ææ. A Tribe of the Nat. Order *Ehretiaceæ*, having seeds without albumen.

Heliotrop'ia. (ἥλιος, the sun; τρέπω, to turn.) The bloodstone.

Heliotrop'ic. Exhibiting the properties of *Heliotropism*.

Heliotropin. (ἥλιος, the sun; τρέπω, to turn.) A volatile crystalline substance obtained from *Heliotropium europæum* and *H. peruvianum*. Taste bitter; small doses injected subcutaneously cause somnolence, trembling, and vomiting in cats. The cardiac beats are reduced in frequency, anæsthesia follows, with sometimes convulsions, and ultimately death.

Heliotrop'ious. (ἥλιος, the sun; τρέπω, to turn. *F. heliotrope*; *G. sonnenwendig*.) Applied to plants the flowers of which turn constantly towards the sun.

Heliotropism. (ἥλιος; τρέπω. *F. heliotropisme*.) The faculty by which certain plants constantly turn their flowers to the sun.

Also, the bending of a plant, or of a part of a plant, towards the light, so that the side exposed to the greatest light becomes concave in consequence of the better lighted side growing more slowly. Some plants bend in the opposite direction, exhibiting negative heliotropism.

H., neg'ative. (*L. negativus*, that which denies.) The more uncommon form in which a plant or one of its parts bends away from the light.

H., pos'itive. The common form as described under the chief heading.

H., trans'verse. (*L. transversus*, turned across.) Frank's term for the form of heliotropism which occurs in the leaves and thallus of *Hepaticæ*, which, having a bilateral structure, tend to arrange themselves in a transverse direction to the line of incidence of the light.

Heliotrop'ium. (ἥλιοςτρόπιον, from ἥλιος; τρέπω, because it turns to the sun through its course. *F. heliotrope*; *G. Sonnenblume*, *Sonnenwende*.) A Genus of the Nat. Order *Boraginaceæ*.

Also (*F. sanguine*; *G. Sonnenstein*), a term for the *Bloodstone*.

H. europæum, Linn. (*F. heliotrope*; *I. eliotropia*; *S. eliotropio*; *G. Sonnenwende*.) Turazol; sunflower. Hab. South Europe. Somewhat aperient; juice destructive to warts, hence it was anciently called *Verrucaria*.

HELIOTROPIUS LAPIS—HELLEBOREIN.

H. fœtidum, O'Shaughn. (L. *fœtidus*, stinking.) The *H. indicum*.

H. indicum, Linn. Indian turnsol; erysipelas plant. Hab. India and West Indies. Juice of leaves applied to erysipelatous inflammations, gumboils, pimples, and excoriations; mixed with oil it is applied to scorpion stings, and to the bites of mad animals. Plant used for headache, and to subdue inflammations. The *Tiaridium indicum*, Lehm.

H. jamaicensé. Jamaica turnsol. Diuretic.

H. majus. (L. *major*, greater.) The *H. europæum*.

H. minus. (L. *minor*, less.) The *H. supinum*.

H. supinum, Linn. (L. *supinus*, spread out.) Aperient; seeds emmenagogue.

H. triccœum. (L. *tres*, three; *coccus*, a berry.) The French turnsole, *Crotophora tinctoria*.

Heliotropius lapis. (Ἡλιοτροπός, sun-turning; L. *lapis*, a stone.) The *Bloodstone*.

Heliozoa. (ἥλιος, the sun; ζῷον, an animal.) An Order of the Class *Rhizopoda*. They consist of a naked cell, composed of protoplasm, divided into ectosarc and endosarc, sending out pseudopodia, usually with a pulsating vacuole and one or more nuclei. They sometimes possess a radiated siliceous skeleton.

Heliozoaria. (ἥλιος; ζῳάριον, dim. of ζῷον, an animal.) Same as *Heliozoa*.

Helitis. (ἥλος, a nail; because produced by hammering copper nails.) "A scale of copper, or copper flake." (Goræus.)

Helium. (ἥλιος, the sun.) A term proposed by Frankland and Lockyer for an hypothetical element supposed to be present in the solar prominences as observed by the spectroscope.

Helix. (ἑλῆξ, anything which assumes a spiral shape; from ἐλίσσω, to turn or wind about.) A turning or winding; a spiral.

In Anatomy (F. *helix*; G. *Ohrmuschelrand*, *äusserer Ohrwand*, *Ohrleiste*, *Ohrkrenpe*), the outer border of the pinna, or external ear.

Also (F. *limacon*; G. *Schnecke*), a Genus of the Order *Pulmonifera*, Class *Mollusca*. The snail, several varieties of which have been reputed as useful in the cure of phthisis and atrophy. They were used in decoction with milk or water.

Also, the *Hedera helix*.

Also, in Natural Philosophy, the windings of a screw.

Also, a spiral of any kind, as the coil of wire in an induction machine.

H. algi'ra, Linn. Used as *H. pomatia*.

H. aspersa, Linn. (L. *asperus*, sprinkled. F. *escargot des haies*.) Used as *H. pomatia*.

H. auriculæ. (L. *auricula*, the external ear.) The outer border of the pinna.

H. crest of. (G. *Leistenschenkel*.) The *Crista helicis*.

H. fos'sa of. See *Fossa helicis*.

H. hortensis, Müll. (L. *hortus*, a garden. F. *escargot des jardins*.) Used as *H. pomatia*.

H. mus'cle of, large. The *Helicis major*.

H. mus'cle of, small. The *Helicis minor*.

H. nemora'lis, Linn. (L. *nemoralis*, of

woods. F. *escargot des forêts*.) Used as *H. pomatia*.

H. pisa'na, Müll. Used as *H. pomatia*.

H. pomatia, Linn. (L. *pomarium*, a fruit garden. F. *colimaçon*, *héllice vigneronne*, *escargot des vignes*; G. *Weinbergsschnecke*.) Used as food, and as an analeptic in pulmonary diseases. It is made into soup, into a syrup, and into a pastille.

H. pro'cess of. The *Crista helicis*.

H. sylvatica, Drap. (L. *sylva*, a wood.) Used as *H. pomatia*.

H. vermicula'ta, Müll. (L. *vermiculatus*, inlaid like worm tracks.) Used as *H. pomatia*.

Helkology. See *Helcology*.

Helkopœsis. See *Helcopœsis*.

Helkos. (ἑλκος.) An ulcer.

Hell-weed. The *Cuscuta europæa*, from the damage it does.

Hellebora'ceous. (ἑλλίβορος, hellebore. F. *helleboracé*.) Belonging to, or having an arrangement of parts as in, the Genus *Helleborus*.

Helleboras'ter. (ἑλλίβορος, hellebore.) The *Helleborus fœtidus*.

Also, a Genus of the Nat. Order *Ranunculaceæ*.

H. fœtidus. The *Helleborus fœtidus*.

H. maximum, Lob. (L. *maximus*, greatest.) The *Helleborus fœtidus*.

Hellebore. (ἑλλίβορος. F. *hellebore*; G. *Nieswurz*.) The plants of the Genus *Helleborus*.

Also, the *Dracontium fœtidum*.

H., American. The *Veratrum viride*.

H., bas'tard. The *Epipactis latifolia*.

H., black. (F. *ellébore noir*.) The *Helleborus niger*.

H., black, East Indian. (F. *ellébore d'Orient*.) The *Helleborus orientalis*.

H., black, wild. The *Helleborus viridis*.

H., green. (F. *ellébore vert*.) The *Helleborus viridis*.

Also, the *Veratrum viride*.

H., green, rhizome of. See *Veratri viridis rhizoma*.

H., green, tinc'ture of. See *Tinctura veratri viridis*.

H., orien'tal. The *Helleborus orientalis*.

H., poi'soning by. Poisoning has occurred from the powdered root and the extract of black hellebore, and serious symptoms from the tincture of green hellebore. In the former there was severe abdominal pain, vomiting, and purging, with cold sweats, convulsions, and death; the digestive canal, especially the large intestine, was inflamed.

H., stink'ing. (F. *ellébore puant*.) The *Helleborus fœtidus*.

H., swamp. The *Veratrum viride*.

H., white. (F. *ellébore blanc*.) The *Veratrum album*.

H., win'ter. The *Eranthis hycmalis*.

Hellebore'æ. (ἑλλίβορος.) A Tribe of the Nat. Order *Ranunculaceæ*, having an imbricated calyx, petals irregular or wanting, fruit consisting of one or more whorls of many-seeded follicles.

Hellebore'in. C₂₅H₄₀O₁₅. A glucoside obtained by Marmé and Huseman from the root and leaves of *H. niger* and *H. viridis*. It has a bitter-sweet taste, is soluble in water and dilute alcohol, and crystallises in rhomboidal prisms.

HELLEBORESIN—HELMET.

It is poisonous, irritating the mucous membranes, stimulating the kidneys and the uterus, and producing paralysis and convulsions; in large doses it quickens, in small doses slows, the heart's action.

Hellebores'in. $C_{30}H_{38}O_4$. A substance obtained, along with sugar, by boiling helleborein with dilute sulphuric acid or solution of zinc chloride. It is poisonous.

Hellebore'tin. $C_{14}H_{20}O_3$. A substance obtained, together with sugar, from helleborein by boiling it with dilute acids. It forms dark-blue flocculi, which settle, as a powder, without smell or taste; insoluble in water and ether, soluble in spirit of wine.

Helleb'orin. $C_{35}H_{42}O_6$. A glycoside accompanying helleborein in *Helleborus viridis*, *H. niger*, and *H. fœtidus*. Though very insoluble in water, it acts energetically, but is less irritant than helleborein to the intestinal mucous membrane; 0.24 gramme has killed a dog. It is poisonous, causing quick breathing, restlessness and muscular tremors, then slow breathing and pulse, dilatation of the pupil, anesthesia and congestion of the whole cerebro-spinal system.

Helleb'orine. (Ἑλλέβορος, hellebore.) The *Epipactis latifolia*.

H., broad-leav'ed. The *Epipactis latifolia*.

Helleb'orism. (Ἑλλέβορος. *G. Helleborismus*.) The mode of treatment of diseases by hellebore, including its preparation and mode of administration and the precautions and the remedies appropriate to assisting its action, and to preventing its injurious effects.

Also, the symptoms produced by the charging of the system by hellebore, or by its too free administration.

Helleboro'eides. (Ἑλλέβορος; εἶδος, likeness.) The *Helleborus viridis*.

Helleb'orus. (Ἑλλέβορος, hellebore. *F. ellebore*; *I. elleboro*; *S. eleboro*; *G. Niesswurz*.) A Genus of the Nat. Order Ranunculaceæ.

H. albus. (*L. albus*, white.) See *Veratrum album*.

H. altifolius. (*L. altus*, high; *folium*, a leaf.) A variety of *H. niger*, with leaves longer than the flower-stem.

H. fœtidus. Linn. (*L. fœtidus*, stinking. *F. ellebore fœtide*; *G. stinkende Niesswurtz*.) Hab. Europe. Stinking hellebore, great bastard bear's foot. Leaves emetic, purgative, and anthelmintic; they have an acrid taste and a fetid odour. The juice has also been used in asthma, hysteria, and hypochondriasis.

H. grandiflorus. (*L. grandis*, great; *flos*, a flower.) The *H. niger*.

H. humilifolius. (*L. humilis*, lowly; *folium*, a leaf.) A variety of *H. niger*, with leaves shorter than the flower-stem.

H. hyemalis. (*L. hyems*, winter.) The *H. viridis*.

H. niger. Linn. (*L. niger*, black. *F. ellebore noir*; *I. elleboro nigro*; *S. eleboro negro*; *G. schwarze Niesswurz*, *Weihnachtswurzel*, *Winterrose*.) Black hellebore, Christmas rose. Hab. Europe. The root is a drastic, hydragogue cathartic, producing vomiting, vertigo, convulsions, and death in large doses; it is also said to be an emmenagogue, diuretic, and anthelmintic. It was used in insanity, melancholia, epilepsy, amenorrhœa, dropsy, and skin diseases, and has been employed as an abortifacient. Dose, 2

grains as an alternative, 10 or 20 grains as a cathartic. It was formerly an official drug.

The legend runs that the daughters of Proetus, king of Tyrryns, were cured of madness by this plant.

H. niger tenuifolius. C. Bauhin. (*L. tenuis*, thin; *folium*, a leaf.) The *Adonis vernalis*.

H. officinalis. Salisbury. (*L. officina*, a workshop.) The *H. orientalis*.

H. orientalis. Lamk. (*L. orientalis*, eastern.) East Indian black hellebore. Having like properties to, and perhaps the same as, *H. niger*.

H. teë'ta. H. Brogniart. The *Coptis teeta*.

H. trifolius. Linn. The *Coptis trifolia*.

H. viridis. Linn. (*L. viridis*, green. *F. hellebore vert.*) Green hellebore. Hab. Europe. Properties similar to *H. niger*.

Hellecebra. See *Illecebra*.

Hellenia. (After *Hellenius*, a Professor at Abo in Finland.) A Genus of the Nat. Order Zingiberaceæ.

H. chinensis. Willd. Said to furnish the small galanga.

H. grandiflora. (*L. grandis*, great; *flos*, a flower.) The *Costus speciosus*.

Heller, Johann Florian. An Austrian physician, born at Iglau, in Moravia, in 1813, died in 1871.

H.'s albumin test. A test for albumin in the urine. Ten c.c. of urine are placed in a test tube and pure nitric acid is poured carefully into the tube, so that it runs down the side of the glass and forms a layer beneath the urine; if albumin be present an opaque layer forms between them. In urine of high specific gravity a layer of acid urates or one of urea nitrate may form, and if there be copalba in the urine there may be a milky film.

H.'s bile test. See under *Bile*, tests for.

H.'s blood test. (*G. Heller'sche Probe auf Blutfarbstoff*.) A test for blood in the urine. Half its volume of solution of caustic potash is added to the urine in a test tube, and then it is heated gently; the earthy phosphates are precipitated, and if blood be present are tinged garnet red by the hæmatin. The test is uncertain.

H.'s sugar test. A test for sugar in the urine. Same as *Moore's test*.

Hellin. Spain. A sulphur water having a temp. of 25° C. (77° F.)

Hellopia. Greece, in Epirus. A saline sulphur spring.

Helmerich. A German physician of the early part of this century.

H.'s pomade. Sublimed sulphur 10 grammes, potassium carbonate, water, and oil of almonds, of each 5 grammes, and lard 35 grammes. Used for the cure of scabies. The *Pomatum antipsoricum*, Fr. Codex.

Helmet. (Sax. *helm*, a protector; *G. Helm*. *F. casque*; *I. casco*, *elmo*; *S. yelmo*.) A defensive covering for the head.

H.-flower. (*F. anthore*; *G. Helmkraut*.) The *Aconitum anthora*, from its protective or alexipharmic virtues.

Also, the *Scutellaria galericulata*, from the shape of its flower.

H.-flower, yellow. The *Aconitum anthora*.

HELMHOLTZ, HERMANN LUDVIG FERDINAND VON—HELOBIE.

H. pod. The *Jeffersonia Barteri*.

H.-shaped. (F. *casqué*; G. *gehelmt*.) Having the form, or somewhat of the appearance, of a helmet.

Helmholtz, Her'mann Lud'vig Ferdinand von. A German physicist, born at Potsdam in 1821, and now Professor of Physics in the University of Berlin.

H.'s ophthalmometer. See *Ophthalmometer*, *Helmholtz's*.

H.'s ophthalmoscope. See *Ophthalmoscope*, *Helmholtz's*.

H.'s phacoscope. See *Phacoscope*, *Helmholtz's*.

H.'s resonator. See *Resonator*.

Helms. ("Ελμς, a worm.) A worm, especially an intestinal worm.

Helminth. ("Ελμς.) A worm, especially an intestinal worm.

A synonym of *Entozoa*.

Helminth'a. ("Ελμς, a worm.) A synonym of *Entozoa*.

Helminthagogue. ("Ελμς, a worm; ἄγω, to drive out. F. *helminthagogue*; I. *elmintagogo*; S. *helmintagogo*; G. *Wurmmittel*.) Having power to expel intestinal worms. Same as *Anthelmintic*.

Helminthes. ("Ελμς. F. *helminthes*; I. *elminti*; S. *helminthes*; G. *Eingeweidewürmer*, *Spulwürmer*.) Dumeril's term for the intestinal worms.

Helminthia. ("Ελμς, a worm.) A Genus of the Nat. Order *Compositæ*.

H. echio'des. ("Εχίον, the viper's bugloss; εἶδος, likeness.) Hab. Europe. Leaves esculent, both fresh, when boiled, and when pickled.

Helminth'ia. Same as *Helminthiasis*.

H. al'vi. (L. *alvus*, the bowel.) Intestinal worms.

H. erratic'a. (L. *erraticus*, wandering.) Good's term for worms, or the larvæ of insects, introduced by accident, and without finding a proper habitation in the stomach or intestines, such as the *Gordius aquaticus*.

H. pod'icis. (L. *podex*, the anus.) Good's term for worms, or the larvæ of insects, existing and finding a proper nidus within the verge of the anus; such are the thread-worm and the larvæ of the gad-fly.

Helminthiasis. ("Ελμς, a worm. F. *helminthiasé*; G. *Wurmkrankheit*.) The condition in which worms, or their larvæ, are developed in some part of the body; including the disorders or lesions caused by their presence.

Helminth'ic. ("Ελμς, a worm.) Of, or belonging to, worms.

Helminth'icide. ("Ελμς; L. *cædo*, to kill.) A remedy capable of destroying or expelling an intestinal worm.

Helminth'ics. ("Ελμς.) A synonym of *Anthelmintics*.

Helminth'ion. ("Ελμίνθιον, dim. of ἔλμς.) A little worm. Applied to the *Oxyuris vermicularis*.

Helminthochor'ton. ("Ελμς; χορ'tος, grass.) A Genus of the Family *Rhodomeleæ*, Order *Floridææ*, Class *Carposporææ*, Subkingdom *Thallophyta*.

H. officina'rum. Lamk. (L. *officina*, a shop.) The *Alsidium helminthochorton*.

Helminthochor'tum. See *Helminthochorton*.

Helminthocol'ic. ("Ελμς; κωλικός,

having the colic. G. *Wurmkolik*.) Colic produced by intestinal worms.

Helminthocor'ton. See *Helminthochorton*.

Helminthog'eæ. ("Ελμς, a worm; γῆ, the earth. F. *helminthogé*.) Applied by Latreille to a Class of the *Invertebrata*, comprehending the *Hirudineæ* and *Lumbricineæ* of Savigny.

Helminthogen'esis. ("Ελμς; γέν-εσις, production. F. *elminthogénésie*.) Beauclair and Vignier's term for *Helminthiasis*.

Helminthoid. ("Ελμς, a worm; εἶδος, likeness. F. *helminthoïde*; G. *wurm-ähnlich*, *wurmförmig*.) Of the nature of, or resembling, a worm.

Helminth'olith. ("Ελμς; λίθος, a stone. G. *Wurmversteinerung*.) A calcareous concretion produced from an intestinal worm or other entozoon.

Helmintholog'ical. (F. *helminthologique*.) Of, or belonging to, *Helminthology*.

Helminthology. ("Ελμς, a worm; λόγος, a discourse. F. *helminthologie*; G. *Wurmlehre*.) The branch of science which treats of worms, and more particularly of intestinal worms.

Helmintho'ma. ("Ελμς.) Bancroft's term for a swelling or lump produced by an entozoon.

H. elas'tica. Bancroft's term for an elastic swelling in some part of the body, as the axilla, produced by the *Filaria sanguinis hominis*.

Helminthon'cus. ("Ελμς; ὄγκος, a tumour.) A lump produced by an entozoon, such as the guinea-worm, or by an ectozoon, such as a louse.

H. medinen'sis. The *Dracunculus medinen'sis*.

Helminthoph'thisis. ("Ελμς, a worm; φθίσις, a wasting. F. *helminthophthisie*; G. *Wurmschwindsucht*.) Wasting of the body from the presence of intestinal worms.

Helminthopy'ra. ("Ελμς; πυρ, a fever. F. *helminthopyrie*; G. *Wurmfieber*.) Swediaur's term for worm-fever. See *Fever*, *verminous*.

Helminthopyr'etus. ("Ελμς; πυρ'ετός, a fever.) Same as *Helminthopyra*.

Helminthos tachys. ("Ελμς; στάχυς, an ear of corn.) A Genus of the Nat. Order *Ophioglossaceæ*.

H. dul'cis. (L. *dulcis*, sweet.) Hab. Moluccas. Slightly aperient. Used as a pot-herb, especially the young shoots.

Helminth'ous. ("Ελμς, a worm. F. *helmintheux*.) Having, or full of, worms.

Helminth'us Gordii. ("Ελμς, a worm.) The *Gordius aquaticus*.

Helmont'ii flo'res antimo'nii. (Van Helmont; L. *flor*, a flower.) Old name for a preparation of sulphuret of antimony dissolved in aqua regia, the powder being sublimed with sal ammoniac. Said to be violently emetic in a very small dose.

Helm'stadt. Germany, in Brunswick. An earthy, saline, chalybeate water.

Helobacter'ium. ("Ηλος, a nail; bacter'ium.) The *Bacterium capitatum*.

Helo'biæ. ("Ελος, a marsh; βίος, life. G. *Sumpfsüßien*.) An Order or a Series of the Class *Monocotyledones*, being bog or water plants with actinomorphic flowers; endosperm scanty

HELOCEROUS—HELXINE.

or wanting; embryo with a strongly developed hypocotyledonary axis.

Heloc'eraus. ("Ἠλος, a nail; κέρασ, a horn. F. *hélécère*.) Having a club-shaped antenna.

Heloder'ma. ("Ἠλος, a nail; δέρμα, the skin.) A Genus of the Suborder *Fissillinguia*, Order *Sauria*.

H. horridum. Wieg. (L. *horridus*, horrid, savage. G. *Krusteneidechse*.) Hab. Mexico. A venomous lizard having grooved teeth like poison-fangs; the saliva also is said to be poisonous.

Helod'es. ("Ἠλος, a swamp.) Swampy; fenny; having, or full of, moisture. Applied to a fever attended with profuse sweating.

Also (F. *helode*; G. *sumpfartig*), a term for marsh fever.

Heloid. ("Ἠλος, a swamp; εἶδος, likeness. F. *helöide*; G. *sumpfähnlich*.) Resembling a swamp.

Heloid. ("Ἠλος, a nail or claw; εἶδος. F. *helöide*; G. *nagelförmig*.) Resembling a nail; unguiform.

Helonias. ("Ἠλος, a swamp. G. *Schwindblume*.) A Genus of the Nat. Order *Melanthaceæ*.

H. bulla'ta. (L. *bullæ*, a blister.) Hab. United States. Used in abdominal obstructions.

H. dioica, Pursh. (Δίς, twice; οἶκος, a house.) Devil's bit. Hab. United States. Root used as an anthelmintic; leaves bitter and tonic. Also called *Chamælorium luteum*.

H. erythrosp'erma, Michx. (Ἐρυθρός, red; σπέρμα, a seed.) Hab. United States. A narcotic. Used for destroying flies. Also called *Amianthium muscætoxicum*.

H. frig'ida. (L. *frigidus*, cold.) Probably the *H. erythrosp'erma*.

H. læ'ta. (L. *lætus*, joyful.) The *H. erythrosp'erma*.

H. lu'tea, Aitken. (L. *luteus*, yellow.) The *H. dioica*.

H. officina'lis, Don. The *Asagraea officinalis*. Now called in B. Ph. *Schenocaulon officinale*.

H. pu'mila, Jacq. (L. *pumilus*, dwarfish.) The *H. dioica*.

Helonin. A hydroalcoholic extract of the root of *Chamælorium luteum*.

Helonis. ("Ἠλος.) A Genus of the Nat. Order *Melanthaceæ*.

H. vir'idis. The *Veratrum viride*.

Helopeltis Antonii. An insect which does much damage to young cinchona plants, producing what is called the China rust.

Heloph'ilous. ("Ἠλος, a swamp; φίλος, loved.) Flourishing in marshes.

Heloph'ilus. ("Ἠλος, a swamp; φιλέω, to love.) A Genus of the Order *Diptera*, Class *Insecta*.

H. pen'dulus, Linn. (L. *pendulus*, hanging.) Larva, which is rat-tailed, has been found in the stomach and intestine of man and the horse.

Helopy'ra. ("Ἠλος, a swamp; πῦρ, a fever. F. *helopyre*; G. *Sumpfieber*.) Swediaur's term for a marsh or swamp fever.

Helopyr'etus. ("Ἠλος; πυρετός, a fever.) Same as *Helopy'ra*.

Helos. Same as *Helus*.

Also, a term applied to a prolapse of the iris through an aperture in the cornea.

Helosciad'ium. (Ἠλος; σκιάδιον, a

shade. G. *Sumpfschirm*.) A Genus of the Nat. Order *Umbellifera*.

H. californicum. Roots esculent.

H. nodiflorum, Roch. The *Apium nodiflorum*.

Heloseli'num. ("Ἠλος, a marsh; σέλιον, a kind of parsley.) An old name for celery.

Helo'sis. ("Ἐλίσω, to turn.) Old term (Gr. ἡλωσις), used by Galen, *de Usu Part.*, for ectropium, or eversion of the eyelids. Castellus renders it an inversion of the eyelids.

Also, the same as *Helotis*.

Helotic. ("Ἠλος, a corn of the foot. F. *hélotique*.) Of, or belonging to, corns.

Helotis. Old term, used by Sennertus, for the *Plica polonica*.

Helouan. Egypt, in the desert, not far from Cairo. A hot sulphur spring, with a pleasant winter climate.

Hel'sinë. Same as *Helxine*.

Helus. ("Ἠλος, a nail.) A corn on the foot.

Also ("Ἠλος, a marsh), a swamp.

Helvella. A Genus of the Family *Helvellaceæ*, Suborder *Discomycetes*, Class *Carpogoneæ*, Group *Thallophyta*. The morels.

H. cris'pa, Fries. (L. *crispus*, curled.) The mitre mushroom. Pileus lobed, crisped, whitish or yellowish; stem fistulose. In woods. Esculent.

H. esculen'ta, Pers. (G. *Steinmorchel*.) Pileus brown. In sandy pinewoods. Esculent. Also, called *Gyromitra esculenta*, Fries.

H. lacuno'sa, Afz. (L. *lacunosus*, full of holes.) Pileus black. In woods. Esculent.

H. mi'tra, Pers. The *H. lacunosæ*.

H. monachella, Fr. An esculent species.

H. suspec'ta, Krombh. (L. *suspectus*, mistrusted.) Pileus, two- or three-lobed. Said to be poisonous.

Helvella'ceæ. A term for the *Ascomycetes*.

Helve'tius, A'driaan. A Dutch physician, born in The Hague in 1661, died in 1727.

H.'s colly'rium. A solution of lapis divinus in water. Used as an application to conjunctival granulations.

H., pil'ules of. The *Pilula D. Helvetius*, Fr. Codex.

H.'s pow'der. An emetic powder consisting of two parts of tartarised antimony, one of ipecacuanha, and sixteen of cream of tartar.

According to Paris, it was a mixture of alum and dragon's blood.

H.'s styptic. (Στυπτικός, astringent.) Iron filings and cream of tartar mixed with brandy.

Hel'volus. (L. *helvolus*, dim. of *helvus*, of the colour of honey.) Greyish yellow.

Helwingia. A Genus of the Nat. Order *Helwingiaceæ*.

H. ruscifo'lia. (L. *ruscum*, butcher's broom; *folium*, a leaf.) Leaves esculent.

Helwingia'ceæ. A Nat. Order of monochlamydeous Exogens, of the Alliance *Garyales*, having alternate, stipulate leaves, fascicled flowers, and 3—4-celled ovary.

Helwin'giads. The plants of the Nat. Order *Helwingiaceæ*.

Helx'iné. (Ἠλκω, to draw.) Old name for the *Parietaria officinalis*, or wall pellitory, so called from its adherent qualities.

Also, applied to the *Carlina subacaulis*.

HELXIS—HEMERINE.

Helx'is. ("Ελκω, to draw. *F. helxis*; *G. Ziehen.*) A drawing or traction.

Hemachro'in. (Αἷμα, blood; χροά, colour.) A synonym of *Hæmatin*.

Hemacy'anin. See *Hæmacyanin*.

Hem'al. See *Hæmal*.

Hemaleu'cin. See *Hæmaleucin*.

Hemal'opy. See *Hæmalopia*.

Heman'thin. Ringer's name for an alkaloid obtained from the poison root of South Africa, *Hæmanthus toxicarius*. It has an action similar to atropine, paralysing the vagi nerves and their intracardial endings, and when dropped into the eye producing dilatation of the pupil. A salt of sulphuric acid has been used.

Hemanthi'num. See *Hemanthin*.

H. sulfuricum. See under *Hemanthin*.

Hemaph'e'in. See *Hæmaphæin*.

Hemapophys'ial. See *Hæmapophysis*.

Hemapophys'is. See *Hæmapophysis*.

Hemastatics. See *Hæmastatics*.

Hemasthenosis. See *Hæmasthenosis*.

Hematapor'ic. See *Hæmataporic*.

Hematapost'em. See *Hæmatapostema*.

Hemataul'ics. See *Hæmataulics*.

Hematecl'ysis. See *Hæmateclysis*.

Hematem'esis. See *Hæmatemesis*.

Hematemet'ic. See *Hæmatemetic*.

Hematenceph'alic. See *Hæmatencephalic*.

Hemate'rous. See *Hæmaterous*.

Hemather'mous. See *Hæmathermous*.

Hemathidro'sis. See *Hæmathidrosis*.

Hematic. Same as *Hæmatic*.

H. acid. A term applied by Thudichum to an acid which he supposes to be formed from hæmato-crystallin during its oxidation in the lungs, to be a fixed acid, and to have the property of being evolved from the red corpuscles on their arrival in the lungs, of combining with the sodium of serum, and setting free carbonic acid.

Hematics. See *Hæmatics*.

Hematin. See *Hæmatin*.

Also, Chevreul's name for *Hæmatoxylin*.

Hematine. See *Hæmatin*.

Hematis'chesis. See *Hæmatischesis*.

Hematischet'ic. See *Hæmatischetie*.

Hematism. See *Hæmatismus*.

Hematisth'mic. See *Hæmatisthmie*.

Hematite. See *Hæmatite*.

Hematit'inous. See *Hæmatitinous*.

Hematocathar'tic. See *Hæmatocathartic*.

Hematocele. See *Hæmatocele*.

Hematoce'liac. See *Hæmatoæliac*.

Hematoceph'alus. See *Hæmatocephalus*.

Hematocy'anin. Same as *Hæmocyanin*.

He'matocyst. See *Hæmatocystis*.

Hematoga'stric. Same as *Hæmagastric*.

Hematog'raphy. See *Hæmatographia*.

Hematoid. See *Hæmatoid*.

Hematology. See *Hæmatology*.

Hematoman'ty. See *Hæmatomania*.

Hemato'matous. See *Hæmatomatous*.

He'matome. See *Hæmatoma*.

Hematometach'ysis. See *Hæmatometachysis*.

Hematom'eter. See *Hæmatometer*.

Hematom'etry. See *Hæmatometry*.

Hematoph'alocele. See *Hæmatophalocele*.

Hematon'cy. See *Hæmatoncia*.

Hematoph'agous. See *Hæmatophagous*.

Hematophos'phatide. (Αἷμα, blood.) Same as *Phosphatide of blood*.

Hematophyll'ous. See *Hæmatophyllous*.

Hematopoie'tic. See *Hæmatopoietic*.

Hematorrhœ'a. See *Hæmatorrhœa*.

Hematos'cheocele. See *Hæmatoscheocele*.

Hematos'copy. See *Hæmatoscopy*.

He'matose. See *Hæmatodes*.

He'matosin. See *Hæmatosin*.

Hematostatics. See *Hæmostatica*.

Hematosymphore'sis. See *Hæmatosymphoresis*.

Hematothorac'ic. See *Hæmatothoracic*.

He'mato'tic. See *Hæmatotic*.

He'matous. See *Hæmatous*.

Hematox'ic. See *Hæmatotoxic*.

Hematox'ylin. See *Hæmatoxylin*.

Hematoze'mic. See *Hæmatozemie*.

Hematozymot'ic. See *Hæmatozymotic*.

Hemature'sis. See *Hæmaturesis*.

Hematu'ric. See *Hæmaturic*.

Hematur'y. See *Hæmaturia*.

Hemaul'ica. See *Hæmataulics*.

Hemely'trum. See *Hæmielytron*.

Hemeralo'pia. (Ημεράλωψ, the contrary of νυκτάλωψ; from ἡμέρα, a day; ὤψ, the eye. *G. Tagblindheit.*) Day-blindness; the condition in which objects which are seen with comfort in a feeble light or during the night, cannot be looked at in the daylight.

The term was used in the above sense by the early Greek and Latin authors, but, with the exception of Copland and Henry Power, all or most modern authors of all nations have used the term in the sense of night-blindness. The Royal College of Physicians of London have reverted to the true meaning of the word in their 'Nomenclature of Disease.' For a further consideration of the etymology of the two words, and an account of the disease night-blindness, see *Nyctalopia*.

H., congen'ital. (*L. congenitus*, born together with.) See *Nyctalopia, congenital*.

H., epidem'ic. (Ἐπιδήμιος, among the people.) See *Nyctalopia, epidemic*.

H., idio'path'ic. (Ἴδιος, one's own; πάθος, affection.) See *Nyctalopia, idiopathic*.

H., scorbu'tic. (*L. L. scorbutus*, scurvy.) See *Nyctalopia, scorbutic*.

H., symptomat'ic. (Συμπτῶμα, a casualty.) See *Nyctalopia, symptomatic*.

Hemeralops. (Ἡμέρα, a day; ὤψ. *F. héméralope*; *G. Nachtblinder*.) One having the defect called *Hemeralopia*.

Hemerapho'nia. (Ἡμέρα, a day; ἄ, neg.; φωνή, the voice. *F. héméraphonie*.) The loss of voice during the day.

He'merine. (Ἡμέρα, a day. *F. hémérine*; *G. täglich*.) Of, or belonging to, a day; daily; applied to a fever; the same as *Quotidian*.

HEMEROBIOUS—HEMIANOPSIA.

Hemerobious. ('Ημερόβιος; from ἡμέρα; βίος, life.) Living but for a day.

Hemerocal'idæ. R. Brown's term for *Liliacæ*.

Hemerocal'lis. ('Ημέρα, a day; καλός, beauty; from its flowers opening at morning and closing at night. *G. Tagblume*.) A Genus of the Nat. Order *Liliacæ*. The day lily.

Hemerod'roma. ('Ημέρα; δρόμος, a course.) A fever which runs its course in one day.

Hemerod'romal. ('Ημέρα, a day; δρόμος, a course. *F. hémérodro-me*.) Running or extending through one day.

Hemeropath'ia. ('Ημέρα, a day; πάθος, disease. *F. héméropathie*.) Applied to a malady that appears only during the day, or exists for one day.

Hemerotyphlo'sis. ('Ημέρα, a day; τυφλωσις, blindness. *F. nyctalopie*; *G. Tagblindheit*.) Term for day-blindness, or *Nyctalopia*.

Hemery'thrin. See *Hæmerythrin*.

Hem'i. ('Ημι, an inseparable prefix, the root of ἡμισυς, signifying half.) Half, used only in composition.

Hemiaceph'alus. ('Ημι, for ἡμισυς, half; ἄ, neg.; κεφαλή, the head.) I. G. St. Hilaire's name for a monstrosity in which the head is represented by a formless tumour having some cutaneous folds in front of it, and with the thoracic limbs existing.

Hemiachromatop'sia. ('Ημισυς; ἄ, neg.; χρώμα, colour; ὄψις, sight.) Colour blindness in the corresponding halves of the field of vision.

Hemialbu'min. ('Ημισυς; albumin.) The same as *Hemialbumose*.

Hemialbuminose. Same as *Hemialbumose*.

Hemialbumose. ('Ημισυς; albumin.) Kühne's term for the substance called by Schmidt-Mülheim *Propeptone*, and by Meissner *a-peptone*. It is soluble in water at 70° C. (158° F.), from which it separates on cooling, and in a ten per cent. solution of sodium chloride.

Hemialbumosu'ria. (*Hemialbumose*; Gr. οὖρον, urine.) The presence of hemialbumose in the urine. It was first discovered in the urine by Bence Jones in a case of mollities ossium.

Hemial'gia. ('Ημι; ἄλγος, pain.) A unilateral pain. Same as *Hemierania*.

Hemiamau'rosis. ('Ημι; ἀμαύρωσις, a darkening. *F. hémiamaurose*; *G. Halbblindheit*.) Term for half-blindness, or the power of seeing only the half of a thing. See *Hemipia*.

Hemianæsthe'sia. ('Ημισυς; ἀναίσθησία, want of feeling. *F. hémianesthésie*.) Loss of the faculty of sensation in one half of the body. It may be complete or incomplete, the loss of sensation being absolute, or imperfect, or in many more or less limited spots; when the loss of sensation is imperfect the limbs are often painful when moved.

H., cere'bral. (*L. cerebrum*, the brain.) Hemianæsthesia of intracranial origin. It may occur as a result of cerebral hæmorrhages, or from the growth of a tumour, especially when the fibres of the internal capsule are involved.

H., hyster'ical. (*Hysteria*.) An occasional occurrence in an hysterical person,

whereby the sensation of one half of the body is completely or partially lost. At times the loss of sensation affects the skin only.

H., spi'nal. Hemianæsthesia of spinal origin.

Hemianat'ropal. Same as *Hemianatropous*.

Hemianatropous. ('Ημισυς; ἀνατρέπω, to turn over. *F. hémianatrope*; *G. halbgegenläufig*.) Half inverted, half anatro-pous.

Hemian'dros. ('Ημισυς, half; ἀνήρ, a man.) Old term, used by Lucianus, for a hermaphrodite.

Also, a term for a eunuch.

Hemian'drus. Same as *Hemiandros*.

Hemian'er. ('Ημισυς; ἀνήρ, a man.) A eunuch.

Hemianop'ia. ('Ημισυς, half; ὤψ, the eye.) A term suggested by Monoyer as a substitute for *Hemipia*, in order to emphasise the morbid condition which characterises the disorder, viz. half blindness, or absence of perception of half of the field of vision.

Hemianops'ia. ('Ημισυς; ἄν, neg.; ὄψις, sight. *F. hémianopsie*.) Half-blindness; being a loss of perception of one half of the field of vision. The term was suggested by Hirschberg as a substitute for Monoyer's *Hemianopia*.

Hemianopsia is usually limited to cases of partial loss of vision due to intracranial disease, such as tumours, embolism, hæmorrhages, or other lesions affecting the chiasma of the optic nerves, the optic tracts, or some part of the centres from which the optic nerves originate.

H., altitu'dinal. (*L. altitudo*, height.) Loss of perception of the upper or lower halves of the field of vision.

H., bilat'eral. (*L. bis*, twice; *latus*, the side.) Loss of perception of one lateral half of the field of vision in both eyes.

H., bina'sal. (*L. bis*, twice; *nasus*, the nose.) Loss of perception of the inner half of each field of vision. See *H., heteronymous*.

H., binoc'ular. (*L. bi-*, two; *oculus*, the eye.) Hemianopsia affecting both eyes.

H., bitem'poral. (*L. bis*; *tempora*, the temples.) Loss of perception of the outer half of each field of vision, owing to anæsthesia of the inner half of the retina, due to disease of the conducting power in fibres of the optic nerve, or of perceptivity in the cerebral centre connected with that half. See *H., heteronymous*.

H., complica'ted. (*L. complicatus*, confused.) Loss of perception of one half of the field of vision associated with paralysis of other sensory or motor nerves.

H., correspond'ing. Same as *H., homonymous*.

H., cros'sed. (*L. emianopsia incrociato*.) Same as *H., heteronymous*.

H. dex'tra. (*L. dexter*, the right.) Loss of perception of the right half of the field of vision.

H., equilat'eral. (*L. æquus*, equal; *latus*, the side.) Same as *H., homonymous*.

H., heteronymous. ('Ετερος, other; δυνάμ, Aëol. for δύναμις, a name.) Loss of perception of the two outer or the two inner halves of the fields of vision, due to anæsthesia of the two inner or the two outer halves of the retina, being those which are not associated in function.

H., heteronymous, bilat'eral. (*L. bis*, twice; *lateralis*, belonging to the side.)

HEMIANTHROPIA—HEMIATHETOSIS.

Loss of perception of the temporal half of the field of vision in each eye.

H., heteronymous, lat'eral. (L. *lateralis*, belonging to the side.) The same as *H., heteronymous, bilateral*.

H., heteronymous, me'dian. (L. *medius*, middle.) Loss of perception of the objects situated on the nasal half of both fields of vision.

H., homonymous. (ὁμώνυμος, having the same name; from ὁμός, the same; ὄνυμα, a name. G. *gleichzeitige Hemianopsia*.) Loss of perception of the inner side of the field of vision of one eye, and of the outer side of the other, due to anæsthesia of the outer half of the retina in the former case, and of the inner half of the retina in the latter case, being those which are associated in function. It may be right-sided or left-sided. It may be due to destructive lesion of some part of the optic tract; or of the neighbourhood of the corpora geniculata and of the posterior part of the optic thalamus; or of the posterior part of the external capsule; or of the cortical structures in the neighbourhood of the gyrus angularis.

H., homonymous, bilat'eral. (L. *bis*; *lateralis*.) A condition in which one half of the field of vision of each eye is lost or impaired, the patient being unable to see the left or the right half of the whole field when both eyes are open.

H., homonymous, unilat'eral. (L. *unus*, one; *latus*, the side.) Same as *H., homonymous*.

H., horizon'tal. Same as *H., altitudinal*.

H., incomplete. (Late L. *incompletus*, uncompleted.) Partial defect of one half of the field of vision in one or both eyes. Two forms are described, *H., oblique*, and *H., quadrantal*.

H. inferior. (L. *inferus*, that is below.) Loss of perception of objects situated in the lower half of the field of vision, being those objects the images of which fall on the upper half of the retina.

H. latera'lis. (L. *lateralis*, lateral.) Ordinary *H., homonymous*. See *H. lateralis dextra* and *sinistra*.

In 154 cases of lateral hemianopsia Wilbrand found that 59 cases were associated with other symptoms of paralysis of sense or motion.

Some confusion has arisen from a different use of the word lateral as an exponent of the forms of hemianopsia; when applied to homonymous hemianopsia it refers to loss of perception of the right or left halves of the fields of vision; when applied to heteronymous hemianopsia it refers to loss of perception of the outer halves of both fields of vision.

H. latera'lis dex'tra. (L. *dexter*, right.) Loss of perception of the right side of the field of vision of both eyes. In 154 cases of lateral hemianopsia Wilbrand found there were 74 of hemianopsia lateralis dextra. It is more distressing to the patient than hemianopsia lateralis sinistra. It is often associated with right-sided hemiplegia and aphasia.

H. latera'lis sinis'tra. (L. *sinister*, left.) Loss of perception of the left side of the field of vision in both eyes. In 154 cases of lateral hemianopsia Wilbrand found 80 cases of hemeralopia lateralis sinistra.

H., left-sid'ed. The same as *H. lateralis sinistra*.

H., monolat'eral. (Μόνος, single; L. *lateralis*, belonging to the side.) Loss of one half of the field of vision in one eye only.

H., na'sal. (L. *nasalis*; from *nasus*, the nose.) Loss of perception, in one eye, of the inner or nasal side of the field of vision.

H., na'sal, doub'le. The form of hemianopsia in which the inner half of each field of vision is lost from anæsthesia of the outer halves of each retina, due to lesion of the outer part of both optic tracts. It is therefore the same as *H., heteronymous*.

H., oblique'. (L. *obliquus*, slanting.) An incomplete form in which the area of blindness exceeds the quarter of the field of vision, but does not amount to the full half; the upper or the lower border, as the case may be, being a line stretching from the centre of the retina to the circumference.

H., per'manent. The form of the disease which is caused by actual lesion of the chiasma or optic tracts, or cortical centres.

H., quadran'tal. (L. *quadrans*, a fourth part.) Loss of perception of one fourth only of the field of vision. Called by Nettleship *Tetratoanopia*.

H. sinis'tra. (L. *sinister*, the left.) Loss of perception of the left side of the field of vision.

H., supe'rior. (L. *superior*, that is above.) Loss of perception of objects situated in the upper half of the field of vision, being those the images of which are formed on the lower half of the retina.

H., tem'poral. (L. *tempora*, the temples.) Loss of perception of the outer part of the field of vision in one eye from anæsthesia of the inner half of the retina.

H., tem'poral, doub'le. The form of heteronymous hemianopsia in which the outer half of each field of vision is lost from anæsthesia of the inner halves of the retina, produced by lesion of the central and anterior part of the optic chiasma. It is therefore the same as *H., heteronymous*.

H., tem'porary. The form of the disease which lasts for a short time only, and which is not caused by persistent lesion of the chiasma or optic tracts.

H., unio'cular. (L. *unus*, one; *oculus*, the eye.) Hemianopsia affecting one eye only.

H., vert'ical. (L. *vertex*, the pole.) Loss of vision in the outer or inner halves of the retina.

Hemianthro'pia. (Ἡμισυς; ἀνθρωπος, a man.) An old term for madness.

Hemianthro'pos. (Ἡμισυς, half; ἀνθρωπος, a man.) Old term (Gr. ἡμιάνθρωπος), used by Joh. Stephanus, *Decad. Concil. i*, in *Oper. p. 297*, for a maniac.

Also, a term for a eunuch.

Hemianthropus. Same as *Hemianthropos*.

Hemiarthro'sis. (Ἡμισυς; ἄρθρωσις, a jointing. F. *hémiarthrose*.) A synonym of *Symphysis*.

Hemiataxy. (Ἡμισυς; ἀταξία, want of order.) The occurrence of irregular movements affecting a limb of one side of the body only, when attempts at orderly movements are being made, as, for instance, in writing.

Hemiatheto'sis. (Ἡμισυς; ἀθετος, without fixed position.) Athetosis affecting one side of the body only.

HEMIATROPHIA—HEMICRANIA.

Hemiatroph'ia. Same as *Hemiatrophy*.

H. facia'lis progressi'va. See *Hemiatrophy, facial, progressive*.

H. neuro'tica partia'lis. (Νεύρον, a nerve; *L. pars*, a part.) Atrophy of a part of one side of the body only, as in progressive facial hemiatrophy, and in similar affections of other parts of the body which have been observed, as in one case affecting the structures below the nipple, in another the structures and bones of the foot, and in another the parts supplied by the radial nerve.

H. neuro'tica tota'lis. (*L. totus*, the whole.) Atrophy of the same nature as progressive facial hemiatrophy affecting the whole of one side of the body, of which one or two cases have been recorded.

Hemiatrophy. ("ἤμισυς; ἀτροφή, want of nourishment.) Atrophy or defective nutrition of one side, or part of one side, of the body.

H., fa'cial, progres'sive. (*L. facialis*, belonging to the face; *progressus*, a going forwards. *G. einseitige fortschreitende Gesicht-Atrophie*.) A slowly progressive loss of tissue on one side of the face, which begins on the outer surface and gradually proceeds inwards, described by Parry in 1825. It occurs more frequently in women than in men, and has been observed to be preceded by an eruptive fever, herpes zoster of the face, or severe neuralgic pain. The skin presents white, depressed patches, which spread, coalesce, and often become yellowish or brownish; the hair of the affected part becomes white or falls out, the sebaceous follicles atrophy, the subcutaneous fat is absorbed, the muscles are not generally diminished in size and they respond correctly to electricity, the nerves are generally undisturbed, but sometimes there is hyperæsthesia and painful sensations; the blood-vessels are unaffected, and the temperature is alike with that of the other side; the bones become atrophied, and the teeth often loosened; the general health is not disturbed, but the affected parts seldom undergo any restoration. Some, as Lande, believe it to be a local disease; others, as Bergsen ascribe it to an affection of the vaso-motor nerves; and others, as Samuel, refer its cause to disease of the trophic nerves and ganglia of the fifth nerve, or to lesion of the sympathetic.

Hemiaz'ygus. ("ἤμις, half; ἄζυγος, unpaired.) The left lower azygos vein. See under *Azygos veins*.

H. accessor'ia. (*L. accessus*, an approach.) The left upper azygos vein. See under *Azygos veins*.

H. vein. The left lower azygos vein. See under *Azygos veins*.

Hemic. See *Hemic*.

Hemicarp. ("ἤμισυς, the half; καρπός, fruit. *F. hemicarpe*; *I. emicarpo*; *S. hemicarpo*; *G. Halbfrucht*.) Applied to each of the two portions of a fruit that is naturally separated into two halves, as those of the Umbellifera. The half of a *Cremocarp*.

Hemicephalæ'a. ("ἤμισυς, half; κεφαλή, the head. *F. hémicephalée*.) The half of the head; an imperfect term of the same signification as *Hemicrania*.

Hemicephala'on. ("ἤμισυς; κεφαλή,) The half of the head; applied to the sinciput.

Hemicephalæ'um. Same as *Hemicephala'on*.

Hemicephalia. ("ἤμισυς, half; κεφαλή, the head.) Defect of the whole roof of the skull, with more or less complete defect of the brain.

Hemicephal'ic. ("ἤμισυς, half; κεφαλή, the head. *F. hémicephalique*.) Of, or belonging to, the *Hemicephala'on*, or sinciput.

Hemicephal'ium. Same as *Hemicephala'on*.

Hemiceph'alum. Same as *Hemicephala'on*.

Hemiceph'alus. ("ἤμισυς, half; κεφαλή, a head. *F. hémicephale*.) Term for a monster fœtus born with only half a head, the calvaria and the cerebral hemispheres being absent.

Also, used as a synonym of *Acephalus*.

Hemicerau'nios. ("ἤμισυς, half; κεραυνός, a thunderbolt; because supposed to resemble it.) Old name (*Gr. ἡμικεράννιος*), applied by Galen, *de Fasc. n.* 95, to a bandage for the back and breast.

Hemich'oon. ("ἤμισυς, half; χόος, a gallon.) Old term (*Gr. ἡμίχοον*), used by Hippocrates, *de Intern. Affect.*, xlv, 9, for about the half of the congius, or gallon, but it strictly means a divided gallon.

Hemichore'a. ("ἤμισυς; χορεία, a dancing.) Chorea affecting one side of the body only.

Hemicoll'in. ("ἤμισυς; κόλλα, glue.) $C_{47}H_{70}N_{14}O_{19}$. Hofmeister's term for a peptone-like body formed along with semiglutin when a solution of gelatin is boiled for a long time; it is soluble in alcohol.

Hemicon'gion. See *Semicongius*.

Hemicra'nia. ("ἤμισυς, half; κρανίον, the head. *F. hémicranie*; *I. emicrania*; *S. hemicrania*; *G. halbseitiges Kopfweh, halbseitiger Kopfschmerz*.) Spontaneous attacks of pain in one side of the head occurring at intervals, the periods of intermission being usually perfectly free from pain. It occurs more frequently in females than in males, in the proportion of 5:1, and usually attacks the patient prior to the age of 25. Heredity is a powerful predisposing cause, and it especially descends from the mother and to the daughters. The attack is usually preceded by prodromal symptoms of languor and weariness lasting for a day or more. The pain, though varying in intensity, is usually fixed and severe, and of a boring, dull, tensive character. The left side is most commonly affected. There are no true painful points, but cutaneous hyperæsthesia may exist; vomiting and disturbances of vision and of hearing are sometimes observed. The face is pale, the eye sunken, the pupil dilated, and the temporal artery cord-like on the affected side. The ear is paler and cooler than the opposite one. The pain is aggravated by stooping. Towards the close of the attack the parts become redder and warmer, and the pupil contracts, the heart palpitates, the pulse is hastened, and a general warmth is felt. The duration of the attacks is from a few hours to half a day. Same as *Megrim*.

Also, a term used in Teratology to denote imperfect development or total defect of one side of the brain and its coverings, or of one half, usually the posterior, in the antero-posterior direction.

HEMICRANION—HEMIGLOSSITIS.

H. alter'nans. (L. *alterno*, to alternate.) Hemicerania attacking the opposite sides of the head by turns.

H., angio-paraly'tic. (Ἀγγείων, a vessel; παραλυτικός, paralysed.) A form of hemicerania believed by Möllendorff to be attributable to unilateral relaxation of the vessels of the head from loss of energy in the vaso-motor nerves.

H., angio-spas'tic. (Ἀγγείων; σπαστικός, stretching.) Same as *H., sympathico-tonic*.

H., idiopath'ic. (Ἰδιος, peculiar; πάθος, a suffering.) A term for facial neuralgia.

H. lunatica. An erratic fever. (Prior.)

H., neuro-paraly'tic. (Νέυρον, a nerve; παραλυτικός, paralysed.) The same as *H., angio-paralytic*.

H., period'ic. (Περιοδικός, coming round at certain times.) Term applied by Bartholin to probably what is now termed typical supra-orbital neuralgia, occurring at fixed hours of the day.

H., sympathico-ton'ic. (Συμπαθής, of like feelings; τόνος, tension.) Hemicerania believed by Du Bois Reymond to be caused by a unilateral tetanus of the vessels of the head, or tetanus in the district supplied by the cervical sympathetic.

H. va'so-moto'ria. (L. *vas*, a vessel; *motus*, motion.) Term applied by Eulenberg to hemicerania resulting from tetanus, or from paralysis of the vaso-motor nerves.

Hemicra'nion. See *Hemicrania*.

Hemicrany. Same as *Hemicrania*.

Hemicy'cl'ic. (Ἡμισυς, half; κύκλος, a circle.) Braun's term for those dicotyledonous flowers having a spiral arrangement of their parts, in which the transition from one foliar structure to another, as from calyx to corolla, or from corolla to stamens, coincides with a definite number of turns of the spiral.

The term is also applied to those flowers the members of which are arranged some in whorls and some in a spiral, the former being usually the calyx and corolla, the latter the stamens and carpels.

Hemicylindra'ceous. Same as *Hemicylindrical*.

Hemicylind'rical. (Ἡμισυς, half; κύλινδρος, a cylinder. F. *hémicylindrique*; G. *halbwalzenförmig*.) Applied to those scapes which are flat on one side and convex on the other, as in the *Allium tricoccum*. Also to those leaves which are elongated with one face plain, the other convex, as the *Typha angustifolia*.

Hemidac'tylous. (Ἡμισυς; δάκτυλος, a finger. F. *hémidactyle*.) Having half fingers or toes. Applied to birds and quadrupeds that have the external toes shorter than the others.

Hemides'mi ra'dix. B. Ph. The dried root of *Hemidesmus indicus*. It is in cylindrical, tortuous, longitudinal, wrinkly, circularly fissured pieces, 6" long and .25" to .5" thick, covered with a thin, yellowish-brown, easily separable corky layer. It smells like Tonka bean, and has a sweetish, slightly acid taste. Said to be tonic, diuretic, and diaphoretic, and was used as sarsaparilla in syphilis; now chiefly employed as a flavouring agent.

Hemides'mic ac'id. Pereira's term for Garden's *Smilasperic acid*.

Hemides'mus. (Ἡμισυς; δέσμος, a band.) A Genus of the Nat. Order *Asclepiadaceæ*.

H. in'dicus. R. Br. Hab. India. Supplies *Hemidesmi radix*.

H. root. See *Hemidesmi radix*.

Hemidial'ysis. (Ἡμισυς; διάλυσις, a dissolution. F. *hémidialyse*.) The same as *Hemiplegia*.

Hemidiaphore'sis. (Ἡμισυς; διαφώρησις, a sweating. F. *hémidiaphorèse*; G. *einseitiges Schwitzen*.) Perspiration of one side of the body only.

Hemidrach'mon. (Ἡμισυς, half; δραχμή, a drachm.) Old name for half of a drachm. (Goræus.)

Hemidrach'mum. Same as *Hemidrachmon*.

Hemidysæsthe'sia. (Ἡμισυς; δύς, difficult; αἴσθησις, a sensation.) Dulness of sensation in one half of the body; also, dulness of sense in one half of a sense organ.

Hemidystroph'ia. (Ἡμισυς; δύστροφος, hard to rear.) Partial bad development of a tree, from some opposition to the growth of part of the roots.

Hē'mie. (Αἷμα, blood.) Monneret's term for a general disease of the blood.

Hemiec'ton. (Ἡμισυς, half; ἐκτός, a sixth.) Old term (Gr. *ἡμιεκτον*), used by Hippocrates for a kind of seat for administering fumigations to women in cases of sterility and diseases of the genitals; or for the pot or vessel in which the ingredients for such fumigation were contained.

Also, the name of a measure holding four pecks, or the half of a *Sextarius*, according to Galen, de *Pond. et Mens.* v.

Hemiec'tum. Same as *Hemiection*.

Hemied'ric. Same as *Hemihedral*.

Hemiellip'tic. (Ἡμισυς, half; ἑλλειπτικός, defective. F. *hémieллиptique*; G. *halbelliptisch*.) Half-elliptic; semi-elliptic. Applied to the recess of the vestibule of the external ear.

Hemiel'ytron. (Ἡμισυς, half; ἑλυτρον, the scale which covers an insect's wings. F. *hémelytre*.) The superior wings of *Hemiptera*, which are horny or coriaceous at the base, membranous and like the inferior wings towards their extremity.

Hemiel'ytrum. See *Hemiel'ytron*.

Hemienceph'alus. (Ἡμισυς, half; ἐγκέφαλος, the brain.) A monstrosity which, without any trace of an organ of sense, has a brain a little less than natural.

Hemienceph'aly. (F. *hémiencephalie*.) The condition of an *Hemiencephalus*.

Hemiep'ilepsy. (Ἡμισυς, half; ἐπιληψία, epilepsy.) An epileptic attack producing convulsions on one side of the body only.

Hemifa'cial. (Ἡμισυς; L. *facialis*, belonging to the face. F. *hémifacial*.) Relating to, or connected with, one half of the face.

H. paral'ysis. Paralysis of one side of the face.

Hemigam'ious. (Ἡμισυς; γάμος, a marriage. F. *hémigamie*.) Name given by Trinius to the condition in which calices of the Gramineæ contain two sets of flowers only, one male or female, and the other neuter.

Hemig'amous. Same as *Hemigamious*.

Hemiglossi'tis. (Ἡμισυς, half;

HEMIGLUTIN—HEMIOPIA.

γλῶσσα, the tongue.) Parenchymatous inflammation of one half only of the tongue, and that generally the left half, in which is a firm, elastic, painful nodule, which sometimes projects above the surface. The disease has little inclination to end in suppuration, deep ulceration, or sloughing.

Hemiglu'tin. ("Ημισυς; *glutin*.) $C_{47}H_{70}N_{14}O_{19}$. A peptone-like body obtained, along with semiglutin, by Hofmeister when collagen is boiled in water for a long time.

Hemigonia'rious. ("Ημισυς, half; γονί, seed. *F. hémigonaire*.) Applied by De Candolle to double flowers in which parts of the organ of both sexes are changed into petals.

Hemig'y nous. ("Ημισυς; γυνή, a woman.) Having in part the qualities of a woman or of a female; effeminate.

Hemigy'rous. ("Ημισυς; γῦρος, a ring.) Term applied by Desvaux to the fruit of the Proteaceæ. This resembles a follicle, the walls of which often become thick and woody, containing one or two seeds only; it is sometimes separated by a false dissepiment, and dehisces completely by its ventral suture, and incompletely by its dorsal suture.

Hemihe'dral. ("Ημισυς; ἔδρα, a base, or seat. *F. hémiedrique*; *G. halbfächig*.) Applied to a crystal having only half of the complete number of planes or faces, the opposite ones or the alternate ones being absent. They are the only crystals which exhibit the phenomena of *Pyro-electricity*.

Hemihyperæsthe'sia. ("Ημισυς; ὑπέρ, above; αἰσθησις, sensation.) The occurrence of hyperæsthesia on one half of the body only, as in some forms of hysteria.

Hem'i-hypo-ther'mia. ("Ημισυς, half; ὑπό, under; θερμη, heat.) Defective temperature on one side of the body as compared with the other. It may be due to diminished generation of heat or to increased loss of heat.

Hemilaryngople'gia. ("Ημισυς; λάρυγξ, the larynx; πληγή, a stroke.) Hilton Fagge's term for paralysis of the muscles of one side of the larynx only. There is complete immobility with some concavity of the vocal cord of the affected side, and when long continued some atrophy of it; the apex of the arytenoid cartilage of the same side is directed further forwards and inwards than natural. The voice is weak and more or less hoarse, and, according to Frauk, frequently breaks into a falsetto when much exerted.

Hemim'elus. ("Ημισυς; μέλος, a limb.) A monstrosity in which the limbs are incomplete at their extremities, terminating in stumps.

Hemim'ely. ("Ημισυς; μέλος, a limb.) In Teratology, the condition of a monster in which the upper extremity of one side is reduced to a simple bud or mushroom-like process.

Hemimer'is. ("Ημεμερίς, halved.) A Genus of the Nat. Order *Scrophulariaceæ*.

H. cauliala'ta. Pers. (*L. caulis*, a stem; *alatus*, winged.) Used as a stomachic.

Hemimetab'ola. ("Ημισυς; μεταβολή, a change.) A Subclass of the Class *Insecta*, being those in which the metamorphosis is incomplete, the larva differing from the imago chiefly in the absence of wings, and the pupa being capable of movement.

Hemimetab'olous. ("Ημισυς; μεταβολή, a change.) Applied to those insects which undergo only an imperfect metamorpho-

sis, the larval state not differing much from the adult condition, but which, nevertheless, lose some of the embryonic organs whilst the wings or such organs are growing. See *Ametabolous* and *Metabolous*.

Hemimoe'riou. ("Ημιοίριον, a half.) Same as *Hemimorion*.

Hemimo'riou. ("Ημιορίον; ἥμισυς, half; μόριον, a part.) Old term, applied by Erotianus, in the same manner as *Hemidrachmon*; but, also, it signified a divided part, according to Foësius.

Hemimo'rium. Same as *Hemimorion*.

Hemimorphous. ("Ημισυς; μορφή, form.) Possessing *Hemimorphy*.

Hemimorphy. ("Ημισυς; μορφή.) A partial occurrence only of the faces of a crystal.

Hemimiyasthe'nia. ("Ημισυς; μῦς, a muscle; ἀσθίθεια, want of strength.) Aitken's term for weakness of the muscles of one half of the body.

Hemin. Same as *Hemin*.

Hemina. ("Ημισυς, half.) Old name for a measure and weight, as to which there was great difference according to the diversity of places and things; said to contain the half of a sextarius.

Hemineurasthe'nia. ("Ημισυς; νεῦρον, a nerve; ἀσθίθεια, weakness.) Beard's term for neurasthenia affecting one side of the body only, which is generally the left.

Hemiob'olon. ("Ημισυς, half; ὀβολός, the sixth part of a drachm.) Half of an obolus, or twelfth part of a drachm. (Goræus.)

Hemiol'ion. ("Ημισυς, half; ὅλος, the whole.) Old term for an ounce and a half, or twelve drachms. Also, for the whole of a thing and half as much more, same as *sesquialtera*, or as *sesquialtera*, an ounce and a half.

Hemiol'ios. ("Ημισυς, half; ὅλος, the whole.) Consisting of a whole with one half added.

Hem'ionis. ("Ημίονος, a mule; ονίς, ordure.) Old term (Gr. *ἡμίονος*), for the dung of a mule, formerly used in the treatment of diseases of women, according to Hippocrates, *de Nat. Mul.* lxxxv, 4.

Hemionit'is. ("Ημίονος, a mule.) The *Asplenium hemionitis*; so called because it was supposed to be sterile, or because it made women sterile, as mules are.

Hemiopal'gia. ("Ημισυς, half; ὤψ, the eye; ἄλγος, pain. *F. hémioalgie*.) A term for hemieranic pain of the eye.

Hemio'pia. ("Ημισυς, half; ὤψ, the eye. *F. hémipie*; *I. emipia*; *S. hemipia*; *G. Halbsichtigkeit*.) Half-sight. A defect of vision in which only one half of the field of vision is perceived. The condition is better expressed by the term *Hemianopsia*, which has reference to the real morbid state, viz. the part of the field of vision not seen, while hemiopia has reference to the healthy state, viz. the part of the field of vision which is seen. The two terms are often, but erroneously, used synonymously.

H., altitu'dinal. Same as *Hemianopsia*, *altitudinal*.

H., bina'sal. Same as *Hemianopsia*, *bi-temporal*.

H., bitem'poral. Same as *Hemianopsia*, *binasal*.

H., equilat'eral. Same as *Hemianopsia*, *equilateral*.

HEMIOPIASIS—HEMIPLEGIA.

H., heteronymous, bilateral. Same as *Hemianopsia*, *heteronymous*, *median*.

H., homonymous. Same as *Hemianopsia*, *homonymous*.

H., homonymous, bilateral. Same as *Hemianopsia*, *homonymous*, *bilateral*.

H., homonymous, unilateral. Same as *Hemianopsia*, *homonymous*, *unilateral*.

H., horizontal. Same as *Hemianopsia*, *horizontal*; the part of the visual field perceived being reversed.

H., nasal. Same as *Hemianopsia*, *temporal*.

H., temporal. Same as *Hemianopsia*, *nasal*.

H., vertical. Same as *Hemianopsia*, *vertical*; the part of the visual field perceived being reversed.

Hemioptiasis. The same as *Hemipia*.

Hemipia. ("ἡμις; ὄψις, vision.) Same as *Hemipia*.

Hemipagia. ("ἡμις, half; πάγος, fixed. F. *hémipagie*.) Old term for pain on one side only of the head.

Hemipagus. ("ἡμις; πάγος, that which is fixed.) A double monstrosity in which the two individuals are united by the thorax.

Hemiparaplegia. ("ἡμις, half; παραπληγία, a benumbing of the limbs. F. *hémiparaplégie*.) Paralysis of one lower limb only.

H. spinalis. (L. *spina*, the spine.) Hemiparaplegia of spinal origin.

Hemiparesis. ("ἡμις; πάρεσις, a slackening of strength.) Paresis or impairment of muscular strength affecting one side of the body only.

Hemipathia. ("ἡμις, half; πάθος, disease. F. *hémipathie*.) Term for disease affecting one half of the body.

Also, the same as *Hemicrania*.

Hemipegia. Same as *Hemipagia*.

Hemipeptone. ("ἡμις; *peptone*.) Kühne's term for that part of the peptones of pancreatic origin which may be transformed into leucin, tyrosin, hypoxanthin, and asparagin, as normal products, and indol, skatol, phenol, volatile fatty acids, and other products, in contradistinction to *Antipeptone*. According to him it is the result of the action of trypsin on hemialbumose.

Hemipetalous. ("ἡμις; πέταλον, a flower-leaf. G. *halbblumenblättrig*.) A flower consisting partly of free, partly of coalesced, petals.

Hemiphalacro'sis. ("ἡμις; φαλάκρωσις, baldness. G. *halbseitige Kahlheit*.) Baldness of one side of the head only.

Hemiphonia. ("ἡμις, half; φωνή, the voice. F. *hémiphonie*.) A half-voice, or a low whispering voice, as is heard in the advanced stages of Asiatic cholera.

Hemiphonous. ("ἡμις; φωνή. F. *hémiphone*.) Having a weak voice; half vocal.

Hemiphyllous. ("ἡμις; φύλλον, a leaf. G. *halbfreiblättrig*.) Same as *Hemipetalous*.

Hemipinic acid. ("ἡμις.) $C_{16}H_{10}O_6$. A product along with meconin, of the action of potash on opianic acid; it is a crystallisable substance soluble in alcohol and ether; almost insoluble in cold water. It melts at $180^{\circ}C$.

Hemiplegia. ("ἡμις; πλᾶγος, the side.) Same as *Hemiplegia*.

Hemiplectic. Same as *Hemiplegic*.

Hemiplegia. ("ἡμις; πλῆγῃ, a stroke; from πλῆσσω, to strike. F. *hémiplegie*; I. *emiplegia*; S. *hemiplegia*; G. *Hemiplegie*, *halbseitige Lähmung*.) Loss of motor power of one lateral half of the body. The usual cause is a lesion, on the opposite side to the paralysis, of some part of the corpus striatum and internal capsule, or of the crus cerebri, or sometimes of a cerebral convolution. The convulsions most frequently implicated are the dorsal part of the gyrus centralis anterior, the gyrus centralis posterior, and those adjoining. It is probable that the few cases reported of cerebral mischief occurring on the same side of the body as the paralysis involve some error of observation. The arm and the leg in equal or in different proportions, or sometimes one to the exclusion of the other, suffer most; the movements of parts which are consensual in action are seldom interfered with; the movements of the head, neck, and trunk are little affected, neither is there much difficulty in swallowing, breathing, or sleeping. There is generally some anæsthesia in the early stage, but it usually passes off shortly. The temperature of the affected part is generally a little raised, there is often considerable perspiration, and sloughing from pressure easily occurs. The electrical condition of the muscles is not affected at first, but sometimes there is rigidity and tonic spasm at an early stage, said to be caused by destruction of brain tissue. When recovery takes place that of the leg is earlier usually than that of the arm. When no recovery takes place the muscles become contracted and wasted, and the limb is fixed generally, but not always, in a state of flexion.

H., alter'nate. (L. *alternus*, one after the other. F. *hémiplegie alterne*.) Gubler's term for *H., crossed*.

H., cerebral, com'mon. (L. *cerebrum*, the brain. F. *hémiplegie cérébrale vulgaire* of Charcot.) The ordinary form of hemiplegia depending on brain lesion.

H., cortical. (L. *cortex*, the rind.) Hemiplegia depending upon a diseased condition of the cortex of the brain, and not on any direct affection of the central ganglia.

H., cross'ed. Paralysis of the muscles of the eye supplied by the oculo-motor or third nerve on the side opposite to that on which the limbs, face, and tongue are paralysed. It occurs in lesions of the crus cerebri.

H., dimid'iate. (L. *dimidio*, to divide into halves. F. *hémiplegie dimidiée*.) Same as *H., crossed*.

H., epilep'tic. ("Επιληψία.) Todd's term for a loss of muscular power in an arm or in the whole side of the body, following immediately upon an epileptic fit. It occurs more frequently on the side which has been most convulsed.

H., fa'cial. The ordinary form, affecting one side only, of *Paralysis, facial*.

H., hephæstic. ("Ηφαίστος, Vulcan, the god of working in metal.) The same as *Palsy, hammer*.

H., hyster'ical. (*Hysteria*.) Paralysis of one side of the body, occurring in a hysterical person, and not produced by disease of the opposite side of the brain. It occurs more frequently on the left side, and does not affect the face or the tongue.

H., spast'ic, in'fantile. (Σπαστικός, drawing in; L. *infans*, a little child.) A form

HEMIPLEGIC—HEMISYSTOLE.

of hemiplegia in children in which the paralysed limb is subjected to choreiform movements. The paralysis may arise before birth, but it generally commences when the child is two or three days old by an attack of severe and repeated, usually one-sided, convulsions, accompanied by unconsciousness, upon which the paralysis ensues either immediately or after some time; there is no anæsthesia. Subsequently contractions take place, choreiform movements set in, and then the mental powers fail, the child becoming more or less imbecile. At a later stage epileptic attacks commence, more marked on, or confined to, the paralysed side. The paralysed limbs grow very slowly, and although the girth may be about equal to that of the opposite limb in consequence of the muscular growth produced by the choreiform movements, yet the arrest of development of the limb is marked. The part of the brain involved is primarily the cortex of some of the convolutions of the motor area, where there is degeneration of structure or loss of substance following local inflammation or hæmorrhage, and the fibres of the corresponding pyramidal tract have undergone degeneration of the descending form.

H., spinal. (L. *spina*, the spine.) Loss of power of the whole or of one side of the body from disease of the spinal cord, without any loss of sensation of the opposite limb, such as occurs when one half of the cord has been cut through with a knife. In these cases the spinal disease does not entirely destroy the postero-lateral column and the grey matter of the cord.

Hemiplegic. ("ἡμισυς; πληγή. F. *hémiplegique*.) Of, or belonging to, the disease *Hemiplegia*.

Hemiplegy. Same as *Hemiplegia*.

Hemiplexia. ("ἡμισυς, half; πλῆξις, a stroke.) Same as *Hemiplegia*.

Hemiplexic. The same as *Hemiplegic*.

Hemiprism. ("ἡμισυς; πρίσμα, a thing sawn off, a prism.) Dana's term for a crystalline form having one face only of a prism.

Hemiprosoplégia. ("ἡμισυς; πρόσ-ωπον, the face; πληγή, a stroke.) A synonym of facial paralysis.

Hemiproteidin. ("ἡμισυς; protein.) $C_{24}H_{42}N_6O_{12} + H_2O$. A peptone-like body obtained by Schützenberger by treating albumin with dilute sulphuric acid and boiling.

Hemiprotein. ("ἡμισυς; protein.) Schützenberger's term for the insoluble residue formed when albumin is treated so as to produce hemialbuminose; it is probably Kühne's anti-albumin, and Meissner's dyspeptone.

Hemiptera. ("ἡμισυς; πτερόν, a wing. F. *hémiptères*; G. *Halbflügler*.) A Suborder of the Order *Rhyncoata*, Class *Insecta*, having four wings, the front pair coriaceous at the basal half, membranous at the apical half, and a mouth produced into a suctorial proboscis folded on the thorax.

Hemipteral. Same as *Hemipterous*.

Hemipterous. ("ἡμισυς, half; πτερόν, a wing. F. *hémiptère*; I. *hemiptero*; G. *halbflügelig*.) Half-winged; belonging to the Order *Hemiptera*.

Hemirrhachialgia. ("ἡμισυς; ῥάχις, the back; ἄλγος, pain. F. *hémirrhachialgie*.) Pain on one side of the spine.

Hemirrhombion. ("ἡμισυς; ῥόμβος, a rhomb.) A bandage so called from its shape; the same as *Hemitomon*.

Hem'ispasm. ("ἡμισυς; σπασμός, a drawing.) A convulsive movement or spasm affecting one side of the body only.

Hemispærium. ("ἡμισυς, half; σφαῖρα, a globe. F. *hémisphère*; G. *Halbkugel*.) A hemisphere.

Hemispheræ. See *Hemisphere*.

H. cerebri. (L. *cerebrum*, the brain.) The hemispheres of the brain.

Hemisphere. (Old F. *hemisphere*; from L. *hæmisphærium*; from Gr. ἡμισφαῖριον; from ἡμισυς, half; σφαῖρα, a ball. F. *hémisphère*; I. *emisfero*; S. *hemispherio*; G. *Halbkugel*.) The half of a sphere, or round body, or globe.

H.s., cerebellar. (L. *cerebellum*, the little brain. F. *hémisphères du cervelet*; G. *Halbkugeln des kleinen Gehirns*.) The lateral halves of the cerebellum. See *Cerebellum*, *hemispheres of*.

H.s., cer'ebreal. (L. *cerebrum*, the brain. F. *hémisphères du cerveau*; G. *Halbkugeln des Gehirns*.) The lateral halves of the cerebrum. See *Cerebral hemispheres*.

H.s. of brain. See *H.s., cerebral*.

H., ves'icle. (L. *vesicula*, a small blister.) A term applied to each half of the embryonic *Prosencephalon*.

Hemispherical. ("ἡμισφαίριον; F. *hémisphérique*; G. *halbkugelig*.) Relating to, or of the form of, a *Hemisphere*.

H. conden'ser. See *Reade's hemispherical condenser*.

H. gan'glia. (Γάγγλιον, a nerve-knot.) The *Cerebral hemispheres*.

H. papill'æ. See *Papille*, *hemispherical*.

Hemisptomum. ("ἡμισυς, half; στόμα, the mouth.) A sexually mature trematode worm found only in birds and mammals.

H. ala'tum, *Diesing.* (L. *alatus*, winged.) Found in the small intestine of *Canis azaræ*.

H. auri'tum, *Diesing.* (L. *auritus*, eared.) Found in the intestines of *Strix flammea*.

H. clathra'tum, *Diesing.* (L. *clathri*, a grating, or trellis work.) Found in the stomach and small intestine of *Lutra brasiliensis*.

H. commuta'tum, *Diesing.* (L. part of *commuto*, to change.) Found in the intestines of *Sterna caspia*.

H. corda'tum, *Diesing.* (L. *cordatus*, heart-shaped.) Found in the small intestine of *Felis catus*.

H. denticula'tum, *Diesing.* (L. *denticulatus*, furnished with small teeth.) Found in the intestine of *Alcedo hispida*.

H. excava'tum, *Diesing.* (L. *excavæ*, to hollow out.) Found in the intestines of *Ciconia alba*.

H. peda'tum, *Diesing.* (L. *pes*, a foot.) Found in the small intestine of *Didelphys cancrivora*.

H. podomor'phum, *Diesing.* (Πούς, a foot; μορφή, form.) Found in the intestine of *Circus cineraceus*.

H. spatha'ceum, *Diesing.* (L. *spatha*, the spathe of a palm tree.) Found in the intestine of *Lestris pomarinus*.

H. spat'ula, *Diesing.* (L. dim. of *spatha*, a spatula, or flat wooden instrument for stirring.) Found in the intestine of *Ula aluco*.

H. trilo'bium, *Rudolphi.* (Τριλοβος, three-lobed.) Found in the intestines of *Carbo cormorans*.

Hemisys'tolè. ("ἡμισυς; συστολή, a contraction.) A half contraction.

HEMITERIA—HEMP.

H., intermittent. (L. *intermitto*, to leave off for a time.) Malbranc's term for a condition which occurs occasionally in cases of mitral insufficiency in which both ventricles of the heart for some time contract together, but occasionally the right only seems to contract, as is evidenced by the absence of pulse and the presence of the curve of impulse, but without the mark of closure of the aortic valves in the cardiographic tracing.

Hemiteria. (Ἡμι, half; τέρας, a monster. F. *hémitérie*.) A congenital anomaly of the conformation of the body of an anatomically simple kind, which may either exert an injurious influence, being only a deformity, or may become an impediment to the due performance of one or more functions.

Hemitis. See *Hemitis*.

Hemitomon. (Ἡμισος, half; τέμνω, to cut.) Old term (Gr. *ἡμίτομον*), mentioned by Hippocrates, *de Iis qu. in Med. t. 2*, and Galen, in *Comm.*, applied to a certain bandage cut half through.

Hemitritæus. (F. *hémiritée*; G. *halb-dreitägig*.) Same as *Febris hemitritæa*.

Murchison is of opinion that even if the hemitritæus or febris hemitritæa of Galen were really a malarial fever, that the disease which was so called by later writers was true enteric fever.

Hemitropal. Same as *Hemitropous*.

Hemitrope. (Ἡμισος, half; τρέπω, to turn. F. *hémitrope*; G. *halbkrummlaufig*.) Applied by Haüy to a crystal formed of two halves regularly united together, but contrary to the natural position, as if the superior had undergone a half revolution upon the inferior.

Hemitropous. (Ἡμισος; τρέπω.) Having the characteristics of a *Hemitrope*.

Also, a term employed by Schleiden to the ovules of leguminous plants, which have the hilum intermediate between the micropyle and the chalaza. It is synonymous with the term amphitropous of Mirbel.

Hemiuncia. (Ἡμισος; L. *uncia*, an ounce.) Half an ounce.

Hemiuncion. Same as *Hemiuncia*.

Hemivertebra. (Ἡμισος, half.) Same as *Semivertebra*.

Hemlock. (Mid. E. *hemlok*, also spelt *humloke*, *humlok*, *homelok*; from Sax. *hemlic*, *hymlice*, of which the first syllable has probably an evil signification, and the second is from Sax. *lede*, a leak. F. *cique*; I. *cicuta*; S. *cicuta*; G. *Schierling*.) The *Conium maculatum*.

Also, the same as *H. spruce*.

H., American. The *Cicuta maculata*.

H., bas'tard. The *Anthriscus sylvestris*.

H. bath. See *Bath*, hemlock.

H. cher'vil. The *Cherophyllum cicutaria*.

H., com'mon. The *Conium maculatum*.

H. drop'wort. (F. *anranthe safranée*; G. *safranengelbe Rebendwurz*.) The *Anranthe crocata*.

H., ex'tract of. See *Extractum conii*.

H. fruit. See *Conii fructus*.

H., great broad-leav'ed. The *Molospersperm cicutarium*.

H., ground. The *Taxus canadensis*.

H. gum. A synonym of *Canada pitch*, the resinous exudation of the hemlock spruce, *Abies canadensis*.

H., juice of. See *Succus conii*.

H. leaves. See *Conii folia*.

H., les'ser. The *Æthusa cynapium*.

H. pars'ley. The *Conioselinum canadense*.

H., pill of, com'pound. See *Pilula conii composita*.

H. pitch. Same as *Canada pitch*, *Pix canadensis*, U.S. Ph.

H. pitch plas'ter. The *Emplastrum picis canadensis*, U.S. Ph.

H. plas'ter. The *Emplastrum cicute*.

H., poi'son. The *Conium maculatum*.

H., poi'soning by. See *Conium*, poisoning by.

H. poult'ice. The *Cataplasma conii*.

H., spotted. The *Conium maculatum*.

H. spruce. The *Abies canadensis*.

H. spruce fir. The *Abies canadensis*.

H. stork's-bill. The *Erodium cicutarium*.

H., tinc'ture of. See *Tinctura conii*.

H. tree. The *Abies canadensis*.

H., wa'ter. (F. *ciculaire vireuse*; G. *giftiger Wutrich*.) The *Cicuta virosa*.

H., wa'ter, Amer'ican. The *Cicuta maculata*.

H. wa'ter-drop. The *Enranthe crocata*.

H. wa'ter-drop'wort. The *Enranthe crocata*.

H., wa'ter, fine-leav'ed. The *Enranthe phellandrium*.

H., wil'd. The *Cicuta maculata*.

Hemochro'in. See *Hemochro'in*.

Hemochrome. See *Hemochrome*.

Hemo'dia. See *Hemodia*.

Hemodynamom'eter. See *Hemodynamometer*.

Hemogas'tric. See *Hemogastric*.

Hemom'eter. See *Hemometer*.

Hemometrecta'sia. See *Hemometrectasia*.

Hemophthal'my. See *Hemophthalmia*.

Hemop'tic. See *Hemoptic*.

Hemop'toe. See *Hemoptoe*.

Hemopto'ic. See *Hemoptoic*.

Hemoptysis. See *Hemoptysis*.

Hemorrhage. See *Hemorrhage*.

Hemorrhag'ic. See *Hemorrhagic*.

Hemorrhagiparous. See *Hemorrhagiparous*.

Hemorrhagy. Same as *Hemorrhage*.

Hemorrhœ'a. See *Hemorrhœa*.

Hemorrhœ'ic. See *Hemorrhœic*.

Hemorrhoid'al. See *Hemorrhoidal*.

Hemorrhoids. See *Hemorrhoids*.

Hemos'pasy. See *Hemospasia*.

Hemostasis. See *Hemostasis*.

Hemostatic. See *Hemostatic*.

Hemostatics. See *Hemostatics*.

Hemotho'rax. See *Hemothorax*.

Hemp. (Mid. E. *hemp*; contracted from *henep*; Sax. *henep*, *hænep*; G. *hanf*; F. *chanvre*; I. *canapa*; S. *cañamo*; all from L. *cannabis*; from Gr. *κάνναβις*; from Sans. *çaña*, hemp.) The *Cannabis sativa*.

H. ag'rimony. The *Eupatorium cannabinum*.

H. ag'rimony, wa'ter. The *Bidens tripartita*.

H., Amer'ican. See *Cannabis americana*.

H., bas'tard. The *Galeopsis tetrahit*.

HEMPWEED—HENNA.

H., Cana'dian. The root of *Apocynum cannabinum*.

H., India, extract of. See *Extractum cannabis indicæ*.

H., Indian. See *Cannabis indica*.

Also, the *Apocynum cannabinum*.

H., Indian, tincture of. See *Tinctura cannabis indicæ*.

H., mountain. The *Hyoscyamus in-sanus*.

H. net'tle, com'mon. The *Galeopsis tetrahit*.

H. net'tle, red. The *Galeopsis ladanum*.

H. net'tle, trailing. The *Galeopsis ochroleuca*.

H. op'eratives, disea'ses of. (L. *operator*, to work.) Hemp beaters, carders, and spinners, like cotton and flax operatives, suffer much from dust arising from the material on which they work, and which consists chiefly of siliceous particles and fragments of woody fibre. They are liable to pulmonary diseases, such as chronic bronchitis and pneumonia and phthisis, experiencing cough, chronic bronchial catarrh, severe pain in chest, anæmia, emaciation, debility, and occasionally profuse diarrhœa. An inflammation of the mouth and tongue has been observed, which results from the practice of continually wetting the thread with saliva, using the finger as a means, and thus conveying acid and irritating matters from the hemp to the tongue.

H. plant. The *Cannabis sativa*.

H. seed. The fruit of *Cannabis sativa*. It is oily and mucilaginous. Used in decoction as a demulcent in gonorrhœa and cystitis. See *Fructus cannabis*.

H. seed cal'culus. (L. *calculus*, a small stone.) Wollaston's term for a small, smooth, globular oxalate of lime calculus, of the size and shape and colour of a hemp seed. It is generally found in the kidney.

H.-seed oil. A greenish or brownish-yellow oil obtained from the seed of hemp, *Cannabis sativa*. It is used in the manufacture of soft soap.

H.-spin'ners' disea'ses. See under *H. operatives, diseases of*.

H. weed. See *Hempweed*.

H., wild. The *Ambrosia trifida*.

Hemp'weed. The *Eupatorium aromaticum*.

H., aromati'c. The *Eupatorium aromaticum*.

H., round-leav'ed. The *Eupatorium rotundifolium*.

Hemp'worts. The plants of the Nat. Order *Cannabinacæ*.

Hen. (Sax. *heun*, *hen*, *hæn*, formed from *hana*, a cock; F. *poule*; I. *gallina*; S. *gallina*; G. *Henne*.) A female bird; especially the female of the domestic fowl.

H.-blind ness. A name for night-blindness, or *Nyctalopia*, because hens are said to be subject to it.

H.'s foot. The *Torilis anthriscus*, or the *Caucalis daucoides*.

H., moor. The coot, *Fulica atra*.

H., water. The *Gallinula chloropus*; good for food.

Hen'bane. (E. *hen*, a fowl; *banc*, poison. F. *jusquiame*; I. *giusquiamo*; S. *beleno*; G. *Bilse*.) The *Hyoscyamus niger*.

H. and col'ocynth, pill of. See *Pilula colocynthidis et hyoscyami*.

H., black. (F. *jusquiame noire*.) The *Hyoscyamus niger*.

H., com'mon. The *Hyoscyamus niger*.

H., extract of. See *Extractum hyoscyami*.

H., great white. The *Hyoscyamus albus*.

H., juice of. See *Succus hyoscyami*.

H. leaves. See *Hyoscyami folia*.

H. of Peru'. An old name for the *Nicotiana tabacum*, or tobacco.

H., pois'oning by. See *Hyoscyamus*, poisoning by.

H. seed. See *Hyoscyami semen*.

H., tinc'ture of. See *Tinctura hyoscyami*.

Hen'bit. The *Lamium amplexicaule*.

Hendecagon. ("Ενδεκα, eleven; γωνία, an angle. F. *hendécagone*.) A figure having eleven equal angles and sides.

Hendec'atane. $C_{11}H_{24}$. A hydrocarbon which is supposed to exist in paraffin oils.

Hendec'atyl. ("Ενδεκα, eleven; ἔλαιον, stuff.) A compound radicle containing eleven atoms of carbon.

H. group. The most important member is methyl-nonyl ketone, $CH_3(C_9H_{19})CO$, which forms the essential constituent of the essential oil of rue from *Ruta graveolens*.

Hen'le, Friedrich Gustav Jacob. A German anatomist and pathologist. Born at Fürth in 1809, died at Göttingen in 1885.

H.'s fen'estrated mem'brane. (L. *fenestra*, a window.) A thin brittle film of elastic tissue with irregularly-shaped apertures found beneath the endothelium of arteries. It can be stripped off in small shreds, which have a tendency to roll or curl up at their borders.

H.'s fibres. The broad, flat, elastic fibres forming the *H., fenestrated membrane of*.

H.'s lay'er. The outermost layer of the inner root-sheath of the hair. See under *Hair-root*.

H.'s loop. See *H., looped tubes of*.

H., loop'ed tubes of. See under *Tubuli uriniferi*.

H.'s root-sheath of hair. The outer layer of the two sets of cells forming the inner root-sheath of the hair. See under *Hair-root*.

H.'s sheath of nerves. A delicate lamella of connective tissue covered on both sides by epithelioid cells which generally invests the finest branches of nerves.

Hen'na. The *Lawsonia inermis*. The dried leaves, powdered and made into a paste, are used for colouring the nails of women and the hair yellow; it is also said to be useful in headache, and is applied to the soles of the feet in smallpox to save the face from the eruption. Waring suggests its application to the soles in the native affection called burning of the feet. The fresh leaves, bruised or mixed with vinegar, are applied to wounds and ulcers to quicken healing. The flowers are distilled to form a perfume, which is also used in megrim. The fruit is considered emmenagogue; and a decoction of the bark is used in hepatitis, affections of the spinal cord, calculous concretions, and leprosy.

H. plant. The *Lawsonia inermis*.

HENOGENESIS—HEPATATROPHIA.

Henogen'esis. ('Ενός, gen. of εἷς, one; γένεσις, an origin.) The same as *Henogeny*.

Henog'eny. ('Ενός; γένος, race.) A term proposed by Föl as a substitute for Hæckel's term *Ontogeny*, meaning thereby the development of the individual proper as opposed to the historic or palæontological development of the same.

Henophyllous. ('Ενός, genitive of εἷς, one; φύλλον, a leaf. F. *hénophylle*; G. *einblättrig*.) Having one leaf.

Henophyllum. ('Ενός; φύλλον.) The *Convallaria majalis*, from its mode of growth.

Heno'sis. ('Ενός.) A growing into one; applied to *Symblypharon*, or the uniting together of the eyelids.

Henotannic acid. A name given by Abd-el-Aziz to a brown substance with a resinoid fracture and the chemical properties of tannin, which he obtained from henna.

Henrice'a. (R. S. *Henrici*, a Danish botanist.) A Genus of the Nat. Order *Gentianaceæ*.

H. pharmacear'cha. The *Ophelia chirata*. (Dunglison.)

Henricus rub'ens. (L. *rubeus*, red.) Old term for vitriol calcined to redness.

Henry, Thomas. An English physician, born at Wrexham in 1734, died at Manchester in 1816.

H.'s magnesia. Same as *Magnesii carbonas ponderosa*.

Henry, William. An English chemist, born at Manchester in 1775, died in 1836.

H.'s law. The volume of a gas dissolved by a given quantity of water at a given temperature is always the same.

Hensen, Victor. A German physiologist and embryologist. Born in Schleswig in 1835, still living, and now Director of the Physiological Institute of Kiel.

H.'s disc. The transverse dark line dividing the transparent part of a primitive muscular fibre.

H.'s prop-cells. (G. *Stützzellen*.) The columnar epithelial cells on the outer side of the last row of outer hair-cells of the organ of Corti.

H., support'ing cells of. Same as *H.'s prop-cells*.

Henslov'ia'ceæ. (*Henslow*.) A Nat. Order of perigynous, calycifloral Exogens of the Alliance *Saxifragales*, having a tree-like habit, styles united into a cylinder, and seeds without labumen. It is allied to the *Hydrangeaceæ*.

Henslov'ian membrane. A term for the cuticle of plants.

Henslow, John Stevens. Born at Rochester in 1796, died in 1861.

Hen'ware. The *Alaria esculenta*.

Hep. Same as *Hip*, the fruit of the dog-rose.

H. tree. The *Rosa canina*.

Hep'ar. ('Ηπαρ, the liver. F. *foie*; I. *segato*; S. *higado*; G. *Leber*.) The liver or organ which secretes the bile.

Also, an old term for substances which resemble, or are supposed to resemble, liver.

H. adipo'sum. (L. *adeps*, fat.) Fatty degeneration of the liver.

H. adulteri'num. (L. *adulterinus*, spurious.) The spleen.

H. antimon'ia'tum. Old term for an oxy-sulphuret of antimony.

H. antimo'nii. (G. *Spießglanzschwefelleber*.) An old name for a substance produced by deflagrating together equal parts of antimony sulphide and potassium nitrate.

H. antimo'nii calca'reum. The *Calcaria stibiato-sulphurata*.

H. cal'cis. (L. *calx*, lime. F. *foie de soufre calcaire*; G. *Kalkschwefelleber*.) The sulphide of calcium.

H. indura'tum. (L. *induratus*, hardened.) See *Liver*, *induration of*.

H. kali'num. (*Kali*.) A synonym of *Potassium sulphide*.

H. martia'lē. (L. *Mars*, a name of iron.) Old term for a compound of liver of sulphur and oxide of iron.

H. migrans. (L. *migro*, to change one's abode.) See *Liver*, *floating*.

H. mo'bilē. (L. *mobilis*, movable.) See *Liver*, *floating*.

H. moschatifor'mē. (*Nux moschata*, the nutmeg; L. *forma*, likeness.) The condition described under *Liver*, *nutmeg*.

H. sangui'nis. (L. *sanguis*, blood.) Coagulated blood.

H. sinis'trum. (L. *sinister*, on the left side.) The spleen.

H. succenturia'tum. (L. *succenturio*, to receive as a substitute.) The *Liver*, *accessory*.

H. sul'furis kali'num. (*Kali*. F. *foie de soufre alkaline*; G. *Schwefelleber*.) The *Potassa sulfurata*, B. Ph.

H. sul'phuris. An old name for *Potassa sulfurata*.

H. sul'phuris calca'reum. (L. *calx*, lime. G. *Kalkschwefelleber*.) Calcium sulphide.

H. sul'phuris volat'ilis. (L. *volatilis*, fleeting.) A name for Boyle's fuming liquor, or ammonium sulphide.

H. uteri'num. (L. *uterus*, the womb.) Old term for the *Placenta*. (*Castellus*.)

H. variega'tum. (L. *variegatus*, to make of various colours.) The condition of hepatic congestion called *Liver*, *nutmeg*.

Hepatal'gia. ('Ηπαρ, the liver; ἄλγος, pain. F. *hepatalgie*; I. *epatalgia*; S. *hepatalgia*; G. *Leberschmerz*.) Pain affecting the liver.

The term is especially applied to pain in the right hypochondrium of a paroxysmal nature and supposed to be neuralgic, but there is great doubt whether such a disease exists.

H. calculo'sa. (L. *calculus*, a small stone.) The pain produced by gall-stones.

H. pettit'iana. (*Petit*.) Pain from distension of the gall-bladder.

H. phlegmoni'des. (Φλεγμονή, inflammation below the skin; εἶδος, likeness.) Pain from acute inflammation of the liver, or *Hepatitis*.

Hepatal'gic. (F. *hépatalgique*.) Of, or belonging to, the liver pain, or *Hepatalgia*.

Hepataposte'ma. ('Ηπαρ, the liver; ἀπόστημα, an abscess.) Abscess of the liver.

Hepatapostematic. (F. *hépatapostématique*.) Of, or belonging to, abscess of the liver, or *Hepatapostema*.

Hepatatrophia. ('Ηπαρ, the liver; ἄ, neg.; τροφή, nourishment.) Atrophy of the liver.

HEPATAUXE—HEPATIC.

Hepataux'ë. (Ἡπαρ; αὔξη, increase.) Increase in size, or enlargement, of the liver.

Hepatechēma. (Ἡπαρ; ἤχημα, a sound. F. *hépatechème*; G. *Leberlaut*.) Term for the sound heard by percussion over the liver, or by the stethoscope applied over its region. See also *Fremitus, hepatic*.

Hepate'chos. (Ἡπαρ; ἤχος, an echo.) Same as *Hepatechēma*.

Hepatelco'sis. See *Hepathelcosis*.

Hepatēphractic. (F. *hépatēphrastique*.) Of, or belonging to, obstruction of the liver, or *Hepatēphraxis*.

Hepatēphraxis. (Ἡπαρ, the liver; ἐμφορaxis, obstruction. F. *hépatēphrasie*; I. *epatēfrassia*; S. *hepatēphraxis*; G. *Leberverstopfung*.) Obstruction of the liver.

Hepatencephalo'ma. (Ἡπαρ; ἐν-cephalo'ma.) Encephaloid cancer of the liver.

Hepateria. (Ἡπαρ.) Remedies for diseases of the liver.

Hepate'rous. (Ἡπαρ.) Same as *Hepatic*.

Hepathæmorrhag'ia. (Ἡπαρ, the liver; αἱμορραγία, an eruption of blood. F. *hépathémorrhagie*; G. *Leberblutung*.) Hemorrhage from the liver.

Hepathelco'sis. (Ἡπαρ; ἑλκωσις, ulceration. F. *hépatelcose*; G. *Lebergeschwür*.) Ulceration of the liver.

Hepathy'derus. (Ἡπαρ, the liver; ὕδρωρ, dropsy. F. *hydropisie de foie*; G. *Leberwassersucht*.) Dropsy of or from the liver.

Hepathydrocyst'is. (Ἡπαρ, the liver; ὕδωρ, water; κύστις, a bladder. F. *hépathyrocyste*; G. *Leberwasserbläschen, Leberwasserblasenwurm*.) A hydatid in the liver.

Hepatic. (Ἡπατικός, from ἥπαρ, the liver. F. *hépatique*; I. *epatico*; S. *hepatico*; G. *hepatisch*.) Of, or belonging to, or resembling, the liver.

Also, resembling liver of sulphur.

H. abs'cess. (L. *abscessus*, an abscess; from *abscedo*, to go away. F. *abcès hépatique*; G. *Leberabscess*.) A collection of pus in the substance of the liver. It may result from contusion, rupture, or penetrating wound of the liver. It may follow ulcers of the mucous membrane of the intestine and dysentery, operations for hæmorrhoids and fistula in ano, and the operation of lithotomy, in which cases the starting point is the conveyance by the portal veins of septic matter, which causes embolic foci in the liver and abscess. Hepatic abscesses are developed in a similar way through the systemic veins from amputations and compound fractures of the lower limbs, lumbrici, and from foreign bodies, and hydatid cysts, which excite suppuration around them. Hepatic abscesses may be single or multiple, superficial or deep, encysted or diffused. It is a disease of adult life, and is especially common in tropical and malarial districts. It is often painless and chronic; but it is sometimes acute, and is then attended with sensations of weight and pain in the region of the liver, spasmodic contraction of the rectus abdominis, and occasionally fluctuation can be distinguished. Other symptoms are rigors, muddy complexion, foul tongue, hectic, night sweats, and emaciation. It is liable to be mistaken for perihepatitis, distended gall-bladder, cancer, and hydatid cyst.

H. air. An old term for *Hydrogen sulphide*.

H. al'oēs. See *Aloe hepatica*.

H. ap'oplex'y. (Αποπληξία.) Effusion of blood into the substance, or under the capsule, of the liver.

H. artery. (F. *artère hépatique*; G. *Leberschlagader*.) One of the branches of the celiac axis. It runs forwards over the upper border of the pancreas and below the foramen of Winslow to the upper margin of the pylorus, where it gives off its gastro-duodenal branch. It then ascends between the layers of the small omentum in front of the foramen of Winslow and the portal vein, and to the left of the common bile-duct. Its branches are the gastro-duodenal, the pyloric, the right hepatic, and the left hepatic. It supplies the upper border of the stomach, the duodenum, the great omentum, and the liver.

H. ascites. (Ασκίτης, a kind of dropsy.) Dropsy depending on disease of the liver.

H. bile. The bile contained in the liver as distinguished from that in the gall-bladder.

H. cells. See *Liver cells*.

H. col'ic. Same as *Gall-stone colic*.

H. congest'ion. See *Liver, congestion of*.

H. cyst. See *Liver, cyst of*.

H. dex'trine. (L. *dexter*, to the right.) A synonym of *Glycogen*.

H. duct. (F. *canal hépatique*; G. *Lebergang*.) The hepatic duct is formed by the union of a right and left branch, which proceed from the corresponding lobes of the liver, and lie in the transverse fissure. After their junction the duct descends to the right within the gastro-hepatic omentum, in front of the vena portæ, and with the hepatic artery to its left. Its length is about two inches and its diameter about two lines. Below it meets with the cystic duct, and forms by joining with it the ductus communis choledochus. See *Liver, ducts of*.

H. ducts, inflam'mation of. Inflammation of some part of the course of the channels which convey the bile from the liver to the intestine may be of catarrhal origin, or may be an extension of hepatitis, or may own a mechanical cause, as injury or the pressure of a gall-stone. Distension, flatulence, tenderness over the liver, nausea, vomiting, some amount of jaundice, and more or less fever, are usually present.

H. ducts, obstruct'ion of. A condition which occurs in many of the diseases of the liver from extension of inflammation, from pressure of a morbid growth, or from impaction of a gall-stone. Its result is more or less of jaundice, according to the area of the liver obstructed.

H. dys'entery. See *Dysentery, hepatic*.

H. eph'e'lis. See *Ephelis hepatica*.

H. flex'ure. (L. *flexura*, a bending. G. *Leberkrümmung des Grimmdarms*.) The bend at the junction of the ascending and the transverse colon.

H. flux. Same as *Hepatorrhœa*.

H. frem'itus. See *Fremitus, hepatic*.

H. gas. Hydrogen sulphide, because it is made from potassium sulphide, or liver of sulphur.

H. glands. See *Glands, hepatic*, and *Glandule hepaticæ*.

H. hab'it. The conditions of body, inherent or acquired, which tend to disturbance of the functions of the liver.

H. insan'ity. See *Insanity, hepatic*.

H. is'lets. (F. *îlots hépatiques*.) Same as *H. lobules*.

HEPATICA—HEPATICO-RENAL.

H. lobes. (Λόφος, the lobe of the liver. *F. lobes hépatiques*; *G. Leberlappen*.) The primary anatomical divisions of the liver. In man the named lobes are the right and left, the quadrate, the spigelian, and the caudate.

H. lob'ules. (*F. lobules hépatiques*; *G. Leberläppchen*.) Spheroidal or polygonal subdivisions or segments of the liver, of a diameter varying from 1-24th to 1-12th of an inch, which in some animals, as the pig, have a complete investment of connective tissue, but which in man is incomplete. They are composed of blood-vessels and cells. Surrounding the periphery is the plexus of the interlobular veins from the portal vein. From these veins capillaries pass into the centre of the lobule and form a central intralobular vein, which terminates in a sublobular vein, on which the lobule is seated. Branches of the hepatic artery accompany those of the interlobular vein, and discharge their contents into them. The cells are arranged radially between the vessels, and the hepatic ducts take origin in minute lobules between the cells.

H. phthi'sis. (Φθίσις, a wasting.) Atrophy of the liver.

H. plex'us. (*L. plexus*, a weaving. *F. plexus hépatique*; *G. Lebergeflecht*.) Branches of the sympathetic and left pneumogastric nerves surrounding the vena portæ, hepatic artery, and hepatic duct. It gives off, or is continuous with, the pyloric, gastro-epiploic, and cystic plexuses.

H. pulsa'tion. A series of impulses perceived when the hand is placed over the region of the liver in cases of insufficiency of the tricuspid valve. It is felt at an early period of the disease, on account of the absence of valves in the hepatic vein, and is due to the regurgitation of the blood through the great veins at each systole of the heart.

H. starch. A synonym of *Glycogen*.

H. syph'ilis. See *Liver*, *syphilitic disease of*.

H. trabec'ulæ. (*L. trabecula*, dim. of *trabs*, a beam.) A plexus of liver cells which was formerly supposed to support the capillaries of the liver.

H. vein, blood of. According to C. Schmidt, the blood of the hepatic vein contains a large quantity of sugar and no fibrin. Pavy finds only traces of sugar.

H. vein, bra'chial. (Βραχιών, the arm.) An old term for the right basilic vein.

H. veins. (*F. veines hépatiques*; *G. Leberblutadern*.) The hepatic veins commence in the substance of the hepatic lobule, the radicles being continuous with the capillary plexus formed by the interlobular veins. These radicles converge towards an intralobular vein, which traverses the centre of the lobule, and empties itself into a sublobular vein; the sublobular veins unite with each other, and in the end form the right and left hepatic veins, which open into the vena cava inferior a little below the diaphragm. The venæ hepaticæ are not surrounded by connective tissue. They remain patent when divided.

H. wa'ters. Mineral waters containing hydrogen sulphide.

Hepatica. (Ἡπαρ, the liver. *F. hépatique*; *I. fegatella*; *G. Leberkraut*.) A Genus of the Nat. Order *Ranunculaceæ*. Liverwort.

Also, remedies for liver disorders.

H. acutilo'ba, De Cand. (*L. acutus*,

pointed; *lobus*, a lobe.) Hab. America. Used as *H. triloba*, of which it is probably a pointed-leaved variety.

H. al'ba, Ard. (*L. albus*, white. *F. hépatique blanche*.) The *Parnassia palustris*.

H. america'na, De Cand. Probably a rounded-leaved variety of *H. triloba*.

H. commu'nis. (*L. communis*, common. *F. hépatique commune*, *h. des jardins*.) The *H. triloba*.

H. fonta'na, De Cand. (*L. fontanus*, belonging to a spring. *F. hépatique des fontaines*.) A name for the *Marchantia polymorpha*, or liverwort.

H. her'ba. A name for the fungus *Marchantia polymorpha*, because it was used in liver complaints.

H. jecora'ria. (*L. jecur*, the liver.) A name for the fungus *Marchantia polymorpha*.

H. nob'ilis, Möuch. (*L. nobilis*, noble. *F. hépatique noble*; *G. Edelleberkraut*.) The *H. triloba*.

Also, the *Parnassia palustris*.

H. polymor'pha. The *Marchantia polymorpha*.

H. stella'ris. (*L. stella*, a star.) The *Asperula odorata*.

H. stella'ta. (*L. stellatus*, starry. *F. hépatique étoilée*.) The *Asperula odorata*.

Also, the fungus *Marchantia polymorpha*.

H. terres'tris. (*L. terrestris*, belonging to the earth.) The *Marchantia polymorpha*, or liverwort.

H. terres'tris jecora'ria. (*L. jecur*, the liver.) The *Marchantia polymorpha*.

H. trifo'lia. (*L. tres*, three; *folium*, a leaf.) The *H. triloba*.

H. trilo'ba, Chaix. (*L. tres*; *lobus*, a lobe. *G. Edelleberkraut*.) Hab. Europe and America. Liverwort. The leaves were formerly official in the U.S. Ph. as a mild demulcent tonic and astringent, having some diuretic and deobstruent properties. Used in chronic liver affections, hæmoptysis, chronic coughs, diabetes, dysentery, and as a vulnerary. The *Anemone hepatica*, Linn.

H. vulga'ris. (*L. vulgaris*, common.) The fungus *Marchantia conica*.

Hepatica'ceæ. A Nat. Order of the Subclass *Acrogonæ*. Same as *Hepaticæ*.

Hepaticæ. (Ἡπαρ, the liver. *F. hépatiques*; *I. epatiche*; *S. hepaticas*; *G. Lebermoose*.) Liverworts. A Class of the Group *Muscineæ*, the plants consisting of a flat, dichotomously-branched thallus or thalloid stem, or of a leafy filiform stem; they generally grow flat to the ground, or have a dorsi-ventral character; the capsule generally contains elaters, seldom a columella.

H., caules'cent. (*L. caulis*, a stalk.) The liverworts which at the germination of the spores form a short cellular filament.

H., frondes'cent. (*F. frondesco*, to put forth leaves.) The liverworts which at the germination of the spores form a new sexual plant.

Hepatico-colic. (Ἡπαρ; κόλον, the colon.) Of, or belonging to, the liver and colon.

Hepatico-gastric. See *Hepatogast'ric*.

Hepati'con. (Ἡπατικός, pertaining to the liver. *F. mal hépatique*; *G. Leberleiden*.) Disease of the liver.

Hepatico-re'nal. (*L. hepaticus*, belonging to the liver; *renalis*, belonging to the

HEPATICOUS—HEPATITIS.

kidney. *F. hépatocoréale.*) *Of*, or belonging to, the liver and the kidney.

Hepaticous. (*Ἡπατικός*, pertaining to the liver.) *Of* a liver colour; lobed like the liver.

Hepatics. (*Ἡπατικός*, *F. hépatiques.*) Medicaments which act on the liver and increase the secretion of bile.

Hepaticula. (Dim. of *L. hepar*, the liver.) Chronic hepatitis.

Hepaticus. See *Hepatic*.

H. flos. (*L. flos*, a flower.) The *Hepatica triloba*.

Hepatification. (*L. hepar*, the liver; *factio*, a making.) The same as *Hepatisation*.

Hépatin. (*Ἡπαρ*, the liver.) Pavy's former term for the *Glycogen* of the liver.

Hepatirrhœa. (*Ἡπαρ*, the liver; *rhoia*, a flow. *F. hépatirrhée*; *G. Leberfluss*.) A purging with bilious evacuations, in which portions of a fleshy substance like liver are voided.

Also, a form of diarrhœa.

It has been suggested that the term should be restricted to the evacuations connected with abscess of the liver consisting of sanguineous and purulent matter mixed with bile and feces.

Hepatis descensus. (*L. hepar*, the liver; *descensus*, a climbing down.) The condition of the liver in which it has a lower position than natural.

H. suspensorium. (*L. hepar*; *suspendo*, to hang up.) The suspensory ligament of the liver.

Hepatisatio. See *Hepatisation*.

H. pulmonum. (*L. pulmo*, a lung.) See *Lung*, *hepatisation of*.

Hepatisation. (*Ἡπαρ*, the liver. *F. hepatisation*; *I. epatizzazione*; *S. hepatication*; *G. Hepatisation*, *Verleberung*.) A consolidation of the lung tissue, so that it becomes solid and friable, somewhat like liver.

H., grey. (*F. hépatisation grise*; *G. graue Verleberung*.) A term for the condition of the lung in the third stage of *Pneumonia*.

H., red. (*F. hépatisation rouge*; *G. rothe Verleberung*.) A term for the condition of the lung in the second stage of *Pneumonia*.

H., white. (*F. hépatisation blanche*; *G. weisse Verleberung*.) A condition observed by Virchow in the lungs of stillborn syphilitic children, especially in association with syphilitic pemphigus. The affected part of the lung is dense, yellowish-white, tough, and pits on pressure.

H., yellow. (*F. hépatisation jaune*; *G. gelbe Verleberung*.) A term applied to the condition of the lung in the third stage of pneumonia when it takes on a yellow appearance from the excess of pus-corpuscles. See *Pneumonia*.

Hepatised. (*Ἡπαρ*.) The being subjected to *Hepatisation*.

Also, charged with sulphur.

H. ammo'nia. Ammonium sulphide.

Hépatisie. (*Ἡπαρ*, the liver; *φθίσις*, consumption.) Alibert's term for a form of atrophy or consumption due to a chronic disease of the liver.

Hepatitis. Same as *Hepatisation*.

Hepatism. (*Ἡπαρ*.) A term applied by Verneuil to denote the general derangement of the system which is produced by, and characterises, disturbance of the functions, or disease, of the liver, and its influence on the repair of

injuries, an influence which he declares to be generally injurious. Hepatism may cause the wound to become inflamed, erysipelatous, diffusely phlegmonous, or gangrenous, from which may result traumatic fever, adynamic septicæmia, or rapid pyæmia; or secondary hæmorrhages, of frequent recurrence and difficult to arrest, may occur; or hæmorrhages from some mucous surface may result; or the wound may stir up the pre-existing liver disease, and jaundice, or gall-stone colic, or ascites may return, with vomiting, anorexia, and diarrhœa. These dangers may occur after a slight wound or operation as well as after the most severe.

Hepatic. (*F. hépatique*.) *Of*, or belonging to, inflammation of the liver, or *Hepatitis*.

Hepatitis. (*Ἡπαρ*, *F. hepatite*; *I. epatite*; *S. hepatitis*; *G. Leberentzündung*.) Inflammation of the substance of the liver.

H., acute. (*L. acutus*, sharp. *F. hépatite aigue*; *G. acute Leberentzündung*.) A condition which is seldom seen in temperate climates, and not very frequently in the tropics in its pronounced form. It may be caused by injury, by the unhealthy conditions of life in the tropics especially when combined with alcoholism, by malarial influences, by dysentery, by the acute infectious fevers, by yellow fever, and by similar causes. It commences with chilliness or rigors and fever, the appetite is lost, the tongue is white and coated, nausea and bilious vomiting occur; often there is great thirst, a short dry cough, and pain in the right shoulder; the bowels are constipated, and the urine contains bile-pigment and occasionally albumin. The liver is sometimes enlarged and generally tender on pressure; there is a dull pain when the inflammation is deep seated, a more acute pain if it is near the surface, and when combined with perihepatitis there may be pain and difficulty in breathing. The liver is soft from infiltration with inflammatory exudation, red from congestion of the vessels, or pale from excess of leucocytes; embryonic tissue is developed in the walls of the blood-vessels and the bile-ducts, in the connective tissue, and in Glisson's capsule; and the hepatic cells are the subject of cloudy swelling. Hepatitis may end in resolution, in a chronic enlargement, or in abscess.

H. apostematosa. (*Ἀποστήμα*, an abscess.) The form of *H., acute*, which ends in abscess of the liver.

H., chronic. (*L. chronicus*, long-lasting.) A term applied both to chronic perihepatitis and to cirrhosis of the liver.

H., circumscribed syphilitic. Term applied to a condition in which one or several gummatous nodules, varying in size from a pea to a hen's egg, are found in the liver, the tissue of which may either be normal, consecutively hypertrophied, or the subject of fatty or amyloid degeneration. It may occur either in the child or in the adult, and in connection with the lobulated liver, which represents its terminal stage, it constitutes the most frequent form of hepatic syphilis.

H. cystica. (*Κύστις*, a bladder.) Inflammation of the gall-bladder.

H. cytophthora. (*Κύτος*, a hollow; *φθορά*, destruction.) The same as *Liver, acute atrophy of*.

H. diffusa parenchymatosa. (*L.*

HEPATIZON—HEPATOMPHALUM.

diffusus, from *diffundo*, to spread; Gr. *παρίγχυμα*, the substance of the viscera.) The same as *Liver*, *acute atrophy of*.

H., diffus'd. (L. *diffusus*, shed abroad.)

A term for acute yellow atrophy of the liver.

H. externa. (L. *externus*, outward.)

The same as *Perihepatitis*.

H. fibrosa. (L. *fibra*, a filament.) Cirrhosis of the liver.

H., interstitial. (L. *interstitium*, an interval of space.) Cirrhosis of the liver.

Also, a proliferation of connective tissue proceeding from the walls of the gall ducts when these are filled with concretions, giving rise to induration of the hepatic parenchyma in the vicinity of the affected ducts. The growth may also extend to the interlobular structure of the entire gland, inducing a condition that corresponds essentially to cirrhosis.

H., interstitial, chronic. (L. *chronicus*, long-lasting.) Cirrhosis of the liver.

H. longa. (L. *longus*, long.) Same as *H., chronic*.

H., metastatic. (Μεταστατικός, denoting change.) Inflammation of the liver following inflammation in some other part of the body.

H. occulta. (L. *occultus*, hidden.) An old term applied to a slowly progressing disease of the liver which was probably in most cases cirrhosis.

H., parenchymatous. (Παρίγχυμα, anything poured in beside, the substance of the viscera.) The inflammation of the liver substance which constitutes *H., acute*.

H., suppurative. (L. *suppuro*, to collect matter.) Acute inflammation of the liver ending in abscess.

H., syphilitic. See *Liver*, *syphilis of*.

H., tropical. (L. *tropicus*, tropical.)

Inflammation of the liver, with a strong disposition to terminate in abscess, occurring in hot climates, and frequently accompanied by recurring febrile attacks closely resembling quotidian, double quotidian, and tertian or quartan types of fever, occurring most commonly in the later hours of the day.

H. velamento'sa. (L. *velamentum*, a covering.) Same as *Perihepatitis*.

H. vera. (L. *verus*, true.) Suppurative inflammation of the liver.

Hepatizon. (Ἡπατίζω, to be like the liver.) A synonym of *Chloasma*.

Hepatocacē. (Ἡπαρ; κακός, evil.) Gangrene of the liver.

Hepatocèle. (Ἡπαρ, the liver; κήλη, a tumour. F. *hépatocèle*; G. *Leberbruch*.) A hernia in which a part of the liver protrudes through an aperture in the abdominal parietes.

H., umbilical. (L. *umbilicus*, the navel.) Hepatocèle occurring at the umbilicus.

H., ventral. (L. *venter*, the belly.) Hepatocèle occurring in the linea alba.

Hepatocolorrhœa. (Ἡπαρ, the liver; χολή, bile; ροία, a flow. F. *hépatocolorrhée*; G. *Lebergallenfluss*.) A flow of bile from the liver.

Hepatocirrhosis. (Ἡπαρ, the liver; κίρρως, yellowish. F. *hépatocirrhosé*; G. *Leberkirrhose*.) Laennec's term for cirrhosis of the liver.

Hepatocolic. (Ἡπαρ; κόλον, the colon. F. *hépatocolique*.) Relating to the liver and the colon.

H. ligament. Haller's name for the portion of peritoneum extending from the gall-bladder and transverse fissure of the liver across the duodenum to the colon.

Hepatocystic. (Ἡπαρ, the liver; κύστις, a bladder. F. *hépatocystique*.) Of, or belonging to, the liver and the gall-bladder.

H. calculus. (L. *calculus*, a small stone.) A biliary calculus or gall-stone.

H. canal's. Bile-ducts which pass directly from the liver to the gall bladder, such as are seen in some birds and mammals.

H. duct. The *Ductus communis choledochus*.

Also see *H. canals*.

Hepato'des. (Ἡπαρ, the liver; εἶδος, likeness.) Resembling, or belonging to, the liver.

Hepatodyme. (Ἡπαρ, the liver; δί-δυμος, double. F. *hépatodyme*.) Geoffroy St. Hilaire's term for a double monstrosity united at the liver.

Also, a monster with a double liver.

Hepatodyn'ia. (Ἡπαρ, the liver; δόνη, pain. F. *hépatodynie*.) Pain in the liver, or in the region of the liver.

Hepatodysenteria. (Ἡπαρ, the liver; δυσεντερία, dysentery. F. *hépatodysenterie*; G. *Leberruhr*.) Hepatic dysentery or flux.

Hepatogastric. Same as *Gastro-hepatic*.

H. omentum. Same as *Omentum, gastro-hepatic*.

Hepatogastrocholo'sis. (Ἡπαρ, the liver; γαστήρ, the stomach; χολή, bile.) A term used in the same sense as bilious fever, and also as gastric fever.

Hepatogenic. (Ἡπαρ; γέννω, to produce.) Formed by the liver.

H. icterus. (L. *icterus*, jaundice.) Jaundice produced by the absorption of bile already formed in the liver.

Hepatography. (Ἡπαρ, the liver; γράφω, to write. F. *hépatographie*; I. *epatografia*; S. *hepatografia*; G. *Leberbeschreibung*.) The description of the liver, its attachments and functions.

Hepatohæmia. (Ἡπαρ; αἷμα, blood.) Sanguineous congestion of the liver.

Hepatoid. (Ἡπαρ; εἶδος, likeness.) Like to the liver in colour or in function.

Hepatolith. (Ἡπαρ, the liver; λίθος, a stone. F. *hépatolithe*, *calcul de foie*; G. *Leberstein*.) A calculus or concretion in the liver; a gallstone.

Hepatolithiasis. (Ἡπαρ, the liver; λιθίασις, the disease of the stone. F. *hépatolithiase*.) A morbid concretion in the liver; a gallstone.

Hepatolith'ic. (F. *hépatolithique*.) Of, or belonging to, a hepatolith.

Hepatologia. (Ἡπαρ, the liver; λόγος, a discourse. F. *hépatologie*; G. *Leberlehre*.) A dissertation or treatise on the liver.

Hepatomala'cia. (Ἡπαρ; μαλακία, softness.) Softening of the liver.

Hepatomia. See *Hepatotomy*.

Hepatomphalocèle. (Ἡπαρ, the liver; ὀμφαλός, the navel; κήλη, a tumour. F. *hépatomphale*; I. *epatomphalo*; G. *Lebernabelbruch*.) Umbilical hernia including some portion of the liver.

Hepatomphalum. An imperfect term for *Hepatomphalocèle*.

HEPATOMYELOMA—HEPTAGONAL.

Hepatomyelo'ma. ('Ηπαρ, the liver; μυελός, marrow. F. *hépatomyélome*; G. *Lebermarkschwamm*.) Encephaloid cancer of the liver.

Hepatomyelo'sis. ('Ηπαρ; μυελός. F. *hépatomyélose*.) The growth or formation of *Hepatomyeloma*.

Hepaton'cus. ('Ηπαρ, the liver; όγκός, a tumour. F. *hepatoncie*; G. *Lebergeschwulst*.) Enlargement of the liver.

Hepatopan'creas. ('Ηπαρ; *pancreas*.) Claus's term for the glandular structure belonging to the digestive system of the Invertebrata called the liver, because it not only secretes colouring and other substances similar to the bile of Vertebrata, but exercises a digestive action on starch and albumin.

Hepatoparec'tama. ('Ηπαρ; παρέκταμα, immoderate extension.) Term for excessive enlargement of the liver.

Hepatopath'ia. ('Ηπαρ, the liver; πάθος, disease. F. *hépatopathie*; G. *Leberleiden*.) Disease of the liver.

Hepatoperitonitis. ('Ηπαρ, the liver; περιτόναιον.) The same as *Perihepatitis*.

Hepatophleg'mon. Same as *Hepatophlegmone*.

Hepatophleg'monē. ('Ηπαρ, the liver; φλεγμονή, inflammation. F. *hépatophlegmon*; G. *Leberentzündung*.) Inflammation of the liver.

Hepatophrax'ia. ('Ηπαρ, the liver; φράσσω, to obstruct.) Term (F. *hépatophraxie*) applied by Alibert to express the various alterations of the liver constituting the seventh Genus of the *Choloses*, or third Family of diseases in his *Nosol. Naturelle*.

Hepatophthis'ic. (F. *hépatophthisique*.) Of, or belonging to, *Hepatophthisis*.

Hepatoph'thisis. ('Ηπαρ, the liver; φθίσις, consumption. F. *hépatophthisie*; G. *Leberschwindsucht*.) Consumption, decay, or wasting of the liver.

Also, the wasting of the body from abscess of the liver.

Hepatoph'thōe. ('Ηπαρ; φθόη, a wasting.) Same as *Hepatophthisis*.

Hepatophthō'ic. (F. *hépatophthorique*.) Of, or belonging to, *Hepatophthoe*.

Hepatophy'ma. ('Ηπαρ; φύμα, an inflamed swelling.) A swelling of the liver with suppuration.

Hepato-re'nal. ('Ηπαρ; L. *ren*, the kidney.) Relating to the liver and the kidney.

H. lig'ament. A reflection of the peritoneum extending from the transverse fissure of the liver to the kidney.

Hepato'rium. A misspelling of *Eupatorium*.

Hepatorrhag'ia. ('Ηπαρ, the liver; ρήγνυμι, to burst forth. F. *hépatorrhagie*; G. *Blutausfluss der Leber*.) A discharge of blood from the liver.

Hepatorrhag'ic. (F. *hépatorrhagique*.) Of, or belonging to, *Hepatorrhagia*.

Hepatorrhect'ic. (F. *hépatorrhectique*.) Of, or belonging to, *Hepatorrhexis*.

Hepatorrhex'is. ('Ηπαρ, the liver; ρήξις, a rupture or fracture. F. *hépatorrhexie*; G. *Leberzerreissung*.) Rupture of the liver.

Hepatorrhœ'a. ('Ηπαρ; ροία, a flow. F. *hépatorrhée*; G. *Leberfluss*.) A flow or dis-

charge from the liver, whether of bile or of purulent matter.

Hepatorrhō'ic. (F. *hépatorrhœique*.) Of, or belonging to, *Hepatorrhœa*.

Hepatoscir'rhus. ('Ηπαρ, the liver; σκίρρος, a hard tumour. F. *hépatoscirrhe*; G. *Leberverhärtung*.) Induration of the liver.

Also, scirrhus cancer of the liver.

Hepatos'copy. ('Ηπαρ; σκοπέω, to inspect. F. *hépatoscopie*; G. *Leberuntersuchung*.) Inspection and examination of the liver by any physical means, percussion, measurement, or stethoscopy.

Hepatosphongi'omata. ('Ηπαρ; σφόγγος, a sponge.) Fungoid or encephaloid tumours of the liver.

Hepatosplenit'ic. (F. *hépatosplénitique*.) Of, or belonging to, *Hepatosplenitis*.

Hepatosplenitis. ('Ηπαρ, the liver; σπλήν, the spleen. F. *hépatosplénite*.) Inflammation of the liver and spleen.

Hepatotomy. ('Ηπαρ, the liver; τέμνω, to cut. F. *hépatotomie*.) Dissection of the liver.

Hepatule. ('Ηπαρ; ύλη, stuff, matter.) A term for ammonium sulphide.

Hepaty'derus. See *Hepathyderus*.

Hephæst'ias. ('Ηφαιστος, Vulcan, the god of fire.) Old name for a drying plaster made of burnt tiles.

Hephæst'ic. ('Ηφαιστος.) Relating to fire; also, relating to the forge.

H. hemiple'gia. ('Ημισ, half; πηγή, a stroke.) Hammer palsy. A term employed by Frank Smith to designate that form of paralysis which occurs in workmen who use the hammer almost continually in certain processes, such as table-blade forging, scissors-making, saw straightening, razor and pen-blade striking, engineering, and file forging. See *Hammer palsy*.

H. palsy. Same as *Hammer palsy*.

Hephæstior'haphy. ('Ηφαιστος; ραφή, a suture. F. *héphestiorrhaphie*.) The union of parts by the agency of fire; being Gail-lard's term for the searing of the lips of a wound with a red hot iron to draw them together.

Hepi'alus. See *Epi'alos*.

Hep'ingen. Prussia, in the Ahr Valley, near Neuenahr. Two springs containing sodium carbonate, chloride, and sulphate, with a minute trace of iron, and much free carbonic acid.

Hepse'ma. ('Εψημα, anything boiled; from έψω, to boil.) Term for pottage, gruel, or whatever is proper to be boiled; a decoction.

Hepse'sis. ('Εψησις, a boiling. F. *hepsé*; G. *Kochen*.) The act or process of boiling.

Heptacaps'ular. ('Επτά, seven; L. *capsula*, a small cell.) Having seven cavities or cells.

Heptachlo'ric. ('Επτά, seven.) Same as *Perchloric*.

Heptachro'mic. ('Επτά.) Same as *Perchromic*.

Heptad. ('Επτά.) A septem-element, being one which requires seven atoms of hydrogen for saturation.

Heptagon. ('Επτά, seven; γωνία, an angle. F. *heptagone*.) A figure having seven equal angles and sides.

Heptag'on'al. (F. *heptagone*; G. *sieben-eckig, siebenkantig*.) Of, or belonging to, a heptagon; seven-sided.

HEPTAGYNIA—HERACLEUM.

Heptagyn'ia. ('Επτά, seven; γυνή, a female. F. *heptagynie*; G. *Siebenweibigkeit*.) An Order of plants in the Linnean System having seven pistils, or distinct carpels.

Heptagyn'ian. Same as *Heptagynious*.

Heptagyn'ious. ('Επτά, seven; γυνή, a woman, the symbol of the pistil, or female organ of flowers. F. *heptagynie*; G. *siebenweibig*.) Having seven pistils.

Heptag'ynous. Same as *Heptagynious*.

Heptahy'drated. ('Επτά; ὕδωρ, water.) Containing seven equivalents of water.

H. salt. A form of sodium sulphate containing seven equivalents of water of crystallisation.

Hep'ta-iod'ic. ('Επτά.) Same as *Periodic*.

Hep'tal. ('Επτά.) Consisting of, or relating to, the number seven.

Heptal'dehyde. $C_7H_{13} \cdot CHO_2$. A substance, also called *œnanthol*, obtained by distilling castor oil. It is a highly refracting liquid, boiling at $154^\circ C.$ ($309.2^\circ F.$) having a sp. gr. of .823, and an aromatic pungent smell.

Heptall'on. A Genus of plants.

H. grave'olens. (*L. graveolens*, strong-smelling.) Hogwort. Hab. United States. Used as a diuretic and cathartic. (Dunglison.)

Heptamerous. ('Επτά, seven; μέρος, a part.) Consisting of seven parts or members.

Heptan'dria. ('Επτά, seven; ἀνὴρ, a male. F. *heptandrie*; G. *Siebenmännigkeit*.) A Class of plants in the Linnean System having seven stamens.

Heptan'drian. Same as *Heptandrious*.

Heptan'drious. ('Επτά, seven; ἀνὴρ. F. *heptandre*; G. *siebenmännig*.) Having seven stamens.

Heptan'drous. Same as *Heptandrious*.

Hep'tane. ('Επτά, seven.) C_7H_{16} . A substance discovered by Schorlemmer in *cannel-coal naphtha*, and found by him to constitute a large part of *Pennsylvania petroleum*. It is the chief constituent also of the volatile liquid known as *abietine*, obtained by distillation of the resin of the *Pinus sabiniana*. It boils at $98.4^\circ C.$ ($209.08^\circ F.$), has a vapour density of 3.464, and is an anæsthetic.

Heptan'therous. ('Επτά, seven; ἄνθηρος, having flowers. F. *heptantheré*.) Having seven flowers; applied by Gleditsch to plants with seven stamens. (Mayne.)

Heptapetal'ous. ('Επτά; πέταλον, a petal. F. *heptapétale*; S. *heptapetalado*.) Having seven petals.

Heptaphar'macum. ('Επτά, seven; φάρμακον, a medicine. F. *heptapharmacum*.) Old term, used by Aëtius, xv, 22, for a certain medicine containing seven ingredients, cerussa, litharge, wax, pitch, resin, frankincense, and bullock's fat.

Heptaphyll'ous. ('Επτά; φύλλον, a leaf. F. *heptaphylle*; S. *heptafillo*; G. *siebenblättrig*.) Having seven leaves.

Heptaphyll'um. ('Επτά, seven; φύλλον, a leaf.) A name applied to the *Potentilla tormentilla*, because it has seven leaflets; also to the *Alchemilla*.

Heptapleur'on. ('Επτά; πλευρόν, a rib.) A name for the *Plantago major*, because it has seven ribs on its leaf.

Heptapleur'ous. ('Επτά; πλευρόν. F. *heptapleure*; G. *siebenrippig*.) Having seven ribs.

Heptasep'alous. ('Επτά; L. *sepal*. F. *heptasépale*.) Having seven sepals.

Heptasper'mous. ('Επτά; σπέρμα, a seed. F. *heptasperme*; G. *siebensamig*.) Having seven seeds.

Heptastém'ous. ('Επτά; στήμων, stamen. F. *heptastémone*; G. *siebenmännig*.) Having seven stamens.

Hep'tene. Same as *Heptylene*.

Hep'tine. ('Επτά, seven.) C_7H_{12} . A hydrocarbon homologous with *ethine*, having a strong alliaceous odour and dissolving in alcohol, ether, and benzol.

Heptoi'c acid. ('Επτά.) $C_7H_{14}O_2 = C_6H_{13} \cdot CO_2H$. Same as *œnanthyl'ic acid*.

Hep'tyl. ('Επτά, seven; ὕλη, stuff.) C_7H_{15} . The hypothetical radicle of *heptylic* or *œnanthyl'ic alcohol* and its derivatives.

H. al'cohol. $C_7H_{16}O = C_7H_{15} \cdot OH$. *Hep'tyl hydrate* or *œnanthyl'ic alcohol*. A colourless pleasant-smelling liquid occurring in the fusel oil from the brandy distilled from the marc of grapes, and also from ricinoleate of sodium, the soap of castor oil; it may be obtained by the action of nascent hydrogen on *œnanthol*. It has a sp. gr. of .838, and boils at $175.5^\circ C.$ ($347.9^\circ F.$)

H., hy'drate of. Same as *H. alcohol*.

H. hy'dride. $C_7H_{16} = C_7H_{15} \cdot H$. Same as *Heptane*.

Heptyl'amine. $C_7H_{17}N = N \cdot H_2 \cdot C_7H_{15}$. An oily liquid of ammoniacal smell and pungent taste obtained by heating *heptyl chloride* or *iodide* with ammonia. It is somewhat soluble in water, from which it separates on the addition of solution of potash.

Heptyl'ic. Relating to *Heptyl*.

H. ac'id. An isomer of *Pelargonic acid*; its zinc salt has been proposed as a substitute for *valerianate* of zinc in medicine.

H. al'cohol. Same as *Heptyl alcohol*.

Hep'wort. (*Hep*; *wort*.) The dog rose, *Rosa canina*.

Herac'lea. (*Heraclea*, where it grows abundantly.) The water horehound, *Hyssopus europæus*.

Heraclei'os. ('Ηράκλειος, Herculean.) Old epithet (Gr. 'Ηρακλείη νόσος), applied by Hippocrates, *de Morb. Mul.*, xvii, 6, to epilepsy, from its severity and the vehemence of its attacks.

Also, anciently applied to the magnet, from its power.

Heracleiot'icum. (*Heraclea*, where the best was produced.) Old name for the *Ori-ganum vulgare*. (Quincy.)

Heraclei'us. Same as *Heracleios*.

Heracle'um. ('Ηρακλής, Hercules, who was supposed to have discovered it. F. *berce*; G. *Heilkraut*.) A Genus of the Nat. Order *Umbellifera*.

H. bran'ca. (*L. branca*, a claw.) The *H. sphondylium*.

H. gummif'erum. Willd. (*L. gummy*, gum; *fero*, to bear.) Erroneously supposed at one time to yield *opoponax*, and also *ammoniacum*.

H. lana'tum. Michx. (*L. lanatus*, woolly.) Hab. North America. Masterwort. Root, formerly in the U.S. Ph., emollient and demulcent.

HERACLEUS—HERBA.

H., oil of. (*G. Heracleumöl.*) An ethereal oil obtained in the proportion of 3 to 9 per cent. from the fruit of *H. sphondylium*. It is a pale-yellow acid of sp. gr. 0.80, boils at 80°.

H. pan'aces, Linn. (*Πανάκες*, the opopanax plant, according to Dioscorides; from *πανακής*, all-healing.) A species thought at one time to supply opopanax.

H. sphondylium, Linn. (*Σφονδύλιον*, the cow parsnip. *F. berce*, *brancursine bâtard*; *G. Bärenklau*.) Cow parsnip. Root has a rank smell and an acrid taste; tonic, stomachic, and carminative; used in dysentery. Fruit used in hysterical colic. Young shoots esculent. A fermented liquor is made in North America from the seeds and leaves.

Heracleus. (*Ηράκλειος*.) Belonging to Heraclea a city of Lydia.

Also (*Ηρακλής*), relating to Hercules.

H. lapis. (*L. lapis*, a stone.) The magnet, from the place where it was obtained.

H. morbus. (*L. morbus*, disease.) The same as *Heracleios*.

Herac'lin. $C_{32}H_{22}O_{10}$. A substance obtained from the unripe fruit of *Heracleum sphondylium*, and from those of the *Pastinaca sativa*.

Her'apath, W. An English analytical chemist, born 1795, died 1868.

H.'s salt. Same as *Herapathite*.

Her'apathite. (*Herepath*.) A term applied to the crystals of iodo-sulphate of quinine which form so beautiful an object when seen by the aid of polarised light.

Herb. (*Mid. E. herbe*; from *F. herbe*; from *L. herba*, grass; supposed to be allied to *Gr. φορβή*, pasture; from the Aryan root *harb*, to eat. *I. erba*; *S. yerba*; *G. Kraut*.) A plant with a succulent stem dying to the root, or altogether, every year.

In Pharmacy, the stem, leaves, and fructification of an herbaceous plant.

H.s, aromatic. See *Species aromatica*.

H. ben'net. (*Contr. of L. benedictus*, blessed. *F. benoîte officinale*; *G. Benedikten-wurzel*, *Nelkenwurzel*.) The *Geum urbanum*, or *avens*.

The *Conium maculatum* and the *Valeriana officinalis* have also received this name.

H., bles'sed. The *Geum urbanum*.

H. Chris'topher. The *Actæa spicata*.

Many other plants have been thus called, among them being *Pulicaria dysenterica*, *Spiræa ulmaria*, and *Vicia sepium*.

H.s, five capillary. See *Herbæ quinque capillares*.

H., five emol'lient. See *Herbæ quinque emollientes*.

H. ger'arde. The *Ægopodium podagraria*.

H. im'pious. The *Filago germanica*, so called because the younger flowers overlap the older ones.

H. ive. Same as *H. wy*.

H. ivy. The *Ajuga iwa*, the *Plantago coronopus*, and the *Senebiera coronopus*.

H. Mar'garet. The *Bellis perennis*.

H. mas'tich. The *Thymus marum*.

H. mas'tich, Syr'ian. The *Teucrium marum*.

H. of grace. (*F. herbe à pauvre homme*; *G. Gnathenkrant*.) The *Gratiola officinalis*, or hedge-hyssop; also the *Ruta graveolens*.

H. of St. Cu'negundo. The *Eupatorium cannabinum*.

H. par'is. The *Paris quadrifolia*.

H. pe'ter. The *Primula veris*, from its resemblance to St. Peter's bunch of keys.

H. Rob'ert. The *Geranium Robertianum*.

H. sher'ard. The *Sherardia arvensis*.

H. soph'ia. The *Sisymbrium sophia*.

H. trin'ity. The *Anemone hepatica*, from its three leaflets.

Also, the *Viola tricolor*, from the three colours in its flower.

H. two'pence. The moneywort, *Lysimachia nummularia*, from its pairs of round coin-like leaves.

H. Will'iam. The *Ammi majus*.

H., will'ow. The *Lysimachia vulgaris*.

H., will'ow, hood'ed. The *Scutellaria galericulata*.

H., will'ow, purple-spik'ed. The *Lythrum salicaria*.

H., will'ow, rose'bay. The *Epilobium angustifolium*.

H., will'ow, smooth-leav'ed, broad. The *Epilobium montanum*.

H., will'ow, square-stalk'ed. The *Epilobium tetragonum*.

Her'ba. See *Herb*.

H. abrot'ani. (*F. aurone mâle*, or *citronelle*; *G. Eberraute*.) The *Artemisia abrotanum*; also the *Santolina chamaecyparissus*.

H. abrot'ani monta'ni. (*L. montanus*, belonging to the mountains. *F. aurone femelle*, *garde robe*; *G. Cypressenkrant*.) The *Santolina chamaecyparissus*. Hab. South of France. Aromatic.

H. absin'thii, *G. Ph.* (*F. absinthe, grande absinthe*, or *aluine*; *G. Wermuth*, *bitterer Beifuss*.) The leaves and flowering tops of *Artemisia absinthium*.

H. absin'thii alpi'ni. (*F. gènipi blanc*.) The same as *Genippi album*.

H. absin'thii pon'tici. (*F. la petite absinthe*, or *absinthe pontique*; *G. pontischer Wermuth*, *römischer Wermuth*.) The *Artemisia pontica*.

H. aceto'sæ officina'lis. (*L. officina*, a workshop. *G. Sauerampfer*.) The *Rumex acetosa*.

H. aceto'sæ praten'sis. (*L. pratensis*, found in meadows.) The *Rumex acetosa*.

H. aceto'sæ roma'næ. (*L. romanus*, Roman.) The *Rumex scutatus*.

H. aceto'sæ rotundifolia'e. (*L. rotundus*, round; *folium*, a leaf.) The *Rumex scutatus*.

H. acetosella'e. (*L. acetum*, vinegar. *F. surelle*, *allèluia*, or *pain de concou*; *G. Sauerklec*.) The *Oxalis acetosella*.

H. ac'inos. (*G. Bergbasilie*.) The *Calamintha acinos*, *Clairv*.

H. acmell'æ. (*F. Spilanthes acmella*.) The *Spilanthes acmella*, *L*.

H. adian'ti al'bi. (*L. albus*, white. *F. rue des murailles*, or *saue-vie*; *G. Mauerraute*, *weisses Frauenhaar*.) The *Asplenium ruta muraria*.

H. adian'ti au'rei. (*L. aureus*, golden. *F. capillaire de Canada*; *G. goldner Widerthou*, *Goldhaar*.) The *Polytrichum commune*, *L*.

H. adian'ti canadensis. (*F. capillaire du Canada*.) The *Adiantum pedatum*, *L*.

H. adian'ti ni'gri. (*L. niger*, black. *F.*

HERBA.

le capillaire noir; G. schwarzes Frauenhaar.) The *Asplenium adiantum nigrum*, L.

H. adian'ti ru'bri. (L. *ruber*, red. G. rother Widerthon.) The *Asplenium trichomanes*.

H. agera'ti. (Ἀγρίατος, undecaying. F. l'eupatoire de mèsué.) The *Achillea ageratum*, L.

H. alce'æ. (F. mauve alcée; G. Siegmarskraut, Rosenpappel.) The *Malva alcea*, L.

H. alexandrina. The *Smyrniolum olusatrum*, or Alexanders.

H. althæ'æ. (Ἀλθαία, wild mallow.) The name under which the *Pelargonium cucullatum* is imported into Europe.

H. amar'aci. (F. *origanum marjolaine*; G. Majoran, Mairan.) The *Origanum majorana*, L. See *Anaracus*.

H. anseri'næ. (F. *ansérine*, or argentine; G. Gänsekraut, Gänsegarbe, Silberkraut.) The *Potentilla anserina*.

H. anthos. (ἄνθος, a flower. F. Rosmarin; G. Rosmarin.) The *Rosmarinus officinalis*, L.

Also, the flowers of the rosemary, *Rosmarinus officinalis*.

H. antirrh'i ni cæru'lei. (L. *cæruleus*, dark blue. G. blauer Tarant, Lungenblume.) The *Gentiana pneumonanthe*.

H. apalag'inis. (G. Mate, Paraguaythee.) The *Ilex paraguayensis*.

H. a'pii hortens'is. (L. *apium*, parsley; *hortensis*, belonging to a garden. F. persil; G. Petersilie.) The *Apium petroselinum*, L., or *Petroselinum sativum*, Hoffm.

H. a'pii monta'ni. (L. *montanus*, belonging to a mountain. G. kleine Bergpetersilie, Bergpeppich.) The *Peucedanum oreoselinum*, Mönch., or *Selinum oreoselinum*, Scop.

H. ar'boris vitæ. (L. *arbor*, a tree; *vita*, life. G. Lebensbaum.) The *Thuja occidentalis*, L.

H. argenti'næ. (L. *argentum*, silver. G. Gänsekraut, Gänsegarbe, Silberkraut.) The *Potentilla anserina*, L.

H. arnicæ sveden'sis. (G. Ruhrkraut.) The *Pulicaria dysenterica*.

H. artemisiæ ru'bræ. (L. *ruber*, red.) The *Artemisia campestris*, L.

H. asperulæ aureæ. (L. *aureus*, golden. G. Goldwaldemeister.) The *Galium eruciata*, Scop.

H. asteris at'tici. (L. *aster*, a star; *atticus*, Attic.) The *Aster amellus*, L.

H. as'teris monta'ni. (L. *aster*; *montanus*, mountainous. G. Bergasterkraut.) The *Inula squarrosa*.

H. atrip'licis fœ'tidi. (L. *fœtidus*, ill-smelling. G. Stinkmelde.) The *Chenopodium vulvaria*, L.

H. auriculæ mu'ris. (L. *auricula*, the external ear; *mus*, a mouse. G. kleines Mäuseöhrchen.) The *Hieracium pilosella*.

H. auriculæ mu'ris major'is. (L. *major*, greater. G. grosses Mäuseöhrchen.) The *Hieracium murorum*, L.

H. ayapa'næ. The *Eupatorium ayapana*, Vent. Hab. South America. Used as a perfume.

H. ballo'tæ lana'tæ. (G. Wolfstrapp.) The *Leonurus lanatus*.

H. ballo'tæ ni'græ. (L. *niger*, black. G. schwarzer Andorn.) The *Ballota vulgaris*, L.

H. bal'sami palus'tris. (L. *palustris*, marshy. F. menthe aquatique; G. Wasserminze.) The *Mentha aquatica*, L.

H. balsami'tæ. (F. balsamite odorante, grande baum, menth cog; G. Frauenminze, Balsamkraut, Marienblatt.) The *Tanacetum balsamita*. Hab. South Europe. Bitter, aromatic.

H. barbaræ'a. (F. l'herbe de Saint Barbe; G. Winterersee, Barbenkraut.) The *Barbaræa vulgaris*, Br.

H. basil'ici. (G. Königskraut, Basilienkraut, Basilgen.) The *Ocimum basilicum*, L.

H. beccabun'gæ. (G. Bachbungenkraut.) The *Veronica beccabunga*, L.

H. belladon'næ. (F. belladone; G. Tollkirsche.) The *Atropa belladonna*, L.

H. bel'lidis mayo'ris. (L. *bellis*, a daisy; *major*, greater. G. grosse Masliebe.) The *Chrysanthemum leucanthemum*.

H. bellidis mino'ris. (L. *minor*, less. F. pâquerette; G. Masliebe, Gänseblümchen, Tausendschön.) The *Bellis perennis*, L.

H. benedic'ta. (L. *benedictus*, blessed. F. benoîte officinale; G. Benediktenwurzel.) The *Geum urbanum*, or herb bennet.

H. bet'les. (F. betel; G. Betelpfeffer.) The *Charicia betle*, Miquel.

H. bislin'guæ. (L. *bis*, double; *lingua*, tongue.) The *Ruscus hypoglossum*.

H. bismal'væ. (F. guinauve officinale; G. Eibischkraut, Altheekraut.) The *Althea officinalis*.

H. bo'ni Henri'ci. (G. guter Heinrich.) The *Blitum bonus Henricus*, C. A. Meyer.

H. bonifa'cii. The *Ruscus hypoglossum*.

H. bot'ryos. (F. *botrys*.) The *Chenopodium botrys*, L.

H. bot'ryos mexica'næ. (F. ambrosie; G. mexicanisches Traubenkraut, Jesuitenthe.) The *Chenopodium ambrosioides*, L. Nat. Order *Chenopodiaceæ*. A clear pale-yellow oil is obtained from it, having a pleasant odour and a peppermint-like taste.

H. britan'nica. See *Britannica herba*.

H. brunellæ. (F. la Brunelle; G. Brunelle, Braunelle, Bräunheil.) The *Prunella vulgaris*, L.

H. bubo'nii. The *Aster amellus*, L. Nat. Order *Compositæ*. Hab. mountains and hills in middle Europe.

H. bu'gulæ. (F. bugle rampante; G. Gulden-Günsel.) The *Ajuga reptans*.

H. bupthal'mi. The *Anthemis tinctoria*, L.

H. bur'sæ pas'toris. (F. bourse à pasteur; G. Gänsekresse, Hirtentüschel, Säckelkraut.) The *Capsella bursa pastoris*.

H. ca'chen lag'uén. The *Erythræa chilensis*, Pers.

H. can'nabis aquat'icæ. (L. *aquaticus*, watery. F. eupatoire d'Avicenne, e. chanvrin; G. Wasserdost, Wasserhanf, Kanigundenkraut.) The *Eupatorium cannabinum*.

H. can'nabis in'dicæ. G. Ph. The tops of the female stems of *Cannabis sativa*.

H. can'ni. The *Artemisia santonica*.

H. capillo'rum ven'eris. (L. *capillus*, hair; *Venus*, Venus. F. capillaire; G. Frauenhaar, Venushaar.) The *Adiantum capillus veneris*.

H. cap'itis vit'uli. (L. *caput*, the head; *vitulus*, a calf. F. muflier des jardins; G. grosser Dorant, Kalbnase.) The *Antirrhinum majus*.

HERBA.

H. cardamines majoris. (L. major, greater. G. Spanische Kresse, Kapuziner Kresse.) The *Tropaeolum majus*, L.

H. cardiaca. The *Leonurus cardiaca*.

H. cardiaceæ. (L. carduus, a thistle. F. agripaume carduire; G. Herzgespann.) The *Leonurus cardiaca*, L.

H. car'dui benedic'ti. G. Ph. (L. benedictus, blessed. F. chardon b  nit; G. Kardobenediktenkraut, Bernhardinerkraut.) The leaves and flowering stems of *Cnicus benedictus*.

H. car'dui stella'ti. (L. stella, a star. F. chaussetrappe; G. Sterndistel.) The *Centaurea calcitrapa*.

H. car'dui tomento'si. (L. tomentosus, woolly. G. Krebsdistel.) The *Onopordon acanthium*.

H. car'dui Ven'eris. (L. carduus, a thistle; Venus, the goddess of love.) The *Dipsacus fullonum*.

H. car'thami silves'tris. (L. silvestris, woody. F. jacc  .) The *Centaurea jacea*, L.

H. cata'ri  . (F. cataire, herbe aux chats; G. Katzenminze.) The *Nepeta cataria*.

H. centa'urii. G. Ph. Same as *H. centaurii minoris*.

H. centa'urii mino'ris. (L. minor, less. G. Tauseng  ldenkraut, rother Aurin, Fieberkraut, Erdg  lle.) The *Erythraea centaurium*, Persoon.

H. centummor'bia  . (L. centum, a hundred; morbus, disease. F. nummulaire; G. Pfennigkraut.) The *Lysimachia nummularia*, L.

H. centumno'dii. (L. centum, a hundred; nodus, a knot. F. renou  e centinode, traivasse; G. Vogelkn  terich, Tausendknoten.) The *Polygonum aviculare*, L.

H. cerefo'lii. (L. cera, wax; folium, a leaf. F. cerfeuil cultiv  ; G. Gartenkerbel, Kerbelkraut.) The *Anthriscus cerefolium*, Hoffm., or *Scandix cerefolium*, L. Hab. Southern Europe. Odour strong, due to a greenish-yellow ethereal oil.

H. ch  rophyl'li. (G. Gartenkerbel, Kerbelkraut.) The *Anthriscus cerefolium*, Hoffm., or *Scandix cerefolium*, L.

H. ch  rophyl'li silves'tris. (L. silvestris, belonging to woods. G. K  lberkropf.) The *Anthriscus silvestris*, Hoffm. Considered to possess narcotic properties.

H. cham  cis'ti vulga'ris. (L. vulgaris, common. G. Sonnenbl  mchen.) The *Helianthemum vulgare*, G  rtner.

H. cham  dryos. (F. petit ch  ne; G. kleiner, or edler Gamander.) The *Teucrium cham  dryos*.

H. cham  leag'ni. (G. Gagelkraut.) The *Myrica gale*, L.

H. chama  py'tios. (G. Feldeypresse, Schlagkraut.) The *Ajuga cham  pitys*, Schreb.

H. chamomil'l   fo  tid  . (L. foetidus, stinking.) The wild chamomile, *Anthemis cotula*, Linn.

H. chelido'ni mino'ris. (L. minor, less. G. Scharbockskraut, Feigwarzenkraut.) The *Ficaria ranunculoides*.

H. cicu't  . (F. cig  e officinale, grande cig  ; G. Schierling, Fleckenschierling, Erdschierling.) The *Conium maculatum*, L.

H. cicu't   majoris. (L. cicuta, hemlock; major, greater.) The spotted hemlock, *Conium maculatum*.

H. cicuta'ri  . (G. K  lberkropf.) The *Anthriscus silvestris*, Hoffm.

H. co'c  . The *Erythroxylon coca*.

H. cochlea'ri  . G. Ph. The *Cochlearia officinalis*.

H. con'i. G. Ph. The leaves and flowering tops of *Conium maculatum*.

H. consolid   me'di  . (L. medius, middle. F. la bugule; G. G  lden-G  nsl.) The *Ajuga reptans*, L.

H. consolid   mino'ris. (L. minor, less. F. la brunelle; G. Brunelle, Braunelle, Br  unheil.) The *Prunella vulgaris*, L.

H. consolid   sarraceni  c  . (F. verge d'or; G. Goldr  the, heidnisch Wundkraut, g  lden Wundkraut.) The *Solidago virgaurea*.

H. convol'vuli majoris. (L. major, greater. F. liseron des haies; G. Zauwinde.) The *Calystegia sepium*, R. Brown.

H. convol'vuli mino'ris. (L. minor, less. F. liseron des champs; G. Ackerwinde.) The *Convolvulus arvensis*, L.

H. conyz   majoris. (L. major, greater. F. conyze squareuse; G. grosse D  rrwurz.) The *Inula conyza*, D.C., or *Conyza squarrosa*, L. An emmenagogue and vulnerary.

H. cos't  . (F. porcelle; I. porcellina macchiata; G. Ferkelkraut.) The *Hypochaeris maculata*.

H. cos'ti nostra'tis. (L. nostras.) The *Achyrophorus maculatus*, Scop.

H. cos'ti vulga'ris. (L. vulgaris, common. G. Ferkelkraut.) The *Hypochaeris radicata*.

H. cras'sul   majoris. (L. major, greater. G. Fetthenne, Bohnenblatt, falscher Portulak.) The *Sedum maximum*, Sut.

H. cris't   gall'i. (L. crista, a crest; gallus, a cock. G. Klappertopf.) The *Alectrolophus major*, Rehb., Nat. Order Scrophulariace  .

H. crucia't  . (L. cruciatus. G. Goldwaldmeister.) The *Galium cruciata*, Scop.

H. cu'culi. (F. cardamine des pr  s, cresson des pr  s; G. Wiesenkresse, Kukukskraut.) The *Cardamine pratensis*.

H. cunigun'd  . (F. eupatoire d'Avicenne, e. chanvrin; G. Wasserdost, Wasserhanf, Kunigundenkraut.) The *Eupatorium cannabinum*, L. Root purgative; leaves bitter. Aromatic; aperient.

H. cyna'pii. (F. petite cig  e, faux persil; G. Gartengleisse, Hundspetersilie, Gartenschierling, Hundsdill.) The *  thusa cynapium*, fool's parsley.

H. cynocram'bes. (F. mercuriale vivace.) The *Mercurialis perennis*, L.

H. diapren'si  . (F. sanicle; G. Saunickel, Bruchkraut, Heil aller schaden.) The *Sanicula europ  a*, L.

H. dictam'ni cre'tici. (F. dictame de Cr  te; G. Kretischer Diptam, Diptam-Dosten.) The *Origanum dictamnus*, L.

H. do'rea. The *Solidago virgaurea*.

H. do'ria. The *Senecio doria*.

H. dracun'culi. (F. l'estragon; G. Estragon, Dragen-Beifuss, Kaisersalat.) The *Artemisia dracunculus*, L.

H. elat'ines. The *Linaria elatine*, Mill.

H. equise'ti majoris. (L. major, greater. F. pr  le; G. grosser Schachtelhalm.) The *Equisetum hiemale*.

HERBA.

H. equise'ti mechan'ici. The *Equisetum hiemale*.

H. equise'ti mino'ris. (L. minor, less. F. préle; G. kleiner Schachtelhalm, Katzenstert, Dubock.) The *Equisetum arvense*.

H. eri'cæ. (G. Besenheide, Heidekraut.) The *Calluna vulgaris*.

H. eupato'rii mes'nes. The *Achillea ageratum*, L.

H. fa'am. The same as *H. faham*.

H. faba'riæ. (G. Fetthenne, Bohnenblatt, falsche Portulak.) The *Sedum maximum*.

H. fa'ham. (G. Bourbonthee.) The *Angræcum fragrans*, P. Th. An orchid. Hab. Isle of Bourbon. The leaves are linear. They contain coumarin, and smell like the Tonka bean. They are used as an infusion.

H. far'faræ. (F. pas d'âne; G. Huftatich, Rosshuf.) The *Tussilago farfara*.

H. febrif'uga. (L. febris, fever; fugo, to put to flight. G. Mutterkraut.) The *Pyrethrum parthenium*, Sm.

H. fe'lis. (L. felis, a cat. F. cataire; G. Katzenminze.) The *Nepeta cataria*, or cat-mint.

H. fe'ni camelo'rum. (L. fenum, hay; camelus, a camel. G. Kameelheu.) The *Andropogon schænanthus*. An aromatic.

H. fistula'riæ. (F. herbe aux poux; G. Sumpfödel, Läusekraut.) The *Pedicularis palustris*, L.

H. flam'mulæ jo'vis. (L. flammula, a little flame; Juppiter.) The *Clematis erecta*.

H. foe'ni camelo'rum. The same as *H. feni camelorum*.

H. galeop'sidis. The *Galeopsis ochroleuca*, Lam.

H. ga'lii al'bi. (L. albus, white. F. caille lait blanc; G. weisses Labkraut.) The *Galium mollugo*, L.

H. ga'lii lu'tei. (L. luteus, yellow. F. caille lait jaune; G. gelbes Labkraut.) The *Galium verum*, L.

H. gen'ipi al'ba. (L. albus, white. F. genipi blanc.) The *Artemisia mutellina*, Willd.

Also, a mixture of *Artemisia mutellina* with *A. glaciatis* and *A. spicata*.

H. gen'ipi ni'gri. (L. niger, black. F. genipi noir.) The *Artemisia valesiaca*, All.

Also, the *Artemisia spicata*.

H. gen'ipi ve'ri. (L. verus, true. F. genipi vraie.) The *Artemisia glaciatis*.

Also, a mixture of *Achillea moschata*, *A. atrata*, and *A. nana*.

H. gentiane'læ. (G. kleiner Enzian, Steh auf und geh.) The *Gentiana amarella*, L., and *G. campestris*, L.

H. glas'ti. (L. glastum, woad.) The *Isatis tinctoria*.

H. glycyrrhi'zæ sylves'tris. (L. sylvestris, belonging to the woods.) The *Astragalus glycyphyllos*, L.

H. gongon'hæ. The *Cassine gongonha*, Mart. A Brazilian plant.

H. hed'eræ terres'tris. (L. hederæ, ivy; terrestres, of the earth. F. lierre terrestre; G. Gundermann, Gundelrebe, Donnerrebe, Erdpheu.) The *Glechoma hederaceum*.

H. helian'themi. The same as *H. chamaecisti vulgaris*.

H. helioscop'iæ. The *Euphorbia helioscopia*.

H. helxi'nes. (Ελξιν. G. Mauerkraut, Glaskraut.) The *Parietaria officinalis*.

H. hepatic'æ au'reæ. (L. aureus, golden. G. Miltkraut.) The *Chrysosplenium oppositifolium*.

H. hepatic'æ fonta'næ. (L. fontanus, belonging to a fountain. G. Brunnenleberkraut.) The *Marchantia polymorpha*.

H. hepatic'æ nobilis. (L. nobilis, noble. F. hépatique; G. Leberblümlein, blaue Osterblume.) The *Hepatica triloba*, D.C., or *Anemone hepatica*, L.

H. hepatic'æ stella'tæ. (L. stella, a star. G. Waldmeister.) The *Asperula odorata*.

H. hiera'cil macrorrh'izi. (Μακρός, large; ρίζα, root. G. Ferkelkraut.) The *Hypochaeris radicata*.

H. hormi'ni praten'sis. (Ὀππυον, sage; L. pratensis, of the fields. F. sauge des prés; G. wilde Salvey.) The *Salvia pratensis*.

H. hormi'ni sati'væ. (L. sativus, that is sown.) The same as *H. sclareæ*.

H. hydropi'peris. (F. poivre d'eau; G. Wasserpfeffer.) The *Polygonum hydropiper*.

H. hyose'yami, G. Ph. The leaves and flowering petioles of *Hyoscyamus niger*.

H. ignis. (L. ignis, fire. G. Feuerkraut, Korallenflechte.) The *Cladonia coccifera*, Ach.

H. i'licis aquif'olii. (F. houx commun; G. Stechpalm.) The *Ilex aquifolium*, L.

H. i'væ. A mixture of *Achillea moschata*, L., *Achillea atrata*, L., and *Achillea nana*, L.

H. i'væ arthritic'æ. The same as *H. chamæpityos*.

H. jace'æ. (F. pensée; G. Freisamkraut, Stiefmütterchen.) The *Viola tricolor*.

H. jace'æ ni'græ. (L. niger, black.) The *Centaurea jacea*, L.

H. jacobæ'æ. (G. Jacobskraut.) The *Senecio jacobæa*, L.

H. ju'lia. The *Achillea millefolium*, milfoil or yarrow.

H. jun'ci odora'ti. (L. juncus, a rush; odoratus, perfumed.) The *Andropogon schænanthus*.

H. lactu'cæ scar'iolæ. The *Lactuca scariola*, L.

H. lago'pi. (Λαγώπους, hare-footed. G. Mauseklee.) The *Trifolium arvense*.

H. la'mil. (F. ortie puante, grande épiaire des bois.) The *Stachys silvatica*.

H. Pe'tri. The *Primula veris*, or cowslip.

H. pilosell'æ. (*G. kleines Mäuseöhrchen*.) The *Hieracium pilosella*.

H. pimpinell'æ italic'æ. (L. *italicus*, belonging to Italy.) The *Poterium sanguisorba*.

H. pneumonan'thes. (Πνεύμων, a lung; άνθη, blossom.) The same as *H. antirrhini cærulei*.

H. pol'li monta'ni. (F. *pouliot de montagne*; *G. Bergpoley*.) The *Teucrium polium*, L.

H. polyg'oni. The *Polygonum aviculare*.

H. polyg'oni coccif'eri. (L. *coccus*, a berry; *fero*, to bear. *F. la guavelle*; *G. Johannis-kraut*, *Blutkraut*, *Sandknöterich*.) The *Scleranthus perennis*.

H. pra'sii. (L. *prasius*, grass-green.) The *Marrubium vulgare*.

H. ptarmic'æ. (F. *ptarmique*, herbe à éternuer; *G. wildes Bertramkraut*, weisser Dorant, weisser Rainfarn.) The *Achillea ptarmica*, L., or *Ptarmica vulgaris*, D.C.

H. pule'gii. (F. *pouliot vulgaire*; *G. Poley*, *Flohkraut*.) The *Mentha pulegium*, L., or *Pulegium vulgare*, Miller.

H. pule'gii cervi'ni. (L. *cervus*, a stag.) The same as *H. pulegii*.

H. pule'gii horten'sis. (L. *hortensis*, belonging to a garden.) The same as *H. pulegii*.

H. pulica'riæ. (L. *pulex*, a flea.) The *Pulicaria vulgaris*.

H. pulsatill'æ nigrican'tis. (L. *nigricans*, blackish. *F. anémone des prés*; *G. Küchenschelle*, *Windblume*, *Osterblume*.) The *Anemone pratensis*.

H. purgati'va. (L. *purgo*, to cleanse.) The *Boerhaavia tuberosa*.

H. pyrolæ umbella'tæ. (F. *pyrole ombellée*; *G. Harnkraut*.) The *Chimophila umbellata*, Nutt.

H. querc'i'ni. (L. *quercinus*, belonging to an oak tree.) The *Usnea plicata*.

H. quinquefol'lii. (L. *quinque*, five; *folium*, a leaf.) The same as *H. pentaphylli*.

H. ranunculi pratensis. (L. *pratensis*, belonging to meadows. *F. bouton d'or*; *G. Hahnenfuss*.) The *Ranunculus acris*.

H. re'gia. (L. *regius*, royal.) The *Ocimum basilicum*, or citron basil.

H. regin'æ pratensis. (L. *regina*, a queen; *pratensis*, belonging to meadows.) The same as *H. ulmaricæ*.

H. rorel'æ. (L. *dim.* of *ros*, dew. *G. Sonnenthau*.) The *Drosera rotundifolia*.

H. ro'ris sol'is. (L. *ros*, dew; *sol*, sun.) The same as *H. rorelleæ*.

H. Ruper'ti. (*G. Ruprechts Krant*.) The *Geranium Robertianum*.

H. ru'tæ capra'riæ. (L. *ruta*, rue; *caprarius*, a goat-herd. *G. Geisraute*.) The *Galega officinalis*.

H. ru'tæ horten'sis. (L. *hortensis*, belonging to a garden. *G. Gartenraute*, *Kreuzkraut*, *Weinraute*.) The *Ruta graveolens*, L.

H. sa'cra. (L. *sacer*, holy.) The *Verbena officinalis*, or vervain.

H. salica'riæ. (F. *salicaire*; *G. gemeiner Weiderich*.) The *Lythrum salicaria*, L.

H. saliva'ris. (L. *saliva*, spittle.) The *Anthemis pyrethrum*, from its power of exciting the salivary secretion.

H. sal'viæ horten'sis. (L. *hortensis*, belonging to a garden. *F. sauge officinale*; *G. Salvey*, *Salbey*.) The *Salvia officinalis*, L. Sage.

H. sal'viæ mino'ris. (L. *minor*, less.) The same as *H. salviæ hortensis*.

H. sampsu'chi. The same as *H. majoranæ*.

H. Sanc'ti Pe'tri. (L. *sanctus*, holy.) The *Crithmum maritimum*, or samphire.

H. sanguina'riæ. (*G. Blutkraut*.) The *Geranium sanguineum*.

Also (*G. Vogelknöterich*), the *Polygonum aviculare*.

Also (*F. sanguinaire de Canada*), the *Sanguinaria canadensis*.

H. San'ta Mari'a. The name in Brazil of the fruit of *Chenopodium ambrosioides*.

H. sardo'nia. The *Ranunculus sceleratus*.

H. saxif'ragæ aure'æ. (L. *aureus*, golden.) The *Chrysosplenium alternifolium*.

H. sclare'æ. (*G. Muskatellersalvey*.) The *Salvia sclarea*.

H. scor'dii. (F. *pouliot de montagne*; *G. Lachenknoblauch*, *Wasserknoblauch*, *Wasser-Bathengel*.) The *Teucrium scordium*.

H. scorodo'niæ. (F. *germandrée sauvage*, *scorodone*; *G. wilder Gamander*, *Wald Salbey*.) The *Teucrium scorodonium*, L.

H. scrophularia foetida. (L. *foetidus*, ill-smelling.) The same as *H. scrophularia vulgaris*.

H. scrophularia'riæ vulga'ris. (L. *vulgaris*, common. *F. scrophulaire noueuse*; *G. Braunwurz*.) The *Scrophularia nodosa*, L.

H. sé'di major'is. (L. *major*, greater. *F. jonbarbe des toits*; *G. Hauslauch*, *Dachlauch*, *Donnerkraut*.) The houseleek, *Sempervivum tectorum*.

H. sé'di mi'noris. (L. *minor*, less. *F. orpin acre*, *vermiculaire brûlante*; *G. mauerpfaffer*, *Steinkraut*.) The *Sedum acre*.

H. selagin'is. The *Lycopodium selago*.

H. sempervi'vi. The *Sempervivum tectorum*.

H. serpyll'i. *G. Ph.* (F. *serpolet*; *G. Quendel*, *wilder Thymian*, *Feldpoley*, *Feldthymian*.) The foliated flowering stems of wild thyme, *Thymus serpyllum*, L.

H. sideri'tidis. (Σιδερίτις, vervain. *F. crapandine*; *G. Ziest*, *Beruskraut*, *Beschreikraut*, *Glückkraut*, *Abnehnkraut*.) The *Stachys recta*, L.

Also the *Sideritis hirsuta*, L.

H. sola'ni furio'si. (L. *furiosus*, mad. *F. belladone*; *G. Tollkirsch*.) The *Atropa belladonna*, L.

H. sola'ni quadrifo'lii. (L. *quater*,

HERBACEOUS—HERBIVOROUS.

four; *folium*, leaf. G. Einbeerkraut.) The *Paris quadrifolia*.

H. soldanel'lae. The *Calystegia soldanella*, R. Br.

H. sophi'ae chirurgo'rum. (L. *chirurgus*, a surgeon. F. *l'herbe de St. Sophie*; G. *Sophienkraut*.) The *Sisymbrium Sophia*.

H. spi'næ albæ. (L. *spina*, a thorn; *albus*, white.) The *Onopordon acanthium*.

H. stellæ. (L. *stella*, a star.) The *Plantago coronopus*.

H. stramo'nii. The *Datura stramonium*.

H. su'mach. (F. *sumac des corroyeurs*; G. *Sumach*, *Schmack*.) The *Rhus coriaria*, L.

H. symphyti min'imii. The same as *H. bellidis minoris*.

H. taba'ci. The tobacco plant, *Nicotiana tabacum*.

H. teleph'ii. The same as *H. crassula majoris*.

H. tertiana'riæ. (F. *scutellaire*, *toque*; G. *Fieberkraut*.) The *Scutellaria galericulata*.

H. thy'mi, G. Ph. The foliated flowering stems of *Thymus vulgaris*.

H. tithym'all. The same as *H. helioscopiæ*.

H. toxicoden'dri. (F. *sumac vénéneux*; G. *Giftsumach*.) The *Rhus toxicodendron*, Michx., or *Toxicodendron pubescens*, Mill.

H. trichom'anes. (F. *polytric des officines*; G. *rother Widerthon*.) The *Asplenium trichomanes*, L.

H. trifolii cornicula'ti. (L. *tres*, three; *folium*, a leaf; *corniculatus*, horned. G. *Hornklee*.) The *Lotus corniculatus*.

H. trifolii fibr'i'ni. (L. *fibra*, a fibre. F. *ményanth*, *trêfle d'eau*; G. *Bitterklee*, *Fieberklee*, *Zollenblume*.) The *Ményanthes trifoliata*.

H. trinita'tis. (L. *trinitas*, the number three. G. *Dreifaltigkeitsblume*, *Freisam*.) The *Anemone hepatica*; also, the *Viola tricolor*.

H. trixag'inis. (L. *trixago*, the gremander.) The same as *H. chamædryos*.

H. ulma'riæ. (F. *ulmaire*, *reine des prés*, *herbe aux abeilles*; G. *Mädelssüss*, *Wiesenkönigin*.) The meadowsweet, *Spiræa ulmaria*, L.

H. urti'cæ foetidis'sima. (L. *urtica*, a nettle; *foetidissimus*, foulest.) The *Stachys silvatica*.

H. u'væ ur'sæ. (F. *busserole*, *raisin d'ours*; G. *Bärentrauben*, *Jakaslapak*.) The *Arctostaphylos uva ursi*, Spreng., *Arbutus uva ursi*, L.

H. u'væ ver'sæ. The *Paris quadrifolia*.

H. uvula'riæ. The *Ruscus hypoglossum*, L.

H. Ven'eris. (L. *Venus*, the goddess of love.) The *Adiantum pedatum*.

H. ven'ti. (L. *ventus*, the wind.) The *Anemone pulsatilla*.

H. vin'cæ pervin'cæ. (F. *petite pervenche*; G. *kleines Sinngrün*, *Wintergrün*, *Todtenmyrte*.) The *Vinca minor*, L.

H. vio'læ tricoloris, G. Ph. The flowering plant of *Viola tricolor*.

H. virgaureæ. (F. *verge d'or*; G. *Goldrute*, *heidnisch Wundkraut*, *gülden Wundkraut*.) The *Solidago virgaurea*, L.

H. vitri. (L. *vitrum*, glass.) The *Salsola soda*

H. vulnera'riæ. (F. *vulnéraire*; G. *Wundklee*.) The *Anthyllis vulneraria*.

H. vulva'riæ. (F. *vulvaire*; G. *Stinkmelde*.) The *Chenopodium vulvaria*, L.

H. zazarheu'di. The *Origanum vulgare*.

Herba'ceous. (L. *herba*, grass, an herb. F. *herbacé*; I. *erbaceo*; S. *herbaceo*; G. *krautartig*, *krautgrün*.) Of the nature, or appearance, or colour, of an herb.

H. lay'er. The subepidermic layer of the bark of monocotyledonous plants.

H. plants. Plants that have soft stalks and perish to the root each year.

H. stem. See *Stem*, *herbaceous*.

Her'bæ. Plural of *Herba*.

H. pro enem'atè. (L. *pro*, for; *enema*, an injection.) Herbs for a glyster; two parts of mallow leaves and one of chamomile flowers.

H. pro fo'tu. (L. *pro*, for; *fotus*, a fomentation.) Herbs for fomentation; two parts each of southernwood leaves, the tops of sea-wormwood and chamomile flowers, and one part of bay leaves.

H. quin'què capilla'res. (L. *quinque*, five; *capillus*, a hair.) Hart's tongue, *Scolopendrium vulgare*; black maidenhair, *Asplenium adiantum nigrum*; white maidenhair, *Asplenium ruta muraria*; golden maidenhair, *Polytrichum commune*; and spleenwort, *Asplenium ceterach*.

H. quin'què emollien'tes. (L. *quinque*, five; *emollio*, to soften.) Beet, *Beta vulgaris*; mallow, *Malva sylvestris*; marsh-mallow, *Althæa officinalis*; French mercury, *Mercurialis annua*; and violet, *Viola tricolor*.

Her'bal. (L. *herba*.) A book containing a description of plants and of their properties.

Her'balist. (L. *herba*. F. *herboriste*; I. *erbajulo*; S. *herbatorio*; G. *Kräuterhändler*.) A seller of plants for medicinal uses.

Herbar'chel. The *Rocella tinctoria*.

Herbar'ium. (L. *herba*. F. *herbier*; G. *Kräuterbuch*.) A collection of dried specimens of plants, or grasses; also, termed *Hortus siccus*.

Herbes'cent. (L. *herbesco*, to grow into green blades.) Growing into a herb or in the form of one.

Herbicarniv'orous. (L. *herba*, grass; *caro*, flesh; *voro*, to devour.) Living on both vegetable and animal food.

Herbic'olous. (L. *herba*; *colo*, to inhabit. F. *herbicole*.) Living on herbs.

Herbifer'ous. (L. *herba*; *fero*, to bear.) Producing herbs.

Herbifica'tion. (L. *herba*; *facio*, to make. F. *herbification*.) Applied by L. C. Richard to all that relates to the organs of conservation of vegetables.

Herbiform. (L. *herba*; *forma*, a likeness. F. *herbiforme*.) Resembling an herb.

Herbitz'heim. Germany, in Elsass-Lothringen, near Saverne. A sodium chloride spring.

Herbiv'ora. (L. *herba*; *voro*, to devour. F. *herbivores*.) An old Division of *Mammalia*, including those which live exclusively on vegetable food.

Also, a Division of *Cetacea*, including the Order *Sirenia*.

Herbiv'orous. (L. *herba*, an herb or grass; *voro*, to devour. F. *herbivore*; I. *erbivoro*; S. *herbivoro*; G. *kräuterfressend*.) Herb-

HERBOSE—HERING, EWALD.

devouring. Applied to animals that feed upon grass and herbs, or other plants.

Herbose. (*L. herbosus*, full of herbs.) Abounding in herbs.

Herbous. Same as *Herbose*.

Herbst, Ernst Friedrich Gus-tav. A German anatomist now living, born at Göttingen in 1803.

H's corpuscles. Small end organs of sensory nerves occurring in the tongue of the duck. They are like Pacinian bodies, with thin, closely-applied lamellæ and a layer of nuclei around the cylinder-axis. They are also found in the tongue of the rabbit and in tendons.

Herbula. (Dim. of *L. herba*, grass; *G. Kräutlein*.) A small low herb.

Hercogamous. (*Ἑρκος*, a fence; *γάμος*, marriage.) Unable to be self-fertilised. Applied to those hermaphrodite flowers which are prevented from autogamy by some structural obstacle.

Hercules' all-heal. The *Pastinaca opoponax*.

H. bo'vii. Old name for a celebrated emetic and cathartic medicine prepared from gold and mercury dissolved in a distillation of copperas, nitre, and sea-salt.

H. club. The *Aralia spinosa*; and also, the *Xanthoxylum clava Hercules*.

Herculesbad. Hungary, near Mehadia; a sulphur spring containing much chloride of sodium. Beside the Hercules spring there are many others varying in temperature from 28° C. to 56° C. (82-4° F. to 132-8° F.); the Ludwigsquelle contains small quantities of magnesium bromide and iodide. The waters are used in chronic rheumatism, jaundice, scrofula, neuralgia, paralysis, chronic urinary catarrh, and skin diseases. See *Mehadia*.

Herculeus morbus. (*L. Hercules*; *morbus*, disease.) A synonym of *Epilepsy*, from the violence and strength of the limb spasms.

Heredia. Spain. An earthy water, weakly charged with hydrogen sulphide.

Hereditary. (*L. hereditarius*, from *heres*, an heir. *F. héréditaire*; *I. ereditario*; *S. hereditario*; *G. erblich*.) Descending by inheritance.

H. disease'. A disease which is transmitted from a parent or remoter ancestors to offspring.

Heredity. (*L. hereditas*, heirship; from *heres*, an heir. *F. hérédité*; *I. eredita*; *S. hereditad*; *G. Erblichkeit*.) The law by which living beings tend to repeat themselves in their descendants. It is observed in both the corporeal and in the psychical features; in the outward form, and in the internal structure; in fecundity, in immunity from, or liability to, infectious and other diseases; in habits, instincts, and intellectual attributes, and their affections and morbid states; and in duration of life. The transmission of acquired characters and modifications is not constant. The Chinese have for centuries bandaged the feet of their children till their original form is greatly altered, yet Chinese children are born with normally shaped feet. The Jews have practised circumcision for at least 4000 years, yet the continuance of the practice shows that Hebrew children are born with foreskins; the children of deaf-mutes are rarely so affected. Yet Brown-Sequard found that guinea-pigs rendered epileptic by operation can transmit

this peculiarity to their offspring. Heredity opens up the subject of consanguineous marriages, and the conclusion drawn by Quatrefages, Ribot, and others, from a review of the effects of such intercourse in animals and in man, is that near relationship between father and mother is not in itself hurtful, but that in virtue of the laws governing heredity it oftentimes becomes so, and hence in view of the eventualities to which consanguinity leads, it is at least prudent to avoid consanguineous marriage.

H. collateral. (*L. con*, with; *latus*, the side.) The same as *H. indirect*.

H. direct'. The transmission of parental characters to the offspring. This form presents two aspects; one, in which the child takes after the father and mother equally as regards both physical and moral characters, which, though theoretically possible, is probably, as a matter of fact, very rare; and a second, in which the child resembles one parent more than the other. In this case the heredity may take place in the same sex from father to son or from mother to daughter; whilst in other cases, which are more frequent, the heredity occurs between different sexes, from father to daughter and from mother to son.

H. in'direct. Heredity existing between individuals and their ancestors in the indirect line, uncle or grand-uncle and nephew, aunt and niece.

H., mor'bid. (*L. morbus*, a disease.) The transmission of morbid conditions by the parent to the offspring; such as gout, syphilis, skin diseases, and defects of the organs of sense.

H., normal. (*L. norma*, a rule.) The transmission to the offspring of parental peculiarities or characteristics natural to the race or family.

H., rever'sional. (*L. reversio*, the act of returning.) Atavism. The reproduction in the descendants of the moral or physical qualities of their remoter ancestors.

H. through in'fluence. P. Lucas's term for the reproduction in the children of the same mother by a second husband of some peculiarity belonging to the former spouse. It is seen in animals, such as the mare, which, having been impregnated by a zebra and given birth to a zebra-like mule, produced, after subsequent fecundations by a horse, zebra-marked foals. The same thing occurs in dogs.

Heretie'ra. A Genus of the Nat. Order *Zingiberaceæ*.

H. chinensis, Retz. The *Hellenia chinensis*.

Hering, E'wald. The Professor of Physiology and Medical Physics in the University of Prague, born at Alt-Gersdorf, in Saxony, in 1834.

H's colour the'ory. Hering admits three pairs of colours, black and white, blue and yellow, red and green, each of which is composed of a colour and its opposite; for blue and yellow, as well as red and green, must not be regarded as complementary but as antagonistic colours, which obliterate each other and do not give a mixed sensation like the other colours. The members of each pair act differently on the nerve-substance of the retina, thus the sensation of white light corresponds to its decomposition or disassimilation, and that of black to its restoration or assimilation; of the other pairs red and yellow are the expression of decomposition, green and blue of restoration. Hering further

HERLEIN—HERMAPHRODITISM.

assumes that there are three different visual substances each sensitive to its own pair of colours.

Herlein. Hungary, near Kaschau. A mineral water containing sodium chloride, calcium carbonate, and some iron bicarbonate.

Hermannsbad. Prussia, near Muskau. An earthy chalybeate water containing carbonic acid, hydrogen sulphide, nitrogen, and oxygen.

Hermannsbad. Saxony, near Leipzig. A mineral spring containing calcium, magnesium, iron, and aluminium sulphates.

Hermaphrodeity. Same as *Hermaphroditism*.

Hermaphrodisia. The same as *Hermaphroditism*.

Hermaphrodism. Same as *Hermaphroditism*.

Hermaphrodismus. Same as *Hermaphroditism*.

Hermaphrodite. (L. *hermaphroditus*; from Gr. ἐρμαφρόδιτος; from Ἑρμῆς, Mercury, as representing the male part; and Ἀφροδίτη, Venus, as representing the female part. F. *hermaphrodite*; I. *ermafrodito*; S. *hermafrodita*; G. *Hermaphrodit*, *Zwitter*.) An animal or plant in which the attributes of both sexes are combined, so that it is capable of producing young without intercourse with any other individual. Although the procreation of young may occur for several generations by hermaphrodite individuals, yet in all cases the course of two individuals of opposite sexes is at length requisite.

Also, a monster individual occurring in the higher animals and plants which possesses, or appears to possess, some of the generative organs of both sexes.

In Botany, a plant which possesses both male and female organs of generation, that is, stamens and pistils.

H. gland. The genital gland of certain cephaloporous Lamellibranchiata, which produces both male and female elements.

Hermaphroditic. Having relation to *Hermaphroditism*.

Hermaphroditism. (*Hermaphroditie*. F. *hermaphroditisme*; I. *ermafrodismo*; S. *hermaphrodismo*; G. *Zwitterbildung*.) The combination of the two sexes, or of some of their attributes or organs, in one individual. This may be a normal condition, as in some of the lower animals and in most plants; or it may be an abnormal condition from congenital defect, as in certain monstrosities. When normal, the conjunction of two individuals is frequently necessary for fertilisation.

H., abnormal. (L. *abnormis*, irregular. F. *hermaphroditisme anormal*.) Hermaphroditism in an individual of a species the members of which are naturally of only one or other sex; being a monstrosity.

H., absolute. (L. *absolutus*, complete.) Same as *H., normal*.

H., adequate. (F. *hermaphroditisme suffisant*.) The form of normal hermaphroditism occurring in most plants and some worms in which the organs of the individual are sufficient for self-fertilisation.

H., androgynic. (Ἀνδρ., a male; γυνή, a female.) The form in which the male part of an hermaphrodite individual, such as an oyster, exercises its fecundating power before the female part has exercised its power.

H., apparent. The form in which only the external non-essential genital organs assume the characteristics of the opposite sex.

H., bisexual, imperfect. (L. *bis*, twice; *sexus*, sex.) A form of abnormal hermaphroditism which, in the female, is expressed by a penis-like clitoris, a vagina, and a rudimentary uterus; and in the male, by a defective or hypospadiac penis, a rudimentary vagina, with spermatic ducts and testicles in its walls.

H., complex. Same as *H., vertical*.

H., crossed. (F. *hermaphroditisme croisé*.) The form in which the deeper organs of one side are of the same sex as the more superficial organs of the other, and *vice versa*.

H., double. Same as *H., vertical*.

H., false. See *H., spurious*.

H., female. The form of abnormal hermaphroditism in which the genital organs are essentially female, but some possess male characteristics.

H., gynandrous. (Γυνή, a female; ἀνδρ., a male.) The form in which the female part of an hermaphrodite individual is fecundated, as in the *Euphorbia cyperissias*, before the stamens possess ripe pollen.

H., inadequate. (F. *hermaphroditisme insuffisant*.) The form of normal hermaphroditism occurring in many Mollusca in which organs are so arranged that self-fertilisation is impossible, the conjunction of different individuals being necessary for fertilisation.

H., lateral. (L. *lateralis*, belonging to the side.) The form of true abnormal hermaphroditism in which the male organs present chiefly lie on one side of the median line and the female organs on the other.

H., male. The form of abnormal hermaphroditism in which the genital organs are essentially male, but some possess female characteristics.

H., mixed. The form of abnormal hermaphroditism in which some of the genital organs are male and some female.

H., neuter. (L. *neuter*, neither of two.) The form of abnormal hermaphroditism in which none of the genital organs are either essentially male or essentially female.

H., normal. (L. *norma*, pattern.) The form in which, as in most plants and many Mollusca, both male and female organs are contained in one individual.

H., semilateral. (L. *semi*-, half; *latus*, the side.) The form of abnormal hermaphroditism in which all the genital organs of one side are either male or female, and those of the other side are of both sexes.

H., spurious. (L. *spurius*, false.) The condition in which some of the external peculiarities of one sex, as the growth of a beard, are assumed by the other without any real anatomical admixture of the sexes.

H., sterile. (L. *sterilis*, unfruitful.) Same as *H., neuter*.

H., superposed. (L. *super*, above; *pono*, to place.) The form of abnormal hermaphroditism in which the genital organs of one sex lie above those of the other.

H., transverse. (L. *transversus*, turned across.) The form of true hermaphroditism in which the external organs of generation appear to be of one sex, and the internal organs of the opposite.

H., true. The condition in which there

HERMAPHRODITISMUS—HERNIA.

are present in one individual some of the essential organs of generation of both sexes.

H., vertical. (L. *verticalis*, from *vertex*, the top.) The form of true hermaphroditism in which both ovaries and both testicles coexist in the same person, or other like combinations.

H. with excess'. The form in which the abnormal hermaphrodite individual possesses the whole of the organs of one sex and some of those of the other.

H., without' excess'. The form of abnormal hermaphroditism in which, whether essentially male or essentially female, a small number only of the genital organs exhibit the characteristics of the opposite sex.

Hermaphroditismus. See *Hermaphroditism*.

Hermaphroditus. An *Hermaphrodite*.

Hermetic. (Low L. *hermeticus*, relating to alchemy; from Ἑρμῆς, the god Mercury, who was said to be the founder of chemistry. F. *hermétique*; I. *ermetico*; S. *hermetico*; G. *hermetisch*.) Of, or belonging to, chemistry.

H. art. A synonym of *Alchemy*; and also of *Chemistry*.

H. medicine. Same as *Medicine, spagiric*.

H. philosophy. A synonym of *Alchemy*.

H. science. A synonym of *Alchemy*.
H. sealing. (F. *scel hermétique*.) The closing of the end of a glass vessel or tube while in a state of fusion.

Also, a mode of treatment of penetrating wounds of the chest or abdomen by closing them externally with collodion and scraps of lint.

Hermetica doctrina. (L. *doctrina*, teaching.) Same as *Hermetic science*.

Hermetical. Same as *Hermetic*.

H. sealing. The closing of a glass tube by fusing it or plugging it closely so that no air could pass.

Also, the closing of a wound by impervious plaster.

Hermetically. In an hermetic manner.

Hermetism. (Ἑρμῆς, Mercury. F. *hermétisme*.) A term for *Alchemy*.

Hermida, la. Spain, Province of Santander. A thermal sodium chloride water from three sources, having a temperature varying from 40°–57·5° C. (104°–135·5° F.) Used in lymphatic and scrofulous affections, in chronic rheumatism, and in paralysis.

Hermioné. Greece, in Argolis. A cold saline water containing sodium chloride 13·5 grains, sodium carbonate 1·8, sodium sulphate 3·7, magnesium sulphate 7·4, and magnesium chloride 2·6 grains in sixteen ounces. It is used in calculous affections and chronic catarrhs of the bladder.

Hermit crab. The *Cancer Bernhardus*.

Hermitage. A wine of France from the Lower Rhone, named after a hill near Tain, Département du Drome, where it is grown. It contains from 9 to 13 per cent. of alcohol.

Hermodactyl. See *Hermodactylus*.

H., bitter. The *Colchicum variegatum*.

H., sweet. The kernels of the *Trapa bispinosa*; a drug found in Indian bazaars.

Hermodactylus. (Ἑρμόδακτυλος, from Ἑρμῆς, Mercury; δάκτυλος, a finger, or a date, from its resemblance; or *Hermus*, a river

in Asia, on the banks of which it grows.) The hermodactyl. A bulb which was anciently much celebrated as a cure for gout, and still retains its reputation in Eastern lands. The plant which afforded it is supposed, by some, to be the *Colchicum illyricum*; by Planchon, the *Colchicum variegatum*; by others, the *Iris tuberosa*; and by others, the *Colchicum autumnale*. It was of three kinds, white, yellow, and black.

Also, a Genus of the Nat. Order *Iridaceæ*.

H. officinalis. (L. *officina*, a workshop.) The bulb of *Colchicum variegatum*, according to Planchon.

H. tuberosus, Salisb. The *Iris tuberosa*.

Hermola'os. Ancient name applied by Aëtius to two kinds of an astringent collyrium, the greater and the less, for repressing and stopping fluxions. (Gorræus.)

Hermonville. France, Département du Marne, near Rheims. A bituminous sulphur spring used in asthma, rheumatism, gout, and skin diseases.

Hernand'ia. (Hernandez, a Spanish botanist.) A Genus of the Nat. Order *Thymelacæ*.

H. ovig'era, Willd. (L. *ovum*, an egg; *gero*, to bear.) Hab. West Indies. Bears an astringent fruit called American myrobalanus.

H. sonora, Linn. (L. *sonorus*, loud sounding.) Jack in a box. Hab. India, West Indies. Fruit astringent, very large, so as to make a loud sound in a wind; seeds, bark, and young leaves purgative; juice of leaves depilatory. Used as an alexipharmic.

Hernia. (L. *hernia*, a rupture; perhaps from ἕρως, a sprout. F. *hernie*; I. *ernia*; S. *hernia*; G. *Bruch*.) A tumour formed by the protrusion of any, or part of any, viscus through an aperture in the walls of its containing cavity, either naturally present or unnaturally produced.

The term is also applied to the passage of some organ, or of a part of it, through an aperture or canal in the interior of the cavity in which the organ lies; as in hernia through the foramen of Winslow.

A hernia consists of the viscus which is protruded, the sac of peritonæum which invests it, and the tissues, varying with the position of the rupture, covering it. See *Hernial sac*.

H., abdom'inal. (L. *abdomen*, the belly. F. *hernie abdominale*; G. *Unterleibsbruch*, *Bauchbruch*.) A hernia which protrudes externally through some accidental or natural opening in the abdominal walls. Males are more subject to abdominal hernia in the proportion of about two to one; it is, according to Birkett, more commonly developed before than after middle life; the defective condition of the abdominal rings and a long mesentery, both predisposing circumstances, are often hereditary; a condition of feeble health and great bulk of abdominal contents, may also predispose. The immediate cause is great muscular exertion in most cases, but the result may not be sudden, the hernia may be developed gradually. Wounds and inflammations may cause weak places which become the seat of hernia.

Also, see *H., ventral*.

H., acquired. (F. *hernie acquise*; G. *erworbener Bruch*.) A hernia which was not present at birth.

H. adipo'sa. (L. *adeps*, fat. F. *hernie*

HERNIA.

graisseuse; G. *Fettbruch*.) A protrusion of fatty substance through one of the usual apertures by which a hernia escapes. It consists either of an outgrowth from the subperitoneal connective tissue, or is directly connected by means of a peduncle with the peritonæum. See also, *H., fatty*.

H., aneurys'mal. (Ἀνεύρυσμα, a widening.) A dilatation of the arteries about the navel.

H. an'nuli umbilica'lis. (L. *annulus*, a ring; *umbilicus*, the navel.) See *H. of umbilical ring*.

H. aquo'sa. (L. *aquosus*, watery. F. *hernie aqueuse*; G. *Wasserbruch*.) An old term for *Hydrocele*.

H. arteria'rum. (L. *arteria*, an artery.) A term for true *Aneurysm*.

H., ascend'ing. Same as *H., interstitial*.

H. bis'toury. (*Bistoury*.) Same as *H. knife*.

H. bronchia'lis. (Βρόγχος, the wind-pipe.) A term for *Goitre*.

H., bur'sal. (*Bursa*.) Same as *H., synovial*.

H., cæ'cal. See *Cæcal hernia*.

H. carno'sa. (L. *carnosus*, fleshy. F. *hernie charnue*; G. *Fleischbruch*.) A term used by Prosper Alpin and Larrey for a fleshy tumour of the scrotum, being elephantiasis of the scrotum, but perhaps also including the tumours called *sarcocele*.

H., cer'ebral. (L. *cerebrum*, the brain. F. *hernie cérébrale*; G. *Hirnbruch*.) See *Brain, hernia of*, and *Encephalocele*.

H. cer'ebrl. See *H., cerebral*.

H., Clo'quet's. (*Cloquet*.) A femoral hernia which passes on the inside of and behind the femoral vessels, lying on the pectineus muscle, the aponeurosis of which forms one of its coverings.

H., complete'. A hernia which has fully passed through the aperture by which it escapes from the cavity of the body.

See also, *H., inguinal, complete*.

H. complica'ta. (L. *complicatus*, confused.) A hernia accompanied by some morbid condition of a near part, such as *varicocele* or *hydrocele*.

H., congen'ital. (L. *congenitus*, born together with. F. *hernie congenitale*, *h. de l'enfance* of Malgaigne; G. *angeborenes Bruch*.) A hernia which protrudes through a natural aperture of the body which should have been closed at birth.

The term has been, since the time of Haller, specially applied to an inguinal hernia present at birth and occupying the vaginal process of peritonæum which accompanies the testicle in its descent into the scrotum, and which has remained open throughout its whole extent, from the peritoneal cavity to the fundus of the scrotum.

H., Coö'per's. (*Cooper*, Astley.) A femoral hernia which has passed through one or more openings in the superficial fascia.

H. cor'neæ. See *Ceratocoele*.

H., cru'ral. (L. *crus*, the leg. F. *hernie crurale*; I. *ernia crurale*; G. *Schenkelbruch*.) Same as *H., femoral*.

H., cru'ral, exter'nal. Same as *H., femoral, external*.

H., cru'ral, inter'nal. Vidal's term for a rare form of femoral hernia, in which the in-

ternal opening of the sac lies on the inner side of the obliterated umbilical artery.

H., cru'ral, mid'dle. Same as *H., femoral, middle*.

H., cys'tic. (Κύστις, the bladder.) Same as *H., vesical*.

H., diaphragma'tic. (Διάφραγμα, a partition. F. *hernie diaphragmatique*; I. *ernia diaframmatica*; G. *Zwerchfellbruch*.) A protrusion of some of the viscera of the abdomen into the cavity of the chest through an opening in the diaphragm, which may be congenital or the result of a wound; or through one of the natural openings in the diaphragm. The term is also applied to displacement of the abdominal viscera into the thoracic cavity by stretching of the diaphragm without loss of continuity.

H. diaphragmatica congen'ita. (L. *congenitus*, born together with.) See under *H., diaphragmatic*.

H. direc'tor. A flat silver or steel instrument, about '25" wide and channelled in the centre for the reception of the hernia knife. It is usually fixed in a handle.

H., divertic'ular. (L. *diverto*, to separate from.) Same as *H., Littré's*.

H., doub'le. A hernia on both sides of the body, or in different situations.

H., encyst'ed. (Ἐν, in; κύστις, a bag.) Same as *H., infantile*.

H., encyst'ed vagin'al. (Ἐν; κύστις; L. *vagina*, a sheath.) Astley Cooper's term for the form of hernia described under *H., infantile*.

H., endem'ic. (Ἐνδημος, dwelling in a place.) The fact that hernia may be endemic has been demonstrated by M. Bondin from an examination of the causes of exemption from military service in France, who found that hernia was much more common in conscripts coming from some localities than from others.

H., entero-vagin'al. (Ἐντερον, an intestine.) Protrusion of a portion of small intestine into a pouch in the vaginal wall. It is most common in the posterior wall, the intestine stretching Douglas's pouch.

H., epiga'stric. (Ἐπίγαστριον, the region of the abdomen below the breast-bone. F. *hernie epigastrique*; I. *ernia epigastrica*; G. *Oberbauchbruch*.) A protrusion of some abdominal viscus in the angle between the cartilages of the ribs, having its apex at the ensiform cartilage; especially in the part of the linea alba above the umbilicus.

H., epiplo'ic. (Ἐπίπλοον, the omentum only.) A hernia consisting of the omentum only.

H., exter'nal. (L. *externus*, outward.) A hernia which escapes through an aperture in the body which leads towards the superficial surface, such as a femoral hernia.

H., fat'ty. (F. *hernie graisseuse*.) A fatty tumour of the middle line of the abdomen, which, instead of arising from the subcutaneous fatty tissue, has taken origin in the subperitoneal fat, and perforated the muscles in its growth outwards.

Fatty hernia consisting of subperitoneal fat, or of a fatty tumour unconnected with it, may be met with in the inguinal, scrotal, or labial region; the subperitoneal form may enclose a peritoneal sac, into which some viscus may protrude. See also, *H. adiposa*.

HERNIA.

H., fem'oral. (L. *femoralis*, belonging to the thigh. F. *hernie fémorale*, h. *crurale*; G. *Schenkelbruch*.) A hernia in the groin which passes underneath Poupart's ligament, through the innermost compartment of the femoral sheath, the femoral canal, till it reaches the saphenous opening, whence it protrudes and turns over the iliac part of the fascia lata and the femoral canal. It carries before it the peritonæum, the septum crurale, and the sheath of the femoral vessels, which conjoined form Astley Cooper's fascia propria, the cribriform fascia, the superficial fascia, and the skin; sometimes the femoral sheath splits and does not form a covering. Femoral hernia is much more common in the female than in the male, and rarely occurs before puberty. Its varieties are *H., Cloquet's*, *H., Cooper's*, *H., Hesselbach's*, *H., Laugier's*, and *H., Partridge's*.

H., fem'oral, anterior. (L. *femur*; anterior, in front.) A femoral hernia which lies in front of the femoral vessels.

H., fem'oral, external. (L. *femur*; *externus*, outward.) A rare form of femoral hernia, in which the internal opening of the sac lies on the outer side of the epigastric artery.

H., fem'oral, internal. (L. *femur*; *internus*, within.) Same as *H., crural, internal*.

Also, by some authors, used in the same sense as *H., femoral, middle*.

H., fem'oral, mid'dle. (L. *femur*.) The common form of femoral hernia, in which the internal opening of the sac lies on the inner side of the epigastric artery.

H., fem'oral, oblique. Same as *H., crural, internal*.

H., fem'oral, pectine'al. (L. *femur*; *pectineus* muscle. F. *hernie crurale pectinée*.) De Gendré's name for *H., Cloquet's*.

H., fem'oral, poster'ior. (L. *femur*; posterior, hinder.) Same as *H., Cloquet's*.

H., fem'oral, retrovas'cular. (L. *retro*, behind; *vasculum*, a vessel.) The same as *H., pectine'al*.

H., flatulent'a. (L. *flatulentus*, from *flatus*, a blowing. F. *pneumatocèle*; G. *Luftbruch*.) A name for *Pneumatocèle*.

H., foramina'lis Winslow'ii. (L. *foramen*, an opening; *Winslow*.) Protrusion of intestine through the foramen of Winslow.

H., foram'nis magni is'chii. (L. *foramen*, an opening; *magnus*, great.) Same as *H., ischiatic*.

H., foram'nis ova'lis. (L. *foramen*, an opening; *ovalis*, oval.) Same as *H., ob-turator*.

H., free. (G. *freier Bruch*.) Same as *H., reducible*.

H., funic'ular. (L. *funiculus*, a small cord.) Same as *H. of umbilical cord*.

H., funic'uli umbilica'lis. (L. *funiculus*; *umbilicus*, the navel. G. *Nabelschnur-bruch*.) See *H. of umbilical cord*.

H., fun'is. (L. *funis*, a cord.) Same as *H. of umbilical cord*.

H., gut'tural. (L. *guttur*. F. *hernie gutturale*.) A term for *Goitre*.

H., guttura'lis. (L. *guttur*, the throat. F. *bronchocèle*, *goître*; G. *Kropf*.) Guttural hernia, or hernia of the throat. Name for *Bronchocèle*.

H., gut'turis. (L. *guttur*.) Same as *H. gutturalis*.

H., hepatic'a. (L. *hepar*, the liver.) See *H. of liver*.

H., Hes'selbach's. See *Hesselbach, hernia of*.

H., hour'glass. A form of oblique inguinal hernia in which there is a constriction at or about the centre of the tumour, so that it resembles in shape the hourglass.

H., humora'lis. (L. *humor*, fluid. F. *hernie humorale*; G. *entzündungsartige Hodengeschwulst*.) Humoral hernia. A term applied to acute inflammation of the testicle when arising from gonorrhœa, or some other kind of irritation in the urethra; swelled testicle; also called *H. veneris*. See *Orchitis*.

H., hypogas'tric. (Ἵπογάστριον, the belly below the navel.) A hernial protrusion through the linea alba below the umbilicus.

H. in recto. (L. *in*, in; *rectum*.) The passage of some part of the abdominal viscera or of the vagina through an opening in the muscular coat of the rectum; it pushes forward the mucous coat, and when extensive may protrude externally, and form a kind of prolapsus.

H., incar'cerated. (L. *in*, in; *carcer*, a prison. F. *hernie incarcerated*; G. *eingeklemmter Bruch*, *einsperrener Bruch*.) A term which is variously explained by authors. It is used by some in the same sense as *strangulated*; by others, to signify an irreducible hernia which has become obstructed by flatus or feces, an obstructed hernia; and by others, to denote a hernia which has become irreducible in consequence of thickening of, or fatty deposit in, the enclosed omentum or mesentery.

H., in'complete. A hernia which has not fully passed through the aperture by which it escapes from the cavity of the body.

Also, see *H., inguinal, incomplete*.

H., in'fantile. (L. *infantilis*, belonging to infants.) Hey's term for a form of hernia not confined to infants, in which the vaginal process of peritonæum is closed only at the internal abdominal ring, so that the gut pushing forwards the septum which forms its sac becomes included in the unclosed portion of the vaginal process, and so receives two separate coats of peritonæum. This is Astley Cooper's encysted hernia of the tunica vaginalis.

An infantile hernia may pass behind the cord with its unclosed funicular process, and so obtain three coats of peritonæum.

The infantile hernia of Malgaigne (*hernie de l'enfance*) is *H., congenital*.

H., infarc'ted. (L. *infarcio*, to stuff into.) Same as *H., obstructed*.

H., infla'med. A hernia which, from violence, pressure of a badly fitting truss, or extension of abdominal inflammation, has become hot, painful, enlarged, and more or less hard. When it occurs in an incarcerated hernia strangulation may result; an incarcerated omental hernia is said to be the most frequently inflamed.

H., infrapu'blian. (L. *infra*, beneath; *pubes*.) Same as *H., subpubic*.

H., in'fra-umbili'cal. (L. *infra*, beneath; *umbilicus*, the navel.) Same as *H., hypogastric*.

H., ingen'ita. (L. *ingenitus*, inborn.) Same as *H., congenital*.

H., in'guinal. (L. *inguen*, the groin. F. *hernie inguinale*, h. *sus-puberne*; G. *Leistenbruch*.) A hernia in the groin which passes

HERNIA.

over the upper surface of Poupart's ligament into the inguinal canal and the scrotum. In its early stage, as it emerges from the external abdominal canal, it is called a *Bubonocoele*; in its completed form it is called *H., scrotal*, or *Oscheocoele*. There are two forms, *H., inguinal, direct*, and *H., inguinal, oblique*, and together they constitute some two thirds of the total number of cases of hernia, and are in the proportion of seven or eight inguinal to one femoral. It occurs four times more frequently in males than in females; and is found on the right side three times to twice on the left.

H., inguinal, complete'. An inguinal hernia which has passed through the external abdominal ring.

H., inguinal, congenital. See under *H., congenital*.

H., inguinal, direct'. (*F. hernie inguinale interne*; *G. innerer Leistenbruch*.) An inguinal hernia which escapes from the abdomen by a protrusion in the triangle of Hesselbach, on the inner side of the epigastric artery, directly, or almost directly, opposite the external abdominal ring; it pushes before it, in addition to the peritonæum which forms its sac, the subperitonæal tissue, the transversalis fascia, the conjoint tendon of the internal oblique and the transversalis muscles, the spermatic fascia, the superficial fascia, and the integuments.

Occasionally a direct inguinal hernia protrudes through an opening in the aponeurosis of the external oblique muscle, and not through the external abdominal ring.

H., inguinal, external. (*L. inguen; externus*, outward.) Hesselbach's term for *H., inguinal, oblique*, inasmuch as the neck of the hernial sac lies outside the epigastric artery.

H., inguinal, incomplete. An inguinal hernia which still lies in the inguinal canal.

H., inguinal, infantile. See under *H., infantile*.

H., inguinal, internal. (*L. inguen; internus*, within.) An inguinal hernia which has the mouth of the sac on the inner side of the epigastric artery; being the same as *H., inguinal, direct*.

H., inguinal, interstitial. (*L. interstitium*, an interval.) Same as *H., inguinal, incomplete*.

H., inguinal, oblique'. (*F. hernie inguinale oblique*; *G. äusserer Leistenbruch*.) An inguinal hernia which enters the internal abdominal ring, takes the oblique course of the inguinal canal, and passes through the external abdominal ring to the scrotum, along with the spermatic cord in the male, and to the labium vulvæ, along with the round ligament of the womb in the female, into which it may descend. The inner aperture of the hernial sac lies on the outer side of the epigastric artery, the neck and body of the rupture usually lying upon the spermatic cord and its vessels, but sometimes passing into it and separating the structures of which it is composed. It carries before it the peritonæum, the subperitonæal areolar tissue, and the infundibuliform fascia, covered by the cremasteric fascia and muscle, the intercolumnar fascia, the superficial fascia, and the skin, with, in the scrotum, the dartos.

H., inguinal, scrotal. Same as *H., scrotal*.

H., inguino-interstitial. (*F. hernie inguino-interstitielle*.) Goyrand's term for *H., interstitial*.

Also, a term by Goyrand for *H., inguinal, interstitial*.

H., inguino-labial. (*L. inguen; labium*, a lip.) An inguinal hernia in the female which has developed so as to occupy a labium of the pudendum.

H., inguino-scrotal. (*L. inguen; scrotum*, the bag for the testicles.) An inguinal hernia which has developed so as to occupy the scrotum.

H., intermuscular. (*L. inter*, between; *musculus*, a muscle.) Same as *H., interstitial*.

H., internal. (*L. internus*, within.) A hernia which passes through an aperture leading from one part of the interior of the body to another part, such as a diaphragmatic hernia; or a hernia which passes through an aperture in some structure contained in a cavity of the body, as a mesenteric hernia.

H., interstitial. (*L. interstitium*, a space between.) A form of congenital hernia occurring in a person in whom the vaginal process of peritonæum has an offset extending upwards between the internal abdominal fascia and the aponeurosis of the external oblique muscle of the abdomen, or between this aponeurosis and the integuments; or one extending into the iliac fossa, and lying upon the iliacus muscle, between the internal abdominal fascia and the peritonæum; or one extending behind the horizontal ramus of the pubes to the bladder; into one of which offsets the hernia passes.

Also, the same as *H., inguinal, incomplete*.

H., intestinal. (*F. entéroccle*; *G. Darmbruch*.) A hernia containing intestine only.

H. intestino-omentalis. (*L. intestinum*, a gut; *omentum*, the membrane which includes the bowels.) A hernia containing both intestine and omentum.

H. intestinum. (*L. intestina*, the bowels.) Same as *H., intestinal*.

H. into funicular portion of vaginal process. (*L. funiculus*, a small cord; *vagina*, a sheath.) Birkett's term for a form of congenital hernia occurring in those cases where the tunica vaginalis of the testicle has been formed and completely shut off, but the funicular portion of the process of peritonæum forming the tunica vaginalis has remained open from just above the testicle.

H. into the vaginal process. Birkett's term for *H., congenital*.

H., intranguinal. (*L. intra*, within; *inguen*, the groin.) Boyer's term for an incomplete inguinal hernia.

H., intraparietal. (*L. intra*, within; *paries*, a wall.) Same as *H., interstitial*.

H. iridis. See *Iris, hernia of*.

H., irreducible. (*L. irredux*, that does not bring back. *F. hernie irréductible*; *G. unbeweglicher Bruch*.) A hernia whose contents cannot be returned into their natural place by pressure or position, but in which there is no impediment to the passage of faeces nor obstruction to the blood circulation.

H. ischiadica. See *H., ischiatic*.

H., ischiatic. (Ἰσχίον, the hip. *F. hernie ischiatique*; *G. Hüftbeinbruch, Bruch des Hüftbeinausschnittes, Hüftausschnittbruch*.)

HERNIA.

Hernia through the great sciatic foramen; the protrusion generally occurs at the upper border of the pyriformis muscle.

H., ischio-rectal. (*Ischium; rectum.*) Hernia through the ischio-rectal fossa. Same as *H., perineal.*

H. knife. A long, narrow, slightly curved knife, oval in section, with a blunt and rounded end and a cutting edge about .75" long, commencing .25" from its extremity. Also called *Herniotome.*

H., labial. (*L. labium, a lip. F. hernie des grandes lèvres.*) Same as *H., pudendal.*

H., lac'ri-mal. (*L. lacryma, a tear. F. tumeur lacrymale.*) A term for a swelling of the lachrymal sac from over-distension.

H., lat'eral. (*L. latus, the side.*) Same as *H., Littré's.*

H., Laugier's. (*Laugier.*) A femoral hernia passing through Gimbernat's ligament.

H. lien'a'lis. (*L. lien, the spleen.*) See *H., splenic.*

H. ligamento'sa. (*L. ligamentum, a band.*) An internal hernia which has become strangulated or incarcerated by one of the peritoneal ligaments.

H. lin'æe alb'æ. (*L. linea, a line; albus, white. F. hernie de la ligne blanche.*) An abdominal hernia protruding from some part of the linea alba.

H., Littré's. (*Littre.*) A hernia which contains one wall only of a piece of intestine, the whole lumen not being involved.

H. littria'na. Same as *H., Littré's.*

H. lit'trica. Same as *H., Littré's.*

H. lumba'lis. See *H., lumbar.*

H., lum'bar. (*L. lumbus, the loin. G. Lendenbauchbruch.*) A hernia occurring in the posterior abdominal wall between the ilium and the last rib, usually in Petit's triangle.

H. membra'na Descemetii. Hernia of Descemet's membrane. Same as *Ceratocoele.*

H., mesenter'ic. (*Μεσεντερειον, the membranes to which the intestines are attached. F. mésentérique.*) A kind of hernia formed by the intestine becoming inserted through an aperture in one of the layers of the mesentery, torn by a blow, or caused by natural defect, while the other layer is in its natural state; mesenteric rupture.

H., mesocol'ic. (*Μέσος, in the middle; κόλον, the colon. F. hernie mésocolique.*) A term for hernia consisting in the bowels having glided between the layers of the mesocolon.

H., mus'cular. (*F. hernie musculaire.*) A protrusion of some fasciculi of a striped muscle through an accidental opening in its aponeurosis.

H., obstruc'ted. An irreducible hernia which, from distension of the protruded bowel by gas, liquid, or accumulated feces, has become tense, larger, and painful; the passage of the feces is arrested, and if the obstruction is not removed the hernia becomes strangulated.

H., obtur'ator. (*L. obturo, to stop up. F. hernie obturatrice; G. Bruch des eirunden Loches.*) Hernia passing through the aperture in the obturator membrane which transmits the obturator vessels and nerve. The neck of the sac lies behind the horizontal ramus of the os pubis, and its body is covered by the obturator fascia.

H. of a tu'nic. (*F. hernie tuniquaire.*) A protrusion of some part of the mucous or lining

membrane of a structure through an aperture in its muscular coat.

H. of blad'der. (*G. Blasenbruch.*) See *H., vesical.*

H. of blad'der, congen'ital. (*L. congenitus, born together with.*) Same as *Bladder, extroversion of.*

H. of brain. (*F. hernie du cerveau; G. Hirnbruch.*) See *H. cerebri.*

H. of cæ'cum. See *Cæcal hernia.*

H. of canal' of Nuck. A hernial protrusion, in the female, into the peritoneal sac around the round ligament of the uterus at its outer termination.

H. of cerebellum. Protrusion of a portion of the cerebellum through an aperture, congenital or acquired, in the lower part of the occipital bone.

H. of cer'ebral mem'branes. See *Meningocele and Encephalocele.*

H. of cor'nea. See *Ceratocoele.*

H. of di'aphragm. See *H., diaphragmatic.*

H. of Fallo'pian tube. See *Fallopian tube, hernia of.*

H. of heart. (*G. Herzbruch.*) See *Cardiocele.*

H. of iris. See *Iris, hernia of.*

H. of kid'ney. See *Nephrocele.*

H. of lac'ri-mal sac. See *H., lac'ri-mal.*

H. of liv'er. (*G. Leberbruch.*) See *Hepatocele.*

H. of lung. (*G. Lungenbruch.*) See *Lung, hernia of.*

H. of mus'cle. See *H., muscular.*

H. of Nuck's canal'. See *H. of canal of Nuck.*

H. of o'vary. (*G. Eierstockbruch.*) See *Ovary, hernia of.*

H. of pleu'ra. See *H., pleural.*

H. of rectum. See *H. in recto and H., recto-vaginal.*

Also, a term for *Prolapsus ani.*

H. of spleen. (*G. Milzbruch.*) See *H., splenic.*

H. of stom'ach. (*G. Magenbruch.*) See *Gastrocele.*

H. of tes'ticle. Same as *Testis, fungus of.*

H. of tongue. Same as *Glossocoele.*

H. of tu'nica vagina'lis. Same as *H., congenital.*

H. of umbil'cal cord. (*G. Nabelschnurbruch.*) An umbilical hernia which is produced by a congenital defect of the abdominal wall at the umbilicus.

H. of umbil'cal ring. (*G. Nabelringbruch.*) See under *H., umbilical.*

H. of vagi'na. See *H., vaginal.*

H. of womb. See *H., uterine.*

H., omen'tal. (*L. omentum, the membrane which includes the bowels. F. épiplocèle; G. Netzbruch.*) A hernia consisting of omentum only.

Also, the same as *H., mesenteric.*

H., opera'tions for. See under *Herniotomy* and *H., radical cure of.*

H. oschea'lis. (*Όσχρον, the bag for the testicles. F. hernie scrotale, oschocèle; G. Hodensackbruch.*) Another term for *Scrotocoele*, or scrotal hernia; also called *Oscheocoele.*

H., ova'rian. See *Ovary, hernia of.*

H. parorchidoenter'ica. Same as *Parorchidoenterocoele.*

H., Par'tridge's. (*Partridge.*) A fe-

HERNIA.

moral hernia which has passed out of the abdomen on the outer side of the femoral vessels.

H., pectine'al. Same as *H., femoral, pectineal*.

H., pel'vic. (*Pelvis*.) A hernia protruding through an aperture situated in some part of the pelvis, such as obturator heruia.

H., perinæ'al. (*Περιναιον*, the space between the anus and the scrotum. *F. hernie perineale*; *G. Mittelkeischbruch*.) Hernia passing down the ischio-rectal fossa and appearing in the perinæum; it protrudes between the prostate gland and the rectum in man, and between the vagina and rectum in the female, or in both, in rare cases, by the side of the anus. It may contain intestine, or omentum, or urinary bladder.

H. perinæ'i. See *H., perinæal*.

H., peritonæ'o-vaginal. (*L. peritonæum*; *vagina*, a sheath.) A term which includes both *H., congenital*, and *H., infantile*.

H., pharynge'al. (*Φάρυγξ*, the throat.) A diverticulum of the pharynx. See under *Pharynx, dilatation of*.

H. pharyng'is. Same as *H., pharyngeal*.

H., phren'ic. (*Φρήν*, the diaphragm.) Same as *H., diaphragmatic*.

H. pingueden'osa scro'ti. (*L. pinguedo*, fatness; *scrotum*, the bag for the testicles.) A fatty tumour of the scrotum.

H., pleu'al. See *Pleurœcele*.

H. pleu'rica et pulmona'lis. (*L. pulmo*, the lung.) Same as *Pleurœcele*.

H., properitonæ'al. (*L. pro*, in front; *peritonæum*.) Au interstitial heruia in which the pouch of peritonæum which contained it extends into the abdominal walls in front of the peritonæum.

H., puden'dal. (*L. pudenda*, the privy parts. *F. hernie pudendale*; *G. Schamlippenbruch*.) A hernia occurring in females which protrudes between the ascending ramus of the ischium and the vagina, and pushes forwards to the hinder part of the labium pudendi.

H. purulen'ta. (*L. purulentus*, full of pus or matter.) A hernial sac containing pus.

H., radical cure of. (*G. Radicalheilung des Bruches*.) The permanent blocking up of the canal through which a hernia passes after it has been returned into the body, in order to prevent a fresh protrusion. This may be not infrequently accomplished in infants, but very seldom in the adult, by the firm pressure of a truss over the canal through which the protrusion has occurred. It may also be accomplished by operative interference, either by setting up inflammation of the peritonæum of the neck of the sac or of the sac itself, so that the two sides become united; or by invagination of the sac and subcutaneous tissues into the neck of the sac, and retaining them there by sutures till there is a plug formed by adhesion; or by removal of the sac and closure of the neck by sutures.

H. rec'ti. See *H. of rectum*.

H., rec'to-vaginal. (*Rectum*; *vagina*.) A protrusion of the rectum into a pouch formed in the posterior wall of the vagina, from retention of fæces; constipation, and piles, or inflammation of the mucous membrane of the rectum, with tenesmus, may happen.

H., redu'cible. (*L. reduco*, to lead back. *F. hernie reducible*; *G. beweglicher Bruch*.) A hernia whose contents can be returned to

their natural position either by pressure or position.

H., reduc'tion of. (*L. reduco*, to lead back. *F. repoussement de la hernie*; *G. Zurückbringen des Bruches*.) See *Taxis*.

H., replace'ment of. (*G. Zurückbringen des Bruches*.) See *Taxis*.

H., retroperitonæ'al. (*L. retro*, behind; *peritonæum*.) An interstitial hernia which passes into a pouch of the peritonæum which extends into the iliac fossa, and rests on the iliacus muscle.

H. retrovascula'ris. (*L. retro*, behind; *vasculum*, a small vessel.) The same as *H., Cloquet's*.

H., sac of. See *Hernial sac*.

H., sac'ci lachryma'lis. (*L. saccus*, a bag; *lachryma*, a tear.) Beer's term for rupture from distension of the lachrymal sac.

H., sa'cro-rec'tal. (*Sacrum*; *rectum*.) Same as *H., perinæal*.

H., sciatic. Same as *H., ischiatic*.

H., scro'tal. (*L. scrotum*, the bag for the testicles. *F. hernie scrotale*; *G. Hodensackbruch*.) An inguinal hernia which has descended into the scrotum.

H. semina'lis scro'ti. (*L. semen*, seed; *scrotum*.) Same as *Spermatocele*.

H., splen'ic. (*Σπλήν*.) Protrusion of the spleen, or some part of it, through an aperture in the abdominal parietes, or one in the diaphragm.

H., sponta'neous. (*L. spontaneus*, of one's free will.) A hernia in which a portion of a viscus passes out of its natural cavity without any defined cause beyond the pressure exerted on the abdominal viscera by the muscles.

H., stran'gulated. (*L. strangulo*, to throttle. *F. hernie étranglée*; *G. eingeklemter Bruch*.) A hernia in which the contents are so constricted at or by the neck of the hernial sac that the venous circulation and the passage of fæces are arrested or impeded to such an extent that return of the hernia is impossible. In this condition, unless the cause of constriction is removed, gangrene will occur. The sac of a strangulated hernia usually contains some serum, which is pale yellow, clear and bright in recent cases, but becomes dark brown as time advances, and ultimately, if the strangulation continues, is turbid, from changed blood, pus, or flakes of lymph.

H., subpu'bic. (*L. sub*, under; *os pubis*. *F. hernie sous-pubienne*.) Hernia through the subpubic or obturator foramen. See *H., obturator*.

H., subpu'bic, fem'oral. (*L. femur*, the thigh.) Same as *H., subpubic*.

H., suprapu'bian. (*L. supra*, above; *os pubis*.) Same as *H., inguinal*.

H., syno'vial. (*Synovia*.) A protrusion of the synovial membrane through the fibrous capsule of a joint, where it is weakest, from the pressure of intra-articular effusion.

H. tes'tis. (*L. testis*, the testicle.) See *Testicle, protrusion of tubuli of*.

H. through fora'men of Wins'low. Protrusion of some part of the intestine through the opening between the peritoneal sac and the sac of the great omentum, the foramen of Winslow.

H. through fora'men ova'lë. (*L. foramen*, a hole; *ovale*, oval.) The same as *H., obturator*.

HERNIAL—HERNIARIA.

H. through obturator canal. Same as *H. obturator*.

H. through thyroïd foramen. See *H., thyroïd*.

H., thyroïd. (Θυροίς, a shield; εἶδος, likeness.) A hernia through the thyroïd or obturator foramen. See *H., obturator*.

H. thyroïdealis. See *H., thyroïd*.

H., traumatic. (Τραύμα, a wound. *F. hernie traumatique*.) A hernia which is caused by a wound or injury.

H., umbilical. (*L. umbilicus*, the navel. *F. hernie ombilicale*; *G. Nabelbruch*.) A rupture protruding at the navel. It may be congenital or acquired. In the latter case it is most frequent in infancy before the separation of the umbilical cord; in later life it is most common in big-bellied females. The sac is generally wide-mouthed, and is covered by the thin internal abdominal fascia and the integuments. The contents generally comprise the omentum, and not infrequently the stomach, as well as large or small intestine. It has been divided into two forms, *H. of umbilical cord*, being the congenital form; and *H. of umbilical ring*, being the form which occurs after separation of the umbilical cord.

H., umbilical, congenital. (*L. umbilicus*; *congenitus*, born together with. *G. angeborener Nabelbruch*.) Same as *H. of umbilical cord*.

H. umbilici aquosus. (*L. umbilicus*, the navel; *aqueus*, watery.) A protrusion of the umbilicus containing fluid, such as may occur in distension of the abdomen by dropsy, or in the case of the sac of an umbilical hernia which contains fluid only.

H. urachi. Same as *Uromphalus*.

H. u'teri. See *Uterus, hernia of*.

H., u'terine. (*L. uterus*, the womb. *F. hernie de l'uterus*; *G. Gebärmutterbruch*.) See *Uterus, hernia of*.

H., vaginal. (*L. vagina*, a sheath. *F. hernie vaginale*; *G. Scheidenbruch*.) A protrusion of a viscus into the vagina. A hernia which protrudes through some part of the vaginal wall; it occurs chiefly in women who have borne several children, and frequently contains the urinary bladder.

Its forms are *H., entero-vaginal*, or enterocele, *H., recto-vaginal*, or rectocele, and *H., vesico-vaginal*, or cystocele.

H., vaginal, encysted. (*L. vagina*, a sheath; *Gr. ἐν, in*; *κύστις*, a bladder.) The same as *H. of tunica vaginalis*.

H., vagino-labial. (*L. vagina*, a sheath; *labium*, a lip. *F. hernie vagino-labiale*.) Same as *H., pudendal*.

H., vagino-peritonæal. See *H., peritonæo-vaginal*.

H. varicosus. (*L. varix*, a dilated vein. *F. hernie variqueuse*; *G. Krampfadernbruch*.) A synonym of *Varicocele*, or *Cirsocele*.

H. venarum. (*L. vena*, a vein.) Same as *Varix*.

H. ven'eris. (*L. Venus*, the goddess of love. *F. orchocèle*; *G. Ho'tengeschwulst*.) Old term for gonorrhœal orchitis.

H. vento'sa. (*L. ventus*, wind.) Another name for *Pneumatocèle*.

H., ven'tral. (*L. venter*, the belly. *F. hernie ventrale*; *G. Bauchbruch*.) A rupture occurring in some part of the front abdominal wall other than at the abdominal ring.

H., ven'tral, lat'eral. (*L. lateralis* belonging to the side.) A ventral hernia occurring outside the linea alba, most frequently at the outer border of the sheath of the rectus abdominis.

H., ven'tral, me'dian. (*L. venter*; *medius*, in the middle.) A hernia through an opening in the linea alba.

H. ventric'uli. (*L. ventriculus*, the stomach.) Same as *H. of stomach*.

H., ventro-ing'ual. (*L. venter*, the belly; *inguen*, the groin.) The same as *H., inguinal, direct*.

H. vesicæ. See *H., vesical*.

H. vesicæ urinariæ. (*L. vesica*, the bladder; *urina*, urine.) Same as *H., vesical*.

H., vesical. (*L. vesica*, the bladder. *F. hernie de la vessie, h. vesicale*; *G. Blasenbruch*.) Protrusion of a part of the bladder into a hernial sac. In the male it is usually inguinal, in the female vaginal, but sometimes femoral.

Also, the same as *Bladder, extraversion of*.

H., vesico-vag'inal. (*L. vesica*; *vagina*.) A protrusion of the bladder into a pouch formed in the anterior wall of the vagina, which may be so large as to protrude externally. It creates much distress when the urine is retained in the pouch and undergoes decomposition.

H., vis'ceral. (*L. viscera*, the internal organs of the body. *F. hernie viscerale*; *G. Eingeweidebruch*.) Protrusion of a viscus from its natural cavity through an aperture in the wall of the cavity.

H., vul'var. (*Vulva*.) Same as *H., pudendal*.

H. zirba'lis. (*L. zirbus*, the omentum.) Same as *H., omental*.

Hernial. (*L. hernia*, a rupture. *F. herniaire*; *I. erniario*; *S. herniario*; *G. bruchig*.) Relating to, or connected with, *Hernia*.

H. an'eurysm. See *Aneurysm, hernial*.

H. band'age. A truss, or other appliance for the retention of a hernia.

H. fluid. (*G. Bruchwasser*.) The fluid contained in the sac of a hernia outside the intestine or other contents.

H. gesta'tion. (*L. gestatio*, a carrying, pregnancy.) Extra-uterine pregnancy in which the fœtus is contained in a hernial sac.

H. sac. The serous membrane pushed before it by a hernial protrusion. It may consist of the vaginal process of peritonæum which has remained patent; or it may be a protrusion from visceral pressure of the parietal peritonæum, a protrusion which is slow and gradual in its development.

A hernial sac presents a body and a neck, the lower part of the former being the fundus, and the latter having an internal opening into the visceral cavity called the mouth.

H. sac, acquired. Birkett's term for a hernial sac which is the result of a gradual process of relaxation and yielding of the parietal peritonæum under pressure from within.

H. sac, congenital. (*L. congenitus*, born together with.) Birkett's term for a hernial sac which is the normal vaginal process of peritonæum which accompanies the testicle in its descent into the scrotum.

Herniaria. (*L. hernia*, a rupture. *F. herniaire*; *G. Bruchkraut*.) A Genus of the Nat. Order *Illecebraceæ*, so called because the species were supposed to be capable of curing ruptures. Rupture-wort.

HERNIARIÆ—HERPES.

H. alpes'tris, Aubrey. (L. *alpes*, the Alps.) The *H. glabra*.

H. annua. (L. *annuus*, yearly.) The *H. glabra*.

H. cinerea. (L. *cinereus*, ash-coloured.) The *H. glabra*.

H. frutico'sa, Govan. (L. *fruticosus*, shrubby.) The *H. glabra*.

H. gla'bra, L. (L. *glabrus*, rough. F. *herniole*, *herniaire*; I. *erniaria*; G. *Bruckkraut*.) Rupture-wort. Formerly supposed to be efficacious in curing hernia. It is saltish, astringent, and diuretic. Juice used to disperse corneal opacities.

H. hirsu'ta, Linn. (L. *hirsutus*, hairy.) The *H. glabra*.

H. vulga'ris. (L. *vulgaris*, common.) The *H. glabra*.

Hernia'riæ. A synonym of *Illecebracæ*.
Herniari'n. A crystalline principle obtained by Goble from the *Herniaria glabra*. It has a pleasant taste, a smell of Tonkin bean, and is soluble in boiling water.

Herniated. (L. *hernia*.) Enclosed in a hernial sac.

Herniemp'hrag'mus. (L. *hernia*; Gr. *ἐμφραγμός*, a stopping.) Gerdy's term for a mechanical stopping up of the hernial canal as a radical cure for hernia.

Herniemp'hrax'is. (L. *hernia*; Gr. *ἐμφραξις*, a stopping.) Same as *Herniemp'hrag'mus*.

Herniencolo'sis. (L. *hernia*; Gr. *ἐν*, in; *κολέος*, a sheath.) Gerdy's term for the invagination of a portion of the integument in the inguinal canal as a mode of cure of inguinal hernia.

Herniolaparot'omy. (L. *hernia*; Gr. *λαπάρα*, the soft part of the body between the ribs and the hips; *τομή*, section.) The division of the abdominal walls in order to reach a strangulated hernia which has been returned *en masse*, so that the constricting part may be divided.

Herniopunc'ture. (L. *hernia*; *punctura*, a pricking.) The puncture of a hernia by means of a capillary trocar to diminish its size and so facilitate its reduction.

Hernioschon'cus. (L. *hernia*, a rupture; Gr. *σχέον*, the scrotum; *όγκος*, a tumour.) A scrotal swelling consisting of a hernia.

Herniotome. (L. *hernia*; Gr. *τομή*, section. G. *Bruchschneider*.) A knife for division of the hernial stricture.

Herniotomy. (L. *hernia*; Gr. *τομή*, section. F. *herniotomie*.) The operation for the relief of a strangulated hernia, which consists essentially in the division of the constricting band. The skin and the tissues covering the hernial sac having been successively divided, the body of the sac is pinched up with the finger and thumb and a small opening made with a scalpel, into this a director is passed, and the neck of the sac is divided on it, or on the tip of the index finger, by means of a blunt-ended bistoury or hernia knife; sometimes after the sac has been opened the hernia may be returned without dividing the neck. Occasionally the constricting part is outside the sac, and when it is divided the hernia may be returned without opening of the sac and exposure of the peritoneum.

H., exter'nal. (L. *externus*, outward.)

The operation for the relief of a strangulated hernia performed without opening the sac.

H., inter'nal. (L. *internus*, within.) The operation for the relief of strangulated hernia in which the sac is opened.

Hernious. (L. *hernia*. F. *hernieux*; I. *ernioso*; S. *hernioso*.) Same as *Hernial*. Also, one possessing a *Hernia*.

H. an'eury'sm. See *Aneurysm*, *hernial*.

Hernösand. Sweden, in Angermanland.

A chalybeate spring.
He'ro. (Old F. *heroë*; from L. *heros*; from Gr. *ἦρως*, a demigod.) A great warrior; an illustrious man.

Hero'ic. (Hero. F. *héroïque*; G. *heroisch*.) Pertaining to a hero; brave; intrepid.

H. treatment. The treatment of a disease or an injury by powerful or severe means.

Her'on. (Mid. E. *heroune*; from Old F. *hairon*; from Old High G. *heigir*. F. *héron*; I. *aghirone*; S. *garza*; G. *Reiher*.) The *Ardea cinerea*. Its bill was supposed to produce sleep, and its fat to relieve the pain of gout. The flesh was thought to be bad for piles.

H.'s bill. The plants of the Genus *Erodium*.

Herophilus. A physician of Alexandria, who lived about three hundred years before Christ.

H., tor'cular of. (L. *torcular*, a cellar for storing up oil. F. *pressoir d'Herophile*; G. *die Presse des Herophilus*.) The reservoir in which the four sinuses of the dura mater meet, situated opposite the tuberosity of the occipital bone; first described by Herophilus.

H., wine-press of. Same as *H., torcular of*.

Herpe'don. (Ερπηδών.) The same as *Herpes*.

Her'pen. (Ερπίν.) The same as *Herpes*.

Herpes. (Ερπης, a vesicular skin eruption that creeps on round the body; from *ἔρπω*, to creep. F. *dartre*; I. *erpete*; S. *herpes*; G. *Herpes*, *Bläschenflechte*.) Tetter. A non-contagious, vesicular skin disease. Sensations of heat, pain, and tingling, which are sometimes very severe, are felt in some part of the skin, and coincidently a patch of redness appears of more or less circular form on which arises a cluster of small papules that speedily develop into vesicles, which have little tendency to burst. These are close-set, and sometimes run together, forming small bullæ. They contain at first a limpid fluid, which subsequently becomes cloudy from suppuration, or dark from effused blood. The vesicles form in the course of twenty-four hours, and last for two or three days; they then dry up and form thin yellowish scabs, which separate in the course of a week, leaving a healthy, but sometimes pitted, surface behind. The origin of those forms of herpes other than zona is not settled; some believe the eruption to be caused by a catarrhal or other disturbance of a mucous tract; while others suppose it to be of neurotic origin. It is closely allied to erythema. See under *H. zoster*.

The term has been very loosely used by many authors, and included many chronic skin affections as well as parasitic diseases.

H. æsthiom'enes. See *H. esthiomenos*.

H. ambulat'i'vus. (L. *ambulo*, to walk about.) Wiseman's term for *H. zoster*.

Also, a name for erratic erysipelas.

HERPES.

H. areolæ. (L. *areola*, a small open space.) Herpes affecting the areola of the nipple. It occurs sometimes in a few days after childbirth in nursing women.

H., arsenical. Same as *Eczema arsenicale*.

Hutchinson has observed the occurrence of herpes zoster during the administration of arsenic.

H. auricula'ris. (L. *auricula*, the external ear.) Herpes affecting the pinna of the ear.

H. bilatera'lis. (L. *bis*, twice; *lateralis*, belonging to the side.) A term applied to the form of *H. facialis* which attacks both the upper and lower lip at the same time.

H., catarrhal. (Kardáppos, a running down. F. *herpes catarrhal*.) A division of herpes produced by, or accompanying, catarrhal affections. It is probable that, like *H. zoster*, it is connected with some nerve disturbance.

H. circina'tus. (L. *circino*, to make round. F. *herpes circiné*.) Willan's term for what seems to be a variety of *H. iris*, in which the central part, which was first affected, has become nearly healthy, whilst vesiculation is still continuing at the periphery.

This form may be caused by the growth of the *Trichophyton tonsurans*, constituting a variety of ringworm.

H., conjunctival. The same as *Conjunctivitis phlyctenulosa*.

H. cor'neæ. (Cornea.) A form of *H. zoster frontalis* affecting the cornea in which one or more vesicles appear, containing a watery fluid, then become purulent and burst, forming ulcers, which generally heal slowly, and leave a white spot, which, according to its tint, is named nebula or leucoma. The affection is often accompanied by more or less complete anæsthesia of the cornea and forehead, following the course of the supra-orbital, or other branch of the fifth nerve, with severe lancinating pain. The tension of the eye varies, but is usually reduced. Vision is impaired.

H. corrosi'va. (L. *corrodo*, to burn away.) An old name for what was probably *Lupus*.

H. crusta'ceus. (L. *crusta*, the hard surface of a body.) Alibert's term for a disorder, some of the varieties of which were probably eczematous, others impetiginous affections.

H. depas'cens. (L. *depasco*, to eat down.) Old term for a corroding or eating form of herpes, probably *Lupus*.

H. devas'tans. (L. *devasto*, to waste.) The same as *H. rodens*.

H. erythemoi'des. (Ἐρύθημα, a redness upon the skin; εἶδος, form.) Alibert's term, which included many forms of *Erythema*, as well as *Urticaria*.

H. esthiom'enos. (Ἐσθίω, to eat. F. *dartre rongeante*; G. *fressende Flechte*.) A form of herpes in which there is great destruction of the skin by ulceration; the same as *H. exedens*.

H. ex'edens. (L. *exedo*, to consume.) An old term for a form of herpes which was probably *Lupus*. Alibert in all probability included some syphilitic diseases under this head.

H. facia'lis. (L. *facialis*, belonging to the face.) Hebra's term for the form which attacks various parts of the face, especially the lips, and also the ear, eyelids, nose, and cheek. It thus includes Willan's *H. labialis*. Bacilli

are said to have been found, but only when pus was formed.

H. zoster also appears on the face in some of its forms.

H. farino'sus. (L. *farinosus*, mealy. F. *dartre furfuracée*.) Term for a form of *Herpes* especially characterised by furfuraceous exfoliations. Probably cases of eczema were included under this term.

H. faucia'lis. (L. *fauces*, the throat.) The form of catarrhal herpes which appears on the soft palate and uvula. See *H. of pharynx*.

H. febr'i'lis. (L. *febris*, a fever.) The form of herpes which accompanies influenza, catarrh, pneumonia, puerperal peritonitis, and other febrile disorders, also called *H. labialis*, from its common seat around the mouth. It may also occupy the nostrils, the buccal cavity, the fauces, the eyelids, or the auricle.

It is also described as an essential disease not accompanied by any other disturbance.

H. fe'rus. (L. *ferus*, wild.) Old epithet for erysipelas.

Also, the same as *H. rodens*.

H. fronta'lis. The same as *H. zoster frontalis*.

H. geneta'lium. Same as *H. progenitalis*.

H. gestatio'nis. Buckley's term for the pemphigoid disease called by Smith *Hydroa gestationis*.

H. guttura'lis. (L. *guttur*, the throat.) See *H. of pharynx*.

H. impetiginifor'mis. (*Impetigo*; L. *forma*, shape.) Von Hebra's term for the disease called by R. Liveing *Hydroa gestationis*.

H. in'dicus. (F. *dartre d'Inde*.) A term for a fiery, itchy form of *Herpes* said to be peculiar to India.

H. i'ridis. See *H. of iris*.

H. i'ris. (Ἴρις, the rainbow.) Willan's term for a form of herpes consisting of a central vesicle with concentric rings of vesicles succeeding each other at intervals of time, and so becoming of different tints, hence the name. It usually occurs on the back of the hand in old people.

H. labia'lis. (L. *labium*, a lip. F. *dartre labiale*.) Willan's term for the form which occurs on the edge of the upper and under lip, and at the angle of the mouth, sometimes forming a semicircle, or even completing a circle round the mouth by the successive rising of the vesicles.

H. milia'ris. (L. *milium*, a millet seed.) The ἑρπης κερχοίας of Galen. Old term for herpes zoster, when commencing with a pustular eruption like millet seeds.

Plenck applied the term to what was probably *Aene*.

H. of i'ris. The form of iritis which occurs occasionally in the course of *H. zoster frontalis*.

H. of pha'rynx. (Φάρυγξ, the gullet. F. *herpès gutturale*; I. *erpete della faringe*; G. *Herpes des Schlundkopfs*.) A febrile condition arising from cold, and marked by an eruption of whitish vesicles on an inflamed base, scattered over the soft palate, the tonsils, and the pillars of the fauces; these may be few and discrete, or many and confluent. In the first form they may be healed by resolution, or they may burst, and a circular ulcer follow; in the latter form there may be considerable ulceration, and a

HERPES.

large patch of whitish, or yellowish, or greyish false membrane formed of epithelium, pus-cells, and débris. This form may be accompanied by *H. facialis* or *H. progenitalis*.

H. of throat. Same as *H. of pharynx*.

H. of tongue. A form which sometimes occurs; it is similar to *H. of pharynx*.

H. o'ris. (*L. os*, the mouth.) The form of catarrhal herpes which appears on the mucous membrane of the mouth and the tongue.

H. palpebra'lis. (*L. palpebræ*, the eyelids.) Herpes affecting the eyelids.

H. peris'celes. (*Περισκελής*, round the leg. *F. zona*; *G. Gürtel*.) Old term for *Herpes zoster*, or the shingles.

H. phlyctæno'ides. (*Φλύκταινα*, a pimple; *είδος*, like.) An old division of herpes which was usually preceded by slight fever for two or three days, then followed by small transparent vesicles in irregular clusters, sometimes containing a colourless, sometimes a brownish, lymph, on the cheeks, forehead, neck, breast, or extremities. It included *H. facialis* and *H. zoster*.

H. phlyctæno'ides. The same as *H. phlyctenodes*.

H. præputia'lis. (*L. præputium*, the foreskin. *F. dartre præputiale*.) A local variety of herpes attended by extreme itching with heat; on the prepuce are one or two red patches, about the size of a silver penny, on which are clustered five or six minute transparent vesicles, which appear coloured like the base on which they stand; they lose their transparency and become enlarged and milky in twenty-four or thirty hours, and on the third day are coherent, and assume an almost pustular appearance; subsequently they assume the appearance of an ulcer.

H. progenita'lis. (*L. pro*, in front of; *genitalis*, genital.) Hebra and Alibert's term for the form which attacks the genital organs. See *H. præputialis* and *H. pudendalis*.

H. pseudosyph'ilis. (*Ψευδής*, false; *syph'ilis*.) Fuchs's term for *H. progenitalis*.

H. pudenda'lis. (*L. pudenda*, the genitals.) Herpes affecting the female generative organs or breech. It is similar to *H. præputialis*, and is often accompanied by considerable hyperæsthesia.

H. pustulo'sus. (*L. pustula*, a pimple. *F. dartre pustuleuse*.) A term for the various forms of *Acne*.

Plenck applied the term to what was probably *Impetigo*.

Alibert probably included under this term forms of *Acne*.

H. pyæmifor'mis. (*Πύον*, matter; *αἷμα*, blood; *L. forma*, likeness.) Neumann's term for Hebra's *Impetigo herpeticiformis*.

H. rapiens. (*L. rapio*, to tear away.) A term used by Fordyce for a form, as he describes it, of herpes arising upon the head in small ulcers, covered with a brown, moist, shining crust, and cured by antivenereal remedies.

H. ro'dens. (*L. rodo*, to gnaw.) A term employed by the older writers to designate a form of disease that is now called rodent ulcer or lupus.

H. scorbuticus. (*Low L. scorbutus*; from *Low G. schorbok*, scurvy.) Small vesicles filled with a bloody fluid, occurring in the course of scurvy.

H. serpi'go. (*L. serpo*, to creep. *F. dartre*; *G. Flechte*.) Another term for *H. circinatus*.

H. sic'cus. (*L. siccus*, dry. *F. dartre furfuracée*.) The dry, mealy form of *Herpes*.

H. sim'plex. (*L. simplex*, simple.) A term which has been applied to the forms of herpes such as *H. facialis* and *H. progenitalis*, in contradistinction to *H. zoster*.

Also, a term for shingles, *H. zoster*.

Also, Plenck's term for what was probably *Prurigo*.

H. spu'rius. (*L. spurius*, false.) Plenck's term for an artificial eczema.

H. squamo'sus. (*L. squamosus*, scaly.) Alibert's term for a skin disease which was probably *Pityriasis rubra*; some of his varieties were probably forms of *Eczema*.

H., symptomatic. A term for *H. labialis*, in reference to its connection with catarrh, pneumonia, and other febrile affections.

H., syph'ilitic. See *Syphiloderm, vesicular*.

H. ton'dens. (*L. tondo*, to shave. *G. scherende Flechte*.) Same as *Ringworm*.

H. ton'surans. (*L. tondo*, to shave. *G. scherende Flechte*.) Same as *Ringworm*.

H. ton'surans maculo'sus. (*L. tondo*; *maculosus*, spotted.) See *Tinea tonsurans maculosa*.

H. ton'surans squamo'sus. (*L. squamosus*, scaly.) See *Tinea tonsurans squamosa*.

H. ton'surans vesiculo'sus. (*L. vesicula*, a small blister.) See *Tinea tonsurans vesiculosa*.

H. unilatera'lis. (*L. unus*, one; *lateralis*, belonging to the side.) A term for *H. zoster*, from its rare occurrence on both sides of the body at the same time.

H. veg'etans. (*L. vegeto*, to quicken.) Auspitz's term for a form of Hebra's *Impetigo herpeticiformis* in which papillomatous proliferations occur in the affected places.

H. vulva'ris. (*L. vulva*, the female external genital organs.) Same as *H. pudendalis*.

H. zo'ster. (*Ζώνη*, a girdle. *F. zona*; *I. zona*; *S. zona*; *G. Zona, Gürtelausschlag*.) The form known as *Zona* and *Shingles*. The attack is preceded by a sharp, burning pain along the course of a nerve, to which succeeds in a day or two red patches with red points that speedily become vesicles, at first containing serum and then pus; these sometimes dry and form small scabs, sometimes they burst and form ulcers, which heal with a white, scarred cicatrix. The severe neuralgia of the part frequently continues for weeks after the skin eruption has gone, especially in old people. It is most common in connection with the intercostal, lumbar, and supraorbital nerves, and almost invariably assails only one side of the body.

The pathology of herpes, though suspected by earlier writers, was first clearly expressed by Bärensprung, who demonstrated by dissection that herpes zoster followed the course of the spinal nerves or of the branches of the fifth cerebral nerve, and was the result of inflammation, either of the intervertebral ganglia or, in the case of the fifth nerve, of the analogous Gasserian ganglion. On examination the ganglion on the root of the nerve, from which are derived the branches distributed to the part of the skin on which the

HERPESTES—HERPETIC.

herpes zoster appears, is found to be swollen, congested with blood, softer, and redder than natural. The blood-vessels are engorged; the tissue of the ganglion under the microscope exhibits minute hæmorrhages which press upon and destroy the ganglion cells, and the general characters of inflammation. Auspitz believes that instead of the ganglia the spinal cord itself may be the seat of inflammation, and thus accounts for its invading occasionally both sides of the body.

H. zo'ster abdomina'lis. (L. *abdomen*, the belly.) V. Hebra and Kaposi's term for zona affecting the skin of the abdomen, its point of origin being over the lumbar vertebra.

H. zo'ster brachia'lis. (L. *brachium*, an arm.) V. Hebra's term for zona affecting the arm, extending from the last cervical and first dorsal vertebrae over the upper border of the scapula to the arm.

H. zo'ster capillit'ii. (L. *capillitium*, the hair.) V. Hebra and Kaposi's term for zona affecting the anterior and posterior portions of the hairy scalp; being those portions of integument supplied by the superior maxillary nerve.

H. zo'ster cerebra'lis. (L. *cerebrum*, the brain.) A term applied to those cases in which nearly the whole of one half of the body is covered with an herpetic eruption believed to depend on cerebral mischief; and also to cases in which herpes attacks the paralysed side in cerebral hemiplegia.

H. zo'ster cervi'co-brachia'lis. (L. *cervix*, the neck; *brachium*, the arm.) Bärensprung's term for zona appearing in the course of the lower cervical and the first dorsal nerves.

H. zo'ster cervi'co-brachia'lis gangræno'sus. (L. *cervix*; *brachium*; *gangræna*, gangrene.) Kaposi's term for a form of cervico-brachial zoster in which the eruption was arranged in circinate fashion, so that in some places there were vesicles, in others green and black scabs.

H. zo'ster cervi'co-subclavicula'ris. (L. *cervix*, neck; *sub*, beneath; *clavicle*.) Bärensprung's term for zona appearing in the course of the suprasternal, supraclavicular, and supra-acromial branches of the cervical plexus of nerves.

H. zo'ster colla'ris. (L. *collare*, a band for the neck.) Herpes of the neck.

H. zo'ster dor'so-abdomina'lis. (L. *dorsum*, the back; *abdomen*, the belly.) Bärensprung's term for zona appearing in the course of the eighth, ninth, tenth, eleventh, and twelfth dorsal nerves.

H. zo'ster dor'so-pectora'lis. (L. *dorsum*, the back; *pectus*, the chest.) Bärensprung's term for zona affecting the skin in the course of the third, fourth, fifth, sixth and seventh dorsal nerves. Ordinary shingles.

H. zo'ster facia'lis. (L. *facies*, the face.) Von Hebra's term for the form of zona affecting the face. According to him, it has its seat in the anastomoses of the facial nerve. It has been suggested that the actual seat is the sensory fibres derived from the superior maxillary nerve.

H. zo'ster femoralis. (L. *femur*, the thigh.) V. Hebra's term for zona affecting the buttocks and the thigh as far as the popliteal space.

H. zo'ster fronta'lis. (L. *frons*, the forehead.) Zona affecting the ophthalmic branch

of the fifth nerve. It is a serious affection, not only on account of its protracted character, and the pain, numbness, and disfigurement from scars it occasions, but from the liability to serious inflammation of the eye; vesicles may form on the conjunctiva and on the cornea, in the latter case leading to much disorganisation, and severe iritis may occur. Hutchinson is of opinion that the eye does not become implicated unless the nasal branch of the ophthalmic nerve is affected. See also *H. corneæ*.

H. zo'ster lum'bo-femora'lis. (L. *lumbæ*, the loins; *femur*, the thigh.) Bärensprung's term for herpes zoster appearing in the course of the second, third, and fourth lumbar nerves, especially the external cutaneous, genitorural, anterior crural, and obturator nerves.

H. zo'ster lum'bo-inguina'lis. (L. *lumbæ*, the loins; *inguen*, the groin.) Bärensprung's term for zona appearing in the course of the last intercostal and the first lumbar nerves.

H. zo'ster nu'chæ. (*Nucha*.) V. Hebra's term for zona affecting the neck, especially extending from the cervical vertebra to the clavicle or toward the occiput and auricle.

H. zo'ster occip'ito-colla'ris. (L. *occiput*, the back of head; *collum*, the neck.) Bärensprung's term for zona appearing in the course of the occipitalis minor and major nerves, the auricularis magnus and the superficialis colli.

H. zo'ster occip'ito-colla'ro-brachia'lis. (L. *occiput*, the back of the head; *collum*, the neck; *brachium*, the arm.) Zona extending over the back of the head, the neck, and shoulder.

H. zo'ster ophthal'micus. (Ὠφθαλμός, the eye.) Zona occurring along the course of those sensory twigs of the ophthalmic division of the fifth nerve which supply the eye and its appendages. Same as *H. zoster frontalis*.

H. zo'ster pectora'lis. (L. *pectus*, the chest.) V. Hebra's term for zona affecting the chest having its seat on the distributions of the intercostal nerves, its point of origin being the region of the dorsal vertebra.

H. zo'ster perina'æ'lis. (Περίανων, the space between the anus and the scrotum.) Zona affecting the perinaeum and hinder part of the scrotum.

H. zo'ster sacrogenita'lis. (*Sacrum*; *genitalis*, pertaining to generation.) Zona occurring on the sacrum and extending to the perinaeum.

H. zo'ster sa'cro-ischiad'icus. (L. *sacrum*; *ischion*, the hip.) Bärensprung's term for zona appearing in the course of the cutaneous branches of the sacral plexus.

Herpestes. (Ἑρπessτής, creeping.) A Genus of the Nat. Order *Scrophulariaceæ*.

H. amara. The *Gratiola amara*.

H. colubri'na. Supplies some *Jaborandi*.

H. monnie'ra, H. B. and Kunth. Hab. India. Plant used as a diuretic and aperient; juice, mixed with petroleum, rubbed into rheumatic joints. Probably, with other species of *Herpestes*, supplies some *Jaborandi*.

Herpesthiom'enus. (Ἑρπης, a skin disease; *ἐσθία*, to eat. *G. fressende Flechte*.) A synonym of *Herpes exedens*.

Herpet'ic. (Ἑρπetic. *F. herpétique*; *I. erpetico*; *S. herpetico*; *G. herpeticisch*.) Of, or belonging to, the disease *Herpes* or the condition *Herpetism*.

HERPETIFORM—HESELBACH, FRANZ KASPAR.

H. angina. (Ἀγχω, to strangle.) The same as *Herpes of pharynx*.

H. diathesis. Same as *Herpetism*.

H. fever. See *Fever, herpetic*.

H. pneumonia. See *Pneumonia, herpetic*.

Herpetiform. (L. *herpes*, a skin disease; *forma*, likeness. F. *herpétiforme*.) Having the appearance of herpes.

Herpetism. (Ἑρπης, a skin disease. F. *herpétisme*.) A term used, especially by French writers, in the same sense as *Diathesis, darts*.

Herpetography. (Ἑρπης; γράφω, to describe. F. *herpétographie*.) A history or description of the disease *Herpes*.

Also (ἑρπετόν, a reptile; γράφω), a description of reptiles.

Herpetology. (Ἑρπης, a skin disease; λόγος, a discourse. F. *herpétologie*.) A dissertation on herpetic diseases.

Also (ἑρπετόν, a reptile; λόγος. F. *herpétologie*; G. *die Lehre von den Reptilien*), the study or history of reptiles, their habits and nature.

Herpeton. (Ἑρπω, to creep.) An old name (Gr. ἑρπετόν), used by Hippocrates, *Epid.* ii, 3, n. 38, for a creeping pustule, or ulcer.

Herpne mata. (Ἑρπω, to creep; νῆμα, a thread.) A group of Rhizopoda having no definite nucleus and no contractile vesicle. The group embraces the Foraminifera and the Polycystina.

Herposyphilidochthus. (*Herpes; syphilidochthus*.) A syphilitic swelling with a herpetic appearance of its surface.

Herpyllus. (Ἑρφυλλος, creeping thyme.) The *Thymus serpyllum*.

Herperia. A Genus of the Nat. Order *Smilacaceae*.

H. salsaparilla. Mart. Hab. Brazil. Used as sarsaparilla.

Herring. (Mid. E. *hering*; Sax. *hæring*; G. *haring*; F. *hareng*; I. *airinga*; S. *arenque*; probably from Teutonic base *harya*, an army, because it swims in shoals.) The *Clupea harengus*. Used as food; when salted they are said to be diuretic; the brine was used in dropsy and as an enema.

Herrsch. Roumania. A sulphur spring.

Herschel, Sir John Frederick William. An English astronomer, born at Slough in 1792, died at Collingwood, in Kent, in 1871.

H.'s rays. The non-luminous heat rays of the solar spectrum outside the red luminous ray; so called because he discovered them.

Herse, la. France, Département de l'Orne. A weak, cold, chalybeate water. Used in chronic gastro-intestinal catarrhs, leucorrhoea, and abdominal congestions.

Hersterquell. One of the sulphur springs of Driburg.

Hervideros de fontilles ca. Spain, Province of Ciudad Real. Bicarbonated chalybeate waters, of a temp. of 18° C. (64° F.)

Hervideros del Emperador. Spain, Province of Ciudad Real. A thermal water, temp. 25° C. (77° F.), containing calcium bicarbonate. Used chiefly for baths in chronic rheumatism.

Hervideros del pozzo. Spain, Province of Ciudad Real. Chalybeate waters, of a temp. varying from 16°—21° C. (60°—69° F.)

Hervideros di San Fuenté. Spain, near Pozuelo. A chalybeate water containing iron carbonate 1·5 grains, sodium chloride 15, and magnesium carbonate 11 grains, in 16 ounces. Used in skin diseases, gall-stones, gastro-intestinal and urinary catarrhs, chlorosis, menorrhagia and leucorrhoea.

Heselwang'en. Germany, in Württemberg. A sulphur spring.

Hes'mis. Alchemical name for a weight equal to a quarter of a pound.

Hesperetic acid. (*Hesperidium*.) C₂₀H₁₀O₆. A crystalline substance obtained by the action of potash upon hesperidin.

Hesperetin. (*Hesperidium*.) C₁₆H₁₄O₆. A crystalline substance insoluble in water, a product of the decomposition of *Hesperidin* by acids.

Hespere'tol. C₉H₁₀O₂. A yellowish oil that stiffens in a crystalline manner, obtained by the dry distillation of lime hesperetinate. It melts at 57° C. (134·6° F.)

Hesperidene. C₁₀H₁₆. A terpene. The oil of Seville orange. The peel of *Citrus aurantium*, var. *amara*, contains this oil. Its boiling point is 178° C. (352·4° F.)

Hesperideous. (*Hesperidium*. F. *hespéridé*.) Of, or belonging to, or having, an arrangement of parts, as in the orange.

Hesperidin. (*Hesperidium*. F. *hespéridine*.) C₂₀H₂₀O₆. Name by Lebreton for a crystallisable glycoside obtained from unripe oranges, and from the white inner surface of the rind. It is a glycoside, white, shining, insoluble in cold water and ether, soluble in boiling water and hot alcohol. It is decomposed into sugar and hesperetin by dilute acids.

H. of Vrij. The same as *Naringin*.

Hesperidium. (*Hesperis*, of the west; because the lemon and orange are brought from thence. F. *hespéridie*.) A superior, pulpy fruit developed from a free, many-celled ovary, with an indehiscent, leathery rind, consisting of epicarp and mesocarp, within which the endocarp sends inwards numerous septa which enclose the pulp, as the orange and lemon.

Also, a term for the orange.

Hesperinic acid. C₈H₆O₃. A substance obtained by the action of nitric acid on *Hesperidene*.

Hesperis. (Ἑσπερίς, the night-scented gilliflower; from ἑσπερος, at evening. G. *Nachtwale*.) A Genus of the Nat. Order *Cruciferae*.

H. allia'ria. Lam. The *Sisymbrium albiaria*.

H. matronalis. Lamb. (L. *matronalis*, belonging to a married woman.) Dame's violet. Hab. Europe. Said to be diaphoretic and antiseptic. Used in dysuria and dyspnoea.

H., oil of. (G. *Hesperisöl*.) An ethereal oil obtained from the seeds of *H. matronalis*. It is greenish, without smell, sp. gr. 0·928. It remains fluid at —16° C., and easily dries.

Hesselbach, Franz Kaspar. A German surgeon, born in Hammelburg in 1759, died in Würzburg in 1816.

H., her'nia of. Hernia with a diverticulum through the cribiform fascia, traversing several openings.

H., triangle of. A triangular space on the inner surface of the abdominal wall having for its base Poupart's ligament, and for its other sides the margin of the rectus abdominis

HESSIAN FLY—HETERAUXESIS.

muscle and the epigastric artery; through it direct inguinal hernia protrudes.

Hessian fly. The *Cecidomyia destructor*.

Heterion. Same as *Eterio*.

Heterocolica. ("Εταῖρα, a courtesan; κωλικός, the colic.) Same as *Colica scortorum*.

Hetarism. ("Εταρος, a companion.) Lubbock's term for the state in which the women of a tribe are the common property for sexual intercourse of all the men; a condition which he assumes to have existed in primitive times.

Heteracan'thous. ("Ετερος, different; ἀκανθα, a thorn. F. *hétéracanthe*.) Having different shaped spines or thorns.

Heteracephalus. ("Ετερος; κεφαλή, the head.) A monstrosity with two dissimilar heads.

Heterac'my. ("Ετερος; ἀκμη, the culminating point.) A. W. Bennett's term for the proterogynous form of *Dichogamy*, in which the stigmas attain sexual perfection before the anthers.

Heterac'tinism. ("Ετερος, diverse; ἀκτίς, a ray.) Deformity occurring in regularly five or more rayed Echinoderms, resulting, probably, in most cases, from fission.

Heteradel'phia. ("Ετερος; ἀδελφός.) The condition of a *Heteradelphus*.

Heteradelphus. ("Ετερος; ἀδελφός, a brother.) Isid. G. St. Hilaire's term for a double monstrosity in which the accessory fœtus, very small and imperfect, without a head, and frequently without a thorax, is attached to the anterior surface of the principal fœtus.

Heteradenia. ("Ετερος; ἀδήν, a gland. F. *hétéradénie*.) The production of heteradenic tissue.

Heteradenic. ("Ετερος; ἀδήν.) Relating to glandular tissue of morbid growth.

H. tis'sue. Ch. Robin's term for the structures composing an *H. tumour*.

H. tu'mour. Same as *Heteradenoma*.

Heteradenoid. ("Ετερος; ἀδήν; εἶδος, likeness.) Same as *Heteradenic*.

Heteradeno'ma. ("Ετερος; ἀδήν.) Ch. Robin's term for a tumour composed of gland-like tissue, but situated in a part where no glandular tissue is normally present. Ordonnez regarded such a tumour as caused by the growth of a vegetable parasite. It is probably a true cancer of the form now called tubular epithelioma.

Heteræ'cism. See *Heteracism*.

Hetera'kis. ("Ετερος, different; ἀκίς, a point.) A sexually mature nematode worm.

H. ala'ta, Schneider. (L. *alatus*, winged.) Found in the intestine of *Tinamus*.

H. annula'ta, Molin. (L. *annulatus*, furnished with a ring.) Found in the intestine of *Ophis saurocephalus*.

H. arqua'ta. (L. *arquatus*, arched.) Found in the intestines of *Crypturus cupreus*.

H. compres'sa, Schneider. (L. *compressus*, part. of *comprimio*, to press together.) Found in the intestines of *Gallus gallinaceus*.

H. dis'par, Zed. (L. *dispar*, unlike.) Found in the intestine of *Sarīna passerina*.

H. dis'tans, Schneider. (L. *disto*, to stand apart.) Found in the large intestine of *Cercopthecus fuliginosus*.

H. fascia'ta, Schneider. (L. *fascia*, a band.) Found in the cæcum of *Dasypus novemcinctus*.

H. flexuo'sa, Schneider. (L. *flexuosus*, tortuous.) Found in the intestine of *Crotalus*, species unknown.

H. forcipa'ria, Schneider. (L. *forceps*, a pair of pincers; *pario*, to bear.) Found in the intestines of *Capito collaris*, *C. macrorhynchus*, and other species of the same genus.

H. foveola'ta, Rudolphi. (L. *fovea*, a small pit.) Found in the intestines of *Dentex foveolata*.

H. inflex'a, Rudolphi. (L. *inflectus*; from *inflecto*, to bend.) A synonym of the *Ascaris inflexa*, Rudolphi, and *A. perspicillum*, Rud. Found in the intestines of *Tetrao urogallus*.

H. linea'ta, Schneider. (L. *linea*, a line.) Found in the intestines of *Gallus*, species unknown.

H. maculo'sa, Rudolphi. (L. *maculosus*, spotted.) Found in the intestines of various species of *Columba*.

H. perarma'ta, Ratzel. (L. *per*, intensive; *armatus*, armed.) Found in the intestines of *Tarsius spectrum*.

H. retu'sa, Schneider. (L. *retusus*, blunt.) Found, both free and encapsuled, in the large intestines of *Dasypus novemcinctus*.

H. serra'ta, Schneider. (L. *serratus*, saw-like.) Found in the intestine of *Penelope humeralis*.

H. spumo'sa, Schneider. (L. *spumousus*, foaming.) Found in the cæcum of *Mus decumanus*.

H. sucto'ria, Molin. (L. *sugo*, to suck.) Found in the coats of the stomach of *Caprimulgus campestris*.

H. trunca'ta, Rud. (L. *trunco*, to lop off.) Found in the intestines of *Conorus solstitialis*.

H. tur'gida, Schneider. (L. *turgidus*, inflated.) Found in the intestine of *Tejus jemezianus*.

H. uncina'ta, Rudolphi. (L. *uncinatus*, barbed.) Found in the cæcum of *Cecogenys paca*.

H. valva'ta, Schneider. (L. *valvatus*, having folding doors or valves.) Found in the cæcum of *Crypturus cupreus*.

H. verruco'sa, Molin. (L. *verrucosus*, full of warts.) Found in the stomach of *Dasypus procta aguti*.

H. vesicula'ris, Frölich. (L. *vesicula*, dim. of *vesica*, a bladder.) Found in the cæcum and large intestine of *Tetrao urogallus*.

Hetera'lus. ("Ετερος; ἄλος, a dise. F. *hétéralien*.) Isid. G. St. Hilaire's term for a double monstrosity in which the accessory fœtus, very small and incomplete, is attached some distance from the umbilicus in such a manner that, although itself without an umbilical cord, it has no connection with that of the principal fœtus.

Heteran'drous. ("Ετερος, different; ἀνήρ, a male. F. *hétérandre*.) A plant in which the stamens or the anthers are not all of the same form.

Heteran'thous. ("Ετερος, different; ἄνθος, a flower. F. *hétéranthe*.) Having flowers which are not all disposed in the same manner.

Heterauxesis. ("Ετερος, diverse; ἀύξω, to increase.) Unequal growth. Applied, in Biology, to the different rate of growth of parts exposed to different conditions.

H., indu'ced. (L. *in*, in; *duco*, to lead) The curvature produced in the stems or roots of

HETERO-AUTOPLASTY—HETERODROMY.

plants by the agency of external causes, as the presence of water, heat, or light.

H., spontaneous. (L. *spontaneus*, voluntary.) The curvature produced in the parts or organs of plants due to internal causes.

Hetero-autoplasty. (Ἑτερος, other; αὐτός, one's self; πλάσσω, to form.) The grafting of a piece of skin from another person on to a wound or sore needing such treatment.

Heterobaphia. (Ἑτερος, different; βαφή, dye. F. *hétérobaphie*; G. *Vielfarbigkeit*.) The state of a body, the surface of which is of two or more colours.

Heterobranchia'ta. (Ἑτερος, different; βράγχια, the gills. F. *hétérobranche*.) Applied by Latreille to a tribe of the *Siluroidei*, comprehending those fishes in which the branchiæ are accompanied by ramified appendices.

Also, applied by Lamarck to an Order of the *Crustacea*, in which he ranks those which have branchiæ very much diversified in relation to their form and situation.

Also, applied by Blainville to an Order of the *Acephalophora*, including animals in which the branchiæ vary as to their form.

Heterocarpous. (Ἑτερος; καρπός, fruit. F. *hétérocarpe*; G. *verschiedenfrüchtig*.) Bearing more than one kind of fruit. Applied to the anthodium of the *Compositæ*, when it presents ovaries or fruits dissimilar whether in themselves, or as to their down.

Heterocephalous. (Ἑτερος; κεφαλή, the head.) Having heads of different kinds.

In Botany, bearing heads or capitula of two kinds; one consisting of male, the other of female, flowers.

Heterocephalus. (Ἑτερος, different; κεφαλή, the head. F. *hétérocephale*.) A monster fetus with two unequal heads.

Heterocera. (Ἑτερος; κέρα, a horn. F. *hétérocre*.) A Division of the Order *Lepidoptera*, having the antennæ not clubbed at the extremity, being the Moths.

Heterocer'al. (Ἑτερος; κέρκος, a tail. F. *hétérocerque*.) In Biology, a term applied by Agassiz to those tails of fishes which are larger below than above the line of the vertebral column; that is, composed of two unequal lobes, as in sharks and dogfishes.

Heterocheilus. (Ἑτερος, different; χεῖλος, a lip.) A sexually mature form of nematode worm.

H. tunica'tus. Dising. (L. part. of *tunica*, to clothe with a tunic.) Found in the stomach and small intestines of *Manatus exunguis*.

Heteroche'late. (Ἑτερος; χηλή, a crab's claw. F. *hétérochèle*.) Applied to one of the *Crustacea* which has one arm larger than the other.

Heterochro'ic. (Ἑτερος; χρωκός, coloured. G. *verschiedenfarbig*.) Having different colours.

Heterochro'mic. (Ἑτερος; χρώμα, colour.) Of different colours.

Heterochron'ia. (Ἑτερος; χρόνος, time. F. *hétérochronie*.) Irregularity of rhythm or time in the action of a part.

Also, abnormality of time in the development of a part.

Also, a term used to express the development of a tumour at a time when its presence is an abnormality.

Heterochron'ic. (Ἑτερος, different; χρόνος, time. F. *hétérochronique*; G. *anderzeitig, fremdzeitig*.) Occurring at different times; irregular; intermittent.

H. pulse. An irregular or intermitting pulse.

Heterochyme'u'sis. (Ἑτερος, different; χύμενσις, a confusion, or commixture. F. *hétérochymie*.) The state of the blood in which a substance is present that does not exist in the normal fluids; a qualitative change of the blood.

Heterocline. (Ἑτερος; κλίνη, a bed.) Similar to the botanical use of *Heterocephalous*.

Heteroclite. (Ἑτερόκλητος, otherwise inflected; from ἕτερος; κλίνω, to incline. F. *hétéroclite*.) That which does not follow the ordinary rule. Anomalous or irregular in formation.

H. plants. Plants which have the sexes separated, as the *Monoicæ* and *Dioicæ*.

Heterocrania. (Ἑτερος, different; κρανίον, the cranium. F. *hétérocranie*; G. *halbseitiges Kopfweh*.) A term for *Hemierania*, but rather referring to pain in the anterior half of the head.

Also, an asymmetrical condition of the skull.

Heterocrasia. (Ἑτερος, different; κράσις, a mixture. F. *hétérocrasie*.) A heterogeneous mixture, especially of the humours.

Heterocras'ic. (F. *hétérocrasique*.) Of, or belonging to, *Heterocrasia*.

H. blood. Basedow's term for blood containing foreign matters.

Heterocrin'ia. (Ἑτερος; κρίνω, to separate. F. *hétérocrinie*.) Irregularity of secretion. Andral's term for an altered secretion.

Also, the same as *Heterocrisis*.

Heterocrisis. (Ἑτερος; κρίσις, a crisis; from κρίνω. F. *hétérocrisie*.) An irregular or abnormal crisis of a fever or other disease.

Heterocyst. (Ἑτερος; κύστις, a bag. F. *cellules limitées*.) Term applied by Allman to certain cells found in *Nostocaceæ*. They present a yellow colour, and their membrane is thickened at the point of contact with another cell. They either terminate in a filament or are found interposed between the ordinary cells in the course of a filament.

Heterodactylous. (Ἑτερος; δακτύλος, a finger.) Having dissimilar digits.

Heteroder'matous. (Ἑτερος; δέρμα, the skin. F. *hétéroderme*.) Having some parts of the skin different to others.

Heterodidym'ia. (Ἑτερος; δίδυμος, double.) Same as *Heteradelphia*.

Heterodon'tous. (Ἑτερος, different; δόους, a tooth. F. *hétérodonite*.) Having some teeth larger than others.

Heterodox'us. (Ἑτερος, different; δόξα, an opinion. F. *hétérodoxe*.) This term was applied by Linnæus to those botanists who formed their methods of classification from the consideration of every other part but those of fructification.

Heterodromous. (Ἑτερος; δρόμος, a course.) Following different directions. See *Heterodromy*.

Heterodromy. (Ἑτερος, different; δρόμος, a course.) Term applied in Botany when the axial shoot of the stem coils from right to left, whilst that of the branch twists from left to right, or *vice versâ*.

HETERODYME—HETEROGYNOUS.

Heterodyme. ("Ἑτερος; δίδυμος, double.) I. G. St. Hilaire's term for a double monstrosity in which the accessory fœtus, very small and very imperfect, is reduced to a head incompletely carried, by the intermeditation of a neck and a rudimentary thorax, on the anterior surface of the principal fœtus.

Heterodymia. ("Ἑτερος; δίδυμος. F. *hétérodymie*.) The condition of a *Heterodyme*.

Heterodymian. (F. *hétérodymien*.) Possessing the characters of a *Heterodyme*.

Heterœcious. ("Ἑτερος; οἶκος, a house.) Term applied by De Bary to Fungi which, passing through certain stages of development in or on one host, complete their development in or on another.

Heterœcism. The condition described under *Heterœcious*.

Heterœcis'mal. Same as *Heterœcious*.

Heterogamous. ("Ἑτερος, different; γάμος, a marriage. F. *hétérogame*; G. *verschiedenehig*.) Applied by De Candolle to plants which have their flowers monoic, dioic, or polygamous; by Lessing to the capitula of the *Compositæ*, when they contain flowers of different sex; by Trinius to calyces of polygamous *Graminææ*, and to grasses in which one calyx contains hermaphrodite flowers, and another female or male flowers only. It is substituted now by the term *Polygamous*.

Heterogamy. ("Ἑτερος, diverse; γάμος, marriage.) The succession of differently organised sexual generations living under different nutritive conditions. It occurs in some Nematodes, as in *Rhabdonœura nigrovenosum*, in which, when the embryo is developed as a parasite in conditions favourable for the acquisition of nutriment, it gives rise to a sexual form quite different from that which arises when the embryo leads a free existence in damp earth or dirty water. Heterogamy also occurs in the females of the bark lice or Chermes, and in the root lice or Phylloxera, in which the winged and apterous female generations are characterised by parthenogenetic reproduction, and consist only of oviparous females, whilst the generation of females which lay fertilised eggs appears with the males only at certain seasons, and can be distinguished by their small size and by the reduction of their oral and digestive apparatus.

In Botany, the term indicates an unusual arrangement of the sexual organs.

H., in'complete. (L. *incompletus*, incomplete.) That form of development which is seen, amongst other animals, in Phyllopoda and Rotifera, in which there is not, as in complete heterogamy, two sexual generations, but in which a sexual and a parthenogenetic generation alternate. As an example, the Daphniidæ may be mentioned, in which the female produces summer eggs capable of parthenogenetic development, and later winter eggs requiring fertilisation.

Heteroganglia'ta. ("Ἑτερος, diverse; γάγγλιον, a swelling.) Term applied by Owen to the Mollusca, in reference to the irregular distribution of the centres and cords of the nervous system.

Heterogeneity. ("Ἑτερος, different; γένος, a kind. F. *hétérogénéité*; I. *eterogeneita*; G. *Fremdartigkeit, Heterogenität, Ungleichartigkeit, Verschiedenartigkeit*.) The quality of that which is heterogeneous.

Heterogen'eous. ("Ἑτερος; γένος. F. *hétérogène*; I. *eterogeneo*; S. *heterogeneo*; G. *fremdartig, ungleichartig, verschiedenartig, heterogen*.) Of different kinds; opposite by nature; composed of several substances.

Heterogen'esis. ("Ἑτερος, different; γένεσις, generation. F. *hétérogénèse*.) Name given by Breschet to a class of organic deviations, comprehending those in which there exists a relative anomaly, whether in regard to the situation or to the colour of organs; to the number or the situation of the fœtuses belonging to the same gestation; or to the situation or the number of organs in particular.

See also *Heterogeny*.

Heterogen'etic. ("Ἑτερος; γένεσις.) Relating to *Heterogenesis*, or to *Heterogeny*.

H. puerperal fever. (L. *puerpera*, a lying-in woman.) Barnes' term for the form of puerperal fever which is due to the reception of a poison from without, in contradistinction to the autogenetic form.

Heterog'enuous. Same as *Heterogeneous*.

Heterog'eny. ("Ἑτερος; γένος, race. F. *heterogenie*; I. *eterogenia*; G. *Heterogenie*.) Burdach's term for the production of living beings in some other manner than by the influence of a parent or parents having sex. The same as *Abiogenesis*.

Also, the production of a living being from the substance of a living being of some other kind; as in the supposed development of maggots from the substance of putrefying flesh.

H., symmetrical. (Συμμετρία, due proportion.) Term applied in Botany to the parenchyma of the upper and lower surfaces of a leaf when the cells of their surface resemble each other, though differing in form from those of the central parenchyma.

Heteroglau'cia. ("Ἑτερος; γλαυκός, bluish-green.) Wallroth's term for the abnormal production of green or glaucous spots on the surface of a body, especially in the eye.

Heteroglau'cous. Relating to *Heteroglau'cia*.

Heterog'nathous. ("Ἑτερόγναθος; from ἕτερος, other; γνάθος, the jaw.) Having differently shaped jaws.

Heterogone. Same as *Heterogonous*.

Heterog'onism. ("Ἑτερος, different; γόνος, offspring. F. *hétérogone*.) The production of dissimilar offspring from similar parentage, as in Gymnoblasi where dissimilar gonosomes may arise from similar trophosomes.

Heterog'onous. ("Ἑτερος; γόνος, offspring.) Being of, or produced by, irregular generation.

H. digen'esis. See *Digenesis, heterogonous*.

H. dimor'phism. (Δίς, twice; μορφή, form.) A term applied to those hermaphrodite flowers in which intercrossing is secured by dimorphism of the andrœcium and gynœcium occupying different individuals, so that the pollen of one form of flower fertilises the stigma of the other.

H. flow'ers. Flowers in which there is such dimorphism of stamens and pistils that self-fertilisation is interfered with.

Heterog'ony. ("Ἑτερος; γόνος.) Same as *Heterogonism*.

Heterog'ynous. ("Ἑτερος, different; γυνή, a female. F. *hétérogynie*.) Applied to

HETEROID—HETEROPHTHONGIA.

those insects, such as ants, in which each species comprises males, females, and neuters.

Heteroid. (Ἑτεροειδής, of another kind. F. *étéroïde*.) Of another species; having the appearance or the form of another kind.

Heteroinfection. (Ἑτερος; L. *inficio*, to taint.) An infection produced in a person by a virus carried by another person not himself affected.

Heteroiosis. (Ἑτεροίωσις, from ἑτεροῖω, to alter. F. *hétéroïose*; G. *Andersmachen*, *Umwandeln*.) Term for alterations or changes; the process or progress of a change.

Heterolalia. (Ἑτερος, different; λαλία, speech. F. *hétérolalie*; G. *unrichtiges Sprechen*, *Versprechen*.) A defect in speech.

Heterolobous. (Ἑτερος; λόβος, a lobe. F. *hétérolobe*.) Having unequal lobes.

Heterologous. (Ἑτερος, other; λόγος, an account. F. *hétérologue*; G. *fremdartig*.) Different in structure or formation to the normal.

H. séries. (L. *series*, a row.) Gerhardt's term for bodies derived from each other by definite chemical metamorphoses, in contradistinction to *Homologous series*.

H. stimuli. See *Stimuli*, *heterologous*.

H. tis'sue. (F. *tissu hétérologue*.) Lobstein's term for morbid structures which have no analogy with the normal tissues of the body.

The term is used by Virchow in a different sense. See *H. tumours*.

H. tu'mours. Virchow's term for those tumours the tissue of which differs from that of the organ in which they are situated.

Heterology. (Ἑτερος, different; λόγος, a discourse. F. *hétérologie*.) A dissertation on the differences presented by objects from each other, or from the structures on which they are formed. Used in reference to morbid growths.

Heterolopy. (Ἑτερος; λοπός, bark, peel.) The production of abnormal scales or crusts.

Heteromera. (Ἑτερος; μέρος, a part.) Latreille's term for a Section of the *Coleoptera*, in which the joints of the tarsi are unequal in number; the four anterior tarsi having five joints, and the posterior four.

Heteromerous. (Ἑτερος; μέρος, a part. F. *hétéromère*; G. *ungleichschichtig*.) Having, or consisting of, different portions.

H. flow'ers. Flowers the several whorls of whose parts are not all equal in number.

H. lichens. Those lichens in which the gonidia and hyphæ are not equally intermixed in a thallus, but are each arranged in layers.

Heterometry. (Ἑτερος; μέτρον, a measure.) A quantitative alteration of fluids or tissues, as distinguished from qualitative change.

Heteromorphæ. (Ἑτερος; μορφή, form.) An Order of the Subclass *Carinata*, Class *Aves*, having schizognathous palates, long free toes, nasal bones completely ankylosed with the lachrymal, and the furculum ankylosed to the manubrial rostrum and the coracoids.

Heteromor'phic. Same as *Heteromorphous*.

Heteromorphism. (Ἑτερος; μορφή, shape.) The condition or quality of that which is *Heteromorphous*.

In Chemistry, the property possessed by some substances of crystallising in different forms.

Heteromorphous. (Ἑτερος, different; μορφή, form. F. *hétéromorphe*; I. *etero-*

morfo; G. *verschiedengestaltig*.) Differing in form, shape, or external appearance, as compared with the normal.

In Entomology, differing greatly in appearance at different stages of growth, as when the larval and adult state of an insect are very unlike.

Applied by Alibert to those skin diseases which do not fall into any natural group.

H. genera'tion. See *Generation*, *heteromorphous*.

H. le'sions. See *Lesions*, *heteromorphous*.

H. monstros'ity. A non-symmetrical monstrosity.

H. tis'sue. Laennec's term for those morbid structures which are composed of elements which are new and unknown among the normal tissues; such as tubercle.

Heteromorphy. Same as *Heteromorphism*.

Heterone'meous. (Ἑτερος, different; νῆμα, a thread. F. *hétéronémé*.) Applied by Fries to those plants in which the sporidia are lengthened by germination into filaments which unite to produce a heterogeneous body, as happens in the fungi and mosses.

Heterone'mous. (F. *hétéronème*.) Applied to those plants the stamens of which are unequal in the length of their filaments.

Heteron'omous. (Ἑτερος; νόμος, a law. F. *heteronome*.) Dissimilar; abnormal.

Heteronomy. (Ἑτερος, different; νόμος, a law. F. *hétéronomie*.) The state of deviation from the ordinary laws.

Heteropagus. (Ἑτερος; πάγιος, united.) I. G. St. Hilaire's term for a double monstrosity in which the accessory foetus, very small and very imperfect, but having a distinct, even if rudimentary, head and pelvic limbs, is attached to the anterior surface of the body of the principal foetus.

Heteropath'ic. Relating to *Heteropathy*.

Heteropathy. (Ἑτερος, different; πάθος, affection. F. *hétéropathie*.) The mode of treating disease whereby a morbid condition is removed by inducing a different morbid condition to supplant it. The same as *Allopathy*.

Also, Berthold's term for the form of idiosyncrasy in which the organic susceptibility behaves itself in a different fashion to the normal in the presence of any irritation.

Heteropetalous. (Ἑτερος, different; πέταλον, a flower leaf. F. *hétéropétale*.) Having dissimilar or unequal petals.

Heteroph'agi. (Ἑτερος; φαγεῖν, to eat.) Applied to those birds the young of which require to be fed by their parents for some time after being hatched.

Heterophlegma'sic. (Ἑτερος; φλεγμασία, inflammation. F. *heterophlegmasique*.) That quality of a substance which enables it to replace one irritation by another, and so change the character of an inflammation.

Heteropho'nia. (Ἑτερος; φωνή, the voice. F. *hétérophonie*.) An abnormal state of the voice.

Heteropho'nous. Suffering from *Heterophonia*.

Heterophthal'my. (Ἑτερος, different; ὀφθαλμός, the eye. F. *hétérophthalmie*.) The condition in which the eyes are of a different colour, or are different in direction.

Heterophthong'ia. (Ἑτερος; φθoγ-

HETEROPHYLLOUS—HETEROTAXIA.

γῆ, sound or voice. F. *hétérophthongie*; G. *Fremdsprechen*.) An abnormal condition or mode of speech; a foreign pronunciation.

Heterophyllous. ("ἑτερος; φύλλον, a leaf. F. *hétérophylle*; G. *verschiedenblättrig*.) Having on the same stem leaves differing in form or size.

Heterophylly. ("ἑτερος; φύλλον.) The condition of having leaves of more than one shape.

Heteroplas'ia. ("ἑτερος, different; πλάσις, a formation. F. *hétéroplasie*.) Lobstein's term for the production of a morbid structure foreign to the economy and taking the place of the normal tissues.

Heteroplas'ias. Same as *Heteroplasia*.

Heteroplasm. ("ἑτερος; πλάσμα, anything formed.) Burdach's term for a morbid tissue foreign to the economy.

Heteroplas'tic. (F. *hétéroplastique*.) Of, or belonging to, *Heteroplasia*, or a *Heteroplas'm*.

H. growth. A morbid increase of tissue, consisting of elements foreign to the structure in which it grows.

H. tissue. Lobstein's term for the structure also called *Heterologous tissue*.

H. tumour. One of Virchow's divisions of tumours.

Same as *H. growth*.

Heteroplas'ty. ("ἑτερος; πλάσσω, to form.) Same as *Heteroplasia*.

Also, applied to the grafting into a part of a substance from another organism.

Heterop'oda. ("ἑτερος; πούς, a foot.) An Order of the Class *Gastropoda*, Subkingdom *Mollusca*, distinguished by the feet being compressed into a vertical muscular swimming lamina, instead of forming a horizontal disc.

Heterop'odous. ("ἑτερος; πούς, a foot. F. *hétéropode*.) Having different feet.

Heterop'ody. ("ἑτερος; πούς. F. *hétéropodie*.) The condition of having feet of different shape or size.

Heteropros'opus. ("ἑτερος; πρόσωπον, a face.) A monster foetus having two faces.

Heterop'tera. ("ἑτερος, different; πτερόν, a wing. F. *heteroptera*.) Latreille's term for a Suborder of the Order *Hemiptera*, in which the anterior wings are membranous only at the extremity, being coriaceous at the base, and are called hemelytra.

Heterop'terous. ("ἑτερος; πτερόν, a wing. F. *hétéroptère*.) Having dissimilar wings, as the *Heteroptera*.

Heterorex'ia. ("ἑτερος, different; ὄρεξις, appetite. F. *hétérorexie*.) Alibert's term for a depraved appetite.

Heterorgan'ous. ("ἑτερος, different; ὄργανον, an instrument. F. *hétéroorgane*; G. *ungleichorganig*.) Having an unequal organisation.

H. plants. A term applied by K. H. Schultz to plants the internal organisation of which comprises three different systems of organs, spiral vessels, vessels of nutrition, and cellulæ.

Heterorhex'ia. See *Heterorexia*.

Heterorrh'izal. ("ἑτερος; ῥίζα, a root.) Having roots which grow from no definite point, as in the germination of the spores of some Acrogens.

Heterorrh'yth'mous. ("ἑτερος, dif-

ferent; ῥυθμός, rhythm. F. *heterorrh'ythme*; G. *abweichend*.) Having an irregular rhythm; applied to the pulse.

Heterosarco'ses. ("ἑτερος; σάρκωσις, the growth of flesh.) Diseases characterised by the development of heterologous growths.

Heteros'celous. ("ἑτερος; σκέλος, the leg.) Having dissimilar limbs.

Heterosciad'æ. ("ἑτερος; σκιάδειον, anything that affords shade.) One of Bentham and Hooker's series of *Umbellifera* having simple or compound umbels, but generally irregular; channels of the fruit without vittæ.

Heteros'cian. ("ἑτερος; σκιά, a shadow.) An inhabitant of one zone of the earth, other than the tropics, as compared with an inhabitant of the opposite zone or zones, inasmuch as their shadows at noon fall on opposite sides.

Heteros'copy. ("ἑτερος; σκοπέω, to observe. F. *hétéroscopie*.) An abnormality of vision of any kind.

Heteroso'matous. ("ἑτερος, different; σῶμα, a body. F. *hétérosome*.) Applied by Dumeril and Blainville to animals in which the right and the left sides of the body are dissimilar.

Heterosper'mous. ("ἑτερος; σπέρμα, seed. G. *verschiedensamig*.) Having different kinds of seed.

Heterospor'æ. ("ἑτερος; σπόρα, seed.) A Division by Sachs of vascular Cryptogams now given up as being incorrect. It included those which produced two kinds of spores.

Heteros'porous. ("ἑτερος; σπόρα, seed. F. *hétérospore*.) Having spores or seeds of more than one kind.

Heterostat'ic. ("ἑτερος; στατικός, belonging to a stand-still.) Relating to another form of static electricity.

H. electroscope. (*Electricity*; Gr. σκοπέω, to look at.) A term used by Sir W. Thompson for a form of electroscope in which, besides the electrification to be tested, another electrification, maintained independently of it, is used as assistant.

Heterosté'monous. ("ἑτερος; στήμων, a thread. F. *hétérostémone*.) Having dissimilar stamens.

Heteros'tomous. ("ἑτερος; στόμα, a mouth. F. *hétérostome*.) Having an extraordinary or irregular placed mouth.

Heteros'tomy. ("ἑτερος; στόμα.) Irregularity or asymmetry of the mouth.

Heterostroph'ous. ("ἑτερος; στρέφω, to turn. F. *hétérostrophe*.) Applied to a spirivalve shell in which the terminal border is to the left side of the animal.

Heterostyl'ia. ("ἑτερος; στῦλος, a pillar.) Same as *Heterostylism*.

Heterostyl'ism. ("ἑτερος; στῦλος.) The condition of a flower which has two forms of flowers as regards the proportionate length of the stamens and style, as in the *Primula*, where some of the flowers have long stamens and a short style, and others the reverse. In this manner self-fertilisation is impeded and cross-fertilisation is made more likely.

Heterostyl'ious. Possessing the condition of *Heterostylism*.

Heterotax'ia. ("ἑτερος; τάξις, order. F. *hétérotaxie*.) Term applied by I. Geoffroy Saint-Hilaire to those congenital, but not hereditary, anomalies, which, while they are of

HETEROTAXY—HEUSTRICH.

anatomical importance, do not hinder the performance of any function, and are not apparent externally, such as the malposition of internal organs.

Heterotaxy. Same as *Heterotaxia*.

In Botany, displacement or deviation of an organ from its normal position.

Heterothamnious. ("Ἑτερος; θάμνος, a bush. *G. ungleichhäutig.*) Having different forms of stems or branches.

Heterothermal. ("Ἑτερος; θερμή, heat. *F. hétérotherme.*) Having a temperature which varies according to the variations of the surroundings, as occurs in plants, invertebrates, and cold-blooded vertebrates.

Heterotomic. ("Ἑτερος; τομή, a cutting. *F. hétérotome*; *G. ungleichhälftig.*) In Botany, applied to a calyx or a corolla in which the alternate divisions are dissimilar.

Heterotopia. ("Ἑτερος; τόπος, place. *F. hétérotopie.*) An error of position. Misplacement of a part.

Also, the presence of a tumour in a part of the body where the elements of which it is composed do not naturally exist.

H., cerebral. (*L. cerebrum*, the brain.) The presence of superfluous masses of brain substance without coincident ventricular dropsy. The masses sometimes present the form of small accessory gyri, varying in size from a millet-seed upwards, situated on the summit of the convolutions. They may consist of grey or white substance or both. They are probably congenital.

H., consecutive. (*L. consequor*, to follow after. *F. hétérotopie consecutive.*) The growth of secondary morbid structures of like nature to the primary disease.

H., objective. (*L. objecto*, to throw before. *F. hétérotopie objective.*) Gueniot's term for an actual deviation from the natural position of a part.

H., plastic. (Πλαστικός, fit for moulding. *F. hétérotopie plastique.*) Lebert's term for the formation of normal tissues and complex organs in parts of the body where in the natural state they are not to be found, as the growth of hairs in the pharynx, or teeth, and sebaceous matter in cysts. The abnormalities may be parts of an included fœtus.

H., subjective. (*L. subjectivus*, relating to the subject.) Gueniot's term for an apparent deviation from the natural position of a part.

H., trophic. (Τροφή, nourishment.) Same as *Heteroplasia*.

Heterotopic. ("Ἑτερος; τύπος.) Misplaced. Relating to *Heterotopia*.

Heterotopous. Same as *Heterotopic*.

Heterotricha. ("Ἑτερος; τρίξ, a hair.) A Suborder of the Order *Ciliata*, Class *Infusoria*, having the cilia dispersed over the whole body, the series near the mouth being longer and stiffer than those of the remainder of the body.

Heterotropical. Same as *Heterotropous*.

Heterotrophic. ("Ἑτερος; τροφή, nourishment. *F. hétérotrophie.*) An alteration of nutrition.

Heterotropous. ("Ἑτερος, different; τρόπος, a turn. *F. hétérotrope*; *G. abgewendet.*) Turned in a different manner from what is usual and natural.

In Botany, the same as *Amphitropous*.

H. ovule. The condition of the plant ovule described under *Amphitropous*.

According to Agardh, it is applied to collateral ovules with the raphes back to back.

Heterotypic. ("Ἑτερος; τύπος, a pattern. *F. hétérotypien.*) L.G. St. Hilaire's term for those double monstrosities which consist of a principal fœtus, from the anterior wall of which is suspended an accessory fœtus.

Heterou'ra. ("Ἑτερος; οὐρά, a tail.) A Genus of nematode worms.

H. androph'ora. (Ἀνήρ, a male; φορέω, to bear.) Lives in the stomach of the Triton, the male being twisted round the body of the female.

Heteroval'vate. ("Ἑτερος; *L. valva*, a valve. *F. hétérovalve.*) Applied by Peyre to fruits in which the valves are dissimilar.

Heteroxenia. ("Ἑτερος; ξένος, a host.) A synonym of *Heterocism*.

Heterozoa'ria. ("Ἑτερος, different; ζῷον, an animal.) Applied by Blainville to reptiles because numerous essential differences exist among the animals comprised in the class.

Hettocyrto'sis. ("Ἑττων, smaller; for ἥσσων, comp. of κακός; κύρτωσις, a being curved. *F. hettocyrtose.*) Term for a slight curvature.

Heuch'eloup. France, Département des Vosges, near Mirecourt. An earthy mineral water.

Heuch'era. (*Heucher*, a Wittemberg professor.) A Genus of the Nat. Order *Saxi-fragaceæ*.

H. acerifo'lia. (*L. acer*, a maple; *folium*, a leaf.) The *H. americana*.

H. america'na. Linn. Alum root. A plant growing in shady rocky places in most parts of the United States. A powerful astringent, used as a local application to wounds, ulcers, and cancers, as well as internally in diarrhœa and menorrhagia.

H. caules'cens. (*L. caulis*, a stem.) Hab. North America. Has similar properties to *H. americana*.

H. cortu'sa. Michaux. The *H. americana*.

H. Richardso'ni. Hab. North America. Used as *H. americana*.

H. villo'sa. Michaux. (*L. villosus*, hairy.) Properties as *H. americana*.

H. vis'cida. Pursh. (*L. viscidus*, sticky.) The *H. americana*.

Heudelot'ia. (*Heudelot*, a garden director on the Senegal.) A Genus of the Nat. Order *Terebinthaceæ*.

H. africa'na. Guillem. The *Balsamodendron africanum*.

Heurteloup, Charles Louis Stanislas, Bar'on. A French surgeon, born in Paris in 1793, died there in 1864.

H.'s artificial leech. See *Leech, artificial*, *Heurteloup's*.

H.'s per'cuteur. (*L. percutio*, to strike through and through.) A lithotrite in which blows from a hammer were substituted for the screw pressure of Civiale's instrument.

Heust'rich. Switzerland, Canton Bern. An alkaline sulphur water, 2000 feet above sea-level. Used in catarrhal affections of the respiratory and urinary passages, in rheumatism, and in herpetic diseases.

Hevea. A Genus of the Nat. Order *Euphorbiaceae*.

H. brazilien'sis, Willd. Hab. Brazil. Supplies *Caoutchouc*.

H. guianen'sis, Aubl. Hab. Guiana. Yields *Caoutchouc*.

H. lutea. (L. *luteus*, yellow.) Supplies some of the *caoutchouc* of Para.

H. spruceana. Supplies *Caoutchouc*.

He'veene. C_4H_4 . An oily, amber-coloured, transparent liquid obtained by Boucharlat from the products of the distillation of *caoutchouc*. It boils at $315^{\circ}C$. ($599^{\circ}F$.), being the least volatile of the products.

Hév'viz. Hungary, County Zala. An indifferent mineral spring, containing a little calcium carbonate and a small quantity of iron carbonate.

Hewitt, William Morse Graily. An English obstetric physician, born at Badbury, in Wiltshire, in 1828, now Professor of Midwifery and Diseases of Women in University College, London.

H's pessary. See *Pessary*, *Hewitt's*.

Hexacanthous. ("Εξ, six; ἀκανθα, a spine. F. *hexacanthé*.) Having six rays, or spines, or hooks.

H. embryo. (Εμβρυον, the fruit of the womb before birth.) The embryonic form of trematode and cestode worms which before their escape from the ovum, and for a while afterwards, are provided with six hook-like structures for boring.

Hexacapsular. ("Εξ; L. *capsula*, a small box.) Having six capsules or seed vessels.

Hexacetoamylum. ("Εξ; L. *acetum*, vinegar; *amylum*, starch.) A white powder obtained when starch is heated to $150^{\circ}C$. ($302^{\circ}F$.) with acetic anhydride. It is not coloured by iodine.

Hexacetodextrin. ("Εξ; L. *acetum*; *dextrin*.) A substance obtained when starch is heated with acetic anhydride to $160^{\circ}C$. ($320^{\circ}F$.)

Hexacetrhamnin. ($C_{24}H_{26}(C_2H_3O)_6O_{14}$.) A colourless substance obtained by Schützenberger from *a-rhamnin* by acting on it with acetic anhydride at $140^{\circ}C$. ($284^{\circ}F$.) It crystallises with difficulty; it is nearly insoluble in water, but easily soluble in spirit of wine.

Hex'ad. ("Εξ, six.) A sexvalent element, being one which requires six atoms of hydrogen for saturation.

Hexadactylous. ("Εξ, six; δάκτυλος, a finger. F. *hexadactyle*.) Having six digits.

Hexadecyl. $C_{16}H_{33}$. Same as *Cetyl*.

Hexagium. (Ἑξάγιον, a weight of one and a half drachmæ.) The sextula of the Romans. An old apothecaries' weight of four scruples.

Hex'agon. ("Εξ, six; γωνία, an angle. F. *hexagone*; G. *Sechseck*.) A solid figure of six equal sides and angles.

H., arterial, of Wil'lis. Same as *Wilis, circle of*.

Hexagonal. (F. *hexagonal*; G. *sechseckig*.) Of, or belonging to, a *Hexagon*.

H. system. A system of crystallisation in which the double six-sided pyramid is the fundamental form, with the principal axis passing through the summits of the pyramids, and either longer or shorter than the other three, which latter are all in one plane and at right angles to the principal one.

Hexagonien'chyma. (Ἑξάγωνος, six-cornered; ἔγχυμα, an infusion.) In Botany, tissue consisting of six-sided cells.

Hexagynia. ("Εξ, six; γυνή, a female. F. *hexagynie*; G. *Sechseibigkeit*.) A Linn. Order of plants, comprising those which have six pistils.

Hexagyn'ian. Same as *Hexagynious*.

Hexagyn'ious. ("Εξ, six; γυνή. F. *hexagynie*; G. *sechseibig*.) Having six pistils.

Hexag'ynous. Same as *Hexagynious*.

Hexahe'dral. (F. *hexaédral*; G. *sechsfüschig*.) Of, or belonging to, a *Hexahedron*.

Hexahe'dron. ("Εξ, six; ἕδρα, the base. F. *hexaèdre*; G. *Hexaeder*, *Sechsfüschner*.) A solid figure consisting of six equal sides.

Hexam'erous. ("Εξ; μέρος, a part. F. *hexamère*.) Consisting of six parts.

Hexam'ita. ("Εξ; μέτρος, a thread.) A Genus of flagellate *Infusoria*.

H. infla'ta, Dujardin. (L. *inflatus*, swollen.) A species which lives in salt water. See *H. intestinalis*.

H. intestinal'is, Dujardin. (L. *intestina*, the bowels.) Found parasitic in the intestine and visceral cavity of the frog and newt. Bütschli says that this and the *H. inflata* are only varieties of the same species.

Hexan'dria. ("Εξ; ἀνήρ, a male. F. *hexandrie*; G. *Sechsmännigkeit*.) The sixth Linnean class of plants, being those possessing six stamens.

Hexan'drian. Same as *Hexandrous*.

Hexan'dric. ("Εξ; ἀνήρ. F. *hexandrique*; G. *sechsmännig*.) Having six stamens.

Hexan'drious. Same as *Hexandrous*.

Hexan'drous. ("Εξ; ἀνήρ. F. *hexandre*; G. *sechsmännig*.) Having six stamens.

Hex'ane. (Εξ, six.) C_6H_{14} . A substance found in petroleum and cannel coal. It is a mobile liquid, boiling at $69^{\circ}C$. ($156.2^{\circ}F$.), having a sp. gr. of .663 at $17^{\circ}C$. ($62.6^{\circ}F$.), and a vapour density of 2.98.

Hexan'gular. ("Εξ, six; L. *angulus*, an angle. F. *hexangulaire*; G. *sechswinkelig*.) Having six angles.

Hexan'therous. ("Εξ; anther. F. *hexanthéré*.) Applied by Gleditsch and Allioni to plants that have six stamens.

Hexapetaloid. ("Εξ; πέταλον, a flower-leaf; εἶδος, likeness.) Having six petal-like structures.

Hexapetal'ous. ("Εξ; πέταλον. F. *hexapétale*; G. *sechsblumenblättrig*.) Having six petals.

Hexaphar'macon. ("Εξ; φάρμακον, a medicine.) Old term (Gr. ἑξάφαρμακον) for a plaster, described by Paulus Ægineta, iii, 79, Adams's Transl., vol. i, p. 676, composed of six ingredients.

Hexaphyll'ous. ("Εξ; φύλλον, a leaf. F. *hexaphylle*; S. *hexaflo*; G. *sechsblättrig*, *sechskelchblättrig*.) Having six leaves. Applied to a calyx with six sepals, and to a pinnate leaf consisting of six leaflets.

Hex'apod. ("Εξ; πούς, a foot.) An animal with six feet.

Hexap'odous. ("Εξ, six; πούς, a foot. F. *hexapode*; G. *sechsfüssig*.) Having six feet.

Hex'apterous. ("Εξ, six; πτερον, a wing. F. *hexaptère*; G. *sechsfügelig*.) Provided with six wing-like appendages, as the capsule of the *Fritillaria imperialis*.

HEXASEPALOUS—HIATUS.

Hexasepal'ous. ("Εξ, six; *sepal*. F. *hexasepale*; G. *sechskelchblättrig*.) Applied to a calyx which is composed of six sepals.

Hexaspermous. ("Εξ; σπέρμα, a seed. F. *hexasperme*; G. *sechssamig*.) Applied to fruits having six seeds.

Hexastemonous. ("Εξ, six; στήμων, a thread. F. *hexastémone*.) Having six stamens.

Hexastichous. ("Εξ; στίχος, a row. G. *sechszellig*.) In six rows.

Hexathyridium. ("Εξ; θυρίδιον, a little door.) A Genus of the Order Trematoda, Class Platyhelmintha.

H. affiné. Diesing. (L. *affinis*, related to.) Found in the veins of *Bombinator igneus*.

H. pingui'cola. Treutler. (L. *pinguis*, fat; *colo*, to inhabit.) Found in a small tumour attached to the ovary of a woman.

H. vena'rum. Treutler. (L. *vena*, a vein.) Found in man in venous blood, and in the sputum of persons suffering from hæmoptysis. It is a doubtful species.

Hexavalent. ("Εξ; L. *valeo*, to be worth.) Having the capacity to join with six atoms of a univalent radicle, as the radicle of mannite, C₆H₈.

Hex'ene. Same as *Hexylene*.

Hexicology. ("Εξis, a state or habit; λόγος, an account.) The study of the relations of a living creature to time, space, physical forces, other organisms, and surrounding conditions generally.

Hexine. ("Εξ, six.) C₆H₁₀=CH₂=CH₂. CH₂. CH₂. CH=CH₂. A mobile liquid obtained by Berthelot by acting on allyl iodide with sodium. It has an alliaceous, ethereal smell, boils at about 80° C. (176° F.), has a vapour density of 2.8372, and a sp. gr. at 13° C. (55.4° F.) of .71. Also called *Diallyl*. There are several hexines.

Hex'is. ("Εξis, a state; from ἕχω, to have. F. *constitution*; G. *Lebensbeschaffenheit*.) Habit or constitution of body.

Hexo'ic acid. ("Εξ, six.) C₆H₁₂O₂=C₅H₁₁.CO₂H. Same as *Caproic acid*.

Hexoylene. C₆H₁₀. Caventou's term for the hexine of petroleum oil formed in the preparation of hexylic alcohol.

Hex'yl. ("Εξ, six; ὕλη, stuff.) The hypothetical radicle of hexylic or caproylic alcohol, being the sixth alcohol-radicle of the series C_nH_{2n+1}. Also called *Caproyl*.

H. alcohol. C₆H₁₄O=C₆H₁₃OH. An aromatic, pleasant-smelling liquid found in oil of Heracleum. It boils at 157° C. (314.6° F.), and at 0° C. (32° F.) has a sp. gr. of .8333.

H. chloral. C₆H₉Cl₃O=C₅H₈Cl₃.CHO. A substance separated by fractional distillation from the higher-boiling portions of crude butyl chloral. It is insoluble in water, soluble in alcohol and ether. It is a feeble narcotic.

Hexylamine. C₆H₁₃.NH₂. An oily liquid obtained by treating hexyl chloride with an alcoholic solution of ammonia; it has an ammoniacal odour, and is miscible with water, alcohol, and ether.

Hexylene. C₆H₁₂. Three isomeric forms of this composition may exist. It is a liquid, of a faint garlic-like smell, and having at 0° C. (32° F.) a specific gravity of .6997.

Hexylic alcohol. See *Hexyl alcohol*.

Hey, William. An English surgeon, born at Pudsey, near Leeds, in 1736, died in 1819.

H's amputa'tion. The removal of the anterior part of the foot at the tarso-metatarsal articulations, the flaps for covering the ends of the bones being obtained from the sole, and the projecting end of the internal cuneiform bone being removed with the saw.

H's lig'ament. The fibres of the upper horn of the falciform border of the saphenous opening in the fascia lata which are attached to Gimbernat's ligament.

H's saw. See *Saw*, *Hey's*.

Hg. (Contraction of L. *hydrargyrum*, quick-silver.) The symbol of Mercury.

Hhabb. A local name of *Aleppo evil*.

Hia tsa'o tong tchong. The *Sphaeria sinensis*.

Hiant. (L. *hians*, part of *hio*, to gape. G. *klaffend*, *offenstehend*.) Gaping; opening. Applied to seed-vessels.

Hianticonchous. (L. *hio*, to gape; *concha*, a shell. F. *hianticonque*.) Applied by Latreille to those of the conchiferous mollusca which have wide-mouthed, gaping shells.

Hiatus. (L. *hiatus*; from *hio*, to gape. F. *hiatus*; I. *iato*; G. *Spalt*, *Öffnung*, *Klaffen*.) A gaping or deficiency; a gap; an opening.

Also, a term for the *Vulva*.

Also, the same as *Yawning*.

H. aorticus. (*Aorta*. F. *ouverture aortique*; G. *Aortenschlitz*.) The Foramen aorticum.

H. aorticus diaphrag'matis. (Διάφραγμα, a partition wall.) The Foramen aorticum.

H. cana'lis facia'lis. (L. *canalis*, a pipe; *facies*, the face.) The *H. Fallopii*.

H. cana'lis Fallo'pii. (L. *canalis*, a pipe.) The *H. Fallopii*.

H. cana'lis sacra'lis. (*Sacrum*. G. *Kreuzbeinspalt*.) The lower end of the sacral canal on the posterior surface of the sacrum where the laminae of the last two or three sacral vertebrae are defective.

H. diaphrag'matis aorticus. The opening in the diaphragm through which the descending aorta passes.

H. Fallo'pii. (*Fallopius*, the Italian anatomist.) A foramen situated on the upper surface of the petrous portion of the temporal bone leading to the aqueduct of Fallopius. It transmits the great superficial petrosal nerve.

H. interos'seus antibra'chii. (L. *inter*, between; *os*, a bone; *antibrachium*, the forearm.) The space above the upper end of the interosseous ligament of the forearm, through which the interosseous vessels pass.

H. occipito-petro'sus. (*Occipital bone*; *petrous bone*. F. *hiatus occipito-petreux*.) The Foramen lacerum posterius.

H. oesophage'us. (G. *Speiseröhrenschlitz*.) The Foramen oesophageum.

H. of Fallo'pius. The *H. Fallopii*.

H. of Scar'pa. (*Scarpa*.) The *Helicotrema*.

H. of Wins'low. See *Winslow*, *foramen of*.

H. pro ve'na basil'ica. (L. *pro*, for; *vena*, a vein; *basilic*.) The opening on the inner side of the fascia of the upper arm, a little below the middle of the limb, for the transmission of the basilic vein.

H. pro ve'na cephal'ica. (L. *pro*; *vena*; Gr. κεφαλή, the head.) The opening in the fascia of the upper arm for the passage of the

HIBERNACULUM—HICESIA.

cephalic vein on the inner border of the deltoid muscle.

H. pro ve'na media'na. (L. *pro*; *vena*; *medianus*, middle.) The opening in the fascia of the forearm, just below the anterior fold of the elbow, for the passage of the deep median vein.

H. semilun'aris. (L. *semi*, half; *luna*, the moon.) A crescentic opening in the outer wall of the middle meatus of the nose, with its convexity looking downwards and forwards; it leads to the infundibulum.

H. semiluna'ris fas'ciæ bra'chii. (L. *semilunaris*, half-moon-shaped; *fascia*, a band; *brachium*, the arm.) The *H. pro vena basilica*.

H. sphe'no-petro'sus. (*Sphenoid* bone; *petrous* bone. F. *hiatus sphéno-pétreux*.) The *Foramen lacerum anterius*.

H. spina'lis congen'itus. (L. *spina*, the spine; *congenitus*, born together with.) A term for *Spina bifida*.

H. subarcua'tus. (L. *sub*, under; *arcuatus*, bowed.) Von Tröltsche's name for a cleft on the upper border of the petrous bone near the eminentia arcuata; it serves for the passage of blood-vessels to the cancellous bone in the neighbourhood of the labyrinth.

Hibernac'ulum. (L. *hibernaculum*, a winter residence. F. *hibernacle*; I. *ibernacolo*; G. *Gewächshaus*, *Winterhaus*.) Linnæus's term for the envelopes of the buds and bulbs of plants which defend them from the cold of winter.

In Zoology, the winter retreat of a hibernating animal.

Hibern'al. (F. *hibernal*; from L. *hibernalis*, wintry; from *hibernus*, wintry: from the same root as *hiems*, winter.) Relating to winter.

In Botany, applied to a plant which has its time of growth and flowering in the winter.

Hibernate. (L. *hiberno*, to pass the winter; from *hibernus*.) To retire into a close and secluded and warm place during the winter season; to sleep through the winter.

Hiberna'tion. (L. *hibernus*, belonging to winter. F. *hibernation*; G. *Winterschlaf*.) Winter sleep. A dormant condition into which many plants and animals pass when the temperature falls below certain limits, and which is therefore usually observed in winter. The manifestations of vital activity then become greatly reduced. Most of the trees in temperate climates shed their leaves in autumn; as the sun's rays become less intense, and as winter advances, the circulation of sap proceeds very slowly, or is altogether arrested, only to recommence when the warm days of spring return. The same occurs in many poikilothermous animals. Many fishes bury themselves at the bottom of ponds and rivers. Lizards, snakes, and frogs retreat into holes and remain for long periods quiescent. The term hibernation, however, is commonly applied to the winter sleep of homoiothermous animals, the chief examples being the dormouse, hedgehog, marmot, hamster, ziesel or earless marmot, badger, bear, and bat. No example of hibernation is known amongst birds.

The temperature of animals that hibernate becomes greatly reduced, but soon rises when they are awakened. Saissy found the temperature of a hibernating marmot to be 5° C. (41° F.); when brought into a room at 24° C. (75·2° F.) it

waked after five hours, and its temperature was then 15° C. (59° F.), and after nine hours it had risen to the normal, 35° C. (95° F.) Some are wakened if the cold becomes very intense, and many awake when the temperature rises for a few days above a certain point. Some sleep as though by habit, even when kept in a warm room. In proportion to the deepness of the sleep into which the animals pass, the metabolic processes in the economy become reduced. The respiratory acts are performed only at long intervals, yet the blood is bright red and very little carbonic acid gas is given off.

Hibernant. (L. *hibernans*, part. of *hiberno*, to keep in winter quarters. F. *hibernant*; G. *winterschlafend*.) Sleeping or resting during the winter. See *Hibernation*.

Hibernicus lapis. (L. *hibernicus*, Irish; *lapis*, a stone.) See *Irish slate*.

Hibis'ceæ. (Ἰβίσκος, the marsh-mallow.) A Tribe of the Nat. Order *Malvaceæ*, having the flowers furnished with an involucre and the fruit syncarpous.

Hibis'cum. The *Hibiscus abelmoschus*.

Hibis'cus. (Ἰβίσκος, the marsh-mallow. G. *Eibisch*.) A Genus of the Nat. Order *Malvaceæ*.

H. abelmos'chus, Linn. See *Abelmoschus moschatus*.

H. cannab'inus, Linn. (Καννάβινος, hempen.) An acidulous herb.

H. esculen'tus, Linn. See *Abelmoschus esculentus*.

H. longifo'lius, Roxburgh. (L. *longus*, long; *folium*, a leaf.) The *H. esculentus*.

H. popul'eus. (L. *populeus*, poplar-like.) Hab. Moluccas. Fruit supplies a substance resembling gamboge; root emetic. Used in chronic diarrhœa, colic, and dyspepsia.

H. ro'sa-sinen'sis, Linn. (L. *rosa*, a rose; *sinensis*, Chinese. F. *rose de Chine*, *ketrine rose*.) Shoe-flower plant, Chinese rose. Flowers astringent and demulcent; leaves emollient and slightly aperient.

H. sabdarif'fa, Linn. Guinea or red sorrel. An acidulous herb with diuretic properties.

H. suraten'sis, Linn. (*Surat*.) An acidulous herb.

H. syriacus, Linn. (L. *syriacus*, belonging to Syria. F. *mauve en arbre*.) Leaves used as a substitute for those of *Malva sylvestris*.

Hi'brid. See *Hybrid*.

Hic'cough. (*Hic*, word imitative of the sound; *cough*. F. *hoquet*; I. *singulto*, *singhiozzo*; S. *hipo*; G. *Schlucken*.) An abrupt and spasmodic contraction of the diaphragm, causing an inspiratory act which is suddenly arrested by the closure of the glottis, or impeded by its insufficient opening, and is accompanied by an audible sound. It is generally a reflex action, the afferent nerves being the gastric branches of the pneumogastric and the efferent nerve the inferior laryngeal nerve. It may also be produced by direct irritation. It is generally of no moment, but in some stages of disease is a sign of serious import.

Hic'cup. Same as *Hiccough*.

Hices'ia. (Ἰκέσια, a slave or servant.) A term (Gr. *ἱκεσία*) for supplication, or the prayer of a suppliant. Anciently applied to a plaster, mentioned by Galen, de *C. M. per Gen.* iv, 14, and described by Paulus Ægineta, vii, 17,

HICKET—HIDROTOPOIESIS.

Adams's Transl., vol. iii, p. 565, used for serofulous diseases.

Hick'et. Same as *Hiccough*.

Hick'ory. (Etymology unknown.) The name of several species of the Genus *Carya* and *Juglans*.

H. nut. The edible fruit of *Carya alba*.

Hick'ot. Same as *Hiccough*.

Hic'quet. Same as *Hiccough*.

Hic'ry-pic'ry. The vulgar pronunciation of the *Hiera picro*.

Hidden. (*Hide*.) Kept out of sight; concealed.

H. sei'zure. Term used by Dr. M. Hall for such a paroxysm in convulsive diseases as may have been unobserved, because it occurred in the night, or away from the patient's home and friends, and so the attack, obvious enough in itself, may have passed unwitnessed or unrecorded; or the convulsion may have been limited to the deeply-seated muscles and to the deeply-seated veins in the neck, and have been actually hidden even from near observers.

H. vein'ed. In Botany, applied to leaves where the veins are deeply seated and not visible from the outside, as in the *Sempervivum*.

Hide. (Mid. E. *hiden*, *huden*; Sax. *hidan*, *hydan*; Gr. *κύθω*; from Aryan root *kudh*, to hide. F. *cacher*; I. *nascondere*; S. *esconder*; G. *verstecken*.) To cover or conceal.

Also (Sax. *hýd*; G. *haut*; L. *cutis*; Gr. *κῦτος*; from Aryan root *sku*, to cover. F. *peau*, *cuir*; I. *pele*, *cuoio*; S. *cuero*, *piel*; G. *Fell*), a skin of an animal.

Hide'bound. (*Hide*.) Having the skin tight.

In Botany, applied to trees in which the bark adheres so closely as to impede growth.

In Biology, having the skin firmly adherent and incapable of extension.

H. disease. A term used by Underwood in the same sense as *Scleroderma*.

Hidros'chesis. Same as *Hidroschesis*.

Hidro'a. (*Idrōw*, to sweat. F. *hidroa*; G. *Hitzblattern*, *Schwitzblattern*.) See *Hydroa*.

Hidroadeni'tis. (*Idrōw*, sweat; *adēn*, a gland. G. *Schweissdrüsenentzündung*.) Inflammation of the sweat glands.

H. axilla'ris. (L. *axilla*, the armpit.) Verneuil's term for inflammation of the sudoriparous glands of the armpit which, especially in serofulous persons and delicate women, produces small, roundish, hard knots in the skin that not infrequently suppurate.

A similar disease occurs in the areola of the breast gland and around the anus.

H. phlegmon'o'sa. (Φλεγμονή, inflammation beneath the skin.) Same as *H. axillaris*.

Hidroan'chone. (*Idrōw*, sweat; *áchōnē*, a strangling. G. *Frieselebräune*.) A sore throat with a military eruption.

Hidrocrit'ica. (*Idrōw*, sweat; *κριτικός*, capable of judging.) Signs derived from observation of the sweat.

Hidrocritical. (*Idrōw*, sweat; *κριτικός*, capable of judging. F. *hidrocritique*.) Having, or belonging to, a critical sweating.

Hid'roid. (*Idrōw*, sweat; *είδος*, likeness. F. *hidroïde*; G. *schweissartig*.) Having, or full of, sweat.

Hidroman'cy. Same as *Hidromantia*.

Hidromantia. (*Idrōw*, sweat; *μαντεία*, a divination. F. *hidromantie*.) Prognosis formed from an examination of the sweat.

Hidron'osos. (*Idrōw*, sweat; *νόσος*, a disease. F. *hidronose*; G. *Schweissfieber*.) Old term for the *Sudor anglicanus*, or English sweating sickness, according to Blancardus.

Also, a disorder of the perspiratory function.

Hidron'osus. Same as *Hidronosos*.

Hidronus'us. (*Idrōw*; *νόσος*, disease.) Same as *Hidronosos*.

Hidropede'sis. (*Idrōw*; *πῆδησις*, a leaping. F. *hidropédèse*.) Excessive sweating.

Hidroph'orous. (*Idrōw*; *φορέω*, to carry.) Sweat carrying. Same as *Sudoriferous*.

Hidroplania. (*Idrōw*, sweat; *πλάνια*, an error or wandering. F. *hidroplanie*.) Term used by Swediaur for sweating on an unusual part; a supposed transposition of the sweat.

Hidropoiet'ic. (*Idrōw*; *ποιέω*, to make.) Sweat making; causing to sweat.

Hidropy'a. (*Idrōw*; *πῦρ*, fever.) The same as *Sweating sickness*.

Also, the perspiration which occurs during fever.

Hidropy'retus. (*Idrōw*; *πυρετός*, a fever.) Old term for the *Sudor anglicanus*, or English sweating sickness. (Quincy.)

Hidrorrhoe'a. (*Idrōw*; *ροία*, a flow. F. *hidrorrhée*; G. *Hidrorrhoe*, *Schweissfluss*.) A flow of sweat, or profuse sweating.

Hidrorrho'ic. (*Idrōw*; *ροία*. F. *hidrorrhoïque*.) Of, or belonging to, *Hidrorrhoea*.

Hidros. (*Idrōw*, sweat. F. *sueur*; G. *Schweiss*.) Sweat.

Hidros'chesis. (*Idrōw*, sweat; *σχέσις*, a retention. F. *hidroschèse*; G. *Schweissverhaltung*.) Suppression of the sweat.

Hidroschetic. (F. *hidroschétique*.) Of, or belonging to, *Hidroschesis*.

Hidrose. (*Idrōw*.) Having, or full of, sweat.

Hidros'is. (*Idrōw*, sweat. F. *hidrose*; G. *Schwitzen*.) The formation of sweat; the condition of sweating.

Applied by Hever to disease characterised by sweating.

Also, the same as *Hidrotic fever*.

H. malig'na. (L. *malignus*, of evil nature.) Same as *Sweating sickness*.

H. simplex. (L. *simplex*, simple.) Same as *Sudamina*.

Hidrote'ri'on. (*Idrōw*; *τήριον*; from *idrōw*, to sweat. F. *sudatoire*; G. *Badstube*, *Schwitzbad*, *Schwitzstube*, *Schwitzzimmer*.) A *Sudatorium*, or sweating bath.

Hidroter'ium. Same as *Hidroterion*.

Hidrot'ic. (*Idrōw*; *τικός*, from *idrōw*, sweat. F. *hidrotique*; G. *schweisstreibend*.) Causing sweat; sudorific; diaphoretic.

H. ac'id. An acid believed formerly to exist in sweat.

H. fé'ver. Blundell's term for those cases of puerperal fever in which profuse perspiration is a marked symptom.

Hidrot'ica. (*Idrōw*; *τικός*. G. *schweissbreibende Mittel*.) Medicines which produce sweating. Same as *Sudorifics*.

Hidro'tion. (*Idrōw*; *τίον*, dim. of *idrōw*, sweat. F. *hidrotion*; G. *Schweisslein*.) A moderate sweating.

Hidro'tium. Same as *Hidrotion*.

Hidrotopoe'a. (*Idrōw*; *τοποιέω*, to make.) Medicines which produce sweating.

Hidrotopoie'sis. (*Idrōw*, sweat;

HIDROTOPOIETIC—HIGHMORIANUM ANTRUM.

ποίησις, a making; from ποίω, to make. F. *hidrotopoièse*; G. *Schweissmachen*.) The excretion of the sweat.

Hidrotopoietic. (F. *hidrotopoiétique*.) Of, or belonging to, *Hidrotopoiesis*.

Hidus. Old term for *Flos aris*, or flowers of brass. (Ruland, and Johnson.)

Hie'mal. (L. *hiemalis*, belonging to winter. F. *hiemal*; G. *winterlich*.) Belonging to winter; flourishing or flowering in winter.

Hiera. (Ἱερός, holy.) A name formerly given to certain compounds on account of their wonderful or holy properties.

H. diacolocynthidos. (Διά, through; κολοκυνθίς, colocynth.) An electuary composed of colocynth, agaric, germander, white horehound, lavandula stœchas, of each 10 parts; opoponax, sagapenum, parsley, round birthwort root, white pepper, of each 5 parts; spikenard, cinnamon, myrrh, saffron, of each 4 parts; all mixed with honey.

H. logadii. (Λογός, chosen.) The *H. piera* when made into an electuary with honey, as in the Lond. Ph. of 1650.

H. nos'os. Same as *Hieronosus*.

H. of colocyntn. The *H. diacolocynthidos*.

H. pi'era. (Πικρός, bitter. G. *Heilig-bitter*.) An old purgative emmenagogue, consisting of aloes 125 parts, canella bark 8, mace 8, asarabacca 8, saffron 8, and mastic 8 parts. When mixed with 500 parts of honey it formed *H. logadii*. It is said to be used secretly as an abortifacient.

It was an official preparation of the London Ph. of 1746, and then consisted of 4 parts of aloes to one of canella.

H. sy'rinx. See *Hierasyrinx*.

Hierobot'anë. (Ἱερός; βοτάνη, a plant.) The *Verbena officinalis*.

Hieracan'tha. (Ἱέραξ, a hawk; ἄνθος, a flower. F. *hieracanthé*.) A former name for a kind of thistle which seized on or adhered to passengers, as a hawk to its prey.

Hieracites. (Ἱέραξ, a hawk.) Old name of a stone, or gem, of the colour of a hawk; hawkstone. It was much commended as a remedy for piles.

Hiera'cium. (Ἱέραξ, a hawk, because it was said that hawks feed on it, or cleansed their eyes with its juice. G. *Habichtskraut*.) A Genus of the Nat. Order *Composite*. Hawkweed.

H. alpi'num. Linn. The *Hypochaeris maculata*, or broad-leaved Hungarian hawkweed.

H. cæru'leum. Scop. The *Mulgedium alpinum*.

H. grono'vil. Linn. Hab. North America. Juice of leaves used to destroy warts, and to relieve toothache.

H. lachena'lii. The *H. murorum*.

H. ma'jus. (L. *major*, greater.) The *Senchus arvensis*, or greater hawkweed.

H. mi'nus. (L. *minor*, less.) The lesser hawkweed, *Oporinia autumnalis*.

H. muro'rum. Linn. (L. *murus*, a wall.) Wall hawkweed. Hab. Europe. Cordial, stomachic, and pulmonary. Used also as a vulnerary.

H. officina'lë. (L. *officina*, a workshop.) The *Hypochaeris radicata*.

H. olera'ceum. The *Senchus oleraceus*.

H. pilosella. Linn. (L. *pilosus*, hairy.) The mouse-ear. It contains a actescant juice

having a slight astringency; leaves sternutatory and vulnerary.

H. sca'brum. Linn. (L. *scaber*, rough.) Used as *H. gronovii*.

H. spinulo'sum. Spreng. (L. *spinula*, a small thorn.) The *Senchus arvensis*.

H. veno'sum. Linn. (L. *venosus*, full of veins.) Rattlesnake weed. Hab. North America. Used as *H. pilosella* and in snake bites.

Hierac'ulum. The same as *Hieracium*.

Hieran'osus. Same as *Hieronosus*.

Hieran'osus. Same as *Hieronosus*.

Hierasyrinx. (Ἱερός, holy; σῦριγξ, a pipe.) The vertebral column.

Hieratic'um. (Ἱερατικός, destined for sacred use; from Ἱερός, holy.) Old term (Gr. Ἱερατικόν), applied by Galen, *de C. M. sec. Loc.* viii, 5, to a *Malagma*, or cataplasm, used in diseases of the stomach and liver, and pains in the bowels.

Hieraz. (Ἱέραξ, a hawk.) The bandage called also *Accipiter*.

Hierobot'anë. (Ἱερός, excellent; βοτάνη, an herb.) The *Verbena officinalis*, so called from its good qualities.

Hieroglyphica. (Ἱερός, holy; γλύφω, to engrave on stone.) The signs used in medicine.

Also, the lines on the hands, and on the forehead and face, whereby it was thought the future might be learned.

Hierologan'chè. (Ἱερολογία, a discourse on sacred things; ἄγγω, to strangle.) The affection known as clergyman's sore throat.

Hieron'osus. (Ἱερός, holy; νόσος, a disease.) The holy disease; an old name, employed by Linnaeus, for *Epilepsy*.

Applied likewise to *Chorca*, because it was believed to be induced by superior beings.

Also, applied to convulsions, probably with reference to our Saviour having cured those who were possessed of devils. (Quincy.)

Hieropyr. (Ἱερός; πῦρ, fire or fever. F. *hieropyre*; G. *heiliges Feuer*.) Vogel's term for *Erysipelas*.

Hig'ginson's syringe. See *Syringe, Higginson's*.

High. (Mid. E. *heigh*, *high*, *hey*, *hy*; Sax. *heah*, *hēh*; G. *hoch*; from Teut. base *huh*, to bow; from Aryan root *kuk*, to bend, to make round.) Lofty.

H. operation for stone. Same as *Lithotomy, suprapubic*.

H. taper. See *Hig-taper*.

High'gate springs. United States of America, New England, Franklin County. A spring containing 1·223 grains of solids in a pint, consisting of minute quantities of potassium, sodium, calcium, and magnesium carbonate, crenic acid ·112, and silicic acid ·102.

Highland cud'weed. The *Gnaphalium sylvaticum*.

High'more, Nathan'iel. An English physician, born at Fordingbridge in 1613, died at Sherborne in Dorsetshire in 1685.

H., an'trum of. See *Antrum Highmorianum*.

H., bod'y of. The *Corpus Highmori*.

H., cave of. Same as *Antrum Highmorianum*.

H., sin'us of. (L. *sinus*, a gulf.) The *Antrum Highmorianum*.

Highmoria'num an'trum. See *Antrum Highmorianum*.

High rock spring. One of the *Saratoga springs*.

Hig-taper. (According to Prior, either from Sax. *hig*, hay; or *hege*, hedge; and *taper*.) The *Verbascum thapsus*.

Higue'ro. The calabash tree, the fruit of which is said to be febrifuge; the *Crescentia cujete*, Linn.

Hik'ry pi'kry. The vulgar pronunciation of *Hiera piera*.

Hilar. Relating to the *Hilum*.

Hilar'iant. ('*Ilapós*, cheerful. F. *hilar'iant*.) Lively; making merry.

H. gas. Nitrous oxide gas, from its physiological action when diluted with common air.

Hilar'io, San. See *San Hilario*.

Hilda'nus, Fabricius. See *Hilden, Wilhelm Fabricius de*.

Hildegarde-Brun'nen. Hungary, near Ofen. A mineral spring, containing sodium sulphate 9 grammes, magnesium sulphate 5·1, sodium chloride 1·165, magnesium carbonate ·208, and potassium sulphate 1 gramme in a litre. Used as an aperient.

Hilden, Wilhelm Fabricius de. A German physician, born at Hilden, near Düsseldorf, in 1560, died in 1634. His real name was Wilhelm Fabry.

H., girdle of. The *Cingulum Hildani*.

Hilif'erous. (*Hilum*; L. *fero*, to hear. F. *hilifère*.) Having a *Hilum*. Applied by Mirbel to a radicle when the nucleus is naked and the radicle directly receives the vessels of the funicle.

Also, applied to a perisperm when it immediately hears the *Hilum*.

Hill. (Mid. E. *hil, hyl*; Sax. *hyll*; allied to Lithuan. *kalnas*; L. *collis*, a hill. F. *colline*; I. *colle*; S. *collado*; G. *Hügel*.) A low mountain.

H. berry. The *Gaultheria procumbens*.

H. chiray'ta. The *Ophelia angustifolia*.

H. chiretta. Same as *H. chirayta*.

H. col'ocynth. The *Cucumis Hardwickii*.

H. diarrhœ'a. See *Diarrhœa, hill*.

H. fe'ver. See *Fever, hill*.

Hilof'er. (*Hilum*; *fero*, to bear. F. *hilofère*; G. *Heimhaut*.) Name given by Mirbel to the endosperm or internal tunic of a seed.

Hil'on. Same as *Hilum*.

Hil'tit. The Arabic name of *Asafetida*.

Hil'ton, John. An English surgeon, born in London in 1804, died at Clapham in 1878.

H.'s mus'cle. The part of the aryteno-epiglottidean muscle which arises from the arytenoid cartilage just above the attachment of the upper vocal cord, and is attached to the upper and inner part of the epiglottis. Also called *Aryteno-epiglottideus inferior*, and *Compressor sacculi laryngis*.

Hilum. (L. *hilum*, a trifle. F. *hile*; G. *Keimgrube, Samengrube*.) The point of attachment of a seed to its seed-vessel, being the place where the funicle adheres to the primine, and by which it obtains its nourishment.

Also, the aperture in the extine of a pollen grain.

Also, in Anatomy, applied to notches or wide fissures where vessels enter an organ; and also to certain small apertures and depressions.

Also, a term for a small, flattened staphyloma of the iris from corneal perforation, in consequence of its likeness to the hilum of the garden bean.

H. carpicum. (*Karpós*, fruit.) The *H. of fruit*.

H. folliculi. (L. *folliculus*, a small bag.) The most prominent part, devoid of blood-vessels, of the ripe follicle of the ovary where rupture takes place to allow of the escape of the ovum.

H. he'patis. (L. *hepar*, liver. F. *hile du foie*; G. *Leberpforte*.) The transverse fissure of the liver, or the point on the under surface of the liver at which the vessels enter.

H., internal. (L. *hile interne*.) The chalaza of a seed.

H. lienal'ë. Same as *H. lienis*.

H. lie'nis. (L. *lien*, the spleen. F. *hile du rate*; G. *Milzpforte*.) The depression on the mesial border of the spleen at which the splenic vessels enter or leave the organ.

H. of a seed. (F. *hile de la graine*.) See under *Hilum*.

H. of fruit. (F. *hile du fruit*.) The cicatrix which remains when the fruit has fallen off from the pedicle.

H. of lymphatic glands. The place, generally a depression, where the blood-vessels enter and leave a lymphatic gland, and where the efferent lymphatic vessels leave the gland.

H. of salivary glands. The depression at which the blood-vessels enter and leave, the nerves enter, and the duct leaves, the gland.

H. ova'rii. (L. *ovum*, an egg. F. *hile de l'ovaire*.) The depression on the inner surface of the ovary at which the vessels enter the organ.

H. placen'tæ. (L. *placenta*, a cake. F. *hile du pouton*.) The point at which the umbilical arteries and vein are connected with the placenta.

H. pulmo'nis. (L. *pulmo*, a lung. F. *hile du pouton*.) The root of the lung.

H. renal'ë. (L. *renalis*, belonging to the kidney. F. *hile du rein*; G. *Niereneinschnitt*.) The fissure or depression on the internal border of the kidney at which the blood-vessels, the ureter, and the nerves enter or leave the organ.

Hilus. Same as *Hilum*.

H. of adrenals. An irregular fissure, from which the suprarenal vein passes, on the anterior surface of the *Adrenals*.

H. of kidney. See *Hilum renale*.

H. of o'vary. See *Hilum ovarii*.

H. of spleen. See *Hilum lienis*.

H. of suprarenal cap'sules. (L. *supra*, above; *ren*, the kidney.) Same as *H. of adrenals*.

Hilusstro'ma. (L. *hilus*; Gr. *σπρῶμα*, anything spread.) His's term for the stroma of the ovary and of lymphatic glands in the neighbourhood of the hilus; it consists of thicker connective tissue than that of the other part of these organs.

Hil'wort. The *Mentha pulegium*.

Himal'aya. A mountain chain on the north of Hindostan.
